AIMING FOR ACCREDITED LIST

The herd at Foreland Farms at York, New York has just passed a clean test, the entire 54 head going through without showing a reactor or even one suspicious animal. The aim of the owners, G. A. & G. S. Donnan is to place the herd on the accredited list and application has been made.

A number of good records have recently been made in this herd under the care of George S. Donnan, this being his third attempt at official work. He made a record of 30.14 lb. butter in seven days on Blanche Lyons Segis Climax, a daughter of King Segis Pontiac Climax. A number of other very nice records have recently been finished in this herd as the following list shows:

Foreland Johanna De Kol Lilith	2 yr.	14.73	Lb. butter
Linwood Lilith Pontiac	6 "	22.86	" "
Foreland Segis Beets De Kol	sr. 2 "	18.89	" "
Foreland Geneva De Kol	jr. 2 "	17.94	" "
Segis Inka Climax	sr. 4 "	24.33	" "
Empress De Kol Pontiac Canary	6 "	25.03	" "
Jessica Segis Pontiac De Kol	sr. 4 "	26.90	" "
Foreland Lilith Empress Canary	2 "	19.06	" "
Jessica Lyons Govers	9 "	29.09	" "
Pauline Segis Pontiac Boon	6 "	28.25	" "

THE MIDCOAST MAGAZINE

There came to the editorial desk a little eight-page paper called *The Midcoast Magazine*, published at College Port, Texas. The date of issue is "every little while" and it is published in the interest of better sires and dams. It has never been entered as second-class matter claiming to be a publication of the first-class, there are no subscription fees, but it can be obtained upon request. The editor and publisher is Harry Austin Clapp, owner of the Homecroft Farm. Its purpose is to advertise Holsteins belonging to the Homecrofters. Among the advertising are several readable articles, some instructive, some entertaining, and all interesting. There are gems of humor, and among them we note that the reason that Nero fiddled when Rome was burning was that the Holstein cow (the one Cæsar brought back from his expedition to Gaul) was dry. Nero was so peeved at the loss of his daily Holstein milk that he just naturally had to do something.

The Midcoast Magazine is unable to understand why Eve was tempted by an apple. Had she been offered a Homecroft Quality Holstein Heifer—well anyone could excuse her.

The editor says there are two kinds of cows—Holsteins and others.

Dairying is a profitable business when cows are fed sufficient feed to enable them to produce milk in profitable quantities.

No farm mortgage has ever been foreclosed where as many as five cows have been kept.

A productive dairy cow is God's greatest gift to humanity.

If dairying makes life worth living, why not make dairying worth while?

The heavy feeder makes the money.

Quit milking boarder cows. If your cow will not keep you don't keep her.

Your land may feed your cow but you can't keep it up unless your cows feed your land.

A cow with a poor appetite is in the same class as the hired man who is never hungry.

You are invited to visit Homecroft, shoot a few ducks, catch a few fish, see the family and have a good time.

SUPERMILK

A big Holstein dairy sent its first milk to Kansas City on May 8th. This is the Coöperative Dairy Association which has about 200 black and white cows in a modern dairy on the 4,500-acre Highland farm owned by Milton Thompson, near Lees Summit, Missouri.

L. H. Haas, general manager of the Coöperative Dairy Association, has been studying big milk plants and spent several days at the Natoma Farm dairy Hinsdale, Illinois. Besides the milking shed there is a pasteurization plant which is said to be the first of its kind to be established in Missouri. The shed is 30 by 120 feet long, has concrete floors and troughs, Louden stanchions and electric milking machines. The milk is carried right from the machines in a vaccum container to a 500-gallon glass-lined storage tank which is in a separate building, 20 feet away, the buildings being connected by a runway. The product is being advertised under the name of "super-milk" and it is said that every operation from milking, to loading into the delivery wagons is done by machinery.

REACHING THE CONSUMER

The advertising of the Dairymen's League Coöperative Association, Inc., appearing in grocery stores and refreshment parlors is a long step toward acquainting the general public of the value of dairy products, and the disposal of the milk surplus which accumulates through the height of the producing season. The posters are changed monthly and certainly serve to introduce the Dairymen's League brand of ice cream to consumers. Newspaper space is generously used and serves to tie up the league, the dealer and the consumers to their advantage. Some 60,000 dairymen are behind this advertisement which can be seen in Dairymen's League territory. Many members of the Holstein-Friesian Association are also members of the League. The plants of the Dairymen's League are at Auburn and Carthage, New York and at Milton, Pa., and the general offices are at Utica, New York.

THE ORMSTOWN SHOW

The prize list and catalog of the Ormstown Show at Ormstown, Quebec, June 20th to 23d announces nearly $1300 for the Holstein classes. The largest amount $557 is put up for the females. Approximately $350 goes to the males and $360 to the groups. One cow class is for animals "having a yearly record of performance." This will be awarded upon the basis of 100 points for perfect conformation to which will be added one point for every 500 pounds of milk and one point for every 20 lb. of fat above the amount required to qualify.

One of the rules stipulates that it shall be the duty of the chairman to see that every cow shown in the milk classes shall be milked dry between the hours of five and seven the evening preceding the competition.

The booklet is printed in English and French.

OREGON STATE RECORD

Hazelwood Josephine Korndyke, owned by Dr. W. T. Phy, Hot Lake, Oregon is the state holder of the record in the junior three-year-old class for 305 days butter production, having made 17,324 lb. milk, 503.99 lb. fat or 754.98 lb. butter. She displaces Clothilde Hengerveld Washington with 579.59 lb. butter, 13,725.2 lb. milk.

When comes a day, whose low descending sun
Counts not an auto wreck that's featured on Page One.

CIRCULAR FOR DAIRYMEN

Extension Circular No. 35 issued by the Clemson Agricultural College is full of sound advice to South Carolina dairymen on the production and care of cream for shipment. We are informed that there are about 220,000 dairy cows in the state, heretofore most of their product has been consumed locally and but very little has been shipped from the farms. The influx of the boll weevil caused dairying to be changed from a sideline activity to a regular industry.

There are directions on keeping the barn and utensils clean, on cleaner milk practices. Some advice is given on feeds, on separation and on cooling the cream, and directions on how to market it to the best advantage. The bulletin is illustrated with pictures of cattle of three different breeds and some methods of cooling cream are depicted.

The authors are M. R. Tolstrup, and C. G. Cushman. This little circular should have a wide circulation in its native state and surrounding territory.

WHAT THE COW CANNOT DO

The dairy cow is not a machine that can handle rough and bulky feeds, which have been baled, shipped, stored, and several commissions added to it, and return to her owner a profit over its cost, but if she is kept on the farm where the feed is raised she can handle it and furnish the best available market for it. Farmers should keep good cows to consume the feed they raise, and not have to purchase feed with which to feed the cows they keep.

The basis of feeding a dairy cow is to furnish her with all of the roughage she can handle. It is from pastures and stored roughage that the cheapest part of the production of a dairy cow is derived.—*Texas Extension Service Farm News.*

Of all sad words of tongue or pen,
The saddest are these: "Stuck again."

WILL BE AT KANSAS CITY

The highest producer in the Ellisburg Cow Testing Association is Brookside Ladoga Burke, owned by Dr. D. B. Armstrong, of Watertown, New York, director of the Holstein-Friesian Association of America. During the month of March this cow milked 2,651 lb. and during April, 2,250 lb. Her March production was 86.2 lb. butter fat and during April it was 81.6 lb. She led her association each month for both milk and butter production.

Brookside Ladoga Burke was sired by King Burke Hengerveld. Her dam is a 22-lb. daughter of Ladoga De Kol Pauline, a cow with a seven-day record of 30.80 lb. butter and six A. R. O. daughters, two of which each made seven-day 30-lb. butter records. When Dr. Armstrong bought Ladoga, she had a record of 26.42 lb. butter, 538.3 lb. milk. He had her quite a while and she was producing so much that a tester was obtained and the cow milked 650 lb. in seven days and increased her butter record to 28 lb.

Brookside Ladoga Burke is a cow of immense size and splendid proportions. Her owner believes she is the largest cow in Jefferson County, which is one of the greatest dairy counties of Northern New York. She is a steady, persistent milker and had very little fitting preparatory to making these large records. On account of her size and conformation, she is an impressive looking animal and will be seen at the sale and exhibition at Kansas City, as a member of the New York State show herd. She is not the only good one the doctor owns, for the three highest association fat producers in March and the four highest in April were members of the Roacharm herd. In March, Roacharm De Kol Princess produced 70.1 lb. fat, 2,260 lb. milk; Ada Dutchland Ladoga, a junior four-year-old, made 67.3 lb. fat, 2,170 lb. milk, and Aaggie Wellsland Korndyke, another junior four-year-old, 56.8 lb. fat, 1,352 lb. milk. In April, Princess produced 75 lb. fat, 2,250 lb. milk, another member of the herd made 64.9 lb. fat, another, 64.3 lb., and Ada made 58.3 lb.

BROOKSIDE LADOGA BURKE

Brookside Ladoga Burke, 167.8 lb. fat, 5,162 lb. milk in the months of March and April, in cow testing association work, 650 lb. milk, 28 lb. butter A. R. O. Owned by Dr. D. B. Armstrong, Watertown, New York.

High class producing re-actors bred and maintained for one-half interest in offspring. A square deal guaranteed.

A modern breeding establishment for re-acting Holstein-Friesian Cattle

BETTER SIRES: BETTER STOCK

The purebred sire campaign being carried on by the United States Department of Agriculture is meeting with a considerable degree of success. The reports are often brief but they agree on one main point—the desirability of wellbred breeding stock for practical farm use.

Altogether the Department of Agriculture has received signed agreements from 7,488 live-stock owners who have agreed to use purebred sires of good quality for all classes of farm animals kept. In no case, according to the records of the better-sires campaign, has any person who changed from grade or scrub sires to purebreds reverted to the old methods. During April of this year, 497 persons qualified in the better-sires campaign, the number being more than three times as great as in the corresponding period a year ago.

She (sentimentally)—What would you do, darling, if I were to die?

He (matter-of-fact)—I'm afraid I should have to bury you, darling.

LITTLE BUT GOOD

It is not always the biggest apples that are the best, nor are all the good cows found in large herds.

W. D. Hostrop who lives just west of Waterloo, Iowa, has 10 head of Holsteins, male and female, yet he has in his herd a state record cow. This is Lady Papoose 2d with a year record of 976 lb. butter and 21,624 lb. milk made as a two-year-old. She holds the state championship in her class for both milk and butter production. Another member of the herd is the two-year-old, Fisher Lena Pontiac; she has a seven-day record of 23 lb. butter and 475 lb. milk and is a granddaughter of King Segis Pontiac. Ensenore Spoffard Beets, another tow-year-old heifer, won first prize as a senior yearling at the Wisconsin Fair in 1920. She has a seven-day record of 19 lb. butter and 399 lb. milk.

In the herd there is a daughter of King Pietertje Ormsby Piebe, one of the real great Iowa sires. The herdsire is a son of Triune Ormsby Piebe who was a son of King P. O. P. from a cow that made 1,300 lb. butter in a year. Hostrop's favorite is Fashion Lady a daughter of Lady Papoose 2d and he says that the six nearest dams of Fashion Lady have year records that average better than 1,000 lb. butter and 21,000 lb. milk.

PRODUCER AND SHOW COW

At the Oklahoma State Fair last fall Empress Wayne Gerben 253,907 was proclaimed the Grand Champion cow. That she is a producer as well as an animal of superb type is shown by the fact that she recently closed a year record of 26,658.3 lb. milk and 884.47 lb. butter. According to A. C. Baer, superintendent of Dairying at the A. & M. College, this is not only the highest record ever made by a Holstein in Oklahoma, but is a record over all breeds in the state.

During the year she had dry feed consisting of alfalfa hay with some beet pulp, her grain ration being a mixture of bran, oats, corn chop, cotton seed meal and oil meal. Her owner is J. H. Vaughn of Stillwater, the Payne County attorney.

PRIZES FOR DODDIES

The American Aberdeen-Angus Association Board of Directors set aside for this year $2,000 for premiums to be given for boys and girls calf club work. State shows where Baby Beeves owned by members of boy and girl calf clubs are shown, will receive liberal cash premiums with gold watches for Aberdeen-Angus grand championships. At large fairs where five or more calves sired by Aberdeen-Angus bulls compete, liberal cash premiums will be given by the fair authorities and where ten or more calves compete in addition to the cash prizes, gold watches will be awarded to the owners of Aberdeen-Angus Grand Championships. Wrist watches will be given to girls and pocket watches to boys.

MILKY MASSACHUSETTS HERD

On the Sayles Farm, North Attleboro, Mass., is a herd of purebred Holsteins that is attracting considerable attention in that locality on account of their producing ability. Richard Stevens, of Winchester, official tester of Bristol County visits the farm every 30 days and weighs and tests the milk. He reports that the first four months of the year a number of the animals yielded more than 1,200 lb. milk a month. The list follows:

JANUARY

No. 12.—Elmhurst Princess Johanna, 1,674 lb.

No. 14—Elmhurst Clothilde Nixie, 1,383 lb.

No. 15—Elmhurst Mary, 1,243 lb.

No. 23—Elmhurst Nixie Pyrrha, 1,535 lb.

FEBRUARY

No. 12—Elmhurst Princess Johanna, 1,224 lb.

No. 8—Elmhurst Betty, 1,246 lb.

MARCH

No. 12—Elmhurst Princess Johanna, 1,259 lb.

No. 20—Elmhurst Pietertje Johanna, 1,792 lb.

No. 23—Elmhurst Nixie Pyrrha, 1,299 lb.

No. 8—Elmhurst Betty, 1,364 lb.

APRIL

No. 12—Elmhurst Princess Johanna, 1,227 lb.

No. 20—Elmhurst Pietertje Johanna, 1,803 lb.

No. 8—Elmhurst Betty, 1,218 lb.

No. 21—Elmhurst Princess Pyrrha, 1,560 lb.

Five cows missed the 1,200-lb. mark by only a few pounds. Elmhurst Pietertje Johanna gave 62 pounds, 10 ounces on her best day. Elmhurst Betty was only 26 months old when she went on test.

SIRING HEIFERS

The Sunnyside herd has been considerably increased this spring. Of 27 calves sired by King Walker Lota, 20 including twins have been heifers. At the present time there are thirty-one older females in the herd, of which 17 are due to freshen in the fall and early winter, eleven for the first time.

The herdsire, King Walker Lota, is a son of King Walker Johanna Lad and of Lota De Kol, 700.7 lb. milk, 30.18 lb. butter in seven days. This cow has four tested daughters one of which is a 30-lb. cow with three seven-day milk records each above 600 lb. and another has a 29 lb. seven-day butter record. His sire, King Walker Johanna Lad has made a wonderful reputation in a few short years, his daughters making remarkable milk and butter records as heifers. Sunnyside Stock Farm is owned by Frank L. Hight of Cornville, Maine.

Once they married in haste and repented at leisure; now they marry in haste and repent at work.

UP IN MAINE

One of the best dairying establishments in Franklin County, Me., is that of Archie S. Pratt of Farmington. There are four farms with a total area of nearly 700 acres of which about 350 is tillage land.

Up to 16 years ago Mr. Pratt worked in a store. He decided to change to dairying and was early convinced that for his purpose the Holstein breed was the best. He started to build up a first class herd and at the present time has 110 head of purebred Holsteins on the farm of which about 40 are milking. During June 1921, 1,500 tons of milk were shipped from this establishment to the Turner Center Creamery.

Four years ago a new barn was erected which is 230 feet long by 36 feet wide. It is modern in every respect, with sanitary cement floors, litter carriers, drinking fountains, a ventilation system, lots of windows, two large silos and electric milking machines.

HEADED BY GOOD MEN

Work on the World's Dairy Congress is being carried on despite the absence of the President, H. E. Van Norman who is touring Europe. Henry N. Brawner Jr., of the Chestnut Farms Dairy, Washington, D. C., is appointed treasurer. On the Board of Vice-Presidents occur the names of a number of prominent cattlemen: F. L. Houghton, secretary of the Holstein-Friesian Association of America; M. D. Munn, president of the American Jersey Cattle Club; Robert Scoville, president of the American Guernsey Cattle Club; John A. Bell, Jr.; Prof. E. V. McCollum, discoverer of vitamines; R. Page, Seattle, vice-president of the Carnation Milk Products Company; J. H. Frandsen, former head of Cattle Department of Nebraska State College; and Hon. Fred Rasmussen, Pennsylvania secretary of agriculture.

MILK FOR CHILDREN

A quart of milk a day made a difference of 3½ lb. average weight for 12 undernourished Manchester (N. H.) children in two months' time. Every child gained, and the city health nurse who coöperated with the Farm Bureau in the experiment reported such changes as "less irritable," "better color," "improved in every way." Say milk to your dairyman if you want healthy children. —*New England Farms.*

STARTING RIGHT

David T. Kling of Donnelly, Minnesota, has started a herd of purebreds. Last fall he purchased a registered bull from W. F. Meyer and he has just received a couple of purebred Holstein calves from Watertown, Wisconsin. These calves are twins, their mother is giving 60 lb. milk a day right along, and they are sired by a bull whose three nearest dams average 33.53 lb. butter, 591.4 lb. milk in a week.

WILL HAVE A CHANCE

New Jersey secured a good young bull when King Echo Sylvia Fayne was purchased by a group of New Jersey breeders at the Brentwood Sale. This young bull was sired by Echo King Sylvia, a son of the world champion milk producer, May Echo Sylvia, 41 lb. butter, 1,005.8 lb. milk in a week, the only cow that ever produced 1,000 lb. milk in seven days.

The sire of Echo King Sylvia is King Valdessa Pontiac whose daughters are making such tremendous records in the Bell herd. The dam of the young herdsire is Polly Douglass Fayne, state champion of Pennsylvania for 30 day and for 365 day butter production in the junior four-year-old class. She has a seven-day butter record of 32.48 lb. butter, 682.1 lb. milk; a 30-day record of 128.48 lb. butter, 2,709.9 lb. milk; and she crowned these great performances by producing in year test 24,468.1 lb. milk, 1,219.21 lb. butter.

King Echo Sylvia Fayne is owned jointly by Eber M. R. Davis; D. Morton Davis; Howard L. Davis, all of Shiloh, and Harry W. Read, of Vineland. An up-to-date building with exercising yard has been built on the farm of D. Morton Davis and after September 1st here will be housed King Echo Sylvia Fayne and the 1920 Grand Champion bull, Winterthur Prilly Segis Marmagel.

PLAN TO SHOW

Beauty De Kol Reka Ormsby owned in the Hartsook herd, Lankershim, California, recently produced 134.2 lb. milk in a day. She has a seven-day butter record of 28.57 lb. The Hartsook herd plan to exhibit at some of the great fairs next fall and Superintendent Earl Sturgis reports that they will be seen at the California state fair at Sacramento.

HOW MUCH

When Abraham Lincoln was asked how long a man's legs should be, he replied, "Long enough to reach the ground." A similar answer can be made to the inquiry, "How much advertising should I do?"—"Enough to get the business."—*DeLaval Monthly.*

HOLSTEINS VS. SHORTHORNS

At the Experiment Farm at Archer, Wyoming, there has recently been conducted an experiment that should mean much to the Holstein breeders of that state. In Wyoming, there is many a Shorthorn of the "dual purpose" kind. Her friends contend that she is best adapted to local conditions; that her calves are more salable; that the animals withstand adverse weather conditions better than do other breeds; and that they produce just as much butter fat in a year as do their competitors.

This difference of opinion has been quite general over the state so the Experiment Farm selected nine high grade "dual purpose" Shorthorns and ten Holsteins from their dairy, chosen as nearly as possible with reference to age and period of lactation. All of the cows finished their milking period in 1921. The average lactation period for the ten Holsteins was 350 days, for the Shorthorns 329 days. The average amount of milk produced by the Holstein cows was 8,151 lb.; for the Shorthorns the average was 6,110 lb. The fat content of the Shorthorn milk was a trifle more, but not enough to offset the larger milk production of the Holsteins. The fat production of the Shorthorns was 219 lb., while that of the Holsteins was 265 lb.

J. E. Peterson of Donnelly, Minn., has started a Holstein herd with a purchase of nine heifers between four and five month old. These came from the herd of Goecks Brothers and are granddaughters of Duke Pietertje Ormsby Mercedes. Mr. Peterson already has in his herd a grandson of Sir Pietertje Ormbsy Mercedes which sold when six months old for $600.

ARE YOU GUILTY?

A young man of brilliant prospects, endowed with a love for the only unfortunate class, the dairy farmer, started out on his mission of charity with a twofold purpose. He was going to save said dairyman, and coin some cash in the same transaction. His *modus operandi* was a blatant farm sheet whose only purpose was to teach them how to do it better every day. As this brother of charity flivvered along his pathway through a hot vacation and a prosperous farming state, he spied a prospect leaning against the breezy side of a wire fence 'neath the shade of a wide-spreading tree. The gentleman's ration of Horse-shoe was yielding a liberal flow and his adam's apple coquetted coyly through his drooping hedge of whiskers, kepping up perfectly the rythm of his maxillary athletics. His attire was the most simple two-piece sort, the nether half hanging by gallouses that were perilously near the edge of two drooping shoulders. As the young philanthropist caught sight of this vision of ease his eye glowed with the gleam of the true sportsman. Here was a real prospect, a man who needed help. Pointing with pride to the highly lithographed cover of his organ, he went carefully through his oration. Here was the solution of every problem that ever has faced or will come to the dairy farmer. By writing your name on the dotted line and paying the meager sum you get 31 9issues of the one high clas seducational, agricultural and dairy magazine in existence; follow its advice and your cows will give more milk, your calves will grow faster, the demand for your stock will be unlimited, your bank account will overload the vaults, and so on to the end. When the perspiring peroration was reached and the helpful pencil offered just over the subscription blank the farmer drawled lazily, "Never mind, son, run along, I ain't farmin' half as well as I know how right now."

Unfortunately, this class of dairy farmers is far too large, they are going to do better, always, just a little later. They know how but they are putting off. They know new blood of a better strain would pay a handsome profit on the investment but they are waiting till a more convenient moment to buy. They know that a better ration could be balanced but they are not quite ready to get the feed. They know that another silo or more equipment or more modern barn would be real economy, but they move along waiting, just waiting, till their path becomes mighty nearly a rut. They may scorn the man who "Ain't farmin' half as well as he knows how," but they may well be cautious about throwing pebbles while living in sun porches and glazed bungalows. Are you dairying as well as you know how? Answer for yourself *and act!*

Ed. Madigan of Fox Lake, Wis., who has owned a herd of big producing grades for a number of years, has recently started in the purebred business.

HANDSOME HERDSIRE

King Ormsby Abbekerk Helena is herdsire of the Wood's Dairy at Carlisle. This four-year-old bull is of good size, largely white in color, handsomely marked and is a son of the King of the Ormsbys from Allamuchy K. A. Helena, a 20.58 lb. junior three-year-old daughter of the Allamuchy herdsire Korndyke Abbekerk who it is claimed has joined the select list of century sires. The dam Allamuchy K. A. Helena is a 24-lb. daughter of the good old herdsire, Peter De Kol Burke Spofford.

The breeding of King of the Ormsby is well known to all interested in the black and white breed. He is a son of Sir Pietertje Ormsby Mercedes, whose daughters have made wonderful records in both short time and long time tests, and whose descendants have made equally notable history in the show ring. King of the Ormsbys' dam is Spring Brook Bess Burke 2d, 792.3 lb. milk, 38.22 lb. butter in seven days. She has three-year-records above 1,000 lb. and is the dam of Bess Johanna Ormsby, the only cow that has three different years made over 1,000 lb. butter in ten months tests.

King Ormsby Abbekerk Helena is siring some very handsome animals and although his daughters are young. they show promise of making good producers when they come into milk.

EDUCATIONAL TRIP

The Cow, Sow, Hen train which is traveling over the Sante Fé railroad carries among other animals a cow of each of the four dairy breeds, Holstein, Guernsey, Jersey and Ayrshire and a Holstein bull. Experts from the Kansas State Agricultural College accompanied the animals and gave talks to the farmers at various stops. Among the speakers were Prof. J. B. Fitch and Dr. C. W. McCampbell of the Department of Animal Husbandry, Prof. W. T. Crandall, Extension Department Dairyman and F. H. Budden, Herdsman.

HOPES TO WIN AGAIN

Those who attended the Wisconsin State Fair at Milwaukee last fall may remember the third prize heifer calf and its owner, Edith Clark, of Janesville, Edith and her sister, Alice, are daughters of Russell L. Clark, and became interested in calf club work. Edith's calf won first prize at the Janesville fair and went on to the Milwaukee fair, where it won third prize. Both girls are taking up Holstein Club work again and spend most of their leisure time in looking after their animals.

EDITORIAL WISDOM

Q. Please tell me if cheese is wholesome to eat when it smells very bad and is full of little live worms just the color of the cheese.

A. When the cheese becomes as lively as that it is just as well to let it get away.

CO-OPERATIVE TESTING ASSOCIATIONS INCREASING

There is an increased interest in keeping production records of dairy cows. Dairymen realize that satisfactory progress in herd improvement cannot be made without them. There are now in active operation in the nine western states, 45 cow testing associations, including approximately 30,000 cows, about 6,000 more cows than were on test last year. The number of cows in each association runs from 150 to 3,600.

There are a number of other associations in process of organization and testers will be needed for them. At present the demand for well-trained men is greater than the supply. To young men, who are qualified to take up this work and need some good practical experience, this work offers a splendid opportunity and a stepping stone to something better in extension work. The pay ranges from $80 per month and up, usually with board and lodging. Anyone wishing to take up work along this line should get in touch with the Western Office of the Dairy Division, 318 Federal Building, Salt Lake City, Utah.

PIONEER HOLSTEIN BREEDERS

William Hamilton & Sons, of Chehalis, Washington, have headed their herd with a son of Carnation Pietertje Colantha and Segis Clothilde Emma. Carnation Pietertje Colantha topped the recent Brentwood Sale and is a son of Segis Pietertje Prospect, 37,381.4 lb. milk, 1,448.7 lb. butter in a year.

The dam, Segis Clothilde Emma has a record of 28,786.4 lb. milk, 1,164.99 lb. butter. A picture of her appears on page 326, May 22d issue of THE HOLSTEIN BREEDER AND DAIRYMAN. She is a daughter of Matador Segis Walker, who now has four daughters that have each produced over 1,000 lb. butter and over 25,000 lb. milk in a year.

The herd of William Hamilton & Sons consists of nearly 100 females, many of which are excellent individuals. This farm is the pioneer Holstein breeders of Lewis County.

BEWARE THE NEW TEST

Prof. E. H. Farrington, of the University of Wisconsin, warns dairy men against a new fat test that is being offered to replace the Babcock test. The exploiters of the device emphasize its simplicity and ease of operation. It is a gravimetric spindle with levels marked "Watered," "Skimmed," "Whole Milk." "Cream." This is the second device that has been put out within a year as a reliable, cheap tester. In speaking of this particular instrument, Prof. Farrington says, "Any form of gravimetric spindle that attempts to give the fat content of milk is unreliable. It is possible to add a considerable amount of water to a sample of milk and the spindle will sink to the cream mark."

It is probable that it will be many years before the really true measure of milk value from the fat standpoint—the Babcock test—is supplanted by any philanthropist even of the lurid advertising sort. Dr. Babcock did a great work when he perfected his test. He furnished a basis of measuring the value of a cow, and he offered protection to the consuming public at the same time. He furnished the means of lifting dairying from a cloud of uncertainty to the plane of definite business. He encouraged many a practical farmer to become a successful dairy farmer and later a real breeder of purebreds. His tester is good enough, don't be led astray by blatantly advertised improvements.

HOLSTEINS IN JAPAN.

The man who is known as the father of the dairy industry in Japan, is a Holstein breeder. He gained his dairy education in the states, and he imported the foundation of his herd from some of the premier breeders in this country. Some came from New York, some from Wisconsin, some from Iowa and some from Oregon. The gentleman in question is Mr. Utsunomiya. His success is the result of persistent careful work. His path has not always been easy, but the work he has accomplished for Japanese agriculture is worth all the effort.

Cropping systems similar to the most profitable over here are being worked out, and a registry association has been established to keep records of production. For a time a cow in Mr. Utsunomiya's herd held the high record—720 lb. of fat in a year, but that figure has been surpassed by a neighbor breeder.

CLEAR AS MUD

A tourist reports seeing the following police regulations posted up in Ireland:

"Until further notice every vehicle must carry a light when darkness begins. Darkness begins when the lights are lit."

BOUGHT BULL CHEAP

Theresa Piebe De Kol Fern, 351,473 has produced 33.22 lb. butter fat in seven days from 649.2 lb. milk. She is owned by W. H. Olson, Green Valley, Wisconsin and is a daughter of Paul Homestead Fern. Her dam is Theresa Piebe De Kol 2d.

A bull calf, three months old, from this cow was sold at the third Annual sale of the Brown County Holstein Breeders' Association at De Pere on May 8th for $200. He was purchased by Joseph Hoskens, De Pere and Matt Meulemans, Wrightstown.

Joshua Tite, a dairyman in the northern part of the state died recently. It is proposed to use as his epitaph, "He piped water 70 rods for his cows but his wife carried water 50 yards, up five steps, 30 years."

Can Spare a Breeder's Herd

of young cows, FIFTEEN animals, two to four years old, everyone with a semi-official record or now running on test.

This is the first Accredited herd in the state and NO abortion.

A few nice bull calves, 1 mo. to 9 mo. by our KING WALDORF SYLVIA, a double grandson of May Echo Sylvia. His pedigree shows lots of World Record backing and several 40 lb. crosses. His 10 nearest dams average 37.32 lb. and his 30 nearest dams average 30 lb. A lot of well known cows are bred to him. The value of this strain is increasing.

Scudder Farms,
Trenton, N. J. Route No. 6

MERRYALL FARMS HERD UNDER STATE AND FEDERAL SUPERVISION

Our Herd Sire is
King Sylvia Johanna Pontiac

Brother to Carnation King Sylvia and son of Otego Valley Christmas Belle; 40.56 lb. butter, 651.2 lb. milk in 7-day official test. Our herd is run for production coupled with economy and profit. Cows in this herd have made and are still making dandy records in both short time and long time semi-official work. A cow we sold to State College produced 22,247 lb. of milk, 851.1 lb. butter in a year; and we think we have others just as good. *Come and see for yourself.*

C. W. NEWMAN, **Wyalusing, Pennsylvania**

RENO COUNTY, KANSAS DAIRY SHOW

The Reno County Dairy Show was held May 5th at the Kansas State Fair Grounds at Hutchinson. The show was very successful despite the fact that heavy rains cut down the attendance and exhibits. Reno County is in the heart of the great central wheat district where a few years ago the dairy cow was a novelty. Now there are nearly 800 pure-bred dairy cattle in the county. All four breeds were well represented and all cattle exhibits were Federally tested for tuberculosis, many being from accredited herds. A number of animals exhibited were winners at the Kansas State Fair last September.

There was a judging contest, Partridge winning the championship. They have won this twice and so become permanent owners of the $75 loving cup given by the Hutchinson Chamber of Commerce. The Pretty Prairie team was second; Reno County High school at Nickerson, third; Sylvia, fourth; and Hutchinson high school, fifth.

Herman Miller of Partridge was the highest scoring student and won the first prize of a $20 gold watch; Wayne Redburn of Nickerson won a $10 sweater; Gordon Davies Partridge won third prize and Eldon Dale of Zenith was fourth.

On the evening of May 4th, a banquet was given by the Chamber of Commerce to members of the high school judging teams and some 90 Reno County dairymen. George Newlin president of the Reno Cow Testing Association presided. A. M. Davis, outlined the work of the Reno County Testing Association since it was formed February 1921. He showed the importance of the work by citing the average butter fat production of all the cows in the state, which is 135 lb., and comparing it with the average of the cows owned by the members of the Reno Cow Testing Association last year, which was 291 lb.

Emerson Carey said that the Chamber of Commerce work of financing the dairy shows was merely a starter to what they intend to do. They plan to finance the purchase of a large number of pure-bred cattle which will be brought to Reno County and sold to the boys' calf clubs on credit.

Prof. Cave, Kansas State Agricultural College, one of the judges of the show said that the Reno County Cow Testing Association is the only organization of its kind sponsoring a dairy show. He thanked the Chamber of Commerce and the bankers for their wholehearted support. "There is a definite relation between the production and the type of an animal and cows of good type and quality will in a great majority of cases produce more than cows lacking in type and quality," said Prof. Cave.

J. H. Frandsen, dairy editor of the *Capper Farm Press*, said that Hutchinson may soon be known as the main entrance to the newly developing dairy center of the United States. He called attention to the wonderful strides made in the purebred business and told of the market for purebred cattle there is in Colorado and the other western states. F. E. Fearl of the Hutchinson Chamber of Commerce, A. E. Asher, president of the Reno County Bankers' association, Sam Smith, County agent, and Dr. W. H. Mott also spoke.

Cups were awarded to the owners of the best aged cows in each of the four great dairy breeds. Fred McMurray, of Darlow, winning the Holstein cup. C. C. Kagarice of the Cannavane Stock Farm, Darlow, made a great showing, winning all the group prizes as well as having first junior two-year-old heifer and junior champion bull. The Holstein showring placings are herewith appended:

Aged Bulls, 2 years and over—1st, Fred McMurray on Oak; 2d, W. A. Shuler on Boy; 3d, C. C. Gagarice on Alamo.

Bulls, under 1 year of age—1st and 4th, C. C. Kagarice on Bob and Tom; 2d and 3d, Fred McMurray on Burke and Canary.

Junior Champion Bull—C. C. Kagarice on Bob.

Senior and Grand Champion Bull—Fred McMurray on Oak.

Aged Cows, 4 years and over—1st, Fred McMurray on Annie; 2d, C. C. Kagarice on Cornucopia.

Cows, 3 years and under 4—No entries.

Cows, 2 years and under 3—1st, C. C. Kagarice on Bright Jewell; 2d, W. A. Shuler on Sunshine.

Heifers, 1 year and under 2—1st, A. M. Davis on Nell; 2d, W. A. Shuler on Expectant; 3d and 4th, C. C. Kagarice on Beryl and Lady.

Heifers, under 1 year of age—1st, Fred McMurray on Lady; 2d, 3d and 4th, C. C. Kagarice on Pet, May and Mayme.

Senior Champion—Fred McMurray on Anne.

Junior and Grand Champion—A. M. Davis on Nell.

Get of Sire—1st, C. C. Kagarice.

Produce of Dam—1st, 2d and 3d, C. C. Kagarice.

Aged Herd—1st, C. C. Kagarice.

Young Herd—1st, C. C. Kagarice.

Calf Herd—C. C. Kagarice.

ROCK RIVER FARMS

Woodlawn Princess Pink Cornucopia recently produced 19,382.2 lb. milk, 840.54 lb. butter in a year as a junior two-year-old, breaking the Illinois state record for both milk and butter for her class. She is a member of the Rock River Farm's herd and is owned by Senator Medill McCormick, of Byron.

AT THE DIXON TESTING PLANT

Cora Lady Kate, owned by Irwin Isenberg, Edwardsville, Illinois, is making a great record at the Dixon Testing Plant. During April she produced 2,429 lb. milk, and right around 91 lb. butter. She is milking 80 lb. a day at the present time, and in 107 days has produced 8,787 lb. milk, 350 lb. butter.

A professor of biology addressed his class thus: "I propose to show you a very fine specimen of a dissected frog which I have in this parcel." Undoing the parcel he disclosed some sandwiches, a hard-boiled egg and some fruit. "But—surely I ate my lunch!" he said.

STATE SCHOOL TESTS OUTSIDE COWS

To coöperate with Holstein Breeders around Morrisville, New York, who wanted to test one or more cows and did not feel like paying the expenses of a tester, the New York State School of Agriculture tested a number of outside cows during the period from February 9th, to April 19th. All cows taken had to have passed at least two clean tuberculosis tests and every precaution was taken to keep the animals healthy and the barn sanitary. The trial prices were $3 a day for one cow, $2.50 each for two cows, and $2 each for three or more cows on test at one time.

It is planned to take in more cows when enough have been secured to insure financial efficiency. This testing will possibly begin the latter part of September and anyone interested should write to M. C. Bond, at the New York State School of Agriculture for an entry blank for full particulars.

The results attained were:

Owner	*Name of animal*	*Age*	*Milk*	*Butter*

THE SPRINGDALE HERD

Built up during the past sixteen years on a basis of profitable production and re-production

Present Herd Sire

WOODMONT ECHO SYLVIA CHAMPION

His sire, Sir Pietje Echo Sylvia, is by Champion Echo Sylvia Pontiac and is therefore a brother to Eco-Sylv Belle, 31.15 lb. as a junior two year old, the present World Champion in her class.

His dam, Butter Boy Empress, made 30.27 lb. butter in seven days, has milked 100 lb. in a day and was first prize aged cow, first in the A. R. O. class and Grand Champion at the 1921 New York State Fair. Judge Haeger says she is one of the three best cows shown last year.

Most of our young animals are by

KING TWEEDE SPRING FARM

His sire is Spring Farm King, full brother to the former World Champion and first 44 lb. cow; regarded as one of the best young sires of the breed.

His dam, Dressie Lady Pontiac, has a record of 30.04 lb. butter, 614.8 lb. milk made in seven days and is full sister to the 33.98 lb. cow Dressie Princess Pontiac. Their sire is Spring Farm King Pontiac. Daughters of KING TWEEDE SPRING FARM now in test are making a splendid showing under real dairy conditions.

Our older cows are daughters of

TOBE RAG APPLE KORNDYKE

Son of Christmas Tobe, 2d, 31.66 lb. butter in seven days and former World Champion ten year old. She is also the dam of Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in thirty days as a senior four year old, both being World Records when made. She in turn is dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days, also as a four year old. Here is large production, generation after generation.

Animals from this herd will make good anywhere

B. F. JONES & SON — **SOUTH MONTROSE, PA.**

B. F. JONES W. HUGH JONES

The Lathrop Herd

headed by

KING VALDESSA PONTIAC HOMESTEAD, whose three nearest dams average 37.9 lbs. butter in 7 days, offers to discriminating breeders a few young bulls sired by this great young sire, also a few yearling heifers and several foundation cows in calf to this show bull. His daughters are not for sale.

And please note:--

The Lathrop Herd is fully accredited. We started clean and have never had a reacting animal in the herd. Come and see us, please, for we are proud to show visitors the herd.

LACKAWANNA COUNTY HOLSTEINS

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders —pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal supervision.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

Published in the Interest of Breeders and Dairymen Everywhere

EXHIBIT OF BERKS FARM PUREBRED HOLSTEINS AT THE READING, PENNSYLVANIA, FAIR, 1921, OWNED BY MR. ABNER S. DEYSHER.

Application for entry as second-class matter pending, April 8, 1922, at the post office at Harrisburg, Penna., under the Act of March 3, 1879.

KING TWEEDE SPRING FARM

A son of Spring Farm King from a daughter of Spring Farm King Pontiac that made 30 lb. butter in a week averaging 86.85 lb. milk a day.

He is only five years old and has 12 A. R. O. daughters. Ten average over 20 lb. butter at an average age of less than three years.

In the Berks Herd he will have the opportunity his individuality, breeding, and transmitting ability deserves.

His daughters are not for sale, his sons can be bought now at lower prices than you will have to pay a year from now.

Why wait?

READY FOR SERVICE, a son of King Tweede Spring Farm, from K K S V Pearl, an A. R. O. daughter of King Korndyke Sadie Vale and S V H Pearl—she a 35.21 lb. three-year-old daughter of Sir Veeman Hengerveld. Several other bulls from top-price animals I have purchased at great public sales.

Write for pedigrees and particulars or better yet, *come and see the bulls and their dams.* They are priced to sell.

The Holstein Breeder and Dairyman

VOL. I HARRISBURG, PA., JUNE 22, 1922 No. 12

The Purebred Holstein Cow in Pennsylvania

By LeRoy Hoffer

A QUESTION debated among dairymen and often left undecided in the mind of the individual dairyman, is whether it would be more profitable to keep purebred dairy cattle than to continue the keeping of grades. During three years of experience as a cow tester in associations in this state, the merits of the purebred cow were always evident, however, occasionally you will find that there are grade cows producing more milk and butter fat than certain purebred individuals in the same herd. Very often the amount of production of the several low producing purebreds act as a barrier in the mind of the one who is about to decide to dispose of his grades and in their places put purebreds.

The dairy extension department of The Pennsylvania State College made a study of the records of ten cow testing associations in seven counties in this state, comparing the production of the purebred Holstein cows and grade Holstein cows in these associations. These associations include the northern, central, southern and eastern sections and are representative of dairy conditions for the entire state. In making this study, the idea in mind was not to select individuals or herds where exceptional care is being given or the making of records is the paramount idea of the owner, but rather it was aimed to choose those herds that are receiving ordinary attention and are making profitable returns every day at the pail.

The total number of cows completing a year's work in the associations having the proper age specification numbered 1,013 cows. Every record in this comparison represents the production of twelve months, including the dry period. The classification made consisted of comparing 2, 3, 4, 5 and over 5-year-old grade Holstein cows with 2, 3, 4, 5 and over 5-year-old purebred Holstein cows.

HOLSTEINS—Comparative vs. Grades.	Production Age	No. of Cows	Results—Purebreds Pounds of Milk	Pounds of Butter fat
Grade Holsteins	2	80	6164	235.0
Purebred Holsteins	2	36	7771	276.8
Grade Holsteins	3	111	6480	234.6
Purebred Holsteins	3	76	8378	287.4
Grade Holsteins	4	140	6977	256.6
Purebred Holsteins	4	42	8017	273.2

	Age	No. of Cows	Pounds of Milk	Pounds of Butter fat
Grade Holsteins	5	120	7271	258.1
Purebred Holsteins	5	50	9581	329.6
Grade Holsteins	Over 5	256	7723	282.7
Purebred Holsteins....	" 5	102	8420	311.4
Total Production—				
Grade Holsteins	all ages	707	5,039,191	184,133.5
Average			7,124	260.4
Total Production—				
Purebred Holsteins	all ages	306	2,591,199	91,535.7
Average			8,467	299.1
Difference in favor of purebreds			1,343	38.7

The difference is very marked in favor of the purebred cow in every one of these classes. If space would permit to show the record of every one of the 1,013 Holstein cows, it would be interesting to note the few grade Holsteins in the different classes that produced more milk and butter fat than did some of the purebred Holsteins in the same classes. When the total and average of all the records was considered the difference was always on the side of the purebreds. An average difference per cow of 1,343 pounds of milk and 38.7 pounds of butter fat on a herd of producers during the past year of a decline in milk prices will place many a herd in the profitable class where they have just been breaking even or in many cases, fallen below the profitable mark.

It is the high producing cow that has proven a salvation to the milk producer during this past year of economic readjustment. Latest cow testing association records show that dairymen who have increased their average production per cow from 6,000 pounds of milk and 250 pounds of butter fat to 8,000 pounds of milk and 325 pounds of butter fat during the past three years, are able to make the same average profit per cow this year as they did three years ago with low production and higher milk prices. This increase in production in so short a time is brought about largely by weeding out the low producers and by the use of better feeding methods.

Many farmers and dairymen who have milked grade cows for a number of years are beginning to realize the advantage of owning a purebred herd—that of greater and more economical production.

A HERD OF SALE TOPPERS

WHEN Abner S. Deysher approaches the ring at one of the great public sales you will see millionaire owners of famous herds, hurriedly leave their seats and talk earnestly with the visitor, for Mr. Deysher has a reputation for bidding liberally, buying the best and paying cash for his purchases.

DAUGHTERS OF KING TWEEDE SPRING FARM
Heifers in the Berks Herd, sired by King Tweede Spring Farm, Mr. Deysher's senior herdsire.

Mr. Deysher has bought the sale toppers of many high-class consignment and dispersion sales. At the recent Brentwood sale he added to his herd the grand champion of the show, the highest priced female, and a famous show animal, and all three were heifers that had not yet freshened, the highest priced one being a mere calf.

The Deysher establishment is named Berks Farm and is a few miles from the busy city of Reading, Pa. It contains 226 acres and in times past was famous for the quality of the trotting horses raised and trained there. The owner retains his love for a good horse but figures that black and white cows are more profitable than trotting horses, and so keeps only three, two of which will be seen this year on the grand circuit. The Berks herd is still being built although Mr. Deysher does not intend to buy many more animals. He has a good foundation and plans to raise and develop his own.

At the head of the herd is King Tweede Spring Farm, a bull of fine proportions and high-class individuality. We are sorry that our picture does not do him justice. He is very long bodied, a dandy handler, an active dairy bull and from the showing of his daughters is bound to rank high as a sire. Although he is only five years old, he has twelve daughters in the Advanced Registry. Wynola Korndyke Pontiac Lass produced 515.8 lb. milk in seven days as a junior two-year-old, second highest milk record for the class in the state at the time of making. Wynola Tweede Pontiac Lass made 443.2 lb. milk in seven days as a yearling which was a state record and she also made in seven days, no less than 338 days from freshening, records of 13.15 lb. butter and 320.8 lb. milk from which are state records for both milk and butter in the eight months after calving division. Ten daughters of this bull, at an average age of less than three years, have seven-day records that average better than 20 lb. butter.

King Tweede Spring Farm is royally bred, is a son of Spring Farm King whose daughters, although young have made wonderful records and who was by King of the Pontiacs from the 34-lb. cow Tweede De Kol Lass, therefore is a full brother of K. P. Pontiac Lass the first cow that ever made 44 lb. butter in seven-day official work.

The dam of King Tweede Spring Farm is Dressie Lady Pontiac. She has a seven-day butter record of better than 30 lb. and a milk record of 614 lb. and she has a full sister that made 33.98 lb. butter in seven days. Her sire, Spring Farm King Pontiac has 75% the same breeding as the former world champion and first 44-lb. cow, K. P. Pontiac Lass and was by King of the Pontiacs from Tweede White Lady, 37.45 lb. butter in seven days and 1,127.85 lb. butter in a year.

King Tweede Spring Farm was purchased by Mr. Deysher at the first Brentwood sale. He formerly headed the herd of B. F. Jones & Son where his older daughters still reside. He has a number of real good young heifers in the Deysher herd and the accompanying illustration shows something of their quality and character.

Should you walk through the Deysher Barn you will find animals that you have heard of a number of times. Prominent in the herd, as she would be in any company, is Hazelwood Ormsby Posch 2d, winner of the first prize at the 1921 Brentwood Show. This cow has recently completed a seven-day test in which she made 716.2 lb. milk her best day being 106.2 lb. As a four-year-old she produced 666.66 lb. butter and 16,399.9 lb. milk in 305 days. She has a long list of show triumphs. As a junior heifer calf in 1912 she won first prize at the Oregon and Washington state fairs, at the Dairy Cattle Congress and at the National Dairy Show and went on to junior championship at the Washington State Fair, the Dairy Cattle Congress and the National Dairy Show. She won first prize at the Washington, Idaho and Oregon State Fairs, was second at the Panama-Pacific Exposition and was a member of the first prize dairy herd at that great show in 1915. In 1919 she was second in the aged class at the Pacific International. In 1920 she was grand champion female at the Southwest Washington Fair, the Washington State Fair and the Oregon State Fair and won first prize in the aged cow class at the Pacific International. Her son is the junior herdsire, was sired by Sir Chimacum Wayne Lutscke, whose dam, Lutscke Vale Cornucopia, produced 789.7 lb. milk in seven days, 3,345.8 lb. milk in thirty days and 31,246.9 lb. milk in a year.

The herd includes daughters of many famous sires. There are daughters of Matador Segis Walker, King Segis Pontiac Alcartra, Champion Echo Sylvia Pontiac, Sir Pietertje Ormsby Mercedes 37th, King Joh and daughters of Empire Segis from daughters of Ormsby Korndyke Lad, besides others of equal prominence.

An animal that you will be sure to see is Carnation Matador Pontiac the grand champion at the 1922 Brentwood show. She freshened as a junior two-year-old and produced 401.9 lb. milk and 23.13 lb. butter in seven days milking 64.1 lb. in a day despite the fact that she gave very little from one-quarter of her udder. She looked even more like a cow than when we saw her at Brentwood. Next to her in the quarantine barn was the famous show heifer, Beautiful Josephine 3d. At the Minnesota state fair last year she was grand champion, was first prize senior yearling at the National Dairy Show and first prize senior yearling at the Fargo inter-state fair. She is from a cow that made over 25,000 lb. milk and nearly 1,100 lb. butter in a year as a four-year-old and was sired by Marathon Bess Burke.

ABNER S. DEYSHER
Abner S. Deysher, owner of the Berks Farm, Reading, Pa.

One of Mr. Deysher's pets is Dairy Maid Prilly for which he paid the top price $4,300 at Brentwood this year. This heifer is royally bred as well as handsome. She is a sister to Louise Alcartra Prilly, world champion for both 7- and 30-day butter production in the junior three-year-old class. Her dam, Adirondac Wietske Dairy Maid, recently completed a year record of 34,401 lb. milk and 1,420.19 lb. butter and is the only cow that has ever made 1,000 lb. butter fat two different years. Her two year records aggregate 66,301.7 lb. milk and 2,715.3 lb. butter and she made these two year records in only 26 months and 21 days. She has a seven-day butter record of 41.02 lb., two different years has made over 38 lb. in a week, has three times gone above 36 lb. and four times over 30 lb. Her largest seven-day milk record according to the books, is 876.4 lb., three different years she has produced over 830 lb. at the time of making her seven-day record and five different years has exceeded 600 lb.

Another star in the herd is Eco-Sylv Mechthilde a daughter of Champion Echo Sylvia Pontiac. This heifer freshened as a yearling has milked 80 lb. in a day and exceeded 70 lb. twenty-two consecutive days in her test, during which she produced 531.2 lb. milk, 17.34 lb. butter in a week and 2,224 lb. milk, 71.24 lb. butter in

DAIRY MAID PRILLY
Dairy Maid Prilly, sold for $4,300. The highest priced female at the Third Brentwood Sale. Her dam is the only cow that has ever made over 1,000 lb. butter fat in two consecutive year tests. She has a seven-day butter record of 41.02 lb., three above 830 lb. milk and 36 lb. butter, and has just closed a year record of 34,401.9 lb milk and 1,420.19 lb. butter.

30 days. These are state records for both 7- and 30-days milk production and for 30-day butter production for heifers under two years old. She is a real typy animal. Her sister Eco Clothilde Pontiac freshened as a yearling and produced 394.5 lb. milk, 14.27 lb. butter in seven days, and 1,672.9 lb. milk, 58.17 lb. butter in 30 days.

We have spoken of the daughters of King Tweede Spring Farm. These heifers have the milk vein development characteristic of their sire who has the greatest milk vein development we ever saw on a bull, the veins running to his shoulder and branching like those on a cow in milk, while the milk wells are large and clean cut.

CARNATION MATADOR PONTIAC
Carnation Matador Pontiac the Brentwood 1922 Grand Champion and her one-day-old son by Carnation Pietertje Colantha. This heifer has since made 23.13 lb. butter and 401.9 lb. milk in seven days as a junior two-year-old.

The Deysher herd is under Federal supervision and is periodically tuberculin tested. The dairy manager is Clark Berry who for several years was with Stevens Brothers and later with Ward Stevens. Under his care the animals of this herd, possessing as they do,

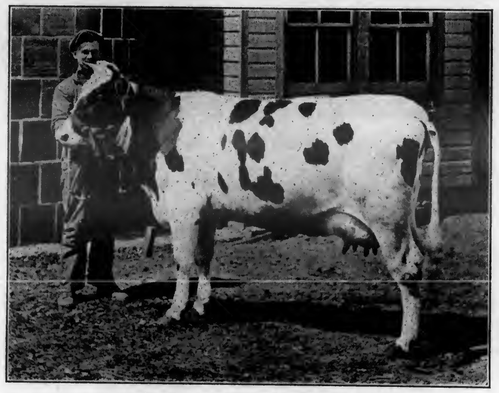
The Deysher herd is under Federal supervision and is periodically tuberculin tested. The dairy manager is Clark Berry who for several years was with Stevens Brothers and later with Ward Stevens. Under his care the animals of this herd, possessing as they do,

INTENTIONAL SECOND EXPOSURE

producing blood and characterized by high-class individuality, will be heard from in official work.



You may expect that there would be an expensive set of buildings on this farm, but you will be disappointed in your expectations. The buildings are of

Beautiful Josephine 3d—Grand Champion at Minnesota State Fair when only a yearling, first prize senior yearling at the National Dairy Show and first prize senior yearling at the Fargo Interstate Fair 1921.

wood and are built for business instead of for show. There are electric lights, litter carriers and several good silos. The drinking water is first class and is obtained from a well 114 feet deep in which stands 99 feet of water. The in-take is 65 feet deep and the water is conveyed by air pressure to the barns and house. The cows are stanchioned but the calves. heifers and young bulls have commodious stalls and when the alterations now going on are completed there will be plenty of stalls for different classes of animals and for the test cows. One of the barns will be for test cows only and as this barn was originally planned to hold 50 horses it can be seen there will be lots of room. In the cow barn, there will be stanchions on each side, the cattle facing outward. The barn is well lighted, has plenty of windows on both sides which insures sunlight and which will help keep the barn healthy. At the present time no year work is being done but it is planned to take up long time work a little later.

The Deysher herd is still in the making, but, from the standpoint of individuality and bloodlines, the foundation has been laid deep and wide. The bull at its head is siring animals of choice conformation and his daughters in milk are showing that they possess

ECO-SYLV MECHTHILDE

Eco-Sylv Mechthilde, 80 lb. milk in a day, over 70 lb milk in a day for 22 consecutive days. 17.39 lb. butter in seven days, 71 24 lb. in 30 days. 531.2 lb. milk in seven days, 2,224 lb. milk in 30 days, Pennsylvania state records for a yearling.

that desired characteristic, capacity to produce. Its owner is a capital judge and an enthusiastic believer in the purebred black and white cow and we believe the time is not far distant when this herd will rank with the best of the famous herds of the Keystone State.

She Loves a Holstein

THE newly appointed director of the Glenn-Colusa Irrigation District, the third largest irrigation district in the county is a woman, Miss California Gibson. Her appointment is bound to be of considerable interest to all owners of Holsteins for Miss Gibson is the owner of the great Gibson Herd, one of the best black and white herds in California. Miss California Gibson is a sister to the late Gion Gibson, whose lamented death last December left her in sole charge of the 2,177 acre Gibson ranch, valued at a half-million dollars. Since the death of her father in 1906 she and her brother have managed the property.

The Gibson ranch has a herd of 120 registered Holstein-Friesians, a 100 acre alfalfa field and a whole section in rice.

Mr. Gibson was a graduate of the engineering course of Stanford University. He was very much interested in machinery and installed and operated on the ranch a machine shop valued at $10,000. Miss Gibson was interested in stock, much more than in any other ranch department. Her brother had been one of three directors of the fifteen million dollar Glenn-Colussa Irrigation District with its 103,000 acres in Glenn and Colusa Counties, California. It is a position of high responsibility for upon its successful management depends the welfare of a number of towns and villages in the two counties. When it became necessary to provide a successor to Mr. Gibson a politician in the district remarked that "California Gibson is the best qualified candidate, but she is a woman." The women of the district heard of this slur on their sex, held a mass meeting on January 26th, after which they organized an automobile parade, visiting each Supervisor and demanding Miss Gibson's election to succeed her brother, and on January 28th she was appointed by the board of supervisors.

The father of Miss Gibson bought his first land from the government in 1854. His daughter has a natural liking for farm life. In her early days she delighted to get on a horse early in the morning and superintend the work of the men operating the eight-mule-teams. She never cared for society although she was educated at the best girls school of that time where the more successful of the large ranchers of that day were accustomed to send their daughters to be "finished."

The Dairy Industry

AT the meeting of the executive committee held in the offices of Secretary Wallace recently, the World's Dairy Congress adopted a program for the meeting in the fall of 1923. Dean Van Norman, who is president, summarizes the scope of the organization as embracing four distinct yet inter-related lines of activity. They are: research and education, industry and economics, regulation and control, national health.

A few figures, with the national census as their authority, will give an idea of the importance of the congress. These show that America has 31,400,000 dairy cattle valued at $1,900,000,000. The number of farms given as maintaining dairy cattle is 4,567,000, out of a total number of 6,448,000 in the United States. It is estimated that each farm averages 148.2 acres, which means that there are 677,000,000 acres in the dairy industry of the land. The value of these farms, including permanent improvements and machinery for operation is said to average $10,248 and aggregate $47,000,000. The value of dairy products from this little national industry is put at $2,000,000,000 annually. The number of people who are vitally interested in these farms, herds and milk checks can hardly be estimated. And at the same time it is almost impossible to compute the value of the investments in equipment, and machinery for manufacture and marketing the product in its many forms. Naturally the great bulk of the herds that are classed as dairy cattle, in this report, are grades. Some writer has said that seventy-five per cent of the dairy cattle in this country are grades. A little arithmetic puts the value per head at less than seventy dollars, which is hardly startling. But the encouraging point in the matter is that these grade dairy farmers soon become dissatisfied with grades and after serving their apprenticeship turn to the real dairy cow. They are our best prospects for purebreds. Many a breeder who is successful and recognized as a leader to-day will tell you of his humble start with grades.

When one pauses to think of the vastness of dairying as an industry, of its vital importance in human development and welfare, and of its place in American agriculture, he will not doubt for a moment the importance of the field and the possibilities for the World's Dairy Congress. This is further emphasized by a comparison with other industries far less important, yet protected and promoted by complex and far reaching organizations. It is certainly fitting that the work of the Congress have the support of every breeder who is optimistic and progressive.

"What is it?" quizzed the Sunday-school teacher, "that binds us together and makes us better than what we are by nature?"

"Corsets," peeped Tiny Tootsie.

"Sonny," said the old man, "I'm surprised that you should tease that cat in that way."

"Why," replied the bad boy, "do yer know a better way?"

Ninteen State Fairs To Feature Holstein-Friesian Calf Club Work

NINETEEN states in all have made application for the special Holstein-Friesian calf club offer at state fairs this season. This means that nineteen of the state fairs will make a special feature of calf clubs this fall.

Six more states did not qualify for special calf club aid due to various reasons, even though they had the numbers. However, these states will make special effort to excel in county exhibits.

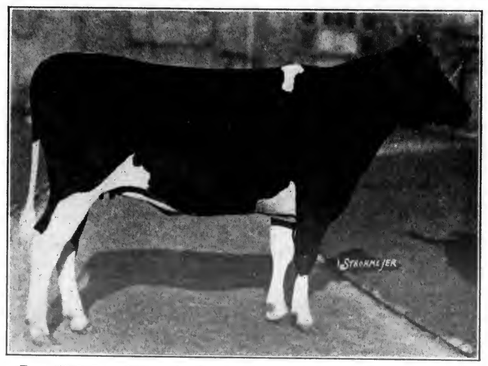
At the present time it is estimated that fully 3,700 boys and girls in the nineteen states heard from will own and care for Holstein calves this summer. As the season progresses more will enroll and swell our ranks of Junior Breeders.

A CALF CLUB BOY AND HIS PRIZE-WINNING ANIMAL

This particular picture was taken at the Virginia State Fair, Richmond, Va., but the condition of the animal and the pride of ownership shown by the boy are typical of calf club work.

Calf club members everywhere are now putting their calves on feed for the fall shows. In most cases they are raising them inside of the barn, realizing that this is by far the best practice. The right kind of feeds are being fed to grow winners, and good quality will be the reward for such efforts.

The *Holstein-Friesian Calf Club Manual* recently published contains valuable articles on feeding and fitting by experienced Holstein breeders. Calf club leaders can obtain copies of this bulletin by writing to the Extension Service, Holstein-Friesian Association of America, 910 S. Michigan Ave., Chicago, Ill.

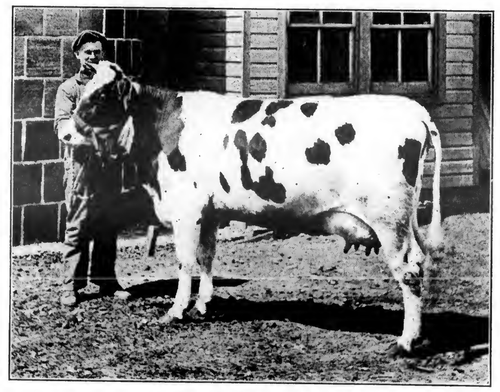


Many of our calf club members are looking forward to the National Dairy Show, the Waterloo Dairy Congress, the Eastern States Exposition or the Pacific International. The Holstein-Friesian Association of America is providing special prizes for all of the four mentioned shows. EARL J. COOPER,

Holstein-Friesian Association of America.

Four things a man must learn to do,
"If he would make his record true;
To think without confusion clearly,
To act from honest motives purely,
To love his fellow man sincerely,
To trust in God and heaven securely."

producing blood and characterized by high-class individuality, will be heard from in official work.



You may expect that there would be an expensive set of buildings on this farm, but you will be disappointed in your expectations. The buildings are of

Beautiful Josephine 3d—Grand Champion at Minnesota State Fair when only a yearling, first prize senior yearling at the National Dairy Show and first prize senior yearling at the Fargo Interstate Fair 1921.

wood and are built for business instead of for show. There are electric lights, litter carriers and several good silos. The drinking water is first class and is obtained from a well 114 feet deep in which stands 99 feet of water. The in-take is 65 feet deep and the water is conveyed by air pressure to the barns and house. The cows are stanchioned but the calves. heifers and young bulls have commodious stalls and when the alterations now going on are completed there will be plenty of stalls for different classes of animals and for the test cows. One of the barns will be for test cows only and as this barn was originally planned to hold 50 horses it can be seen there will be lots of room. In the cow barn, there will be stanchions on each side, the cattle facing outward. The barn is well lighted, has plenty of windows on both sides which insures sunlight and which will help keep the barn healthy. At the present time no year work is being done but it is planned to take up long time work a little later.

The Deysher herd is still in the making, but, from the standpoint of individuality and bloodlines, the foundation has been laid deep and wide. The bull at its head is siring animals of choice conformation and his daughters in milk are showing that they possess

ECO-SYLV MECHTHILDE

Eco-Sylv Mechthilde, 80 lb. milk in a day, over 70 lb milk in a day for 22 consecutive days. 17.39 lb. butter in seven days, 71 24 lb. in 30 days. 531.2 lb. milk in seven days, 2,224 lb. milk in 30 days, Pennsylvania state records for a yearling.

that desired characteristic, capacity to produce. Its owner is a capital judge and an enthusiastic believer in the purebred black and white cow and we believe the time is not far distant when this herd will rank with the best of the famous herds of the Keystone State.

She Loves a Holstein

THE newly appointed director of the Glenn-Colusa Irrigation District, the third largest irrigation district in the county is a woman, Miss California Gibson. Her appointment is bound to be of considerable interest to all owners of Holsteins for Miss Gibson is the owner of the great Gibson Herd, one of the best black and white herds in California. Miss California Gibson is a sister to the late Gion Gibson, whose lamented death last December left her in sole charge of the 2,177 acre Gibson ranch, valued at a half-million dollars. Since the death of her father in 1906 she and her brother have managed the property.

The Gibson ranch has a herd of 120 registered Holstein-Friesians, a 100 acre alfalfa field and a whole section in rice.

Mr. Gibson was a graduate of the engineering course of Stanford University. He was very much interested in machinery and installed and operated on the ranch a machine shop valued at $10,000. Miss Gibson was interested in stock, much more than in any other ranch department. Her brother had been one of three directors of the fifteen million dollar Glenn-Colussa Irrigation District with its 103,000 acres in Glenn and Colusa Counties, California. It is a position of high responsibility for upon its successful management depends the welfare of a number of towns and villages in the two counties. When it became necessary to provide a successor to Mr. Gibson a politician in the district remarked that "California Gibson is the best qualified candidate, but she is a woman." The women of the district heard of this slur on their sex, held a mass meeting on January 26th, after which they organized an automobile parade, visiting each Supervisor and demanding Miss Gibson's election to succeed her brother, and on January 28th she was appointed by the board of supervisors.

The father of Miss Gibson bought his first land from the government in 1854. His daughter has a natural liking for farm life. In her early days she delighted to get on a horse early in the morning and superintend the work of the men operating the eight-mule-teams. She never cared for society although she was educated at the best girls school of that time where the more successful of the large ranchers of that day were accustomed to send their daughters to be "finished."

The Dairy Industry

AT the meeting of the executive committee held in the offices of Secretary Wallace recently, the World's Dairy Congress adopted a program for the meeting in the fall of 1923. Dean Van Norman, who is president, summarizes the scope of the organization as embracing four distinct yet inter-related lines of activity. They are: research and education, industry and economics, regulation and control, national health.

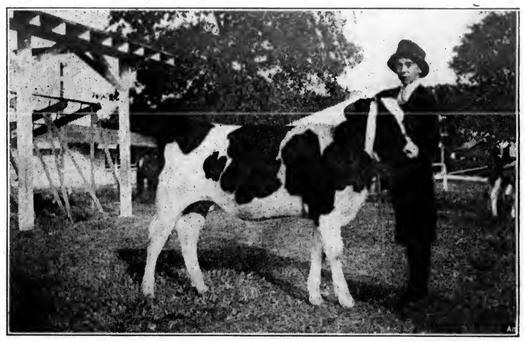
A few figures, with the national census as their authority, will give an idea of the importance of the congress. These show that America has 31,400,000 dairy cattle valued at $1,900,000,000. The number of farms given as maintaining dairy cattle is 4,567,000, out of a total number of 6,448,000 in the United States. It is estimated that each farm averages 148.2 acres, which means that there are 677,000,000 acres in the dairy industry of the land. The value of these farms, including permanent improvements and machinery for operation is said to average $10,248 and aggregate $47,000,000. The value of dairy products from this little national industry is put at $2,000,000,000 annually. The number of people who are vitally interested in these farms, herds and milk checks can hardly be estimated. And at the same time it is almost impossible to compute the value of the investments in equipment, and machinery for manufacture and marketing the product in its many forms. Naturally the great bulk of the herds that are classed as dairy cattle, in this report, are grades. Some writer has said that seventy-five per cent of the dairy cattle in this country are grades. A little arithmetic puts the value per head at less than seventy dollars, which is hardly startling. But the encouraging point in the matter is that these grade dairy farmers soon become dissatisfied with grades and after serving their apprenticeship turn to the real dairy cow. They are our best prospects for purebreds. Many a breeder who is successful and recognized as a leader to-day will tell you of his humble start with grades.

When one pauses to think of the vastness of dairying as an industry, of its vital importance in human development and welfare, and of its place in American agriculture, he will not doubt for a moment the importance of the field and the possibilities for the World's Dairy Congress. This is further emphasized by a comparison with other industries far less important, yet protected and promoted by complex and far reaching organizations. It is certainly fitting that the work of the Congress have the support of every breeder who is optimistic and progressive.

"What is it?" quizzed the Sunday-school teacher, "that binds us together and makes us better than what we are by nature?"

"Corsets," peeped Tiny Tootsie.

"Sonny," said the old man, "I'm surprised that you should tease that cat in that way."



"Why," replied the bad boy, "do yer know a better way?"

Ninteen State Fairs To Feature Holstein-Friesian Calf Club Work

NINETEEN states in all have made application for the special Holstein-Friesian calf club offer at state fairs this season. This means that nineteen of the state fairs will make a special feature of calf clubs this fall.

Six more states did not qualify for special calf club aid due to various reasons, even though they had the numbers. However, these states will make special effort to excel in county exhibits.

At the present time it is estimated that fully 3,700 boys and girls in the nineteen states heard from will own and care for Holstein calves this summer. As the season progresses more will enroll and swell our ranks of Junior Breeders.

A CALF CLUB BOY AND HIS PRIZE-WINNING ANIMAL

This particular picture was taken at the Virginia State Fair, Richmond, Va., but the condition of the animal and the pride of ownership shown by the boy are typical of calf club work.

Calf club members everywhere are now putting their calves on feed for the fall shows. In most cases they are raising them inside of the barn, realizing that this is by far the best practice. The right kind of feeds are being fed to grow winners, and good quality will be the reward for such efforts.

The *Holstein-Friesian Calf Club Manual* recently published contains valuable articles on feeding and fitting by experienced Holstein breeders. Calf club leaders can obtain copies of this bulletin by writing to the Extension Service, Holstein-Friesian Association of America, 910 S. Michigan Ave., Chicago, Ill.

Many of our calf club members are looking forward to the National Dairy Show, the Waterloo Dairy Congress, the Eastern States Exposition or the Pacific International. The Holstein-Friesian Association of America is providing special prizes for all of the four mentioned shows. EARL J. COOPER,

Holstein-Friesian Association of America.

Four things a man must learn to do,
"If he would make his record true;
To think without confusion clearly,
To act from honest motives purely,
To love his fellow man sincerely,
To trust in God and heaven securely."

INTENTIONAL SECOND EXPOSURE

CONVENTION SIDELIGHTS

PRESS accommodations at the 1922 convention far surpassed those of previous years. The representatives of the papers were in a position where they could see and hear not only the platform speakers, but also any delegate or visitor who voiced his sentiments.

The splendid educational exhibits of the Kansas, Missouri and Nebraska state colleges and the United States Department of Agriculture deserve more lengthy mention than we are able to give them at this time. The value of purebred sires, of cow testing association work and of balanced combinations of farm feeds were strongly emphasized.

Do dairymen consume dairy products? The question would be answered in the affirmative by anyone who was near the counter of the local milk distributing company in the Kansas City Convention Hall. Milk, buttermilk, ice cream and cheese sandwiches were in great demand, were of good quality and sold at a reasonable price.

There was no mention to the assembled delegates of the Surplus or the Reserve Fund or any predictions as to the amount likely to be obtained from the increase of transfer fees nor any definite estimates or plans as to how the increase should be disbursed. In the matter of the Reserve Fund, at least, there was quite a difference from the meetings of recent years.

The difference between the legal mind and that of the ordinary man, was strongly brought out in Mr. Aitken's remarks on the attendance at the meeting. The speaker claimed the 1922 event was a greater success than that of previous years because there was more out-of-state visitors present than there had been out-of-state visitors at previous annual meetings. Considering that there were only 163 members of the National Association in Missouri at the time the proportionate number of delegates were ascertained, contrast this with the membership of any other state in which the meeting has ever been held and then tell, if you can, if there was any attendance at all this year, how it could be otherwise?

For the first time since the trouble has arisen, there was no mention of the Cabana case from the platform, nor was there any reference to the Brady injunction.

One of the handiest things seen at the recent convention was *Capper's Daily Holstein-Friesian*, an eight-page paper with pages the size of those of THE HOLSTEIN BREEDER AND DAIRYMAN illustrated with pictures of prominent visitors and noteworthy animals. The events of the day before and comments by visitors appeared in the next morning's issue. Professor Frandsen, who was in charge of the news gathering and of the Capper Farm Press booth, received many commendations.

The only lady delegate was Mrs. Medill McCormick, wife of Medill McCormick, United States Senator for Illinois. Mrs. McCormick takes an active part in the management of Rock River Farms and is greatly interested in dietetics as well as in the breeding of purebred Holstein-Friesians. Mrs. McCormick took her place with the Illinois delegation and duly voted when the roll was called.

The trip to the Pickering Farms was scheduled for four-thirty, Wednesday afternoon. The meeting did not adjourn until after six o'clock. Some did not care for this thirty-mile trip. There had been local showers, a number of the autos stuck in the mud and some of the intending trippers did not get there or had to walk a mile or more. There was a lot going on, and many were too tired to add this event to those of a long, hot, busy day.

The animals were judged in the open street, the traffic being diverted for a couple of hours. This enabled all who wished to see the competing state herds and to listen to the explanations of Judges Moscrip, Stevens and Haeger.

SUGGESTIONS FOR FUTURE MEETINGS

There should be a complete roll call of the delegates, before any vote is taken. Delegates, press representatives and the members in attendance should know the proportionate vote value of each delegate present.

While perhaps a subject for individual state determination the unit rule—all members from a particular state binding themselves before meeting to vote similarly—should be avoided, this is too much like machine politics and suppression of individual thought, particularly as resolutions are sprung on the meeting without any opportunity of premeeting discussion.

There should be some limitation to length of speeches of the delegates and directors. Any speaker on a resolution who cannot present his case in 15 minutes had better boil down his arguments.

The Banquet at Kansas City

THE banquet given by the Kansas and Missouri Holstein-Friesian Associations to the delegates and the visitors was held at the Hotel Baltimore, Thursday June 8. The day had been hot and, partly on this account and partly because so many had attended the barbecue at the Pickering Farms the evening before there were only 200 present. Those who did attend had a royal time and a splendid feed. President Lowden was toastmaster but had to leave early. In his opening talk he paid tribute to the Kansas City authorities, to Commissioner Catts and to the officials and members of the Kansas and Missouri Associations for the royal welcome and perfect arrangements for the entertainment of the guests. The first delegate meeting of the Holstein-Friesian Association of America, has passed into history. He believed that the actions taken at it would improve the association so that it would be almost, if not quite, worthy of the great Black and White Cow. The President announced that he had appointed as a committee to plan the program for the next convention: H. V. Noyes, Kenwood, N. Y., Fred Pabst, Oconomowoc, Wis. and, Dr. D. B. Armstrong, Watertown, N. Y. The President then turned the office of toastmaster over to the first speaker, F. W. A. Vesper, President of the St. Louis Chamber of Commerce, whose subject was Gasoline vs. Milk.

He voiced a thought with which his hearers thoroughly agreed:—Gasoline was too high in price and milk too low. Another of his axioms was "Get acquainted with your neighbor breeder, you might like him."

The subject of Dr. H. J. Waters, Editor of the Kansas City Star, was "The Inevitability of Dairying." While physically possible it was not humanly possible to maintain the fertility of the land without the keeping of livestock. He said that a cow making 30,000 lb. milk in a year was producing as much dry matter as ten average well-fed steers. He told of the comparative amount of fertility carried out of the state by dairy products, grain, meat and so forth and showed that land was depleted very little by the exportation of the products of the dairies. He slightly criticised the portion of Dr. McCullom's talk that suggested going back to coarser foods, said that history of the past centuries showed that the trend was toward refinement in foods, that coarse foods were always the portion of slaves, serfs and servants, and it was impossible to change human nature. He suggested that a greater consumption of dairy products would do more for the race than a return to coarser foods. The population of the world had doubled in 125 years and if the world's population again doubled in the next 125 years there would be a greater demand for food with consequent higher prices. Only continual employment the year around will keep the families on the farm and dairying gives the opportunity for continuous employment.

The Hon, C. W. Pugsley, U. S. Assistant Secretary of Agriculture, finished with a bright, brief talk. When a boy on the farm on inquiring why his father did certain things around the land, feeding, etc., about the only answer he could get was, "I have learned from experience and you will have to do the same." He finally made up his mind to leave agriculture and entered a college engineering course. Lessons were given in the agricultural department on stock judging for which he registered, having been told that it was a simple course and would give him counts toward graduation. At the first lesson the professor, in showing which was the best of the two steers, told them the reasons *why* one was a better feeder and a more profitable animal than the other. Mr. Pugsley was so interested that he completed the course and then the next semester became an agricultural student. From his own experience Mr. Pugsley drew the lesson, "teach the child why and success will follow" which will apply to calf club work, which he called the greatest extension work the Holstein-Friesian Association has ever undertaken.

The Open Forum at Kansas City

ON the Tuesday evening of the convention, an open forum was arranged where members and delegates could express their views. This was the plan but it did not quite work out, as there were very few delegates present and none of the officers excepting the secretary, assistant secretary, and Director Kelley. The first part of the program consisted of showing a number of films depicting famous animals of to-day and officers of the association in days past.

At 9:45 Secretary Houghton called the meeting to order for the speaking, and mentioned the calf club work of the association, for which a sum of $10,000 was appropriated last year. Wm. Standish, one of the Ohio delegates, spoke on calf club work as being very important at county fairs, and said that calf club work was of great value considering the money cost. He mentioned the work of the Judging Committee on training judges and said that the training of county fair judges was fully as important.

Judge Peasley, of Connecticut, brought up an important subject when he urged culling of purebred herds and said that the registration papers of many Holsteins should be canceled for unprofitability. Mr. A. A. Hartshorn said that breeders should have respect for their occupation and should breed for better animals, not for better prices. If better animals were developed the prices would take care of themselves. J. C. Marlow, of Mankato, Minn., praised calf club work. He suggested putting Holstein publicity matter in public schools. When Mr. Marlow touched on T. B. work and said that breeders should demand a retest on condemned valuable cattle, and that veterinarians may and do make mistakes, he touched a sympathetic chord in the hearts of his hearers. Axel Hansen said calf club work was bringing permanent results in Minnesota, and that work through the children counted for more than it did through their parents.

J. M. Kelley talked for considerable length on his hobby, "Advertising Holstein Milk." He said the price of competitive milk on the open market governs the value of animals of the breed, that if Holstein milk sold for less than Guernsey and Jersey milk, the Holstein purebred cows would sell for less than the purebred animal of the competing breeds. Dairy business needs organization and salesmanship, and Mr. Kelley believes that milk from black and white cows should be advertised as Holstein milk, and if properly advertised it would sell at a premium.

One of the members present said that a state association or some one responsible to the state or national association should inspect all cattle going out of a state into new territory; that new territory should be regarded as a sacred trust; that the South and Southwest were the most fertile fields for Holstein development and for the work of the National Association Extension department.

In summing up, Secretary Houghton suggested that the "culling" problem might be solved in following the Holland method, which allowed preliminary registration when the animal was young, and full registration when quality was demonstrated either by production or by type and development.

Employer—"My mother-in-law is coming for a long visit to-morrow. Here is a list of her favorite dishes."

Cook—"Yes, sir."

Employer—"Well, the first time you give us one of these you'll get fired."

"You should stand by the grocer," argued the Business Booster.

"I always do when he is weighing my purchases," replied Mrs. Housekeeper.

McCullom's Discoveries

IN Dr. E. V. McCullom's address at the Kansas City Convention, the distinguished scientist threw light on a number of questions which had puzzled some of his hearers, who, without making a study of the subject, had given some thought to dietetics.

Fifteen years ago breeders and cattle men knew more about the effects of certain food combinations than did scientists. The human body is very sensitive to chemical combinations in foods and to the absence or presence of vitamines in the everyday diet. For a number of years, scientists in this and other countries have been studying food combinations and now can definitely predict that certain combinations will bring good or poor results.

At the present time experimentors have found there are four vitamines which for want of names have been labeled, "A" "B" "C" and "D." "D" has been discovered during the past year. All four of these vitamines are found in the leafy parts of plants and in uncooked milk.

There are four distinct types of diet which insure growth and reproduction. First, the strictly carnivorous, that of lions, tigers, beasts and birds of prey. These eat *all* parts of animals.

Second, the strictly vegetable diet, i. e., grass and herbage, that of grazing and browsing animals.

Third, the properly balanced omnivorous type. This is the one that should be eaten by civilized man.

Fourth, the oriental type of diet, common in China and Japan where quantities of leafy vegetables form a large portion of the daily diet.

One illustration of the difference is development caused by diet is the difference between the inhabitants of northern China and those of southern China. The northern Chinese eat millet and wheat, generally ground with the outer covering of the kernel. The main portion of the diet of the people of southern China is polished rice. The northern Chinese are quite little the larger.

Japanese children in the United States are considerably larger, age for age, than children in Japan. This is because children raised in this country have a better balanced diet and more food than they have in their own country. Much of the food we eat to-day is supercleaned and the tendency is toward overrefinement.

Extensive nutrition investigations in America and Great Britain show a deplorable state of affairs. Fifty per cent of the children in America suffer more or less from rickets and kindred diseases, and seventy per cent in Great Britain show underdevelopment and poor quality of teeth, due to the deficiency of vitamines, particularly the fourth discovered and of certain mineral compounds, such as calcium and phosphates in their food.

Good teeth must be developed, partly before birth, by the proper feeding of the mother, as the teeth are already formed in the head when the child is born. Children should have properly balanced food containing certain mineral compounds to insure proper formation and full development of the second or permanent teeth. Diets consisting of supercleaned cereals, muscle cuts of meat, potatoes and sugar, proved a failure in animal feeding. Many humans let their daily diet consist largely of these foods. Investigation of old burying places shows that our ancestors had far better teeth than we have to-day.

Our ancestors did not eat the quantities of highly cleaned cereals we do to-day. In fact, these were not grown to the extent they are now, because with the farm machinery of those days they could not keep down the growth of grass which was the great enemy of cereal growing until modern farm machinery was invented. Since the time of such invention, cereal growing and cereal consumption have greatly increased.

Every one should eat green vegetables in the form of salad or pot herbs at least once a day, and at least a quart of milk, all of which, however, need not be in liquid form.

Dairymen should get behind an educational campaign showing the value of dairy products, and in their advertising, should not slur their competitors' products.

At the conclusion of his talk, Dr. McCullom answered questions. He paid his respects to yeast and commercial vitamine compounds. Yeast, he said, did not contain all four of the vitamines, and much of the good effects attributed to the use of yeast as medicine was due to the fact that it set up fermentation in the body, and in that way often relieved constipation. Rats fed on diets that did not contain butter fat or equivalent food died even when yeast was added to their feed. The speaker brought smiles to the face of his audience when he told of rat-feeding experiments with the commercial vitamine preparations, several of which he named. Rats fed the prescribed dose, five times and ten times the dose, died, and when the dose was increased to twenty times the prescribed amount, the rats persisted in dying.

KANSAS STATE EXHIBIT

WINNER OF SECOND PRIZE AT THE HEART OF AMERICA HOLSTEIN SHOW, KANSAS CITY

Cow Testing Associations in the Western States

BY J. E. DORMAN.

THE dairymen in the Western States are recognizing the value of keeping records of production and feed costs. They are becoming convinced that good producing herds cannot be built up without them, and are responding to the call of the Extension Departments of the Agricultural Colleges, through the county agricultural agents, in a very encouraging way.

Ten years ago there were only two cow testing associations west of the Kansas-Nebraska line in active operation. These are still active and are among the strongest associations in the country. During the past year many new ones have been added to the list, and there is room for many more which may be organized in the near future.

At the present time there are 42 associations, representing about 25,000 cows, sending in monthly summary reports to the Western Office of the Dairy Division, U. S. Department of Agriculture, Salt Lake City, Utah, in comparison with 17 associations, representing 8,000 cows, last year. These monthly summary reports are compiled and mailed to the officers of each association, the testers, county agents and to the extension offices in each state which tends to keep the work constantly before everyone interested. In addition to the summary reports sent out, short notes, giving conditions, prices of feed, stock for sale, etc., from each section, supplements the report and has been found interesting to many.

The testers in the western associations are not just bookkeepers, but are rendering a real service to the members in many ways. For instance, last year a survey was undertaken to determine how many herds in the associations were using purebred bulls. The report was very disappointing, as there were many, apparently high producing herds, still being sired by grade bulls. A campaign throughout the West was immediately started to eliminate the scrub bulls from all association herds. The response from the testers was very encouraging, and resulted during the year in the elimination of all scrub and grade bulls in 18 of the associations representing approximately 7,000 cows. The testers also advised the individual dairyman concerning better feeding, which has resulted in the building of several hundred silos for both summer and winter feeding. Nor, do they neglect the sanitary side of dairying, and a better product is being marketed which in most cases results in a larger income. Just at present there is a movement started among the testers to have all herds in the association on the accredited list, and some progress is being made in that direction.

All the work outlined means much in the establishment of a permanent dairy industry in the Western States, and no doubt will have a tremendous influence on future herds in this section.

From the work that is being done, it may be surmised that the testers are unusually high-class men, and it is true. Many of them are four-year graduates of agricultural colleges, and while the average salaries are low for such men, some of them are getting rich experience and are preparing themselves for higher positions, where such experience will be a valuable asset. Salaries range from $1,200 to $2,000 per annum with board and lodging. Many of the testers starting a few years ago at a low salary are now occupying positions that pay from $2,500 to $3,000 per annum.

Does it pay to have a tester that can be a real adviser to the members? The dairymen say it does. In looking over the production records of all the cow testing associations in the United States, it will be found that the associations in the Western States exceed all other sections in average production. Is it because we have better cows, better feed, better climate, or what? At any rate, the tester is an important factor.

Show Your Holsteins

THE dates for the two great cattle shows of the land are September 25 to October 1st at Waterloo, Iowa, the Dairy Cattle Congress, and the National Dairy Show at St. Paul, Minn. on October 7-14. J. P. Eves of Waterloo, is superintendent of the cattle department of both shows. A few changes are announced in the classes. The junior bull and junior heifer calf classes are discarded. A new group will include a "get of sire" with at least two of the four cows in milk and another "get of sire" shows the records of five daughters. Recognition of the grade cow is given by the National through five classes for her. These are: Cows producing 500 pounds of fat or over in the year. Cows producing from 350 to 500, group of five cows from one test association. Group of four, the "get of sire" and the champion class. The premium list shows more liberal cash prizes than ever before.

Let's show our appreciation and coöperation by showing.

Correction

MR. MALCOLM H. GARDNER, Supt. of Advanced Registry, writes that an error crept into his figures on long-time test work, as given in his report this year. The average milk production of the junior two-year-olds on long-time test should be 14,242.3 lb. milk instead of 10,078.4; the average fat, 3.37%. These figures appear in the upper right-hand corner of page 7 of the superintendent's report, and the summing up paragraph should read:

"This herd of 2,409 animals, of which nearly one-half were heifers with first or second calves, produced in an average of 345 days, 40,920,856.2 lb. milk containing 1,373,693.14 lb. butter fat, thus showing an average of 3.36 % fat. The average production for each animal was 16,986.7 lb. milk containing 570.23 lb. fat."

"How much shall we tell our daughter?" a worried mother writes.

"Not a thing. Not a thing—it can't be done."

The Optimist—I hear Brown is going to be married.

The Pessimist—Serves him right. I never did like that fellow.

McCullom's Discoveries

IN Dr. E. V. McCullom's address at the Kansas City Convention, the distinguished scientist threw light on a number of questions which had puzzled some of his hearers, who, without making a study of the subject, had given some thought to dietetics.

Fifteen years ago breeders and cattle men knew more about the effects of certain food combinations than did scientists. The human body is very sensitive to chemical combinations in foods and to the absence or presence of vitamines in the everyday diet. For a number of years, scientists in this and other countries have been studying food combinations and now can definitely predict that certain combinations will bring good or poor results.

At the present time experimentors have found there are four vitamines which for want of names have been labeled, "A" "B" "C" and "D." "D" has been discovered during the past year. All four of these vitamines are found in the leafy parts of plants and in uncooked milk.

There are four distinct types of diet which insure growth and reproduction. First, the strictly carnivorous, that of lions, tigers, beasts and birds of prey. These eat *all* parts of animals.

Second, the strictly vegetable diet, i. e., grass and herbage, that of grazing and browsing animals.

Third, the properly balanced omnivorous type. This is the one that should be eaten by civilized man.

Fourth, the oriental type of diet, common in China and Japan where quantities of leafy vegetables form a large portion of the daily diet.

One illustration of the difference is development caused by diet is the difference between the inhabitants of northern China and those of southern China. The northern Chinese eat millet and wheat, generally ground with the outer covering of the kernel. The main portion of the diet of the people of southern China is polished rice. The northern Chinese are quite little the larger.

Japanese children in the United States are considerably larger, age for age, than children in Japan. This is because children raised in this country have a better balanced diet and more food than they have in their own country. Much of the food we eat to-day is supercleaned and the tendency is toward overrefinement.

Extensive nutrition investigations in America and Great Britain show a deplorable state of affairs. Fifty per cent of the children in America suffer more or less from rickets and kindred diseases, and seventy per cent in Great Britain show underdevelopment and poor quality of teeth, due to the deficiency of vitamines, particularly the fourth discovered and of certain mineral compounds, such as calcium and phosphates in their food.

Good teeth must be developed, partly before birth, by the proper feeding of the mother, as the teeth are already formed in the head when the child is born. Children should have properly balanced food containing certain mineral compounds to insure proper formation and full development of the second or permanent teeth. Diets consisting of supercleaned cereals, muscle cuts of meat, potatoes and sugar, proved a failure in animal feeding. Many humans let their daily diet consist largely of these foods. Investigation of old burying places shows that our ancestors had far better teeth than we have to-day.

Our ancestors did not eat the quantities of highly cleaned cereals we do to-day. In fact, these were not grown to the extent they are now, because with the farm machinery of those days they could not keep down the growth of grass which was the great enemy of cereal growing until modern farm machinery was invented. Since the time of such invention, cereal growing and cereal consumption have greatly increased.

Every one should eat green vegetables in the form of salad or pot herbs at least once a day, and at least a quart of milk, all of which, however, need not be in liquid form.

Dairymen should get behind an educational campaign showing the value of dairy products, and in their advertising, should not slur their competitors' products.

At the conclusion of his talk, Dr. McCullom answered questions. He paid his respects to yeast and commercial vitamine compounds. Yeast, he said, did not contain all four of the vitamines, and much of the good effects attributed to the use of yeast as medicine was due to the fact that it set up fermentation in the body, and in that way often relieved constipation. Rats fed on diets that did not contain butter fat or equivalent food died even when yeast was added to their feed. The speaker brought smiles to the face of his audience when he told of rat-feeding experiments with the commercial vitamine preparations, several of which he named. Rats fed the prescribed dose, five times and ten times the dose, died, and when the dose was increased to twenty times the prescribed amount, the rats persisted in dying.

Winner of Second Prize at the Heart of America Holstein Show, Kansas City

Cow Testing Associations in the Western States

By J. E. Dorman.

THE dairymen in the Western States are recognizing the value of keeping records of production and feed costs. They are becoming convinced that good producing herds cannot be built up without them, and are responding to the call of the Extension Departments of the Agricultural Colleges, through the county agricultural agents, in a very encouraging way.

Ten years ago there were only two cow testing associations west of the Kansas-Nebraska line in active operation. These are still active and are among the strongest associations in the country. During the past year many new ones have been added to the list, and there is room for many more which may be organized in the near future.

At the present time there are 42 associations, representing about 25,000 cows, sending in monthly summary reports to the Western Office of the Dairy Division, U. S. Department of Agriculture, Salt Lake City, Utah, in comparison with 17 associations, representing 8,000 cows, last year. These monthly summary reports are compiled and mailed to the officers of each association, the testers, county agents and to the extension offices in each state which tends to keep the work constantly before everyone interested. In addition to the summary reports sent out, short notes, giving conditions, prices of feed, stock for sale, etc., from each section, supplements the report and has been found interesting to many.

The testers in the western associations are not just bookkeepers, but are rendering a real service to the members in many ways. For instance, last year a survey was undertaken to determine how many herds in the associations were using purebred bulls. The report was very disappointing, as there were many, apparently high producing herds, still being sired by grade bulls. A campaign throughout the West was immediately started to eliminate the scrub bulls from all association herds. The response from the testers was very encouraging, and resulted during the year in the elimination of all scrub and grade bulls in 18 of the associations representing approximately 7,000 cows. The testers also advised the individual dairyman concerning better feeding, which has resulted in the building of several hundred silos for both summer and winter feeding. Nor, do they neglect the sanitary side of dairying, and a better product is being marketed which in most cases results in a larger income. Just at present there is a movement started among the testers to have all herds in the association on the accredited list, and some progress is being made in that direction.

All the work outlined means much in the establishment of a permanent dairy industry in the Western States, and no doubt will have a tremendous influence on future herds in this section.

From the work that is being done, it may be surmised that the testers are unusually high-class men, and it is true. Many of them are four-year graduates of agricultural colleges, and while the average salaries are low for such men, some of them are getting rich experience and are preparing themselves for higher positions, where such experience will be a valuable asset. Salaries range from $1,200 to $2,000 per annum with board and lodging. Many of the testers starting a few years ago at a low salary are now occupying positions that pay from $2,500 to $3,000 per annum.

Does it pay to have a tester that can be a real adviser to the members? The dairymen say it does. In looking over the production records of all the cow testing associations in the United States, it will be found that the associations in the Western States exceed all other sections in average production. Is it because we have better cows, better feed, better climate, or what? At any rate, the tester is an important factor.

Show Your Holsteins

THE dates for the two great cattle shows of the land are September 25 to October 1st at Waterloo, Iowa, the Dairy Cattle Congress, and the National Dairy Show at St. Paul, Minn. on October 7-14. J. P. Eves of Waterloo, is superintendent of the cattle department of both shows. A few changes are announced in the classes. The junior bull and junior heifer calf classes are discarded. A new group will include a "get of sire" with at least two of the four cows in milk and another "get of sire" shows the records of five daughters. Recognition of the grade cow is given by the National through five classes for her. These are: Cows producing 500 pounds of fat or over in the year. Cows producing from 350 to 500, group of five cows from one test association. Group of four, the "get of sire" and the champion class. The premium list shows more liberal cash prizes than ever before.

Let's show our appreciation and coöperation by showing.

Correction

MR. MALCOLM H. GARDNER, Supt. of Advanced Registry, writes that an error crept into his figures on long-time test work, as given in his report this year. The average milk production of the junior two-year-olds on long-time test should be 14,242.3 lb. milk instead of 10,078.4; the average fat, 3.37%. These figures appear in the upper right-hand corner of page 7 of the superintendent's report, and the summing up paragraph should read:

"This herd of 2,409 animals, of which nearly one-half were heifers with first or second calves, produced in an average of 345 days, 40,920,856.2 lb. milk containing 1,373,693.14 lb. butter fat, thus showing an average of 3.36 % fat. The average production for each animal was 16,986.7 lb. milk containing 570.23 lb. fat."

"How much shall we tell our daughter?" a worried mother writes.

"Not a thing. Not a thing—it can't be done."

The Optimist—I hear Brown is going to be married.

The Pessimist—Serves him right. I never did like that fellow.

INTENTIONAL SECOND EXPOSURE

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

June 22, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Service

ALL connected with THE HOLSTEIN BREEDER AND DAIRYMAN are feeling real good over the feat of publishing the report of the recent delegate convention before it appeared in any other agricultural paper or breed journal. The entire report was wired from Kansas City and the rest of the paper was in type and considerable of it printed before the report came in the office. We are indebted both to our own office force and to the printers for their efforts to get this report in good shape and to get the paper out promptly. It was a clean scoop. THE HOLSTEIN BREEDER AND DAIRYMAN is a real live baby.

"Yes, the Steam Roller Worked Perfectly"

FOURTEEN OF THE SIXTEEN DIRECTORS of the Holstein-Friesian Association of America are either Politicians, Capitalists, Professional men or Sale Promotors, men who are not dependent for a livelihood upon the financial returns from the sale of milk and other dairy products or surplus stock.

Two and only *two* of the Sixteen Directors can be classed as *Breeders* and *Dairymen,* men who are directly dependent financially upon the return from their dairies.

Thanks to the steam roller and disfranchising the membership at St. Paul on October 11, 1921.

Another very noticeable fact with reference to the Board of Directors is that the breeders living in the states west of Kansas and including the Pacific Coast States are not represented. With Holstein interests so rapidly coming to the front on the Pacific Coast and in recognition of the splendid work that is being done by far western breeders we believe that in all fairness they should have a representative on the Board of Directors.

Thanks again to the well oiled political steam roller.

For thirty-seven years the members of the Holstein-Friesian Association of America have had a voice and a direct vote in controlling its affairs and until the past four years have met with no difficulty in selecting competent men to serve as directors who are willing to abide by the Constitution and By-Laws.

At the annual Convention in 1921 a committee composed chiefly of directors caused to be introduced at the Annual Convention the following amendment:

"The By-Laws of the Association may, from time to time, be altered, amended or repealed by the Board of Directors of the Association as the advisability of such action may become apparent."

Defeated in their efforts to have this amendment passed the directors caused to be called a Special Meeting at St. Paul on October 11, 1921, and were successful in disfranchising the membership by the adoption of the delegate form of Government.

At the Kansas City Convention we see the delegates disfranchised by having the offices of secretary, treasurer and Superintendent of Advanced Registry made appointive by the Board of Directors and not elective by the delegates. By this move Mr. Houghton, Mr. Gardner and Mr. Wing R. Smith were reduced to the ranks of just plain hired men responsible to the Board of Directors yet paid by and working for the breeders.

Thus we have seen our Association drift back in its form of government to the time of 1776, "Taxation without direct Representation."

Thanks to the well oiled Political steam roller.

A Very Serious Matter

FOR the past two or three years we have heard, at various times, the charge made that the Holstein-Friesian Association of America was conducting its business loosely and illegally.

Whatever the truth or falsity of this claim may be, the BREEDER AND DAIRYMAN believes that the time has come when the members of the Association *Should Know* whether or not the situation with regards to the illegality of our Board of Directors is true.

In our issue of June 8th, we printed the affidavit made by Paul T. Brady in the proceeding which he has instituted against the Association. In that affidavit is to be found a reference to the opinion written by Justice Sears, reading as follows:

> "There was no proceeding under Section 14 of the Membership Corporation Law to increase the number of directors from six to nine between the time of the filing of the certificate and the Philadelphia meeting of 1919. During that period the fundamental law of the Association limited the directorate to six. Likewise the increase of the Board at the Philadelphia meeting did not become legally effective until the filing of the certificate in the proper offices required by Section 14 of the Membership Corporation Law.
>
> "Even the Certificate of increase filed after the Philadelphia meeting is insufficient for the reason that it is not signed by a majority of the directors, but bears the signature as stated above of eight elected at the Philadelphia meeting, and of only three of the preceding directors, which latter three are themselves but de facto directors, being members of a board of nine which was only entitled to six. * * *"

THE BREEDER AND DAIRYMAN makes no claim to the possession of any legal knowledge, but the statement of Judge Sears seems to be so clear that even a plain every day breeder should have no difficulty in understanding it.

This affidavit also shows that when the Association was organized under Chapter 333 of the Laws of 1885, they were entitled to have six directors. When they were reincorporated under the membership corporation law in 1914 the certificate of reincorporation *Also* provided that they should have six directors.

The published list of officers of the Holstein-Friesian Association of America from June 3d, 1914 to June 2d, 1915, shows that *Nine Directors* were acting.

Each year from 1914 up to 1919 nine directors were serving the Holstein-Friesian Association as such, when as a matter of Law, the Association was *Only Entitled To Have And To Elect Six Directors.*

At the Philadelphia meeting in 1919 there was an attempt made to increase the number of directors from nine to sixteen. The term of office of three directors expired that year. Hence ten directors were elected to make the total number sixteen.

It is quite apparent from the statements of Judge Sears that this attempted change in the number of directors from nine to sixteen was *Not Legally Made,* and we trust that the Brady proceeding will establish by a plain, straightforward decision just how many directors this Association is entitled to have.

If the affairs of the Holstein-Friesian Association has been conducted by a Board of Directors that were illegally elected it stands to reason that whatever they may have done was illegal and every breeder has only to use his plain, common sense to know that this is true.

If matters have been conducted in this loose, illegal manner by an illegally elected Board of Directors, we believe the membership should place the responsibility right where it belongs because in so doing it has left our Association open to claims for damage which might easily result in a great multiplicity of lawsuits and the forfeiture of large sums of money belonging to the membership.

In the name of common sense, whatever else happens let us hope that the Brady proceeding will at least result in getting our Association affairs into the hands of a legally elected Board of Directors whose actions cannot be attacked by anyone on the basis of their illegality.

Just One More Move—That's All

THE membership were disfranchised at St. Paul. The delegates were disfranchised at Kansas City.

One more amendment to the By-Laws reading as follows, and it's all over:

Resolved: That the President and Vice-President serve for Life, and in case of Death such vacancy shall be filled by the Board; That the Board shall each year fill all vacancies as they may occur in the Board, and that all Association funds, receipts and disbursements shall be in the custody of and disbursed by the Chairman of the Executive Committee, who is hereby created "King of the Holstein Realm" with all the powers heretofore had and enjoyed by the Kaiser of Germany, his crown to be paid for out of transfer fees, with power to use the Reserve fund of $350,000.00 for a summer home to be located in some place where ice is unknown, and Holstein milk unobtainable."

Dairy Products Advertised

DESPITE the fact that much is said about the nonadvertising of milk and other dairy products, The Dairyman's League Coöperative Association, Inc., is doing good work along this line, and during the month of May expended approximately $40,000. Of this sum, $20,000 was for fluid milk, advertising in the metropolitan districts, $18,000 being used in the newspapers, and $2,000 for painted walls. Approximately $10,000 was spent for advertising condensed and evaporated milk, and a like sum on Dairyman's League Brand ice cream. This is reaching the consumer right where he lives.

The funds for this advertising campaign comes from a deduction of two cents per one hundred pounds, part of a charge made on every hundred pounds of milk handled by the association. The two cents is not taken every month, but is an average deduction.

We plan to tell more of the great work being done along this line in an early issue of THE HOLSTEIN BREEDER AND DAIRYMAN.

First Meeting of the New Board

THE first meeting of the new Board of Directors was held at the Hotel Baltimore, Kansas City, June 8th.

For the first time the directors elected the salaried officers. Secretary Fred L. Houghton, Supt. Malcolm H. Gardner, and Treasurer Wing R. Smith were unanimously reëlected. Following the example of the delegates the day before, the directors unanimously endorsed the Voight Bill which has passed the House of Representatives and is pending before the Senate. Last year the Association endorsed the Fordney Bill believing that is was the better of the two, but this bill at the present time is held in committee. The Voight Bill was endorsed at this time on the grounds that prompt action is desirable and necessary and this legislation will afford partial relief against the dairy substitute evil.

An appropriation of $5,000 was voted for the work of investigating prospective Holstein business in the Argentine. The present committee, Messrs. Barney, Pabst and Elder, was given power to arrange with W. B. Barney to visit Mexico, staying three or four months for the purpose of investigating possibilities of selling Holstein cattle in that country.

It was decided to allow all members of boys' and girls' calf clubs under nineteen years of age, to register and transfer animals at membership rates. A certificate of junior membership will be given the boys and girls.

The list of inspectors of advanced registry and imported cattle were revised and read as follows: Mal-

colm H. Gardner, Delavan, Wis.; W. H. Standish, Lyons, Ohio; Prof. J. B. Fitch, Manhattan, Kansas; Prof. H. H. Wing, Ithaca, N. Y.; A. A. Hartshorn, Hamilton, N. Y.; A. C. Oosterhuis, Oconomowoc, Wisconsin; W. S. Moscrip, Lake Elmo, Minn.; R. E. Haeger, Algonquin, Ill.; Axel Hansen, Savage, Minn.; Prof. T. E. Elder, Mt. Hermon, Mass.; Prof. H. H. Kildee, Ames, Iowa; Geo. A. Gue, North Yakima, Wash.; Prof. J. C. McNutt, Amherst, Mass.; Prof. C. L. Blackman, Springfield, Mass.

The committee to consider the matter of advertising or an advertising department according to the Kelley resolution, consists of John M. Kelley, Baraboo, Wis., and Col. G. Watson French, Davenport, Iowa.

The name of J. P. Eves of Waterloo, Iowa, was added to the official list of judges. Hereafter the committee on judges, W. S. Moscrip, T. E. Elder, and W. B. Barney, are to pass on all new names before they are added to the official list.

The resolution on long time tests offered by Axel Hansen and adopted by the delegate convention will be considered by a committee consisting of W. S. Moscrip and R. J. Schaefer, who have power to act.

From now on any person who becomes delinquent the second time will be required to pay in advance for official test work.

Horace W. Norton, Jr., of Lansing, Michigan, and Malcolm H. Gardner, were appointed a committee to meet with similar committees from the other dairy breed associations and with representatives of the American Dairy Association to consider Advanced Registry rules.

Director's Committees

The Board of Directors of the Holstein-Friesian Association of America elected committees as follows:

Executive Committee: Jas. A. Reynolds, Chairman; Fred Pabst; John A. Bell, Jr; Fred F. Field; and G. Watson French.

Finance Committee: H. V. Noyes, Chairman; George A. Fox; W. B. Barney.

Committee on Special Prizes: W. B. Barney; W. G. Davidson; E. C. Schroeder; T. E. Elder; Fred Pabst; W. S. Moscrip.

Extension Committee: H. V. Noyes, Chairman; Fred Pabst; D. B. Armstrong.

Is There a New Forty Pound Cow?

A record of 42.8 lb. butter from 886.2 lb. milk is reported for Norma Korndyke Cornucopia by C. L. Hughes, Secretary of the California Holstein-Friesian Association. She was owned by Fred Hartsook of Lankershim, who purchased her April 5th of this year in the California Breeder's Sale, paying $1,700 for her. She was consigned by Mrs. Annie Donders, Fresno. As a five-year-old, Norma made 673.1 milk, 38.42 lb. butter in a week, 3,113.6 lb. milk, 155.75 lb. butter in thirty days and as a senior four-year-old she is credited with a seven-day production of 665.1 lb. milk, 28.72 lb. butter. Her dam is Rhana Korndyke Cornucopia and her sire is Pietje Korndyke Pontiac, a son of Pontiac Korndyke. She was bred by Haynes & Brouse of Wellington, Ohio. When she freshened this year she dropped a bull calf, sired by Sir Aggie Meade.

THE KANSAS CITY CONVENTION IN PICTURE FORM

Monthly Comparison of Association Business

The May report of the earnings of the secretary's office is well worth the study of all members of the Holstein-Friesian Association of America. It is to be regretted that the figures for the year 1919 are not available for comparison. During the five reported months of 1922 and for the last seven months of 1921, the transfer fee was 50 cents. During all of 1920 and until the June meeting of 1921 the fee was One Dollar to members, but previous to June 1919 it was only 25 cents. It will be interesting to note the difference in the number of certificates issued during corresponding months with the fee at these three amounts and to compare them with the earnings and number of certificates issued during the next twelve months when the fee will be $1.50.

It is the number of certificates issued and not the sum received that measures the business done in the secretary's office.

The encouraging feature of the latest report is found in the comparison of the business done in May 1922 with that of May 1921. There were 10,142 registration certificates issued during May 1922 against 9,258 in 1921 which is a very different showing from what we have been led to expect. There is a *gain* of 884 over the corresponding month of last year.

In regard to transfer certificates, despite the fact that we have been told by those high in the councils of the Association and more particularly by those who are close to such high officials that there was a great falling off in the Associations business, practically the same number of transfer certificates were written in May 1922 as there was in May 1921, the figures for the present year being 8,771 and for the past year 8,938, a difference of 167 or less than 2%.

"Johnnie," said a teacher in physiology class, "can you give a familiar example of the human body as it adapts itself to changed conditions?"

"Yess-um," said Johnnie, "my aunt gained fifty pounds in a year, and her skin never cracked."

Mother—"Bobbie, this is the third time I have caught you helping yourself to cake and jam. I'm getting tired of it"

Bobby—"Well, then, why don't you stop hanging around the pantry?"

Constable Slackputter—"Halt. Ye're under arrest." "What for?" inquired the motorist. "Never ye mind," said the constable, "I ain't goin' tuh give ye any chance tuh think up excuses."

CLUB ACTIVITIES

BRATTLEBORO BUSINESS

During the week ending May 27th, twenty-three applications for membership were received at the secretary's office. There were 2,073 certificates of registry—1,522 female, and 551 male; 1,924 certificates of transfer were issued—1,312 female and 612 male. For the week ending June 3d, seventeen applications for membership were filed. There were 1,430 applications for registry, 1,038 female and 392 male; 1,583 certificates of transfer were written of which 1,056 were female and 527 were male.

The herd-prefixes reserved during the two weeks are:

Abony, A. Bonetti, San Jose, Calif.
Ash-Haven, H. D. White, Florence, S. Dak.
Bethelyn, J. Allyn Rogers, Wrightstown, Pa.
Brookmount, W. J. Frevert, Rudd, Iowa.
Chaparral, George H. Isom, Hurricane, Utah.
Cream Rose, A. J. Martin, Turtle Creek, Pa.
High Knoll, F. G. Simmons, Homer, N. Y.
Homedale, C. F. & F. J. Bigler, Sinclairville, N. Y.
Ians Hame, J. C. Campbell, Visalia, Calif.
Kilbroc, Kilpatrick Bros. Co., Inc., Beatrice, Nebr.
Laban, W. T. Davey, Elk Mound, Wis.
Negahning, J. S. Dixon, Orwell, Ohio.
Oak Lake, Ben Schneider, Nortonville, Kans.
Ravenna, James C. McLaughlin, M. C. Muskegon, Mich.
Rowley, Ellsworth Rowley, Cuba, N. Y. (To be used as a suffix).
Sunniglo, Champ Simpson, Dyersburg, Tenn.
Tan Yards, Charles B. Lloyd, Easton, Md.
Williamsburg, Eastern State Hospital, Williamsburg. Va.
Win-a-Home, F. P. Bradfield, Wichita, Kans.

PROMOTING INDIVIDUALITY IN NEW JERSEY

A series of meetings, promoted by the New Jersey Holstein-Friesian Association, was held in five counties of New Jersey, May 15th, and continued for five days. They were under the direction of the State Secretary, J. W. Bartlett, acting in conjunction with Mark H. Keeney, of the Extension Service, State Department of Agriculture. Mr. Keeney is keenly interested in the dairy and Holstein interests of the state and is doing good work for their advancement.

The object of the meetings was to especially bring before the breeders the important matter of individuality, and B. F. Jones, of South Montrose, Pennsylvania, an old showman and recognized expert judge, was engaged to present the subject.

Meetings were held at Mount Holly, Burlington County; Patterson, Passaic County; Branchville, Sussex County; Hackettstown, Warren County; and Somerville, Somerset County. The county agents were all very helpful and enthusiastic and did much to make the meetings successful.

The speaker gave recollections of the leading show animals of the breed covering the last forty years, describing in detail the type of those of the early days and leading up to the present. He commented on the adverse effects of fads, such as the various color fads which have been in vogue at different times. He told how such a fad greatly injured the Jersey breed and how another almost ruined the Shorthorns. Another point brought out was the practice, for many years, of heading the best herds with bulls from high record ancestry without regard to individuality. It was shown that the best individuals of the early days were the best producers; the cows Clothilde and Pietertje 2d, back in the eighties; Aaggie Grace 2d's Pietertje in the nineties and many others were cited.

The speaker showed great familiarity with Holstein showring history going back as far as 1881. He pronounced Soldene 2d's Netherland the best show bull of his day and probably the best the breed has known. He noted with satisfaction the present trend toward the consideration of individuality, but laid considerable emphasis on the fact that excessive fleshing and consequent bloom is very generally mistaken for superior individuality, and he urged upon his hearers the necessity of becoming good judges and mastering the art of picking superior individuals when thin in flesh and off bloom.

Probably no state in the Union has recognized the importance of individuality as has New Jersey. They have excellent foundation stock and under the leadership of the progressive breeders and the wide awake men selected to help them, we predict that the Garden State is headed for an era of great advancement.—*Observer.*

LANCASTER COUNTY ASSOCIATION FORMED

The Lancaster County Holstein-Friesian Breeders' Association was formed by a score of breeders at the home of John H. Shirk, Lancaster, Pa., May 27th. A temporary organization was formed and officers elected as follows:

President, John H. Shirk, Lancaster R. No. 3; Vice-Presidents, Albert B. Groff, East Petersburg and C. A. Spahr, Salunga; Secretary, H. Elvin Herr, New Danville; Treasurer, Lloyd Harnish, Lancaster, R. No. 7. Members of the executive committee, (with president, secretary and treasurer, members ex-officio,) John B. Kendig, Willow Street and Harvey Burkholder, Bareville.

Previous to the meeting the visitors inspected the Shirk herd. In his address Mr. Shirk said that the last census report showed that Lancaster County ranked at the top as a dairy county with 200 more cows than Bradford and even more than Chester County. According to the census the value of the annual production of dairy products is $5,200,000, which is greater than the value of the tobacco crop.

There has been too much speculation in the purebred business and not enough stressing of the practical side of having good stock.

It is unwise for young men getting into the dairy business to plunge heavily into purebreds without knowing enough about them, later getting disgusted and giving the purebred business a blow. The province of an Association, in one sense, therefore, would be a safe and sane influence toward getting men started in the purebred business in such a way that they would get firmly grounded.

Among the speakers was F. C. Brinton, Jr., of West Chester, treasurer of the Pennsylvania Federation of Holstein-Friesian Clubs, who told of the operation of the Chester County Association which has at the present time 55 members.

The purpose of the Lancaster County Association is to further the interests of dairying, form calf clubs, assist in disposing of cattle at fair prices to the raisers, stimulate a demand for milk and dairy products by explaining their value as food and tell that the best results can be obtained through the Holstein-Friesian breed.

He who hesitates is lost.
Take a chance.
Though you may not count the cost,
Take a chance.
In this fair land of the free,
Even though you may agree
Marriage is a lottery,
Take a chance.

Nephew—"Say, Uncle Cy, if you were buying fish, and were given short weight, would you say the man's methods were fishy?"

Uncle Cy—"No, smarty, I'd say 'twas a scaly trick."

There is nothing that makes some people so tired as to see a busy man at work.

Butter Prices and Oleo Production

THE demand for oleo in influenced greatly by the price of butter. When the price of butter goes high the consumer turns to its cheaper substitute. When the market price of butter falls he returns to the real article. Less oleo was manufactured in 1921 than was made in any of the four previous years.

The U. S. Department of Agriculture has investigated this question and finds that since 1917, there has been but two occasions when margarine production fell while the price of butter rose. At one period in 1918, this happened when there was a large increased production of margarine, which probably left the manufacturer with larger stocks than usual. In 1920, the butter market was weak, and this put the oleo manufacturer on guard for an earlier seasonal break.

Contrary to what we would expect, the relation between the production of oleo and the price of butter is almost independent of the price of the ingredients of margarine. Vegetable products have almost supplanted animal products in oleo production. During the period from 1912 to 1918, the materials used in the manufacture of oleo exclusive of milk and salt were, on an average, 63% animal fat and 37% vegetable oil. The percentage of vegetable oil ranged from 27% in 1914, to 45% in 1918. In 1920, about 191,000,000 lb. or 50%, was made exclusively from vegetable oils, and only about 1% was animal margarine.

Reports of the Commissioner of the Internal Revenue show that the materials used in the manufacture of oleomargarine for the fiscal year ending June 30, 1921, were:

	Pounds
Cocoanut oil	103,111,916
Milk	79,715,584
Oleo oil	49,675,749
Neutral oil	29,267,960
Salt	25,365,499
Cottonseed oil	18,532,860
Peanut oil	16,332,498
Vegetable oil	6,559,034
Oleo stearine	4,857,972
Oleo stock	2,065,231
Butter	1,498,625
Corn oil	925,999
Soy bean oil	461,129
Edible tallow	233,227
Mustard seed oil	109,748
Coloring	25,915
Miscellaneous	3,216,742
Total	341,955,688

From these ingredients 281,081,514 pounds of oleomargarine was produced. The difference of about 60,874,000 pounds between the quantity produced and the materials used is chiefly accounted for by the moisture content of the milk which was expelled from the finished margarine.

Jones—"See here, waiter, these eggs are not as fresh as those I had the last time I was here." Waiter—"I think you are mistaken, sir. They are exactly the same eggs."

Everything costs some effort. Even the fellow who rides a hobby may have to get off and push.

Junior Department

MARYLAND BOYS ON TRIP

When the Cunard Liner Carmania pulled out of New York Harbor on June 15th, it had on board the three Maryland boys who won the trip to the English Royal Stock Show at Cambridge, England, when last October they defeated 13 other state teams at the Southeastern Fair, Atlanta, Ga. These three boys are Warren Rice, George Worilow and Joseph Glackin and with them are W. C. Snarr, County Agent from Montgomery County, who trained the boys, E. G. Jenkins, Maryland State Boys Club Agent and C. L. Chambers of the United States Department of Agriculture.

On May 29th the boys went to Washington and met Secretary of Agriculture, H. C. Wallace. The Carmania is expected to reach Liverpool about June 23d and the Royal Show will start early in July. The intervening time will be spent in visits to famous scenes and well known English estates.

It is planned to hold a stock judging contest between the American boys and a selected team of English youngsters, for while the English government does not support boys' clubs as they are carried on in America, there is an English organization supported by private funds that is working along this line.

After the show it is planned to take the team to the Channel Islands, visiting both Guernsey and Jersey, while a trip to Ayrshire, Scotland, and to Holland is also in prospect. It is very likely that the boys will get a glimpse of Paris and French and Belgian battlefields.

The party is expected to sail from Liverpool on the Cunard Liner Samaria and to reach America some time during the latter part of July.

KENTUCKY STIRRING

A Holstein Calf Club in which there are 25 farm boys and girls has been started in Campbell County, Kentucky, under the supervision of county agent H. F. Link. The members and their animals will compete in the county show and it is planned to make an exhibit at the Kentucky State Fair next fall.

Old Lady—"Oh, conductor, please stop the train. I dropt my wig out the window."

Conductor—"Never mind, madam, there is a switch just this side of the next station."

FIRST IN HUNTERDON

A Holstein Calf Club has been organized around Trenton, N. J., and early in June a delegation of the parents and the members accompanied by Secretary Bartlett of the State Association went to Somerset County and purchased 10 calves and to Hunterdon County where they purchased 2 which have been distributed among the members.

This is the first club to be organized in Hunterdon County, was started by R. Sherman Tharp and was fostered by the County Holstein-Friesian Association.

HAD GOOD HELP

A number of students in the Brown City high school with Superintendent T. E. Sinclair and Agricultural Instructor C. J. Thompson, with a number of farmers, went to Owosso, Mich., in the middle of May to buy Holstein foundation stock. These were selected for them by Professor Dennison of the Michigan Agricultural College. They purchased 11 head for $1,625.

Those who hold up the busy bee as an example of industry seem to forget that a bee and its honey are soon parted.

"All the world loves a lover. But don't forget that misery loves company."

Cow Testing Association Reports

IN WISCONSIN

There were 418 cows tested in the Marshfield-McMillan, Cow Testing Association, of which a grade Holstein owned by Mike Redig was the leader in milk and butter fat production with 1,473 lb. milk, 58.9 lb. fat. Forty-nine cows produced more than 40 lb. butterfat. The high herd consisted of ten Holsteins, owned by Charles Butler and had an average of 39.2 lb. butter fat for the month.

The herd of Mrs. B. Motl won the $20.00 prize offered by McCain-Johnson Co. for the best herd average for the year in the association. This average was 337 lb. fat with eleven cows in the herd. Second high herd was a Guernsey herd. The best butter record regardless of age or breed was made by a grade Holstein in the Motl herd, who produced 16,307 lb. milk containing 548.8 lb. fat. The best two-year-old purebred record was also made by a member of the same herd, Dora Jewel Belle Pontiac, who produced 11,031 lb. milk, 364.1 lb. fat during the year.

A grade Holstein, owned by T. A. Merchant and Son, was high cow in the Eldorado Association for the month of April. She produced 1,815 lb. milk, 74.4 lb. butter fat. She was followed by a grade Holstein, owned by A. Jones and Son, with 1,764 lb. milk, 70.1 lb. fat. High herd was owned by R. A. Shafer and sons. They are credited with an average production of 1,230 lb. milk, 43.2 lb. fat.

Five hundred and two cows were tested in the Oconomowoc Association during April, fifty-five of these produced more than 50 lb. fat, while 119 produced more than 40 lb. A junior-two-year-old purebred Holstein owned by H. E. Dickenson, led the association with 2,228 lb. milk, 84.6 lb. fat. The second high cow was a grade Holstein, owned by Handford Whittaker, with a production of 1,773 lb. milk, 79.8 butter fat. The high herd consisting of 21 cows, averaged 1,229 lb. milk, 44.83 lb. butter fat, and was owned by Henry Peterson. Second high herd was owned by Fred R. Weber and produced 1,202 lb. milk, 40.7 lb. fat. It was composed of thirteen cows.

The high cow for fat production in the Rudolph Wood County Association was Iola Johanna Rigtje, a registered Holstein owned by Chas. Imig. She produced 2,079 lb. milk, 76.9 lb. fat. Closely following her was another registered Holstein, Betsie, who produced 1,710 lb. milk, 75.2 lb. fat. She is owned by H. Van de Wetering.

The herd of William Piltz, consisting of nine cows, made the high average for the month, 1,512 lb. milk, 49.1 lb. butter fat. Second high herd was owned by Charles Imig, a seventeen cow dairy that averaged 1,397 lb. milk, 47.5 lb. fat.

There were 416 cows tested of which 79 produced more than 40 lb. fat.

There were 396 cows in the Shirley-Denmark Association during April; 76 of these produced more than 40 lb. fat; 12 made more than 55 lb. The high cow for milk production was a purebred Holstein owned by Henry Benecke, with 2,025 lb. milk, 64.8 lb. fat. The high herd also belong to Mr. Benecke, and consisted of seven purebred Holsteins with an average of 1,343 lb. milk, 44.1 lb. fat.

The four-year-old, Walcowis Allie Inka, was high cow in the Delevan-Geneva Association. She produced 1,748 lb. milk, 103.1 lb. butterfat and is owned by Mrs. Louise H. Dickinson of Lake Geneva, Wisconsin. Mrs. Dickinson owned the second high cow, Walcowis Ollie Butter Maid, who produced 2,567 lb. milk, 89.8 lb. fat, as well as the high herd. This herd of twenty-six grade and registered Holsteins produced 1,271.7 lb. milk, 50.6 lb. butterfat.

There were 479 cows tested in the Association for the month of May, and of these 96 produced more than 40 lb. fat. Joseph Senneff is the tester.

Eighteen of the 542 cows tested in the La Grange, Wisconsin, Association for the month of May produced more than 50 lb. butterfat and 72 over 40 lb. Seven of the twelve highest cows in the association were Black and Whites. First place being held by a registered Holstein, owned by O. Oleson & Sons, which produced 1,825 lb. milk, 76.6 lb. butterfat. A grade Jersey held second place and a grade Holstein came third with 1,438 lb. milk, 63.2 lb. fat. She is owned by R. Lauderdale. High herd was owned by H. Ludeman, which consisted of grade Holsteins and made the average of 1,135 lb. milk, 40.6 lb. fat.

Two cows in the Wausau-Marathon, Wisconsin, Association produced more than 60 lb. butterfat for the month of April, six produced over 50 lb., and 37 produced more than 40 lb. There were 484 cows tested, a grade Holstein holding first place for butterfat production by producing 1,155 lb. milk, 62.4 lb. butterfat. She was owned by Clarence Jensema. A grade Holstein, owned by Jake Hunter, stood high for milk production and second for butterfat production. She gave 61.1 lb. butterfat from 1,272 lb. milk.

R. B. Flagler, official tester of the Beloit, Wisconsin, Association, reports 437 cows tested for the month of May. Of these 80 produced more than 40 lb. butterfat. Kit, a grade Holstein, owned by Rockwell and Katterhenry, held first place for both milk and butter production. She gave 2,275 lb. milk which contained 77.4 lb. fat. The herd owned by the same men and consisting of 23 grade Holsteins held high record for milk production and second for butterfat. This herd averaged 1,180 lb. milk, 42.1 lb. fat.

In the list of the twelve high cows for butterfat production in the Wrightstown-Greenleaf Association, the first six places were held by Black and Whites. A purebred, owned by Bender and Franc, De Pere, Wisconsin, held first place for both milk and butterfat by producing 78.3 lb. butterfat from 2,448 lb. milk. Next to her came a grade Holstein owned by W. Gilson, with 68 lb. fat from 1,308 lb. milk.

Five hundred and seventy-seven cows were tested in 34 herds during May, 122 cows producing more than 40 lb. butterfat.

There were 492 cows tested in the Monroe, Wisconsin, Cow Testing Association for the month of May; 141 of these produced 40 lb. or more butterfat. The eight cows producing more than 60 lb. butterfat were all Holsteins, a grade owned by Claude Wideman, being the leader with 1,903 lb. milk, 91.7 lb. fat; second came the registered Holstein owned by Herman Gempeler, Monroe, Wis., with 1,896 lb. milk, 83.4 lb. fat, while a registered Holstein, owned by Roderick & Steussy, came third with 1,748 lb. milk, 71.7 lb. fat. The five highest herd averages were all held by Holsteins. Claude Wideman with his grade and registered herd took first place, having the average credit of 1,418 lb. milk, 49.92 lb. fat. The registered Holstein herd owned by Roderick & Steussy, came second with 1,383 lb. milk, 47.37 lb. fat.

EAT WELL; PRODUCE WELL; MAKE PROFIT

From a study of data supplied by 96 cow testing associations in various parts of the country, J. C. McDowell, in a bulletin just published by the United States Department of Agiculture, has deduced the fact that cows that produce milk and butter fat in large quantities have keen appetites and roomy paunches, but they earn higher incomes over feed cost than do the scanty producers, regardless of breed, age, weight, date of freshening and geographical location.

Because of better feeding, better breeding and better care, cows owned by association members are much better than the general run of cows. The estimated production per head of all the dairy cows in the United States is approximately 4,000 lbs. of milk and 160 pounds of butter fat a year. The Association cows are about 50 per cent better, producing an average of 6,077 pounds of milk and 248 pounds of butter fat.

According to figures based on 18,014 yearly individual cow records, as butter fat production increased from 100 to 400 pounds there was a regular increase of about $16 in income over feed cost per cow for every 50 pounds of increase in average production of butter fat. As the yield of butter fat increased from 109 pounds to 396 pounds, the returns above the dollar expended for feed increased from 35 cents to $1.52.

The cows having an average milk production of 3,250 pounds showed an average income of $32.25 over the cost of feed, while those producing 13,250 pounds showed an average income of $218.19 over feed cost. The cows in the latter group produced about four times as much as those in the other group, and their average income over cost of feed was nearly 7 times as great. The increase in income above feed cost grew regularly with the increase in production.

A careful study of these records shows that it pays best to put feed into big producers, even though they are big eaters, and that it does not pay to limit cows that are able to handle heavy feeding to good advantage. The bulletin is entitled "Relation of Production to Income from Dairy Cows," is Department Bulletin No. 1069, and can be obtained from the United States Department of Agriculture.

IN ALL NEW YORK

During the month of March a grade Holstein, Aaggie, owned by Sam Barber of Scottsburg, produced 111.6 lb. fat, 2,232.7 lb. milk. Another grade also in the Livingston Association but owned by Wilbur Ashley, Livonia produced 99.7 lb. fat, 1,635.2 lb. milk in twenty-eight days. The third high cow, also a member of the Livingston Association, was a purebred Holstein owned by Roy Reed, Hemlock. She produced 2,222.7 lb. milk, 97.8 lb. fat. Jesse Dalrymple, of Horseheads, had the fourth cow with 96.5 lb. fat, 2,300 lb. milk, while the registered Holstein, Korndyke Quality of the Erie Company Farm, Millgrove, was the fouth with 96.3 lb. fat and no less than 2,754 lb. milk.

During March 11th, 686 cows in thirty associations were tested, one association not reporting.

BARTON HERD AGAIN

There were 321 cows tested in the Scotts Bluff, Nebraska, Association, and of these, 47 produced more than 40 lb. fat, 13 more than 50 lb. Lady Vale, a registered Holstein, owned by Sam. Barton & Sons, Gering, was high cow for the month of April. She produced 2,052 lb. milk, 67.7 lb. fat. Mr. Barton had the second high cow as well as high herd. The thirteen cows in this herd averaged 1,357 lb. milk, 46.8 lb. fat.

COW TESTING ASSOCIATION REPORTS IN MINNESOTA

Twenty-eight of the thirty herds enrolled in the Mower County, Minn., Association are using purebred sires. There were 403 cows tested during the month of April which averaged 717.1 lb. milk, 29.9 lb. fat. The high producing cow was owned by the Minnesota Holstein Company and produced 2,858 lb. milk, 112.7 lb. fat for the month. The high herd is also owned by the same company and averaged 58.8 lb. fat.

Ninety-two cows produced more than 40 lb. fat; twenty-two herds averaged more than 25 lb. fat for the month.

The 296 cows enrolled in the Kanebec County, Minn., Association, averaged 652.3 lb. milk, 26.38 lb. butter fat for the month of April. Twenty-nine cows produced more than 40 lb. butter fat, while 24 made more than 1,000 lb. milk. The high herd was owned by Myril Holland. This herd consisted of six Holsteins and averaged 1,123.5 lb. milk, 59.7 lb. butter fat. The same man also owned the high cow, a grade Holstein, who produced 115.7 lb. fat, with a purebred Holstein, owned by Emil Fredlund, making the highest milk production, 1,851 lb.

The high cow for milk production in the Winona, Minn., Cow Testing Association for the month of April, was a grade Holstein who produced 1,644 lb. milk.

There were 450 cows tested in April, 26 of which produced more than 40 lb. butter fat and 12 that produced more than 45 lb. fat.

THE BANNER MONTH

According to the report of W. D. Morrison, official tester for the Tempe, Arizona, Association, April was the banner month in the history of the Association both in number of cows tested and the average production.

In February there were 518 cows tested, 549 in March and 553 in April. The average production was 795 lb. milk, 28.5 lb. fat compared with 720 lb. milk, 28.2 lb. fat in the month of March. Seventy-seven cows produced more than 40 lb. fat.

The high cow for the month was a registered Holstein, Lady Vernon, in the herd of M. W. Turley. She is credited with 2,040 lb. milk, 67.3 lb. fat. The high herd was owned by B. Coman with an average of 1,408.9 lb. milk, 43.8 lb. fat.

PUREBRED FIRST: GRADE SECOND

During the month of May, twenty-five herds containing 299 cows were tested in the Volant Association which operates in Lawrence County, Pennsylvania. Twenty-four cows produced over 1,200 lb. milk while fifty produced more than 40 lb. fat and 42 more than 50 lb. The ten high cows averaged 1,916.8 lb. milk, 69.72 lb. fat. The two high cows were owned by Alford Brothers. A registered Holstein made 2,770 lb. milk, 99.7 lb. fat and led the association for both milk and butter fat production. Second for fat and third for milk production is the grade Holstein owned by the same firm with a production of 95.2 lb. fat, 2,028 lb. milk. Alford Brothers had eight cows on the honor roll. A registered Holstein owned by C. M. Hartzell stands second for milk production with 2,120 lb. She tested low and her fat production was 55.1 lb. Hartzell had four cows in the honor roll. D. B. Reynolds had two Holsteins each of which produced over 69 lb. fat and another that made 47.5 lb. in 19 days. W. McMillen and Son had one Holstein with more than 2,000 lb. milk, 61 lb. fat.

WYOMING COUNTY, PA.

The highest producing cow for the month of May in the Wyoming County Association is owned by J. C. Quick of Meshoppen, Pa. His purebred Holstein, Lady Beauty Korndyke Hengerveld produced 2,178.0 lb. milk and 84.9 lb. fat. This is the best production for both milk and fat for the month.

F. M. Piker of Factoryville, Pa., has the best herd average. His 18 purebred Holsteins average 1,243.1 lb. milk and 43.1 lb. butter. Chas. Ace of Tunkhannock, Pa., is second with 17 Holstein cows averaging 1,180.2 lb. milk and 38.48 lb. butter.

Of the 370 cows tested, 81 produced over 40 lb. of fat and 21 over 50 lb. fat. 114 cows produced over 1,000 lb. milk and 63 over 1,200 lb. Despite the high production of many of the cows, most of the farmers find it unprofitable to feed grain with cows on pasture. Milk in the vicinity has fallen almost to the cost of production. It is now $1.33 per cwt. A good grain mixture at local prices costs well over $2.00 per cwt.

RAY G. SLOAT, *Tester.*

GRADE FIRST: PUREBRED SECOND

There were 311 cows tested in the Geauga County, Ohio, Association during April. Fifty-two produced more than 40 lb. fat, 12 more than 40 lb., 49 made more than 1,200 lb. milk, while 18 produced over 1,400 lb. The high cow for the month was a grade Holstein, owned by R. B. Russell, which produced 1,633.6 lb. milk, 61.81 lb. fat. The second high cow was a purebred Holstein, Spotted Lillie, owned by E. L. Taylor, Burton, which produced 1,458 lb. milk, 58.32 lb. fat.

DOWN IN VIRGINIA

One hundred and thirty cows in the Henrico, Virginia, Association made more than 40 lb. butter fat in the month of April; forty-four made more than 50 lb. in the same month.

A registered Holstein, owned by H. W. Gillis, Glenwood Farm, near Richmond, held the highest record for butter fat production, having made 73.4 lb. The best herd average was held by the thirty-three purebred Holsteins owned by J. A. Loving, Lovingstone Farm. This herd averaged 967.5 lb. milk, 36.7 lb. fat.

ILLINOIS PUREBREDS LEAD

The highest producing cow in the cow testing associations in the state of Illinois as reported by the University of Illinois department of dairy husbandry, was a purebred Holstein owned by Arthur E. Howard of Dundee. She produced 2,415 lb. milk, 99 lb. butter fat. Buffalo Creek Farm, Arlington Heights, Cook County, had the second highest cow, a purebred Holstein, with a production of 3,181 lb. milk, 95.4 lb. butter fat.

The high herd, consisting of more than ten cows, was owned by A. D. Cornue, Hebron, whose herd of twenty-three purebred Holsteins made an average of 1,191 lb. milk, 46.6 lb. fat. Second came the herd of fifteen purebred Holsteins owned by J. J.. Case, Elmhurst, with a production of 1,140 lb. milk, 40.5 lb. fat.

YOUNG BUT ACTIVE

There are now 25 active members in the Livingston County, Michigan, Association, although this association has been in operation only since January last. It was organized under the direction of Fred S. Dunks, who was former county agent. Four boarder cows have been disposed of for beef; and one purebred sire has been purchased. During the month of May, 40 cows produced over 40 lb. fat. The average of the association cows were 937.2 lb. milk, 32.7 lb. fat. James G. Hayes had the high herd average for the month, his six purebred Holsteins averaging 1,426 lb. milk, 49 lb. fat.

GOOD IOWA GRADE

Three hundred and four cows were tested in the twenty-four herds enrolled in the Farmersburg, Iowa, Cow Testing Association during the month of April. The high cow of the association was a grade Holstein owned by Wm. Schultz, Farmersburg, with a production of 1,327 lb. milk, 74.3 lb. butter fat. High herd was composed of five cows and produced an average of 956.2 lb. milk, 40.78 lb. fat. The annual meeting of this association was held April 27th, when it was reorganized and new officers elected.

INTEREST IN TEST WORK IN NEW YORK

Notwithstanding the unfavorable milk market the interest shown in the New York dairy work was never better. A demand for associations has appeared in several counties where there have been no such organizations for several years. While some of the associations which complete the year this summer may not be reorganized until fall, enough new ones are under way to maintain the total number in the state at 30 or above.

MOVING THE BOARDERS

Two hundred and ninety-eight cows from 29 herds were tested in the Androscoggin Valley, Maine, Association for the month of May. Twenty-eight cows were disposed of as boarders. Thirty-two cows produced more than 40 lb. butter fat.

High cow for butter fat was a registered Holstein owned by the Western Maine Sanitorium. She produced 44.2 lb. milk per day, 1,348 lb. for the month and 67.4 lb. butter fat. The high cow for milk is also owned by the Western Maine Sanatorium. She produced 1,446 lb.

REGISTERED COW LEADS

A registered Holstein owed by I. R. Manton was high cow in the Summit County, Ohio, Association. She produced 2,100.3 lb. milk, 81.9 lb. butter fat. High herd was also owned by Mr. Manton. There were 280 cows tested during the month, showing an average production of 882.6 lb. milk, 31.25 lb. fat. Ninety-seven cows produced more than 1,000 lb. milk, 54 produced more than 40 lb. butter fat.

A REAL QUEEN

Queen, a registered Holstein, owned by J. J. Kalberer of Broomfield, Col., was high cow in the Boulder County Association for the month of April. This three-year-old produced 2,685 lb. milk, 89.9 lb. fat in the month. High place for herds of fifteen or more cows was held by Marcus Harper of Boulder, whose eighteen cows averaged 1,235 lb. milk, 44.3 lb. fat.

IN RENO COUNTY

The high herd in the Reno County, Kansas, Association for the month of April was owned by C. C. Kagarice, of Castleton. This herd, consisting of Black and White cows, produced an average of 41.4 lb. butter fat. A purebred Holstein was the highest producing individual. She was owned by W. A. Shuler and produced 65.7 lb. butter fat from 1,634 lb. milk for the month.

WESTBROOK'S HERD LED

The seventeen herds, comprising the Davenport, Iowa, Cow Testing Association number 249 cows. The average production of these herds for the month of May was 862 lb. milk, 32.6 lb. fat. The leading herd for both milk and butter fat production was a herd consisting of 19 Holsteins which averaged 1,035 lb. milk, 41.3 lb. butter fat. They were owned by P. W. Westbrook.

A PRODUCING DAIRY

During March, 521 cows enrolled in the Orange County, Calif., Farm Bureaus Dairy Department averaged 1,085 lb. milk, 35.5 lb. fat. Sixty-two produced over 60 lb. fat. Rait's Dairy averaged 39.5 lb. fat for 74 cows, a truly remarkable performance for a herd of its size.

Money does not make happiness,
Nor drive our ills away;
But it comes in handy, nonetheless,
When we have bills to pay.

OFFICIAL CALF CLUB MANUAL

The Calf Club Manual of the Holstein-Friesian Association of America should be in the hands of every one interested in calf club work. The preface consists of the eloquent tribute paid by the Hon. Frank O. Lowden, president of our association, to the dairy cow.

The book contains forms and directions that will be of use to any one thinking of getting up a calf club. A model constitution and by-laws are included. C. M. Long, Illinois State Secretary, has an article on "Selecting Calves for Club Work." Mr. Long has had much experience along this line. There is a chapter by Earl D. Upton, manager and part owner of the Dutchland Farms, on the subject of "Feeding Holstein Calves," and one on "Fitting Calves for the Show," by the well-known Ohio breeder and showman, O. O. Zehring. Fred E. Klussendorf, one of Wisconsin's expert showmen, has a chapter on "Showing Holsteins in the Ring." Judge W. S. Moscrip, now a director of the National Association, is the author of the concluding chapter, "Holstein-Friesian Type."

The cover shows a picture of the millionth Holstein-Friesian registered in the United States, a calf club heifer. By the way, a calf club girl, Hilda Techlin, Appleton, Wisconsin, owned the calf. The booklet can be obtained from the office of the Holstein-Friesian Association of America, Brattleboro, Vermont.

"To be honest, to be kind—to earn a little and to spend a little less, to make upon the whole a family happier by his presence, to renounce when that shall be necessary and not to be embittered, to keep a few friends, but these without capitulation—above all, on the same grim conditions, to keep friends with himself—here is a task for all that a man has of fortitude and delicacy.—*Stevenson.*

A henpecked husband never can understand why a man should want to commit bigamy.

LET US TAN YOUR HIDE—Cow and Horse hides for fur coats and Robes. Cow and Steer hides into Harness or Sole Leather. Catalog on request. We repair and remodel worn furs; estimates furnished. The Crosby Frisian Fur Co., Rochester, N. Y.

Java Village, N. Y.

"A modern breeding establishment for re-acting Holstein-Friesian Cattle."

High-class producing re-actors bred on a share basis.

CONNECTICUT NOTES

THE SPRINGFIELD SALE

Fifty-eight head of the choicest Holstein cattle in New England sold at Springfield, on May 23d, for just about one-half their value. It was decidedly a buyers' sale and a consignors' sacrifice. Just why the range of prices was so low has yet not been discovered, for the sale was well advertised and the cattle were New England's finest. Of course, there were some lessons learned that will help on future sales, but the fact remains that the prices obtained show conclusively that the splendid quality of the offerings was not appreciated as it should have been.

YEARLY RECORD AT BRIDGEPORT

The City of Bridgeport has just completed another nice long time record: Piersona De Kol Venango, No. 549712, at five years of age produced in one year, 19,763 lb. of milk containing 787 lb. of butter. She was bred by the late John T. Hunt of Ridgefield, Conn. Her sire is Villette Venango, No. 118390. Her dam is Piersona De Kol Keck of Valley Home, No. 213014. This record as are all the records in the city of Bridgeport herd was made on the regular dairy feed and care, the cow occupying her stanchion as a regular member of the herd.

CONNECTICUT REFORMATORY RECORDS

Johanna Baby Hengerveld Artis, No. 436500 at three years and eight months of age produced 23.06 lb. butter from 458.2 lb. milk in seven days. She was bred and tested by the Connecticut Reformatory. Her sire is Sir Rag Apple Korndyke Artis, No. 187561 whose second daughter to be tested made a 30 day record, the 5th highest in the world for her age. Her dam, Johanna Baby Hengerveld, No. 288311, was bred by *C. P. Viets and Son of Granby.*

Artis Sylvia Pontiac, No. 538222, at two year and three months of age produced 19.66 lb. butter from 340.6 lb. milk in seven days. She also was bred by the Connecticut Reformatory and was sired by Sir Rag Apple Korndyke Artis. Her dam is Sylvia Pontiac Hengerveld, No. 288307, who as a mature cow produced 28 lb. butter from 491 lb. milk in seven days.

Gretna Colantha Walker, No. 418177, produced 25 lb. butter from 479.6 lb. milk in seven days at four years and one month of age. Her sire is King Walker Prilly Spofford, No. 143350, the senior herdsire at Hayland Farms, Milford. Her dam is De Kol Vivian Colantha 2d, No. 299184, a daughter of Mt. Hermon Creamelle Don, who produced 20 lb. butter from 457 lb. milk in seven days at four years of age

Johanna Baby Hengerveld, No. 288311, at six years of age produced 22.65 lb. butter from 438 lb. milk in seven days. Her sire is Allenvail Hengerveld Beets Segis, No. 85222. Her dam is Edgelake Johanna Baby, No. 117990. She was bred by *C. B. Viets and Son.* Arvilla Inka Pontiac De Kol 2d, No. 288306, at seven years of age produced 28.62 lb. butter from 449.5 lb. milk in seven days. Her sire was also Allenvail Hengerveld Beets Segis and her dam was Arvilla Inka Pontiac De Kol, No. 150455, who at three years and seven months of age produced 16.94 lb. butter from 323.7 lb. milk in seven days.

TWO-YEAR-OLD SON OF ORMSBY KORNDYKE LAD

His dam by King of the Alcartras, made 463.3 lb. milk, 23½ lb. butter in a week; 18,918 lb. milk, 883.8 lb. butter in a year as a junior 3-year-old. Will sell reasonable as I own 2 sons of O. K. L., the greatest of all sires.

TICK A FOE TO DAIRYING

Wherever the dairy industry has gained a foothold in the South, there is strong sentiment in favor of the complete eradication of the cattle tick, for it is only in tick free areas that the dairy cow can be expected to return a profit. At the last session of the State Legislature of Mississippi, it was the influence of the newly developed industry that prevented the indefinite suspension of the State-wide tick-eradication law. Farmers who depend upon the cow for a part of their income have grown to be a power in the state and they demand that the work be carried to completion.

In two counties in Mississippi last fall the Boards of Supervisors decided to stop tick-eradication work, but they reckoned with out the cow owners, who saw in the reinfestation by ticks the disappearance of the bimonthly milk and cream checks that had been keeping up their credit at the stores, even when the cotton crop was a failure. These men got together and demanded that the boards reverse their actions, and the boards did so with little delay.

State officials report that in several counties of Georgia last year a few dairy cows prevented many cotton farmers being thrown into bankruptcy by the ravages of the boll weevil. When some of the most progressive farmers saw the cotton crop was to be a failure, they bought some cows from the North and used the cotton fields for growing feed. Had ticks been prevalent these animals would have been lost.

A map prepared by the Commissioner of Agriculture for Oklahoma shows that in an area of 43,000 square miles cleared of ticks there are now more than 150 creameries and ice cream factories that have sprung up in the last three or four years.

GREAT KENTUCKY ESTABLISHMENT

The cows in the test at the Kentucky Holstein Farm, Bardstown, Ky., have been doing good semi-official work since they started November 22, 1921. Since that date they have headed the honor list of Kentucky dairy animals with from one to three cows every month, as well as making some very creditable seven day records.

Oakwood Segis De Kol Johanna, No. 617424 made a seven day record of 644 lb. of milk containing 28.5 lb. butter at the beginning of her 365 day test November 22, 1921, and by the end of her sixth month will have nearly 600 lb. butter to her credit. She is sired by Sir Daisy Piebe Johanna and there are fifteen more of his daughters on the farm to be developed.

They have, on the farm, nine daughters of Wase Korndyke Segis, who sired the first 30-lb. two-year-old in the world. Wase Korndyke Segis is a son of Johanna McKinley Segis, for which Carnation Stock Farms paid $25,000. Kentucky Holstein Farms recently purchased for their herdsire Sir Pontiac Ormsby Champion, whose sire's two nearest dams average better than 1,053 lb. of butter in 365 days. His dam and full sister will enter on semi-official test in May.

This great breeding establishment is under the management of John Null, with Morris Halpein in charge of the test cows. The Kentucky Holstein Farm has made rapid progress in the short time they have been doing test work and as the animals they have to select from are good individuals, they will no doubt make some wonderful records in the near future.

T. F. MASON.

THE WORLD IS GROWING SMALLER

Figured in time there is not a very great distance from the farm to the table. The first of June, the White Star liner Majestic, on her maiden voyage made it possible to land bacon in London seven days, 11 hours and 56 minutes from Chicago. This includes loading at New York, unloading at an English port and reloading again on the London train.

On June 12th, Morris & Co., announced that cattle grazing in Iowa pastures the first of June will be served as beefsteak in Paris on the morning of the 13th. This record was made possible when the Mauretania, sister ship to the ill-fated Lusitania, touched Cherbourg, France 5 days, 8 hours and 10 minutes after leaving New York.

What you must do at first through force of character you will later be able to do through force of habit.

The prize for raising the largest head of cabbage goes to the young commencement orator.

COWS WON'T EAT MINERAL FEED

"I wish you would tell me how to get my cows to eat their mineral feed. I as using special steam bone meal and place it in a trough before them, but they do not eat very much of it." Simon T. Felker, Allentown, Pa.

We find that a number of Holstein breeders are having some difficulties in feeding minerals. It is true that with a good mineral feed the cows will eat some of it if it is placed before them, but because most of the minerals are not especially palatable, the cows will usually not eat enough of them unless they are fed right along with the rest of the feeds.

The special steam bone meal is the best form of mineral to use to supply the extra calcium and phosphorus required. It can be fed mixed with salt and placed where the cows can have access to it, but it has been found that the best way to feed it is to mix it right in with the rest of the concentrates to the extent of two to three pounds per hundred pounds.—*P. V. Ewing.*

THEY ALL ADVERTISE

A hen is not supposed to have
Much common sense or tact,
Yet every time she lays an egg,
She cackles forth the fact.
A rooster hasn't got a lot
Of intellect to show,
But none the less most roosters have
Enough good sense to crow.
The mule, the most despised of beasts,
Has a persistent way
Of letting folks know he's around
By his insistent bray.
The busy little bees, they buzz,
Bulls bellow and cows moo,
The watchdogs bark, the ganders quack,
And doves and pigeons coo.
The peacock spreads his tail and squawks,
Pigs squeal and robins sing
And even serpents know enough
To hiss before they sting.
But man, the greatest masterpiece
That nature could devise,
Will often stop and hesitate
Before he'll advertise.—*Ad-Vents.*

Misunderstandings can separate friends far more widely than either time or space.

Nov. 7-8-9—Sedalia, Mo., Pettis County Holstein-Friesian Co.
Nov. 8—Wichita, Kansas, Wichita State Sale.

THE KANSAS CITY SALE

The Third Coöperative National Sale, held at Kansas City, June 8th and 9th, was the means of placing many highclass Holstein Friesians in herds of Missouri, Kansas and nearby states. Missouri took by far the largest number of animals, 64 of the 148 animals, a trifle over 42 per cent, going to the "Show Me" state. Seven animals, four females and three males, each brought $1,000 or more.

The highest price was $3,200, for Wadmantje Finderne Pride Pontiac, a large, strong, dark-colored cow, sired by Finderne Pride Johanna Korndyke. She was consigned by the Pickering Farms and was purchased by a company consisting of C. E. Driver, Glenn G. Davis, and Harlo J. Fiske, and was taken back to Pickering Farms to make another year test. Her yearling daughter, also by Finderne Pride Johanna Korndyke, was sold for $675. Major Fiske purchased this four-year-old for $280 so that she certainly was a profitable investment.

The second highest price, $2,550, was obtained for a 40-lb. junior four-year-old Highland Burke Joh. Owing to a transposition of figures the telegram published in our issue of June 8th was in error. The purchasers were W. England and Geo. L. Miller, Ponca City, Oklahoma. Mr. Miller, it will be remembered, is one of the principal owners of the 101 Ranch.

The World's Record junior two-year-old Pietertje Ormsby Mercedes Frisby went for $1,000, to W. T. Rawleigh Co., Freeport, Ill. The Kansas milk champion, Genista Knoll De Kol, went for the same figure to G. E. McMahon. This cow sold at a little disadvantage as in shipping she had one teat hurt, although her owners guaranteed this to come right.

The top price for a male was $1,500, obtained for Carnation King Setske Segis, a son of Carnation King Sylvia, from a 33-lb. cow. He was purchased by T. Shields, of Peverly Farms, Crescent, Mo. Bell Farm Distinction, whose two nearest dams average 899 lb. milk in seven days test work, went for $1,225, to John Wuethrich, Greenwood, Wis. The Adams Dairy, Blue Springs, Missouri, obtained King Walker Lyons Joh, for $1,125. As Mr. Page paid $1,900 for this son of the 40-lb. four-year-old, Highland Burke Joh, at the Liverpool Sale last February, he took quite a loss.

The total was $69,445 for 148 animals, an average of $469.22. The auctioneers were Mack, of Wisconsin, Haeger, of Illinois, Baxter, of New York, Boyd Newcom, of Kansas, with Wood in the box, Frank Chestunt as leadsman and Frank Everson as clerk.

Animals bringing $300 or more with names and addresses of purchasers are as follows:

Consigned by American Beet Sugar Co., Lamar, Col.
1 Rubertdale Flint Tula Hengerveld, 7 yrs., Capital View Farms, Topeka, Kan. $500
Consigned by Donley & Hansen, Mt. Morrison, Col.
2 Miss Johanna Changeling, 7 mo., J. F. Layman & Son, Portis, Kan. 300
Consigned by James Gibson, Mt. Morrison, Col.
6 Content Segis Pietertje, 5 yrs., Modern Woodmen Sanitarium, Woodland, Col. 850
Consigned by Hall Bros., Denver Col.
8 Western Colantha Sir Top, 2 yrs., Peverly Dairy, Crescent, Mo. 810
9 Western Ormsby Ascalon, 3 yrs., Jesse Lincoln, Marlowe, Okla. 460
Consigned by Winterthur Farms, Winterthur, Del.
12 Winterthur Ormsby Celle, 1 yr., A. J. King, Kansas City, Mo. 900
Consigned by C. E. Coleman, Belvidere, Ill.
13 Finderne Ormsby Colantha Creamelle, A. M. McCall, Woodward, Iowa 400
Consigned by Fred Meyer, Belvidere, Ill.
14 Unique Pietertje Butter Girl, 2 yrs., Pevely Dairy 525
Consigned by Chas. Reed & Sons, Oregon, Ill.
15 Het Loo Inka, 6 yrs., Geo. E. Page, Cuyler, N. Y. 480
16 Omaha Rag Apple Clyde, 2 yrs., A. M. McCall 350
Consigned by Rock River Farms, Byron, Ill.
17 Daisy Pauline Butter Boy, 6 yrs., Ross Grosshart, Tulsa, Okla. 400
Consigned by John Sexauer & Sons, Belvidere, Ill.
19 Urmagel Burke Champion, 2 yrs., W. T. Rawleigh Co., Freeport, Ill. 440
Consigned by W. B. Barney & Sons, Chapin, Ia.
20 Eibertje Cornucopia Sadie Vale, 4 yrs., A. M. McCall 400
21 Lorella Cornucopia Korndyke Pietje, 2 yrs., Clement Bros., Area., Ill. 430
22 Lorella Cornucopia, 7 yrs., Dr. E. Carbaugh, Kansas City, Mo. 320
Consigned by Hargrove & Arnold, Norwalk, Iowa.
23 Bonnie Korndyke Lass, 7 yrs., E. H. Maytag, Newton, Iowa 530
24 Miss Chloe Piebe, 8 mo., A. J. King 500
25 Queen Van Betta, 7 yrs., E. E. Hazen, Hiawatha, Kansas 650
Consigned by Geo B. Appleman, Mulvane, Kan.
29 Anzoletta De Kol Belle, 5 yrs., C. L. Gooden, Derby, Kan. 380

DEMAND FOR HERD BULLS

A number of high class young bulls have been sold from Valley View Stock Farm, Butler, Pa., for the purpose of heading good herds.

King Butter Boy De Kol Harcourt, went to Mr. G. C. Rowley of Colegrove, Pa. His dam is a 17 lb. two-year-old heifer a daughter of our former herd-sire King Sadie Vale Highland, No. 196661. The youngster was sired by the King Sadie Vale Highland bull thus making a close infusion of blood lines.

King Sadie Vale Pietertje went to J. A. Herman of Fombell, Pa. He is a son of King Sadie Vale Highland and is from a 24.76 lb. cow that made 2,298.2 lb. milk and 100 lb. butter in 30 days while in 60 days she produced 4,481.3 lb. milk, 182.42 lb. butter. Her name is Queen Pietertje De Kol Schuiling, she is from Bessie De Kol Schuiling 510 lb. milk, 19.90 lb. butter in 7 days at 11 years old, while her sire is a son of the century sire Pietertje Hengerveld Segis.

King Sadie Vale De Kol was sold to F. E. Wiesinstein of Butler, Pa. This is a splendidly developed young bull. He was by our former herdsire, King Sadie Vale Highland who was a son of King Korndyke Sadie Vale from a 22 lb. daughter of King Segis De Kol Korndyke, sire of the first 40 lb. heifer Mabel Segis Korndyke. He has a number of good record sisters in this herd.

The dam of this bull is a daughter of King Pietertje De Kol Segis, who was sired by a brother to King Segis 10th the sire of the world champion milk cow, Segis Pietertje Prospect. The dam of Mr. Wiesinstein's bull made 23 lb. butter 510 lb. milk in 7 days as a three-year old and in 305 day test produced 14,898 lb. milk, 625 lb. butter.

First Sorority Sister—"I'm sorry I couldn't have tea with you dear; but, you see—er—I had a class."

Second Sorority Sister—"Yes, darling, I saw him; some class!"

A COMING SALE OF INTEREST

On November 7th, 8th, 9th the cattle owned by Pettis County Holstein-Friesian Co., will be sold at Sedalia, Mo. The success of this organization has attracted attention not only in our own but also in foreign countries. The chief organizer was Mr. C. M. Long, former county agent of Pettis County and the present field secretary of the Illinois Holstein-Friesian Association. This company was started with a paid up capital stock of $30,000.00 and was the first company of its kind organized for the purpose of breeding Holstein-Friesian cattle. The cattle are placed with farmers and dairymen for five-year periods and at the expiration of the time specified they are to be sold and the proceeds divided.

It is to be hoped that prices will be as good November 1922 as they were in November 1917 and it will be interesting to compare the figures after the sale. The animals are periodically tuberculin tested and will be tested again about sale time. It is expected that a good many of the animals will remain in Pettis County and it is certainly to be hoped that this pioneer enterprise may result favorably from a financial standpoint to all who have participated therein.

FOR BOY'S CLUB WORK

At the annual meeting of the Maryland State Bankers' Association at Atlantic City in May, $500.00 was subscribed in a few minutes on the floor of the convention toward the support of the work of the boys' agriculture clubs of the state.

Judge Frank I. Duncan of Towson gave his report on the accomplishments of club members during 1921. Judge Duncan is Judge of the Juvenile Court of Baltimore and is thrown in contact with many boys. He believes the rural boy, however, is the hope of the country's future.

The Young Thing—"What kind of a husband would you advise me to look out for?"

Friend—"You let the husbands alone, my dear; it's asking for trouble. You get a single man."

You never can tell. Many a spotless reputation is merely whitewashed.

Recent experiments conducted by the U. S. Dept. of Agriculture, show that the milk production of many cows is limited by inadequate mineral supply.

U-COP-CO SPECIAL STEAM BONE MINERAL MEAL an especially prepared product, is readily eaten by dairy cows. It insures plenty of minerals for a heavy production, helps prevent disease and makes better breeding stock. Prices in 125-lb. sacks:

125 lbs. @ 3½c. lb..$4.38 1000 lbs. @ 3¼c. lb..$32.50
500 lbs. @ 3½c. lb..17.50 2000 lbs. @ 3c. lb.... 60.00

All prices F. O. B. our plant. Write for booklet.

STATE COLLEGE BULL SALE

The Second Annual Bull Sale of the Pennsylvania State College was held in the Stock Judging Pavilion, Thursday, June 15th. Seven bulls sold for $925, an average of $132.15.

Professor A. A. Borland, Chief of the Dairy Husbandry Department, addressed the large audience on the value of purebred sires and the dairy industry and explained the pedigrees. The well-known auctioneer, Geo. W. Baxter, wielded the gavel.

The Dayton Lumber Company of Dayton, Pa., purchased two sons of Sir Beets Korndyke, who carries 75 per cent of the blood of Pontiac Korndyke. R. M. Tennant, representing the Chamber of Commerce of Grove City, Pa., purchased two sons of the same sire, paying only $200 for a son of De Kol Klassje Lilith, 18,601.1 lb. milk, 749 lb. butter in a year in the college herd, she a daughter of the State College champion, Lilith Gem Kolkluff, whose four-year records in the State College herd average over 20,000 lb. milk, and 775.2 lb. butter. Arthur Peters, Oak Hill, Pa., and John W. Kneller, Dushore, also obtained well-bred sons of Sir Beets Korndyke.

WAYNE COUNTY SALE

Sixty head of cattle were sold at Wooster, Ohio, on May 26th, by the Wayne County Holstein Association, for the sum of $6,975, an average of $116.25. The top price was $390, which William Bixler, Sugar Creek, paid for Orrville Lady Bell Pontiac Ormsby. She was consigned by Chas. Hertzler, of Weilersville. A six months heifer, Lady Champion Veemer, was sold to Geo. L. Dye, of Orville. She was consigned by Reece Bros., of Wooster. There were a large number of young calves and young bulls in the sale.

LITTLE HERD MAKES BIG SHOWING

Despite the fact that H. C. Gates of Canton, Pa., had only six cows on long time test during the past year, his herd carried off seven prizes. This is all the more remarkable as one of his animals, a senior three-year-old, entered in the 305 day division, had trouble when calving and her calf was born dead so that she did not qualify in the 10 months division.

Keystone Segis Celosia 2d, a senior three-year-old produced in 305 days, 752.81 lb. butter and 17,060.8 lb. milk. She won ninth prize for fat production and tenth prize for milk. Crestmont Dutchess Ormsby, a junior three-year-old, produced in the 10 months 806.65 lb. butter and 18,243.1 lb. milk, winning third prize for both her fat and milk production. This heifer surpassed the previous world's record for her class. Her full sister, Crestmont Ormsby Alcartra, as a junior two-year-old in the same division, made 722.99 lb. butter and 15,883 lb. milk and also won two prizes, the sixth prize for fat production and 15th prize for milk production. These two heifers are daughters of Mr. Gates herdshire, King Pontiac Alcartra Wayne. Keystone Leona De Kol Princess, a senior three-year-old, won the 23d prize by producing 898.39 lb. butter in 365 days. Considering that Mr. Gates has a small herd, the showing his animals made during the past year is indication of the quality of the Cresmont animals.

A GENEROUS DONATION

The Baltimore & Ohio Railroad Co. set aside $200 as premiums to be divided equally between one boy and one girl living in any of the counties of Maryland through which the Baltimore and Ohio runs.

The competitors must belong to a boy or girls' farm club and is to be used in part payment of the expenses of the winner in a course at the University of Maryland, providing that he or she becomes a student in that institution within a year after the premium is awarded. If the winner is not able to accept this offer, the money can be used in an educational trip.

Don't tell all you know. Give people the privilege of guessing.

WALWORTH COUNTY BREEDERS

Walworth Couty, Wisconsin, Holstein Breeders' Association held their regular spring sale at the Fair Grounds, Elkhorn, May 15th. There were 74 animals sold, including week-old calves, six-months-old animals and many yearlings. The total amount realized was $10,855 and the average was less than $150 on account of the large number of immature animals. The top price of the sale was Popevale Ollie Longfield, who went to Mike Westphal & Sons, Elkhorn, for $515. The animals bringing $150 or more, with names and addresses of purchasers follow:

Consigned by Walcowis Farms, Lake Geneva.

Walcowis Pontiac Butter Mald, 5 yrs., John Clausen, Pleasant Prairie	$250
Walcowis Ormsby Canary, 5 yrs., A. P. Kaye, Walworth	320

Consigned by Wm. Buck, Burlington.

Christdale Pauline Posch, 6 yrs., John Clausen, Pleasant Prairie	275

(Continued on page 416)

SAMBO'S LOGIC

One hot July afternoon a tired and very dusty little colored lad chanced to be passing a reservoir quite a distance from home. The water looked so cool and inviting that Sambo could not resist, and a few moments later found him splashing around to his heart's content.

The keeper, upon discovering him, rushed up and called out, "Hey, there! Come out of that! Don't you know that people in town have to drink that water?"

Sambo dived under again, came up, and innocently replied: "Oh, dat's all right, suh, I ain't usin' no soap?".

MISJUDGED

He was a very small boy, and the apples he was eying were very large. For ten minutes he looked at them, longingly and furtively, while the grocer bustled about serving his customers. The boy edged toward the basket and then away from it till at last the grocer thought it was time to intervene.

"Well, Tommy," he said sharply, "what are you doing?"

"Nothing" replied the small boy.

"Nothing! It looks to me as if you are trying to steal those apples."

"No, sir, you're wrong," retorted the tempted one. "I'm trying not to."

EVER FELT THIS WAY?

"And do you really love me?" "Yes," said the budding practitioner. "The mere sight of you, Isabella, sets up violent cardiac disturbances, superinduces dryness of the palate, epiglottis and larynx and brings on symptoms of vertigo."

Two musicians sat in a concert hall listening to a famous orchestral selection. After a while the first musician hissed fiercely into his friend's ear, "The fools are playing this movement too slowly, much too slowly." The other musician hissed back: "Yes, I expect their union only allows them to play so many notes an hour."

FROM A YOUTHFUL READER

A teacher asked a boy what the main function of the stomach is and he was whispering and didn't know. Then she asked a girl and she said "The main function of the stomach is to hold up the petticoat.

Jones—"How did Polly Peaches get so many medals as a life saver?"

Brown—"So many fellows told her they were just dying for a kiss."

Cornucopia De Kol Teksta, Harvey E. Hersh	205
Abbekerk Josie Pontiac, Harvey E. Hersh	175
Wolfe's Hill Pine, Clement H. Congdon	185
Bull, D. F. Green, Palmerton	200

JEFFERSON COUNTY, WASHINGTON

The Jefferson County, Washington, Holstein breeders held a sale at the Elma Fair Grounds on May 6th. There were 63 animals sold for $13,630, an average of $216.19. The top price paid for any animal was $510, obtained for C K K S V Lady May, a four-year-old, which was consigned by Wm. Bishop, of Chimacum. This cow was purchased by C. H. Kampendork, of Chimacum. Nine head were purchased by Governor Hart for the Western Washington Hospital for the Insane.

DISPERSAL SALE OF PETER BOWE

Forty-four head of registered Holsteins were sold on May 31st in the dispersal sale of Peter J. Bowe, Bend View Farm, near Bloomer, Wis. The average was $174. The highest price was $400, obtained for Johanna Ormsby Snowball, who is a daughter of Hillvale Snowball. She was purchased by Wm. Krause, of Thorpe. Frank Everson was in charge of the pedigrees, while Mack and Krause were the auctioneers.

IN ALL ILLINOIS

For the first time for many months, a black and white cow does not lead the Illinois Cow Testing Associations. The state leader is a grade Jersey, owned by Ed. Gerber of the Jo Daviess County Association No. 3. This cow made 1,863 lb. milk, 104.3 lb. fat. Second to her is a purebred Holstein owned by the Rock River Farms, Byron, and entered in the Ogle County Association. This cow made 2,629 lb. milk, 102.5 lb. fat. The highest milk producer reported is a member of the Buffalo Creek Farm herd, a purebred Holstein that produced 2,948 lb. milk, 82.5 lb. fat.

In McHenry County three different herds, owned by R. W. Stewart, A. D. Cornue, and F. M. Barber each averaged over 10,000 lb. milk during last year for every animal in the herd. Mr. Stewart's herd of 11 cows averaged 11,840 lb. milk, 534 lb. butter fat. Mr. Cornue's herd of 17 cows averaged 11,519 lb. milk and 527 lb. butter fat. Mr. Barber's herd of four cows averaged 10,504 lb. milk and 466 lb. butter fat.

The average American isn't hectic about imports; the fourth dimension doesn't annoy him, and the nebular hypothesis he never heard of. He spends his spare time wondering why every man with a wrist watch looks to see what time it is and then invariably listens to see if it's going.

When a man wants a lot for his money any real estate agent will accommodate him.

DOING WELL

At the Lathrop Farm, Montrose, Pa., the cow, Rexall Grace Segis Korndyke is milking 90 pound a day at the present time which we all must confess is doing pretty well. This cow was purchased from the offering of George Page of Cuyler, N. Y., in a consignment sale and was purchased by the farm manager, Dr. L. M. Thompson, because she appealed to him. Evidently the Doctor is a pretty good judge of a producer.

Sam boarded a trolley, and after a few whispered words with the motorman, shuffled to the exit door at the middle of the car, where the conductor collected fares.

The conductor asked: "Why do you want to get off so soon, Sam?" "Wy suh, Ah wants ter go ter Sixty-seventh and Cedah avenoo an' de motah man he say deh ain't no Sixty-seventh and Cedah avenoo!" The conductor replied: "Well, there isn't!" Sam continued: "Well, den, what's de use of me goin?"

Germans have christened their new 40,000-ton liner the Columbus. Fritz evidently intends to discover America all over again.

It's not so much a question of what ails Congress as what doesn't ail it.

"How did you order your steak, sir?" the waiter asked after a long absence.

"Like a fool, I did it personally," bellowed the patron. "If I'd had any sense I'd have ordered it by mail, a month in advance."

CANADIAN RECORDS

Eighty-eight Canadian official records accepted during May, the leader being Kate of Roselawn with 32.89 lb. butter from 741.7 lb. milk. This record is remarkable as it is the first official work ever done by her owner John G. Wait of Colborne, Ont. Minnie Ykema Abbekerk is second with 545.5 lb. milk in 7 days and 31.29 lb. butter in 7 days, 2,549.1 lb. milk and 122.4 in 30 days.

The leader of the senior four-year-olds is Lady Verbelle with 690.6 lb. milk, 33.51 lb. butter in a week and 2,755.7 milk and 131.60 lb. milk in 30 days.

The largest 7 day record reported is that of the junior four-year-old Segis Alcartra with 638.4 lb. milk, 34.78 lb. butter in a week and 2,543.8 lb. milk, 137.09 lb. butter in a month. Her owner is D. Raymond of Vaudreuil, Quebec. Sylvia Pauline Echo of the Hardy herd is second with 535 lb. milk, 32.4 lb. butter. The leader of the senior three-year-olds is Roycroft Segis Walker a member of the Raymond herd with 716.5 lb. milk and 31.34 lb. butter. Nothing over 23 lb. is reported in the junior three-year-old class, but the leader of the senior two-year-old class is Eco-Sylv Rauwerd with 544.1 lb. milk, 29.06 lb. butter in a week, 2,278.2 lb. milk, 121.73 lb. butter in the month. She is a member of the Hardy herd and is sired by Champion Echo Sylvia Pontiac who is also the sire of Eco-Sylv Belle Pietje the leader of the junior two-year-olds with 543.2 lb. milk, 27.14 lb. butter in a week and 4,459.1 lb. milk, 203.90 lb. butter in 60 days.

In the Record Performance Tests, four animals, three mature cows and a two-year-old heifer, make over 1,000 lb. butter. All are Ontario animals. Maude Huckleberry Hengerveld produced 27,759 lb. milk and 1,150 lb. butter. Pontiac Rose Korndyke made 24,555 lb. milk and 1,136.25 lb. butter and Goldie Keyes Camille produced 26,361 lb. milk and 1,000 lb. butter.

The leader of the three-year-olds is Colony Bessie McKinley owned by the Colony Farm of Essondale, B. C., with 18,694 lb. milk and 805 lb. butter.

The two-year-olds form a great class. The leader is Topsy Korndyke Segis 21,27 lb. milk and 1,056.25 lb. butter. She is owned by Duncan McNaughton of Winchester, Ont. Second to her is Shelleybrook Pietje Canary with 21,021 lb. milk and 912.50 lb. butter.

A record of 732.5 lb. butter is made in the mature class, of the 305 day division by Colantha Pledge Queen. The four-year-old class is headed by Lady Marling Burke with 631.25 lb. butter. Lady Verbelle is the leader of the three-year-olds with 686.25 lb. butter and 14,763 lb. milk and the two-year-old leader is Hillside Countess Lucknow with 14,102 lb. milk and 606.25 lb. butter.

Ah bin had dem gyahden tools hid outen de bosses' sight fuh a mont' now, but de sto'-keepuh done *ruint* me—he wint en give de boss one dem seed-cat'logs!

DR. E. V. McCULLOM.
Scientist, Investigator, and Scholar. The man who discovered vitamines.

CALF RATIONS

"There are two things to remember in feeding dairy calves," says E. A. Hanson, dairy specialist with the agricultural extension division of the University of Minnesota. "The feed must make them grow and must supply flesh-building material so they will be in good condition."

Growing feeds, he says, consist of skim milk, clover hay, oats, bran and oilmeal. The fattening feeds are corn, barley and oilmeal. For calves under six months old in good condition and having a soft, mellow hide a mixture of 30 lb. ground corn, 30 lb. ground oats, 30 lb. bran of which mixture three to five lb. daily is recommended by Mr. Hanson. A mixture of 30 lb. ground corn, 20 lb. ground barley, 40 lb. ground oats and 10 lb. oilmeal, also fed at the rate of from three to five lb. a day, is advised for calves in poor condition.

"Salt improves the calf's appetite, so keep a box with clean salt in sheltered place where the calf may eat of it freely," Mr. Hanson advises. Provide all the good clover or alfalfa hay the calf will eat up clean. Never allow the calves or yearlings to run with the herd."

COLLEGE DONATION

The Dairy Husbandry Department of Pennsylvania State College has recently been presented with a young Holstein heifer, "Weiler Farm Yankee Beauty," which is donated by E. H. Weiler & Sons, Warren, Pa. She will be placed with "Lycoming Breeders' Choice" the heifer recently given to the college by the Holstein breeders of Lycoming County.

A bore is a disagreeable person who positively refuses to talk to you about yourself.

FEED HEIFERS WELL

The extra feed required to develop a young dairy heifer to her proper size will be paid for by the extra money received for the cow when old. Dairy heifers should be fed so they will grow to as large size as possible. When a calf is to be sold for breeding purposes, it is easy to get back in the price received for the calf all of the extra feed it took to grow the mother out to good size, suggests Don. Magruder, extension dairy specialist of the State College of Washington.

If the heifer is stinted in feeding, she will not grow out to as good size and it is hard to sell her calves to good advantage. It may be explained to the prospective buyer that her size was caused by lack of feed while she was young, but the buyer is almost certain to fear that she is naturally small and that her offspring will be small. Even if the heifer becomes a high producer, her calves will not sell well if she is small.

Plenty of good roughage should be supplied the growing heifer at all times. When a heifer, over six months of age is on good pasture, she does not need any grain. But at any time that the grass begins to fail, she should be supplied with enough good legume hay and grain to insure steady growth. When not on pasture, feed all the good legume hay that she can eat and about one pound of grain for the first hundred weight of the heifer and a half pound of grain for each additional hundred pounds. That is, if a heifer weighs seven hundred pounds she should be fed four pounds of grain per day. A good grain mixture is equal parts by weight of bran and ground oats. Corn can be substituted for either feed, if it will cheapen the ration.

"What has become of the old-fashioned bad man who used to shoot out the lights in saloons?"

"He's gone where the woodbine twineth, and for the sake of his reputation as a marksman, 'tis better so. Two drinks of the stuff sold nowadays by bootleggers would spoil his aim."

"George, you weren't listening to what I said."

"Er—what makes you think that, my love?"

"I asked you if you could let me have $25 and you smiled and said 'Yes, dearest.'"

A member of the Rainier Calf Club attended the recent Holstein sale at Chehalis and purchased a purebred two-year-old for $135. The Citizen's Bank of Tenino financed the purchasing, reports William Dunham, Thurston County Club Leader.

Smith—"That child must be wearing her older sisters' cast-off dress."

Jones—"Why so?"

Smith—"She must be; that dress couldn't possibly have gotten so ragged and dirty in that child's lifetime."

TO SHOW EFFECTS OF GOOD AND POOR DIETS

Because rats fed on poor diets cannot stand traveling to let people see how they look compared with those which had been fed properly, four rats which were fed on diets with and without milk have been stuffed and mounted for the United States Department of Agriculture by the Smithsonian Institute. The work has

been done so accurately that the stuffed rats do not vary in size from their measurements when living. Rats are used for feeding experiments not only for the reason that they eat the same kinds of food as human beings but because they mature in a few weeks.

These four rats were fed on the staple diet of the poorer people of some sections of the United States. Rat No. 1 had

grits, sweet potato, salt pork and collards to eat. Grits or hominy grits are prepared from corn and are used as a cereal food in many parts of the South. Collards are a kind of cabbage which grows two feet or more in height and does not form a head. They are grown and used in the extreme southern part of the United States and are eaten as greens. Like all members of the cabbage family they contain vitamines. Although Rat

No. 1 had green collards in his diet, he did not get all the vitamines he needed and the experiment ended with his death.

Rat No. 1c had the same diet, but just before it was too late, he was given some milk containing the essential properties his diet lacked. Though he could never have made as fine a rat, after such treatment, as Nos. 2 and 3, he might have lived as long.

Rat No. 2 was fed on a similar diet except that he was given a little milk which amounted to 8 per cent of his diet. He was not as rugged as he should have been, but he was fairly healthy.

Rat No. 3 had a similar diet but in addition was fed all the whole milk he needed and his picture shows he was a fine, husky rat.

What diet does to rats, it is likely to children, which means that children

should be given an abundance, or about a quart of *whole* milk a day, not the skim milk from which father has been given the cream for his coffee. The cream contains some of the essential, growth-stimulating vitamines. This does not mean that all the milk should be consumed as a liquid but it can be made into custards, puddings, etc. The essential thing is to see that the child has plenty of vitamines in his food and the best way to do this is to give it plenty of Nature's best and, in fact, only perfect food—*milk*.

"When is your daughter thinking of getting married?"

"Constantly."

"What are girls coming to with the modern dresses?" "Aw, it's just a different style package." "Huh?" "The goods are all right."

The Cynical Bachelor observes that the easiest way to manage a wife is her own way.

"Pleasures" said Uncle Ezra, "am much like mushrooms. De right kind am fine, but you has to be on the lookout foh toadstools."

A young man recently asked one of the opposite sex why girls so frequently become engaged to several fellows at once.

"A smoker like you shouldn't have to ask that," she replied with a laugh. When you have only one match, doesn't it generally go out?"

"My dear," said the farmer to his wife about 3:00 A. M., "I haven't been able to get to sleep all night. I wish you would get up and fix me a little laudanum."

"It isn't worth while now," she replied, "it's nearly time for you to get up and make the kitchen fire."

Then he sank into a quiet peaceful slumber.

And another of the country's greatest needs is a revolver that will count ten before it shoots.

Let us have faith that right makes might, and in that faith let us dare to do our duty as we understand it.—*Abraham Lincoln.*

Director—"At the psychological moment when the villain enters the store, the heroine should have registered 'fear.'"

Fair One—"But the thief took the register with him."

Clerk: "So you wish to open a joint account with your husband. Current or drawing?"

She: "Oh, deposit for him—,—drawing for me."

American agriculture should lead us inescapably to the conclusion that national welfare can best be subserved by making farming a safe and fairly profitable industry in this country, and as progressively modern and efficient as is any other industry.

A deaf man was being married and the parson asked the usual question, "Do you take this woman for your lawful wife?" "Eh?" said the deaf man. "Do you take this woman for your lawful wife?" this time a bit louder. The groom seemed to get angry. "Oh, I don't know," he said. "She ain't so awful, I've seen wuss than her that didn't have as much money."

"Honey," said the colored suitor, "when we gits married, you ain't gwine to give up dat good job you has workin' for de white folks, is you?"

"But ain't we gwine to have no honeymoon an' take a trip on de train somewhere?"

"One of us might go, honey. Dey ain't a thing holdin' me, but you's got 'sponsibilities."

A little English boy proposed to put a penny in the box for missions. His sister told him it would be useless to make so small a gift, saying it would never be noticed among the larger contributions of others. He gave the penny, however, and when the collectors reported a collection of £65 s. 1d., he whispered to his sister: "Hear, tha's my penny; you said it was so little it would never be noticed, and the gentleman has told the whole congregation."

A traveling man one night found himself obliged to remain in a small town on account of a washout on the railroad, caused by the heavy rain, which was still coming down in torrents. The traveling man turned to the waitress with, "This certainly looks like the flood."

"The what?"

"The flood. You've read about the flood, and the Ark landing on Mount Ararat, surely?"

"Say, mister," she returned, "I ain't seen a paper in three days!"

TESTING IN MISSOURI

During the month of May, 224 cows in forty-three Missouri herds were given official tests, either two or seven-day. Despite the fact that only a quarter of the animals tested were Holsteins the honor roll is headed by two black and white cows followed by a Jersey and then five other Holsteins so that seven of the leading eight are registered Holstein-Friesians. The leader was, Fobes Homestead. Rauward, owned by S. C. Lindsey, with a credited production of 2,043.4 lb. milk, 79.284 lb. fat. Plum Clothilde Pontiac of the Pickering Farms was second with 2,368.1 lb. milk, 76.632 lb. butter fat. In fourth position is Duchess Chemacqua Hengerveld, of Bellfontaine Farms, 2,078.1 lb. milk, 71.257 lb. fat. A Bellfontaine cow is next followed by three Pickering Farms animals.

All of the eight leaders with the exception of the Jersey, made, more than 2,000 lb. milk and 69 lb. fat. The Missouri College of Agriculture gave the following advice to readers of its news letter:

At this time preparation should be made to place cows on test this fall and winter. Not only is it a time of preparing the cow but it is also a time to consider the feeds. Alfalfa or clover is essential. Silage is one of the best feeds to keep up a large milk flow due to its succulence. If you do not have a silo, you are paying for it in losses without getting any of its benefits.

For the early freshening cow, the final fitting process can start at once. A rest not only helps to build up the animals physically but the mineral reserve can be increased for a strenuous lactation period. Fall and winter freshening are the best seasons of the year to start testing. The heat of the summer with flies and dried up pastures are not conducive to high production. In the fall and winter the fat content of the milk has been shown to be higher and at the same time there is a maximum milk production and consequently more fat will be produced. The following spring on fresh pasture, the production of milk will again increase for a time. Through the hot summer months the tests on the average will be lower no matter in what stage of lactation the cow may be in. To make a success of testing five points are important. 1. Have cows of good breeding with an inheritance for large production. 2. Have the proper feeds available. 3. Have the cow freshen in the fall or winter. 4. Have the cow in good condition. 5. Take good care of her.

"The world is a looking glass, and gives back to every man the reflection of his own face. Frown at it, and it in turn will look sourly upon you; laugh at it and with it, and it is a jolly companion."—*Thackeray.*

Of course a musical education counts for something, but at the same time lots of people put on airs who can't carry a tune.

WASHINGTON DAIRY NOTES

The Stillaguamish Valley purebred Dairy calf club toured the purebred establishments of the Valley lately. The First National Bank of Stanwood offered $10 in three prizes for the boy or girl doing the best judging work. The first prize went to a girl owning a Holstein. This club has aroused much interest in improved livestock in the community.

At the recent purebred Holstein sale at Grays Harbor, 52 females and 10 males weres sold of which 28 females and 9 bulls were purchased by residents of the county for $7,630.

To boost the purebred livestock industry, the bankers of the county formed the Grays Holstein purebred cattle loan Association and financed any purchasers who wished to borrow the money.

During May, eleven purebred Holstein sires changed hands in Grays Harbor County.

All the herds in the Stillaguamish Valley Cow Testing Association are headed by purebred sires.

The Club boys of Spokane County enjoyed the livestock tour recently held during which they visited the John L. Smith and Waikiki dairy farms. The boys in each case picked the highest producers in the judging contest.

At the first Lewis County Holstein sale held May 24th, 50 head of purebreds were sold and 31 of them remained in Lewis County.

Mrs. Jones had just learned that her colored workwoman, Aunt Dinah, had at the age of 70, married for the fourth time. "Why, Aunt Dinah," she exclaimed, "you surely haven't married again."

"Yassum, honey, I has," was Aunt Dinah's smiling reply. "Jes' as of'en as de Lawd takes 'em, so will I."—*Ladies Home Journal.*

Magistrate—"Where do you live?"

Prisoner—"Me home is where I hang me hat."

Magistrate—"Well, where is your hat?"

Prisoner—"I ain't got no hat."

The Investor—"Your circular said 'Many wells are producing upwards of a thousand barrels a day.'"

The Promoter—Yes, and you neglected to ask how many wells it took to produce the thousand barrels.

In spite of the fact that it takes 100 cents to make a dollar lots of people have more dollars than sense.

Luck may carry a man to the top of the ladder, but sooner or later he takes a tumble to himself.

We Don't Keep Holsteins

They keep us so our 125 head are bred for every-day and all the year 'round production.
Oh! Boy!
How they do milk!
They are good individuals too, that straight-backed, big-barrelled kind, carrying large, square udders, with a teat on each corner.
You won't have to hide any stock you get from

Ellis Ellsworth
Meshoppen, Pa.
R. No. 4.

The herd is run on the Accredited Plan.

WHO WILL SHOW HOLSTEINS IN BRAZIL?

There will be another great Livestock Show at the International Exposition which will be held at Rio de Janeiro, Brazil, beginning September 7th and extending into 1923. This exposition is in celebration of the 100th aniversary of Brazilian independence. The Livestock Show will be from September 20th to 30th. New buildings are being erected to accommodate the Brazilian and foreign Livestock exhibits.

Livestock breeders of the United States are invited to participate in the show. There will be special classes for herds coming from foreign countries. Foreign animals of approved breeds, whether entered in competition or not, may be offered for sale at public auction at the close of the livestock exposition.

The Brazilian government is very anxious to improve the livestock industry of the country and to have animals from foreign herds take part in the exposition. Among the "preferred" breeds designated by the Secretary of Agriculture of Brazil are Holstein-Friesians.

The livestock exhibit is under the direction of the Committee of Rural Industries of which Dr. Simoes Lopes, Minister of Agriculture, is president. A summary of rules and regulations governing the exhibit of foreign livestock may be obtained on application to the United States Department of Agriculture, Washington, D. C.

Judge—"Where did the automobile hit you?"

Rastus—"Well, Judge, if I'd been carryin' a license numbah, hit sho' wud hab been busted to a thousan' pieces."

Nell—"I wonder why Mr. Closefist is always talking of the demoralizing influence of the theatre."

Belle—"Oh, it's just because it costs more than taking a girl to church."

LOOK! READ!
THINK!

—BULL CALF—

Born May 12, 1922, dam and sire's six nearest dams average 36.23 lb. butter in a week. Dam very large, and strong in King Segis Blood.

Priced right to quick buyer

Mineral Stock Farm

Westfield, Penna.

FIRST ACCREDITED HERD IN STATE

The Scudder herd was the first herd in the State of New Jersey to be placed on the accredited list. Many long and short time records have been made at this establishment, which is headed by King Waldorf Sylvia, who is both son and grandson of Champion Echo Sylvia Pontiac, the great Avondale herdsire, whose daughters are making tremendous records. Two as two-year-olds have exceeded 30-lb. butter in seven days; in fact, he is the only sire of which this statement can truthfully be made. He has six daughters whose records made in their two-year-old form average better than 30-lb. while three daughters of this bull have each milked 700 lb. in a week as three-year-olds.

Lady Waldorf Sylvia, the dam of King Waldorf Sylvia, is one of the very greatest if not the best daughter of her sire. As a senior three-year-old she produced 34.45 lb. butter in a week and milked better than 82 lb. a day. As a two-year-old she made 28.27 lb. butter in a week, averaging nearly 80 lb. milk a day and made a number of World's Records. Continuing on strictly official test for ten months, she produced 903.16 lb. butter, 19,947.4 lb. milk, the latter of which is the World's record for a senior two-year-old. She comes from a line of producers, her dam being a 36 lb. senior four-year-old daughter of Lady Waldorf Pietje who herself made 36.31 lb. butter in seven days as a junior four-year-old and has three different years exceeded 32 lb. butter in a week.

King Waldorf Sylvia possesses the individuality characteristic of the grandsons of May Echo Sylvia. He is backed by sires of highest quality and by wonderful producing cows and his offspring will carry the best producing blood of the Holstein breed.

YOUNG FOLKS HAVE BIG PART IN BREEDERS' MEETINGS

When the program committee makes up a program these days the boys and girls are not forgotten. Far from it. Their interests are considered at all times. "Give the young folks their chance" was the slogan at two of our recent big Holstein gatherings.

At the Minnesota State Holstein Field Day we found boys and girls from all of the surrounding counties. When the class of yearling heifers were judged in the forenoon, Judges Moscrip and Hansen awarded first place to Merl Woolson of Amboy, Minnesota, a club boy of sixteen. Second place went to Merl's sister, Nina Woolson, a club girl of thirteen. Ten senior breeders willingly took their places behind these enterprising young people. After the ribbons were awarded a great cheer went up for the boys and girls.

But this was not all. Fully two hundred young people attended the afternoon program and gave an excellent demonstration of club work to a packed house.

Again at the Wisconsin Field Day held May 24th on John Erickson's farm at Waupaca we find boys and girls at the front. Due to the immense crowd of over 10,000 people it was found necessary to run two programs, one for adults and one for boys and girls. At the latter program great stress was laid on the value of starting the boys and girls early in the game. Several of the boys and girls got right up on the platform and told how they raised "their" purebred calves.

Likewise, in looking over programs of other state breeders' associations we find that ample provision has been made for the young people. So the idea that "young people should be seen and not heard" is fast passing in the dairy world at least. And we suspect that is true in many other cases where agricultural improvement is concerned.

EARL J. COOPER, *Calf Club Leader. Holstein-Friesian Ass'n of America.*

ASSOCIATION SPECIAL PRIZES

The list of special prizes to be offered by the Holstein-Friesian Association of America at the great fairs this fall show that owners of minor prize winners can benefit as well as the owners of champions. To win any of the Association money the certificate of registration establishing identity and transfer showing ownership must be presented at the time of the showing of the animals.

Unregistered animals, even though eligible for registration or a registered animal not properly transferred, cannot win any of this money.

Animals six months of age or more must have been tested for tuberculosis within six months by a duly accredited Federal or State veterinarian, and a test certificate showing freedom from disease must be exhibited.

A leaflet containing the list of prizes and details and general classification list of official judges can be obtained from Secretary F. L. Houghton.

The money set aside to be used as prizes in calf club work is under the direction of the extension service and Earl J. Cooper, the calf club leader is the man to whom to apply. His address is 910 South Michigan Ave., Chicago, Illinois.

Life is a mad, mad race and when we get through it we are all out of breath.

"Enter," said St. Peter, at the gate. The shade hesitated, gazed about uncertainly and started back to earth. "What's the matter with that spirit?" asked an indolent angel who was lounging near the pearly turnstile. "He used to be a plumber's assistant," said St. Peter. "He thinks he forgot something."

"Now, my son," said the conscientious father, "tell me why I punished you?"

"That's it," blubbered the boy, indignantly, "First you pound the daylights out of me, and now you don't know why you done it."

LEADERS IN THE YEARLY DIVISION

†Strictly official.

‡The Canadian senior three-year-old, Lady Roberts Colantha, 1,468.75 lb. butter, 26,433 lb. milk, World Champion of her class, is not registered in the American Herdbook.

THE DAIRY INDUSTRY

The publicity department of the World's Dairy Congress is responsible for the statement that out of a population of 108,140,000 in the continental United States there are 25,228,000 children less than nine years old and an examination conducted among some 50,000 pupils attending the schools in Los Angeles, ranging in age from 4 to 15 years shows that nearly 42% are not receiving milk regularly. They also found that, in each year, the children who received a pint of milk a day averaged three-quarters of an inch in height and two pounds in weight more than the children who did not use milk.

Approximately half of the milk that is produced in the country is used for household purposes and half is manufactured into butter, cheese, condensed milk, ice cream, etc. According to the experts there are 23,619,000 dairy cows in the country. The importance of the dairy industry can be grasped by a study of the following table:

Total number of farms in 1919	6,448,000
Number reporting dairy cattle	4,567,000
Average acreage of all farms	148.2
Estimated acreage of farms with dairy cattle	877,000,000
Average value of lands, buildings, machinery per farm	$10,248
Estimated value of farms with dairy cattle	$47,000,000,000
Total agricultural population	32,500,000
Estimated number on farms with dairy cattle	23,000,000
Number of dairy cows	23,619,000
Number of dairy cattle—cows, bulls, calves	31,400,000
Estimated value of dairy cattle	$1,900,000,000
Gallons of milk produced in 1920	10,425,000,000
Value of dairy products on farms in 1920	$3,025,000,000

NEW YORK STATE EXHIBIT
WINNER OF FIRST PRIZE AT THE HEART OF AMERICA HOLSTEIN SHOW, KANSAS CITY

A GREAT FOUNDATION COW

In the herd of Henry Wieland, Sr., of Rock County, Wis., is an old cow, Corona Clyde. She is a high class individual and has been a big producer, but her fame rests chiefly on the performance of her descendants, her daughter and granddaughter. Corona Clyde was purchased in the Harry Dunbar Dispersal Sale in January, 1917, for $150. She has given Mr. Wieland two heifers which are now in the herd as well as one or more young bulls.

One of the daughters of this great old cow is Oak Lodge Corona Clyde, now owned by W. J. Jenkinson, of Monroe, Neb. This cow has produced 1,262.4 lb. butter, 30,250.1 lb. milk as a five-year-old, and is the only Nebraska cow that has ever made 30,000 lb. milk in a year. She produced, when fresh, 776.8 lb. milk and 29.14 lb. butter in a week and 3,205.9 lb. milk and 120.89 lb. butter in 30 days. She was sired by Beauty Walker Pietertje King.

Oak Lodge Corona Clyde is the dam of Loup View Corona, holder of the world's championship in the junior three-year-old class for 305-day butter production. She made 837.22 lb. butter, 20,440 lb. milk, carrying calf 203 days of the time she was on test. When fresh she made a seven-day butter record of 508.6 lb. milk and 23.38 lb. butter, her best day's milk being 77.2 lb., but we understand that she produced 90 lb. milk in a day later on, during her semi-official test. She finished her year record December 16, 1921, and dropped a heifer calf on March 3, 1922, thereby meeting the calving requirements in the 305-day division. Her sire is Colantha Hamilton Pietertje and she herself has two daughters in the Jenkinson herd.

"A perfect wonderland," said Alice as she proceeded to try on hats. But she didn't buy anything. Then there was a mad hatter.

Can Spare a
Breeder's Herd

of young cows, FIFTEEN animals, two to four years old, everyone with a semi-official record or now running on test.

This is the first Accredited herd in the state and NO abortion.

A few nice bull calves, 1 mo. to 9 mo. by our KING WALDORF SYLVIA, a double grandson of May Echo Sylvia. His pedigree shows lots of World Record backing and several 40 lb. crosses. His 10 nearest dams average 37.32 lb. and his 30 nearest dams average 30 lb. A lot of well known cows are bred to him. The value of this strain is increasing.

Scudder Farms,
Trenton, N. J. Route No. 6

WASHINGTON DAIRY NOTES

Representatives from the three dairy breed associations of Snohomish County met with county agent W. D. Love and organized the Snohomish County Livestock Breeders' Association. The purpose of this organization is to introduce better stock into the county by means of holding an annual livestock and dairy show.

An exchange of registered *Holstein bulls* was made between Arthur Funk of Keystone and Nunamaker Company of Washtucna, through the county agent of Adams County.

Four purebred *Holsteins* were purchased by the Woodland Dairy Club. Don G. Magruder, extension dairy specialist and T. Y. Blanton, county agent of Cowlitz county assisted in selecting the stock.

WHEN PASTURE FAILS

FEED SOILING CROPS WHEN PASTURE IS DRY AND SHORT.

A soiling crop is a green forage (like sweet corn drilled thickly) which is cut for convenience to feed livestock during a dry spell. Prepare for that dry spell now, because July and August are near by. Do you remember last year during midsummer, how the pasture got dry and short? You will need some green feed to replace that June grass. Drill in thickly several rows of corn near the pasture fence which can be fed green when pasture fails. It may be conveniently cut and thrown over the fence. From ten to sixteen tons of green feed can be harvested from each acre. One acre of this green corn fed at the rate of 50 lb. a cow per day will feed a herd of 10 cows for about a month. This will help to keep up the milk flow when otherwise you might have a 25 to 50 per cent drop in production.—*Wisconsin News Letter.*

THE MARQUETTE DAIRY

Frank H. Vanderboom, proprietor of the Marquette City Dairy on April 17th purchased a number of registered Holsteins from the Emblagaard Dairy and also leased 120 acres of pasture land formerly used by the Emblagaard herd. The Marquette City Dairy consists of 60 head. Mr. Vanderboom will erect a new modern dairy barn 30 feet wide and 100 feet long with stalls for 60 cows.

BABY COW HAS TWIN HEIFERS

A twenty-five month's old heifer, owned by G. D. Barnes, Grove City, Pennsylvania, is the mother of twin calves that each weighed 70 lb. at birth. They are the same size but there the resemblance ends for one is almost all black and the other is nearly all white.

Diner (scanning bill of fare)—"Rump steak 40 cents and again 50 cents. What's the difference?"

Waiter—"You get a sharper knife with the 50 cent one, sir."

KANSAS BUYING

Three carloads of grade Holsteins were recently taken from Fort Atkinson, Wisconsin to Elgin, Kansas, by the veteran Holstein breeder, W. R. Gates. The shipment consisted of 55 cows and a 30-lb. sire. The animals were distributed among the farmers living in the vicinity of Elgin, which is a new section from the dairying standpoint. This is the first introduction of the Holstein breed.

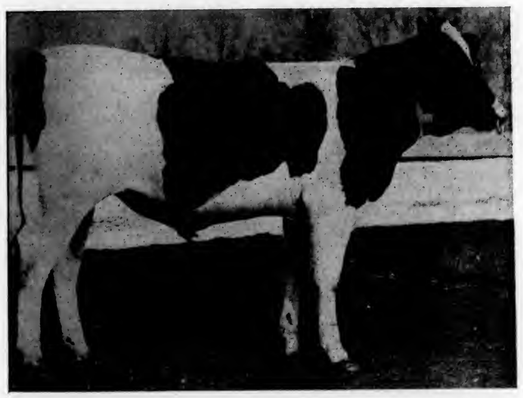
AMBITIOUS PLANS

There is a plan on foot to make Genesee County, Michigan, the greatest Holstein county in America. The Genesee Holstein Breeders' Association is waging the campaign. Among recent buyers are Mrs. Catherine Hyatt, Flushing, and E. McCrane of Mt. Morris.

UNLIMITED POSSIBILITIES

A new Holstein herd has been started at St. Petersburg, Florida by Albert Schleudecker, who has just purchased three registered Holstein calves. Mr. Schleudecker believes that dairying with Holsteins has almost unlimited possibilities.

AROUND SYRACUSE



Ray Duell who for a number of years has been the Farm Bureau Agent for Onondaga County, has purchased a farm at Manlius, N. Y., and will breed purebred Holsteins. Duell did much for the purebred industry for Onondaga County while in his former position. He brought out good herds of several breeds of cattle, at the New York State Fair, organized and developed a number of calf and heifer clubs and made a fine record for himself. His many friends will wish him success in his new enterprise.

Jim Gillet, former superintendent of Moyerdale, has quit milking cows for a time. Jim says he is too old to get up early in the morning, work all day and then milk at midnight, which is what Jim does when making records. He is on the job most all the time. Jim is selling condition powders and stock food at present and has the eastern United States as his territory.

I like that helpful word "again,"
Which stands a lot of rhyming strain,
And so the poet now and then
Proceeds to trot it out again.

KING ORMSBY CRIJNTJE

A good young bull with splendid long time record backing is King Ormsby Crijntje who now heads the herd at Allendale Farms. His dam as a junior four-year-old produced 971.86 lb. butter and 21,627.5 lb. milk in a year and has a 26-lb. 7-day butter record. These records were both made as a junior four-year-old and she averaged 80 lb. milk a day during the week of her official test. Johanna Ormsby, the only cow to make three distinct thousand-pound butter records in 10 month tests. As is well known she is a daughter of Sir Pietertje Ormsby Mercedes and Spring Brook Bess Burke 2d who herself has a long list of tremendous long-time and short-time records, made over 38 lb. butter in 7 days from nearly 800 lb. milk and four different years made records of over one thousand pounds butter.

KING ORMSBY CRIJNTJE

Two nearest dams average 1,131.39 lb. butter, owned by Allendale Farms, C. G. Allen, owner, Williamsport, Pa.

She is a daughter of Pietertje Hengerveld Segis, century sire, and son of King Segis and the 33-lb. cow, Blanche Lyons De Kol.

The sire of this young bull, King of the Ormsbys, already has a long list of good record daughters and is full brother to the famous 40-lb. heifer Bess The dam and sire's dam of King Ormsby Crijntje have year records that average well over 23,000 lb. milk and 1,131 lb. butter. His individuality is equal to his pedigree and in the Allendale herd he will have an opportunity to demonstrate his worth.

Whether you make official records or just milk your cows as an everyday dairy proposition, you will get satisfactory results by feeding

UNION GRAINS

The first commercial dairy feed made.
The standard of quality for over 20 years.

THE UBIKO MILLING CO., **CHAS. R. NEFF**
Pennsylvania Representative

Lilith Gem Kolkluff

a former member of the MERRYALL HERD, sold by us to the PENNSYLVANIA STATE COLLEGE, recently completed her sixth year's work in that herd by making, in 365 days, 22,084 lb. milk, 825.1 lb. butter, practically equalling her former year record of 22,247 lb. milk, 851 lb. butter. For four years she has averaged 20,294.4 lb. milk, 775.2 lb. butter. Her daughter, DE KOL KLASSJE LILITH, made 18,601.1 lb. milk, 749,95 lb. butter, in a year, in everyday work in the STATE COLLEGE HERD.

We have others of this type. Come and see them.

LACKAWANNA COUNTY HOLSTEINS

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders —pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal supervision.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

Application for entry as second-class matter pending, April 8, 1922, at the post office at Harrisburg, Penna., under the Act of March 3, 1879.

BERKS FARM HOLSTEINS

No. 1, EMPIRE SEGIS POSCH, Born Jan. 8, 1921.

Sired by Empire Segis, the great Moyerdale bull.

His dam is Bonnie Lass Posch who has a 7-day official record at 2 years of 17.32 lb. butter and 371.0 lb. milk.

He is well grown, light in color and a fine individual. First check of $150 takes him.

No. 2, DE KOL NAPOL COURTLAND MEG, Born Feb. 18, 1921

A Show Bull, seven-eighths white, straight top line.

His dam, Napol Tritomia De Kol, has a seven-day record of 19.85 lb. butter and 425.5 lb. milk, while, as a two-year-old, she made 13.43 lb. butter, 309 lb. milk in seven days. Her dam and granddam both have good long time records.

He is sired by Napol Sir Courtland Meg, a grandson of Pietje Ormsby Segis Burke and the wonderful cow Keystone Beauty Plum Johanna, whose short time and long time official work makes her world famous.

This bull is priced to sell, only $200.

Several other good bulls for sale. If you are looking for individuality, here's where it is.

The Holstein Breeder and Dairyman

VOL. I HARRISBURG, PA., JULY 8, 1922 No. 13

The Development of Agriculture

AGRICULTURE is one of the oldest pursuits of man. Primitive man was first of all a hunter. When long journeys had to be taken in pursuit of game, the weaker and older men and the women stayed around the homes and gathered fruits, seeds and nuts. From this it was but a step to plant seeds and to take care of the growing plants. Women was probably the first farmer. To her would fall the care of the growing crops.

To assist him in capturing his prey, man first tamed the dog. Animals of the bovine family were domesticated and some genius of these early days must have thought of gathering herbage when it was in its prime, curing it in the sun and storing it to feed the domesticated grazing animals during the non-growing season. It is very easy to see how these progressive steps could have been taken, but from what we know of the early history of our race the time was probably extended over many, many years.

Agriculture, as we know it, originated in semi-tropical countries, lands of great fertility which supported a dense population. Egypt is generally considered as the first great agricultural country, but explorations and excavations show that parts of China, India and Mesopotamia had a civilization practically as old as also did Mexico and several districts of South America.

Because we have an account in sacred history, we know more of early Egyptian agriculture. Periodic inundations along the Nile Valley occurred in prehistoric times. Wheat, barley, millet and rice were the first great cereal crops. The floods of the Nile brought silt and added fertility from the mountains of Abyssinia and distributed this over the surface of the land along the river valley. When the waters subsided the surface was easily worked, was free from growing grass or weeds, and it was very easy to plant seeds. The richness of the soil, the rapid growing season and the available soil moisture, later added to by irrigation, all combined to make ancient Egypt the granary of the then known world. In Genesis we read of the journeyings of the patriarchs into Egypt and later on are told that Jacob sent his sons to Egypt for corn, and that people came from far off countries to obtain the grain which had been stored by Joseph, under his authority derived from the Egyptian ruler, Pharaoh.

Secular history corroborates the statements of the Bible. The richness of the Nile Valley and the great corps of cereals raised there made Egypt one of the greatest of the early civilizations and made the Nile Valley, of which only a very small strip each side of the river ever was tilled, one of the great countries of the early days.

Egypt was blessed with large crops year after year. There are comparatively few instances of the periodic rise of the Nile failing to materialize and very few instances of it rising beyond bounds. When the rise did not come, famine resulted. When the rise was too great, the floods did much damage, sweeping away villages and causing great loss of life.

In the countries bordering Egypt, lacking the fertility of the Nile and the assurance of regular crops, a different system of husbandry was gradually developed. Large herds of cattle and flocks of sheep and goats were driven from place to place in search of herbage and water. Settlements gradually grew in districts favored with an abundance of pure water. Drought was the great natural enemy and when drought came the surviving animals were driven from place to place in search of food and it was undoubtedly a catastrophe of this kind that first drove the patriarchs from Canaan to Egypt where the rise of the Nile rendered the inhabitants independent of rainfall.

Tribes were gradually formed under natural leaders. These men and their families united, first of all, for protection against wild animals and wilder men, became possessed of vast flocks. Thus we read in the book of Job that the hero of that narrative had immense possessions in flocks and herds as well as five hundred yoke of oxen, which he employed in plowing and husbandry. While the primitive implements of those days caused a great deal of labor to be needed, we can readily see that considerable land must have been cultivated to have fed so many animals and their caretakers.

The Babylonians and nations subject to them had a great agricultural industry. Ancient ruins in Mesopotamia show stupendous irrigation works and that land is one of vast potential fertility, needing only water in due season to make it a country of great agricultural wealth. In earlier days we know this country supported an immense population.

Ancient Egyptian agriculture was looked upon as one of the great industries. The land owners, the priests and the warriors formed the ruling classes and one man often combined the three occupations.

Excavations have brought to light pictures and carvings representing the ancient Egyptians sowing, tilling and reaping their crops and show that cattle were esteemed very highly. The sacred ox, Apis, was wor-

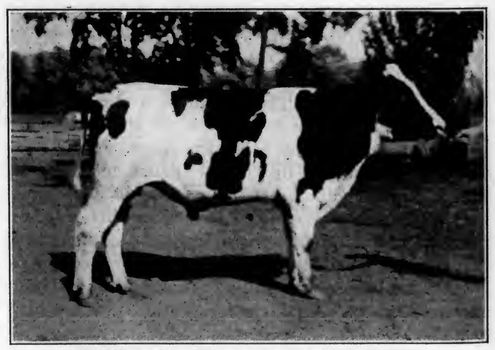
shipped as a visible emblem of Deity and was selected from the general herds because of peculiar markings.

While there seems no evidence that the flesh of animals was used extensively for food, yet we find records of men owning large herds and flocks and it seems impossible that they could have been kept only for their milk and for products made from milk without their flesh being eaten. In Palestine, our earliest records show that animals of the domesticated herds were used for food and there are many references to domesticated animals being killed for food in the writings that have come down to us from other early nations. It is very unlikely that Egypt was an exception to this rule.

The first agricultural implements were sharp stones, shells and sticks. The first plow that we know of from hieroglyphics was a crooked stick which was strengthened by a stick fixed transversely thus forming a rude letter A. It may be only a coincidence that our first depiction of what is the first letter of the alphabet in all Indo-European languages and practically all Semitic languages and the first farm implement of the great primal industry, agriculture, should so strongly resemble each other. Language experts unite fairly well in saying that the first representation of the letter A was suggested by the figure of a crane yet there are a few who have suggested that the first letter of the alphabet and the chief implement of the first great business were originally represented by the same sign, and the first letter of our alphabet, the capital A, certainly resembles an upended ancient plow stick more than it does the bird which we know as the crane.

Good Cattle in Small Herds

ONE of the coming cattlemen of the Keystone State is M. H. Sheaffer, of Huntsdale, Pa. He has only a few animals in his herd but they are good ones. Colantha Echo Korndyke, a cow of remarkable individuality and great producing capacity, is one of the best. Her sire is by King Lunde Pontiac Korndyke, a son of King of the Pontiacs. Her dam is

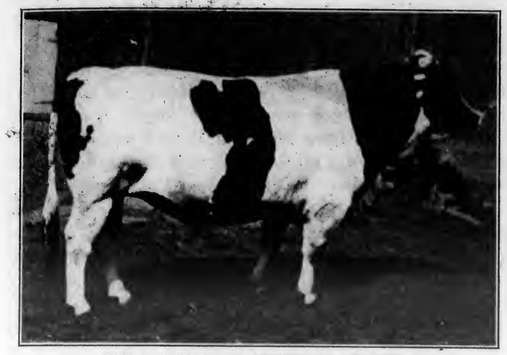


COLANTHA ECHO KORNDYKE
589 lb. milk, 27.28 lb. butter in seven days, owned by M. H. Sheaffer, Huntsdale, Pa. Picture taken five months after freshening.

a daughter of Sir Veeman Boon, whose descendants have made a number of very large records.

Colantha Echo Korndyke made a record of 16.7 lb. butter in seven days as a two-year-old, at which time she averaged practically 60 lb. milk a day. Mr. Sheaffer knew she could do considerably better. This cow freshened when she was five years and 22 days old. She was put on official test and run for fourteen days, in which time she made 1,217.1 lb. milk, 52.76 lb. butter, her best seven days being 589 lb. milk, 27.28 lb. butter. On the first day of her test she produced 75.7 lb. milk, second day 79 lb. and from then on above 80 lb., the last six days of her test were each over 90 lb., the best day being 92.8 lb.

Previous to freshening she was fed five weeks on a ration consisting of oil meal, bran, corn meal and ground oats. During the last ten days of these five weeks, corn meal was left out of the ration. After freshening, she was fed very moderately for three days, then the feed was increased gradually, her ration consisting of three parts Union grains and one part of the preliminary ration. When she was on test she was given two pounds beet pulp (weighed before soaking) Alsike clover, all she would eat, and a small amount of silage. At no time did she consume more than nineteen pounds of grain in a day so that she is a real, profitable producer.



The dam of Colantha Echo Korndyke is Mary Colantha Echo 2d. This cow has a number of good records as a six-year-old. She produced 656.3 lb. milk, 27.56 lb. butter in a week, in thirty days made 2,536.5 lb. milk, 113.85 lb. butter and in a full year produced 18,956.2 lb. milk, 786.91 lb. butter. As a three-year-old this cow has a seven-day record of 489.2 lb. of milk, 26.23 lb. butter.

HUNTSDALE KING ORMSBY KORNDYKE
Owned by M. H. Sheaffer, Huntsdale Stock Farm.

The eldest son of this great cow is Huntsdale King Ormsby Korndyke and he heads the herd of Mr. Sheaffer. He is a very nice bull, full of life and vigor, deep of body, a stylish, handsome animal. The youngest son of Colantha Echo Korndyke is being developed on the farm of J. H. Lear, Carlisle, Penna. Mr. Lear's herd includes a number of granddaughters of the great Ormsby Korndyke Lad.

The sire of both these young bulls is King Ormsby Abbekerk Helena. This great bull is one of the most handsome animals which has ever been our good fortune to look over, and is the head sire of the herd

KING ORMSBY ABBEKERK HELENA
Show bull and sire of show animals. Owned by W. A. Wood, Carlisle, Pennsylvania.

of W. A. Woods, Carlisle, Penna. We have had occasion to speak of the individuality of this bull before this time; we wish to repeat that he is a remarkable individual. His sire is King of the Ormsbys, the Allamuchy herd bull. All interested in registered Holsteins know that this bull is a son of Sir Pietertje Ormsby Mercedes and the famous Spring Brook Bess Burke 2d.

The dam of King Ormsby Abbekerk Helena, Allamuchy K A Helena, as a junior three-year-old, produced 20.58 lb. butter, 455.5 lb. milk in seven days. She is a daughter of Korndyke Abbekerk, great sire and show bull, who now has nearly 100 A. R. O. daughters.

King Ormsby Abbekerk Helena is proven to be a sire of remarkable individuals. One of his heifers was consigned to the second Brentwood Sale when only a yearling. Competing in a class of thirty-two heifers, selected from the greatest herds of the United States and Canada, this heifer won first place and was awarded a prize of $100. She afterwards sold for $900 in the sale.

Mr. Sheaffer is considered to be quite an authority on official test work and has done a little testing for his neighbors. One of the records he made is 421 lb. milk, 20.48 lb. butter in seven days on the two-year-old Tranquillity K. A. Jennie, a daughter of Korndyke Abbekerk, owned by Mr. W. A. Woods, at the time this record was made. While making her record, she was fed Union grains, a ration that Mr. Sheaffer strongly recommends.

Iowa Herd of Producers

THERE are a little over fourteen hundred people at the State Hospital, at Clarinda, one of the fourteen institutions owned by the state of Iowa. The Hospital has a herd of cattle that is famous as producers.

The Clarinda state herd now numbers 144 females of which eighty are purebred Holsteins. Formerly, only grades were kept but it was found that purebreds produced more and paid better and as milk was required for the patients and attendants at the Hospital, Holsteins were chosen as the favored breed.

The dairy herd at the Clarinda State Hospital is under the supervision of Arthur Rackliffe who has been in charge several years. When he first was connected with the dairy the cows were mostly grades. Three years ago 95 cows were required to furnish milk for the institution and the average daily production at all periods of lactation was about two gallons per cow. During the past year the daily average has been better than four gallons and the production of only 49 cows will fill the milk demands of the great institution. The following table gives the figures in detail for three different years.

Year	*Cows in Herd*	*Average Milk Produced*	*Average Feed Cost*	*Average Net Profit*
1917-18	95	5,142	$ 80.00	$ 67.00
1919-20	48	9,055	106.02	210.11
1920-21	49	10,435	107.46	221.76

Milking machines are in use at the present time. The yield from each cow is weighed at each milking, the time of milking being from 4:30 to 5:30 night and morning. The cows are usually fed before milking. Each cow is allowed to have a vacation each year of about thirty to sixty days and most of them freshen during the winter.

The institution herd is tested regularly for tuberculosis. When the first test was made there were many reactors but recent tests have shown only a few and the last time the herd was tested no reactors were found. It is the intention to place the herd on the accredited list.

The heifers are bred to freshen when right around thirty-months-old and the aim is to have each cow drop succeeding calves about thirteen months apart. The herd sire is of Ormsby breeding and won first prize in the yearling class at the Chicago National Dairy show.

The present Iowa dairy cow production average is estimated at right around four thousand lb. milk annually. The average per cow in the fourteen state institutions of Iowa is 8,008 lb., while the average of the Clarinda Hospital herd the year 1920-21 was 10,435 lb. for the 49 cows milked, a striking testimonial to the value of purebred Holsteins, the cows as milkers and the bulls as sires.

Stump Speaker (boastfully)—I'm a practical farmer. Mention, if you can, just one thing I can't do on the farm.

Voice (from the rear)—Kin you lay an egg?

Drug Clerk—"What kind of a toothbrush do you want?"

Customer—"Gib me a big one, boss; dare's ten in my family."

The Loyalsock Herd

AT Montoursville, a short distance from Williamsport, Penna., is a Holstein breeding establishment that was started in 1909 and is therefore one of the oldest in that section of the state.

The first herdsire was King Colantha Clothilde 3d who has left a number of good daughters in this herd. Following him was King Korndyke Daisy Hengerveld, a son of King Korndyke Sadie Vale from S V H Daisy, a 30.48-lb. four-year-old daughter of Sir Veeman Hengerveld. This bull has 17 daughters in the herd. There are a quartet of daughters of Sir Veeman Hengerveld himself, two daughters of his son S V H 9th as well as eight good young things sired by King Sadie Vale Hengerveld who was by King Korndyke Sadie Vale from a 37-lb. three-year-old daughter of Sir Veeman Hengerveld.

One heifer that they are sure to show you is Leafy Veeman Pontiac whose dam, Leafy Veeman De Kol, has a 40-lb. record and is a daughter of a 43-lb. cow. She has a 27-lb. seven day butter record and has milked 113 lb. in a day. There are 30-lb cows and near 30-lb. cows in the herd together with heifers that have correspondingly large records. The oldest cow is Small Hopes Mooie 5th now 15 years old. She has 2 A R O daughters in the herd including a 20.53-lb. two-year-old. You will be interested in Loyalsock Colantha Witra 28.04-lb., and her dam, Loyalsock Butter King Witra, that herself has produced 656.5 lb. milk in a week and has a 305 day record of 16,160.1 lb. milk and 625.48 lb. butter made on two milkings a day. Loyalsock Sadie Vale Craig, a two-year-old, made over 23 lb. butter in a week.

In the Loyalsock herd which is owned by the Flock Brothers Co., there are 72 head of which 48 are of milking age. One of the 30-lb. cows is Pauline Gelsche Walker De Kol 30.12 lb. butter and 610.5 lb. milk and another is Lady Ekster Pontiac Korndyke, 30.24 lb. butter in seven days as a four-year-old averaging better than 80 lb. milk a day. At the present time there are six young things on semi-official work and they are making creditable records under the care of Superintendent Floyd House who has had many years experience with registered Holsteins.

The senior herdsire is Traverse Echo Sylvia King whose sire is the 36-lb. bull, Echo Sylvia King Model, and whose dam, Traverse Inka Johanna, has a long list of big records and three different times has made over 30 lb. butter in a week. She has a seven day record of 33.27 lb. butter and 736.4 lb. milk, averaged 102 lb. milk a day for thirty days and is the dam of 5 A R O daughters including Traverse Inka Hartog, 35.37 lb. butter from 694.4 lb. milk in a week and a ten months record made as a junior four-year-old of 950.75 lb. butter, 21,146.1 lb. milk.

The young herdsire is a Jemima bull. Mr. House and his employers were able to induce the Houcks to part with four heifers as well as King Jemima Segis, son of Jemima Johanna Segis, who has a year record of 1,175 lb. butter and is the youngest member of the world record three generation group. She is the Canadian Champion in the four-year-old division and while making her year record produced 26,370 lb. milk. Her dam is Jemima Johanna of Riverside 2d, 23,890 lb. milk and 1,192.3 lb. butter, and the dam's dam is the famous Jemima Johanna of Riverside, foundation cow of the Jemima family, a wonderful individual that, as a ten-year-old, made over 30 lb. butter and better than 700 lb. milk in a week and in a year produced 30,373 lb. milk and 1,280 lb. butter, Canadian champion record at time of making.

One of the heifers that came with this bull is a daughter of Aaggie Wayne Princess Posch who a short time ago completed a year record of 23,567 lb. milk, 1,272.5 lb. butter as a twelve-year-old, world record for age.

Both the bulls are fine individuals. The young bull has the depth and straight top line that is found in all members of the Jemima family and he is certainly a lively fellow. There are many owners of famous herds that covet him on account of his superb conformation and the wonderful records back of him.

The Loyalsock herd is under Federal supervision and everything possible is done to insure the health and comfort of the animals. The milk produced is sold in the city of Williamsport and is in great demand. The establishment is one that many inhabitants of this city periodically visit in order to look over the sanitary barns, the choice Holsteins and the splendid horses, and any of our readers who are in the neighborhood would do well to include the Loyalsock establishment among the places to be seen.

Something New at the Dairy Show

According to a letter written by W. S. Skinner, General Manager of the National Dairy Show to the Holstein-Friesian Association, the Governors of Minnesota and near-by states are showing considerable interest in this year's exhibition. The Governor of Minnesota has formed a committee of thirty members to get back of the show. Twenty of these are from the twin cities and ten are from the country. Similar committees have been formed by Governor Nestor of North Dakota, and Governor McMasters of South Dakota, while committees are being formed in Iowa and Wisconsin. The Governor of Iowa asked the college leaders at Ames to perfect a similar committee for Northwestern Iowa and the state leaders of Wisconsin with Governor Blaine are developing a committee for the western half of that state.

The directors of the National Dairy Association have, according to statement, increased the cattle premiums 125% and have added prizes for grade cows from cow testing associations and bulls from bull clubs. They state "That the stabling of the cattle in this year's show will be in harmony with the best interests of the sanitary care of the cattle." They further state that "The Boys and Girls Calf Club work is enlarged 100 per cent over last year, both in premiums for the calves owned by the boys and girls, and for the judging and demonstration work by these young people.

The Association is asked to urge representative breeders to exhibit their herds; that the extension forces of the association help to bring out the grade cattle and see to it that the Holstein--Friesian breed is represented in them, and also in the State Herd Classes for the show.

"A one price bull sale" is in contemplation. Mr. Skinner has not given any explanation just what this means but probably will in the near future.

A Real Livestock Breeder

BY the death of William G. Markham which occurred at his home, Elm Place, Avon, N. Y., the Holstein breed and Association lost one of its grand old men, a man with a world wide knowledge of stock breeding. At the time of his decease he was 86 years old.

At the age of 21, Mr. Markham became actively interested in stock breeding and established a fine herd of Shorthorn cattle and flock of Leicestershires. At one time his herd included the ox, General Grant, which was purchased as a calf and was raised to maturity in the herd. When seven years old, in 1864, he weighed 3,602 lb. He was sold by Mr. Markham to the Livingstone County Soldiers Aid Society for $1,000. They presented him to a similar society in New York where on exhibition he earned $1,000 for the Soldiers' Relief Fund. Carlos Pierce of Boston, purchased him for $1,000, named him General Grant and presented him to President Lincoln who contributed him to the Soldiers and Sailors Fair at Boston. He was loaned to different fairs in the United States, was finally presented to General Grant and sent by him to his farm in Galena, Ill. This ox is said to have earned for the benefit of soldiers and sailors around $10,000.

When he was 36 years old Mr. Markham had assembled one of the best herds of American Merinos to be found in the country and in 1876 prepared for publication the American Merino Register. For 20 years he was president of the New York State Sheep Breeders and Wool Growers Association, was secretary of the National Wool Growers Association for 23 years and for a number of years was president of the New York State American Merino Sheep Breeder Association.

At the request of the Japanese Government, Mr. Markham selected 200 sheep and personally delivered them to Tokio to establish a government flock. In Japan he met General Grant who was then on his trip around the world and told the General of a flock of sheep he had seen, the foundation animals of which had been brought from China. American Merino rams had been used in the flock and there was a 300 per cent increase in the value of the fleece of their progeny. General Grant induced Mr. Markham to go on to China and to make this explanation to Viceroy Li Hung Chang, then at the height of his power, with the result that many American Merino rams went to China. Mr. Markham continued on his tour around the world, visiting great sheep establishments in France, Italy and Germany. Mainly through his efforts American Merinos were introduced into South America and the Cape of Good Hope, while he made many large shipments to Australia.

The interests of this great stock breeder gradually turned from sheep breeding to dairying. At the present time there are at the Markham and Puffer Farm 150 purebred Holsteins of which about 70 head are milking. The average production is 1,200 quarts daily which is all bottled and sold as certified milk. The herd is under State and Federal supervision and is inspected daily by a veterinarian. For a period of eight months the milk of this herd averaged only 800 bacteria per cubic centimeter.

The farm covers about 400 acres of which about 100 are planted annually with corn and 150 devoted to raising alfalfa, clover and timothy. On the farm there is a log cabin built in 1890, a replica of one built in 1794 on the same site by Mr. Markham's grandfather and containing many mementos of that day such as flintlock muskets, pistols, snow-shoes, etc. In 1789 Col. William Markham, grandfather of the hero of our story, came from Connecticut and settled in the Genesee Valley. Five years later he purchased the farm now known as Elm Place and built a log cabin.

In 1805 he built the first brick house in western New York which, with later additions, is the family homestead. Mr. Markham was born at Elm Place in 1836 and was educated at Lima Seminary. His partner, C. C. Puffer was also his brother-in-law and both were prominent in the affairs of the Pfaudler Co., manufacturers of sterilizers and other dairy machinery. At the time of his death Mr. Markham was chairman of the Board of Directors of this company.

Mr. Markham was an enthusiast on the good qualities of Holstein milk and in an interview a short time ago is reported to have said: "When I decided to produce certified milk for the use of babies I investigated the different breeds of cows, and, following the advice of the best medical authorities as to quality of milk for infant feeding, I abandoned the breeding of Shorthorns and selected Holsteins, because they are not only larger producers but their milk more nearly approximates the human mother's milk than does that of any other breed."

The Doctor's Opinion

DR. THOMAS MORGAN TOTCH, professor of pediatrics at Harvard Medical School, in his book, "Pediatrics," says "From a medical point of view, the Holstein milk is exactly what we find best for infant feeding. The volatile glycerides which are present in very small proportions in human milk are considerably greater in Jersey and Guernsey milk than in that of the Holsteins. They increase decidedly the difficulty of digestion." W. G. MARKHAM.

Mike—"Say, Ike, that mattress you sold me was full of bed-bugs."

Ike—"Well, what can you expect for two dollars? Did you want it full of canary birds."

Jack—"My brother takes up French, Spanish, Italian, Hebrew, German and Scotch."

Jill—"My goodness, when does he study?"

Jack—"Study! He doesn't study. He runs an elevator."

Virtue never blows its own horn. In fact, virtue is generally too poor to own one.

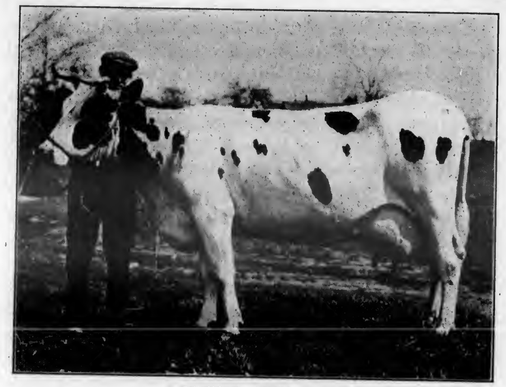
A Grand Old Cow

THE grand, old foundation cow, Aaggie Manor De Kol 105,190 was sired by Sir Concord Manor De Kol, a grandson of the great old sire Sir Korndyke Manor De Kol who was a grandson of Belle Korndyke and De Kol 2d, and a great-grandson of Netherland Hengerveld, the three greatest cows of their day. The dam of Aaggie Manor De Kol was Aaggie De Kol Clothilde Artis, 88,890, a daughter of De Kol Artis Clothilde.

In the hands of her present owner, George C. Hubbard of Red Hook, New York, Aaggie Manor De Kol made an official record of 662.3 lb. milk, 30.7 lb. butter in seven days and her thirty-day record was 2,639.7 lb. milk, 117.46 lb. butter, she being nearly nine years old at the time of making. At her previous lactation period she produced 26.52 lb. butter in a week and averaged 79 lb. milk a day. As a six-year-old, she made a seven-day record of 22.75 lb. butter and in this test she averaged 75 lb. milk a day. She has always been a heavy and economical producer and has six generations of descendants.

Aaggie Manor De Kol is now fourteen years old. She has three Advanced Registry daughters and she is the foundation animal of the five generation group which appeared on the cover of the May 22d issue of THE HOLSTEIN BREEDER AND DAIRYMAN. Her owner,

AAGGIE MANOR DE KOL, No. 105190
30.7 lb. butter, 662.3 lb. milk in seven days. Owned by George C. Hubbard, Red Hook, N. Y.



Mr. Hubbard, the proprietor of Hubbavale Farm, Red Hook, N. Y., is holding her in the picture. He is a well known New York cattleman and consignments from his good herd were sold in the first and third Brentwood Sales, and are always in request. Mr. Hubbard is secretary and treasurer of the Eastern New York Holstein-Friesian Breeders' Association. There are a number of descendants of Aaggie Manor De Kol in the Hubbavale Herd.

Every man reaches the time in life when he becomes dignified and settled, yet he never fails to find much satisfaction in telling about what a devilish boy he was.

Beauty without virtue is a rose without fragrance.

Thirty Pounds In Murdock Herd

PIETJE ARTIS DAISY, one of the good cows in the herd of Alex Murdock & Son of Wyoming, has increased her record to 30.22 lb. butter and 521.4 lb. milk. She averaged 4.63% butter fat and her best days milk was 85.9 lb. She had previous records of 26.28 lb. butter as a six-year-old, 27.32 as a seven-year-old. She is a daughter of Sir Korndyke Pontiac

PIETJE ARTIS DAISY
30.22 lb. butter and 521.4 lb. milk in a week, owned in the Wyoming herd, Alex Murdock & Son proprietors, Wyoming, Pa.

Artis 5th while her dam, Pietje Daisy, 24.82 lb. butter and 591 lb. milk in a week, is also a member of the Murdock herd. Alex Murdock and Son have purchased from Hillside Farms their half interest in Hillside Ormsby Pontiac Korndyke so that now he will spend all of his time in the Wyoming herd. He is a son of King Pontiac Maple Knoll Ormsby and his dam is Hillside Saxon 32.29 lb. butter and 628.7 lb. milk in a week, a daughter of Woodcrest Pietje and of Pennsylvania's first 30 lb. cow Hillside Annette. His sire is by King of the Pontiacs from Maple Knoll Helen, a 33 lb. daughter of King Korndyke Hengerveld Ormsby who is a maternal brother to Sir Pietertje Ormsby Mercedes.

He—"Darling, there's been something trembling on my lips for a month."

She—"So I've noticed. Why don't you shave it off?"

To write your name
On the scroll of fame
May make you a man of rank:
But the name to own,
Though it be less known,
Is the one that goes at the bank.

A woman may be influenced to forgive a man's past because of his presents.

Nature abhors a vacuum so when she finds one in a human head she fills it with words.

A good memory is one that enables us to forget our debts and remember our debtors.

A Disgraceful Demonstration of Political Manipulation

AFTER making a very careful survey of the many radical changes in the Association management voted by the so-called "delegates" to the Kansas City Convention, the BREEDER AND DAIRYMAN feels justified in characterizing the work of the convention as being not only a disgraceful violation of every right which the membership is entitled to have and enjoy, but also such a demonstration of political intrigues, misrepresentation and total disregard of right, justice and fair dealing, as justly stamps the political ring-leaders of the Association as enemies of the industry and of the men whom they are supposed to represent.

We are already beginning to reap the results of the Aitken regime that mulcted the association to the tune of $24,000 for "salary" and about $9,000 in "expenses" during the period when whirlwind campaigns brought about the so-called "extension work expenditures" of $140,000 in one year and a reduction in Association's receipts from $550,000 in 1919-1920 to $330,000 in 1921-1922.

We feel that the facts fully justify our belief that the Holstein-Friesian Association as such has been debauched, exploited and put on the toboggan slide that leads to disaster. We feel that it has been lured away from the harbor of safety, well-being and high-minded purpose, and among the rocks of political ambition, personal greed and dastardly design, manned by a crew whose illegal right to act is a proven fact with the black flag of plotted autocracy nailed to the mast-head.

The splendid purpose for which the Holstein-Friesian Association came into existence; the noble ideals which ever actuated the men who helped to give it birth and cradle it during its infancy have been assaulted and defiled, while the rights of every member have been ruthlessly trodden under foot by those whose greed for political perfectment and personal gain have become blinded to every sense of decent regard for members' rights through a lust for political control of Association affairs. Starting with a mere handful of Holstein enthusiasts, the Holstein-Friesian Association has grown to be the largest breed organization in the world, with a membership of over 20,000.

Starting with nothing it now possesses a reserve fund of $350,000 which it acquired as a direct result of the frugality, honesty and conscientious work of its ever-faithful secretary, Frederick L. Houghton, *and on a transfer fee of twenty-five cents.*

One of the fundamental principles of the Association as clearly set forth in its original charter, is that which provides that its *officers shall be elected by the members,* and that *members may vote either in person or by proxy.*

At the Kansas City Convention, 20,000 members of the Holstein-Friesian Association were represented by 88 so-called "delegates;" and these 88 men, a vast majority of whom were chosen through the political manipulation of the paid-secretary state organizations, did the very thing which they *would not have dared to do* had the membership not been disfranchised at the special meeting held at St. Paul October 10, 1921.

June, 1919, saw the first raid made on the Association's treasury through an increase of the transfer fee from 25 cents to one dollar, and the voting of $12,000 salary to a country lawyer as president of this great breed organization. This happened at Philadelphia in 1919.

Like the beasts of the jungle whose native fury is augmented by the smell of blood, men who thought more of self, place and power than they did of the good of the breed, seized the opportunity. Association profits soon began to melt away under the enormous expenditures for whirlwind campaigns, paid state secretaries, high priced chairman of the executive committee, enormous legal expenses, big hotel bills, taxi cabs, new office furniture, pullman cars, porters' tips and traveling expenses, together with such other special pap as could be provided for the faithful.

At St. Paul in 1920, we saw still further raids made upon the rights of the people. A committee was appointed with full power to act in the selection of a "National Home" which would give to the committee so appointed, and of which Mr. Reynolds was a member, power to expend the entire reserve fund of $350,000. A committee on by-law amendments was appointed, and the same James A. Reynolds as chairman of said committee proposed at the Syracuse Convention of 1921 a resolution giving the Board of Directors power to make, amend or repeal Association by-laws.

But in 1921 we witness an uprising of the membership. Under the leadership of Judge Peasley, A. L. Brockway, former chairman of the finance committee and others, we saw the politicians put to rout, the $24,000 president, D. D. Aitken swept from office, the transfer fee reduced from one dollar to fifty cents, and the stealthy attempt to take away from the membership the right to make its own by-laws overwhelmingly defeated.

And now note the punishment which the defeated politicians meted out to the members.

Scarcely had the smoke of battle cleared away after the Syracuse Convention before the politicians in the Association got together and through their able lieutenant, the *Holstein-Friesian World,* agitated for "Special Meeting," to be held at St. Paul, in October, 1921, more than a thousand miles west of the center of Holstein population at which meeting it was proposed to *punish the members by taking away their rights to manage the Association's affairs.*

The servility with which the *Holstein-Friesian World* lent its support to this movement should forever stamp it as being unworthy the support of the plain, every day breeders and dairymen, who go to make up 85 per cent of the membership of our Association.

Breeders were busy with their fall work. They had expressed their views at the Syracuse Convention and

A Grand Old Cow

THE grand, old foundation cow, Aaggie Manor De Kol 105,190 was sired by Sir Concord Manor De Kol, a grandson of the great old sire Sir Korndyke Manor De Kol who was a grandson of Belle Korndyke and De Kol 2d, and a great-grandson of Netherland Hengerveld, the three greatest cows of their day. And now note the punishment which the defeated politicians meted out to the members.

Scarcely had the smoke of battle cleared away after the Syracuse Convention before the politicians in the Association got together and through their able lieutenant, the *Holstein-Friesian World,* agitated for "Special Meeting," to be held at St. Paul, in October, 1921, more than a thousand miles west of the center of Holstein population at which meeting it was proposed to *punish the members by taking away their rights to manage the Association's affairs.*

The servility with which the *Holstein-Friesian World* lent its support to this movement should forever stamp it as being unworthy the support of the plain, every day breeders and dairymen, who go to make up 85 per cent of the membership of our Association.

Breeders were busy with their fall work. They had expressed their views at the Syracuse Convention and

INTENTIONAL SECOND EXPOSURE

they little believed that the politicians would dare put through their scheme.

It is now a matter of fact, however, that at this Special Meeting the entire membership was disfranchised, a so-called delegate system adopted, and the delegates elected under this system were the ones who misrepresented the Association membership at the Kansas City meeting.

"Ill fares the land to hastening ills a prey, where wealth accumulates and men decay."

When we review the history of the Holstein-Friesian Association of America and compare it with the noble unselfish constructive work of such men as Gerrit S. Miller, Edward A. Powell, Henry Stevens and many others, men of noble purpose who guided the Holstein Association in its earlier days and helped to bring it into its commanding position of breed influence, with the narrow-minded, selfish, scheming political intrigue of some of the so-called leaders of to-day, we cannot help but invoke the sentiment set forth in the above quotation from Goldsmith.

THE BREEDER AND DAIRYMAN goes on record now as saying, *it is time to call a halt.*

We believe that unless the membership is restored to its absolute rights as members to have an unquestioned, unhampered voice in expressing their wishes through their direct or proxy vote, that this Association will go upon the rocks of disaster to be succeeded by a new and a better organization where the spirit of fair play, honesty and justice will be accorded to every member; where political intrigue will be frowned upon and stamped out by a righteously indignant membership; where by-laws made by the members will be respected and the surplus earnings of the Association protected from the rapacity of political greed.

We realize that this is a strong, right from the shoulder position to take, but we assume the fullest responsibility for taking it. Whenever the hand of greed and personal ambition assume to throttle and to kill a decent, fair-minded regard for right, justice and fair dealing, it is only cowards who fear to tell the truth and to demand a reckoning.

The power to vote as provided by the original charter, constitution and by-laws of the Association, has been taken away from the membership and destroyed. The right of representation has been denied to every member of this Association; the right to elect its officers and to make its by-laws has been taken away from the membership. As stated by Judge Peasley, not only have the members been disfranchised, but by the passage of the Hackney resolution the delegates have also been disfranchised.

Taxation without representation resulted in the war for American independence, and those who believed that taxation without representation was wrong were victorious.

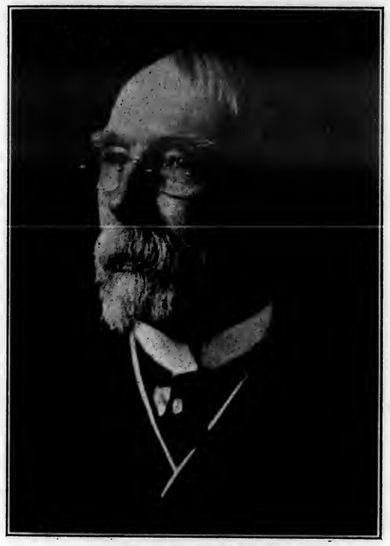
Even the most died-in-wool politicians would never have dared to make a straight out and out issue of the Hackney resolutions, proposed at the Kansas City Meeting and passed by these so-called "delegates," and there is not one of them who doesn't know that had the question of taking from the membership the right to vote for their secretary, their treasurer and their Superintendent of Advanced Registry been put squarely up to the members, it would have been overwhelmingly defeated. The threat of J. M. Hackney and of the *Holstein World* made in 1918 when the membership refused to be bulldozed or blackjacked into a surrender of their rights has through the lapse of years and as a result of political intrigue been carried into full force and effect. THE BREEDER AND DAIRYMAN believes that the members will resent such action and will make their resentment felt in no uncertain manner.

It is a well recognized and oft-repeated adage that "That government is best that governs least." It is an equally well recognized principle of government that best results are always secured where the management of governmental or corporate affairs are left to the good judgment of the individuals who go to make up the corporation or the sovereignty. For twenty-six years the Holstein-Friesian Association prospered to an unusual degree under a charter which gave to the membership the right to say who should be its officers and what by-laws should govern. For twenty-six years it made rapid progress in numbers, influence and financially under the management of its officers and the guiding hand of its secretary. For twenty-six years it operated under a twenty-five cent transfer fee, accumulated a large reserve fund, and aroused to a point where the sun of a great prosperity presaged a wondrous future for the association.

And then, what happened? Looming big to the eyes of greed was a $300,000 reserve fund, and yearly receipts through the secretary's office of *over a half-million dollars.* Fat fees—fat incomes—fat rake-offs and opportunity for exploitation began to occupy the attention of those whose interests in the Association were personal in their character and for whom the Association was nothing but an opportunity for gain.

Taxation without representation in the Holstein-Friesian Association is wrong in principle, and we believe that those elements of manhood, justice and fair dealing to be found among the rank and file of the men who milk their own cows and breed cattle for a livelihood and not as a hobby, will arise, assert itself and so resent this political destruction of personal rights as to save the Association from political intrigue and forever bury the peanut politicians who have dared to assume the power of dictatorship in this great breed organization.

An undertaker was ordered to make a wreath to bear the inscription, "Rest in Peace," on both sides and if there is room, "We shall meet in heaven."



The undertaker was out of town, and his new assistant handled the job. It was a startling piece which turned up at the funeral. The ribbon was extra wide and bore the inscription, "Rest in Peace on both sides, and if there is room we shall meet in heaven."

A fellow was arrested for striking his mother-in-law. When brought into Court the Judge said: "One hundred and six dollars and costs." The fellow was very indignant and asked the Judge how he arrived at a sum like that, and the Judge answered: "One hundred dollars' fine and $6 amusement tax."

Southworth In Europe

MR. E. E. SOUTHWORTH, President of the Breeder and Dairyman Publishing Company, left July 1st, for an extended trip to Europe. He sailed from Montreal and will go directly to London. After a short stay in that city, he will make a tour of the British Isles and will spend some time in Scotland. He plans to visit France, Belgium and Germany before his return.

Mr. Arthur T. Vance, editor of the well-known woman's magazine *The Pictoral Review,* is a nephew of Mr. Southworth.

E. E. SOUTHWORTH
President of the Breeder and Dairyman Publishing Co.

Mr. Southworth is an extensive traveler. During his last over-seas journey he toured the Orient. Sailing from Southern California, he visited the Philippines, Japan and China. He returned via Vancouver and then spent several months on the Pacific Coast. On his present journey he carries the wishes of all connected with THE HOLSTEIN BREEDER AND DAIRYMAN for an enjoyable trip and a safe return.

The worried countenance of the bridegroom disturbed the best man. Tiptoeing up the aisle, he whispered:

"What's the matter, Jock? Have ye lost the ring?"

"No," blurted out the unhappy Jock; "the ring's safe eno'. But, mon, I've lost ma enthusiasm."

Jones—"He must be fairly well-to-do, I notice he always smokes initialed cigarettes."

Banks—"Yes, but did you ever notice that they're never his own initials."

Dugan invited Patrick to sample his private stock. He gave Pat an extra small glass. Pat drank it and said: "I say, God bless the man that made the whisky, but the devil take the man that made the glass."

"Phwat was the last card Oi delt ye, Mike?"

"A spade."

"Oi knowed it. Oi saw you spit on yer hands before ye picked it up."

"Waiter," he called, snuffing the air suspiciously, "what is this smell of fresh paint around here?" "If you just wait a few minutes, sir," replied the waiter, "them two young ladies at the next table will be going, sir."

"Ah, life is full of vain regrets," sighed the romantic woman.

"Yes, lots of us wish we had all the money we have lost trying to make more," replied the tired business man.

Prisoner—"But I would rather tell my own story. Don't you think it would be believed?"

Lawyer—"Yes, that's the trouble; it would carry conviction with it."

Even on Sunday an ounce of practice may be worth a pound of preaching.

He who fights and runs away may throw down his arms, but of course he keeps his legs.

Letters to the Editor

WHAT WILL BE THE OUTCOME

EDITOR BREEDER AND DAIRYMAN.

The yearly meeting is over. What will eventually be the outcome?

For myself, I think they went just as far as they possibly could and not stir up too much trouble. They want to give it to us little fellows in small doses; they are afraid if they go too far at one sitting they might stir up a hornet's nest (which I think they will do before this matter is permanently settled). They think if we do not say much they will give us a bigger dose the next time or between meetings. I believe the next meeting will see a new secretary, treasurer and Superintendent of Advanced Registry. In the meantime they will be on the lookout for a building or site for the new building to take in all the offices, then they will add the clause that will give the Board of Directors the power to amend and change the by-laws as they think best and then we will be done for all time to come. The fellows that are in the swim will locate themselves in the new building (which will be bought with our reserve fund) and we will support them with large salaries derived from the enlarged transfer fees.

Signed,
ONE OF THE LITTLE FELLOWS.

NOW IS THE TIME TO SHOOT

EDITOR BREEDER AND DAIRYMAN:

I am sending in One Dollar (1.00) for as much as it will buy of your good HOLSTEIN JOURNAL; what I like about it is you are not afraid of *the cars.*

I am glad you fellows are digging into some of the stunts as I believe it will make this whole matter come clean. The Holstein cow is too great a breed to have so much politics over and now is the time to shoot them before they get so old and tough a bullet will not be able to penetrate their frame.

Ohio.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

JULY 8, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Extension Committee Meeting

A MEETING of the Holstein-Friesian Association Extension Committee was called July 6th, at 10 o'clock, a. m., the place of meeting being the Hotel Cleveland, Cleveland, Ohio. The three members of the Extension Committee are: H. V. Noyes, of Oneida, N. Y., chairman; Fred Pabst, of Oconomowoc, Wis., and Dr. De Launcy B. Armstrong, Watertown, N. Y. The committee has formulated plans which are believed to be of great importance and have decided to have a general meeting of representatives from various territories, state secretaries, etc., rather than confine the meeting to the committee as appointed by President Lowden.

A report of the proceedings with outlines of the plans approved or chosen will be given in the next issue of THE HOLSTEIN BREEDER AND DAIRYMAN.

Tuberculosis Indemnity Insurance

IT is reported that the cattle owners of Lyme township, Huron County, Ohio, have formed a mutual insurance company to pay indemnities for animals reacting to the tuberculosis test. Each member pays a premium of $2.00 for each unregistered animal in his herd and $3.00 for each registered animal. Fifty cents of this fee is used to pay necessary expenses and an official veterinarian and the remainder is placed in an indemnity fund. The herds are tested annually while animals are tested as they are sold. Positive reactors are slaughtered and at the end of the year the balance of the indemnity fund is prorated among the owners of the slaughtered animals. Twice as much is allowed for a registered animal as for one that is not registered. More than 500 animals have been enrolled in this mutual insurance association.

The work of tuberculosis eradication has been delayed or halted in many parts of the country because the state and federal appropriations were exhausted. The cattle owners of Lyme township have shown a commendable spirit of independence. Other communities will follow their example.

Who Gets the Money?

NOW that the Kansas City meeting is a matter of history, we have had an opportunity to sit down deliberately and review what the effects will be with reference to the action of the convention, increasing the transfer fee from 50 cents to $1.50. The first thought entering into our minds is "Who will get the money?" In our June 22d issue, we printed a "Monthly Comparison of the Association's Business," and by reference to these statistics it will be seen that the amount of money received from transfer fees from June, 1921 to May, 1922, inclusive, was as follows:

1921	
June	$10,256 00
July	5,757 50
August	4,341 50
September	4,830 75
October	6,186 00
November	5,873 75
December	7,606 00
1922	
January	7,119 25
February	5,762 00
March	6,988 50
April	7,175 50
May	6,620 50
Total	$77,516 75

The transfer fee has been increased from 50 cents to $1.50, or threefold. Assuming that the secretary's office will record the same amount of transfer business during the coming year as it did for the period above mentioned, it will be seen that the receipts from this source, instead of being $77,516.75, will be $232,550.25, or $155,033.50, more than they were last year. It cannot be denied that this vast sum of $155,330.50 comes out of the pockets of the breeders of purebred Holstein cattle and it is proper to inquire what is going to be done with it.

There is an old and well-recognized axiom that "unnecessary taxation is unjust taxation." There can be no denial of the fact that this extra $150,000 is a tax on the members. In view of the fact that the income of the association from all sources including the 50 cent transfer fee is ample to pay the running expenses of the association when economically administered, it shows that when a tax of $150,000 is placed upon the breeders of this association it is not only an unjust tax but an unnecessary tax as well.

The next thought which comes to our mind is, "Just who is going to get this extra $150,000? What is it going to be used for? Who is going to have the handling of it? Just what political debts are going to be paid by it? How many trips are going to be provided?" We are wondering if the $5,000 which has been voted for the work of investigating prospective Holstein conditions is to be taken out of this fund, and placed in the hands of Barney for that three or four months' visit to South America. While the Cedar Rapids *Gazette* says that "Barney was kicked out of office" as food and dairy commissioner of the State of Iowa and resigned his position "under fire" this does not itself disqualify Barney to act but it should be sufficient to raise a question as to the propriety of appointing Barney to this position as a representative of the Holstein-Friesian Association. It will be interesting also to note how much of the $150,000 that comes out of the pockets of the breeders is to be used in the payment of state secretaries and building up of state organizations through which the politicians will continue to have control of the Association's affairs and perhaps disfranchise the everyday breeder and dairyman. It will also be interesting to note how much of the money is used for publicity purposes and who will control the disbursement of this large sum of money.

It may that the Supreme Court of the State of regarding the question of the Association's management. Bue we are anxious to know because of our position as a representative of the plain, everyday breeder and dairyman just what is going to be done with this extra $150,000 and who is going to get it.

It may be that the Supreme Court of this State of New York will take such action in the matter that will protect the treasury of the Holstein-Friesian Association from those who use it for personal ends. In any event, if those who are going to assume the power of disbursing this vast sum of $150,000 that comes out of the pocket of the breeders wish to tell the members of the Association what they propose to do with it. The columns of THE HOLSTEIN BREEDER AND DAIRYMAN are open to any one assuming to speak with authority to make any explanation which they deem advisable.

TRANSFERRING THE TRANSFER FEE

Sensation in Brady Matter—Claim James A. Reynolds, Chairman of Executive Committee, Promised Money to Cole

Counsel for Brady Reads Affidavit in Court Intimating Reynolds Promised to Pay $6,000 to Cole—Refers to Col. G. Watson French and Fred F. Field, Directors of Holstein-Friesian Association and Members of Executive Committee—Supreme Court Justice Donnelly, of New York, to Decide.

THE case of Paul T. Brady vs. The Holstein-Friesian Association of America, came up for a hearing before Supreme Court Justice Donnelly in New York City, Wednesday morning, June 21, 1922. The attorneys appearing for Mr. Brady were the firm of Breed, Abbott and Morgan of New York, represented by Mr. Leake, while the Association was again represented by Hon. Judge Woodward of New York, former Supreme Court Justice, O. U. Kellogg of Cortland, L. L. Babcock of Buffalo, C. M. Horn and James A. Reynolds of Cleveland, Ohio.

Following the argument before Justice Donnelly, each side was allowed until Friday, June 23d, in which to file petitions and we can only wait for the final outcome.

Mr. Leake read an affidavit of Mr. Brady which embraced two sworn statements made by Charles E. Cole, one of which makes the statement that Reynolds agreed to see that Cole received Association or personal help to the amount of $6,000.00 about the time of his so-called confession.

This affidavit read to Justice Donnelly also brings in Col. G. Watson French and Fred F. Field, both members of the Board of Directors and members of the Executive Committee, as having been parties to the $6,000.00 deal.

The reading of this affidavit and the very serious character of the matters referred to surprised the lawyers representing the Association and commanded the undivided attention of everyone present in the court room during the hearing.

That portion of the affidavit dealing with the claim of Cole that he was promised $6,000.00 in connection with his Chicago confession throws a new light into what has heretofore been a dark place, and puts a new phase on the activities of our former $12,000.00 president in his hasty publication of the Cole scandal.

The affidavit in part reads as follows:

"STATE OF NEW YORK,
CITY AND COUNTY OF ALBANY } ss.:

"CHARLES E. COLE, being duly sworn, deposes and says; that he resides at Pawlet in the State of Vermont; that he is 31 years of age and is at present engaged in the business of farming.

"Deponent further says that on the 5th day of August, 1919, at the City of Chicago and in the presence of the Executive Committee of The Holstein-Friesian Association of America, he made a certain statement wherein and as part of which, he told of certain methods that he had employed in the making of Advanced Registry records upon the cows in his charge, while in the employ of the said Cabana; and while working upon his own farm at Pawlet, Vermont. * * *

"That prior to the making of said statement this deponent had talked with one John Arfmann, of Middletown, N. Y., and also with J. T. Williams, of Sterling, Ill., and with James A. Reynolds, of Ohio, chairman of the said Executive Committee hereinfore referred to * * *

"'I had told Williams and Arfmann how my financial matters were in connection with Mr. Hicks and had informed them that I needed the sum of $6,000 in order that I might get straightened out and get some cattle on my farm. While at Chicago, Williams also told Mr. Reynolds of my situation and that I needed $6,000 in order that I might be protected from Mr. Hicks making me any trouble.' * * *

"This deponent further says that while at Chicago on the 3d day of August, 1919, and after having made the statement hereinbefore referred to that the said James Reynolds, chairman of the Executive Committee, introduced this deponent to G. Watson French, a member of the Board of The Holstein-Friesian Association of America, at which time the said Reynolds said to Colonel French, 'We have got to take care of this boy Cole. He is in trouble with Hicks and needs $6,000, and we have got to protect him.' To which French replied: 'We ought to be able to get Cole out of this difficulty.' French asked me the value of my farm and several other questions and Reynolds suggested that French and Fred Field come down to my farm and get me straightened out with Hicks. * * *

"This deponent further says that he was fooled and by reason of untruthful statements to him by Arfmann, Williams and Reynolds was induced to make the false statement which he did make at Chicago, August 3d, 1919, and which he has since retracted by his sworn affidavit made on the 23d day of August, 1919.

(Sgn.) "CHARLES E. COLE.

"Subscribed and sworn to
before me this 23d day of
August, 1919.

(Sgn.) "MYRON J. CANADY,
Notary Public,
Albany, N. Y."
"[Seal]"

While this Cole affidavit seems to have been kept entirely in the dark, we are informed that it was presented to the Board of Directors, August 25, 1919, during the meeting held at Buffalo, N. Y., within three weeks of the time when the so-called confession was made at Chicago.

If it should be proven in the Brady proceeding that Cole was promised $6,000.00 for making this so-called confession, we can readily understand *why such great haste* was shown in publishing the story before Cole could retract it, and stamp the whole thing as a falsehood, *which he did twelve days after its publication in the Holstein-Friesian World.*

As stated in a previous issue, this is a most regrettable affair. Whatever may be the final outcome, sufficient has already come to light to call for and to demand a general housecleaning.

If wrongdoing has sought to clothe itself by besmirching others, the honesty and fair-mindedness of the members may be depended upon to compel full restitution and to place our Association affairs in the hands of men who consider Association interests above petty politics, personal spite and personal ambitions.

Readers of THE BREEDER AND DAIRYMAN will be kept fully advised as to the outcome of the Brady matter, and we are still hopeful that the day will come when the affairs of the Holstein-Friesian Association will be put into such shape and under such management as will *stop these wholesale expenditures for lawyers' fees and restore a feeling of confidence among the members generally.*

Jersey Breeders Law Abiding

THE Jersey breeders complying with the laws under which their association is incorporated, have always held their annual meetings and elected their officers in the state of New York, and now that the laws of the state are amended, allowing breed associations to hold meetings in other states, the American Jersey Cattle Club voted to hold its 1923 annual convention at Kansas City, Missouri. We quote herewith a part of the discussion as appearing in the report of the last annual meeting.

"Heretofore the club has been prevented from holding meetings outside of the state of New York as it is chartered in that state and the legal opinion was to the effect that a meeting outside of the state would not be lawful. The legislature of New York State has recently passed a bill making it legal for all breed associations having 1,000 or more members to hold their annual meeting and elect their officers in any state of the Union."

Little Men Win Big Prizes

IN a series of letters exchanged between Axel Hansen, Savage, Minn., cattleman, judge and expert feeder, and the editor of this paper, Mr. Hansen brought out the fact that animals owned by men with small herds had won many prizes at great fairs in the central west. Illustrating this point, we are showing the following excerpts from Mr. Hansen's letters.

"The first prize 'get of sire' at Wisconsin State Fair last fall was four cows, the second prize 'get' was four big bulls, including the Grand Champion of the show, at least two of the four bulls in this 'get' were owned by small breeders, and had it not been for the fact that they were showing against that famous 'get' owned by Aitken Bros., that won at the National Dairy Show in 1920 and 1921, they would have won first."

"Take the case of Mr. Glenn Davis, of Columbus, Mo. Last fall he showed four heifers as 'get of sire;' three of the four were senior heifer calves and one was a junior yearling: this group won first or second wherever they were shown, and they were shown against cattle owned by big breeders."

"As to the 'little men' and the 'big men' in the show game, I hardly know where to draw the line: for instance, a small breeder showing for the first time, winning Grand Championship bull at Wisconsin State Fair, and another 'little man' man winning junior champion at the National Dairy Show, and two other small breeders winning Grand Champion bull at the National Dairy Show, 1921. If these 'little men' should ever start to grow, what would they do then?"

Fools rush in, but wisdom knows when to quit.

The proper place to keep overhead expense is underfoot.

The way of the transgressor may be hard, but, at any rate, it isn't lonesome.

Even the burglar isn't satisfied to take things as they come. He goes after them.

Mrs. Wigwag—"Are you fond of sports?"
Mrs. Dashing—"I used to think I was till I married one."

Nell—"I always take everything Mr. Longbow says with a grain of salt."
Belle—"Yes, he's entirely too fresh."

Wife—"Oh, Bob, one of the twins has swallowed a dime."
Hubby—"Well, give the other one a dime to swallow. I won't have any favoritism in this family.

"Going to drive through to California, this summer?" we asked a neighbor.
"No," he replied. "Going on the train. There's a lot of grade crossing races to be run between here and California, and I want to be riding on the winner."

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Aug. 23, 1922—Tour to New Jersey State Agriculture College and Forsgate Farm.
Aug. 26—Baltimore, Md., Maryland State Dairymen's Association.
Aug. 26—Bridgeport, Conn., Holstein-Friesian Breeders' Association.
Sept. 25-Oct. 1—Waterloo, Iowa, The Dairy Cattle Congress, E. E. Estel, Mgr.
Oct. 7-14—Minnesota State Fair Grounds, National Dairy Show.
Oct. 21—West Chester, Pa., Field Day and Banquet.
Nov. 23—Belvidere, N. J.—Annual Meeting Warren County Association.

Secretaries of breeders' clubs and associations are requested to send dates of coming meetings for publication in this calendar. THE HOLSTEIN BREEDER AND DAIRYMAN will gladly publish such particulars and are always pleased to obtain reports of breeders' meetings, picnics and clubs.

ERIE COUNTY BREEDERS' ACTIVE

The Annual Meeting of the Erie County Holstein-Friesian Club was held recently at the Board of Trade Rooms, East Aurora, N. Y. A large number of members and several visitors were present. The following officers were elected for the year:

President, Harry Yates; Vice-President, Glenn R. Mead; Secretary-Treasurer, A. J. Nankeville; Member of State Advisory Council, Smith J. Housel.

Four new committees were organized and will, with the officers, comprise the Executive Committee:

Chairman Propaganda Committee, C. J. Allen; Chairman Extension Committee, H. B. Tillou; Chairman Fairs and Shows Committee, Clark Hurd; Chairman Membership Committee, D. T. Graves.

The Erie County Fair Association is again offering attractive prizes for show animals and plans are under way to show a County herd again this year. The Committee are:

Clark Hurd; M. L. Allen; H. B. Tillou; Glenn R. Mead.

This Club in conjunction with the Farm Bureau are trying to make this County one hundred per cent purebred sires. A recent survey of the Town of Collins showed that fifty per cent of the sires in that town were purebred. The East Aurora Dairy Improvement Association is making a survey of the Towns of Aurora and Wales but figures are not complete at this date.

Vice-President Mead is chairman of the Sports Committee for the Farmers' Field Day picnic. This promises to be a great day for the farmers and their families. A splendid program has been arranged by way of sports. One of the features will be the awarding the prize bull calf to the boy or girl writing the best essay on "Why Dad needs a purebred Holstein sire at the head of his herd." Several essays have now been received by Mr. Mead so we know the boys and girls are keen for this sort of competition. The calf will be given by this Club.

The rules for the Contest are as follows:

1. Open to any Erie County boy or girl, 15 years of age or under, living on a farm.

2. Parents or parents must belong to some farm organization in Erie County.

3. Parent or parents must own 8 or more dairy cows.

4. Essay should not be over 300 words in length, and title should be "Why Dad Needs a Purebred Holstein Sire at the Head of His Herd."

5. Essay should be neatly written, using one side of the paper only.

6. Essay should be sent to Glenn R. Mead, vice-president of the Holstein Club, East Aurora.

7. Each contestant should give on his essay his name, address, age, school, name of farm organization to which his parents belong, name of head of family, number of cows kept and breed.

A sale service has been organized of which Glenn R. Mead is chairman and plans are about complete whereby members having cattle to sell can list them with the Club and for a small charge can avail themselves of this opportunity. We are constantly getting inquiries for cattle and by this method can know just what breeders have cattle to sell.

CALF CLUB WORK NOW BIG FEATURE OF EASTERN STATES

Boys and girls in the Eastern States are finding dairy calf club work a very interesting and profitable business. Until recently only a small number took up calf club raising, but this season sees several hundred busily engaged in raising purebred calves for the various county and state shows.

In New Jersey there are two hundred Holstein members all owning purebreds of the highest type. The members recently gathered at the College of Agriculture where instructions were given by the Dairy Specialists in Selection, Feeding and Fitting. The Holstein-Friesian calf club specialist assisted in this work. There isn't a grade calf club member in the State of New Jersey.

Massachusetts has made splendid progress in calf clubs this year. Mr. C. L. Blackman, the New England Holstein-Friesian Field Secretary, is in close coöperation with the extension workers and is doing much to find the right kind of calves for the young people. On a recent trip over parts of Massachusetts we found the calves of good quality and receiving excellent care.

In the neighborhood of Waltham, Mass., there are twenty-five members of which over half are Holsteins. A feature of this club is the visits which the boys make to each other. On a recent trip the boys made comparisons of their calves and received instructions for Summer care.

Around Springfield seven boys and girls owning purebred Holsteins are the pioneers in this section. They are aware of their responsibility to make a good showing at the Eastern States Exposition this Fall.

At the Massachusetts Agricultural College a very unique program was staged during the last week in June. About forty members from the surrounding country spent a most profitable day. Calves of four breeds were judged. Interesting demonstrations were given in raising calves by various specialists, which will do much to bring the work through one hundred per cent.

The Holstein-Friesian Association of America in coöperation with the New England Holstein-Friesian Association is offering assistance at the Eastern States Exposition held at Springfield this Fall in the manner of cash prizes. The Club Leaders are looking forward to a good showing in all classes.

EARL J. COOPER, *Holstein-Friesian Ass'n of America.*

HOLSTEIN DAY AT WOODELL

It is estimated that more than 300 persons attended Holstein day at Woodell Farm, Delavan, Illinois, on June 15th, and looked over the Holstein herd developed since 1913 by the owner, Mr. Harry M. Wood.

The principal speakers were Howard Leonard, president of the Illinois Agricultural Association; R. N. Thompson, secretary of the state Holstein-Friesian Association and Earl J. Cooper, calf club leader of the Holstein-Friesian Association of America. Mr. Cooper said there are 4,000 boys and girls, members of calf clubs, who are raising Holstein calves.

Woodell is not a fancy farm but is a practical establishment with a comfortable sanitary barn and up-to-date equipment. There are 64 animals in the herd of which 22 are in milk at the present time. The average production of the entire herd is 12,000 lb. milk a year. The new state champion, Brownwood Pledge De Kol, who recently completed her record of 13,722.9 lb. milk, 449.2 lb. butter fat, or an equivalent to 562.4 lb. butter in 305 days as a senior two-year-old could not been seen for she is at the state Holstein-Friesian Testing Plant at Dixon. But Maud Beets Pledge De Kol, 2,222.2 lb. milk in thirty days, also a state record cow was on hand. One exhibit that attracted much attention consisted of four generations, the youngest one a calf. The foundation cow of this group made a creditable record; her daughter exceeded her mother and her granddaughter in turn exceeded her mother; while the calf was exhibited with its mother's record and a sign which said, "I will beat her record."

H. M. Wood, owner of Woodell Farms is a regional director of the Illinois Holstein-Friesian Association and is a practical farmer. His herd is under the care of F. E. Washbon and S. A. Berger. The lunch served consisted largely of products of Woodell Farm.

WEST SALEM BOOSTER DAY

The annual livestock booster day held at West Salem, Wis., June 9th was a success in every way. Due to the rain and the threatening condition of the weather there was not quite as large a crowd as last year but it is estimated that there was about 2,000 people in attendance. Shortly after ten o'clock Mr. Milo Hill of Tomah, the new secretary of the Wisconsin State Jersey Breeders' association began judging the cattle. A street parade followed at 12 o'clock, a band concert at 1 o'clock, then D. Q. Grabill, Fort Atkinson spoke on "Dairying for Profit and Pleasure" and C. P. Norgord State Commissioner of Agriculture, spoke on the "Health of the Herd." The final thing on the program was a ball game between teams from West Salem and Bangor.

The judging of the Holsteins resulted as follows:

AGED BULLS

1. J. D. McDonald.

AGED COWS

1. J. D. McDonald; 2. J. D. McDonald; 3. J. D. McDonald.

2-YEAR-OLD FEMALES

1. J. D. McDonald; 2. J. D. McDonald.

SENIOR BULL

1. J. D. McDonald; 2. Alfred Nuttleman.

JUNIOR BULL

1. Alfred Nuttleman; 2. Arthur Nuttleman.

SENIOR HEIFER

1. Art Nuttleman; 2. Alfred Nuttleman; 3. J. D. McDonald.

JUNIOR HEIFER

1. Alfred Nuttleman; 2. Hesselberg; 3. Art Nuttleman; Champion female—J. D. McDonald; Champion male—J. D. McDonald.

WORK IN LIVINGSTON COUNTY

Under the direction of county agent C. L. Bolander, coöperating with the Michigan Agricultural College, a constructive program for club work among the boys and girls is now under way in Livingston County. Earl J. Cooper, calf club leader of the national association is also coöperating.

The plans are to start a club of six or more in each township in the county to organize a local club leader and then to have all the clubs compete at the County Fair which will be held at Howell in August.

At the County Fair selections will be made by competent judges and the winners will be given a free trip to the State Fair at Detroit.

At the recent delegate meeting of the Livingston County Farm Bureau, Nevels Pearson, live stock club leader of the state of Michigan, gave an address on the "Value of Club Work."

SCRUB BULL FUNERAL

The annual meeting of the Marathon County Breeders' Association was held June 17th, in the grove on the farm of William Ploeger near Elderson, Wisconsin. There was a scrub bull funeral which was not at all a sad affair, the procession being led by the Wittenberg Band which played lively airs. This was followed by floats, a purebred Holstein bull, clowns and miniature milk carts and ended with a darkey band playing negro melodies.

Professor O. A. Collentine interested his audience for an hour. He congratulated those present on their enterprise and achievements and told them that 30,000 purebred cattle have been sold from Wisconsin the past year to buyers in other states. The South is demanding better cattle, he said.

C. J. Schroeder of Milwaukee, a former editor of the *Wisconsin Agriculturist,* in a brief talk said that the transfer fees had been raised so as to furnish more funds for the depleted treasury of the state associations.

There were games, races and tugs of war, men and boys' judging contests and a girl's milking contest. The entertainment closed with a barn dance which was attended by a very large crowd.

In the milking contest: Lena Meydam, Eland, R. No. 1 milked 7.7 lb. milk in the three minutes time allotted and won the first prize; Agnes Bricko, of Eland, was second, with a record of 7.1 lb.; Sophie Ploeger, Eldron, 3d, 7 lb.; Emma Panko, Elderon, fourth, 6.4 lb., and Linda Robe milked 4.5 lb., and recieved the fifth prize.

The junior judging contest was interesting, boys and girls competing. William Wegewald of Eland, age 15, won first prize; Edward Ploeger, age 12, won second; Elmer Peterson, age 9, won third; Harry Vander Kooy, age 12, won fourth; and Walter Wegewald, age 10, won fifth.

CENTRAL MICHIGAN PICNIC

The annual picnic of the Central Michigan Holstein-Friesian association was held at the home of C. S. Burke on the Eaton Rapids road, southwest of Lansing, on June 17th. About 100 persons attended.

After the inspection of the Burke herd which is said to be the highest producing herd in this district. There was a program of speeches and music followed by a dance. The principal address was made by W. S. Kellogg, farm editor of the *State Journal,* who took for his theme, "A Look Into the Future of the Holstein Industry." He emphasized the necessity of a constructive program embracing better selection of individuals, better records of production, better organization among owners and educating the public to the use of more milk and milk products in the dietary of the family.

Prof. Dennison of the dairy department of the Michigan Agricultural College also emphasized the necessity of continual improvement in cattle and better methods of handling both the animals and the output, declaring that if the Holstein breed was ever superseded as the leading dairy breed it would be because the owners were not keeping pace with their opportunities. Marc Cutler of Dewitt, the "Michigan Harry Lauder," gave a number of musical selections and G. F. Balduf recited an original poem lauding the merits of the Holstein cow. It was decided to hold another similar meeting in the fall.

BULL DISTRIBUTION

Dairymen from all over Franklin County came to Preston, Idaho, June 3d, for the distribution of the animals obtained for the bull association. The University of Idaho donated three young sires, one was purchased from the Washington State College, Pullman and six from the Intermountain Institute at Weiser. The animal from the Washington State College is Chinook Segis Pontiac Jay, whose dam's record is 555.33 lb. butter fat in a year. The six bulls from the Intermountain Institute are from dams who at maturity, have year official tests of above 500 lb. fat or equivalent records for age. The sire of one and grandsire of the others is Segis Walker Hartog, a son of King Segis 10th. The sire of five is the junior herd sire of the Intermountain Institute whose dam has a year record of 18,786 lb. milk, 622.9 lb. butter fat, made as a junior three-year-old.

There are fourteen blocks in the association which is the largest dairy bull association in the west. The majority of the animals were selected by William Durant, vice-president of the association and F. R. Cammack, Idaho field dairyman. John P. Neilson is president and DeMar Neilson is secretar-treasurer. After the bulls were distriuted addresses were delivered by Professor John T. Caine, of the Utah Agricultural College, H. A. Mathieson, bull association specialist of the U. S. Dairy division, and F. R. Cammack.

This association will mean a great deal to the dairy interests of Franklin County in which more than 700 cattle have been Tuberculin tested and only 28 found reactors.

SPARTA DAIRY BOOSTER DAY

Sparta's first Dairy Booster Day was June 5th. Ideal weather and good roads helped to bring together many interested in dairying from nearby Wisconsin townships. During the morning there was an auto tour of inspection. The herds of Howard Tripp, Will Hanchett, Wm. Ebert, Chas. Van der Schaaf and Earl Leverich were visited. After a picnic dinner, Reid Murray, secretary of the Wisconsin Livestock Breeders' Association gave an instructive and entertaining address.

At the close of this address, the Boys' and Girls' Calf Club members with their animals paraded to South Water street where the judging contest was held. Guernsey, Jersey and Holstein breeds were all represented. The Holstein placing was as follows:

SENIOR HEIFER.

1st—Mabel Heath; 2d—Lawrence Weiner; 3d—Renold Poss; 4th—Harold Dalton; 5th—Norbert Sullivan; 6th—Willard Heath.

JUNIOR HEIFER

1st—Mildred Selbach; 2d—Otto Schauff; 3d—Harry Nicholson.

JUNIOR BULL

1st—Albert Reutten.

SENIOR BULL

1st—Lawrence Weiner; 2d—George Nicholson; 3d—Edward Johnson.

WALWORTH COUNTY MEETING

The regular monthly meeting of the Walworth County Holstein Breeders' Association was held in the Court House, at Elkhorn, Wisconsin, June 16th. Reports of the delegates to the National Convention at Kansas City, a discussion of the Spring Sale and plans for the annual picnic were the principal subjects.

It was suggested that the local association combine with the Rock County Association for the annual picnic if the members of the latter organization are agreeable. A committee consisting of President Frank Swoboda, Secretary Ben Bachhuber and Geo. Pope were appointed to have charge of the preparations. It was suggested to gather some of the best herdsires of the county and exhibit them at the picnic. The Walworth County breeders' will challenge the ball players of the Rock County Association, the players of each team to be members of the asssociation and actual breeders of Holsteins.

The report of the Spring Sale showed a deficit of $40. It was told that the local sale was one of the very few in the state held this year that was able to sell on a 10% commission. On the whole the sale was satisfactory.

A. D. Kaye gave a report of the proceedings of the convention that was greatly enjoyed and expressed his pleasure in the election of John M. Kelley to the vice-presidency.

WASHINGTON BREEDERS' TOUR

The Washington County Holstein Breeders' Club held an auto tour on June 16th visiting a number of prominent Holstein herds of the county. S. C. Inkley, president of the Banks Hog and Dairy show, acted as marshal of the day.

The first herd visited was that of J. F. Peerenboom of Roy. Seven cows in this herd are on long time test and the prediction is made that all seven will finish their year with more than 650 lb. butter fat. The farm of Charles Herb was the next stop. Three Holstein calf club members live here and proudly displayed their calves. The Clell Carstans farm at Banks showed four daughters sired by a bull brother to a world champion. Luncheon was served at the Banks Hog and Dairy Show Building. About 75 partook of the lunch which was served by the club ladies, assisted by the Banks Camp Fire girls. There was a short program in which the speakers emphasized the value of club work.

The Frank Herb herd was the first herd visited in the afternoon. Here four club members displayed their calves. At the Evers farm a demonstration on Holstein type was given by S. B. Hall, using the Vandercoevering herd to illustrate his talk. A beautiful heifer calf, owned by Anton Vanderpool, a calf club member, attracted much attention. A judging contest created much attention, nearly everyone participating.

At the Wm. Martin farm, a fine herd of cattle was shown. The herd sire had taken second place at the state fair and at the Pacific International last year. The trip ended with a visit to the herd of Holsteins owned by Connell Brothers. The tour was interesting and instructive and thoroughly enjoyed by all present.

PROGRAM PLANNERS

America's first International Dairy meeting is to have a varied program. The personnel on the various committees assures business and child welfare work will be featured. This is intended to get the attention of men and women—especially parents of growing children—who think that they have no interest in the dairy industry, because they do not keep cows.

The chairman of the Program Committee is L. A. Rogers, who is noted for his work on methods of preserving butter. For twenty years he was director of the research laboratory of the Dairy Division of the United States Department of Agriculture.

The chairman of the sub-committee on Education and Research is Professor C. H. Eckles, President of the American Dairy Science Association, head of the Dairy Department of the University of Minnesota, and noted teacher and writer on cattle feeding and kindred subjects. Dr. Robert S. Breed, of the Agricultural Experiment Station, Geneva, New York; Professor M. Mortenson, head of the Dairy Department of the Iowa State Agricultural College; Dr. E. B. Meigs, of the United States Department of Agriculture, and Dr. Veranus A. Moore, Dean of the Veterinary College of Cornell University, form this sub-committee.

The chairman of the sub-committee in Industry and Economics is Professor O. F. Hunziker, formerly of Purdue and Cornell Universities, now manager of the Manufacturing Department of the Blue Valley Creamery Company. He has written authoritative books on milk products and their manufacture. Business men make up this sub-committee.

The Honorable Fred Rasmussen, Pennsylvania Secretary of Agriculture, and formerly head of the Dairy Department of the Pennsylvania State Agricultural College, is chairman of the sub-committee on Regulation and Control.

The sub-committee on National Health is headed by Dr. H. C. Sherman, Professor of Food Chemistry at Columbia University. With him is Dr. E. V. McCullum, head of the Department of Chemical Hygiene at Johns Hopkins University, whose study of vitamines and work on human feeding is known to all interested in the dairy industry. Professor Flora Rose, of Cornell, is the only woman on the Program Committee. Dr. Donald B. Armstrong, executive officer of the National Health Council and Courtenay Dinwiddie, secretary of the National Child Health Council, are the remaining members of those who will make up an imposing array of talent and learning. The World's Dairy Congress has every right to be a success.

CANADIAN BREEDERS' VISIT ERIE COUNTY FARMS

On June 9th, the Haldimand District Holstein Breeders' Club of Cayuga, Ont., Canada were the guests of the Erie County Club and the Erie County Farm Bureau. Vice-President Glenn R. Mead and Manager R. F. Friche met the visitors and conducted them to the Erie County Farms at Alden where purebred Holsteins are making good in the county herd.

They also visited Dold Bros., farms and from there to East Aurora to the Roycroft where a course dinner was served and several of the visiting breeders' gave short talks. Vice-President Mead outlined the work of the Erie Couny Holstein Breeders' Club for the future.

After dinner the guests were taken to the Harry Yates Farm and several others. They were much impressed by our methods and herds.

BRATTLEBORO BUSINESS

During the week ending June 10th, there were 14 applications for membership received at the office of the secretary. There were 1,848 certificates of registry issued, of which 1,269 were female and 579 male; 2,171 certificates of transfer were written: 1,539 female and 632 male.

For the week ending June 17th, fourteen applications for membership were received. For the same time, 2,258 certificates of registry were issued; 1,605 female 653 male: 2,827 certificates of transfer were written, 2,027 female and 800 male.

The prefixes reserved during the period ending June 17th, are as follows:

Academy, Plainview, Academy, Redfield, S. D.
Bald Eagle, C. L. Buss, Montgomery, Pa.
Cozy Hill, Joseph V. Dhein, Chilton, Wis.
Evanwoods, H. Evans, Golden, Colo.
Faymead, James Edmondson, Los Angeles, Cal.
Hope View, Roy N. Finster, Eldora, Iowa.
Lewis Park, H. H. Lewis, Carthage, N. Y.
Mandan Dairy, John F. Lohstreter & Sons, Mandan, N. D.
Straight Lake, Levi L. Stephens, Osage, Minn.

COLUMBIA BREEDERS' ORGANIZE

The Holstein Breeders of Columbia and Lower Luzerne Counties met at Bloomsburg, June 23d and organized the Columbia County Holstein Breeders' Association. The men represented 360 purebred and 328 grade Holsteins. A. A. Borland, Dairy Specialist from State College and W. Hugh Jones, secretary of the Pennsylvania Federation of Holstein-Friesian Clubs addressed the gathering. Twenty-four men signed as charter members and elected the following officers:

President, William J. Fairchild, Briarcreek; First Vice-President, Ray M. Crump, Orangeville; Second Vice-President, J. A. Patterson, Orangeville; Third Vice-President, Lehamn Seybert, Berwick, R. D.; Secretary-Treasurer, Clarence Reece, Center.

DUNN COUNTY PICNIC

The Dunn County Breeders' Association held their annual picnic at Fairnook Farm, Downing, Wisconsin. In spite of threatening rain and poor roads a large crowd attended and had a royal good time. An interesting program was given in a big tent in the evening. D. P. Hughes, of Menomonio, spoke on tuberculosis, quoting facts and figures to prove his assertions. Several speakers talked on the purposes and aims of the breeders' association. The Downing band and the Downing quartet contributed to the entertainment. A ball game was played between the Downing team and a mixed team, the Downing team being defeated 10 to 8 in seven innings. A dance in the Downing Civic Hall was held in the evening.

VERNON COUNTY PICNIC

The Holstein Breeders of Vernon, Wisconsin, held a picnic at the home of T. C. Knutson, on June 11th. After a basket luncheon, the members held a lively discussion on the merits of the Holstein cow. Following this discussion, the following officers were elected: Chas. Fewell, president; T. C. Knutson, vice-president; Harold Kellicut, secretary-treasurer.

A judging contest was held in which Mr. Knutson gave everyone the opportunity to show their judgment in placing three two-year-old heifers. Nine were successful in placing the animals in the same order as the official judges.

CALF CLUB IN LIVINGSTON

The first Boys' and Girls' Calf Club of Livingston County, was organized at the home of Mr. and Mrs. Berginstall, Hamburg, Michigan, June 22d, under the auspices of the County Farm Bureau. The following officers were elected: President, Marion McDonnell; Secretary-treasurer, Mark Nash.

It was voted to hold monthly meetings, the first one which will be held in July, the club will be favored by having Earl J. Cooper, National Calf Club Leader, talk to them.

GEIGER SPEAKS AT PICNIC

The Holstein breeders held their second annual picnic on the farm of George Daschers in Preston Lake Township, Minnesota, June 10th. After a picnic dinner, the Daschers herd was inspected and a short judging demonstration was given by Robert Geiger, secretary of the state Holstein-Friesian Association who outlined a few of the points to look for when selecting a sire. He explained what the different State Associations are trying to do to coöperate with the National Association.

It is expected that the county association will hold a consignment sale this fall.

CARVER COUNTY MEETING

The members of the Carver County Holstein-Friesian Association met at the City Hall, Waconia, Minn., June 13th for their annual meeting. The speaker of the evening, was Prof. W. E. Peterson of the University Farm at St. Paul. His subject was "Dairying and Cow Testing" and his address was replete with information regarding care and feeding of dairy cattle. He is well qualified to speak on these subjects being in charge of the official test work of the University Farm.

The officers elected by the members were: President, J. P. Peltz; Vice-President, O. E. Hendricks; Secretary-Treasurer, R. J. Kratzke; Directors, J. P. Peltz, O. E. Hendricks, Herman Ehrenberger, William Klein, H. C. Franck, Albert Graupman, and R. J. Kratzke.

PLAN FIELD DAY

The Holstein breeders' of Chester County, Pa., plan on a Holstein Field Day and Banquet which will be held at West Chester, October 21, 1922. The Chester County Association is one of the strongest affiliated with the Pennsylvania Federation of Holstein-Friesian Clubs and has between 50 and 60 members. Its meetings are well attended and is always represented in the annual meeting of the federation by a strong delegation. One of is members, F. C. Brinton, Jr., was elected treasurer of the Federation at its annual meeting last January.

OREGON STOCK SHOW

The Fourteenth Annual Live Stock Show opened at Union, Oregon, June 7th. It is estimated that 2,000 attended.

The cattle parade created much interest. W. C. Cordiner of Walla Walla, a Shorthorn owner, offered a $25 prize for the best groomed animal. This was won by a member of the Holstein herd owned by Dr. W. T. Phy. This herd exhibit was greatly admired particularly the bull, Carnation King, who is valued at $26,000. Dr. Phy offered a valuable Holstein bull calf for the best exhibit of grade dairy cows.

SCHILLING TO SPEAK

The Maryland State Dairymen's Association annual meeting will be held at Baltimore, August 26th and the principal speaker will be W. F. Schilling, Northfield, Minnesota, a Holstein breeder noted for his connection with the Twin City Milk Producers Association, of which he is president. He is said to be one of the best informed men of the country on Market Milk Organization Work.

IRWIN TO JUDGE

The well-known Minnesota Holstein breeder, John B. Irwin, of Woodland Farms, Minneapolis, has been selected to judge registered Holsteins at the Southern California Fair which will be held at Riverside next fall.

Junior Department

Making Future Purebred Breeders

At a recent meeting of the Board of Directors of the Holstein-Friesian Association of America it was voted in the interests of calf club work to extend the following privileges to calf club owners.

Any boy or girl owning a purebred Holstein-Friesian calf club calf duly registered under his or her name shall after completing a season of work under the Club Leader be given a membership in the Holstein-Friesian calf club Association of America. This membership shall continue until the boy or girl is nineteen years of age. The benefits of this membership are as follows: memberships rates of registration and transfer of all animals connected with calf club work including offspring of such animals.

In addition all junior members will receive literature of value in the raising of their calves as well as news items of interest concerning their breed.

Boys and girls become candidates for the junior organization when they join their local Holstein calf club. On receipt of their names and addresses a black and white candidate badge is mailed to them. When the Club Leader and Holstein official have signed the statement of faithful work the neatly engraved certificate of membership is granted. It is expected that fully three thousand young people will soon be enrolled as candidates.

More than ever the young people are getting into calf club work. Splendid calves can now be purchased at a reasonable rate and feed is not too high. A number of states are making plans for extensive calf club drives this Fall. Among these states are Illinois, Indiana, N. Dakota, S. Dakota, Iowa and Missouri. The New England states are also looking forward to more of this good work.

EARL J. COOPER,
Holstein-Friesian Ass'n of America.

Dairy Calf Clubs

The Dairy Calf Club is a project for boys and girls who desire to own, feed, and develop a calf of one of the dairy breeds. The calf, if a heifer, may be either purebred or grade; if a heifer, it must be sired by a purebred bull; but if a bull it must be purebred. They should be good individuals and be well bred so that, when they mature, they will be profitable producers of dairy products.

The fact that a calf is purebred and registered does not give any guarantee that it will make a good producer. There are some poor purebred animals in every breed of cattle. A good grade calf is superior to a poor purebred calf. The average purebred animal is however, far better than the average grade or scrub, and their chances of developing into good cows are much greater. The very best animals that are to be found are purebred.

Growing a calf to maturity is a long time proposition. They are from 24 to 40 months old before they begin producing milk, but if they are good heifers they will soon pay for themselves, and will return a profit. If they are inferior heifers, their ability to handle feed economically is limited, and their products will be small. This means they will be unprofitable producers, and therefore they are worth only their value for beef. Growing a dairy animal to maturity to sell for its beef value is an *unprofitable proposition.* It is only the well bred, well grown heifers that make good cows, and it is only those that have good blood that develop into animals that have productive capacity.—*Massachusetts Calf Club Primer.*

Erie County Prize Essays

The Erie County Farmers' Field Day and Picnic was held at Hamburg, June 24th and was attended by thousands, consisting of farmers and their families, and I believe, we had the largest attendance of any picnic we have ever had. Glenn R. Mead, East Aurora, the well known livestock auctioneer and Mr. Nicholas, manager of the Harry Yates Farms at Orchard Park selected a male calf from the herd of Chas. Eldredge, Portersville, N. Y. This calf was donated by the Erie County Holstein Club for the boy or girl who wrote the best essay on "Why Dad Needs a Purebred Holstein Sire at the Head of his Herd."

This bull calf possesses one of the best combinations of blood lines, possible to obtain. He is by a proven 37-lb. son of King Segis Pontiac Königen, who has become famous through the fine official and semi-official work done by his daughters. The sire's dam is a 37-lb. four-year-old daughter of King Pontiac Königen, one of the best sons of King of the Pontiacs, the only double century sire. The dam of the calf is a 12-lb. two-year-old by a good proven son of King Korndyke Sadie Vale, the only bull living or dead to have a 04-lb. daughter, a 40-lb. dam and a 40-lb. sister. The dam's dam is a 20-lb. three-year-old daughter of Hilldale Korndyke Abbekerk, 25% of whose tested daughters have made better than 30 lb. of butter. Every dam in the calf's pedigree has a creditable A. R. O. record and the seven nearest average over 28 lb. butter, four of them tested under full age.

The winner was Dorothy Spencer, Holland, New York, an eleven-year-old girl. The essay placed second by the judges was written by Wilford F. Clark, Angola. N. Y., a twelve-year-old pupil of the North Collins School and the third prize essay was written by fourteen-year-old Thelma Curtis, Holland, N. Y.

The editors of THE HOLSTEIN BREEDER AND DAIRYMAN donated a two years' subscription to the writers of these three prize essays.

East Aurora, N. Y. C. J. ALLEN.

"WHY DAD NEEDS A PUREBRED HOLSTEIN SIRE AT THE HEAD OF HIS HERD"
First Prize

My Dad is running his farm for the purpose of providing us with a comfortable home, money to educate us and giv eus the advantages which he says every boy and girl need to make them useful men women, and since his income is derived chiefly from his dairy cattle, and over 65% of the cattle in New York State are Holsteins, it is important that he have a purebred Holstein sire at the head of his herd.

There are several benefits derived from the use of such sires. A poor dairy cow is almost worthless, because she yields no profit. A poor dairy sire is worse than worthless because he drags the herd down to his low level. For example, in a year a poor cow produced 146.8 lb. butter fat. Her daughter, from a poor sire, produced 126.3 lb. butter fat. Her granddaughter, by the same sire, produced 99.7 lb. butter fat. On the other hand, a purebred Holstein sire gets productive daughters, and in one case these daughters gave 64% more milk and 52% more butter fat than their mothers. Such breeding, as the last example, combines low investment, light expense and large profit.

Stock records show that Purebred Holstein sires eliminate the production of poor and undersized calves. Dad has found that calves from a purebred sire, when sold to a butcher, bring about three times as much as the low bred one. This is also true in the selling of cattle for beef. It costs as much to raise and more to keep a poor animal than it does a good one, so better livestock means an increase in profits. Therefore, Dad needs a Purebred Holstein sire at the head of his herd.

Name: Dorothy Spencer; address, Holland, N. Y. Age, 11 years; School District, No. 6. Town of Colden. Father's Name, Leon Spencer, Member of Dairymen's League and Farm Bureau; 10 cows, Grade Holsteins and Guernseys.

The figures which I have given were taken from a bulletin sent out by the Department of Agriculture, Dairy Division, Washington, D. C.

"WHY DAD NEEDS A PUREBRED HOLSTEIN SIRE AT THE HEAD OF HIS HERD"
Second Prize

The reasons why Dad needs a purebred Holstein sire are many. The first and no doubt the most important reason is that purebred stock is the most profitable and cannot be had without a purebred sire. It is obvious that purebred stock requires little more food than scrub stock, and a purebred animal in most cases sells for double the money of a scrub; and furthermore, a purebred cow will give a better quantity. The reason for this is that purebred stock has been bred for an increased milk flow for generations, while with scrub stock there is usually more or less crossbreeding, which results in a decreased milk production.

Another good reason for using a purebred sire is that the calves will be stronger and larger and more valuable than those from a scrub sire. Scrub calves when four weeks old will sell for about fifteen dollars at the butcher shop, while purebred calves will sell among neighboring dairymen for about twenty-five to forty dollars.

Another good reason for keeping purebred stock is that Dad's pride will cause him to keep an accurate record of their performances, which the owners of scrub stock too often overlook.

Last comes the question of keeping the boys on the farm. No redblooded American boy cares to spend his time helping Dad care for a scrub herd. While, if Dad has purebred stock, the boys will be interested in the herd and will take pride in caring and helping to advance the same.

After summing up these statements, it is evident that in order for any dairyman to carry on a pleasant and profitable business, he should have a purebred Holstein sire at the head of his herd. WILFORD F. CLARK.

Angola, N. Y., R. F. D. No. 2.

Age 12. I go to North Collins High School. My father has 15 cows; 3 purebreds, and belongs to the Dairymen's League and Grange, and the G. L. F.

"WHY DAD NEEDS A PUREBRED HOLSTEIN SIRE AT THE HEAD OF HIS HERD"
Third Prize

Dad was just an ordinary farmer, following in his father's ways and was very contented until one day I noticed he seemed to be thinking and somewhat silent for him, at times.

He joined the Grange, Farm Bureau and Dairymen's League Association, but I did not think this could be the cause of his studying and reading so much.

We attended a fair held in the fall, and I could not get Dad away from the Holstein stables, and on the way home he made the announcement that he was going to have a purebred Holstein sire. It seems he had been comparing his scrub stock with those at the fair and with some of his neighbors who kept Holstein herds, and made up his mind that he had lost enough money in the past, and intended to start with a new kind.

He decided on the Holstein breed for many reasons, one being that if any time he wished to dispose of one, if he did not wish to sell it for milk he could turn it off for beef as they are easy keepers and usually in good beef condition.

After purchasing his sire, he raised a number of purebred calves which seemed to grow so fast. He now has a herd he is proud to display and finds with about one-half the number of cows he can get as much milk and does not take any more time or work than in the old days.

He now owns a milking machine and all the city environments cannot draw Dad away from the old farm and his slick Holstein cattle. THELMA CURTIS.

Holland, N. Y. Age 14.

There are times when we all have to toe the mark, and we needn't kick about it either.

Cow Testing Association Reports

WESTERN TEST RESULTS

The lone Utah Association still leads in the nine far western states, reports the Western office of the United States Dairy Division in the May letter. Over one-third of the cows attain the honor roll, the number being 55 out of a total of 151 and the entire lot average 37.8 lb. The Oregon Association averaged 35.9 lb. and stood in second place. The twenty California associations have 20,-117 cows enrolled, an average of practically 1,006 cows. This large number average 33.1 lb. fat. Washington, New Mexico, Colorado, Idaho, Nevada and Arizona follow in the order named.

The highest herd average is that of Aggee Brothers of Rivera, Cal., whose twenty registered Holsteins in the Los Angeles Association averaged 57.3 lb. fat. Whowell and Polley of Johnstown, Colo., have a herd of registered Holsteins, 24 in number, that stand in second place with an average of 1,506 lb. milk and 54.8 lb. fat. Sixteen Holsteins owned by A. D. Lommen of Mohler, Oregon, are third with an average of 1,372 lb. milk and 52.95 lb. fat. Two registered Holsteins owned by L. M. Browning of Hemmet, Cal., average 2,106 lb. milk and 81 lb. butter fat.

The famous Aaggie Ormsby Segis is the leading cow of the 29,287 lb. reported. She made 2,855 lb. milk and 145 lb. fat. Her owner is Fred Hartsook of Lankershim, Cal. Pontiac Ada owned by Whowell and Polley leads for milk production and is second for fat with a total of 2,955 lb. and 107.7 lb. respectively. One of Browning's registered Holsteins is third with 2,634 lb. milk and 102.7 lb. fat. Utah Aaggie owned by Holdway Brothers of Vineyard, Utah, is in sixth place with 100.2 lb. fat and 2,865 lb. milk.

Max Grandy, supervisor of the Arkansas Valley Association reports that the Green Mountain Dairy of Lamar, Colo., recently held a sale at which seven cows with association records averaged $150 and thirty-three head without association records averaged $90.

WASHINGTON TESTING FOR MAY

The remarkably high average production mark of 982 lb. milk and 37.5 lb. fat was attained by the 2,967 cows on test in the Washington State Cow Testing Associations, according to the report of assistant dairy extension specialist, Frank W. Kehrli. Of the number tested, 43% produced above 40 lb. of fat each, which is the highest per cent on record for the state. Four hundred and ninety-one cows produced over 50 lb. fat each, while 125 cows produced better than 60 lb. of butter fat each.

In the number of cows tested, Lewis County leads the state for the first time with 515 cows recorded, of which 172 were over the 40-lb. mark. Stillaquamish Valley association was a close second with 512 cows tested, while Clallam County with 480 cows and Snoqualmie Valley with 413 cows tested follow in order.

The highest producing cow for the month was a five-year-old registered Holstein owned by Thos. J. Owens of Kirkland. Her production for the month was 2,821 lb. milk and 90.3 lb. fat. She is enrolled in the Lewis County Association.

Holsteins showed prominently in a number of associations. In the Snohomish Valley, the tester, R. O. Wintermute, reports 111 cows tested during the month with an average of 1,089 lb. milk, 41.7 lb. butter fat. There were 57 honor cows. The high herd consisting of 26 Holsteins, owned by L. F. Krassin & Son of Snohomish, averaged 1,299 lb. milk and 46.9 lb. fat. The high cow for this association was a purebred Holstein owned by H. Steffen & Son of Monroe, she produced 1,996 lb. milk, 79.8 lb. fat.

In the Snoqualmie Valley, there were 413 cows tested. They averaged 1,061 lb. milk, 39.8 lb. fat, with 197 honor cows. The high herd consists of 25 Holsteins and Jerseys, owned by John Odell, of Duvall. They averaged 1,309 lb. milk and 49.6 lb. fat. The high cow was a purebred Holstein already mentioned as owned by T. J. Owens of Kirkland.

The high cow in the Stillaquamish Valley was a grade Holstein owned by P. Husby of Silvana. She produced 2,089 lb. milk, 75.2 lb. fat. There were 512 cows tested their average being 915 lb. milk, 33.0 lb. fat; 219 cows were on the honor roll.

In the White River Valley, a grade Holstein, owned by W. J. Orton of Renton with a production of 1,608 lb. milk, 81.6 lb. fat. Of the 326 cows tested, there were 143 honor cows.

MILLER OWNED LEADERS

A. F. Miller owned the leaders for milk and fat production in the Winona, Minn., Association during May. One of his grades produced 1,776 lb. milk and another milking 69.4 lb. fat. His big milk producer made 67.4 lb. and stood second. There were 451 cows tested during the month, of which 83 produced over 40 lb. butter fat and 17 of the 26 herds tested averaged 25 lb. or more fat.

COLORADO'S LEADER

According to the report of the state association, Whowell and Polley had the high cow and the high herd in Colorado during April. The leader was McCanna Pontiac Ada, with production of 107.7 lb. butter fat from 2,995 lb. milk. The herd average was 54.8 lb. fat.

THREE-FOURTHS OF THE HERD

James Carstairs, Grays Harbor County, Washington, purchased his first registered sire in 1910. Talking to County Agent Cowan recently, Mr. Carstairs said that one of his grade cows never gave over 35 lb. milk in a day at her best while her daughter by a registered sire has given 75 lb. milk in a day. The limit of another cow was 40 lb., while her daughter by the same registered sire has given 60 lb.

Pointing to his high-grade herd, Mr. Carstairs continued: "The mothers of these cows never gave over 30 or 35 lb. milk a day while these have milked all the way from 50 to 75 lb. a day at their best. They not only milk more but longer. The old cows would milk from eight to nine months, while these milk from ten to ten and a half months. I have heard that 'the sire is half the herd,' but I would say that he is three-fourths of the herd."

JUNE AGAIN LEADS

For the third successive month, June, the purebred Holstein owned by John Tyner and Son, has led the Lake Pepin, Minn. Association for butter fat production. In February she made 91.5 lb. butter fat, in March 84.5 and in April 68.1 lb. from 1,662 lb. milk. There are 500 grade and purebred cows enrolled in this association.

Mr. John Tyner and Son have a splendid herd of high grade purebred Holsteins. One of his grades led in milk production in April making 1,758 lb. with Lady, a purebred Holstein, third with 1,632 lb. Cows of this herd stand fourth and fifth for butter fat production for the same month. The Tyner herd is first in herd averages with 1,235 lb. milk and 44.5 lb. butter fat. Viola, a purebred Holstein owned by H. W Bodin and Son is third with 61.7 lb. butter fat, losing second position by only .2 of a lb.

DAIRYMEN FRATERNIZE

Members of the Eagle Point Association had a Field Day on June 8th at Chippewa Falls, Wisconsin, finishing up with a dinner at the Gust Polzin Farm. The Guernsey and Holstein associations have successful county organizations and a Jersey Club is being formed. The principal speaker was W. H. Clarke, of Rice Lake, State Institute instructor and a well known Jersey breeder.

IN MISSOURI

Six of the ten highest producers in the state of Missouri during April were members of the Green County Association and the leader was a Holstein owned by S. J. Wommack, she yielding 2,163 lb. milk and 82.2 lb. fat.

WISCONSIN MAY NEWS

The official report of the 104 associations reported in the *Wisconsin News Letter* for May, shows that purebred Holsteins headed 37 of the associations for butter fat production with grade Holsteins heading 30. Purebred Guernseys headed 8 and grade Guernseys were the leaders in 14. Five association leaders were purebred Jerseys and three were grades. There were two grade Ayrshire leaders, one registered Ayrshire, two are designated as native cows and there is one Brown Swiss and the breeding of one of the leaders is not mentioned.

The highest producing cow in the state is a purebred Holstein owned by the Harvest Farms Co., of Mayville, in the Northeast Dodge County Association. This cow made 111.9 lb. fat. A registered Holstein owned by Mrs. L. H. Dickinson, of Lake Geneva, is second with 103.1 lb. fat. A registered Holstein owned by Leo Kuhy and Son is third, with 102.9 lb. fat. One owned by Spring Brook Farm fourth, with 102.5, and a grade owned by Hubert Maas is fifth, with 102.3 lb. fat.

The highest milk herd average is made by the herd of D. W. Huenink, 1,785 lbs., while the herd of Otto Kohlwey is second, with 1,709 lb. The Huenink herd consists of registered and grade Holsteins, while the Kohlwey herd is all purebreds. A grade Guernsey establishment furnishes the highest producing herd, with an average of 61.8 lb. fat, the purebred and grade Holstein herd of Henry Benecke is second, with 60.4 lb. fat and is third for milk average with 1,707 lb. The purebred Holstein herd of W. C. Baumgartner is third, with 57.9 lb. fat and has a milk average of 1,674 lbs.

The highest cow testing association record made in Wisconsin this year was made by a registered Holstein owned by Joe Molter, of the Avoca Testing Association, of Iowa County, and is over 800 lb. of butter fat.

According to the *May Letter,* there are only seven of the 3,600 members of Wisconsin Cow Testing Associations that use butter substitutes on their table and these are members of different associations.

There are six associations on the honor roll in which every herd is headed by a registered dairy bull is listed free from tuberculosis and real butter is served on the farm table. These six associations are the Allenton-Kohsville Almena, Delafield, Rice Lake, Baron and Chetek.

A GOOD AVERAGE

A purebred Holstein, owned by E. E. Splitt, led the Wilton, Wis., Testing Association for the month of May, with a record of 70.1 lb. fat.

Twenty-two cows produced more than 45 lb. butter fat during the month. H. Birkholz, L. Radke and J. Steinoff had cows in the honor roll.

CUMBERLAND COUNTY ASSOCIATION

A. A. Raudabaugh, test supervisor of Cumberland County, Pa., reports that during May, 256 cows in 26 different herds were tested. As 30 cows were dry the association herds averaged exactly 11 animals.

The highest producer for both milk and butter was a registered Holstein, owned by A. P. Loudon, with 2,343 lb. milk, 77.8 lb. fat. Second was another registered Holstein, owned by M. A. Wikel with 1,425 lb. milk, 64.1 lb. fat. A grade Guernsey was third; one of Ivo V. Otto's registered Holsteins was fourth and grade or purebred Holsteins held the next five places.

KANE HAS GOOD COWS

Twenty herds consisting of 321 cows enrolled in the Kane County, Ill., No. 2 Association have completed records of nine months or more and averaged 279 lb. butter fat. Thirty-six cows in the Association made over 10,000 lb. milk and 16 over 11,000 lb. The herd of 23 Holsteins owned by Mathewson and Lakin averaged 8,816 lb. milk and 338 lb. butter fat. The three highest producers in the Association are members of this herd. Blossom, a grade Holstein made 16,599 lb. milk and 831 lb. butter, another grade made 14,164 lb. milk and 548 lb. butter fat and another cow made 13,329 lb. milk and 539 lb. butter fat.

THE SAME BREED

A registered Holstein cow, owned by I. R. Manton, of Ghent, Ohio, leads the Summit County Association for butter fat production for the month ending May 1st, reports Ralph Wetmore, the official tester. This cow produced 2,103 lb. milk and 81.91 lb. butter fat. The previous month a registered Holstein owned by E. W. Luther at West Richfield was the leader.

According to the report, 280 cows were tested with an average production of 882.6 lb. milk and 31.25 lb. butter fat. Fifty-four cows are credited with over 40 lb. butter fat.

A FINE SHOWING

A grade Holstein owned by M. Sandeen, member of the Nicollet County, Minn., Holstein Association, produced 73.44 lb. butter fat during May, carrying off first honors. A purebred Holstein belonging to Oscar Swenson was second with 1,420 lb. milk and 56.80 lb. fat. The grade Holstein herd of O. Gustafsen, numbering 15 cows, averaged 1,170 lb. milk and 43.29 lb. butter fat. Mr. Sandeen's herd was second.

PEGGY LEADS

Peggy, a Holstein cow owned by Clifton B. Ward, of the Newport County, R. I., Association, produced 1,866 lb. milk and 65.31 lb. butter fat during May. Alden Smith's Holstein, fresh last November, was second with 1,728 lb. milk and 62.20 lb. butter fat.

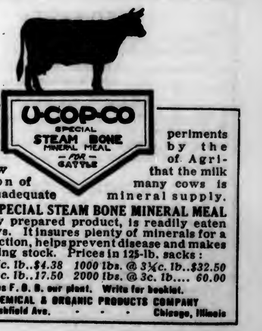
IN WISCONSIN

Twenty purebred Holsteins owned by G. R. Rousseau, of the Green Valley Association, Wis., averaged 9,916 lb. milk and 349.9 lb. butter fat in the past year. The year test was completed by 325 cows in twenty different herds.

A purebred Holstein seven years old owned by Bender and Franc, of DePere, Wis., carried off high honors in the Wrightstown-Greenleaf Association during May by producing 78.3 lb. butter fat and 2,448 lb. milk. A grade owned by Wm. Gilson was second with 68 lb. butter fat and 1,308 lb. milk. No less than 122 cows produced more than 40 lb. butter fat during the month. The six highest producers were all black and whites.

Cornucopia De Kol Lotta, a four-year-old owned by Lawrence Larson carried off the honors in the Shirley-Denmark Association during May by making 83.7 butter fat and 2,391 lb. milk in the 31 days. The herd of Henry Benecke averaged 1,707 lb. milk and 60.4 lb. fat. There were 147 cows tested during the month, of which 139 exceeded 140 lb. milk.

FOR FIVE MONTHS



For the fifth consecutive month the herd of Rolin E. Lee headed the Kenosha-Racine County Testing Association. This registered Holstein herd averaged 1,118 lb. milk, 38.3 lb. fat during May. Seventy-three cows exceeded the 40-lb. mark. The highest producer was Cary, a grade Holstein, owned by F. C. Hanson, she making 1,600 lb. milk, 73.62 lb. fat. The Hanson herd was second with 942 lb. milk and 38 lb. fat.

The month of May finished the second year of testing in this association. There were 707 cows tested: 405 finished the year test 85 were sold as unprofitable and 73 registered animals and 52 grades were purchased, while 16 purebred sires were bought.

KENTUCKY TESTING

Only 27 of the 134 cows in year tests under the auspices of the University of Kentucky are Holsteins. They are in seven different herds, yet they furnished the two highest producers. The leader was Topsy Pearl De Kol, a six-year-old owned by the Kentucky Holstein Farm of Bardstown. She produced 152.3 lb. milk, 5.379 lb. fat. Her stablemate, Rhoda Overton Segis, a five-year-old, made 154.3 lb. milk, 5.22 lb. fat. A Jersey was third, another Kentucky Holstein Farm cow, Oakwood Segis De Kol Johanna, was fourth with 143.8 lb milk, 4.629 lb. fat as a mature cow and next to her was a four-year-old, Bonpas Snowball, owned by Guy Baldwin, of Bardstown, with 146.9 lb. milk, 4.273 lb. fat.

Only two seven-day tests were reported. Mansell Dorothy Konigen, as a four-year-old, made 555.9 lb. milk, 21.06 lb. butter and Wabash King Pauline Abbekerk, a three-year-old, made 369.4 lb. milk, 15.06 lb. butter. Both were owned by the Kentucky Holstein Farm.

GOOD OKLAHOMA HERD

One of the most profitable dairy herds in the state of Oklahoma is owned by Geo. Abdo, of Broken Arrow. During the past six months practically 14,000 gallon and over 4,000 lb. butter fat were produced by 30 Holstein cows. Three of the cows averaged better than 1,000 lb. milk in a month, one averaged better than 1,500 lbs. Five cows averaged 30 lb. butter fat a month, four averaged 40 lb., and one averaged 50 lb. Mr. Abdo is a member of the Consolidated Cow Testing Association, which has an enrollment of more han 800 cows.

"Hey, there, don't you dare park your car near my horse." "Don't worry, I know the city rules are not to park near a plug."

WESTERN TESTING

For the first time in several months, Utah lost first place in the nine Western States, being supplanted by Oregon, whose 3,460 cows enrolled in five testing associations averaged 41.6 lb. fat. Over half, or to be exact 1,845 cows made over 40 lb. fat in a month. The lone Utah Association placed that state in the second position, the 148 cows averaging 39.6 lb. fat. Washington's nine associations have 2,967 cows enrolled and their average was 37.5 lb. fat, 1,275 cows attained the honor roll. The one association of New Mexico has 491 cows that averaged 36 lb. fat. The nineteen California Associations averaged over 1,000 lb. milk a piece, and an average production of 34.7 lb. fat.

Idaho, California, Nevada and Arizona followed in the order named. In the nine states under the western office of the Dairy Division, there are forty-five testing associations in which 30,136 cows are enrolled. The greatest producer in the entire division is the registered Holstein, Norma Korndyke Cornucopia, owned by W. E. Lonney, Salida, Cal., California. She is credited with 3,925 lb. milk, 151.7 lb. fat. This great cow is mentioned on page 404 of THE HOLSTEIN BREEDER AND DAIRYMAN as making a record of 42.8 lb. butter. A grade Jersey is second with a registered Holstein, owned by W. E. Lonney, Salida, Cal., third with 2,917 lb. milk, 105.3 lb. fat, and another registered Holstein, owned by Van Meter & Krebill, Loveland, Colo., is fourth with 2,392 lb. milk, 99.6 lb. fat.

The two registered Holsteins owned by the Reverend N. L. Browning of Hemet, Cal., averaged 2,213 lb. milk, 66.4 lb. fat and headed the list of herds numbering fifteen or less animals.

HOLSTEIN GIRL LEADS

Holstein Girl, a grade Holstein owned by Mike Redig, Jr., leads the Marshfield, Wis., Association with a fat production of 72.1 lb. from 1,640 lb. milk. She has been fresh three months. C. F. Schroeder and Sons' herd of 18 grade and purebred Holsteins has the high herd average of 1,377 lb. milk and 44.6 lb. butter fat. Mr. Schroeder's cows are first and fourth for milk production and one animal of this herd is second for fat production with 68.8 lb.

FIFTH SUCCESSIVE MONTH

With a production of 2,161 lb. milk, 64.8 lb. butter fat a purebred Holstein belonging to the Wisconsin State School for the Blind led the Clinton Cow Testing Association for the month of May, in which 463 cows were tested. Second honors were won by a purebred Holstein, who produced 1,507 lb. milk, 60.3 lb. fat. She is owned by Duoss Bros. Mrs. James Menzies herd of fifteen purebreds and grades again led the association for the fifth successive month averaging 1,291 lb. milk, 46.2 lb. fat, averaging over 40 lb. fat per month for the first five months of the year.

YEAR REPORT IN BOOK FORM

Among the publications that came to the desk of THE HOLSTEIN BREEDER AND DAIRYMAN during the past two weeks, one that we perused with much pleasure was the second annual report of the Livonia Dairy Improvement Association, which operates in Livingston and Ontario Counties, New York. This booklet is handsomely bound, contains sixty-four pages and tells of the work of the association for the past two years.

The cover is adorned with a picture of Sunnybrook Dolly Ladoga, a three-year-old registered Holstein in the Doty & Seaman herd, Geneseo, N. Y. Dolly was the leader of the association for milk and butter fat during the month of January, 1922. Her picture and a story of her accomplishments appeared in the March 22d issue of THE HOLSTEIN BREEDER AND DAIRYMAN.

Monthly production reports are given with pictures of some of the monthly leaders. We learn that every month during the year 1921 either a purebred or high grade Holstein led the association, both for milk and butter fat production. The 1921 leader was a grade Holstein, owned by Roy Reed, Hemlock, she making 18,825.3 lb. milk, 777.6 lb. fat. It may be of interest to add that this cow gave milk to the value of $316.20 above the cost of feed. During the year this cow consumed 3,268 lb. grain, which is at the rate of one pound of grain for every 5.7 lb. milk she produced. The cost of feed used came to $117.76, or 72 cents for every 100 pounds of milk given.

The cow that led for production during the first year's work was a registered Holstein, owned by J. M. Huff, she making 14,620 lb. milk. Forty-one cows produced over 10,000 lb. milk during the year ending January 31, 1921. There were a purebred Ayrshire and a grade Jersey and the others were all purebred or grade Holsteins. During the year ending January 31, 1922, the number of 10,000 lb. cows was increased to 90. All of these producers were Holsteins excepting one lone Jersey.

HOLSTEIN HILDA LEADS

The May report of the Southern Blair Association shows that ten cows from seven herds exceeded forty-five pound of fat in the month. The high cow for both milk and butter fat production was Hilda, a purebred Holstein, owned by H. K. Metzker & Sons. She produced 1,607 lb. milk, 60.5 lb. butter fat. E. Sollenberger had three cows in the first ten, the lowest one making 45.8 lb., the next, 47 lb., and the highest one making 50.3 lb. butter fat.

EDITH LED

Edith Tirania Korndyke, owned by Gus Raduege, was the highest producer in the Madison Township Test Association, making 12,492 lb. milk, 447 lb. fat during the first year of this association's operations, accordinng to the Franklin County, Ohio, Farm Bureau reports.

SUNFLOWERS AS A SILAGE CROP

Bulletin No. 1,045 of the United States Department of Agriculture is on the sunflower as a silage crop. The bulletin says the sunflower is a native of the United States and was cultivated by the Indians who used the seed for food and the oil in dressing his hair.

The results of tests at a number of experiment stations are cited. It is doubtful whether sunflowers will ever be popular for silage in the corn belt nor in the southwestern states. It is likely to be a valuable silage crop in the extreme northern part of the United States or at high altitudes in the western states where corn or sorghum do not yield heavy crops. Sunflowers are more resistant to frost than corn and grow wild in Nebraska, the Dakotas and Western Kansas but has never been satisfactory as a silage crop in these dry regions. The conclusion seems to be that sunflower silage will never supplant corn where the latter can be grown to good advantage.

As a soiling crop sunflowers have given good results but it is necessary to run them through a cutter before feeding.

NEWS FROM DIXON

At the state Holstein testing plant at Dixon, Ill., there were 16 cows registered during April, of which 12 were in milk. The biggest producer was Princess Vevie Colantha, owned by H. K. Vose, with 110.31 lb. butter. She just beat out O. F. C. Chicago Pietje, with 110.27 lb. butter. This cow is owned by Lloyd Ritzenthaler. Evelyn De Kol Korndyke Pontiac, owned by George White, made 109.24 lb. butter and led in milk prosteins. One of his grades led in milk duction with a total of 2,800.9 lb. Mercedes Belle Pontiac, owned by Rouse Brothers, had 98.58 lb. butter to her credit from 1,899.5 lb. milk. The junior two-year-old Menoka De Kol Sadie Vale, owned by M. H. Peterson, made 85.87 lb. butter from 1,835.4 lb. milk.

Resting on our laurels is pretty apt to make them wither.

Oct. 18—Toledo, Ohio, Lucas County Breeders' Sale, Ohio Holstein-Friesian Association.

BIG AVERAGE AT BURR SALE

The Burr Farm Sale held at Hynes, California, June 1-2, attracted Holstein enthusiasts from many parts of the state and from Arizona. The average for the entire number was $420. Thirty-three buyers purchased 114 head for $47,975; five bulls brought $8,835 and 109 females were sold for $39,140, or an average of $359.

The highest price was $8,000, obtained for the well known sire, King Korndyke Pontiac 20th, who went to Sargent Bros., Tulare. This great son of the famous Miss Valley De Kol Walker has had eighteen sons sell for $61,000. Six females brought $1,000 or more. The top price, $1,500, was obtained for Gracia Pontiac Burke, a 33-lb. daughter of a 30-lb. cow, sired by King of the Pontiacs 14th. She went to Fred Hartsook, of Lankershim. The Glenwood Stock Farm, Riverside, purchased Snowball De Kol Pontiac Lass, for $1,300 and was the heaviest buyer of the sale, obtaining 21 head for $8,225. The Miller Cattle Co., of Phœnix, Ariz., took eight head for $1,985. Lutge Bros., Burbank, obtained nine head for $3,380; Los Angeles County Farm, Hondo, took seven animals for $2,270; the Sunshine Co., San Fernando, obtained six good ones for $4,705.

The sale was under the management of the California Breeders' Sales and Pedigree Company, of Sacramento, with Rhoades and Rhoades as auctioneers.

The animals bringing $200 or more with the names and addresses of their purchasers are as follows:

Purchased by Glenwood Stock Farm, Riverside.	
Rosamaines Ononis Ormsby	$435
Burr Matador Segis Rag Apple	700
Amelia Bona De Kol	400
Burr Farm Veeman Lady	275
Stratford Segis Blanche De Kol 2d	410
Wapato Duchess Rixon	510
Rockanna Johanna Rauwerd	450
Snowball De Kol Pontiac Lass	1,300
Palo Verde Burke Segis	310
Lady Holland 3d	375
Daziel Hiske Mead	410
Enid Gold Dust Crown	380
Helm Gelsche Arona Mead	710

CALF CLUB INNOVATION

The management of twelve banks located in Hamilton County, Nebraska, have subscribed $1,600 for the purpose of buying grade Holstein heifers, six to ten months old, to form the nuclei of calf clubs. The first calf club will last for three years and will be under the direction of the Agricutural Extension Service, University of Nebraska, in which title to the animals will be vested. Each animal is to be tuberculin tested each year and will be vaccinated for prevention of blackleg.

The first female offspring of the original animal in sound physical condition is to be returned at the age of two months to the committee in charge, which will place it with another member of a standard calf club. The male offspring and the income from the milk shall be the property of the club member. When the club member has delivered the heifer calf and has completed the three year project according to the Extension Service requirement, title to the original animal shall pass to the club member.

LOOK FOR THIS

The June 10th issue of the *Country Gentleman* carries a feature story on the recent performance of Pietertje Ormsby Mercedes Frisby, the world champion junior two-year-old, for seven-day butter production. The story is entitled "Mr. Murphy Milks a Cow" and is written in very different style from the ordinary Holstein write-up, but is well worth reading and will give many of its readers some idea of the way official tests are conducted. The new champion averaged 52.8 per cent fat on her seven-day test and is credited with 32.91 lb. butter. She sold for $1,000 in the Kansas City Sale, her purchaser being the W. T. Rawleigh Company, Freeport, Ill., while her consignor was Lawrence F. Murphy, a young Wisconsin breeder and dairyman.

KOSSUTH COUNTY BREEDERS' SALE

The Kossuth County Holstein Breeders' held a sale at Algona, Iowa, June 15th. There are quite a number of real good producers in Kossuth County which is shown by the fact that the county cow testing association is leading all cow testing associations in the state of Iowa, in the number of high producing cows and herds.

The Kossuth County Breeders' Association consists of owners of purebred horses, cattle, sheep and swine. There is a director representing the various breeds in the county the Holstein director being Frank Thorpe, Algona, Iowa. The cattle breeds represented are the Hereford, Guernsey, Holstein, Jersey, Shorthorn and Aberdeen-Angus. C. E. Fish of Algona is the secretary of the County Breeders' Association.

The Holstein breeders' consigning to the sale were A. A. Dreyer, Wittemore, and Bert McCorkle & Son, Algona. The thirty-eight animals sold brought $4,295, an average of $112.76. The top price was $275 which was obtained for Roxey Johanna Herbert an A. R. O. cow now on semi-official test, in which she has produced in five months over 11,000 lb. milk. E. W. Young, Algona was the purchaser. She was bred to Sir Ormsby Korndyke Skylark, a son of Sir Ormsby Skylark from Uneeda Korndyke Daffy, a 1,000-lb. year record daughter of Johanna McKinley Segis.

A list of the animals bringing $125 or more with names and addresses of their purchasers follow:

Consigned by Bert McCorkle & Son, Algona, Iowa.

2	Willowane Queen, W. H. Jameson, Ames, Iowa	$100
3	Willowane Tina Mercedes Homestead, C. L. Fincham, Ames	180

34	Major Pietertje Ormsby, Thorpe Bros., Algona	195

BARRON COUNTY SALE

The top price at the Semi-Annual Sale of the Barron County Holstein Breeders' Association was $400, obtained for Princess Inka Rag Apple Pontiac, bought by Martin Borgen, Dallas and consigned by R. R. Hurd, Luck. This heifer will not be three years old until August. W. Miller of Menomonie, purchased three heifers for $310 each from the consignment of Licutenant Governor W. S. Comings, of Eau Claire. Mr. Comings paid $400 for a bull consigned by Devaney Bros., Shell Lake.

The thirty-six animals brought $6,240 an average of $173.33. Seventeen bulls averaged $101.47 and the entire fifty-three head brought $7,965 an average of $150.28.

Bertram D. Scott acted as pedigree expert assisted by Ernest Le Jeune, with W. H. Krause in the box and Fred Hembrook as ringman.

A REAL GUSHER

Lyndale Aaggie Concordia, a cow owned by B. J. Dawes, president of the Pure Oil Co., Columbus, Ohio, is on test for a year and is running up a big record. When fresh, she produced 3,506 lb. milk in thirty days which was a new state record. During April, on semi-official test she made 3,541.2 lb. milk and during May she made 3,692.7 lb. in the thirty-one days, making 122.76 lb. butter in April and 119.92 lb. for May.

Lyndale Aaggie Concordia was the Queen of the occasion at a dinner which Mr. Dawes gave on June 9th to his many friends. There was a regular program with a Master of Ceremonies and a historian. This was followed by a trip around the dairy farm and a visit to the local oil refinery. A dinner followed.

Mr. Dawes purchased Lyndale Aaggie Concordia at the Ohio State Sale last fall. She was consigned by R. E. Dillon.

KEEP YOUR EYE ON HIM

One of the coming California herds is owned by Dan Carmignani of Los Palos near Fresno. He now has about 40 head of females including two daughters of the famous Bridgeford sire, King Segis Alcartra Prilly. One of these daughters, Maud Woodcrest Prilly is a daughter of Chimacum Maud who as a three-year-old made a seven-day record of 29 lb. butter, and over 600 lb. milk. His other daughter, Hengerveld Alcartra Prilly, is from a 27-lb. granddaughter of Hengerveld De Kol.

Mr. Carmignani says, "The purebred cattle business is only in its infancy. There is much opportunity for the man who will stick for a few years. Only about two per cent of the cattle of California are purebred, some day we hope it will be ninety-eight per cent."

HOLSTEIN DAIRYWOMAN

Miss Emma Engler of Ahtanum, Washington, has a 32-acre farm on which she keeps a good herd of purebred Holsteins and herself milks nine cows. She made her first purebred purchase at the E. B. Marks' dispersion sale and to-day has eight registered cows, three purebred heifers besides three grades. One of her heifers is Sagebrush Annie Bessie Girl, for which Miss Engler paid $400 at the state fair sale last year. This heifer, barely two years old, has made 64 lb. milk in a day at her first freshening. Three other animals are milking from 56 to 70 lb. milk in a day.

Miss Engler was deeded her establishment, on which she was born, by her father Chas. Engler, who settled on the place 33 years ago after having farmed in California for 13 years.

COMPANY BULLS

Members of the Clark County Holstein Bull Association have purchased four sons of Sir Aaggie Colantha Korndyke from J. N. Stansfield & Sons of Lawrenceville, Illinois.

BUILT A GOOD HERD

The Skaalen Home for the Aged, which is located at Stoughton, Wisconsin, has a valuable Holstein herd which was raised from a few foundation cows purchased a number of years ago at nominal prices. One of these cows is Porcelain Baker 2d who has seven daughters in the herd. One of her daughters, Porcelain Thora Baker has made over 36 lb. butter, 673 lb. milk in seven days, 148 lb. butter, 2,801 lb. milk in thirty days and averaged over 32 lb. butter a week and 90 lb. milk a day for an eight-weeks period, closing her test with a day's production of 97½ lb. milk. Rev. B. J. Larsen, the present superintendent of the Home, was offered $1,000 for another daughter, Rose Deerfield Baker, which offer was refused.

NEW KANSAS CHAMPION

The state record of Genesta Knoll De Kol who was recently sold for $1,000 in the Kansas City National Sale has been beaten by Ruffinia Hengerveld De Kol with 20.896 lb. milk, 819 lb. butter in 305 days. She made 93.1 lb. milk in a day, carrying calf 188 days of the test and is owned by E. A. Brown.

The greatest days grain feed she received was 33 lb. consisting of a mixture of 100 lb. corn chop, 100 lb. bran, 100 lb. ground oats, 50 lb. oilmeal, and 50 lb. cotton seed meal. In addition she received 20 lb. wet beet pulp and all the alfalfa hay and silage she could eat. She was never off feed a day during her test.

FOUR DAY DAIRY TOUR

Between 150 and 200 farmers with the business men of Fremont, Nebraska, dined recently at the Hotel Pathfinder and afterwards in a four days' tour visited some of the leading farms in the vicinity. Otto Isben has a registered Holstein Farm about three miles from Freemont and when the visitors reached the establishment they were each presented with a bottle of fresh milk which they evidently enjoyed. The Holstein establishment of Ray Hindmarsh was on the itinerary and his fine herd was much admired by the Dodge County Purebred Live Stock boosters.

The widower who had survived no less than four wives lay dying. "Ah, life is so beautiful!" he cried. "I dread the thought of death." "Oh, cheer up," murmured his comforter. "Perhaps in the hereafter it will be impossible to recognize each other."

KANSAS BREED BULLETIN

The Sunflower Bulletin is issued by the Holstein-Friesian Association of Kansas, of which C. A. Branch of Marion, is president; B. R. Gosney, Mulvane, is vice-president; and W. H. Mott, of Herington, is secretary-treasurer.

This is a thirty-two page booklet, handsomely bound and carries messages to the members of the state association from the Board of Directors and the President. It lists the accredited Holstein herds of Kansas of which we notice there are 113; gives the Kansas State records; tells of the news among the herds of the state and has quite a little local advertising. We notice that Congressman, J. G. Strong of the Fifth Congressional District is one of the recent additions to the Kansas State Association. And the following testimonial to the director of the "More Milk Missionary Campaign." "Two years ago our little girl took a half pint bottle of milk to school in her lunch. They made a lot of fun of her at first; had hard time to keep her taking it. This year they all brought milk but two. Signed,

Derby, Kansas. C. L. Goodin.

LARGE ACCREDITED HERD

The largest accredited purebred herd of Holsteins in Pennsylvania is owned by the State Hospital for the Feeble Minded at Polk. The herd contains 303 animals. In 1918 it was placed under supervision of the Bureau of Animal Industry and for more than two years not a single reactor has been found. The certificate of accreditation has just been issued.

The herd is used entirely to supply dairy products to the 1,800 inmates of the institution and is under the supervision of Dr. J. M. Murdock.

FRIENDLY COMPETITION

The Holstein and Guernsey Breeders' Association of Winona, Minn., held their sixth annual dairyman's picnic June 8th. More than 1,500 persons were present. The Holstein breeders played the Guernsey breeders' a game of kittenball and defeated them 14 to 7.

I. J. Strehlow, Bethany, won the purebred Holstein calf in the drawing but decided to take the $100 in place of the calf. It was afterwards auctioned off by Jacob Voelker and was struck off for $170 to Walter Bittner, Winona.

The speedometer said sixty miles an hour.
The constable said it was 90.
The natives said it was a crime.
He said it was the life.
His friends said it with flowers.

Representatives Wanted

The picnic and fair season, when rural people get together, is the time to earn good money at these gatherings soliciting subscriptions to ***The Holstein Breeder and Dairyman.*** Write to-day for terms. Send references with your letter.

The Holstein Breeder and Dairyman, Harrisburg, Pa.

DAIRY COURSE POPULAR AT PENN STATE

Pennsylvania is a great dairy state. Dairy cows are kept by 83.9 per cent of the farmers. The amount of milk produced in the state during 1919 was 421,631,355 gallons. This amount of milk if put on a freight train at the rate of twenty tons to a carload would make a single freight train reaching from Harrisburg to Chicago. Pennsylvania is the seventh state in the union for number of cows, the fourth for amount of milk produced, third for market milk, third for the value of its dairy products, third for condensed and evaporated milk, sceond for farm butter and first state in the union for the production of ice cream. The value of the milk, cream and butter fat sold from Pennsylvania dairy farms excluding milk and cream consumed on farms during 1919 amounted to $99,617,373. This is more than double the value of dairy products sold from Pennsylvania farms in 1909.

The tremendous increase in the amount and value of dairy products in Pennsylvania during the last ten years has had a marked influence on the number or students electing the dairy course at the Pennsylvania State College. Under the Leadership of Profesor A. A. Borland the dairy course has become one of the most popular courses in the Institution. In 1919 only 8 students graduated in the dairy course. In 1920 the number increased to 17; in 1921 to 24, and during 1922, 34 men have graduated in dairying, there being a larger number of Dairy Husbandry graduates during the last year than in any course in the school of Agriculture. It is also significant that everyone of the graduates had secured a good position prior to graduation and that a considerable number of openings could not be filled on account of an insufficient number of men ready to take positions. The photograph shows a splendid group of young men and women who have just completed the course. It is noteworthy that no less than ten of these men expect to go home or to be associated with their fathers in the dairy manufacturing business. The increasing number of thoroughly trained college men who are returning to the farms is a hopeful indication for the future development of the Agriculture Industry of the state.

A SATISFIED CUSTOMER

The eighteenth carload of Holstein cattle, purchased by E. F. Pipes, Mexico City, since last November was recently shipped from Monroe, Wisconsin, by the Babler & Hoesly Company.

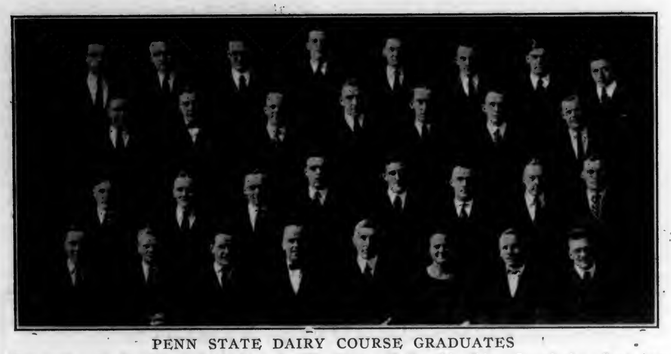
Mr. Pipes reports a good demand for Holstein cattle in Mexico. The Mexicans make practically no cheese and very little butter. They use milk either in liquid form or in the preparation of various food dishes.

ON THE RIGHT TRACK

In an article on the care of babies in the Dennison, Texas, *Herald* appears the following: "If a substitute for the natural mother's milk becomes necessary clean, cows milk is the best substitute, and Holstein milk is a better substitute than Jersey milk."

"Dinah, I hear you are going to get married."

"Yassum. I done found me a nice steady man."



"Has he a good job?"

"No'n. He's studyin' for de ministry. I'm gwine support him till he reads de Bible th'oo."

Mistress (indignantly)—"Jane, whatever did you mean by wearing my new evening dress at the dance last night? Really, you ought to have been ashamed of yourself."

Jane (meekly)—"I was, madam; you never heard such remarks as they made."

A friend is one who knows how worthless you are and doesn't give a darn.

Parry, DuBois; A. L. Heln, Bryn Athyn.

A PIONEER HERD

The first herd of purebred Holsteins in Jackson County, Missouri, was established at Hillcrest Farm in 1901 by Dr. G. C. Mosher, of Kansas City. Dr. Mosher's idea in starting this establishment was to have a model dairy that would furnish good milk for Kansas City children.

There were some noted old cows in the Mosher herd, Wisconsin Bess, Dolly Wayne, Empress Josephine and others of the kind. Sarcastic Lad, grand champion show bull at the St. Louis Exposition in 1904, formerly stood at the head of the herd, being owned jointly by Hillcrest Farms, M. E. Moore, and R. W. Maguire. This great sire was afterwards sold to the University of Illinois and headed the state herd at Urbana.

The first silos in Jackson County were built at Hillcrest in 1902. Dr. Mosher gave up the farm in 1907, when the Medical Milk Commission was organized.

A miner explained one day to the bishop why he never went to church.

"You see, bish, it's like this," the miner said. "The fust time I went to church they threw water in my face, and the second time I went they tied me up to a woman I've had to keep ever since."

The Bishop smiled grimly and said: "And the third time you go, they'll throw dirt on you."

"What did Miss Richgirl say when she turned you down?" asked Brown.

"She said she never would have any second-hand furniture around her house," sadly replied the widower.

MEET MR. BERRY

Clark E. Berry the new superintendent of Berks Farm, Reading, Pa., has had a long experience with purebred Holsteins and for the past seven years has been in charge of one of the Stevens establishments, near Liverpool, New York, first of all for Stevens Brothers Co., and later for Ward W. Stevens until the farm on which he lived was sold.

Mr. Berry assumed his new duties early in April and under his care Mr. Deysher's great heifer, Eco-Sylv Mechthilde, produced 80 lb. milk in a day as a yearling. We understand that Mr. Berry will have a son associated with him as soon as the latter finishes his schooling.

CLARK E. BERRY
Now in charge of the Deysher herd, Berks Farm, Reading, Pa.

The Deysher herd is one of high quality, Mr. Deysher has spared no effort to get real good ones and has purchased the top price animals at great sales, paying $10,500 for three heifers, one of them a calf, at the recent Brentwood Sale.

SOME SIRE

Robert Barker a dairy farmer of Kentucky, who is 84 years old and married to his seventh wife announces the birth of his thirty-third child.

She: "What would you call a man who hid behind a woman's skirt?"

He: "A magician."—*Selected.*

C. L. TEMPLAR, - Syracuse, New York

ADDITIONS TO CLEMSON COLLEGE HERD

By I. R. Jones

Clemson Agricultural College, South Carolina, recently purchased two fine animals from the select herd of V. M. Montgomery, Springdale Farm, Spartanburg, S. C., and at the same time was the recipient of a heifer valued at $1,000, as the generous gift of Mr. Montgomery to the college. The two cows are Lady Ruth Pietertje, 418,098 and Strickland Farm Ella Pontiac, 392,146, while the heifer is Korndyke Segis Posch Polly 744,749.

Lady Ruth Pietertje is a large cow weighing about 1,500 lbs. She exhibits the dairy type and conformation sought for in cows to be used as foundation animals. She has two seven-day records, one of 574.0 pounds of milk and 23.39 pounds of butter at the age of three years, 10 months and 22 days, and the other 629.4 pounds of milk and 24.71 pounds of butter at the age of 4 years, 11 months and 6 days, the latter record being made at Springdale Farm at the beginning of her present lactation period. She is now on her semi-official test and in her first five months has a credit of approximately 11,000 pounds of milk and 435 pounds of butter.

Strickland Farm Ella Pontiac, 392,146 is a good type of Holstein cow but lacks somewhat the size and capacity of Lady Ruth Pietertje. She calved on September 26, 1921, at the age of 4 years, 5 months and 2 days. She was put on test in October and in 7 days produced 547.2 pouns of milk and 23.61 pounds of butter while in 30 days she made 2,261.4 pounds of milk and 85.70 pounds of butter. Continued on semi-official test she has a credit up to June 1st of about 16,100 pounds of milk and 610 pounds of butter.

Korndyke Segis Posch Polly, the young heifer donated by Mr. Montgomery, is a well grown calf showing much individuality. She was born January 5, 1922, being sired by Polly Posch's Son, 182,921, and out of Strickland Farm Korndyke Segis, 497699. Polly Posch's Son is the exceptionally well developed individual owned jointly by Mr. Montgomery and Mr. H. D. Jordan, Ridgewood Farm, Ridge Spring, S. C. This bull has the same dam as Ormsby Korndyke Lad, while his sire, Korndyke Butter Boy, 38,496, has 65 A. R. daughters and 35 proven sons. Polly Posch's Son has 3 Advanced Register daughters and 8 now on test. The dam of Korndyke Segis Posch Polly has the very creditable seven-day record of 486.3 pounds of milk and 21.06 pounds of butter as a senior two-year-old.

Both Lady Ruth Pietertje and Strickland Farm Ella Pontiac have been bred to Polly Posch's Son, so the Clemson Agricultural College hopes soon to have a Holstein herd comparable with the best in the country.

Always think twice before purchasing anything at a sacrifice.

PITTSVILLE BREEDERS PICNIC

The annual picnic of the Pittsville Holstein Club was held at Pittsville, Wis., June 16th. The principal address was given by Prof. G. C. Humphrey, of the state College of Agriculture. He said: "To-day only the productive cow finds a place in the progressive dairyman's herd; the efforts of everyone interested in better dairying is to see that the unproductive cow is 'weeded out.'" Prof. Humphrey gave a demonstration of judging. Following his talk a stock judging contest was held for boys under 18 years of age. First prize was won by Dan Ruggles and second prize was won by Wm. Bouden; twelve others received honorable mention.

County Agent R. A. Peterson emphasized the importance of calf clubs and seed clubs and asked that the boys and girls be encouraged in their efforts to better the dairy industry. He urged the coöperation of all present in securing signers to the petition for the County Tuberculin Test.

More than forty calves, many of which were shown at the Central Wisconsin State Fair at Marshfield last fall, were exhibited by members of the calf clubs.

A tug-of-war contest between the Holsteiners and Jerseyites resulted in victory for the Holsteiners.

UP IN MAINE

There is a nice little Holstein herd on the farm of John Robinson & Son Oxford, Maine, well known mill men. H. S. Bole, a graduate of Cornell University is the farm manager. Among the 25 animals in the milking stable is one that has made 34 lb. butter in seven days, a 25-lb. daughter of Sir Veeman Hengerveld and a 27.85 lb. two-year-old.

Wife—"Do you object to my having $200 a month for spending money?"

Hubby—"Certainly not, if you can find it anywhere."

LOOK! READ!
THINK!
—BULL CALF—
Born May 12, 1922, dam and sire's six nearest dams average 36.23 lb. butter in a week. Dam very large, and strong in King Segis Blood.

Mineral Stock Farm
Westfield, Penna.

NICE RECORDS AT VALLEY VIEW

We have been making a number of good records at Valley View Stock Farm with the daughters of our former herdsire, King Sadie Vale Highland, who was a son of King Korndyke Sadie Vale from a 22-lb. daughter of King Segis De Kol Korndyke who also sired the first 40-lb. heifer Mabel Segis Korndyke.

The full sisters K. S. V. H. Eva Johanna and Edna Sadie Vale Johanna, as junior two-year-olds averaged 422 lb. milk, 18.53 lb. butter. K. S. V. H. Eva Johanna recently completed a 365-day test making 15,072 lb. milk, 685 lb. butter. She freshened again at 3 years 6 months and 27 days old and made a record of 410 lb. milk, 25.96 lb. butter.

K. S. V. H. Butler Pietertje who made a seven-day record of 18 lb. butter and 442 lb. milk finished a year as a two-year-old producing 15,240 lb. milk, 629.05 lb. butter.

Duchess Pietertje of Valley View completed a year record of 13,370 lb. milk and 460.72 lb. butter as a junior two-year-old. Her sire is a son of Pietertje Hengerveld Segis who is a brother to King Segis 10th the sire of Matador Segis Walker, Carnation's great herdsire.

Harriette Concordia Harcourt freshened as a junior two-year-old and completed a year record of 14,560.9 lb. milk, 596.18 lb. butter. Her dam is by a bull with 50% the same blood as the former world champion milk producer, Creamelle Vale.

The Holstein industry has proved itself indispensable in the reconstruction of our country and has supported the efforts and enthusiasm of the breeders.

Butler, Pa. GEORGE A. KASTNER.

A REAL COW

Johanna Ormsby Countess, the cow exhibited by Frank Campbell at the 1920 New York State Fair carrying off the championship at that time, recently freshened as a twelve-year-old and made better than 25 lb. butter in seven days. Her owner, Chas. H. Divoll, Leominster, Mass., is the first man in Leominster to officially test any of his animals and this is the first cow he tested. He has a herd of 28 head, headed by Duchland Königen Sir Aaggie Olive. In the Divoll herd are four yearling daughters of McKinley Pietertje Beets who was also grand champion at the New York State Fair in 1920.

GOOD YOUNG SIRE

Five daughters of Veeman Pontiac Lakeside Lad, owned by W. R. Harper & Sons of Thornapple Hill Stock Farm, Middleville, Michigan, averaged 22 lb. butter in seven days at just a little over two years of age. Four of the five exceed the 22-lb. mark in seven days official test.

The proof of the pudding is in knowing when you have enough.

A HANDSOME PRESENT

The Rhode Island State College located at Kingston, R. I., was presented with six registered Holstein heifers on June 1st by the Rhode Island Holstein-Friesian Association. These were given to the association to donate to the college by the following Rhole Island breeders: Singleton Farms, Wallum Lake; Prescott Knight, Riverpoint; H. B. Ayres, Westerly; Arthur Steere, Greenville; Walter Arnold, Saylesville; and V. J. DeRocha of Bristol.

The association held its first field outing of the season at the college on that day. The college authorities furnished the luncheon and speeches were made by Dean George Adams of the college; Prof. Howland Burdick; Prof. C. E. Blackman of Springfield, secretary of the New England Holstein-Friesian Association; and Prof. Franklin Strickland, State chemist.

MATTER OF ENVIRONMENT

There is quite a story told about the illustrations in the United States Department of Agriculture bulletin, "How to Get the Last Tick." The cover picture shows an emaciated, unthrifty and exceedingly ticky heifer while the last page shows a heifer of excellent beef type.

After the pictures were in print an inspector of the Department told that the two heifers were purebred Shorthorns originally coming from an Oklahoma farm located above the tick quarantine line. One heifer was sold to a farmer whose farm was infested with cattle ticks while the other went to a farm in territory that had been freed from ticks as a result of systematic dipping. The illustrations indicate the damage done to the cattle industry by the ticks and shows the benefit of systematic tick eradiction.

BIG MILKER

Korndyke Cream Cup, a junior three-year-old, owned by W. J. Higdon, Tulare, California, produced 101.5 lb. milk in a day on April 29th in official test work and in seven days made 26.25 lb. butter. As a junior two-year-old, she produced 18,549.6 lb. milk, 700.57 lb. butter in 305 days. She is a large cow, handsomely and evenly marked and her owner believes that she will add materially to her present record when she reaches maturity.

"Poverty is no crime," quoted the Wise One.

"In spite of which it is punished by a life sentence at hard labor," complained the Simple Guy.

HOLSTEIN COMPANY FORMED

A group of Holstein breeders' of Wood County, have organized under the laws of Ohio a corporation called the Wood County Holstein Breeders' Company. The names of those prominent in its organization are: Dr. Stow, of Milton Center, president; Lorin Nelson, secretary and treasurer; and E. M. Lamb, manager. Directors, Dr. Strow, L. E. Wight, Scotch Ridee; Dr. H. E. Ash, Lorin Nelson, and E. M. Lamb of Bowling Green. The object of this company is to promote the Holstein breed and improve the stock by line breeding.

The first transaction of the new company was to purchase Sensation, Jr., a son of Sensation and Lindale Queen Ona. This bull was bred by R. E. Dillon, Williamsfield, Ohio, and for the coming year will be kept on the farm of Earl M. Lamb. The sire of Sensation, Jr., is by a son of Ona Clothilde De Kol, 25,000 lb. milk, 1,100 lb. butter in a year as an eleven-year-old. His dam is Lindale Bonnie Pauline, 30,024.1 lb. milk, 1,250.08 lb. butter in a year as a five-year-old and 1,003.75 lb. butter, 26,057.1 lb. milk in a year as a senior three-year-old, world's record in class at time of making.

The dam of Sensation, Jr., is Lindale Queen Ona, who recently completed a year record of 1,000 lb. butter and over 24,000 lb. milk. She is a daughter of King Ona the noted son of Ona Button De Kol, 1,345.55 lb. butter in a year.

In Sensation, Jr., are combined wonderful producing strains and the blood of two Ohio's greatest cows. He will be given a splendid opportunity in his new home as his daughters will be officially tested when they come into milk.

ON DAIRY HANDLING

Hollycrest Lyon Pontiac, a seven-year-old cow owned by Fred Reed, Larned, Kansas, has produced 10,567.5 lb. milk in the last six months. She has been milked only twice a day and her feed has all been raised on the farm, Kafir corn and barley for grain and alfalfa and sudan grass for hay. She reached 73.8 lb. milk her highest day, an indication of what can be done in the great southwest by using feed generally grown in that part of the country.

The people who go looking for trouble have no business to burn their bridges behind them.

Lots of people who think the world owes them a living are too lazy to collect the debt.

Representatives Wanted

The picnic and fair season, when rural people get together, is the time to earn good money at these gatherings soliciting subscriptions to *The Holstein Breeder and Dairyman.* Write to-day for terms. Send references with your letter.

The Holstein Breeder and Dairyman, Harrisburg, Pa.

FROM CALF OWNER TO COWMAN

BY CECIL L. A. RESSEGUIE

As a boy of fifteen I had a bank account of about $40 and kept urging my father to buy me a purebred calf. At our local fair he found one for $30. In due time she was bred to a purebred bull and when two years old dropped a bull calf, which I sold to a neighbor for $22.50. Then I bred her to a son of a 23-lb. cow which produced 612 lb. milk in seven days, and she gave me a heifer. When this calf was six months old I sold cow and calf for $150. From an investment of $30, I realized $172.50 which is about $168.90 more than it would have yielded if placed in a local bank for two years.

In June, 1913, I purchased from B. F. Jones of South Montrose, Pennsylvania, Clothilde Pietje De Kol 2d Pet, a four-

CECIL L. A. RESSEGUIE
Proprietor Ideal Farms, Kingsley, Pa.

year-old with no record, for the sum of $125. Her first calf for me was a heifer which later I sold for $200. The original cow produced two more heifers which were both lost with pneumonia. As these calves were both by a better sire than the one which sold for $200 they should have been worth at two years of age. She also gave me two bulls which sold for $100 each. The first year I had this cow she made a record of 21.48 lb. butter, from 547 lb. milk and the next year she increased this to 22.68 lb. butter and 521 lb. milk. As a two-year-old she produced 395.1 lb. milk, 14.5 lb. butter in a seven-day official test. When this cow was nine years old I sold her for $325. So for an investment of $225 we have:

A two-year-old sold for	$200.00
Bull sold	100.00
Bull sold	100.00
Cow sold	325.00
Total	$725.00

My next purchase was the three-year-old Pietje Alcartra Fayne, in January, 1919, for $600. She was a daughter of a $10,000 son of the Arfmann bull and was from a 21-lb. three-year-old daughter of King Hengerveld Aaggie Fayne. She had plenty of breeding and individuality but no record. A few days after I got her she dropped a bull calf sired by a son of Spring Brook Clothilde 2d, 30.17 lb. butter, 641 lb. milk. She retained her afterbirth but went on test and made a record of 568 lb. milk, 23.65 lb. butter in seven days, 2,413 lb. milk, 95.36 lb. butter in thirty days. In her

MISS KORNDYKE CLOTHILDE
19.56 lb. butter, 486 lb. milk in seven days as a three-year-old. One of the foundation animals of the Ideal Farms herd.

yearly work she was milked twice a day for the last six months and ran with the herd and yet she produced 718 lb. butter, 17.168 lb.milk, in cow testing association work, the second highest 365 days' milk and butter record made in Susquehanna County. I sold the bull calf for $200 when it was five months old. I then bred her to Dutchland Königen Creamelle Boy, whose sire is King Segis Pontiac Königen and whose dam, Dutchland Colantha Creamelle Vale, a maternal sister of Dutchland Pietertje Vale, has just finished a very creditable yearly record and is again due.

PIETJE ALCARTRA FAYNE
25.16 lb. butter in seven days as a five-year-old, average 90 lb. milk a day. 23.63 lb. butter in seven days, averaging 81 lb. milk a day; 718 lb. butter, 17,168 lb. milk in a year as a three-year-old.

In July, 1920, I got a heifer by this mating and the cow made a record of 25.16 lb. butter, 632.7 lb. milk, which I feel sure she is capable of surpassing. Last year she again gave me a heifer calf by the same cross and I have her bred back again. I want a bull this time for a herdsire. I will not put value on these two heifers, but I am perfectly satisfied with my investment of $600.

I am just a beginner in farming for myself, having been at it less than two years. My herd numbers eighteen head, twelve purebred females and six grades. Am using the $10,000 bull, King Pontiac Alcartra Pietje, for a herdsire, my father owning a third interest in him. He is by the Arfmann bull and out of a 35.61 lb. junior four-year-old. The cow, Pietje Alcartra Fayne, is one of his oldest daughters and his second highest record daughter. I have five heifer calves sired by him. Two of these are from granddaughters of Pontiac Korndyke, one is from Miss Korndyke Clothilde. I also have two heifers from Pietje Alcartra Fayne, both being sired by Dutchland Colantha Creamelle Boy, whose dam is a maternal sister to the dam of Prince Quality, the Brentwood bull. My herd is under Federal Supervision and passed a clean tuberculosis test in January 1922.

IN THE GARDEN OF LOVE

Dear (apple) of my eye: You sure are a (peach) with your (radish) hair, your (cherry) lips and your (turnip) nose. Although you may not (carrot) all for me, my heart (beets) for you. I have long (bean) admiring you. If I wash at the (pumpkin) I call on you? Although my heart is as a (squash) my love is as strong as an (onion). You have disturbed my (peas) of mind. I would (cauliflower) homely, compared with you. You have (bean) as cool as a (cucumber) so I am (melon) choly. If we (cantaloupe), (lettuce) be married at once, for I am sure we would make a fine (pear). Your admiring,

TOM A. TOE.

"What we call luck
Is simply pluck
And doing these over and over;
Courage and skill
Perseverance and will
Are the four leaves of luck clover."

For every man who is making history there are a thousand book agents.

Can Spare a
Breeder's Herd

of young cows, FIFTEEN animals, two to four years old, everyone with a semi-official record or now running on test.

This is the first Accredited herd in the state and NO abortion.

A few nice bull calves, 1 mo. to 9 mo. by our KING WALDORF SYLVIA, a double grandson of May Echo Sylvia. His pedigree shows lots of World Record backing and several 40 lb. crosses. His 10 nearest dams average 37.32 lb. and his 30 nearest dams average 30 lb. A lot of well known cows are bred to him. The value of this strain is increasing.

Scudder Farms,
Trenton, N. J. Route No. 6

FRIEND OF VETERINARIANS

Professor M. N. Lawritson is the Extension dairy specialist of the University of Nebraska and several times has gone to Wisconsin, Michigan and other dairy states to buy or to help others buy dairy cows and he is considered to be a real expert judge. Mr. Lawritson evidently does not think a great deal of county agents, for in a recent talk at Sargent, Neb., he is reported to have said: "With reference to going to a dairy country like Michigan to buy dairy cows or a bull, it is better to quietly look around when you get there then get hold of a good reliable veterinarian, pay him a commission of five dollars per head on each animal you buy, and have him select from herds he knows to be free from disease and that also have good records as milk producers. It is cheaper to buy them that way than to hunt up the county agent for the county agent has a number of friends always that he is trying to help sell their stock and you will have to pay more for your cows by having his help than they will cost even after you pay the veterinarian five dollars per head commission. Never let the county agent know that you are in his county to buy cows. The county agent is a good fellow to coöperate with in Nebraska when he is out in our towns and rural communities spreading the gospel of better dairy cows."

HERD OF STATE CHAMPIONS

J. D. Bacon, Grand Forks, N. D., has a splendid herd of Holsteins which include several state champions. His seven-year-old cow, Lilac Hedge Colantha Zubrod, produced 25,824.4 lb. milk, 1,089.78 lb. butter in a year, milking 113 lb. milk in a day her fourth month of test. During the last seven days of the year she made more than 18 lb. butter in strictly official test work. This cow made 658.8 lb. milk, 35.91 lb. butter in seven days, 3,032.5 lb. milk, 125.80 lb. butter in thirty days, both state records for butter production.

Tekstra Fobes Mercedes De Kol made 19,316.3 lb. milk, 768 lb. butter in a year as a senior three-year-old and a junior two-year-old is giving promise of becoming a state class leader although she has completed but eight months of her test.

QUITE A YEARLING

Indi Cleo Surprise, owned by Cotner Bros., Flasher, N. D., has produced 7,074.7 milk, 315.1 lb. butter in a year. She freshened when just a little over 18 months old. Her dam, Indi Pense Surprise has a record of 15,762.7 lb. milk, 626 lb. butter.

—"Where are you going, John?"

John—"To church in the next parish."

Pastor—"I don't like that. What would you say if your sheep strayed to someone else's property?"

John—"Well, s'far as that goes, I wouldn't say nothin' if the pasturage was better."

TUBERCULOSIS ERADICATION PROGRESS

During May over a quarter of a million cows were tuberculin tested in the eradication campaign, the exact figures being 286,218 in 25,284 herds. In number of herds tested the little state of North Carolina leads with 3,332 followed by New York with 2,118 and Missouri with 1,927. In number of cows tested Wisconsin is far in the lead with 28,035 followed by New York with 20,165 and Missouri with 20,054.

Wisconsin has the most accredited herds and the most accredited cattle the figures being 1,707 and 39,365. Minnesota is second and Indiana third.

Missouri has the most cattle under supervision, 189,689, New York is second with 188,687, Indiana is third, Michigan fourth, Nebraska fifth, and Wisconsin sixth. Michigan has by far the most herds and cattle on the list waiting to be tested.

In the entire United States there are at the present time 346,402 animals in 15,648 accredited herds with nearly one and a half million animals in herds once tested and nearly two and a half million under supervision.

LEADS OKLAHOMA

Empress Wayne Gerben, owned by J. H. Vaughn, Stillwater, Okla., recently finished a year record making 26,658.3 lb. milk, 884.47 lb. butter which is by far the best record made by an Oklahoma Holstein. She had dry feed during her entire test getting alfalfa hay and beet pulp. Part of the time she had a grain ration consisting of bran, oats, corn chop, cotton seed meal and oil meal.

Empress is not only a wonderful producer, but is also a great show cow, having won the grand championship at the Oklahoma State Fair last fall.

VERMONT STATE RECORD

The Vermont State Hospital, Waterbury, Vermont, is the owner of V. S. H. Eliza Pontiac De Kol Korndyke, who has just made a new state record by producing 29.09 lb. butter, 510.3 lb. milk in seven days. She is the oldest daughter of King Korndyke Ida Veeman, who heads the Holstein herd and who has won prizes at several New England fairs. About 60 daughters of this great bull are owned by the Hospital.

SHOWING THEM

Sanatorium Korndyke De Kola is owned at the state institution, Mount Vernon, Missouri, and during the month of April gave 2,360.3 lb. milk as a three-year-old. A seven-year-old cow Cedarview Kola produced 2,649.2 lb. milk in the month, an average of over 88 lb. milk a day.

With the withdrawal of the American troops from the Rhine it would seem that the war is over for all except those married to avoid the draft.

BETTER SEND FOR THIS

Farmers' Bulletin 1227 should be in the hands of every owner of a farm that is not equipped with a complete sewage plant. This bulletin of 56 pages is well illustrated and tells of the advantages and disadvantages of different systems of sewage disposal. There is complete plans for septic tanks together with instructions for their installation and care and the whole is written in language that any farmer can understand.

There is a general but erroneous belief that the cost of proper sewerage is almost prohibitive in the country. The valuation per home in one section of an eastern city is $10,382 and each home is assessed $355 for sewers outside the cellar walls. On this basis any farmer can afford to install a complete septic tank or similar sewage disposal plant as the cost is not anywhere near this amount without considering the added comfort of the household. Future state sanitation will compel a better system than is in use at the present time on a majority of farms.

TEN GOOD ONES

Ten cows owned by Max. Arp, Eugene, Oregon, produced during the past year, an average of 21,771 lb. milk and practically 900 lb. butter. One of the cows made 1,060 lb. butter and better than 26,600 lb. milk as a senior four-year-old and the other made 20,435 lb. milk, 907 lb. butter as a junior three-year-old. Six of the cows tested were under full age.

Yesterday we met a friend who sells a device to prevent check raising. "How are you getting along?" we asked. "Not very well," he replied. "Yesterday I sold but one check protector, and the man paid me with a check which came back to-day marked insufficient funds."

Life is a grind. Still it sharpens many a man's wits.

Entire Herd of
24 Head for Sale

Consisting of

13 cows; 4 heifers over two years old; 1 herd bull four years old; 5 heifer calves from eight months to one month old; 1 bull, five months old.

All tuberculin tested and sound. Attractive registered herd and proposition.

57 State Street, Albany, N. Y.

THE SPRINGDALE HERD

Built up during the past sixteen years on a basis of profitable production and re-production

Present Herd Sire
WOODMONT ECHO SYLVIA CHAMPION

His sire, Sir Pietje Echo Sylvia, is by Champion Echo Sylvia Pontiac and is therefore a brother to Eco-Sylv Belle, 31.15 lb. as a junior two year old, the present World Champion in her class.

His dam, Butter Boy Empress, made 30.27 lb. butter in seven days, has milked 100 lb. in a day and was first prize aged cow, first in the A. R. O. class and Grand Champion at the 1921 New York State Fair. Judge Haeger says she is one of the three best cows shown last year.

Most of our young animals are by
KING TWEEDE SPRING FARM

His sire is Spring Farm King, full brother to the former World Champion and first 44 lb. cow; regarded as one of the best young sires of the breed.

His dam, Dressie Lady Pontiac, has a record of 30.04 lb. butter, 614.8 lb. milk made in seven days and is full sister to the 33.98 lb. cow Dressie Princess Pontiac. Their sire is Spring Farm King Pontiac. Daughters of KING TWEEDE SPRING FARM now in test are making a splendid showing under real dairy conditions.

Our older cows are daughters of
TOBE RAG APPLE KORNDYKE

Son of Christmas Tobe, 2d, 31.66 lb. butter in seven days and former World Champion ten year old. She is also the dam of Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in thirty days as a senior four year old, both being World Records when made. She in turn is dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days, also as a four year old. Here is large production, generation after generation.

Animals from this herd will make good anywhere

B. F. JONES & SON **SOUTH MONTROSE, PA.**
B. F. JONES W. HUGH JONES

The Lathrop Herd

headed by

KING VALDESSA PONTIAC HOMESTEAD, whose three nearest dams average 37.9 lbs. butter in 7 days, offers to discriminating breeders a few young bulls sired by this great young sire, also a few yearling heifers and several foundation cows in calf to this show bull. His daughters are not for sale.

And please note:--

The Lathrop Herd is fully accredited. We started clean and have never had a reacting animal in the herd. Come and see us, please, for we are proud to show visitors the herd.

LACKAWANNA COUNTY HOLSTEINS

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders—pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal supervision.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

AAGGIE CORNUCOPIA PAUL, 2d
100.7 lb. milk in a day. The only cow with four 30-lb daughters (each of these cows has produced over 700 lb. milk in a week.) The only cow with four daughters each above 1,000 lb. butter in a year. Owned by E. E. Ellett & Son, Sunny Side Herd, Beloit, Ohio.

Entered as second-class matter April 8, 1922, at the post office at Harrisburg, Pennsylvania, under the Act of March 3, 1879.

YOU NEED A SON OF KING TWEEDE SPRING FARM

We have one—*BERKS ORMSBY PONTIAC*—born January 26, 1922, whose dam, *MAGADORA ORMSBY*, made 19.78 lb. butter, 476.6 lb. milk as a three-year-old and is a daughter of Sir Pietertje Ormsby Mercedes 37th from a 20-lb. junior three-year-old. Mostly white in color and a bargain at $150.

There must be someone who needs a herd sire. Here is just the one you should have, *KING ECHO SYLVIA SEGIS MODEL*, whose sire, Empire Segis, is a grandson of King Segis Pontiac Alcartra, the $50,000 bull. The dam, Queen Echo Model Walker, made 19.34 lb. butter, 418.9 lb. milk in seven days as a junior two-year-old and came back with 22.20 lb. butter, 551.1 lb. milk as a junior three-year-old. Her dam is a 30.77 lb. daughter of King Colantha Clothilde and is from Segis Walker Pietertje, 27.85 lb.; her dam, 30.22; her dam, 30.01 lb.; her dam, 30.51 lb.; and her dam, old Prilly, 25.02 lb.

The seven nearest dams of King Echo Sylvia Segis Model average 29.27 lb. and we expect this will be well over 30 lb. when his dam freshens again. His fifteen nearest dams, without a skip, averaged 30.12 lb. in their seven-day official test work and thirty dams in his pedigree (no cow counted twice) have an average of 32.02 lb. He was born March 4, 1921, is dark in color and is ready for heavy service. Price $400.

Come and see him and his dam. They will please you.

Herd under the Accredited Plan

Plum Spring Farm Copia

my senior herd sire is from a dam that produced 32.73 lb. butter, 685.5 lb. milk in a week, she is a granddaughter of Pontiac Korndyke and is from a 31 lb. junior four-year-old.

His sire is by Spring Farm Pontiac Cornucopia and is from De Kol Plum Copia, 33.26 lb., a twice 30-lb. cow that produced 92.3 lb. milk a day for a month.

Write us your wants—or better yet, come and see us—if you want good ones at reasonable prices.

Let Me Select Cows For You

My lifetime experience as a dairyman is at your service if you want good cows, purebreds or grades.

I developed the great producer, Pride Klaare De Kol Korndyke, that averaged 101 lb. milk a day for a month of official test work as a junior four-year-old.

My herd sire is from a thirty-pound junior three-year-old and was sired by a son of the former world champion, Finderne Pride Johanna Rue, 1,470 lb. butter in a year.

Let me fill your orders for milkers or heifers, purebreds or grades.

D. B. YORK
BROOKSIDE STOCK FARM, TROY, PA.

KING PONTIAC ALCARTRA WAYNE

my senior herd bull, not only sired two state record full sisters, one a junior two-year-old and the other a junior three-year-old, that averaged 764.82 lb. butter, 17,063.1 lb. milk in 305 days, each winning prizes for both milk and butter production, but he also sired *PAULINE MABEL MAID*, who made seven state records, including 32.76 lb. butter, 753.7 lb. milk in 7 days as a three-year-old, her third time of freshening.

King sires beautiful individuals as well as producers. A bull by him or from one of his daughters will make a great herd sire.

LET ME PRICE ONE TO YOU!

VOL. I HARRISBURG, PA., JULY 22, 1922 No. 14

THE AAGGIES OF SUNNYSIDE

AWAY back in 1910, E. E. Ellett & Son, Beloit, Ohio, invested the sum of $150 in a ten-months-old heifer named Aaggie Cornucopia Paul 2d, 132,741. This heifer carried much of the blood that made the Nye herd famous in its day, being sired by Nye Cold Brook Butter King, while her dam was Aaggie Cornucopia Paul, a cow that as an eight-year-old produced 622.6 lb. milk, 28.89 lb. butter in seven days and 2,561.5 lb. milk, 109.51 lb. butter in thirty days.

AAGGIE CORNUCOPIA COLANTHA
116.5 lb. milk in one day, 799.2 lb. milk in seven days, 25,986.4 lb. milk in a year; 33.27 lb. butter in seven days, 1,136.51 lb. in a year

As a ten-year-old, she made an official record of 624 lb. milk, 31.03 lb. butter. She was a daughter of the great old show bull, Aaggie Cornucopia Johanna Lad, Jr., whose many high record daughters include Lutscke Vale Cornucopia, a cow that made 789.7 lb. milk in seven days and 31,246.9 lb. milk in a year.

It is evident that Aaggie Cornucopia Paul 2d came from lines of breeding of demonstrated producing capacity although it is only fair to say that the records of her dam were made after the heifer herself became the property of the Elletts. Her full sister, Aaggie Cornucopia Homestead, at three years, six months old, made official records of 29.36 lb. butter in a week and 112.56 lb. butter in thirty days while Aaggie herself, as a five-year-old cow, produced 674.4 lb. milk, 28.60 lb. butter in seven days, and 2,765 lb. milk, 112.80 lb. butter in thirty days, averaging better than 92 lb. milk a day for the month and giving 100.7 lb. her best day, and 680 lb. in seven consecutive days.

This capacity to produce she has transmitted to her descendants for by the time five members of the Aaggie family in the Ellett herd were mature cows four of them had each milked over 100 lb. milk a day, and another one, Aaggie Princess of Sunnyside, a granddaughter of old Aaggie reached 98.1 lb. her best day.

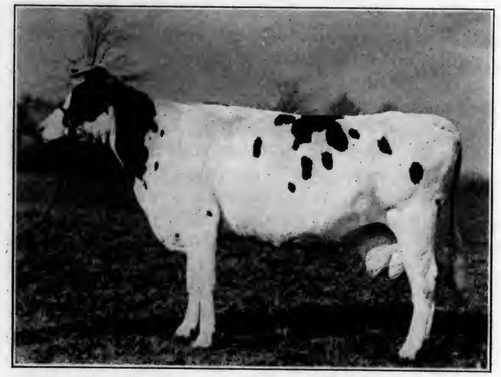
The eldest daughter of this great foundation cow was Aaggie Cornucopia Colantha. In seven days she made official records of 33.23 lb. butter from 747.2 lb. milk and she made 3,331.5 lb. milk, 134.39 lb. butter in thirty days. Her best day's milk was 116.5 lb.; her best seven days was 799.2 lb. She was tested for a year in which she made 25,986.4 lb. milk, 1,136.51 lb. butter.

The second daughter is Aaggie Cornucopia of Sunny Side. As an eight-year-old, this cow produced 105.7 lb. milk in a day, 702.1 lb. milk, 31.87 lb. butter in seven days. On test for the full year she produced 25,127.5 lb. milk, 1,093.46 lb. butter in 365 days.

Aaggie Marie of Sunny Side is the third daughter of old Aaggie. In one day this cow produced 111.8 lb. milk, in seven days she made 769.4 lb. and in 365 days 23,745.1 lb., while her butter records are 30.53 lb. for the week and 1,101.33 lb. for the full year.

The fourth daughter of the old cow was Aaggie Pontiac of Sunnyside. This animal was tested during one lactation period only. As a junior two-year-old, she made a seven-day record of 428.5 lb. milk, 18.14 lb. butter, and, tested for the full year, made 580.94 lb. butter, 14,491.9 lb. milk. Nearly all the time she was making her year record she was milked only twice a day.

The fifth daughter of this great transmitting cow, Aaggie Queen of Sunny Side, has completed a number



AAGGIE QUEEN OF SUNNYSIDE
102.7 lb. milk in a day, 702.5 lb. milk in seven days, 33.81 lb. butter in seven days at five years old; as a three-year-old she produced 25,384.8 lb. milk, 1,067.31 lb. butter in a year.

of splendid tests but her long time records are the most important to us in this story. As a two-year-old, she produced 20,398.4 lb. milk, 871.70 lb. butter in a year. Then, as a senior three-year-old, she raised this record to 25,384.8 lb. milk, 1,067.31 lb. butter. She freshened again as a five-year-old and made a seven-day official

record of 702.5 lb. milk, 33.81 lb. butter, her best day's milk being 102.7 lb.

The sixth daughter of Aaggie Cornucopia Paul 2d to make an official record is Aaggie Cornucopia Paul Segis, who, as a two-year-old, with first calf made in seven days 428.3 lb. milk, 19.19 lb. butter and a year record of 18,509.3 lb. milk, 728.99 lb. butter. As she matures, she is expected to fully uphold the reputation of the family as she is regarded as being just as good as any of her sisters.

Aaggie Cornucopia Paul 2d is the only cow in the world with four daughters that each produced more than thirty pounds of butter in a week. Aaggie Cornucopia Paul 2d is the only cow that has four daughters that have each produced over 1,000 lb. butter in a year. She has two daughters above 1,100 lb., another made nearly 1,100 lb. and a fourth made 1,067 lb. as a three-year-old. Three daughters of this cow have each produced over 25,000 lb. milk in a year. Four daughters of this cow have each made over 100 lb. milk in a day in official test and she herself made 100.7 lb. milk in one day in official work. Each of her four 30-lb. daughters produced over 700 lb. milk in a week, and, as far as we

AAGGIE MARIE OF SUNNYSIDE
111.8 lb. milk in one day, 769.4 lb. milk in seven days, 23,743.1 lb. milk in the year: 30.53 lb. butter in seven days, 1,101.33 lb. milk in a year.

know, she is the only cow with more than two 700-lb. daughters.

The producing ability of Aaggie Cornucopia Paul 2d has been transmitted through her daughters to the third and fourth generation. Her eldest daughter, Aaggie Cornucopia Colantha, herself with records of 33.23 lb. butter in seven days, and 1,136.51 lb. butter in a year, is the dam of Aaggie Princess of Sunnyside, that as a junior four-year-old produced 30.65 lb. butter in seven days, 120.73 lb. in thirty days and in 305-day test made the very fine record of 17,374.4 lb. milk, 880.68 lb. butter. As a six-year-old, she became a thirty-pound repeater by raising her seven-day butter record to 32.36 lb. and in a long time test she made 1,123.94 lb. butter in the year from over 22,000 lb. milk. She in turn is the dam of Aaggie Belle of Sunnyside and this animal has a senior three-year-old record of 21,806.1 lb. milk, 1,048.88 lb. butter in a year, so that Aaggie Cornucopia Colantha, her daughter, Aaggie Princess of Sunnyside, and this cow's daughter, Aaggie Belle of Sunnyside have each made over 1,000 lb. butter in a year. Then to add to the further glory of this great Aaggie family, Aaggie Belle freshened again a short time ago and made a 35-lb. official seven-day butter record, thereby completing three direct generations of thirty-pound cows. It will be noted that there are five direct descendant cows in this family and that each have made over

AAGGIE CORNUCOPIA OF SUNNYSIDE
105.7 lb. milk in one day, 702.1 lb. milk in seven days, 25,127.5 lb. milk in a year; 31.87 lb. butter in seven days, 1,093.46 lb. butter in a year.

28.5 lb. butter in seven days, and that the only one below the thirty-pound mark is old Aaggie Cornucopia Paul 2d, the foundation animal of the Ellett Aaggies

It is extremely likely that if the Elletts had had the experience in handling record cows that they have now the old cow herself would have been well above the thirty-pound mark for the tremendous records that have been made by her daughters indicate that she possessed remarkable capacity. All the members of this Aaggie family, that is, the daughters and granddaughters of Aaggie Cornucopia Paul 2d have been bred and developed in the Sunnyside herd which is the name of the Ellett & Sons establishment. C. A. Ellett, the younger member of the firm has for several years cared for a string of test cows in addition to doing his share of farm work and they have certainly made good. To the Holsteins, particularly to the Aaggie family, C. A.

AAGGIE CORNUCOPIA PAUL SEGIS
18,509.3 lb. milk, 728.99 lb. butter in 365 days as a two-year-old in her first lactation period.

Ellett attributes the financial success of the firm for in a letter to the Editor of THE HOLSTEIN BREEDER AND DAIRYMAN he says, "All we have we have made with the Holstein cow and we have not had all the feed and equipment to make records with that most of the farms have that are making large records."

The Sunny Side herd numbers about thirty head, all of which are descendants of the foundation Aaggie, purchased for about $150 twelve years ago. At least one hundred pounds of milk in a day at maturity seems to be the standard of this strain and we understand that, up to this time, only one mature member of this family has fallen short of this standard, and she by very little.

The wonderful records made by the Aaggies of Sunny Side in a small herd, owned and managed by real dairymen, show something of the possibilities of the Holstein breed when given the proper care and attention. Starting with an investment of $150 in an animal under a year old, an animal possessing individuality of a high order and evident capacity to produce, a family has been built that, in many respects stands at the head of the breed. The story of the Elletts and their Aaggies is a source of inspiration to the beginner, and an object lesson to older breeders, for, to the true breeder rather than to the man who trades in cattle, treating them as merchandise, the business of breeding purebred Holsteins should bring its greatest rewards.

Dividing the Transfer Proceeds

(By Special Report)

THE Extension Committee of the Holstein-Friesian Association of America met in the Hotel Cleveland, Cleveland, Ohio, on July 6, 1922. Besides the three members of the committee proper, which are H. V. Noyes, chairman, Fred Pabst and Dr. D. B. Armstrong, there were also present C. F. Bigler, Frank Price, M. S. Prescott, of New York; James Reynolds and E. M. Clark, Ohio; Fred Koenig, Earl J. Cooper, C. M. Long, Illinois; L. L. Oldham, of Wisconsin; H. W. Norton, Jr., Michigan; John W. Bartlett, New Jersey; W. Hugh Jones, Penna.; and John B. Irwin, of Minnesota.

It was the purpose of the meeting to discuss the method to be followed in returning to the state associations their share of the increased transfer fee, and all the state secretaries and a few others interested were invited. This was thought desirable as it was the purpose of the committee to follow in their recommendation to the Board of Directors a policy that would provide the fullest possible participation of each state in their share of the funds and at the same time guard against waste in their use. They wanted to know conditions everywhere.

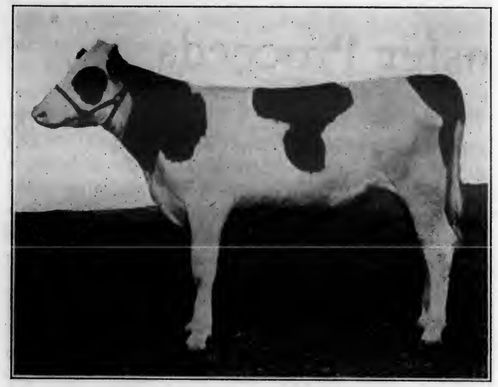
There were many things taken into consideration. Some of those present thought that every state properly organized ought to be entitled to all its share of the transfer fees originating within the state. Others thought that in order to be entitled to is share each state should have at least two-thirds of the members of the National association within its borders as members of the State Association and also raise an equal amount from its own efforts.

Objection was raised to the latter plan as it was felt that only those states already intensively organized would be able to meet the requirements and therefore other states would not be able to advance to the point where they could obtain their share. Suggestions that funds not claimed by the states be put into a pool to be used for extension work in states not organized met with approval, but several thought that anything having the characteristics of a "whirlwind campaign" would be sure to fail, this being particularly true in Pennsylvania and in certain of the western states where other organizations have put on such campaigns.

The question of fixing a maximum amount to be allowed any state met with favor and various sums ranging from $5,000 to $7,500 were mentioned. It was also felt that any state whose share would be below a certain minimum should receive its full share provided it should meet the requirements laid down. The minimum of $4,000 was mentioned. Estimates as to the amounts available from each state were as follows:

New York,	$10,000
Wisconsin,	8,700
Ohio,	4,400
Pennsylvania,	4,300
Michigan,	4,200
New Jersey,	1,000
New England States,	4,900
Washington,	1,100
Minnesota,	2,900
California,	1,600
Iowa,	1,400

Missouri, Kansas, Nebraska, the Dakotas, Colorado, Oregon, Indiana, from $1,000 down to $500. The entire Southern States less than $1,000.



It was finally the sense of the meeting that each state thoroughly organized or attempting to become so, be allowed its full share up to some minimum to be fixed, and an amount additional equal to the amount raised within its borders by its own efforts up to some maximum to be fixed by the Board of Directors. Funds not available to any state should be put in a pool to be used as extension funds and states not large enough to have an efficient organization should have an amount spent in extension work within its borders approximately equal to the amount raised from such states. The Board of Directors is to decide whether each state is "thoroughly organized and properly functioning" and entitled to receive its share of the funds. Possibly the secretaries of the states which are well organized will be required to spend some time in unorganized states. Matters such as whether all the New England States desire to be treated as a body, and which, if either, of the two organizations in California shall be recognized, are questions that must be threshed out by the directors. The Extension Committee met right after the meeting and again the next day in order to formulate their recommendations to the Board of Directors.

After a man finds a wife he has to keep on hunting her.

Heifer Donated to Penn State

By A. A. Borland

THE Pennsylvania State College has recently received another beautiful young Holstein from one of the state's prominent breeders who is interested in placing at the Pennsylvania State College a representative of the Holstein herd that will be a credit to the breed, an inspiration to Holstein breeders and a school of training for dairy students who are

WEILER FARM YANKEE BEAUTY
Purebred Holstein heifer donated to Penn State College by E. H. Weiler & Sons, Warren, Pa.

studying correct Holstein type. This fine heifer was presented to the college by Ward R. Weiler, of the firm of E. H. Weiler & Sons, Warren, Pa. This firm is not new at the Holstein game but have been breeding Holsteins for the past thirty years and now have a herd of some forty registered females.

"Weiler Farm Yankee Beauty" is the name of this dairy queen which has recently been installed in one of the empty stanchions at the college dairy barn. Her sire is Colantha Yankee Lad, 246,903, a bull combining great production with excellent individuality. He won first prize in his class at the Warren County Fair in 1918 and again repeated his winnings in 1921. His ancestors include some of the greatest long distance, as well as short time producers that ever lived. His sire is the noted bull, King Veeman Sadie Vale, one of the best sons of the famous King Korndyke Sadie Vale. Colantha Yankee Lad's dam produced over thirty pounds of butter in a week as a senior four-year-old, and also has a splendid long time record.

This new Penn State Holstein has a very fine dam, her name being Weiler Farm Betty Colantha, 447,039. She is a handsome individual, having also been first prize winner in her class at the Warren Fair last fall.

The college is greatly indebted to the Weiler firm for the public-spirited way in which they have interested themselves in the welfare of the institution. The beautiful heifer which they have presented to the institution will be of material benefit to the students in representing to them proper Holstein type and since she is such an excellent individual she ought also to prove a good advertisement for Warren County Holsteins.

The twenty to thirty thousand visitors that pass through the dairy barn annually will thus learn that Warren County is on the map from a Holstein standpoint. When she freshens Weiler Farm Yankee Beauty will be run on Advanced Registry test and if she makes as good a record as her breeding indicates she should, she will add fame not only to the college herd but to that of Weiler & Sons as well.

Dairymen's League June Price

DAIRYMEN who market their milk through the Dairymen's League will receive the pooled price for the month of June of $1,345 per hundred pounds after expenses are deducted, this being the basic price for milk testing 3% butter fat at the 201-210 mile freight zone. Checks covering milk delivered during June are being mailed by the League to reach farmers not later than July 25th.

The gross pool price was $1.40 with $0.055 per hundred pounds deducted for expenses of which $0.02 per hundred pounds was for the total administrative expenses, $0.002 for forwarding to local associations for local expenses, $0.011 for advertising, $0.002 for an insurance fund to cover losses which might be created by uncollectible accounts and $0.02 to cover depreciation in value fixed assets, $0.10 per hundred pounds is borrowed on the certificate of indebtedness plan to be invested in property owned by the Association. Considerable thought was given by the operating department of the League, and the Executive Committee to find some way of turning the full June price over to the farmers without making the $0.10 per hundred pounds loan for investment. The thought was that owing to discouraging conditions at present the farmer needs every cent in cash he can get, but it was found impossible to do this without causing losses to the farmer in the long run.

As is customary during the surplus period, the Association produced a large amount of evaporated milk and other manufactured products to be put in storage and sold later when prices are higher and when these products can be used to supply the League's regular trade without taking milk for manufacturing purposes from the fluid market during the scarce period. Over 140,000 cases of evaporated milk alone were stored during June by the Association and the same amount will be put in storage from the July production. The capital investment on the evaporated product alone amounts to over $1,000,000, which, according to the principle upon which the League is operating, is financed by the dairy farmers themselves through their loans on the certificate of indebtedness plan.

The Association reports for June show that the organization sold to dealers or handled in its own plants a total of 363,371,520 pounds of milk, of which 28% was sold in fluid form in Class 1, 27% disposed of chiefly in the form of cream and ice cream in Class 2, and the remainder in fancy cheeses, evaporated and condensed milk, butter and American cheese and other manufactured products. The Association handled in its own plants during the same month nearly 100,000,000 pounds of milk.

The pool price to farmers of $1.345 is a little higher than the price for the preceding months, the price for April being $1,335 and for May $1.30. In ordinary years the low water mark is usually reached in June. The slightly higher price indicates some improvement in market conditions and also better ability on the part of the Coöperative Association to cope with the almost impossible conditions which it has faced during the past few months. The milk for July has been sold to dealers at a considerable advance, market conditions are improving, producers of fluid milk are constantly joining the organization, and these and many other factors indicate that prices to the farmers are going to be somewhat more encouraging than they have been during the past few months.

Research In Animal Diseases

THE American Veterinary Medical Association, through its representative, Dr. Leonard F. Goss, has written to the Holstein-Friesian Association of America regarding the endowment of a fellowship in Veterinary Medicine, the subject investigated to be Contagious Abortion and Sterility.

The letter reads as follows:

"In connection with the National Research Council and with the American Veterinary Medical Association and my interests in the live stock industry of the United States, I am prompted to write you relative to Contagious Abortion and Sterility in animals.

"I think that we all agree that, next to the problem of Tuberculosis, Contagious Abortion and Sterility are the cause of the greatest economic loss of cattle from any one disease now existing in the United States. It is also a factor of no small importance in relation to the health of man; first, through the possibility of these organisms or organisms of similar type which may or may not be the same existing in diseases of man. Furthermore, disease conditions of dairy cattle, which makes their production more hazardous, naturally increases the cost of dairy food products to the consumer. High prices in dairy food products are highly important to the health of man and this disease contributes in that way to the reduction of the health of mankind.

"On account of the lack of definite knowledge of many phases of this disease it is most desirable that research work of a highly technical character be pursued in order to arrive at some definite conclusions relative to this disease so that it may be controlled or eradicated. There are, at the present time, a number of states doing work upon this project as well as the Bureau of Animal Industry and the Rockefeller Institute. The total money being expended upon this project amounts in round figures to $80,000 a year. While this seems like a large sum of money to be expended on one disease, we realize that that is small in comparison with the amount of money which is lost as the result of the ravages of this disease and the diseases which it predisposes.

"In view of the importance of this disease and the need for more research work upon it, I am wondering if your breed association cannot see its way clear to found a fellowship for men who are trained and are interested in doing research upon this disease? I know of no way in which a few thousand dollars a year spent by your breed association could bring better results than the improvement of the condition relative to this disease."

The advisability of using the funds of the Holstein-Friesian Association of America to endow such a fellowship, may be questioned as such an endowment is not perhaps in the province of the Association, yet the project is worthy and worth while.

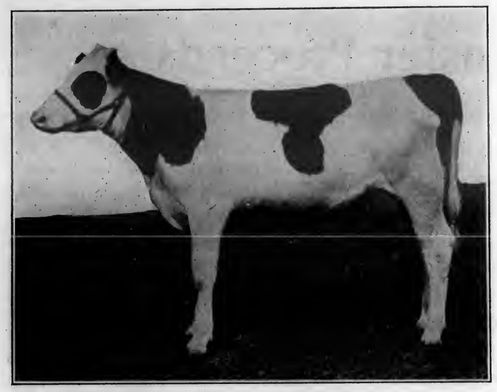
The economic cost to the dairy industry and to the country from Contagious Abortion and Sterility are tremendous. We doubt that this disease or kindred diseases are more prevalent among purebreds than they are among common cattle, but we do know that they are noticed more on account of the heavier loss which is incurred by owners of registered cattle. There should be fellowships endowed to investigate these diseases and also to discover, if possible, some system or test to detect tuberculosis that will be more satisfactory to the cattle industry than is the present tuberculin test and yet at the same time safeguard the health of the cattle and of the public.

We know but very little about cattle diseases. We believe that more investigating work should be done untrammeled and unhampered by hindrances caused by inadequate funds. A millionaire cattleman would be a benefactor to the purebred industry if he would endow a number of fellowships in Veterinary science, or lay the foundation for an institution devoted to animal disease research work.

Essentials for Success with Dairy Cattle

By W. M. Rider

1. *Healthy animals.* This is mentioned first because of its *great* importance. No animal in a herd can secure the results it is capable of when it is sick. Its breeding and individuality may be of the highest order, yet if it is afflicted with one of our contagious cattle diseases or some temporary illness it cannot yield maximum returns. Healthy dairy cattle are therefore essential to secure the highest net returns.



2. *Good dairy type* (form or shape), and *good breed type* (when purebred). Form and function go hand in in hand when it comes to economical milk production. Cows possessing correct dairy conformation, and good size for their age, are most likely to be good producers. Become familiar with correct dairy and breed type, and keep only dairy animals of this kind.

3. *Well-bred animals.* In every case the sire of your herd should be a purebred animal, and conform to

Heifer Donated to Penn State

By A. A. Borland

THE Pennsylvania State College has recently received another beautiful young Holstein from one of the state's prominent breeders who is interested in placing at the Pennsylvania State College a representative of the Holstein herd that will be a credit to the breed, an inspiration to Holstein breeders and a school of training for dairy students who are

Dairymen's League June Price

DAIRYMEN who market their milk through the Dairymen's League will receive the pooled price for the month of June of $1.345 per hundred pounds after expenses are deducted, this being the basic price for milk testing 3% butter fat at the 201-210 mile freight zone. Checks covering milk delivered during June are being mailed by the League to reach farmers not later than July 25th.

The gross pool price was $1.40 with $0.055 per hundred pounds deducted for expenses of which $0.02 per hundred pounds was for the total administrative expenses, $0.002 for forwarding to local associations for local expenses, $0.011 for advertising, $0.002 for an insurance fund to cover losses which might be created by uncollectible accounts and $0.02 to cover depreciation in value fixed assets, $0.10 per hundred pounds is borrowed on the certificate of indebtedness plan to be invested in property owned by the Association. Considerable thought was given by the operating department of the League, and the Executive Committee to find some way of turning the full June price over to the farmers without making the $0.10 per hundred pounds loan for investment. The thought was that owing to discouraging conditions at present the farmer needs every cent in cash he can get, but it was found impossible to do this without causing losses to the farmer in the long run.

As is customary during the surplus period, the Association produced a large amount of evaporated milk and other manufactured products to be put in storage and sold later when prices are higher and when these products can be used to supply the League's regular trade without taking milk for manufacturing purposes from the fluid market during the scarce period. Over 140,000 cases of evaporated milk alone were stored during June by the Association and the same amount will be put in storage from the July production. The capital investment on the evaporated product alone amounts to over $1,000,000, which, according to the principle upon which the League is operating, is financed by the dairy farmers themselves through their loans on the certificate of indebtedness plan.

The Association reports for June show that the organization sold to dealers or handled in its own plants a total of 363,371,520 pounds of milk, of which 28% was sold in fluid form in Class 1, 27% disposed of chiefly in the form of cream and ice cream in Class 2, and the remainder in fancy cheeses, evaporated and condensed milk, butter and American cheese and other manufactured products. The Association handled in its own plants during the same month nearly 100,000,000 pounds of milk.

The pool price to farmers of $1.345 is a little higher than the price for the preceding months, the price for April being $1,335 and for May $1.30. In ordinary years the low water mark is usually reached in June. The slightly higher price indicates some improvement in market conditions and also better ability on the part of the Coöperative Association to cope with the almost impossible conditions which it has faced during the past few months. The milk for July has been sold to dealers at a considerable advance, market conditions are improving, producers of fluid milk are constantly joining the organization, and these and many other factors indicate that prices to the farmers are going to be somewhat more encouraging than they have been during the past few months.

Research In Animal Diseases

THE American Veterinary Medical Association, through its representative, Dr. Leonard F. Goss, has written to the Holstein-Friesian Association of America regarding the endowment of a fellowship in Veterinary Medicine, the subject investigated to be Contagious Abortion and Sterility.

The letter reads as follows:

"In connection with the National Research Council and with the American Veterinary Medical Association and my interests in the live stock industry of the United States, I am prompted to write you relative to Contagious Abortion and Sterility in animals.

"I think that we all agree that, next to the problem of Tuberculosis, Contagious Abortion and Sterility are the cause of the greatest economic loss of cattle from any one disease now existing in the United States. It is also a factor of no small importance in relation to the health of man; first, through the possibility of these organisms or organisms of similar type which may or may not be the same existing in diseases of man. Furthermore, disease conditions of dairy cattle, which makes their production more hazardous, naturally increases the cost of dairy food products to the consumer. High prices in dairy food products are highly important to the health of man and this disease contributes in that way to the reduction of the health of mankind.

"On account of the lack of definite knowledge of many phases of this disease it is most desirable that research work of a highly technical character be pursued in order to arrive at some definite conclusions relative to this disease so that it may be controlled or eradicated. There are, at the present time, a number of states doing work upon this project as well as the Bureau of Animal Industry and the Rockefeller Institute. The total money being expended upon this project amounts in round figures to $80,000 a year. While this seems like a large sum of money to be expended on one disease, we realize that that is small in comparison with the amount of money which is lost as the result of the ravages of this disease and the diseases which it predisposes.

"In view of the importance of this disease and the need for more research work upon it, I am wondering if your breed association cannot see its way clear to found a fellowship for men who are trained and are interested in doing research upon this disease? I know of no way in which a few thousand dollars a year spent by your breed association could bring better results than the improvement of the condition relative to this disease."

The advisability of using the funds of the Holstein-Friesian Association of America to endow such a fellowship, may be questioned as such an endowment is not perhaps in the province of the Association, yet the project is worthy and worth while.

The economic cost to the dairy industry and to the country from Contagious Abortion and Sterility are tremendous. We doubt that this disease or kindred diseases are more prevalent among purebreds than they are among common cattle, but we do know that they are noticed more on account of the heavier loss which is incurred by owners of registered cattle. There should be fellowships endowed to investigate these diseases and also to discover, if possible, some system or test to detect tuberculosis that will be more satisfactory to the cattle industry than is the present tuberculin test and yet at the same time safeguard the health of the cattle and of the public.

We know but very little about cattle diseases. We believe that more investigating work should be done untrammeled and unhampered by hindrances caused by inadequate funds. A millionaire cattleman would be a benefactor to the purebred industry if he would endow a number of fellowships in Veterinary science, or lay the foundation for an institution devoted to animal disease research work.

Essentials for Success with Dairy Cattle

By W. M. Rider

1. *Healthy animals.* This is mentioned first because of its *great* importance. No animal in a herd can secure the results it is capable of when it is sick. Its breeding and individuality may be of the highest order, yet if it is afflicted with one of our contagious cattle diseases or some temporary illness it cannot yield maximum returns. Healthy dairy cattle are therefore essential to secure the highest net returns.

2. *Good dairy type* (form or shape), and *good breed type* (when purebred). Form and function go hand in in hand when it comes to economical milk production. Cows possessing correct dairy conformation, and good size for their age, are most likely to be good producers. Become familiar with correct dairy and breed type, and keep only dairy animals of this kind.

3. *Well-bred animals.* In every case the sire of your herd should be a purebred animal, and conform to

the requirements mentioned in one and two above. Retain only the best and highest bred of your grade cows, which are of good dairy type. Breed these to good purebred bulls and raise the best heifers for your future herd. Keep milk and butter fat records of each animal in milk, know production, and cost of production. Build your herd with profitable dairy animals only. Change from a herd of grade cattle to a purebred one as soon as possible. Your net returns will be greater, you will be more satisfied with the dairy business.

4. *Correct and liberal feeding.* Good cows need plenty of the right kind of feed to produce milk at a profit. Remember that about one-half the feed is used by the cow for her body upkeep. Feed enough feeds to keep her in good condition, and for a large flow of milk. Feed about one pound of a good grain mixture to each three pounds of milk, also about one pound of hay per hundred weight of the cow, and from three to four pounds of corn silage per hundred live weight. Feed at regular times each day. Supply plenty of fresh, clean water, and not too cold.

5. *Sanitary surroundings plus good care.* Provide clean stalls, with plenty of light, fresh air and not too crowded. Have cow barn well ventilated. Avoid dampness, draughts and darkness in barn. Give cattle kind treatment and good care. Be regular each day in time of feeding, milking and doing the chores.

6. *Publicity.* Advertise your herd and your farm. Let the public know what you have, and they will buy your surplus stock and your dairy products. Give your local newspaper and your breed paper items about your herd and your plans. They want the news and will help you to gain favorable publicity. Besides using the press, make use of attractive leaflets, folders, cards and the outdoor metal display signs. Advertise on your farm, tell your name, or farm name, and what breed you have. Thousands of prospective customers pass your farm in a year, and you will find, "It Pays to Advertise."

7. *Sound business practice.* This is absolutely essential in the management of your dairy herd. Keep a record of expenses and receipts, know what the herd is doing as a whole, and also have a record of each cow in herd as to her expense and return. Get rid of unprofitable cows. Market your products profitably, by knowing costs of production. Use business stationery, letter heads and envelope. Answer correspondence promptly. Guarantee satisfaction with every sale and transaction.

New Method of Milk Pasteurization

ONE of the principal difficulties that has to be overcome in the pasteurization of milk is to avoid changing the appearance, odor and taste of the milk during the process. If the temperature is not controlled carefully and the heat treatment allowed to continue beyond the proper length of time, then the various albuminous and fatty constituents of the milk are thrown out of colloidal suspension and the milk thickens and acquires a taste which stamps it at once as an improperly pasteurized product. To avoid this happening and also to correct milk which has been spoiled in this manner are the objects of German Patent No. 329,214. This process consists in passing indifferent gases, such as air or oxygen, through the milk, while it is being subjected simultaneously to a rapid sterilization or pasteurization. This is accomplished by alternate sudden internal heating and cooling, which brings about sudden changes in the temperature. To this end gases of a comparatively low temperature are made to pass through highly heated milk and highly heated gases through cold milk. The milk, for example, may be warmed to 40 or 50 degrees Centigrade, and gases, heated to 250 to 350 degrees Centigrade are passed through it.—*Scientific American.*

Substitutes

THOSE who make shoddy, those who make oleomargerine and those who make oiled milk as well as other makers of articles that are to be sold as substitutes for something better, continually fall back on the defense that their product makes it possible for the poor workingman to save money. The real argument for such goods is that they make it possible for their manufacturers to make money—more money than they could make if they were to try to make the genuine articles which they are trying to displace with their substitutes. Oiled milk is made by adding vegetable fat to skim milk. Skim milk is cheap and the addition of the vegetable fat makes an article that sells just a little under the price of whole milk with its natural butter fat and higher nutritive value. Oleomargarine follows the price of butter up and precedes it on its way down, always selling just a little lower except when it is sold as real butter, when the profits are all the larger. Shoddy mixed with new wool makes it possible to make the cloth cheaper, but the selling price is about as high as that of real virgin wool cloth. Shoddy cloth, however, has the virtue of wearing out much quicker, which increases the demand for cloth. It is easy to see that the principal reason behind the manufacture of substitutes of all kinds is the possibility of making money by selling a cheap article in place of something that is better. In most cases the dealer does not deceive the buyer; the buyer deceives himself, because when he uses oleo he thinks butter; when he buys oiled milk he thinks whole milk, and when he buys shoddy cloth he thinks "all wool." Is it fair to our stomachs and our bodies and our pocketbooks to deceive ourselves in this manner? Is it not encouraging an undesirable tendency to permit this sort of trade chicanery? The filled milk bill and the truth-in-fabrics bill should be passed, and the laws to control the oleomargarine industry must be enforced. It is in the interest of the people at large that they should be encouraged in every way possible to use only the best and most nourishing foods and the most useful materials for clothing.—*Ohio Farmer.*

A flea was biting a watchdog's tail,
The dog was watching a distant sail;
On the distant ship the mate at the rail,
Turned his glass to the shore line pale;
Then the radio sparked with the distant hail:
"Tell that dog there's a flea on his tail."

Shows, Fairs and Expositions

Aug. 14-19—Davenport, Iowa, Mississippi Valley Fair and Exposition.
Aug. 18-26—Aurora, Ill., Central States Fair and Exposition.
Aug. 19-26—Sedalia, Missouri, State Fair.
Aug. 21-26—Erie, Pa., Erie Exposition.
Aug. 21-26—Lexington, Ky., Blue Grass Fair.
Aug. 23-Sept. 1—Des Moines, Iowa, State Fair.
Aug. 26-Sept. 9—Toronto, Canada, Canadian National Exhibition.
Aug. 28-Sept. 2—Columbus, Ohio, State Fair.
Aug. 28-Sept. 2—Danville, Ill., the I. & I. Fair.
Aug. 28-Sept. 2—Milwaukee, Wisconsin State Fair.

Nov. 17-25—Jacksonville, Florida State Fair and Exposition.

Money may be tight, but it never seems to affect the wages of sin.

What's in a name. Filthy lucre is never dirt cheap.

Opinion of Judge Donnelly in the Brady Action

By Mr. Justice Donnelly,
N. Y. Law Journal, July 12, 1922

Matter of Holstein-Friesian Association of America. This is an application by a member of the Holstein-Friesian Association of America to determine the validity of several elections of members of the board of directors. The proceeding is instituted under the provisions of Section 32 of the General Corporation Law. The petitioner raises three questions of law, namely: (1) The legality of elections held outside the state; (2) the validity of proceedings to increase directors from six to sixteen; (3) the validity of the amendment to the by-laws depriving members of the right to vote and the substitution of voting by delegates. I doubt very much the right of this petitioner to avail himself of the provisions of Section 32 of the General Corporation Law, as that is limited to persons or corporations aggrieved by or complaining of elections, and it is evident that his real purpose is to attack the very existence of the corporation, and not to regulate its elections, and therefore it is a proper case for an action by the attorney-general under Section 1948, Subdivision 1, of the Code of Civil Procedure, now Section 1217 of the Civil Practice Act. But, nevertheless, I will apply the provisions of said section of the General Corporation Law, as requested by the petitioner. Applying this section it is questionable at the outset whether the petitioner is not stopped from obtaining the relief he seeks because of the fact that he, personally or by proxy, participated in the very elections that he now seeks to declare invalid. As to the first objection, whatever there may have been as to the legality of the practice of holding elections outside the state, it was removed by the enactment of the amendment of Section 48 of the Membership Law in the year 1921. The amendment was enacted into law at the request of the respondent, and is remedial in its nature, and therefore should be construed liberally, and not strictly, as claimed by the petitioner. This section, as amended, clearly relates to corporation of the class of the respondent, and, since its enactment, elections of officers of such corporations may legally be held outside the state. In regard to the third objection, it appears from the papers, that after the amendment of 1921 a meeting was called to be held at St. Paul, Minnesota, to change the method of members voting to the "representative plan," which now obtains pursuant to Section 44 of the Membership Corporation Law. The petitioner had notice of this meeting; a proxy was mailed and executed by him wherein he appointed F. M. Pearsley, as attorney, to vote for him at such meeting, and it was the petitioner's attorney who moved to make the vote on the "representative plan" or "delegate system" unanimous, thus showing that the petitioner voted, by his duly appointed attorney, for the very plan that he is now attacking. There remains the objection of increasing the directors to the present number of sixteen. The procedure in respect to changing the number of directors of a membership corporation is set forth in Section 14 of the Membership Corporation Law. In May, 1921, that section was amended by permitting the vote of the stockholders to be attested and given effect to by the filing of an amended certificate executed by the president and secretary of the stockholders' meeting. After the passage of this act in 1921 the president and secretary of the meeting held in Philadelphia, in June, 1919, acknowledged and filed an amended certificate increasing the number of directors to sixteen, and this certificate was duly approved by an endorsement thereon of a justice of this court. Therefore the legal number of directors is now sixteen. The petition is dismissed. Motion denied.

BRADY APPEALS

We are informed that Paul T. Brady has taken an appeal from the decision of Judge Donnelly to the Appellate Division of the Superior Court.

Every cloud may have a silver lining, but sunshine is golden.

Half a Million Scrub Bulls

By W. M. Rider

THE 1920 United States Census tells us that there are 565,853 Grade or Scrub Dairy Bulls. This means that there are over 500,000 Bad Bulls on our American Farms, and this is 500,000 too many. It means also that seventy-five per cent of all the Dairy Bulls in the country are either Grades or Scrubs, and that only twenty-five per cent are purebred. Studying these figures, and others, we learn that here is a real, needy, and ready market for practically fourteen good purebred bulls from each of the forty thousand herds of purebred Dairy Cattle. Surely a market worth catering to.

This situation presents to us one of the three big problems confronting the Dairy Cattle Industry, namely:

The quick and complete elimination of the Inferior Bull as a sire of our future Dairy Cattle. By Inferior Bull, we mean either a Grade or Scrub Bull, and also those purebred bulls, which are not of good Breed Type, or which for other reasons should not be used.

The other two problems, demanding attention in the Dairy World are: the more efficient feeding, care, and management of our Dairy Herds; also the more economical marketing and distribution of milk and other dairy products.

Returning to our first problem, that of getting rid of the inferior bull, we find that considerable progress has been made, and is still being made along this line, through the activity of the, "Better Sires—Better Stock" campaigns carried on all over our country. There is need, however, for more vigorous campaigning if we are to secure the results hoped for, and so much needed. We must make more rapid strides in the elimination of these worthless bulls if we are to gain headway. They are causing a loss, annually, to the farmers and the dairy industry, of millions of dollars, to say nothing of the set back to dairy herd improvement caused by their continued and ever increasing use.

Think what it would mean to the Dairy Industry, and in fact to the whole country, because we are all users of Dairy Products, to have these 500,000 undesirable and unprofitable bulls replaced by good purebred ones. Experiment Station records, and also results on hundreds of dairy farms, have shown that a good purebred dairy bull will so improve the milk producing power of his daughters, over their grade or scrub dams, that the daughters are able to produce, each year, from two thousand to four thousand pounds more of milk than their dams. Such an increase in milk coming from these millions of improved grade cows would benefit the dairy farmers upwards of two hundred millions of dollars annually.

To bring out more clearly the effect of this increased producing ability of these improved grade cattle over their dams, we will cite a concrete example.

In a certain herd there were twelve common grade cows, and one inferior grade bull. These cows averaged to produce about 3,200 pounds of milk a year. The bull was finally disposed of, and in his place was used a good purebred dairy bull. His seven daughters, during their first year of milk production, averaged practically 5,600 pounds each. This was an increase of 2,400 pounds from each of the seven or 16,800 pounds for the year over their dams. Figuring this milk at $1.50 per hundred pounds, we find the increased value of the milk worth $252. Surely it pays to use Purebred Bulls in place of grades and scrubs.

The year 1922 should see more farmers changing from the use of an inferior bull to the use of a good purebred one.

Let us all coöperate to put the Better Sire—Better Stock Campaign over Bigger and Better than ever before. This will mean improved Dairy Herds, increased milk production and Larger Net Returns to all Dairy Farmers and Breeders, who use Better Bulls. We will then have a more efficient Dairy Industry, and there will be Profits instead of Losses on every dairy farm, where these good purebred dairy bulls are used instead of the grade or scrub bull, or the inferior purebred one.

Blake Herd Leads

AT the completion of the test year of the Central Wayne Test Association we find several new records for Wayne County, Pa., individually per cow and per herd.

Due to the shortage of cow testers during the past three years, several vocational and high school boys were placed in charge of the different associations, but because of their insufficient education and experience in supervising the work caused considerable dissatisfaction. Nevertheless, the dairymen in several districts of Wayne County, were eager to finish the year after the eighth test.

The County Farm Bureau Agent, R. E. Wakely secured the services of the Clinton Association Tester, Kenneth Bailey, to finish the year. The herd of registered Holsteins owned by Chas. C. Blake of Bethany, were the leaders of the Central Association with an average of 11,273 lb. milk, and 349.4 lb. fat, this being the highest herd average since the organization of the Farm Bureau. The leader for milk was Sadie Lilith Cornucopia, a nine-year-old, owned by Mr. Blake, she produced 11,273 lb. milk, and 349.4 lb. butter fat. These records were made under ordinary care.

Mr. Blake is a pioneer Holstein breeder of the county, and has sold many males and females in this section of the state. Within the last year this herd was placed under state and federal supervision. Mr. Blake said, "I keep registered Holsteins on my farm to enable me to live, but how can the farmer with scrub stock get a living?"

To the Honorable Edward E. Kinsman, a member of the State Legislature goes the credit of several honor animals in his herd of registered Holsteins.

Letters to the Editor

July 19, 1922.

THE HOLSTEIN BREEDER AND DAIRYMAN.

Gentlemen: Referring to your advertisement on page 428 of July 8th issue—"Advertising is Attracting Attention"—the writer of this letter thinks you are right, and so for that reason is sending you a few jingles which may be termed—"Modern Mother Goose."

The constant drop of water
Wears away the hardest stone;
The constant gnaw of Towser
Masticates the hardest bone;
The constant wooing of the lover
Wins away the blushing maid;
And the constant advertiser
Is the one that gets the trade.

* * *

Little Miss Muffet
Sat on a tuffet,
Very much perplexed was she
About "Disgraceful Demonstration
Of Political Manipulation"
And the increased transfer fee.

* * *

Sing a song of salaries,
Pockets full of gold,
Taken from small breeders,
So we are told;
But now their eyes are open,
They answer with a shout,
"Down with promoters and politicians,
We want them all put out."

* * *

Bye Baby Bunting,
Daddy's gone a hunting
To look up records of Mr. Cole,
For six thousand dollars he'd sell his soul.

ONE OF YOUR READERS.

TO THE EDITOR OF THE HOLSTEIN BREEDER AND DAIRYMAN:

We are proud to know you and read you, and feel that at last the real breeder has a friend and one who will stand and fight for his rights. We admire the stand which you have taken in regard to Holstein-Friesian politics and hope that you may always have the courage and nerve to stand for what is right and, as long as you do, you need never fear for the confidence of your readers.

New York Breeder.

TO THE EDITOR OF THE HOLSTEIN BREEDER AND DAIRYMAN:

My subscription to your paper is prompted by your "mast head" and if the "Breeder" conforms to these principles it will serve a useful purpose. Too much red ink and bally-hoo stuff on cattle that are exploited by wealthy breeders will do the breed irreparable harm.

(Signed) Pennsylvania Breeder.

June 5, 1922.

HOLSTEIN BREEDER AND DAIRYMAN,

Gentlemen:—We are very well pleased with THE HOLSTEIN BREEDER AND DAIRYMAN as an advertising medium. Since we started in your paper, we have literally been swamped with requests for our booklet on *Feeding Minerals to Dairy Cattle* and our sales on *U-Cop-Co Special Steam Bone Mineral Meal* have gradually increased until we are sold to capacity most of the time.

As nearly as we can determine, up to 1922, there were practically no extra mineral feeds supplied dairy herds, but now there are thousands of dairymen feeding special steam bone meal the same as they feed grains and roughages.

Yours very truly,
United Chemical & Organic Products Co.
By L. H. BRYANT,
Mgr. Mineral Feed Dep't.

Having helped his mother plant the seeds and place at the end of each row the pictured envelopes showing here a radish, there a beet and so on, little Edwin was quite distressed when he went out next day and found that the rainstorm had washed the envelopes off into the mud.

"Never mind, dear," comforted his mother, "it doesn't really matter."

"But, mamma," said the child, greatly worried, "how will the little seeds know what to be when they come up?"—*Boston Transcript.*

Four-year-old Bobby was stroking his cat before the fireplace in perfect content. The cat, also happy, began to purr loudly. Bobby gazed at her askance for a while, then suddenly seized her by the tail and dragged her roughly away from the hearth. His mother interposed.

"You must not hurt your kitty, Bobby."

"I'm not," said Bobby, protestingly, "but I've got to get her away from the fire. She's beginning to boil."—*The Argonaut (San Francisco).*

Looking after a husband is like playing a game of cards. You must play with what is dealt you, and the glory consists not so much in the winning as in playing a poor hand well.—*London Opinion.*

A New Yorker was spending a night at a "hotel" in a southern town, and told the colored porter that he wanted to be called early.

The porter replied: "Say, boss, I reckon yo' ain't familiar with these heah modern inventions. When yo' wants to be called in de mowin' all yo' has to do is jest to press de button at de head of yo' bed. Den we comes up and calls you."

A stenographer in the office of THE HOLSTEIN BREEDER AND DAIRYMAN when reading in the market report that the cheese market is strengthening, asked if that is the way they got strong cheese.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

JULY 22, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Missionary Work Needed

NO section of the United States was harder hit by war price deflation and consequent agricultural depression than the southeastern and southern states. The bottom literally dropped out of the cotton market, and the tobacco market was a close second. The one-crop farmer was badly hit and the only southern farmer who has any money is the man who owns some cows.

Agricultural leaders have long preached diversification to the southern farmers. Many of the banks are following their example and are urging their customers to get away from the one-crop system; to grow more livestock; to keep more cows; and to raise all the feed required for the animals. The First National Bank, of Greenwood, Miss., is one of the leaders in the movement to put the agricultural south on a permanently sound and economic basis. In an ad in the local paper the bank announces that "Hereafter no loan shall be made where the proceeds are to be used in the purchase of feed." In its announcement the bank says this is not an attempt to coerce anyone, but that since the boll weevil has come, experience has shown that the one-crop cotton farmer is not a safe credit risk.

The governor of the Federal Reserve Bank, of Atlanta, has publicly stated that the banks in that district would furnish credit to the man who practices diversified farming. North Carolina has gotten out from the one-crop system with the result that this state ranks with the leaders as a producer of agricultural wealth.

What North Carolina can do other southern states can do but it will never be done on a one-crop basis. Good cows, preferably Holsteins, good roads, coöperative marketing, and the courageous application of modern knowledge and common sense to agriculture will inevitably build a basis for wealth that will make the southeastern portion of our country one of its very richest sections.

While there are not many large herds of registered Holsteins in this section yet it seems difficult to say why there should not be. The long growing season, with the abundance of bulky feed that can be grown at low cost seems to make this portion of our country an acceptable home for the black and white cow. Milk brings a satisfactory price which will average much higher than in sections farther north. The only drawback is the unreliability of native labor and this will be, in part, remedied in course of time.

From a Holstein standpoint, the south is a territory that should be cultivated and educated to a knowledge of the worth of the black and white breed. Missionary work should be done by men who can speak from the standpoint of the farmer; men who have done things themselves, who can and have milked cows and bred purebred Holstein-Friesians and made a success of the business; men who can talk to and not at the dairymen, who can meet prospective purchasers on their own level; men who know from experience of the pitfalls that await and the troubles that afflict the beginner. Here is the place to use and use to good advantage the money derived from the increased transfer fee, for, as far as we can see, to derive funds from which to finance such missionary work is the only real justification for its imposition.

Attend the Picnic

THE club picnic is to the fore to-day. From many states comes the news of breeder and dairy organizations holding annual outings, meeting at some prominent breeders' establishment or near a cluster of small breeders' homes, inspecting near-by herds, feasting upon home cooked viands washed down with liberal amounts of good Holstein milk and butter milk and topped off with generous helpings of ice cream, that dairy dainty liked by everybody that is helping to solve the dairymen's problem, "What to do with the summer surplus?"

Prominent speakers are obtained to address the assembled dairymen, their friends and families. In the great dairy state of Wisconsin, candidates for the governorship as well as the present lieutenant-governor have grasped the opportunity to present their views of questions of the day to the farmers, for it is coming to be recognized that the day of the independent voter is here and that men and women are shaking off the shackles of party loyalty and are voting for their friends instead of politicians, for platforms instead of party, for measures rather than party leaders, and are studying their own business interests rather than the advancement of place holders.

It has been said that the farmer vote has been bound and delivered like bundles of merchandise but that day, if it ever existed, has passed and to-day the farmer vote is one that is to be considered and appealed to. During the past two years the farmer has spoken in no uncertain tones. In Washington itself, we have seen

men representing agricultural states and constituencies, themselves not only of opposite parties but from the extremes of such parties, working together for the interests of agriculture, sinking trifling party differences and keeping in view the interests of their rural constituents until party whips prate of insubordination.

But politics are not the only nor yet the principal thing. Men prominent in agriculture, in the purebred industry or allied lines of business are in demand as speakers. Many prefer to hear local talent, to hear their friends and neighbors voice their opinions or tell how they did things, for *"How we did it"* is always more interesting than *"How you should do it."*

The busy season for the farmer is here and sometimes, especially after a spell of unfavorable weather, he hates to lose a day from the fields. In the majority of cases, the loss of the outing, of the opportunity to meet neighbors and friends on pleasure bent, is far greater than the loss of an extra day in the fields. Those who participate in such outings return home with a broader viewpoint and a rested mind, and have made a break in the monotony of everyday work. Take a day off therefore, and enjoy your club picnic, take part in the program or sports, play ball either with the youngsters or against the fellows living on the other road, be a good fellow and have a good time and you and your family will have something to look back at and enjoy over again until picnic day comes around next year. Let's go.

The Brady Case

ON another page of this issue, we have printed the decision rendered by Justice Donnelly in the action brought by Paul T. Brady against the Holstein-Friesian Association of America, full particulars regarding which said action were published in the BREEDER AND DAIRYMAN, June 8th.

It is unfortunate that the question of the legality or illegality raised by Mr. Brady is still undetermined.

The petition of Mr. Brady raised three points, to wit:

1. The legality of elections held outside the state.
2. The validity of proceeding to increase the board of directors from six to sixteen.
3. The validity of the amendment to the by-laws depriving members of the right to vote, and the substitution of the delegate system for the proxy system.

By careful reading of the decision of Justice Donnelly, it will be seen that not one of these questions has been squarely decided. The validity or invalidity of the action taken at the special meeting at St. Paul, whereby the delegate system of electing directors and officers was substituted in place of the proxy system, remains undecided, because as Justice Donnelly holds, Mr. Brady participated in that meeting and voted by a proxy made out to Judge Peaslee.

The question as to the right of the Association to hold meetings outside of the state, remains undecided, as well as the validity or legality of the increase in the number of board of directors from six to sixteen, at the Philadelphia meeting in June, 1919.

It was not necessary to await the decision of a judge of the Supreme Court to know that the Membership Corporation Law was amended in 1921, and that since that time meetings could be held outside of the state.

All the questions raised by Mr. Brady in his action against the Association are still undetermined and undecided. The members are no better advised now on these particular points than they were before the action was brought.

As previously stated in the editorial columns of this JOURNAL, this is a very regrettable affair in more ways than one. It tends to destroy the confidence of breeders in the Association. It tends to destroy the confidence of the public in the Holstein cow, and it affords further opportunity for additional raids on the Association treasury for the payment of fat legal fees.

Please Write To-day

THE attention of owners of purebred Holsteins is called to the resolution presented by Chas. F. Bigler of Syracuse, New York, President of the New York Holstein-Friesian Association, at the annual convention of the Holstein-Friesian Association of America held at Kansas City, Missouri, June 7th.

This resolution is also of interest to owners of grade cattle as all dairymen are interested in the eradication of tuberculosis and indemnification for animals condemned for reaction to the tuberculosis test.

WHEREAS, tuberculosis is a serious menace to our herds of purebred dairy cattle and the eradication and control of the disease is vital to the development of the industry.

WHEREAS, the work of eradication of this disease by our Federal Department of Agriculture and the several state departments of agriculture has been seriously handicapped by the lack of Federal funds for this work. Therefore, be it

Resolved, that we, the delegates to the Annual Convention of The Holstein-Friesian Association of America, and representing over 20,000 members of our organization, urge and request our senators and members of Congress to make appropriations sufficient to carry on, without interruption throughout the year, a vigorous campaign of tuberculosis eradication work.

THE HOLSTEIN BREEDER AND DAIRYMAN requests all who own cattle of any kind to write to their senators and congressmen in accordance with this resolution.

Excuse Us

ONE of those regrettable things that make an editor tear his hair occurred in the making up of the editorial entitled "Who Gets the Money?" which appeared in the July 8th issue. The mistake was in the first line of the first paragraph on the right hand side of page 439. Instead of this reading, "It may be that the Supreme Court of the State of," it should have read "We do not wish to appear captious or belligerent regarding the question of the Association's management." The line used appears in its proper position as the first line of the concluding paragraph of the editorial. The error passed several proof readings including a final one in the editorial office. To err is human. We will try not to have it happen again.

Junior Department

Three-Fourths Holstein

A calf club was formed at West Union, Iowa, about the middle of June. There are 20 members and they own fifteen Holstein and five Guernsey calves. The Holsteins came from the herds of Paul P. Stewart, John Miehe and Mr. Barnes of near Maynard. The members of the club visited the various farms and personally selected the calves they desired. This way of selecting calves helps the members to pick out dairy producers for the future.

Calf Clubs have proven to be very popular throughout the country and they furnish some keen competition at the fairs each year.

Calf Club Experiences

The Tribune, published at Freemont, Nebraska, has been helping to establish a purebred Holstein calf club and recently published letters from the young members telling of their experiences and expectations. We have selected a couple of these letters as examples of the work of our junior membership.

"Our Calf Club"

The name of our calf club is Elkhorn-Platte Holstein club, and it has sixteen members. When the calves arrived we drew lots for them. The name of my calf is Inglenook Johanna, the sire was Johanna De Kol Piebe Lad. The dam was Netherland Pauline Beach. I received my calf May 14th, just the day it was three months old. It was in pretty good shape considering the trials of shipping from Wisconsin. At first my calf would only eat grass and drink milk, then I offered it grain and green alfalfa. It soon became used to this and is doing as well as I can expect. I now feed the calf two pounds of grain (rolled oats, corn and bran mixed) a day, about six quarts of milk and keep it on sudan grass. It also gets all the water and salt it wants and alfalfa. I have not had much experience with calves but I hope to make a real calf out of this one.

Freemont, Neb. James McCleave.

"Elkhorn-Platte Holstein Calf Club"

We held our first meeting April 8, 1922, at the Fremont State Bank. There were ten members present. We organized our club: Chose our officers as follows, James McCleave, president; Viola Ibsen, secretary; Arthur Brown, treasurer. We decided to name our club the Elkhorn-Platte Holstein club as the members are located near both rivers.

We received our calves April 29, 1922. The numbers of the calves were written on slips of paper and drawn from a hat. Some of the members were not very well satisfied with their calves at first but at our last meeting all were satisfied with the progress of the calves in growth and weight.

We have held four meetings since the club was organized and have a good time at each meeting.

My calf weighed 195 pounds when I got it, and it now weighs 260 pounds. It did not seem to grow very much at first but it is doing fine now. I feed it skim milk twice a day and ground corn and oats. It runs on alfalfa pasture.

I think doing club work is fun and certainly enjoy taking care of the calves. I help feed the other calves, we have twelve in all.

There are six of us in the club from our family, we are half of the club. Each of us have a purebred Holstein calf, and they are registered. We paid $75 apiece for them. I would not take twice that much for mine now. The name of my calf is Pioneer Oaks Mida Johanna. I hope to take some prizes with her this fall at the fair.

We are going to organize a judging team soon. I think we will have a picnic at our next meeting.

Freemont, Neb. Viola Ibsen.

Juniors Show the Way

Nearly a year ago there was an exhibit of Holstein calves at the Glenn County Fair which resulted in a Holstein Calf Club, which was organized in the early part of 1921. There was quite a lot of interest excited among Holstein breeders and soon after a Glenn County Holstein Association was formed.

This year, another Holstein Calf Club was organized by the Holstein Association in connection with the County Club Agent. Seventeen enrolled and financial arrangements were made at Banks of Glenn County for money with which to purchase calves. A Holstein committee consisting of L. Beck, R. J. Bender, W. C. Saxton, with the County Club Agent went to the famous Gibson Ranch near Williams, Cal., and purchased a number of very fine young animals at attractive prices. The animals were taken to the J. N. Cook farm near Orland and then distributed to the members.

The total purchase price was $2,500 of which $1,025 was furnished by the Club members and $1,475 was secured by notes given by the club members in favor of their local bank. These notes are renewable three times or even more, at the option of the bank.

Maryland Boys Win at English Royal

The three Maryland Agricultural Club boys, Warren Rice, George Warilow, and Joseph Glacken, who represented the United States in a boys' live stock judging contest at the English Royal Live Stock Show, Cambridge, England, July 5th, against a team of English boys, won the contest, according to a cablegram received from C. L. Chambers, Office of Extension Work, States Relations Service, United States Department of Agriculture, who, together with E. G. Jenkins, State boys' club agent, University of Maryland, and W. C. Snarr of the Maryland agricultural extension service, accompanied the boys on their trip abroad. These boys were trained in live stock judging by Mr. Snarr and, after winning preliminary judging contests, were selected for the trip to the Royal Show through a similar contest in which they successfully competed with 13 other State teams at the Southeastern Fair, Atlanta, Ga., in 1921.

Lively Oklahoma Boys

There are two boys, Elmer and Claude, in the family of D. K. Krause who live near Dustin, Okla. These two boys who have not yet finished their schooling, have been exhibiting cattle and hogs at both state fairs and have been taking their share of the premiums.

The first year they showed a Holstein bull which was awarded Grand Championship and they won several first prizes with hogs and repeated in 1921. The two Krause boys won more prize money in the two years than did any other pair of young breeders' in the state.

On the Krause farm there are a herd of purebred hogs, which numbered 110 in the beginning of the year. In January of this year, the boys held a purebred sale, disposing of 26 head at a good average price.

The Calf Club Jingle

Now is the time when the work is hardest. With haying in full swing and harvesting soon at hand it surely does keep a young fellow busy. When the work is over at night you are often tired and about ready for bed. Perhaps you don't have quite as much time as you did to care for your calf. But don't neglect its care by any means. The following little poem is easy to read and in each stanza you will find at least one important pointer. It's called the "Calf Club Jingle." Try it.

Now summer is here and your calf is growing,
'Twill soon be time to think of showing.
The calf needs a blanket for flies are waiting
To start their daily celebrating
Upon that rounded back so slick,
But a well made cover will do the trick.

It won't be long before the county show
And this one fact we all well know,
Mr. Judge likes a calf that leads right handy
And stands in the ring like a regular dandy
So start in now with the little airs
That help make winners at county fairs.

In the Calf Club books you can find good reading
About the ways you should be feeding:
And as you drive down the long corn row,
Keep thinking of things to make your calf grow.
For the boys who think and plan each day
Are the ones who always find a way.

And don't forget to take it out
For a daily walk or run about:
Clean, fresh water should be always close.
With no restrictions as to size of doze.
While they say a brushing applied each night
Will keep that calf a-looking right.

We call to your mind these little tips
Which we have found in our several trips
To calf club stalls and county shows
Where well groomed winners stand in rows.
And it is our wish that you may stand
As number *one* right next to the band.

—*Earl J. Cooper,*
Holstein-Friesian Ass'n. of America.

AN EXPENSIVE VISITOR

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

July 23—Gilman, Wis., Holstein Day.
July 26—Purcellville, Va., Community Fair.
July 26—Marshfield, Wis., Wood County Holstein Breeders' Association Picnic.
Aug. 1—Gouverneur, N. Y., Tri-County Holstein Breeders' Association Meeting.
Aug. 3—Colorado Springs, Holstein Breeders' Annual Picnic.
Aug. 17—New Waterford, Ohio, Columbiana County Holstein Breeders' Annual Picnic.
Aug. 18—Royalton, Wis., Waupaca County Holstein Breeders' Association Picnic.
Aug. 23, 1922—Tour to New Jersey State Agriculture College and Forsgate Farm.
Aug. 26—Baltimore, Md., Maryland State Dairymen's Association.
Aug. 26—Bridgeport, Conn., Holstein-Friesian Breeders' Association.
Sept. 25-Oct. 1—Waterloo, Iowa, The Dairy Cattle Congress, E. E. Estel, Mgr.
Oct. 7-14—Minnesota State Fair Grounds, National Dairy Show.
Oct. 21—West Chester, Pa., Field Day and Banquet.
Nov. 23—Belvidere, N. J.—Annual Meeting Warren County Association.

Secretaries of breeders' clubs and associations are requested to send dates of coming meetings for publication in this calendar. THE HOLSTEIN BREEDER AND DAIRYMAN will gladly publish such particulars and are always pleased to obtain reports of breeders' meetings, picnics and clubs.

ANDROSCOGGIN FIELD DAY

Members of the Androscoggin Holstein Breeders' Association gathered at the home of C. W. Walker, Canton, Maine, June 30th, for the annual field day. After an inspection of the herd those present discussed the merits of the breed. L. E. McIntire, of Waterford, was the speaker of the day.

MAHONING COUNTY PICNIC

The Mahoning County, Ohio, Holstein-Friesian Club held their picnic and tour of the county June 26th. The members met at Canfield, and starting from there, visited the different dairy farms of the county. The meeting itself was held at the Jerold-Jean farm, owned by I. Strouss and I. N. Meyer. State Secretary E. M. Clark was the principal speaker, his subject being "Judging and Selection." He illustrated his talk by showing the good points of animals of the herd. The president of the club, Hugh Bowman, presided.

McPHERSON BREEDERS MEET

The quarterly meeting of the McPherson County, Kansas, Breeders' Association, was held at the Chamber of Commerce rooms, McPherson, June 13th. President B. R. Anderson called the meeting to order. The Association decided to hold a mixed consignment sale of purebreds at Lindborg during the community fair week in October and M. E. Lingle of Conway was instructed to arrange for a sale of purebred and high grade Holsteins at McPherson early in the fall. The next meeting will be held August 29th.

STEARN'S COUNTY PICNIC

The Stearns County Holstein Breeders' picnic was held June 22d in Meire Grove and was attended by 300 people. At the business session all officers of the past fiscal year were reëlected. They are: Joseph Luetmer, Meier Grove, president; Robert Nehring, Paynesville, vice-president; Edwin Manz, Paynesville, secretary-treasurer; Henry Borgman, Sauk Center, H. H. Meires, Meires Grove, and Thomas Zackowski, directors.

It was decided to lower the membership fees to a basis of $2.00 for a Holstein herd; $1.50 for a purebred sire, and $.50 for grade cattle. A membership drive is planned for the near future. The principal speakers were President Lutmer, county attorney Paul Ahles, county agent N. P. Huntemer and Robert Geiger, secretary of the Minnesota Holstein Breeders Association.

NORTHERN IOWA BREEDERS UNITE

The northern Iowa Holstein Breeders' Association was formed at a Holstein picnic held at Mason City, June 27th, by Holstein Breeders of nine northern counties. The principal speakers included H. H. Kildee, head of the animal husbandry department at Ames; the veteran Holstein breeder, Chas. A. Nelson, Waverly; former Dairy Commissioner W. B. Barney, Earl B. Weaver and J. P. Eves, state expert of the Iowa Dairy Association.

A banker of Mason City announced that his organization would lend money at 6% interest for the purchase of dairy cattle and at 5% for the purchase of a purebred dairy sire.

A director will be chosen from each of the nine counties. Park Franks, Clear Lake, was elected president; E. J. Peake, Mason City, secretary. The visitors made a short tour of Cerro Gordo County and inspected the Park Frankes, Cerro Gordo, Schemmerhorn, Gildner and Lantz Farms.

On the preceding day a similar meeting was held at the Iowana Farms at Davenport, the principal speaker being the Hon. Frank O. Lowden, President of the Holstein-Friesian Association of America. There were more than a thousand people from twelve Iowa and two Illinois counties.

BREEDERS HEAR POLITICAL TALK

The annual summer picnic of the Sauk County Holstein Breeders' Association was held at the beautiful farm home of Ed Koenecke, near Reedsburg, Wisconsin, June 23d. The business meeting was held in the forenoon. Present and future sales were the principal subjects of discussion and the old officers and sales managers were reëlected. The proposal to hold a fall sale was unanimously voted. The speeches were partly political, Lieutenant Governor Comings and Mayor Quimby of Reedsburg, being the principal speakers.

Mr. Collentine of the State College of Agriculture, gave some interesting information on the dairy industry was followed by H. Bailey of the Southwest Wisconsin *Breeders' Gazette*. Mr. Bailey disagreed with the Lieutenant Governor concerning the charge that freight rates were the basis of the business evils afflicting the farmer in recent days.

The purebred bull calf awarded to some girl or boy, between the age of 10 and 16 was given to Miss Bernice Neibhur. Her father was building up a herd of Guernsey grades but the conditions are that the parent of the winner is to keep the prize animal as a herdsire for at least two years. Mr. Neibhur agreed to make the change to Holstein cattle in order to please his daughter and keep her prize.

GREAT FARMERS' MEETING

Over 25,000 people attended the Farm Bureau Decennial at DeKalb, Illinois, June 30th, when the Farm Bureau celebrated its tenth birthday.

Among the floats was one displayed by the Lake County Farm Bureau illustrating the Better Sire Campaign, conducted here the past few years. The first part of the float was an old Ford car. In a crate fitted to the back seat was a likeness of a scrub bull cut out of beaver board and appropriately painted. A sign above the car told the average income from cows of scrub breeding.

Following this was a decorated truck carrying a fine Holstein bull. The two cars illustrated the before and after effect of changing from scrub sires to purebred sires, with a difference of $63 per year income from each cow in favor of the purebred herdsire.

The Lake County Holstein-Friesian Association had a neatly decorated float which showed a typy Holstein cow in a stanchion. The lettering told of some of the accomplishments of the Lake County Association.

The first speaker was Henry H. Parke, of Genoa, who has been called the pioneer of the Illinois Farm Bureau movement. The first meetings leading towards the establishment of a Farm bureau were held on the Parke Farm in 1902. Other speakers were Mr. Parke Howard, Leonard, president of the Illinois Agricultural Association; Jas. R. Howard, president of the American Farm Bureau Federation; Eugene Davenport, formerly Dean of the College of Agriculture at the University of Illinois and Governor J. A. O. Preus, of Minnesota. The Honorable F. O. Lowden was to be the speaker of the afternoon, but owing to showery weather, did not make a speech. Some of the floats showed pioneer days and developments since that time. The Illinois Agricultural Association at the present time has over 100,000 members in 95 counties and the American Farm Bureau Federation, which started in 1919 claims a membership of a million located in 47 states.

MANITOWOC BREEDERS' PICNIC

The Holstein breeders of Manitowoc County with their friends to the number of 3,000 held their annual picnic at the Charles Hampke Farm near Manitowoc, Wis., July 2d. The principal address was political and was given by Attorney-General Wm. Morgan, candidate for Governor. Mr. Morgan said that "Beer and light wines" were not an issue in a state campaign, but might be in a congressional and senatorial election. He commended the work of the State Food and Dairy Department and recommended semi-annual tax payments, rural credits, certain tax exemptions for home builders, furtherance of farm coöperation and a combined state organization of farm societies. State Secretary Oldham talked on Wisconsin Holsteins and their position in the national breeding industry. Leon H. Robbins of the *Wisconsin Agriculturist* spoke on accounting and business methods as a means of success in the farming industry and illustrated his point by citing examples.

More than a thousand automobiles and other vehicles were parked at and in the vicinity of the Hampke Farm. Altogether the day was a big one, full of interest and instruction.

BRATTLEBORO BUSINESS

During the week ending June 24th, twenty-five applications for membership were received at the secretary's office. There were 1,866 certificates of registry issued, 1,290 female, 576 male; 1,290 certificates of transfer were written, of which 886 were female, 404 male.

For the week ending July 1st, twenty-two applications for membership were received. During the same time, 1,705 certificates of registry were issued, 1,239 female and 466 male; 1,639 certificates of transfer were written, 1,200 female and 439 male.

Twenty-two applications for membership were received during the week ending July 8th. During the same period, 1,268 certificates of registry were issued, 910 female and 358 male; 1,476 certificates of transfer were written, 1,034 female and 442 male.

Prefixes reserved during the three-week period are: Alkorn, T. Henry Weeks, Chilton, Wis.; Big Bend, J. E. Huston, Talcott, West Va.; Brightland, William H. Hoppock, Milford, N. J.; Damesdale, S. Sisters of Notre Dame, Elm Grove, Wis.; Early Rise, Menzo Brooker, So. New Berlin, N. Y.; Echo Ridge, Stetson Bros, Waterville, Maine; Echo Spring, Homer E. Spencer, Friendship, N. Y.; Elmadell, D. H. Tidgewell, Fayette, Iowa; Four Leaf, J. H. Ames, Sunnyside, Wash.; Hartsbrook, E. P. West, Hadley, Mass.; Kamelia, Frank G. Wagner, Lafargeville, N. Y.; Hovrud, Olin Hovrud, Horeb, Wis.; Hazel Farm, C. P. McMinn, Lanes Mills, Pa.; Keezer, Herbert Keezer, Paulding, Ohio; Herronwold, George Leslie, Dan Herron, Leith, North Dakota; Lawrendale, J. F. Lawrence, Port Byron, N. Y.; Locust Hedge, Lewis M. Lounsbury, Medusa, N. Y.; Makida, Malcolm R. Jeffris, Jeffris, Wis.; Marshyfields, Seth S. March, Madison, Ohio; Melholm, H. A. Melzer, Hanska, Minn.; Milrock, James Palmer, Milton, Wis.; Pem-Farm, R. N. Pemberton, Richmond, Va.; Posyblom, M. B. Mentzer, Chambersburg, Pa.; Prairie Grove, H. O. Aavang, Barneveld, Wis.; Rovana, Edward J. Rodekohr, Corder, Mo.; Sanberco, San Bernardino County Farm, San Bernardino, Cal.; Swanson, W. G. Swanson, Danville, Va.; Swan Creek, Albert Richter, Fair Haven, Mich.; Three Rivers, F. N. Decker, Three Rivers, N. Y.; Trippland, Edward Tripp, Horton, Mich.; Wolfwood, John P. Barbor, Grove City, Pa.

THE HOLSTEIN-FRIESIAN ASSOCIATION OF AMERICA,
F. L. HOUGHTON, *Secy.*

CHESTER COUNTY BREEDERS BUSY

The Holstein-Friesian Breeders' Association of Chester County, Pennsylvania, met June 24th, at West Chester. New members admitted were Mrs. E. Page Allison, Mrs. Marshall Jones, Mrs. F. C. Brinton, and Mrs. H. E. Jones, of West Chester; W. E. Gorrie, Newton Square; W. G. Davidson, Abington and Philadelphia; and Roland Smith, Oxford.

F. C. Brinton, treasurer of the Pennsylvania Federation of Holstein-Friesian Clubs, outlined a program for a Field Day and banquet to be held October 21st. Dr. Thomas, president of the Pennsylvania State College, has promised to speak, besides prominent Holstein breeders and officers of the State Federation.

The Field Day will be held on the Town's End Farm. Three young heifers will be offered as prizes in a boys' judging contest. Mr. Frank A. Keen, treasurer of the county association; E. Page Allison, of West Chester, and Mr. Brinton, each promised nice heifer calves for the prizes. There will also be a prize of a good young show bull close up to King of the Ormsbys. It is planned to feature some of the advantages of cow testing associations.

F. C. BRINTON
Treasurer, Pennsylvania Federation of Holstein-Friesian Clubs

Messrs. Keen, Brinton and Allison were appointed as a committee to raise a fund which will be used to buy a good Holstein representative of the country which will be presented to State College for the purpose of replenishing the herd there, an animal of good type and individuality, that can be used as a model in student instruction.

E. D. Walton, of Londongrove, is the president, and Charles H. Garrett, of Westtown, the secretary of the Chester County Breeders' Association.

INFORMATION RECEIVED FROM SECRETARY'S OFFICE

The following is a copy of a letter to the Secretary, dated July 10, 1922, from Nosawa & Co., 165 Broadway, New York City:

"As we intend to buy several Holstein-Friesian bulls in this country for shipment to Japan, we shall be much obliged if you will kindly furnish us with a list of names and addresses of reliable breeders of same, preferably those who are situated in the Middle West or Eastern states.

"Thanking you in advance for any available information in this direction."

Men make houses, but women make homes.

Cow Testing Association Reports

VOLANT ASSOCIATION

During the month of June, 25 herds numbering 300 cows were tested in the Volant Test Association which operates in Lawrence County, Pa. Twenty-eight cows each produced over 1,200 lb. milk, 82 exceeded 40 lb. butter fat and 24 surpassed the 50-lb. mark. The ten highest cows averaged 61.42 lb. butter fat and the ten highest milkers averaged 1,833.4 lb.

The leading cow was a Holstein from the herd of Alford Brothers, she producing 2,289 lb. milk and 75.5 lb. fat. The Alford herd has seven animals above 40 lb. and four above 50 lb. The second cow is a registered Holstein owned by Wm. McMillen and Son, she making 2,059 lb. milk and exactly 70 lb. fat. The McMillen herd had three cows above the 60-lb. mark. Paul J. Stonebraker is the tester in charge.

A FINE YEAR REPORT

A neat twenty-four page booklet carries the report of the Byron Cow Testing Asociation for the year ending Feb. 1, 1922. Fred G. Stroup is president, E. H. Korrer, vice-president; A. W. Cowles, secretary and treasurer, and Alfred Miller, of South Byron, is the tester. The report shows an increase over the previous year of four herds and 31 cows, and an increased average production of 920 lb. milk and 31.4 lb. fat. During the year just ended 27 herds containing 431 cows were enrolled and the average production was 8,326 lb. milk, 295.4 lb. fat.

The biggest producer in the past year was Oakfield Lucyra Johanna. In the twelve months she produced 622.4 lb. butter fat, 17,504 lb. milk. She has a seven-day record of 28.52 lb. butter and is owned by E. M. Cowles and Son, South Byron. Second to her is Arletta Champion Trudel, owned by A. E. Tulledge, of Oakfield. She made 605.8 lb. butter fat in April, 1920, and was the highest producer in all the testing associations of the state with 2,238 lb. milk, 111.9 lb. fat. This same year she had twin heifer calves. In April, 1921, she led the Byron Cow Testing Association with 2,667 lb. milk, 106.7 lb. fat.

One of the good Holstein herds in this association is owned by H. L. Weber, of Oakfield. His twenty cows, all registered, averaged 1,266 lb. milk and 402.6 lb. butter fat for the year 1921-22. This herd led for milk production, for average pounds of fat, and for average profit, this being $112.77 per cow above feed cost.

Mr. Weber started with registered Holsteins in 1904 when he bought two yearling heifers, Byronia Mercedes De Kol and Byronia Douglas, from F. J. Bristol, of Oakfield. From these two heifers the present purebred herd, now forty-five head, has been produced. The herd sire is Joe Fobes Myrtle Segis, a 31-lb. son of Joe Oak De Kol Segis. The herd has shown steady progress in building up its milk and fat production. Its record in the Association for the last three years has been:

1919-20	9,542 lb. milk	326.3 fat
1920-21	10,721 lb. milk	375.8 fat
1921-22	11,266 lb. milk	402.6 fat

The ten highest producing cows in the association are all Holsteins, two being grade and the others purebreds, five of which are in the herd of H. L. Weber. The highest is Oakfield Lucyra Johanna, the lowest of the ten produced 13,238 lb. milk, 450.2 lb. butter fat. Eight of the ten highest herds consisted of Black and Whites. Seventy-one cows in the entire association averaged over 1 lb. butter fat a day for the entire year and 56 of the 71 were Holsteins.

FOR MILK AND BUTTER

A registered Holstein, owned by H. L. Weber, headed the Byron Test Association for the 30 days ending July 1st. This cow produced 2,508 ib. milk and 80.2 lb. butter fat. She was surpassed for milk however, by another registered Holstein owned by A. E. Tulledge. This animal produced 2,535 lb. milk and 76 lb. fat, standing in third position for fat production. A registered cow owned by O. S. Fenner is fourth with 75.6 lb. fat from 1,644 lb. milk and a registered animal from the herd of L. L. Cowles & Son is fifth with 64.8 lb. fat and 1,662 lb. milk.

The high herd consists of six registered Brown Swiss cows that averaged 1,350 lb. milk and 57.61 lb. fat. The 20-cow Holstein dairy of E. W. Cowles & Son stood in second position with an average of 1,216 lb. milk and 42.36 lb. fat from 20 cows. The official tester is A. Miller of South Byron, Wisconsin.

IN GEAUGA COUNTY

During the month of May there were 281 cows tested in the Geauga County, Ohio, Testing Association. Twenty cows produced over 1,400 lb. milk; 17 over 50 lb. fat; and 67 over 40 lb. fat. The entire number averaged 890.2 lb. milk, 31.46 lb. fat, the highest cow for fat being a grade Holstein owned by Fred Wilmot, which produced 1,339.2 lb. milk, 62.94 lb. fat. The second high cow for fat was also a grade Holstein owned by R. B. Russell, she producing 1,06.6 lb. milk and 61.77 lb. fat. The high cow for milk was a registered Holstein owned by Newcomb Bros., producing 1,762.7 lb. milk; Hettie Queen Pontiac, owned by E. L. Newbury, milked three times a day, made 2,740.4 lb. milk.

(Signed) CHAS. HARRINGTON, *Tester.*

NEW YORK TESTING

The June report of Geo. W. Tailby, Jr., supervisor of the Dairy Improvement Associations of New York State, shows that during April 10,880 cows were tested in the Empire State, of which 1,598 or 14.6% made the honor roll. Of this number, 93 cows produced between 60 and 70 lb. fat; 20 between 70 and 80 lb.; and 13 produced above 80 lb.

The biggest producer was the grade Holstein, Aaggie, owned by Sam Barber, Scottsburg, Livingston County. This six-year-old has been fresh three months and during April she produced 116.5 lb. fat, 2,805 lb. milk. Second to her was a registered Holstein, owned by W. T. Smith & Son, Elmira, with 97.3 lb. fat, 2,092 lb. milk; third was a registered Holstein three-year-old owned by the Doty & Seaman herd of Geneseo with 96.2 lb. fat, 1,719 lb. milk in her third lactation month. Another grade Holstein in the Barber herd is fourth with 89.6 lb. fat, 2,157 lb. milk and a registered Holstein, owned by Luther Carrier, Fulton, is in fifth position with 89.2 lb. fat, 2,176 lb. milk. Livingston County claims first, third and fourth place; second is held by Chemung County; and Mr. Carrier is enrolled in Oswego County.

Four associations are missing from the summary of the May reports. The leader is a grade Holstein in the Livonia Association, Livingston County. She produced 109.3 lb. fat and is the only leader reported with above 100 lb. fat for the month. She is a member of the Barber herd. Second on the list of leaders comes the registered Holstein in the First Niagara Association with 2,162 lb. milk, 95.6 lb. fat. Her owners are Dale Bros. Geo. Garrod owned a grade Holstein with 1,962.3 lb. milk, 90.3 lb. fat, enrolled in the Hamilton Association of Madison County.

CANADIAN TESTING

During the month of June, the official tests of fifty-seven Holstein-Friesian cows and heifers were admitted to the Record of Merit. In the mature class Kate of Roselawn, now owned by Carman Baker, Brighton, Ontario, has increased her record to 36.62 lb. butter and 848.6 lb. milk in seven days and 150.29 lb. butter and 3,433.6 lb. milk in thirty days. Deirdre Douglass Segis owned by the Colony Farm, Essondale, B. C., made 30.51 lb. butter in seven days and 122.18 lb. in thirty days. Raymondale Queen Pietje, owned by D. Raymond, Vaudreuil, Quebec, is third with 30.06 lb. butter in seven days.

In the senior four-year-old class the leader is Manor Keyes Lady, owned by W. G. Gooderham, Toronto, Ont., with 31.90 lb. butter in seven days and 123.51 lb. in thirty days. Lyla Camille Keyes, owned by the Department of Agriculture, Charlottetown, P. E. I., comes second with 25.25 lb. in seven days and 104.63 lb. in thirty days. Among the junior four-year-olds, Sylvia Belle Pontiac, owned by Hon. A. C. Hardy, Brockville, Ont., has a long lead with 30.71 lb. butter in seven days and 121.45 lb. in thirty days. Molly Korndyke Abbekerk, owned by L. A. Everett, Simcoe, Ont., is second with 26.13 lb. in seven days, and Canary of the Maples, owned by A. E. Hulet, Norwich, Ont., is third with 24.77 lb.

In the senior three-year-old class Segis Hengerveld Wayne, owned by Joseph Kilgour, Eglinton, Ont., is best with 26.74 lb. in seven days and 109.27 lb. in thirty days. After her comes Ruby Vale Segis also owned by Mr. Kilgour, with 26.31 lb. in seven days, and Lena Colantha Posch owned by D. Percy Cohoe, Burgessville, Ohio, with 21.22 lb. Among the junior threes, Manor Keyes Friend, owned by W. G. Gooderham of Toronto, Ont., comes first with 22.78 lb. in seven days. In second place is Eco-Sylv Pontiac Lady, owned by Hon. A. C. Hardy, with 22.05 lb. in seven days and 87.83 lb. in thirty days. Desta Keyes Camille, owned by the Department of Agriculture is third with 20.90 lb. in seven days and 88.51 lb. in thirty days.

Only two senior two-year-olds are reported—Sylvia May Echo Champion, owned by H. W. Imerson, Harlem, Ont., with 20.60 lb. and Colony Cyclone Ormsby, owned by Colony Farm with 16.06 lb. in seven days. One of the most remarkable records of the month is found in the junior two-year-old class. It is that of Echo-Sylv Rauwerd Sadie, owned by Hon. A. C. Hardy, viz:—31.31 lb. butter in seven days, 120.21 lb. in thirty days. Next to her is Roxie Ladoga Butter Girl, owned by A. E. Hulet, with 24.36 lb. while in third place is Lakehurst Echo Alcartra, owned by A. C. Matthews, Keswick, Ont., with 18.14 lb. in seven days.

During June, certificates were issued for forty-five Holstein-Friesian cows and heifers which had qualified under the rules of the Record of Performance test. In the mature class, of the 365 day division, May Echo Lady, owned by the Director Experimental Farms, Lacombe, Alta., is the leader with 848.75 lb. butter from 21,885 lb. milk. Margaret Pontiac Pride, owned by Kemptville Agricultural School, Kemptville, Ont., is second with 732.50 lb. butter from 16,554 lb. milk while Wedo Princess Teake, owned by W. R. Brown, Stamford, Ont., is third with 700 lb. butter from 17,414 lb. milk.

In the four-year-old class, Dinora 4th, owned by Alex. M. Agnew, Charlottetown, P. E. I., is an easy first with 958.75 lb. butter from 23,294 lb. milk, followed by Alexandra Birdie May, owned by the Anti-Tuberculosis Society of British Columbia, Tranquille, B. C., with 591.25 lb. butter from 13,191 lb. milk, and Trixy Abbekerk, owned by J. C. Jakes, Merrickville, Ont., with 580 lb. butter from 12,653 lb. milk.

Colony McKinley Beulah, owned by Colony Farm, heads the three-year-old class with the excellent record of 973.75 lb. butter from 23,207 lb. milk, while Rhoda Korndyke, owned by D. Raymond, is a close second with 968.75 lb. butter from 19,578 lb. milk. Next to her comes L. E. S. Evergreen Rosa, owned by Director Experimental Farms, with 698.75 lb. butter from 18,261 lb. milk.

Segis Canary Mercedes, owned by Joseph Kilgour, tops an excellent class of two-year-olds with 905 lb. butter from 20.996 lb. milk. Clifton Colantha Canary, owned by C. E. Hamilton, Truro,, N. S., is second with 702.50 lb. butter from 15,239 lb. milk, while Princess Segis Waldorf, is tied for third with Raymondale Ruby 3d, both owned by Mr. Raymond, the former having 651.25 lb. butter from 14,075 lb. milk and the latter 651.25 lb. butter from 14,705 lb. milk.

In the mature class of the 305-day division, the leader is Ella Pontiac, owned by Wilmot Bros., Newmarket, Ont., with 701.25 lb. butter from 13,929 lb. milk, while Amy Marguerite, owned by A. W. Elder, Glenelm, Que., is next with 501.25 lb. butter from 12,220 lb. milk. Clover Hill Betty Segis, owned by John C. Brown, of Stamford, Ont., is best four-year-old with 747.50 lb. butter from 15,408 lb. milk, followed by Daisy Ormsby Teake, owned by Jethro Clarke, Swan River, Man., with 676.25 lb. butter from 15,005 lb. milk.

The only two three-year-olds in this division are Beaverland Madam Pauline owned by Wm. Medd, Milner, B. C., with 557.50 lb. butter from 13,606 lb. milk, and Cloverlea Pietertje Mayflower owned by A. W. Elder, with 470 lb. butter from 10,657 lb. milk. Lady Clyde Waldorf and Lady Waldorf Clyde, owned by J. C. Jakes, Merrickville, Ont., are the two leading two-year-olds, both with 581.25 lb. butter, the former having 13,002 lb. miik and the latter 13,299 lb.

W. A. CLEMONS,
Secretary.

Misunderstanding goes on like a fallen stitch in a stocking, which in the beginning might have been taken up by a needle.

FIFTEEN TO ONE

There are at present twenty-one herds in the Ogle County, Illinois, Testing Association. There are 117 purebred cows and the herds are headed by fifteen purebred and one grade sires.

The highest producing herd for April is owned by Martin Nordman, Paynes Point. This herd averaged 1,474 lb. milk and 48 lb. fat for the month of April and averaged 1,599 lb. milk, and exactly 50 lb. fat for May. The Nordman herd was third in the entire state for April. They are grade cows headed by a purebred bull.

The two highest cows are on the Rock River Farms, Byron; one cow made 2,629 lb. milk, 102.5 lb. fat and her stablemate made 2,341 lb. milk, 89 lb. fat. This herd has four others in the leading ten; L. M. Gentry has three and Martin Nordman has one.

The L. M. Gentry herd of eighteen cows averaged 1,412 lb. milk, 48.4 lb. fat; the seventy-three cows owned by the Rock River Farms averaged 1,188 lb. milk, 41.8 lb. fat.

NORTH BRANCH

A grade Holstein owned by A. W. Reimensnyder of Tubot Township Northumberland County, produced 61.1 lb. butter fat from 1,421 lb. milk during May. A purebred Holstein owned by H. R. Remley of Deleware, Penna., made 1,925 lb. milk and 58.6 lb. butter fat These cows are enrolled in the North Branch Cow Testing Association

SAVAGE RECOMMENDS

The Savage Feed Service which is sent out by the New York State College of Agriculture, recommends for dairy cows on pasture the following additional grain ration: 400 lb. hominy; 300 lb. bran, ground oats, ground barley or ground buckwheat; 200 lb. gluten feed; 100 lb. cottonseed meal.

Can Spare a
Breeder's Herd

of young cows, **FIFTEEN** animals, two to four years old, everyone with a semi-official record or now running on test.

This is the first Accredited herd in the state and NO abortion.

A few nice bull calves, 1 mo. to 9 mo. by our **KING WALDORF SYLVIA**, a double grandson of May Echo Sylvia. His pedigree shows lots of World Record backing and several 40 lb. crosses. His 10 nearest dams average 37.32 lb. and his 30 nearest dams average 30 lb. A lot of well known cows are bred to him. The value of this strain is increasing.

Scudder Farms,
Trenton, N. J. Route No. 6

WYOMING COUNTY ASSOCIATION

Mabel Veeman showed a production of 2,520 lb. milk, 84.1 lb. fat in June, and by doing so proved to be the highest producing cow in the Wyoming County, Penna., Testing Association for the month. She is a purebred Holstein, owned by J. B. Quick, of Meshoppen. Another purebred, also owned by Mr. Quick, produced 2,310 lb. milk, 77.4 lb. fat. Her name is Lady Beauty Korndyke Hengerveld.

The high herd average is 1,205 lb. milk, 52.4 lb. fat. This average was made by the herd of F. M. Rider, Factoryville. Chas. Ace, of Tunkhannock, fell below the 1,200 average this month. His seventeen Holsteins averaged 1,105 lb. milk, 36.9 lb. fat.

Forty-five cows produced over 40 lb. fat; ten over 50 lb; while seventy-seven produced more than 1,000 lb. milk, and thirty-seven more than 1,200 lb.

RAY G. SLOAT, *Tester.*

BULLY FOR BENDER

A purebred Holstein, owned by Bender Bros. Waconia, Minnesota, produced 1,869 lb. milk, 76.6 lb. fat during May in the Watertown Testing Association. Another registered Holstein, a member of the same herd, made 1,739 lb. milk, 69.6 lb. fat, standing in second position. The leader averaged 4.1% and her stablemate exactly 4%.

The Bender herd has eight cows above the 50 lb. mark. The high herd was that of Bender Bros. with an average of 49.8 lb. fat, Kratzke Bros. were second with 40 lb. Geo. Grimm third with 39 lb. and Henry Grimm & Son fourth with 38.2 lb. fat.

There were 86 cows made more than 40 lb. butter fat during the month, R. W. Braun is the official tester and H. O. Vollrath, the secretary.

IMIG HERD AGAIN LEADS

According to the May report of the Rudolph, Wisconsin, Testing Association the high herd and high cow both were owned by Chas. Imig, Cresent, a member of this herd, produced 1,918 lb. milk, 65.2 lb. fat and the eighteen members of the Imig herd averaged 1,374 lb. milk, 43.8 lb. fat. During the month 400 cows were tested of which 75 exceeded the 40 lb. mark.

PUREBRED IN FRONT

With a record of 70.1 lb. butter fat for May, a purebred Holstein cow 6 years old, owned by E. E. Splitt, of Wilton, Wis., led the Wilton Cow Testing Association for the month. Twenty-two cows in the group produced more than forty-five pounds of butter fat. Other owners of high cows were H. Birkholtz, L. Radke and J. Steinhoff.

"I don't see why you should kick, you got half a million with your wife. Wasn't that enough?" "Oh, the money was enough, but the wife was too much."

MILKY UTAH HEIFER

They have a real good milker at the Lakewood Farm, Salt Lake City, Utah, in Madge Mercedes Beets. She is a junior two-year-old, freshening at the age of two years, three months and four days. In seven days she produced 21.11 lb. butter, 630.2 lb. milk, and in thirty days made 2,333.7 lb. milk, 85.79 lb. butter, milking 94.3 lb. the last day of her test. This is the highest junior two-year-old milk record ever made in the state. Her feed consisted of alfalfa, corn silage, 18 lb. mixed feed and six pounds of dried beet pulp daily.

The president of the Lakewood Farm Company is James H. Moyle, who owned the farm for several years before the company took it over. There are 45 Holsteins in the Lakewood herd which is under the management of L. Scott Bringhurst. There are a number of other good ones including a daughter of Amanda Koroba Segis, grand champion at the National Dairy Show at St. Paul, last year.

Madge Mercedes Beets comes from a good family; her mother being grand champion of the Utah state fair and a winner of the first prize "get of sire" last fall.

LEADS AGAIN

The Nicollet County Minn. Testing Association was again headed in May by Martin Sandeen's purebred Holstein, she making 73.44 lb. butter fat.

The average of the 331 cows in the association was 795 lb. milk, 31.8 lb. butter fat. The Sandeen herd had an average of 42.78 lb. butter fat 1,043 lb. milk from fifteen cows. The O. Gustafson herd of fifteen cows averaged 1,170 lb. milk, 43.29 lb. fat.

BRIDGEFORD AGAIN

Donnybrook Ladysmith Johanna, owned by the Bridgeford Holstein Company, Patterson, recently completed a seven-day record of 34 lb. butter, 774.2 lb. milk. Her sire is Sir Colantha Prilly, who is a grandson of Colantha Johanna Lad and of the famous foundation cow, Changeling. Her dam is a daughter of Joh Gelsche De Kol Burke, son of the great foundation cow, Prilly.

NICE RECORD

A record of 612 lb. milk, 34.62 lb. butter in a week is claimed for Hengerveld Pearl Ophelia 4th, a senior four-year-old owned by John Goldthorpe of Rock Prairie, Wis.

IDAHO DOUBLE CHAMPION

The University of Idaho possesses a great young cow in Idaho Segis Colantha No. 443983. Freshening as a junior two-year-old she produced 13,004.9 lb. milk and 588 lb. butter in a year, becoming the state champion of her class. A very short time after finishing this year record she again freshened at three years and eight months old and at this time made 463.8 lb. milk and 27.18 lb. butter in a week, standing third in the state in this class. Her thirty-day record was 2,276.8 lb. milk and 113.56 lb. butter which was the highest butter record ever made by an Idaho heifer in this class, so that she is champion in two different divisions. She is being continued on year test in which she is expected to make a great showing. She produced 86.2 lb. milk in one day.

Idaho Segis Colantha was bred and developed by the University. Her sire is King Segis Matador Walker, a son of the Carnation herdsire Matador Segis Walker. Her dam is Alaska Yukon Colantha, one of the great foundation cows in the University herd. She has a year record of over 18,000 lb. and in the herd are three of her daughters, five granddaughters and three great-granddaughters and she is still on the job, at the present time is milking over 55 lb. a day right along.

He who talks about people, let him talk about their virtues; if they have no virtues, they are not worth talking about.

The Holstein Breeder and Dairyman, Harrisburg, Pa.

SHOW AT SYRACUSE

The sum of $1,615 will be appropriated for prize money for Holstein-Friesians at the New York State Fair this fall. The state fair commissioners have set aside $1,243 and this will be increased 30% by the Holstein-Friesian Association of America.

The herdsman's award will create considerable interest. This year there are three prizes of $50, $25 and $15, which will be awarded to herdsmen who make the best record in personal appearance, including neatness and cleanliness of quarters, stalls, bedding and animal.

Four prizes of $100 each have been arranged for each of the four great dairy breeds as county prizes and will be competed for by a county farm bureau, grange or breeders' association.

For the five best dairy cows in milk, the fair offers $200 and the Dairyman's League $150.00 in a series of six prizes ranging from $100 to $40. In addition to this the New York State Federation of Farm Bureaus gives a silver challenge cup, which has to be won three times to become the permanent property of any one owner.

The cattle division of the New York State Fair will again be under the supervision of Professor E. S. Savage of the New York State College of Agriculture, Cornell University, whose work has given general satisfaction for the past few years.

"Mama, may I get on the donkey's back?" "No, dear, but if you are good papa will take you on his back. That will be just the same."

Mineral Stock Farm

Westfield, Penna.

WASHINGTON NOTES

They need rain badly in Skagit County, Washington. Pastures are about burned up and many dairymen are feeding hay to their livestock.

Sir Illustrious Ormsby, Walter Johnson's young herdsire, is developing into a great bull and Mr. Johnson is planning to fit and show this bull at fairs this fall. This bull is a son of Sir Korndyke Ormsby Piebe and Ruth Illustrious.

A number of good records are being made on the farm of Lee Brothers, Mt. Vernon, Washington. Lunde Homestead Fayne, a junior four-year-old, made 28.7 lb. butter and 657 lb. milk in seven days, her best day milking being 101.6 lb. Her sire was Sir Bessie Homestead and her dam was Oregon Lunde Fayne, a cow that produced 108 lb. milk in one day, one of the first great producers developed in the Northwest.

During the first 120 days of this year, 108 calves were born on the Washington establishment of Carnation Stock Farms, exactly half of them being males and the other half females. Thirty calves were born during April and 34 during March. Evidently the Carnation Nursery is a busy place.

The Washington State Fair ground at Yakima will have a new dairy cattle barn this year. The building will be 220 feet long with 12 rows of stanchions and will be capable of housing 500 head of cattle. This new building is the result of putting under one roof two of the old livestock barns and the space between them.

Two junior Calf Clubs, one of which is a Holstein Heifer Club have recently been formed in Lewis County, and altogether 223 youngsters are enrolled in club work this year. There has been considerable club work done in Lewis County, but this is the first season that calf clubs have been formed.

The Southwest Washington Fair is offering $25 purses to be divided into $7, $6, $5, $4, and $3 for competition in the various boys' and girls' calf clubs and the Lewis County Holstein Breeders' Association plans to match the appropriations.

The prizes will be awarded on points, the record book, judging, explanations of feeding methods and exhibition of the animal itself will each be considered. There will also be a stock judging contest, the winner of which will represent the county at the Pacific International Livestock Exhibition this fall.

A widower was to be married the fourth time, and his bride herself had been married twice before. The bridegroom wrote across the bottom of an invitation sent to a particular friend:

"Be sure to come; this is no amateur performance."

Judge—"Why did you shoot your husband?"

Prisoner—"He was always getting half shot and I hate unfinished jobs."

BEAVER DAM DOINGS

Beaver Dam is doing mostly semi-official testing at the present time. Among the animals on test are several good young daughters of Ormsby Korndyke Lad. Progress will be reported on them from time to time. Several of the older daughters of Ormsby Korndyke Lad have finished large year records although there was no intention to see how much they could produce in a year.

O K L Royal Beets recently completed a year record of 1,100 lb. butter and 27,000 lb. milk. It will be remembered this great cow produced 28,084.9 lb. milk, 1,208.58 lb. butter and was New York State champion in the senior four-year-old class until supplanted by her sister, Geertje Queen De Kol Posch 2d, who produced 28,866.9 lb. milk, 1,211.68 lb. butter. This cow too is just about through a year test. In 305 days she had exceeded 950 lb. butter and 22,500 lb. milk so it is expected she will have 1,100 lb. butter, 26,000 lb. milk in the full year.

O K L Royal Beets has dropped a bull calf by the great Beaver Dam herd bull, Ormsby Sensation. Another young bull recently arrived by Ormsby Sensation from O K L Andire Posch, one of the two 30,000 lb. year record daughters of the great Ormsby Korndyke Lad. The figures for her year record are 30,097.4 lb. milk, 1,240.92 lb. butter.

While everyone is pleased to see the high record daughters of O K L come back and confirm their wonderful performances, yet everyone is looking forward to the performances of the younger daughters of Ormsby Korndyke Lad. It is well known that the daughters of this great sire that are just beginning to freshen, have been developed and grown better than their older half-sisters, consequently much is expected of them and as Carl Schmid said at one of the recent great sales: "As a sire Ormsby Korndyke Lad is really only just starting."

HEAVY MILKER

Baltz Hoesly of Monticello, Wisconsin, has a great milker in Osa Aunola Homestead De Kol 2d. She is twelve years old and recently produced 1,514.8 lb. milk in fifteen days, averaging practically 101 lb. a day. Her best day was 108.7 lb. She made a seven-day butter record of 25.68 from 692.5 milk. During the test she was injured by getting tangled up with a wire fence and for several days afterwards she gave less than 100 lb. milk a day. She is a daughter of Sir Snowball Sarcastic, a son of Johanna Rue Sarcastic Lad and Snowball Pink, one of the good cows formerly in the herd of Fred Karlen at Winslow, Ill.

Tim: "How are you getting along at home while your wife's away?"

Jim: "Fine. I've reached the height of efficiency. I can put on my socks now from either end."—*Selected.*

Mr. Dan G. Garter of Bridgeton, New York, says he lived to 100 years old, because he lived in God's time, not in the newfangled daylight saving time.

PROFITABLE SIRE

At the Burr Farm Sale at Los Angeles, June 1-2, while King Korndyke Pontiac 20th was being sold, Mr. Hughes, of the California Breeders' Sales and Pedigree Company, from the box announced that eighteen sons of this bull had been sold for a total of $61,200, an average of $3,400 per head; eleven of the eighteen averaged $5,321. Of course, the $41,000 son, King Korndyke Pontiac Acme, swells the average but without him the remaining seventeen brought an average price of $1,188. The bull himself went to Sargent Bros., Tulare, for $8,000.

The daughters of King Korndyke Pontiac 20th are making good records in their first lactation period in the W. J. Higdon herd. Recently, Dame Korndyke Pontiac Lilith made an official record of 19.01 lb. butter, 426.3 lb. milk in seven days, calving at two years and fifteen days. She is now milking from 70 to 78 lb. milk a day; Ida Lotta Winifred Burke 2d with 19.05 lb. butter, 483.9 lb. milk in seven days, milking from 75 to 80 lb. per day; Winifred Hotaling Pontiac, calving as a junior two-year-old, made 25.04 lb. butter from 480.3 lb. milk in a week is now on year test and in 107 days has produced 321.6 lb. butter from 7,907 lb. milk, giving as high as 85 lb. milk a day; Korndyke Creamcup, a junior three-year-old daughter, is making a promising start on another year test. When fresh she produced 26.64 lb. butter from 697.9 lb. milk in a week and is now milking 107 lb. a day.

Kun'l Bob 'low ef ah'd jes' buck up t' de ole 'oman *one time,* mah troubles wid her would end—Yassuh! En mah troubles wid ev'y-thing *else* would end, too!

January 17, 1923—Third New York Sale.

THE ENGLE SALE

The sale of E. S. Engle and Son held June 16th at Abilene, Kansas, was considered successful. There were 14 buyers for the 31 head of cattle. The top price was $300, obtained for Midnight Walker Queen. The mature cows averaged $230; yearlings $138.50; young bulls $97; and the calves $75.

Mrs. Fred Pacey, Oak Hill, purchased five animals; St. Joseph Orphanage, four; W. S. Sheard, Junction City, three; E. P. Miller, Junction City, three; J. A. Engle, Talmadge, three; Jesse West, Marion, two; Glenn Avery, Wakefield, two; Urban Wilson, New Cambria, two; S. C. Nelson, Minneapolis, two; Harold Potter, Sterling, one; Harry Crider, Detroit, one; Chas. Hershey, Abilene, one; Lester Engle, Abilene, one; Gib Rucas, Abilene, one.

THE STATE FAIR SALE

Austin R. Backus, of the Backus Bros. Pedigree Co., will manage a consignment sale on the New York Fair Grounds September 19th and 20th. This event will be known as the State Fair Sale. Many of the animals sold will be fresh or near-by springers and quite a number of them will compete in the various classes at the New York State Fair the week previous. Mr. Backus plans to personally inspect every animal that is offered for the sale and it is intended that nothing but high-class individuals shall be sold.

Being on the main line of the New York Central between Buffalo and New York City, Syracuse is readily accessible from all parts of the country. The optimistic opinions expressed by students of business conditions and leading business men in all parts of the country indicate that the post-war depression is practically over and that we are due for a business revival. The man who buys purebred Holsteins at the present time not only gets full value for his money, but has a reasonable expectation of enhancement of the value of his purchases by a rise in the average price of purebreds. The demand is now for animals that show good type as well as producing ability and the State Fair Sale is one that should bring together animals possessing both of these desirable characteristics.

VIRGINIA CONSIGNMENT SALE

A consignment sale of registered Holsteins was held at Richmond, Virginia, June 22d, under the management of Wallace C. Saunders, of that city. The auctioneer was Geo. W. Baxter with S. T. Wood as pedigree man. The animals were selected from herds under federal and state supervision, and were sold with a sixty-day retest privilege.

Fifty-five animals brought $9,240 an average of $168. The top price was $400 which was obtained for Valle Crucis De Kol Burton Hartog, consigned by Valle Crucis Industrial School, Valle Crucis, N. C. This daughter of Meadow Holm Burtom Hartog was from an A. R. O. daughter of Prince Abbekerk Clyde and has maternal sisters that have made splendid records in long time tests. She was purchased by H. S. Seward of Petersburg. Wallace C. Saunders purchased Meadow Holm Topsy Gerben for $395. This daughter of Hazelwood Korndyke Gerben was not catalogued. Mr. Seward paid $355 for the three-year-old Van Huff Rouble Vale, whose dam has a good longtime record and whose sire was a son of King Korndyke Sadie Vale. She was consigned by C. E. Gardner, Rapidan, Va.

The consignments were from four different states—Virginia, North Carolina, South Carolina and Pennsylvania, the largest consignment being from Brentwood.

Animals bringing $150 or more with names and addresses of purchasers are:

Consigned by Brentwood Farm, W. G. Davidson, Abington, Pa.

76	Lass Echo Hazelwood, Wallace C. Saunders	210

MARKET REVIEW

In his review of the butter market, H. C. Taylor, chief of the Bureau of Agricultural Economics of the U. S. Department of Agriculture, has this to say:

The butter markets during the week ending July 15th were marked by demoralization. There was a general lack of support from the buying interest and the lack of confidence among receivers was more noticeable than during any previous period of the season. All markets carried over heavy accumulations of nearly all grades from the previous week and to these were added further accumulations as the week progressed. Despite the weakness which prevailed there were no price reductions on the top scores which still had some support from a storing demand. The medium grades suffered some declines and much irregularity because often times concessions were made to buyers of large lots. The undergrades market through a part of the week, because of expected export demand had to some extent the support of speculative interests. Late in the week, however, when advices of weakened English markets began to arrive this support was withdrawn and the market became weak. By the middle of the week the supply of fine butter was decreased to some extent because of deterioration in the quality of receipts and a little better demand also developed. As a result there was an advance on top scores of half to one cent but these advances were hard to maintain and often times buyers were still offered concessions. At Chicago centralized cars suffered the heaviest declines and the greatest amount of weakness. For some time the price of 90 score cars had ruled over the price on 92 score but by the end of the week the position was reversed.

Beneficial Rains Check Decrease In Production

The primary cause of the weak condition of butter markets is that supplies were in excess of a ready demand. Receipts while decreasing to some extent were still large for the season. During the previous week the markets gained some strength from the fact that a large portion of the producing sections needed rain to keep pastures from deteriorating but this factor changed from bullish to bearish when during the early part of the week there were heavy beneficial rains in all the more important producing sections. Reports from creameries and persons who had made recent trips through the producing sections all indicated conditions very favorable to continued heavy production.

July Holdings Almost Six Million Pounds Heavier Than Year Ago

Weak markets might still have been avoided had the demand been active enough to absorb the visible supply but instead of this buyers were indifferent. The July 1 preliminary report of the holdings in the United States showing a surplus of over last year of almost six million pounds compared with a shortage of approximately eight million pounds on June 1 was a bearish factor which tended to check the movement of butter to storage. The into storage movement is still quite heavy but buying for these purposes has been checked enough to make it difficult to find outlets for all the arrivals of fine butter. There was a deterioration of receipts which tended to decrease to some extent the supply of fine butter but this brought corresponding increases in the lower grades for which outlets must be found. Then came advices of lower markets in England which greatly lessened the speculative demand for the lower scores and took away one of the important supports of the markets.

Markets Close Easy and Unsettled

When weaker conditions first began to appear about the first of July, operators still had a great deal of confidence in the markets but after the unsettled conditions had lasted some two weeks with the surplus in storage holdings gradually increased and the visible supply unusually heavy many of them began to doubt the advisibility of holding stocks even for cost. The week closed easy and unsettled with much speculation as to whether the immediate future would bring firmer or weaker markets.

BOSTON WHOLESALE MARKET REVIEW

Week Ending July 14, 1922

Dairy Products:—Butter market has been rather unsettled the past week with prices practically unchanged from a week ago. Speculative demand has not been heavy, but some butter has changed hands going into storage. Quality has not been up to the usual standard and practically all butter arriving show effects of the hot weather. Consumptive demand continues good and buyers for this trade have kept the market fairly clean of fancy butter. Supplies have been liberal on all grades but on account of the heat defects fine butter has at times been scarce. Western Extras firm at 37½c with Northern Extras assorted sizes spruce tubs, 38-38½c.

Cheese market continues to rule firm with demand and movement fair. York State Twins are most in demand with prices ranging 21½-22¾ mostly 22½c. Single Daisies and Young Americas unchanged from last week at 21-21½c.

WHO AM I?

I am the fellow that Milks with
"Mehring's Milker"
It makes me smile when I see poor guys pulling away by hand. Buy a Mehring Milker and you can smile too. It was the first practical milker and still has the lead in speed, efficiency and cheapness of operation and repair. Send for a catalogue and be convinced. It will milk one or two cows at once. Price $80 cash or $85 on trial. Also engine power milkers.
W. M. MEHRING, Keymar, Maryland

WASHINGTON WEEKLY MARKETGRAM

FEED.—Demand for wheatfeeds better. High protein feeds in poor request, jobbers showing little more disposition to buy July and August bran but unwilling to pay higher asking prices. Country demand light. Receipts and movement fair. Offerings and production most feeds good.

Quoted July 14.—Bran $14.50 Minneapolis, $22.25 Philadelphia; middlings $16 Minneapolis; $23.75 Philadelphia; flour middlings $22 Minneapolis, $29.50 Philadelphia; gluten feed $28.85 Chicago; 36% cottonseed meal $40.50 Memphis, $41 Atlanta; yellow hominy feed $24 Chicago; linseed meal $45 Chicago. No. 1 alfalfa meal $17.75 Kansas City.

GRAIN.—Prices lower first two days of week on favorable weather and restricted export demand, but the undertone during the remainder of the week up to the 14th was generally good. Wet weather in Southwest, rail strike and apprehension of rust damage to spring wheat were main bullish influences. Chicago September corn up 1¾c net; only fractional change in Chicago September wheat.

On the 14th wheat prices declined on favorable weather and increased country offerings. Less strength in cash market; export demand only fair. Corn firm on strength in cash corn market. Exporters after cash corn; country offerings small early but Illinois and Iowa sold more freely on upturn.

Closing prices in Chicago cash market: No. 2 red winter wheat $1.17; No. 2 hard winter wheat $1.19; No. 2 mixed corn 65c; No. 2 yellow corn 66c; No. 3 white oats 38c. Average farm prices: No. 2 mixed corn in Central Iowa 52c; No. 2 hard winter wheat in Central Kansas $1. Closing future prices: Chicago September wheat $1.13¾; Chicago September corn 64⅞; Minneapolis September wheat $1.20⅞; Kansas City September wheat $1.06¼; Winnipeg October wheat $1.18¼.

DAIRY PRODUCTS.—Butter market firm most of week; but easy at the close; fancy grades have been in heaviest demand. Receipts continue heavy; storage stocks steadily increasing.

Closing prices, 92 score butter: New York 37½c; Boston 37½c; Philadelphia 38c; Chicago 35½c.

Cheese prices slightly lower on Wisconsin Cheese Board; market easier. Movement into storage continues as production is decreasing. Effect of hot weather on quality is increasing.

Prices at Wisconsin primary cheese markets July 13. Twins 19½c; Daisies 20c; Double Daisies 19¾c; Young Americas 20c; Longhorns 20½c; Square Prints 21c.

Never relate your misfortune, and never grieve over what you cannot prevent. Always try to look on the bright side of life and make the best of things.

Many a man's aim in life is restricted to shooting off his mouth about it.

TESTING AT MERRYALL

Long time testing is making good progress at the Merryall Farms. Milanhurst Johanna Queen 600285 is now about to finish her year with well over 18,000 lb. milk, 810 lb. butter. This good three-year-old is by King Pontiac Merdu and is a granddaughter of the great sire Korndyke Abbekerk, who has very close to 100 daughters in the advanced registry. Mr. C. W. Newman writes that Milanhurst was in no condition when she was started in her test about a year ago and that they are very well satisfied with her performance under the circumstances.

De Kol Klassje Hillside, another member of the Merryall herd, has produced in the first six months of her long time test, 594 lb. butter, 14,296 lb. milk. One month of the test she made 112 lb. butter, 2,751 lb. milk. Mr. Newman concludes by saying that these records are all being made under the most ordinary conditions, and nothing is being done for these cows that any farmer cannot do.

DISTRIBUTE CALVES IN MISSOURI

The Andrew County Dairy Calf Club held its drawing and distribution at Jefferson County, Mo., on June 3d. This is one of the projects of the Andrew County Farm bureau.

The sum of $10 was added to the price of each calf as a mutual insurance feature to protect the members against loss; in case none of the calves were lost the insurance will be returned to the members. The calf club leader is Robert Wrigley. The committee who bought the Holstein calves consisted of C. C. Dixon and M. R. Rudolph, assisted by Professor E. M. Harmon of the Dairy Division of the University of Missouri. At the distribution, Mr. Harmon gave valuable instruction to the young members on judging and selecting of a dairy heifer and touched briefly on dairy feeding. The calves will be shown at the Andrew County Fair the last week in August.

HOLSTEIN BEEF CATTLE

Mr. James Christensen of Wolbach, Neb. on June 23rd brought to Omaha a load of beef cattle including four Holstein steers that were 18 months old and averaged to scale 1,202 lb. selling at eight dollars per hundred. He also had 13 light steers ranging from seven months to just under a year old, which averaged 820 lb.

Mr. Christensen said, "There appears to be a bright future for breeders of good Holstein cattle, as the demand for dairy stock gets better all the time."

KOSTER MAKES GOOD RECORD

A record of 30.84 lb. butter and 635 lb. milk in seven days has been made by Esther Butter Girl Ormsby, owned by Mr. John P. Koster of Okabena, Minn. Mr. Koster has a real good herd of purebred cattle including several animals that he believes are fully as good as his new thirty pound cow.

We Don't Keep Holsteins

They keep us so our 125 head are bred for every-day and all the year 'round production. Oh! Boy! How they do milk! They are good individuals too, that straight-backed, big-barrelled kind, carrying large, square udders, with a teat on each corner. You won't have to hide any stock you get from

Ellis Ellsworth
Meshoppen, Pa.
R. No. 4.

The herd is run on the Accredited Plan.

GOOD HEIFER ON POOR FARM

A splendid record has been made by Hillside Doris Ormsby a yearling heifer owned by the Central Poor District of Luzerne County, Pa. The District at Retreat, Pa., has a high class herd of registered Holsteins and Hillside Doris Ormsby was purchased by representatives of the District from the herd of J. N. & W. H. Conyingham with the understanding that she was to be fitted for test and given an official record under the expert handling of D. P. Honeywell, the Superintendent of Hillside Farms.

Hillside Doris Ormsby freshened at one year, 9 months and 19 days old and in due time was put in official test. She made 19.3 lb. butter in a week and was then shipped to Retreat. She evidently liked her new home for she gained in milk production until her owners decided to give her an opportunity to increase her record. A supervisor was obtained and Doris hung up marks of 432.3 lb. milk 20.34 lb. butter in seven days and 1,824.7 lb. milk and 81.66 lb. butter in 30 days. Her best days milk was 65.9 lb. Her test was completed 50 days after freshening and on the 50th day she made 61.1 lb. milk.

The sire of Hillside Duchess Ormsby is King Pontiac Maple Knoll Ormsby 201,844 a son of the double century sire, King of the Pontiacs. The dam of this bull is Maple Knoll Helen who has twice made over 30 lb. butter in seven days and as a six-year-old produced 33.16 lb. butter in a week. She is a daughter of King Korndyke Hengerveld Ormsby himself a noted sire and a maternal brother to Sir Pietertje Ormsby Mercedes, both being sons of the former world champion for 30 day butter production Pietertje Maid Ormsby. Hillside Doris Ormsby was handled in her new home by J. O. Vaughn, herdsman for the Central Poor District.

The District herd is headed by Hillside Pontiac Korndyke, a bull who is brother to the new acquisition, being by the same sire. His dam, Hillside Saxon, two different years has made over 30 lb. butter in seven days and over 600 lb. milk. As a seven year old she produced 32.29 lb. butter in a week and as an eight-year-old milked 663.8 lb. milk in seven days. She is the dam of Hillside Lady Saxon, a junior two-year-old that made 23.73 lb. butter in seven days averaging over 70 lb. milk in a day. Hillside Saxon is by Woodcrest Pietje and from Hillside Annette, the first cow in Pennsylvania to make a thirty pound official seven day butter record. There are quite a number of other good ones in the District herd including a daughter of Matador Segis Walker and a daughter of Pietertje Prospect Colantha, the former Brentwood herdsire, he a son of Segis Pietertje Prospect the 37,000 lb. world's milk champion.

The best books are treasurers of good words and golden thoughts which, remembered and cherished, become our abiding companions and comforters.

ALDENHEIM

The Aldenheim herd is the joint property of J. M. Hemingway, Hampton, Iowa, and Clyde Sawyer, Latimer, Iowa, and is headed by King Pontiac Changeling Geiske, a remarkably well bred young bull whose pedigree includes a number of great transmitting sires and wonderful producing cows. He traces eight times to century sires and he also traces eight times to the famous foundation cow De Kol 2d, the world champion of her day.

The sire of King Pontiac Changeling Geiske is King of the Changelings, a son of King of the Pontiacs and of Previous Second Changeling, a cow with an official record of 33.26 lb. butter and dam of a 31.72 lb. cow, Previous Abbekerk Changeling. Previous Second Changeling is by Changeling Butter Boy, and is from the 25.88 lb. cow, Previous Second.

Lady Changeling, the dam of this young bull, has a seven-day official record of 20.39 lb. butter and is by the century sire, Changeling Butter Boy from the 22-lb. cow, Lady Geiske Concordia, whose dam is an A. R. O. granddaughter of the century sire, Aaggie Cornucopia Johanna Lad and whose sire is a double grandson of Homestead Girl De Kol's Sarcastic Lad, another century sire.

The records of the seven nearest dams shown in a four-generation pedigree of King Pontiac Changeling Geiske average 25.58 lb., the milk of these cows averaging 4% butterfat. The proprietors plan to breed a herd of cattle that can be depended upon to produce milk testing 4% or better.

SPECIAL PRIZES

The banks of Calhoun County, Michigan, will give a number of special prizes to be awarded for purebred exhibits at the Calhoun County Fair which will be held at Marshall, September 19-22. The sum of $200 has been set aside which will be divided into four prizes of $50 each, for the best exhibit of four cows and a bull of four breeds, Holstein, Jersey, Durham and Angus. There are no entry fees at this fair, while stalls and bedding are free. The cattle superintendent is A. J. Tobey of Marshall.

A just estimate of people's characters cannot be formed by what others say about them, but one may judge somewhat by what they say of others.

The happy man has a double chance of being good, and the same rule applies to children.

COWS AT THE REFORMATORY

Not all the good Holstein herds owned by the Michigan State Institutions are at Traverse City and Pontiac. There is a real good herd at Ionia, the property of the Michigan Reformatory.

The herd carries the blood of King Segis, King of the Pontiacs, and Colantha Johanna Lad and there are 14 cows and heifers at the present time with advanced registered records. The present senior herdsire is King Sadie Vale Pontiac Veeman No. 278995, whose sire is a 37 lb. son of King Korndyke Sadie Vale. The junior herdsire is Traverse Echo Sylvia Kaastra, whose pedigree includes the names of some of the greatest cows of the breed.

They have some real good cows in this herd. One member, Reformatory Coronis Lunde Pauline, made 92 lb. milk in a day and 604 lb. in seven days, while her full sister, Reformatory Coronis Lunde, made 26½ lb. butter in a week, averaging over 70 lb. milk a day. A ten-year-old cow Pauline Burke Veeman, without any fitting, averaged over 70 lb. milk a day after giving birth to a 112 lb. calf. The herd is under the charge of H. O. Loomis and under his management a new calf and testing barn has been built.

AN ILLINOIS DOLLY

Dolly De Kol Aaltje Hengerveld, owned by George A. Fox, newly elected director of the National Association, is making a good record at the State Association testing plant at Dixon, Illinois, producing in 96 days 7,731.9 lb. milk and 320.24 lb. butter. During May she produced 2,477.7 lb. 83.63 lb. butter. Dolly, who is four years old, was bred by Mr. Fox who is president of the Illinois Holstein-Friesian Association and treasurer of the Illinois Agricultural Association which numbers over one hundred thousand members.

TWO-YEAR-OLD SON OF ORMSBY KORNDYKE LAD

His dam by King of the Alcartras, made 463.3 lb. milk, 23½ lb. butter in a week; 18,918 lb. milk, 883.8 lb. butter in a year as a junior 3-year-old. Will sell reasonable as I own 2 sons of O. K. L., the greatest of all sires.

The Holstein Breeder and Dairyman, Harrisburg, Pa.

GREW INTO THE BUSINESS

Few people outside the state of Missouri, know that Glenn G. Davis of Columbia, now president of the Missouri Holstein-Friesian Association, owes his education and his present standing to the dairy cow.

When Mr. Davis started to college he had very little money but had an eye for business and a natural inclination for cattle. There was a demand for milk at good prices, in Columbia. Mr. Davis rented an old stable near his rooming house and purchased a good dairy cow. The milk market was good and he made money and kept adding to his dairy herd so that before very long he moved his cows to the outskirts of Columbia and rented a farm.

In 1916, Mr. Davis finished school and started dairying in earnest. He purchased a few purebred Holsteins, continuing to supply Columbia with milk. He now owns his farm and a herd of 90 head of purebred stock. Mr. Davis has shown members of his herd at high-class fairs with considerable success, and this herd combines individuality and producing capacity.

HOLLAND COLONY

There is a regular little Holland on the Hollandale colony at Albert Lea, Minn., which is being developed by the Payne Investment Company. This company has purchased 250 head of grade Holstein heifers, ranging in age from six to eighteen months, and plans to increase this number to approximately two thousand. They are very anxious to get a real Dutch Holstein breeder to locate in this community as they plan to sell these heifers, as they freshen, to Dutch dairymen who settle on the colony, taking one-half of the cream check until the purchase price is paid. A breeder of purebred Holsteins would have an assured market for young bulls and for surplus stock, but only a real Hollander is desired.

SHOWING LED TO SALE

L. Ward of Ardmore, Okla., attended the Oklahoma State Fair where he saw Colantha Beets De Kol win first prize. He liked the bull and some time afterwards opened negotiations for his purchase. June 30th he purchased the bull now 15 months old and three cows from the Modern Woodmen Sanatorium, Colorado Springs, Colo., paying $5,000 for the four of which $3,000 is reported to be the price of the young sire. Mr. Ward is anxious to make Carter County, in which Ardmore is situated, one of the leading dairy counties of the state.

HEAVYWEIGHTS

Most of the Holstein auctioneers are good sized men, but in this respect they do not come up to three Ohio auctioneers, residing in Defiance County. Col. Jesse D. Gorrell weighs 315 lb., and so does Col. Fred L. Perdue, while Col. Keith B. Gorrell tips the scales at 480 pounds.

BRED IN THE PURPLE

They have quite a nice bull calf on the Deysher Farms of which Clark Berry, the superintendent, is very fond. This prospective herdsire has a remarkable pedigree. His dam is only a heifer, that at her last freshening, as a junior three-year-old produced 22.2 lb. butter in a week, averaging 79 lb. milk in a day. Back of her are long lines of high record animals. Her dam, Queen Walker Pietertje, has a seven-day butter record of 30.77 lb., and is a daughter of King Colantha Clothilde, a 31-lb. sire, and her dam, Segis Walker Pietertje, is a 27.85-lb. daughter of Ruby Walker Pietertje, a 30.22-lb. cow with six A. R. O. daughters, one of which is herself a thirty-pound cow. Ruby Walker Pietertje's dam is Lillian Walker Pietertje, 611.6 lb. milk and over 30. lb. butter in seven days. Her dam is Beauty Pietertje, 30.51 lb., the best known daughter of the famous Prilly, 25.2 lb. Thus the seven maternal dams in a straight line of the young bull have large official records.

Queen Echo Model Walker, dam of the young bull mentioned, is by King Echo Sylvia Model, a daughter of Champion Echo Sylvia Pontiac and of Belle Model Pietje 2d, 28.16 lbs. She is by King Pontiac Artis Canada from Belle Model Pietje, 36.13 lb. butter in seven days as a four-year-old, and three times above thirty pound. Her dam, Belle Model Johanna 2d, went twice over 37 lb. and her dam is the 25-lb. cow Belle Model Johanna.

The sire of this young bull is Empire Segis, the well known son of King Joh, and the 33.63-lb. cow Gypsy Lyons. It would take an entire issue of THE HOLSTEIN BREEDER AND DAIRYMAN to tell in full of all of the records of the sire and dam of this bull.

There are thirty dams in his pedigree with seven-day butter records averaging 32.02 lb. and in the tabulation no cow is counted twice. The fifteen nearest dams average 30.12 lb. The six nearest dams back of the dam averaged 30.44 lb. in seven days official work and the seven nearest dams, including the dam herself as a heifer averaged 29.27 lb.

There is a remarkable combination of great transmitting sires. King Joh, King Lyons, Champion Echo Sylvia Pontiac, King of the Pontiacs, Colantha Johanna Lad, Admiral Walker Pietertje, Pontiac Korndyke and Hengerveld De Kol, are only a few that we recall. Such a bull is bred to sire producing animals. If there is anything at all in the mating of Holstein blood lines, his potency is assured.

Lady—"What is your name, little boy?"

Jimmy—"James Jones, ma'am"

Lady—"But your mother's name is Brown."

Jimmy—"Yes'm; but she got married again, and I didn't."

Jones—"Did you ever notice that most of the heroes are married men?"

Brown—"My dear fellow, every married man is a hero."

COUNTY PIONEER

A Holstein pioneer of Stephens County is W. F. Meyer who lives near Donnelly, Minn. Fourteen years ago, Mr. Meyer purchased his first purebred bull at Northfield. Until four years ago he had an exclusive grade herd. At that time he purchased from R. B. Goodhue of Northfield. two cows and from these cows he has 11 descendents in his herd to-day. Three years ago he purchased another animal and early in 1920 he secured seven head from New York State and afterwards purchased five more females at Ashby, Minn. He now has a herd of 25 females and two herdsires, all purebreds.

The Meyer farm consists of 200 acres of which eight are in alfalfa. He has a few purebred Poland China hogs headed by a son of Liberator Leader.

PERSISTENT MILKER

There is a Holstein in Birmingham, Ala., by the name of Flossie Johanna Korndyke No. 315,407, her owner is F. B. Dunlay. Flossie was born August 22, 1915. She milked continuously for nearly two years and a half after dropping her first calf. No continuous record has been made of her production but she is giving an average of five gallon of milk a day eight months after freshening and her owner believes that there is not another cow in her part of the country that ever equalled her record.

Entire Herd of

24 Head for Sale

Consisting of

13 cows; 4 heifers over two years old; 1 herd bull four years old; 5 heifer calves from eight months to one month old; 1 bull, five months old.

All tuberculin tested and sound. Attractive registered herd and proposition.

ROOTS—A NEGLECTED CROP

I am satisfied from my own experience that roots, especially mangels and yellow globe beets, are a valuable feed for different kinds of stock, and can be inexpensively grown, if the ground is properly prepared before seeding.

My first experience with them was when I had charge of Wm. A. Russel's farm and herd of Holsteins in Massachusetts in the 70's. By a liberal use of them the first winter, I increased the flow of milk and greatly reduced the expense of grain. For late fall and the first half of winter I used mangel wurzels, and the yellow globe till the following May.

When I came to Aurora, Illinois, in 1879, I grew them in much larger quantities and fed to both cattle and horses. I prefer them to turnips for they do not taint milk; they also require less work in tending. After a little practice, a man can thin them and clip out weeds in the row with a hoe. A proper cultivator will do the rest. I seldom found it necessary to go through them more than once with a hoe.

To feed to horses, I found it paid well to cook the roots in a large tank. I covered the beets with oats,, so that I confined the steam, and they were quickly cooked. I then mixed the whole lot and the oats were soon cooked and while hot I put the mess in a tight box, mixed with cut hay. In a very short time the hay was well steamed.

Doing this a little before evening feeding time, a portion was fed warm to the horses for supper and greatly relished. The remainder was covered closely and was still warm for breakfast. As evidence of what a finish it put on my horses, at one of the Chicago shows, it was reported around the building that I did it with Holstein milk. One of the prominent exhibitors came to me and said, "Brown, your horses are in the finest condition of any in the show.'" "Is it true you used Holstein milk in fitting them?" I told him what they had been fed, and given regular daily exercise on a tread power cutting hay and grinding grain, and that the only drop of Holstein milk *ever* fed was one spring to some yearling stallions that had wintered badly. Having a surplus of milk, I used some on those colts, but did not see any material benefits resulting.

When I moved to Texas, I kept on with the same feed for my horses that were kept up. In that hot climate I found it satisfactory and much cheaper and safer than all grain. I made it there my main feed, for nine months of the year, because of the long growing season.

I never used cooked beets for feeding cows, but I see no reason why it should not be equally good for them. By mixing alfalfa meal instead of hay, beets, cooked with a small addition of corn meal, would make a quick growing hog feed. In England and Scotland turnips are grown in great quantities for cattle and sheep.

For sheep to feed, a wire netting fence is stretched across the turnip field (which is usually long and narrow), which confines the sheep to a limited piece; when they have finished that piece, the fence is moved and so on till the whole field is finished. In that way the sheep harvest the crop and fertilize the land.

If beets were the cheapest feed for me during the 80's when oats sold at 18 to 20 cents per bushel, corn at 22 and 25 cents, bran at $7.50 per ton in carlots, and oil meal at $25 per ton, why not now with all grain at greatly increased prices? I found the cost of preparing it a mere trifle after I had properly fitted for it. GEO. E. BROWN, *Illinois.*

ENJOYING GOOD TRADE

Thirty-eight carloads of Holsteins have been shipped from Barron County, Wis., since last fall and there is still a large number that will be sold this summer and fall, reports William Meisegeier, Secretary of the Barron County Holstein Breeders Association.

North and South Dakota and Southwestern Minnesota have taken the majority of the animals. The latest shipment of three carloads left Barron the middle of June. The cars were decorated with black and white banners which informed the world that some of Barron County's world-famous cattle were going to new homes. The consignment consisted of grade Holsteins, heifers and calves, two purebred Holstein bulls and several grade Guernseys. They were consigned to Sioux Falls, S. D., and were in charge of W. H. Shafer of that place and Lloyd Krahenbuhl of Barron. Mr. Shafer is buying for a chain of South Dakota bankers who to encourage the establishment of dairying in the Sioux Falls region, are letting the farmers of that territory have the cattle at cost and are giving them 18 months time to pay, so that the indebtedness can be met by the proceeds derived from the sale of the product of the animals.

VALUABLE BOOKLET FREE

Any one who is planning to sell purebred Holsteins by auction in the near future whether in a dispersion or a consignment sale, should send to the Backus Brothers Pedigree Company for their new booklet, "The Management of a Public Sale." A new edition of this publication is just off the press and will be sent free on request. The Backus Brothers Company have a well-earned reputation as pedigree compilers and catalog makers and the manager, R. Austin Backus, is a well-known figure at public sales both as manager and as reader of pedigrees of which he has a remarkable knowledge. Much of his experience has been condensed into the booklet which will be found well worth owning.

Deceit is in haste, but honesty can wait a fair leisure.

Be it ever so homely there's no face like your own.

BOARD MADE GOOD BUY

There are three Holsteins on the school farm at Virginia, Minn., that were purchased by the Board of Education and that have practically paid for themselves in the first five months of the year.

Rosa Beauty DeKol from January to June 1st produced a little over 10,000 lb. milk, or a ton a month, and she showed a net gain of $295.41 over the cost of her feed. The Board of Directors paid $300.00 for this cow and a bull calf she dropped was sold for $200.00.

In the first five months of the year, Magnet of Waukesha produced 6,355 lb. milk. This cow cost the Board $230.00 and she has made a net profit of $177.18.

The Board paid $240.00 for Clearland DeKol Pietertje. She dropped a bull calf which sold for $75.00 and has produced around 6,000 lb. milk in the first five months of the year and has made a net profit of $178.00. A two-year-old, A. W. D. Piebe Longfield Burke made a 23 lb. seven day butter record and promises to be the prize animal of the entire purchase. These cows are under the care of Nels Nelson of the high school agricultural department.

MOSCRIP AT JANESVILLE

The Holstein judge at the Rock County fair, held at Janesville, Wis., will be Wm. S. Moscrip, who will also judge at the Wisconsin State Fair this year.

The woman who is always looking for bargains might try marrying a man who is in reduced circumstances.

The old reliable **O. H. COWS' RELIEF** has stood the test since 1899, with a record of over 99% satisfied users, on cases of Caked Bag; Spider in Teat; Heifers with first calf; Frost Bites; Chapped, Cracked, Sore or Injured Teats.

We guarantee it, and will refund your money if it does not satisfy you. Prices 60c and $1.20 at General Stores, Druggists and Feed Dealers.

If dealers cannot supply you, send direct to us. Booklet on Cow Troubles mailed free on request.

Our Husbands' Mfg. Co.

Lyndon, **Vermont**

THE KING OF CRESTMONT

Harry Gates, proprietor of Crestmont Farm, has a grand old sire in King Pontiac Alcartra Wayne. Several daughters of this bull have made state records, two full sisters making records in the 305-day division that average 764.82 lb. butter and 17,063.1 lb. milk. One of these heifers was a junior two-year-old and the other a junior three-year-old at the time of starting these records and each heifer won Association prizes for both mlk and butter fat production.

Another daughter of this bull in a different herd made seven state records. This is the great Pauline Mabel Maid that as a senior three-year-old produced 32.76 lb. butter and 753.7 lb. milk in a week and in thirty days made 132.18 lb. butter, averaging 103½ lb. milk in a day. This heifer freshened twice as a two-year-old; the first time she made 22.25 lb. butter, 530.5 lb. milk in a week, then in her senior form she raised this record to 28.15 lb. butter and 627.8 lb. milk. She is a wonderful producer and her three great records made before she was four years old stand well toward the top.

As a junior sire, Mr. Gates is using BradCo Holingen Korndyke, one of the bulls owned by the Bradford County Bull Association. The dam of this bull made, at 26 months old, 22.52 lb. butter in a week, averaging 65 lb. milk a day. Her thirty-day record was 90.88 lb. butter and she averaged over 62 lb. milk a day. In the full year she produced 873.18 lb. butter and 18,324 lb. milk. She is a daughter of King Model and was from K. P. Cornucopia, 947.72 lb. butter in a year is a senior two-year-old and 1,050 lb. butter in a year from three-quarters as a mature cow. She is from Cornucopia Mae De Kol, 27.86 lb. butter and 568.4 lb. milk in a week and was sired by the great King of the Pontiacs.

The sire of BradCo Holingen Korndyke is King Holingen Fayne Valdessa, a son of King Valdessa and Finderne Holingen Fayne, 37.34 lb. butter in seven days and 1,395.06 lb. butter in 365 days, the world's record junior three-year-old for production of butter in a year.

The combination of blood lines in the pedigree of the calves born last winter on the Crestmont Farm is all that can be desired. Then, too, they possess individuality of a high order and are in every way desirable.

A young sailor was on shore leave and went to see a girl he knew slightly. They were sitting on the piazza, and finding it hard to keep up the conversation, she finally asked:

"You have been on the water so long I suppose you are accustomed to sea legs."

"Honest, ma'am" he stammered. "I wasn't even looking at 'em.

Harold ran back from the lion in the museum. "Don't be afraid, dear," grandma said: "that lion is stuffed."

"Yes," said Harold, "but mebbe he isn't stuffed so full that he couldn't find room for a little boy like me."

DEPRESSION ABOUT OVER

I am glad to report the sale and shipment of five choice heifer calves to John M. Etiman, Mapleton, N. D. Also the shipment of a load of sixteen high grade, heavy producing cows to Vera Cruz, Mexico.

Business conditions would seem to be improving and inquiries of stock are coming in much more rapidly than for the past two years. Apparently business depression is about over. The letters and inquiries which I have received from the West and South indicate that the majority of the farmers, due to the crisis through which we have passed, are now awakening to the danger of the one-crop system of farming. They are planning to get away from the same as rapidly as possible. C. W. Ellis, Jr.

MAKING GOOD START

The Lancaster County Holstein-Friesian Breeders' Association is starting out in great shape. The Executive Committee met on June 20th and took in 22 new members. John H. Shirk, of Lancaster is president of the association and H. Elvin Herr, of Herrbrook Farms, New Danville, is secretary.

It will be remembered that in his speech of acceptance of his election to the presidency, Mr. Shirk stressed the Holstein purebred as a practical proposition rather than a speculative one. The Lancaster breeders are on the right track.

GOT ALL THE MONEY

A cow of mixed breeding or no breeding at all, owned by Charles Baton of Oneco, Conn., is reported as giving 3,027½ lb. milk in sixty days. She is said to be fifteen years old, and her owner sold her product for a trifle over $150. She was on pasture and in addition received a moderate amount of grain. No, her owner did not ship her milk, he sold right to the consumer.

"Why don't you get rid of that horse if he's so vicious?" asked one farmer of another.

"Well, you see, Jim," replied the other, "I hates to give in. If I was to sell that horse he'd regard it as a personal victory. "He's been tryin' for the last six years to get rid of me."

"Yes, sir, it's pretty hard collecting money just now; I know it."

"Haven't you tried and failed?"

"Oh, no."

"How, then, do you know that money is hard to collect?"

"Because several people have tried to collect some from me."

"What is this leathery stuff?"

"Filet of sole."

"Take it away, waiter, and see if you can get me a nice tender piece from the upper part of the boot, with the buttons removed."

SELL DAIRY FEED WITH FORMULA

The Eastern States Farmers' Exchange has adopted the policy of selling dairy feed on an open formula, that is, with a statement showing the exact amounts of each ingredient used.

This announcement comes on the heels of the conference of New England dairy feed and nutrition experts representing the various New England colleges, which was held under the auspices of the Eastern States Farmers' Exchange a short time ago.

With the open formula the farmer can figure out for himself what it costs to make up the ration. There is nothing concealed regarding the actual value of the ration as a milk producer. The farmer can detect at a glance if there are cheap feed or fillers used and how much of it has been used. With the open formula he can figure out for himself the actual value of the ration based on the current market prices of the ingredients used and can tell if the margin which is added for mixing, merchandising cost and profit is exorbitant.

Howard W. Selby, manager of the Eastern States Farmers' Exchange in announcing the new policy said: "This important step which the Eastern States Farmers' Exchange is taking, is but another move on the part of this organization to bring about fair dealing and better business methods for the protection of the farmer; it also means coöperation with the properly constituted agencies in their program of fostering better feeding practices. Equal emphasis is being placed by this organization on putting into operation a plan for the most economical distribution of these feeds at the lowest possible cost. We encourage the purchase of a mixed ration, soundly balanced, with an open formula distributed at lowest possible cost."

Now that the germ of love's been found,
This one thing must be sure;
If love is a disease profound,
Divorce must be the cure.

C. L. TEMPLAR, - Syracuse, New York

DEAN FARREL'S CONVENTION ADDRESS

At the recent Kansas City Convention Dr. F. D. Farrel, director of the Kansas Experiment Station, spoke on Tuesday to the delegates, members and friends, on "Dairy Feeds for the South-West." This was one of the educational features of the convention program and appealed largely to the locality in which the annual meeting of 1922 was held.

"In deciding upon dairy feeds for the Southwest, one of the first things dairymen and cattle owners of this locality must do is to free themselves of certain agricultural traditions." The Southwest district as understood by Dean Farrell is the region including Southern Nebraska, Kansas, Oklahoma, Eastern Colorado and the northern part of the Texas Panhandle.

"This region has distinctive climatic features. Characteristically, it has almost rainless winters and long growing seasons, during which periods of drouth alternate with periods of abundant moisture. The natural conditions of the region differentiate it sharply from the region lying north and east of Kansas City to the Great Lakes and Atlantic.

"In this latter region—Northeastern United States—agriculture has been dominated very largely by Western European agricultural traditions. Most of the crops grown and most of the methods of growing them are essentially European. Generally speaking, these crops and methods are not well suited to the Southwest.

"We now know enough about the Southwest to be certain that a variety of satisfactory dairy feeds can be grown there. Such traditional dairy feeds as red clover and bluegrass, which came to us from Europe, and corn, which is one of the most important dairy feeds of Northeastern United States, we must "forget about" in most of the Southwest.

Has Splendid Native Pastures.

For pasture purposes the Southwest has millions of acres of native pasture; Sudan grass, an African immigrant, which supplements the native pastures admirably by being the most productive during hot weather, when native grasses grow but little or not at all; and sweet clover, an immigrant from Western Asia, which will furnish excellent pasture for a period of from four to six months, and especially during the late spring and early autumn. Besides these, the Southwest can and does use winter wheat and rye, both of which commonly are pastured throughout the winter. Moderate pasturing of winter wheat probably benefits the soil by adding manure to it, and does not injure the plants for grain production. Rye, as winter pasture, may well be alternated with Sudan grass as summer pasture on the same land.

"As hay crops, the Southwest has, first of all, alfalfa, which came to us from South America and Western Asia, and which is without a superior as a protein feed. It does well throughout the eastern third of the region on both upland and bottom land, but in the western third and to some extent in the central third, its growth must be limited to bottom lands. In many parts of the region sweet clover can also be used as a hay crop. For the uplands of the western two-thirds and particularly the western third of the region, Sudan grass and other leafy sorghum varieties are highly useful and dependable as hay crops.

Sorghums Are Best for Silage.

"The sorghums, because of their incomparable ability to produce crops in spite of drouth, are and should be the principal silage plants for the Southwest. They practically never fail when given reasonable good care. Their value as compared with corn as a silage crop is not impressive in a wet year, but in a year when a severe drouth occurs the sorghum crops clearly excel corn. As silage crops, the so-called saccharine sorghums are more likely to out-yield corn than the grain sorghums are. It has been ascertained at Kansas Agricultural College that on the average an acre of sweet sorghum (cane) silage produces 30,000 pounds of milk, when an average acre of corn silage produces 22,000 pounds of milk, each kind of silage being fed in connection with alfalfa hay and concentrates.

"There is no lack of grain feeds for the Southwestern Dairyman. Generally speaking, he can safely depend on a crop of grain sorghum. In many parts of the region barley yields satisfactorily. In a three-year feeding experiment at Kansas Agricultural College cane seed was compared with corn as a part of a ration fed to dairy cows, and the results obtained from cane were just as good as those obtained from corn.

"The Southwest seems certain to become a great region of dairy production. Whether it fulfills this apparent destiny will depend, in a large measure, on the kind of feeds it uses and the efficiency with which it uses them. The Southwestern dairymen will do well to free themselves from the traditions of Western Europe and Northeastern United States with reference to most of their dairy feeds. This applies particularly to the old standbys of Northeastern United States—corn, red clover and bluegrass. As the southwestern dairymen come to realize that the Southwest has distinctive climatic peculiarities which readily can be capitalized, and that these peculiariies require a different type of agriculture from that of Northeastern United States, they will use distinctive dairy feeds and practice Southwestern methods of growing and utilizing them."

"Do Englishmen understand American slang?"

"Some of them do. Why?"

"My daughter is to be married in London, and the earl has cabled me to come across."

He who attempts to have the penny and the cake too, will find that his cake is all dough.

NICE MICHIGAN HERD

Dr. R. H. Crissey, of Lansing, Mich., has a herd of thirty animals headed by Zeldenrust King Segis Pontiac, who is a son of King Segis Pontiac and is from a daughter of the King of the Pontiacs, the second dam a daughter of Prince Segis Korndyke. He carries the blood of a number of wonderful transmitting sires and traces to Hengerveld De Kol, King Segis and Pontiac Korndyke. He is thus three-quarters brother to King Segis Pontiac Count, King Segis Pontiac Alcartra and a number of other noted sires.

There are a number of real good producers in this herd. Lakeside Weedie Canary has a record of 29 lb. butter, made in seven days as a three-year-old. She is a granddaughter of the great Michigan sire, Sir Korndyke Veeman Hengerveld and her sire is Alcartra Pontiac Butter Boy, a son of King Segis Pontiac Alcartra.

This little herd has been built up during the past four years and is built upon the foundation of production, breeding and individuality. Official records are being made right along and more can be expected.

THREE GOOD ONES

The Ellington, Wisconsin Testing Association herd leader for May consists of fifteen grade and purebreds owned by John Bohl. They averaged 1,129 lb. milk, 37.1 lb. butter fat. Three registered Holsteins, Queen, Marie and Beulah are the Northern Farms Company's best cows. Queen, an eleven-year-old, made 78.4 lb. fat, 2,119 lb. milk. Marie, a seven-year-old, produced 2,449 lb. milk, 75.9 lb. fat and the four-year-old Beulah produced 64.6 lb. fat, 2,310 lb. milk.

While you are standing up for your rights you can't very well be sitting on other people's.

IT COSTS A LOT LESS

to advertise and make sales than it does to feed surplus stock.

Write for particulars about the Holstein Breeder and Dairyman special advertising offer for one year contracts on space of this size.

"IT'S A WINNER"

WHEN THE COWS COME HOME

By Agnes E. Mitchell

With klingle, klangle, klingle,
'Way down the dusty dingle,
The cows are coming home:
Now sweet and clear, and faint and low,
The airy twinklings come and go,
Like chimings from some far-off tower,
Or patterings of an April shower
That makes the daisies grow;
Ko-klarg, ko-klarg, ko-klinglelingle,
'Way down the darkening dingle,
The cows come slowly home;
And old-time friends, and twilight plays,
And starry nights, and sunny days,
When the cows come home.

With jingle, jangle, jingle,
Soft sounds that sweetly mingle,
The cows are coming home:
Malvine, and Pearl, and Florimel,
De Kamp, Redrose, and Gretchen Schell,
Queen Bess, and Sylph, and Spangled Sue,
Across the fields I hear her moo-oo,
And clang her silver bell;
Go-ling, go-lang, yo-lingelingle,
With faint, far sounds that mingle,
The cows come slowly home;
And mother songs of long-gone years,
And baby joys, and childish tears,
And youthful hopes, and youthful fears,
When the cows come home.

With ringle, rangle, ringle,
By twos and threes and single,
The cows are coming home:
Through the violet air we see the town,
And the summer sun a-slipping down;
The maple in the hazel glade
Throws down the path a longer shade,
And the hills are growing brown;
To-ring, to-ring, to-ringleringle,
By threes and fours and single,
The cows come slowly home:
The same sweet sound of wordless psalm,
The same sweet June-day rest and calm,
The same sweet scent of bud and balm,
When the cows come home.

With a tinkle, tankle, tinkle,
Through fern and periwinkle,
The cows are coming home:
A-loitering in the checkered stream,
Where the sun-rays glance and gleam,
Starine, Peachbloom, and Phoebe Phyllis
Stand knee-deep in the creamy lilies
In a drowsy dream;
To-link, to-lank, to-linklelinkle,
O'er the banks with buttercups a-twinkle,
The cows come slowly home:
And up through memory's deep ravine
Come the brook's old song and its old-time sheen,
And the crescent of the silver queen,
When the cows come home.

With a klingle, klangle, klingle,
With a loo-oo, and moo-oo, and jingle,
The cows are coming home:
And over there on Morlin Hill
Hear the plaintive cry of the whippoorwill;
The dew-drops lie on the tangled vines,
And over the poplars Venus shines,
And over the silent mill;
Ko-ling, ko-lang, ko-linglelingle;
With ting-a-ling and jingle
The cows come slowly home:
Let down the bars; let in the train
Of long-gone songs, and flower and rain,
For dear old times come back again
When the cows come home.

EDITOR GETS IN BAD

An Oklahoma editor just about to go to press "pied" a couple of articles, one concerning a public sale, and the other a write-up of a wedding. He asked the office devil to get the two articles together—and he did—but here is how he put the two together, and the mixture was not known to the editor until an angry preacher and the mother of the bride apeared on the scene:

"William Smith and Miss Lucy Anderson were disposed of at public auction at my barn one mile east of a beautiful cluster of roses on her breast and two white calves before a background of farm implements too numerous to mention in the presence of about seventy guests including two milk cows, six mules, and one bob sled. Rev. Jackson tied the nuptial knot with 200 feet of hay rope and the bridal couple left on one John Deere gang plow for an extended trip with terms to suit purchasers. They will be at home to their friends with one good baby buggy and a few kitchen utensils after ten months from date of sale to responsible parties and some 50 chickens."—*Upshaw (Tex.) County Echo.*

TERSTREIP CHECKED

The triumphal progress of the B. Terstreip herd in the Adams County, Illinois Testing Association was checked during the month of May. A purebred Jersey attained the leadership with a production of 71.6 lb. fat, while a Terstreip cow was second with 65 lb. A Holstein, owned by Wilbur Coe, gave 61.4 lb. fat and another Holstein from the herd of the Soldiers' Home was third, with 58.1 lb. fat. Two hundred and twenty-eight cows were tested during the month.

A schoolmaster wrote this brief criticism on a boy's report: "A good worker, but talks too much."

When the report came back signed according to the rule by the boy's father it bore besides the signature this feeling retort: "You should hear his mother!"—*Selected.*

It pays to beat about the bush these days. That is where the moonshine is hidden.

PIONEER IMPORTER NOW A BANKER

During the trip, June 20th, of the Holstein breeders around Little Rock, Washington, those who participated were greatly interested in the unfailing success of C. J. Lord, president of the Capital National Bank, in picking the best cows at the different establishments and when the caravan stopped for lunch there was a demand that Mr. Lord tell something of his experiences. Mr. Lord made the revelation, surprising to quite a number of those present, that he had made fifteen trips to Holland and brought back with him purebred Holsteins. Among the animals he and his father imported were De Kol and De Kol 2d. From De Kol 2d have descended the many animals that have De Kol in their names.

This cow was born March 20, 1884 and was imported June 1, 1885 by B. B. Lord & Son, then of Sinclairville, New York. C. J. Lord was then nineteen years old. The importation, numbering seventeen animals, were practically all from the herd of P. De Boer, Schellinkhout, North Holland. As a four-year-old, De Kol 2d made a private record of something over 33 lb. butter in a week and after the beginning of official test work, she made her famous record of 26.58 lb. butter in seven days as a ten-year-old in the herd of Henry Stevens & Sons, Lacona, New York, this being a world's record until superseded by that of her stablemate Netherland Hengerveld, 26.67 lb. butter in seven days. Mr. Lord said: "I enjoy going back to New York and seeing how the Holsteins are getting along. I feel a personal interest in every Holstein I see, for with my father, I spent many an interesting and busy day helping to prove the quality of Holsteins and filling the demand for them. It's my ambition to some day have a good farm and Holsteins."

Among the herds visited were those of J. P. Johnson, Summers Bros., Ed Cross and John Hegloff. The picnic lunch was held on the Brewer Farm. H. E. McNatt of the Western Washington experiment Station, and Frank W. Kehrli, assistant dairy specialist of the State College, talked on dairying and Holsteins. Mr. Kehrli said that Thurston County's average production is lower than that of any other county in the state. The cows are just as good but the system of feeding is very poor. One herd, that of R. J. Kegley, had an average of 11,649 lb. milk and 424.5 lb. butter fat while another herd in the association had an average of 3,125 lb. milk, 125 lb. fat.

County Agricultural Agent, E. B. Stookey, who was instrumental in bringing about the tour, declared it one of the most successful conducted this season.

HOW TURERCULOSIS IS SPREAD

United States Department of Agriculture experts have been investigating how bovine tuberculosis is spread and have obtained answers from many cattle men in different states. About a dozen causes are indicated. The chief causes in New England the answers from that section claimed was the lack of testing hogs and grade cattle to be sure that they, as well as purebred animals, are free from disease when sold, the breeding to a common bull, serving cows outside the herd, the common drinking trough, milk from diseased animals fed to calves and hogs, unsanitary barns, drafty barns, underfeeding, the common pasture or pasturing boarder animals, and nosing at and breaking through fence lines by cattle some of which may be diseased.

In North Dakota, where range conditions are typical of those in many other States of the Northwest, unrestricted ranging of cattle was given as a common cause. Drinking at the same pool was another. The introduction of the disease was laid to cattle, not properly tested, being shipped into the State.

In parts where the pastures are fenced, the complaint was that the disease is spread by cattle nosing each other at fence lines. One breeder advocated a double line of fence to prevent this means of contact. Where purebred cattle are generally tested before being sold but grade cattle are not, much of the spread of the disease is laid to infected grade stock. Close housing in poorly ventilated buildings was given as a cause of disease by a few breeders. Some, from observation and experience, laid the spread of the disease to feeding calves and pigs, milk from tuberculous animals. From one source came the claim that it was spread from dead animals by dogs and hogs running at large and feeding upon the carcasses.

From Oklahoma came fewer reasons, but of the same type. Common pasture, importation of untested animals from other States and the sale of untested animals, foul stables, and contact with infected cattle in adjoining fields by breachy stock crawling through fences or stock nosing at fence lines.

The twelve causes of the spread of the disease reported generally were:

1. Unrestricted range or common pasture; 2. Common drinking pool or trough; 3. Introduction of untested cattle; 4. Nosing at fence lines; 5. Close foul housing; 6. Milk of infected animals fed to calves and hogs; 7. Trading of untested animals; 8. Dead animals eaten by dogs and hogs; 9. Breachy stock; 10. Breeding to a common bull; 11. Serving cows outside the herd; 12. Conditions unfavorable to health, as drafty barns and underfeeding.

"Tom," said his wife, "I don't believe you smoked one of those cigars I gave you on your birthday."

"That's right, my dear," he replied. "I'm going to keep them until our Johnny wants to learn to smoke."

STRAUSS MAKES THIRTY

A record of 30.59 lb. butter, 545.9 lb. milk has been made by Kingwood De Kol Hengerveld Segis, owned by Jerry Strauss of Glenbeulah, Wisconsin. She finished her record June 12th and was five years, two months and twelve days old at the time of freshening.

Mr. Strauss bought this cow at the Sheboygan County Sale on May 20, 1921 to which she was consigned by the Pinehurst Farms. Both Mr. Strauss and the test supervisor, T. W. Johnson, said that the cow would have made a much larger record had weather conditions been favorable for the days were hot and there were quite a number of thunderstorms which all agree are a bad combination for large official records. This is only the third time Mr. Strauss did official testing with any of his cows.

Kingwood De Kol Hengerveld Segis had a previous seven-day record of 24.55 lb. milk made as a junior three-year-old. Her sire, Maplecrest De Kol Prince, is a son of Friend Hengerveld De Kol Butter Boy. Her dam, Kingwood Hengerveld Segis has a record of 23.01 lb. fat in seven days made as a junior four-year-old and was sired by King Johanna Segis Fayne, who was by King Fayne Segis. Kingwood is of good size, has great capacity and evidences much dairy temperament. She freshened May 30th, dropping a bull calf by Pabst Pontiac Adonis.

CHAMPION BUTTER MAKER

The champion butter maker of the world is probably Mrs. W. C. Mudd, a lady living in Yorkshire, England, who recently celebrated her golden wedding by winning another prize in butter-making competition. In forty years of butter-making, she has made entries in 1,888 competitions and has won 477 blue ribbons, gold medals and other prizes.

As might be expected, Mrs. Mudd had more than a local reputation and at one time gave a demonstration of her skill before Queen Victoria. She has gained the right to be called a successful workman, or should we say workwoman?

PRODUCING GRADE

There is a grade Holstein cow, Twin Mound Skylark, owned by O. C. Siercks, of Hammond, Minn., that has produced 257 lb. butter fat and more than 6,000 lb. milk in three months. She made 2,266 lb. milk, 85.9 lb. butter fat equivalent to 107.28 lb. butter in thirty days. Mr. Siercks has a herd of 14 cows which are enrolled in the Zumbro Valley Cow Testing Association This herd has averaged better than 40 lb. butter fat every month this year.

Said a friend to the proud father of a college graduate who had just been awarded an A. M. degree:

"I suppose Robert will be looking for a Ph.D. next?"

"No. He will be looking for a J. O. B."—*Life.*

LOCAL HOLSTEIN TRADE MARK

The Holstein breeders' around New Salem, N. D., are a live wire progressive bunch and decided to have a local Holstein trade-mark. A prize of a purebred Holstein calf was offered for the best design and this prize was won by Mrs. H. E. Hagerman, of Mandan. The trade-mark chosen is disc-shaped, in the center is a black and white cow which acts as a background for a white field which bears the name "New Salem, N. D.," in clear black letters, also a cornucopia or "horn of plenty" from which rolls the weath which the production of dairy products brings to a community. At the base of the shield and prominent in the foreground is a pile of lignite and some bundles of wheat. In the space below the cow's head the end of a mine car shows; while the ends of a mining pick and shovel show above and below the shield. The slogan "The Center of Prosperity" is shown as a pennant at the top of the disc.

HEADS GRADE HERD

The new herdsire at the Gray's Harbor County Farm, Montesano, Washington, is Chehalis Segis Model Forbes, who was recently purchased from the herd of E. M. Moses, of Chehalis. At the present time there are only seven grade cows on the county farm, under the care of the superintendent, Fred Cook. The cows are kept to supply milk for the dining room. They have no silage but they get lots of succulent food, such as kale, mangels and cabbage.

ON THEIR OCEAN TRIP

The eighteen head of registered Holstein-Friesians purchased by F. Perritt Gentil, of Curacao, Dutch West Indies will go to their new home in the care of W. B. Allen, one of the employees of the Purebred Live Stock Sales Company of Brattleboro, Vermont. The animals cost about $5,000 and it is estimated that it will cost Mr. Gentil $2,000 more to get them home. They will be shipped from Brattleboro to New York by express and be transferred to the steamer Flora. The nautical journey of 2,400 miles will take about nine days.

Many are dead but they don't lie down.

U-COP-CO
SPECIAL
STEAM BONE
MINERAL MEAL
—for—
CATTLE
Recent experiments conducted by the U. S. Dept. of Agriculture, show that the milk production of many cows is limited by inadequate mineral supply.
U-COP-CO SPECIAL STEAM BONE MINERAL MEAL
an especially prepared product, is readily eaten by dairy cows. It insures plenty of minerals for a heavy production, helps prevent disease and makes better breeding stock. Prices in 125-lb. sacks:
125 lbs. @ 3½c. lb..$4.38 1000 lbs. @ 3¼c. lb..$32.50
500 lbs. @ 3½c. lb..17.50 2000 lbs. @ 3c. lb.... 60.00
All prices F. O. B. our plant. Write for booklet.
UNITED CHEMICAL & ORGANIC PRODUCTS COMPANY
4200 South Marshfield Ave. - - - Chicago, Illinois

GREW INTO THE BUSINESS

Few people outside the state of Missouri, know that Glenn G. Davis of Columbia, now president of the Missouri Holstein-Friesian Association, owes his education and his present standing to the dairy cow.

When Mr. Davis started to college he had very little money but had an eye for business and a natural inclination for cattle. There was a demand for milk at good prices, in Columbia. Mr. Davis rented an old stable near his rooming house and purchased a good dairy cow. The milk market was good and he made money and kept adding to his dairy herd so that before very long he moved his cows to the outskirts of Columbia and rented a farm.

In 1916, Mr. Davis finished school and started dairying in earnest. He purchased a few purebred Holsteins, continuing to supply Columbia with milk. He now owns his farm and a herd of 90 head of purebred stock. Mr. Davis has shown members of his herd at high-class fairs with considerable success, and this herd combines individuality and producing capacity.

HOLLAND COLONY

There is a regular little Holland on the Hollandale colony at Albert Lea, Minn., which is being developed by the Payne Investment Company. This company has purchased 250 head of grade Holstein heifers, ranging in age from six to eighteen months, and plans to increase this number to approximately two thousand. They are very anxious to get a real Dutch Holstein breeder to locate in this community as they plan to sell these heifers, as they freshen, to Dutch dairymen who settle on the colony, taking one-half of the cream check until the purchase price is paid. A breeder of purebred Holsteins would have an assured market for young bulls and for surplus stock, but only a real Hollander is desired.

SHOWING LED TO SALE

L. Ward of Ardmore, Okla., attended the Oklahoma State Fair where he saw Colantha Beets De Kol win first prize. He liked the bull and some time afterwards opened negotiations for his purchase. June 30th he purchased the bull now 15 months old and three cows from the Modern Woodmen Sanatorium, Colorado Springs, Colo., paying $5,000 for the four of which $3,000 is reported to be the price of the young sire. Mr. Ward is anxious to make Carter County, in which Ardmore is situated, one of the leading dairy counties of the state.

HEAVYWEIGHTS

Most of the Holstein auctioneers are good sized men, but in this respect they do not come up to three Ohio auctioneers, residing in Defiance County. Col. Jesse D. Gorrell weighs 315 lb., and so does Col. Fred L. Perdue, while Col. Keith B. Gorrell tips the scales at 480 pounds.

BRED IN THE PURPLE

They have quite a nice bull calf on the Deysher Farms of which Clark Berry, the superintendent, is very fond. This prospective herdsire has a remarkable pedigree. His dam is only a heifer, that at her last freshening, as a junior three-year-old produced 22.2 lb. butter in a week, averaging 79 lb. milk in a day. Back of her are long lines of high record animals. Her dam, Queen Walker Pietertje, has a seven-day butter record of 30.77 lb., and is a daughter of King Colantha Clothilde, a 31-lb. sire, and her dam, Segis Walker Pietertje, is a 27.85-lb. daughter of Ruby Walker Pietertje, a 30.22-lb. cow with six A. R. O. daughters, one of which is herself a thirty-pound cow. Ruby Walker Pietertje's dam is Lillian Walker Pietertje, 611.6 lb. milk and over 30. lb. butter in seven days. Her dam is Beauty Pietertje, 30.51 lb., the best known daughter of the famous Prilly, 25.2 lb. Thus the seven maternal dams in a straight line of the young bull have large official records.

Queen Echo Model Walker, dam of the young bull mentioned, is by King Echo Sylvia Model, a daughter of Champion Echo Sylvia Pontiac and of Belle Model Pietje 2d, 28.16 lbs. She is by King Pontiac Artis Canada from Belle Model Pietje, 36.13 lb. butter in seven days as a four-year-old, and three times above thirty pound. Her dam, Belle Model Johanna 2d, went twice over 37 lb. and her dam is the 25-lb. cow Belle Model Johanna.

The sire of this young bull is Empire Segis, the well known son of King Joh, and the 33.63-lb. cow Gypsy Lyons. It would take an entire issue of THE HOLSTEIN BREEDER AND DAIRYMAN to tell in full of all of the records of the sire and dam of this bull.

There are thirty dams in his pedigree with seven-day butter records averaging 32.02 lb. and in the tabulation no cow is counted twice. The fifteen nearest dams average 30.12 lb. The six nearest dams back of the dam averaged 30.44 lb. in seven days official work and the seven nearest dams, including the dam herself as a heifer averaged 29.27 lb.

There is a remarkable combination of great transmitting sires. King Joh, King Lyons, Champion Echo Sylvia Pontiac, King of the Pontiacs, Colantha Johanna Lad, Admiral Walker Pietertje, Pontiac Korndyke and Hengerveld De Kol, are only a few that we recall. Such a bull is bred to sire producing animals. If there is anything at all in the mating of Holstein blood lines, his potency is assured.

Lady—"What is your name, little boy?"

Jimmy—"James Jones, ma'am"

Lady—"But your mother's name is Brown."

Jimmy—"Yes'm; but she got married again, and I didn't."

Jones—"Did you ever notice that most of the heroes are married men?"

Brown—"My dear fellow, every married man is a hero."

COUNTY PIONEER

A Holstein pioneer of Stephens County is W. F. Meyer who lives near Donnelly, Minn. Fourteen years ago, Mr. Meyer purchased his first purebred bull at Northfield. Until four years ago he had an exclusive grade herd. At that time he purchased from R. B. Goodhue of Northfield. two cows and from these cows he has 11 descendents in his herd to-day. Three years ago he purchased another animal and early in 1920 he secured seven head from New York State and afterwards purchased five more females at Ashby, Minn. He now has a herd of 25 females and two herdsires, all purebreds.

The Meyer farm consists of 200 acres of which eight are in alfalfa. He has a few purebred Poland China hogs headed by a son of Liberator Leader.

PERSISTENT MILKER

There is a Holstein in Birmingham, Ala., by the name of Flossie Johanna Korndyke No. 315,407, her owner is F. B. Dunlay. Flossie was born August 22, 1915. She milked continuously for nearly two years and a half after dropping her first calf. No continuous record has been made of her production but she is giving an average of five gallon of milk a day eight months after freshening and her owner believes that there is not another cow in her part of the country that ever equalled her record.

Entire Herd of

24 Head for Sale

Consisting of

13 cows; 4 heifers over two years old; 1 herd bull four years old; 5 heifer calves from eight months to one month old; 1 bull, five months old.

All tuberculin tested and sound. Attractive registered herd and proposition.

ROOTS—A NEGLECTED CROP

I am satisfied from my own experience that roots, especially mangels and yellow globe beets, are a valuable feed for different kinds of stock, and can be inexpensively grown, if the ground is properly prepared before seeding.

My first experience with them was when I had charge of Wm. A. Russel's farm and herd of Holsteins in Massachusetts in the 70's. By a liberal use of them the first winter, I increased the flow of milk and greatly reduced the expense of grain. For late fall and the first half of winter I used mangel wurzels, and the yellow globe till the following May.

When I came to Aurora, Illinois, in 1879, I grew them in much larger quantities and fed to both cattle and horses. I prefer them to turnips for they do not taint milk; they also require less work in tending. After a little practice, a man can thin them and clip out weeds in the row with a hoe. A proper cultivator will do the rest. I seldom found it necessary to go through them more than once with a hoe.

To feed to horses, I found it paid well to cook the roots in a large tank. I covered the beets with oats,, so that I confined the steam, and they were quickly cooked. I then mixed the whole lot and the oats were soon cooked and while hot I put the mess in a tight box, mixed with cut hay. In a very short time the hay was well steamed.

Doing this a little before evening feeding time, a portion was fed warm to the horses for supper and greatly relished. The remainder was covered closely and was still warm for breakfast. As evidence of what a finish it put on my horses, at one of the Chicago shows, it was reported around the building that I did it with Holstein milk. One of the prominent exhibitors came to me and said, "Brown, your horses are in the finest condition of any in the show." "Is it true you used Holstein milk in fitting them?" I told him what they had been fed, and given regular daily exercise on a tread power cutting hay and grinding grain, and that the only drop of Holstein milk *ever* fed was one spring to some yearling stallions that had wintered badly. Having a surplus of milk, I used some on those colts, but did not see any material benefits resulting.

When I moved to Texas, I kept on with the same feed for my horses that were kept up. In that hot climate I found it satisfactory and much cheaper and safer than all grain. I made it there my main feed, for nine months of the year, because of the long growing season.

I never used cooked beets for feeding cows, but I see no reason why it should not be equally good for them. By mixing alfalfa meal instead of hay, beets, cooked with a small addition of corn meal, would make a quick growing hog feed. In England and Scotland turnips are grown in great quantities for cattle and sheep.

For sheep to feed, a wire netting fence is stretched across the turnip field (which is usually long and narrow), which confines the sheep to a limited piece; when they have finished that piece, the fence is moved and so on till the whole field is finished. In that way the sheep harvest the crop and fertilize the land.

If beets were the cheapest feed for me during the 80's when oats sold at 18 to 20 cents per bushel, corn at 22 and 25 cents, bran at $7.50 per ton in carlots, and oil meal at $25 per ton, why not now with all grain at greatly increased prices? I found the cost of preparing it a mere trifle after I had properly fitted for it. GEO. E. BROWN, *Illinois.*

ENJOYING GOOD TRADE

Thirty-eight carloads of Holsteins have been shipped from Barron County, Wis., since last fall and there is still a large number that will be sold this summer and fall, reports William Meisegeier, Secretary of the Barron County Holstein Breeders Association.

North and South Dakota and Southwestern Minnesota have taken the majority of the animals. The latest shipment of three carloads left Barron the middle of June. The cars were decorated with black and white banners which informed the world that some of Barron County's world-famous cattle were going to new homes. The consignment consisted of grade Holsteins, heifers and calves, two purebred Holstein bulls and several grade Guernseys. They were consigned to Sioux Falls, S. D., and were in charge of W. H. Shafer of that place and Lloyd Krahenbuhl of Barron. Mr. Shafer is buying for a chain of South Dakota bankers who to encourage the establishment of dairying in the Sioux Falls region, are letting the farmers of that territory have the cattle at cost and are giving them 18 months time to pay, so that the indebtedness can be met by the proceeds derived from the sale of the product of the animals.

VALUABLE BOOKLET FREE

Any one who is planning to sell purebred Holsteins by auction in the near future whether in a dispersion or a consignment sale, should send to the Backus Brothers Pedigree Company for their new booklet, "The Management of a Public Sale." A new edition of this publication is just off the press and will be sent free on request. The Backus Brothers Company have a well-earned reputation as pedigree compilers and catalog makers and the manager, R. Austin Backus, is a well-known figure at public sales both as manager and as reader of pedigrees of which he has a remarkable knowledge. Much of his experience has been condensed into the booklet which will be found well worth owning.

Deceit is in haste, but honesty can wait a fair leisure.

Be it ever so homely there's no face like your own.

BOARD MADE GOOD BUY

There are three Holsteins on the school farm at Virginia, Minn., that were purchased by the Board of Education and that have practically paid for themselves in the first five months of the year.

Rosa Beauty DeKol from January to June 1st produced a little over 10,000 lb. milk, or a ton a month, and she showed a net gain of $295.41 over the cost of her feed. The Board of Directors paid $300.00 for this cow and a bull calf she dropped was sold for $200.00.

In the first five months of the year, Magnet of Waukesha produced 6,355 lb. milk. This cow cost the Board $230.00 and she has made a net profit of $177.18.

The Board paid $240.00 for Clearland DeKol Pietertje. She dropped a bull calf which sold for $75.00 and has produced around 6,000 lb. milk in the first five months of the year and has made a net profit of $178.00. A two-year-old, A. W. D. Piebe Longfield Burke made a 23 lb. seven day butter record and promises to be the prize animal of the entire purchase. These cows are under the care of Nels Nelson of the high school agricultural department.

MOSCRIP AT JANESVILLE

The Holstein judge at the Rock County fair, held at Janesville, Wis., will be Wm. S. Moscrip, who will also judge at the Wisconsin State Fair this year.

The woman who is always looking for bargains might try marrying a man who is in reduced circumstances.

The old reliable **O. H. COWS' RELIEF** has stood the test since 1899, with a record of over 99% satisfied users, on cases of Caked Bag; Spider in Teat; Heifers with first calf; Frost Bites; Chapped, Cracked, Sore or Injured Teats.

We guarantee it, and will refund your money if it does not satisfy you. Prices 60c and $1.20 at General Stores, Druggists and Feed Dealers.

If dealers cannot supply you, send direct to us. Booklet on Cow Troubles mailed free on request.

Our Husbands' Mfg. Co.

Lyndon, Vermont

THE KING OF CRESTMONT

Harry Gates, proprietor of Crestmont Farm, has a grand old sire in King Pontiac Alcartra Wayne. Several daughters of this bull have made state records, two full sisters making records in the 305-day division that average 764.82 lb. butter and 17,063.1 lb. milk. One of these heifers was a junior two-year-old and the other a junior three-year-old at the time of starting these records and each heifer won Association prizes for both mlk and butter fat production.

Another daughter of this bull in a different herd made seven state records. This is the great Pauline Mabel Maid that as a senior three-year-old produced 32.76 lb. butter and 753.7 lb. milk in a week and in thirty days made 132.18 lb. butter, averaging 103½ lb. milk in a day. This heifer freshened twice as a two-year-old; the first time she made 22.25 lb. butter, 530.5 lb. milk in a week, then in her senior form she raised this record to 28.15 lb. butter and 627.8 lb. milk. She is a wonderful producer and her three great records made before she was four years old stand well toward the top.

As a junior sire, Mr. Gates is using BradCo Holingen Korndyke, one of the bulls owned by the Bradford County Bull Association. The dam of this bull made, at 26 months old, 22.52 lb. butter in a week, averaging 65 lb. milk a day. Her thirty-day record was 90.88 lb. butter and she averaged over 62 lb. milk a day. In the full year she produced 873.18 lb. butter and 18,324 lb. milk. She is a daughter of King Model and was from K. P. Cornucopia, 947.72 lb. butter in a year is a senior two-year-old and 1,050 lb. butter in a year from three-quarters as a mature cow. She is from Cornucopia Mae De Kol, 27.86 lb. butter and 568.4 lb. milk in a week and was sired by the great King of the Pontiacs.

The sire of BradCo Holingen Korndyke is King Holingen Fayne Valdessa, a son of King Valdessa and Finderne Holingen Fayne, 37.34 lb. butter in seven days and 1,395.06 lb. butter in 365 days, the world's record junior three-year-old for production of butter in a year.

The combination of blood lines in the pedigree of the calves born last winter on the Crestmont Farm is all that can be desired. Then, too, they possess individuality of a high order and are in every way desirable.

A young sailor was on shore leave and went to see a girl he knew slightly. They were sitting on the piazza, and finding it hard to keep up the conversation, she finally asked:

"You have been on the water so long I suppose you are accustomed to sea legs."

"Honest, ma'am" he stammered. "I wasn't even looking at 'em.

Harold ran back from the lion in the museum. "Don't be afraid, dear," grandma said: "that lion is stuffed."

"Yes," said Harold, "but mebbe he isn't stuffed so full that he couldn't find room for a little boy like me."

DEPRESSION ABOUT OVER

I am glad to report the sale and shipment of five choice heifer calves to John M. Etiman, Mapleton, N. D. Also the shipment of a load of sixteen high grade, heavy producing cows to Vera Cruz, Mexico.

Business conditions would seem to be improving and inquiries of stock are coming in much more rapidly than for the past two years. Apparently business depression is about over. The letters and inquiries which I have received from the West and South indicate that the majority of the farmers, due to the crisis through which we have passed, are now awakening to the danger of the one-crop system of farming. They are planning to get away from the same as rapidly as possible. C. W. Ellis, Jr.

MAKING GOOD START

The Lancaster County Holstein-Friesian Breeders' Association is starting out in great shape. The Executive Committee met on June 20th and took in 22 new members. John H. Shirk, of Lancaster is president of the association and H. Elvin Herr, of Herrbrook Farms, New Danville, is secretary.

It will be remembered that in his speech of acceptance of his election to the presidency, Mr. Shirk stressed the Holstein purebred as a practical proposition rather than a speculative one. The Lancaster breeders are on the right track.

GOT ALL THE MONEY

A cow of mixed breeding or no breeding at all, owned by Charles Baton of Oneco, Conn., is reported as giving 3,027½ lb. milk in sixty days. She is said to be fifteen years old, and her owner sold her product for a trifle over $150. She was on pasture and in addition received a moderate amount of grain. No, her owner did not ship her milk, he sold right to the consumer.

"Why don't you get rid of that horse if he's so vicious?" asked one farmer of another.

"Well, you see, Jim," replied the other, "I hates to give in. If I was to sell that horse he'd regard it as a personal victory. "He's been tryin' for the last six years to get rid of me."

"Yes, sir, it's pretty hard collecting money just now; I know it."

"Haven't you tried and failed?"

"Oh, no."

"How, then, do you know that money is hard to collect?"

"Because several people have tried to collect some from me."

"What is this leathery stuff?"

"Filet of sole."

"Take it away, waiter, and see if you can get me a nice tender piece from the upper part of the boot, with the buttons removed."

SELL DAIRY FEED WITH FORMULA

The Eastern States Farmers' Exchange has adopted the policy of selling dairy feed on an open formula, that is, with a statement showing the exact amounts of each ingredient used.

This announcement comes on the heels of the conference of New England dairy feed and nutrition experts representing the various New England colleges, which was held under the auspices of the Eastern States Farmers' Exchange a short time ago.

With the open formula the farmer can figure out for himself what it costs to make up the ration. There is nothing concealed regarding the actual value of the ration as a milk producer. The farmer can detect at a glance if there are cheap feed or fillers used and how much of it has been used. With the open formula he can figure out for himself the actual value of the ration based on the current market prices of the ingredients used and can tell if the margin which is added for mixing, merchandising cost and profit is exorbitant.

Howard W. Selby, manager of the Eastern States Farmers' Exchange in announcing the new policy said: "This important step which the Eastern States Farmers' Exchange is taking, is but another move on the part of this organization to bring about fair dealing and better business methods for the protection of the farmer; it also means coöperation with the properly constituted agencies in their program of fostering better feeding practices. Equal emphasis is being placed by this organization on putting into operation a plan for the most economical distribution of these feeds at the lowest possible cost. We encourage the purchase of a mixed ration, soundly balanced, with an open formula distributed at lowest possible cost."

Now that the germ of love's been found,
This one thing must be sure;
If love is a disease profound,
Divorce must be the cure.

DEAN FARREL'S CONVENTION ADDRESS

At the recent Kansas City Convention Dr. F. D. Farrel, director of the Kansas Experiment Station, spoke on Tuesday to the delegates, members and friends, on "Dairy Feeds for the South-West." This was one of the educational features of the convention program and appealed largely to the locality in which the annual meeting of 1922 was held.

"In deciding upon dairy feeds for the Southwest, one of the first things dairymen and cattle owners of this locality must do is to free themselves of certain agricultural traditions." The Southwest district as understood by Dean Farrell is the region including Southern Nebraska, Kansas, Oklahoma, Eastern Colorado and the northern part of the Texas Panhandle.

"This region has distinctive climatic features. Characteristically, it has almost rainless winters and long growing seasons, during which periods of drouth alternate with periods of abundant moisture. The natural conditions of the region differentiate it sharply from the region lying north and east of Kansas City to the Great Lakes and Atlantic.

"In this latter region—Northeastern United States—agriculture has been dominated very largely by Western European agricultural traditions. Most of the crops grown and most of the methods of growing them are essentially European. Generally speaking, these crops and methods are not well suited to the Southwest.

"We now know enough about the Southwest to be certain that a variety of satisfactory dairy feeds can be grown there. Such traditional dairy feeds as red clover and bluegrass, which came to us from Europe, and corn, which is one of the most important dairy feeds of Northeastern United States, we must "forget about" in most of the Southwest.

Has Splendid Native Pastures.

For pasture purposes the Southwest has millions of acres of native pasture; Sudan grass, an African immigrant, which supplements the native pastures admirably by being the most productive during hot weather, when native grasses grow but little or not at all; and sweet clover, an immigrant from Western Asia, which will furnish excellent pasture for a period of from four to six months, and especially during the late spring and early autumn. Besides these, the Southwest can and does use winter wheat and rye, both of which commonly are pastured throughout the winter. Moderate pasturing of winter wheat probably benefits the soil by adding manure to it, and does not injure the plants for grain production. Rye, as winter pasture, may well be alternated with Sudan grass as summer pasture on the same land.

"As hay crops, the Southwest has, first of all, alfalfa, which came to us from South America and Western Asia, and which is without a superior as a protein feed. It does well throughout the eastern third of the region on both upland and bottom land, but in the western third and to some extent in the central third, its growth must be limited to bottom lands. In many parts of the region sweet clover can also be used as a hay crop. For the uplands of the western two-thirds and particularly the western third of the region, Sudan grass and other leafy sorghum varieties are highly useful and dependable as hay crops.

Sorghums Are Best for Silage.

"The sorghums, because of their incomparable ability to produce crops in spite of drouth, are and should be the principal silage plants for the Southwest. They practically never fail when given reasonable good care. Their value as compared with corn as a silage crop is not impressive in a wet year, but in a year when a severe drouth occurs the sorghum crops clearly excel corn. As silage crops, the so-called saccharine sorghums are more likely to out-yield corn than the grain sorghums are. It has been ascertained at Kansas Agricultural College that on the average an acre of sweet sorghum (cane) silage produces 30,000 pounds of milk, when an average acre of corn silage produces 22,000 pounds of milk, each kind of silage being fed in connection with alfalfa hay and concentrates.

"There is no lack of grain feeds for the Southwestern Dairyman. Generally speaking, he can safely depend on a crop of grain sorghum. In many parts of the region barley yields satisfactorily. In a three-year feeding experiment at Kansas Agricultural College cane seed was compared with corn as a part of a ration fed to dairy cows, and the results obtained from cane were just as good as those obtained from corn.

"The Southwest seems certain to become a great region of dairy production. Whether it fulfills this apparent destiny will depend, in a large measure, on the kind of feeds it uses and the efficiency with which it uses them. The Southwestern dairymen will do well to free themselves from the traditions of Western Europe and Northeastern United States with reference to most of their dairy feeds. This applies particularly to the old standbys of Northeastern United States—corn, red clover and bluegrass. As the southwestern dairymen come to realize that the Southwest has distinctive climatic peculiarities which readily can be capitalized, and that these peculiariies require a different type of agriculture from that of Northeastern United States, they will use distinctive dairy feeds and practice Southwestern methods of growing and utilizing them."

"Do Englishmen understand American slang?"

"Some of them do. Why?"

"My daughter is to be married in London, and the earl has cabled me to come across."

He who attempts to have the penny and the cake too, will find that his cake is all dough.

NICE MICHIGAN HERD

Dr. R. H. Crissey, of Lansing, Mich., has a herd of thirty animals headed by Zeldenrust King Segis Pontiac, who is a son of King Segis Pontiac and is from a daughter of the King of the Pontiacs, the second dam a daughter of Prince Segis Korndyke. He carries the blood of a number of wonderful transmitting sires and traces to Hengerveld De Kol, King Segis and Pontiac Korndyke. He is thus three-quarters brother to King Segis Pontiac Count, King Segis Pontiac Alcartra and a number of other noted sires.

There are a number of real good producers in this herd. Lakeside Weedie Canary has a record of 29 lb. butter, made in seven days as a three-year-old. She is a granddaughter of the great Michigan sire, Sir Korndyke Veeman Hengerveld and her sire is Alcartra Pontiac Butter Boy, a son of King Segis Pontiac Alcartra.

This little herd has been built up during the past four years and is built upon the foundation of production, breeding and individuality. Official records are being made right along and more can be expected.

THREE GOOD ONES

The Ellington, Wisconsin Testing Association herd leader for May consists of fifteen grade and purebreds owned by John Bohl. They averaged 1,129 lb. milk, 37.1 lb. butter fat. Three registered Holsteins, Queen, Marie and Beulah are the Northern Farms Company's best cows. Queen, an eleven-year-old, made 78.4 lb. fat, 2,119 lb. milk. Marie, a seven-year-old, produced 2,449 lb. milk, 75.9 lb. fat and the four-year-old Beulah produced 64.6 lb. fat, 2,310 lb. milk.

While you are standing up for your rights you can't very well be sitting on other people's.

IT COSTS A LOT LESS

to advertise and make sales than it does to feed surplus stock.

Write for particulars about the Holstein Breeder and Dairyman special advertising offer for one year contracts on space of this size.

"IT'S A WINNER"

WHEN THE COWS COME HOME

By Agnes E. Mitchell

With klingle, klangle, klingle,
'Way down the dusty dingle,
The cows are coming home:
Now sweet and clear, and faint and low,
The airy twinklings come and go,
Like chimings from some far-off tower,
Or patterings of an April shower
That makes the daisies grow;
Ko-klarg, ko-klarg, ko-klinglelingle,
'Way down the darkening dingle,
The cows come slowly home;
And old-time friends, and twilight plays,
And starry nights, and sunny days,
When the cows come home.

With jingle, jangle, jingle,
Soft sounds that sweetly mingle,
The cows are coming home:
Malvine, and Pearl, and Florimel,
De Kamp, Redrose, and Gretchen Schell,
Queen Bess, and Sylph, and Spangled Sue,
Across the fields I hear her moo-oo,
And clang her silver bell;
Go-ling, go-lang, yo-lingelingle,
With faint, far sounds that mingle,
The cows come slowly home;
And mother songs of long-gone years,
And baby joys, and childish tears,
And youthful hopes, and youthful fears,
When the cows come home.

With ringle, rangle, ringle,
By twos and threes and single,
The cows are coming home:
Through the violet air we see the town,
And the summer sun a-slipping down;
The maple in the hazel glade
Throws down the path a longer shade,
And the hills are growing brown;
To-ring, to-ring, to-ringleringle,
By threes and fours and single,
The cows come slowly home:
The same sweet sound of wordless psalm,
The same sweet June-day rest and calm,
The same sweet scent of bud and balm,
When the cows come home.

With a tinkle, tankle, tinkle,
Through fern and periwinkle,
The cows are coming home:
A-loitering in the checkered stream,
Where the sun-rays glance and gleam,
Starine, Peachbloom, and Phoebe Phyllis
Stand knee-deep in the creamy lilies
In a drowsy dream;
To-link, to-lank, to-linklelinkle,
O'er the banks with buttercups a-twinkle,
The cows come slowly home:
And up through memory's deep ravine
Come the brook's old song and its old-time sheen,
And the crescent of the silver queen,
When the cows come home.

With a klingle, klangle, klingle,
With a loo-oo, and moo-oo, and jingle,
The cows are coming home:
And over there on Morlin Hill
Hear the plaintive cry of the whippoorwill;
The dew-drops lie on the tangled vines,
And over the poplars Venus shines,
And over the silent mill;
Ko-ling, ko-lang, ko-linglelingle;
With ting-a-ling and jingle
The cows come slowly home:
Let down the bars; let in the train
Of long-gone songs, and flower and rain,
For dear old times come back again
When the cows come home.

Oscar Smith & Son, Albany, N.Y.

EDITOR GETS IN BAD

An Oklahoma editor just about to go to press "pied" a couple of articles, one concerning a public sale, and the other a write-up of a wedding. He asked the office devil to get the two articles together—and he did—but here is how he put the two together, and the mixture was not known to the editor until an angry preacher and the mother of the bride apeared on the scene:

"William Smith and Miss Lucy Anderson were disposed of at public auction at my barn one mile east of a beautiful cluster of roses on her breast and two white calves before a background of farm implements too numerous to mention in the presence of about seventy guests including two milk cows, six mules, and one bob sled. Rev. Jackson tied the nuptial knot with 200 feet of hay rope and the bridal couple left on one John Deere gang plow for an extended trip with terms to suit purchasers. They will be at home to their friends with one good baby buggy and a few kitchen utensils after ten months from date of sale to responsible parties and some 50 chickens."—*Upshaw (Tex.) County Echo.*

TERSTREIP CHECKED

The triumphal progress of the B. Terstreip herd in the Adams County, Illinois Testing Association was checked during the month of May. A purebred Jersey attained the leadership with a production of 71.6 lb. fat, while a Terstreip cow was second with 65 lb. A Holstein, owned by Wilbur Coe, gave 61.4 lb. fat and another Holstein from the herd of the Soldiers' Home was third, with 58.1 lb. fat. Two hundred and twenty-eight cows were tested during the month.

A schoolmaster wrote this brief criticism on a boy's report: "A good worker, but talks too much."

When the report came back signed according to the rule by the boy's father it bore besides the signature this feeling retort: "You should hear his mother!"—*Selected.*

It pays to beat about the bush these days. That is where the moonshine is hidden.

PIONEER IMPORTER NOW A BANKER

During the trip, June 20th, of the Holstein breeders around Little Rock, Washington, those who participated were greatly interested in the unfailing success of C. J. Lord, president of the Capital National Bank, in picking the best cows at the different establishments and when the caravan stopped for lunch there was a demand that Mr. Lord tell something of his experiences. Mr. Lord made the revelation, surprising to quite a number of those present, that he had made fifteen trips to Holland and brought back with him purebred Holsteins. Among the animals he and his father imported were De Kol and De Kol 2d. From De Kol 2d have descended the many animals that have De Kol in their names.

This cow was born March 20, 1884 and was imported June 1, 1885 by B. B. Lord & Son, then of Sinclairville, New York. C. J. Lord was then nineteen years old. The importation, numbering seventeen animals, were practically all from the herd of P. De Boer, Schellinkhout, North Holland. As a four-year-old, De Kol 2d made a private record of something over 33 lb. butter in a week and after the beginning of official test work, she made her famous record of 26.58 lb. butter in seven days as a ten-year-old in the herd of Henry Stevens & Sons, Lacona, New York, this being a world's record until superseded by that of her stablemate Netherland Hengerveld, 26.67 lb. butter in seven days. Mr. Lord said: "I enjoy going back to New York and seeing how the Holsteins are getting along. I feel a personal interest in every Holstein I see, for with my father, I spent many an interesting and busy day helping to prove the quality of Holsteins and filling the demand for them. It's my ambition to some day have a good farm and Holsteins."

Among the herds visited were those of J. P. Johnson, Summers Bros., Ed Cross and John Hegloff. The picnic lunch was held on the Brewer Farm. H. E. McNatt of the Western Washington experiment Station, and Frank W. Kehrli, assistant dairy specialist of the State College, talked on dairying and Holsteins. Mr. Kehrli said that Thurston County's average production is lower than that of any other county in the state. The cows are just as good but the system of feeding is very poor. One herd, that of R. J. Kegley, had an average of 11,649 lb. milk and 424.5 lb. butter fat while another herd in the association had an average of 3,125 lb. milk, 125 lb. fat.

County Agricultural Agent, E. B. Stookey, who was instrumental in bringing about the tour, declared it one of the most successful conducted this season.

HOW TUBERCULOSIS IS SPREAD

United States Department of Agriculture experts have been investigating how bovine tuberculosis is spread and have obtained answers from many cattle men in different states. About a dozen causes are indicated. The chief causes in New England the answers from that section claimed was the lack of testing hogs and grade cattle to be sure that they, as well as purebred animals, are free from disease when sold, the breeding to a common bull, serving cows outside the herd, the common drinking trough, milk from diseased animals fed to calves and hogs, unsanitary barns, drafty barns, underfeeding, the common pasture or pasturing boarder animals, and nosing at and breaking through fence lines by cattle some of which may be diseased.

In North Dakota, where range conditions are typical of those in many other States of the Northwest, unrestricted ranging of cattle was given as a common cause. Drinking at the same pool was another. The introduction of the disease was laid to cattle, not properly tested, being shipped into the State.

In parts where the pastures are fenced, the complaint was that the disease is spread by cattle nosing each other at fence lines. One breeder advocated a double line of fence to prevent this means of contact. Where purebred cattle are generally tested before being sold but grade cattle are not, much of the spread of the disease is laid to infected grade stock. Close housing in poorly ventilated buildings was given as a cause of disease by a few breeders. Some, from observation and experience, laid the spread of the disease to feeding calves and pigs, milk from tuberculous animals. From one source came the claim that it was spread from dead animals by dogs and hogs running at large and feeding upon the carcasses.

From Oklahoma came fewer reasons, but of the same type. Common pasture, importation of untested animals from other States and the sale of untested animals, foul stables, and contact with infected cattle in adjoining fields by breachy stock crawling through fences or stock nosing at fence lines.

The twelve causes of the spread of the disease reported generally were:

1. Unrestricted range or common pasture; 2. Common drinking pool or trough; 3. Introduction of untested cattle; 4. Nosing at fence lines; 5. Close foul housing; 6. Milk of infected animals fed to calves and hogs; 7. Trading of untested animals; 8. Dead animals eaten by dogs and hogs; 9. Breachy stock; 10. Breeding to a common bull; 11. Serving cows outside the herd; 12. Conditions unfavorable to health, as drafty barns and underfeeding.

"Tom," said his wife, "I don't believe you smoked one of those cigars I gave you on your birthday."

"That's right, my dear," he replied. "I'm going to keep them until our Johnny wants to learn to smoke."

STRAUSS MAKES THIRTY

A record of 30.59 lb. butter, 545.9 lb. milk has been made by Kingwood De Kol Hengerveld Segis, owned by Jerry Strauss of Glenbeulah, Wisconsin. She finished her record June 12th and was five years, two months and twelve days old at the time of freshening.

Mr. Strauss bought this cow at the Sheboygan County Sale on May 20, 1921 to which she was consigned by the Pinehurst Farms. Both Mr. Strauss and the test supervisor, T. W. Johnson, said that the cow would have made a much larger record had weather conditions been favorable for the days were hot and there were quite a number of thunderstorms which all agree are a bad combination for large official records. This is only the third time Mr. Strauss did official testing with any of his cows.

Kingwood De Kol Hengerveld Segis had a previous seven-day record of 24.55 lb. milk made as a junior three-year-old. Her sire, Maplecrest De Kol Prince, is a son of Friend Hengerveld De Kol Butter Boy. Her dam, Kingwood Hengerveld Segis has a record of 23.01 lb. fat in seven days made as a junior four-year-old and was sired by King Johanna Segis Fayne, who was by King Fayne Segis. Kingwood is of good size, has great capacity and evidences much dairy temperament. She freshened May 30th, dropping a bull calf by Pabst Pontiac Adonis.

CHAMPION BUTTER MAKER

The champion butter maker of the world is probably Mrs. W. C. Mudd, a lady living in Yorkshire, England, who recently celebrated her golden wedding by winning another prize in butter-making competition. In forty years of butter-making, she has made entries in 1,888 competitions and has won 477 blue ribbons, gold medals and other prizes.

As might be expected, Mrs. Mudd had more than a local reputation and at one time gave a demonstration of her skill before Queen Victoria. She has gained the right to be called a successful workman, or should we say workwoman?

PRODUCING GRADE

There is a grade Holstein cow, Twin Mound Skylark, owned by O. C. Siercks, of Hammond, Minn., that has produced 257 lb. butter fat and more than 6,000 lb. milk in three months. She made 2,266 lb. milk, 85.9 lb. butter fat equivalent to 107.28 lb. butter in thirty days. Mr. Siercks has a herd of 14 cows which are enrolled in the Zumbro Valley Cow Testing Association This herd has averaged better than 40 lb. butter fat every month this year.

Said a friend to the proud father of a college graduate who had just been awarded an A. M. degree:

"I suppose Robert will be looking for a Ph.D. next?"

"No. He will be looking for a J. O. B."—*Life.*

LOCAL HOLSTEIN TRADE MARK

The Holstein breeders' around New Salem, N. D., are a live wire progressive bunch and decided to have a local Holstein trade-mark. A prize of a purebred Holstein calf was offered for the best design and this prize was won by Mrs. H. E. Hagerman, of Mandan. The trade-mark chosen is disc-shaped, in the center is a black and white cow which acts as a background for a white field which bears the name "New Salem, N. D.," in clear black letters, also a cornucopia or "horn of plenty" from which rolls the weath which the production of dairy products brings to a community. At the base of the shield and prominent in the foreground is a pile of lignite and some bundles of wheat. In the space below the cow's head the end of a mine car shows; while the ends of a mining pick and shovel show above and below the shield. The slogan "The Center of Prosperity" is shown as a pennant at the top of the disc.

HEADS GRADE HERD

The new herdsire at the Gray's Harbor County Farm, Montesano, Washington, is Chehalis Segis Model Forbes, who was recently purchased from the herd of E. M. Moses, of Chehalis. At the present time there are only seven grade cows on the county farm, under the care of the superintendent, Fred Cook. The cows are kept to supply milk for the dining room. They have no silage but they get lots of succulent food, such as kale, mangels and cabbage.

ON THEIR OCEAN TRIP

The eighteen head of registered Holstein-Friesians purchased by F. Perritt Gentil, of Curacao, Dutch West Indies will go to their new home in the care of W. B. Allen, one of the employees of the Purebred Live Stock Sales Company of Brattleboro, Vermont. The animals cost about $5,000 and it is estimated that it will cost Mr. Gentil $2,000 more to get them home. They will be shipped from Brattleboro to New York by express and be transferred to the steamer Flora. The nautical journey of 2,400 miles will take about nine days.

Many are dead but they don't lie down.

U-COP-CO
SPECIAL
STEAM BONE
MINERAL MEAL
—FOR—
CATTLE
Recent experiments conducted by the U. S. Dept. of Agriculture, show that the milk production of many cows is limited by inadequate mineral supply.
U-COP-CO SPECIAL STEAM BONE MINERAL MEAL an especially prepared product, is readily eaten by dairy cows. It insures plenty of minerals for a heavy production, helps prevent disease and makes better breeding stock. Prices in 125-lb. sacks:

Lackawanna County Holsteins

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders—pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal jurisdiction.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

Lackawanna County Breeders' Association

Harry B. Miller, President — Robert Winship, Secretary

WYOMING COUNTY HOLSTEINS

are good ones.

Their health is O. K.

Their quality high class

while their producing ability is unsurpassed,

the only thing about them not away up is the price.

WYOMING COUNTY HOLSTEIN BREEDERS' ASSOCIATION

THE SPRINGDALE HERD

Built up during the past sixteen years on a basis of profitable production and re-production

Present Herd Sire

WOODMONT ECHO SYLVIA CHAMPION

His sire, Sir Pietje Echo Sylvia, is by Champion Echo Sylvia Pontiac and is therefore a brother to Eco-Sylv Belle, 31.15 lb. as a junior two year old, the present World Champion in her class.

His dam, Butter Boy Empress, made 30.27 lb. butter in seven days, has milked 100 lb. in a day and was first prize aged cow, first in the A. R. O. class and Grand Champion at the 1921 New York State Fair. Judge Haeger says she is one of the three best cows shown last year.

Most of our young animals are by

KING TWEEDE SPRING FARM

His sire is Spring Farm King, full brother to the former World Champion and first 44 lb. cow; regarded as one of the best young sires of the breed.

His dam, Dressie Lady Pontiac, has a record of 30.04 lb. butter, 614.8 lb. milk made in seven days and is full sister to the 33.98 lb. cow Dressie Princess Pontiac. Their sire is Spring Farm King Pontiac. Daughters of KING TWEEDE SPRING FARM now in test are making a splendid showing under real dairy conditions.

Our older cows are daughters of

TOBE RAG APPLE KORNDYKE

Son of Christmas Tobe, 2d, 31.66 lb. butter in seven days and former World Champion ten year old. She is also the dam of Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in thirty days as a senior four year old, both being World Records when made. She in turn is dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days, also as a four year old. Here is large production, generation after generation.

Animals from this herd will make good anywhere

B. F. JONES & SON — **SOUTH MONTROSE, PA.**

B. F. JONES W. HUGH JONES

Lilith Gem Kolkluff

a former member of the MERRYALL HERD, sold by us to the PENNSYLVANIA STATE COLLEGE, recently completed her sixth year's work in that herd by making, in 365 days, 22,084 lb. milk, 825.1 lb. butter, practically equalling her former year record of 22,247 lb. milk, 851 lb. butter. For four years she has averaged 20,294.4 lb. milk, 775.2 lb. butter. Her daughter, DE KOL KLASSJE LILITH, made 18,601.1 lb. milk, 749.95 lb. butter, in a year, in everyday work in the STATE COLLEGE HERD.

We have others of this type. Come and see them.

Herd under State and Federal Supervision.

ORIGIN HERD

OF REGISTERED HOLSTEINS THAT ARE NATURALLY HORNLESS

Origin Herd animals possess a combination of desirable characteristics: Individuality; Producing Ability; Persistency and Hornlessness.

A 1,000-lb. dam with two 1,000-lb. daughters.

The milk produced by this cow and her four A. R. S. O. daughters in year test averaged 3.98% butterfat.

The center cow is the dam
CORNUCOPIA PLUM JOHANNA
19,958.6 lb. milk, 1,056.78 lb. butter in a year, record made from three quarters.

The daughter on the right side is
KEYSTONE PLUM JOHANNA
22,190.7 lb. milk, 1,052.96 lb. butter in a year.

The daughter on the left hand is
KEYSTONE BEAUTY PLUM JOHANNA
25,787.5 lb. milk, 1,294.71 lb. butter in a year as a senior four-year-old. In strictly official year test. FORMER WORLD CHAMPION OF HER CLASS FOR BUTTER.

We judge our animals by their work at the pail, day by day, month by month, and year by year. You can depend upon the stock you get from Origin Herd, they are right.

No. 1. BERKS SPRING FARM BUTTERFLY, born March 29, 1922. Sired by our herd sire KING TWEEDE SPRING FARM, grandson of King of the Pontiacs. At five years of age he has 12 A. R. O. daughters, 10 two-year olds that averaged over 20-lb. in seven days, one three-year-old making 26¾ lb. butter, 595 lb. milk in 7 days.

The dam, COLANTHA KORNDYKE BUTTERFLY made, as a junior three-year-old, 22.16 lb. butter, 553.2 lb. milk in seven days. Price $200.

No. 2. BERKS KING TWEEDE KORNDYKE, born March 19, 1922. Sired by KING TWEEDE SPRING FARM.

The dam, CREAMELLE ADROIT KORNDYKE, made a seven-day record as a five-year-old of 21.87 lb. butter, 522.2 lb. milk. Price $150.

Write us your wants. We have bulls ready for service. Also young bull calves.

ABNER S. DEYSHER

Berks Farm Herd Under Federal Supervision *Reading, Pa.*

Important Mid-Western Holstein Dispersal

Zelden Rust Federally Accredited Herd

125-Registered 60-Day Guaranteed Holsteins-125

At the farm of the owner, C. M. Bottema, 3 miles Southeast of Indianapolis, one-fourth mile from Stop 3 on Shelbyville Line. Sale will begin promptly at 9 A. M., Monday, September 11, 1922.

3 TO 9 MONTHS' TIME WILL BE GIVEN ON APPROVED NOTES

The Milking Dairy Includes—

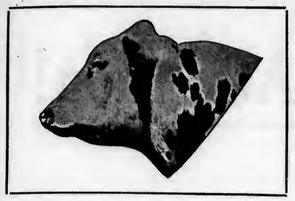
Cows with records of:
- 26.65 lb. butter in 7 days;
- 26.00 " " " " "
- 25.92 " " " " "
- 18,931 lb. milk in 305 days
- 18,706 " " " 358 "
- 18,572 " " " 305 "
- 18,468 " " " " "
- 17,015 " " " " "

4-year-olds with records of:
- 22,166 lb. milk in 1 year
- 13,747 " " " 287 days
- 13,685 " " " " "
- 852 " butter in 1 year

3-year-olds with records of:
- 14,762 lb. milk in 1 year
- 14,744 " " " " "
- 13,138 " " " 344 days
- 12,153 " " " 286 "

2-year-olds with records of:
- 15,210 lb. milk in 243 days
- 14,620 " " " 305 "
- 13,510 " " " 251 "
- 12,465 " " " 1 year
- 12,329 " " " " "
- 12,252 " " " 305 days
- 11,145 " " " 300 "

A yearling with 8,977 lb. milk in 305 days



In the herd are 31 daughters of a 30-lb. sire, 16 daughters of It Mona Pontiac, 9 granddaughters of Belle Segis (former World's Champion 3½-year-old) and other closely related groups such as can be found only in an old long-established herd.

Close to forty cows and heifers are bred to freshen in the fall and early winter. Several young bulls of quality are to be sold including a son of a 1,000-lb. year's butter record dam. The herd is of high individual quality as proved by its prize-winnings at leading fairs.

Write for a Hastings catalog to the owner,

C. M. BOTTEMA, Indianapolis, Indiana

Polled Holsteins

combine all the virtues and good points of the greatest breed of dairy cattle on earth with the desirable characteristic of "Hornlessness."

Why cut or burn off horns when they can be bred off by using a "hornless" sire?"

Place a Polled Holstein Bull at the head of your herd. Prices and Quality are both right.

Let Me Select Cows For You

My lifetime experience as a dairyman is at your service if you want good cows, purebreds or grades.

I developed the great producer, Pride Klaare De Kol Korndyke, that averaged 101 lb. milk a day for a month of official test work as a junior four-year-old.

My herd sire is from a thirty-pound junior three-year-old and was sired by a son of the former world champion, Finderne Pride Johanna Rue, 1,470 lb. butter in a year.

Let me fill your orders for milkers or heifers, purebreds or grades.

D. B. YORK
BROOKSIDE STOCK FARM, TROY, PA.

KING PONTIAC ALCARTRA WAYNE

my senior herd bull, not only sired two state record full sisters, one a junior two-year-old and the other a junior three-year-old, that averaged 764.82 lb. butter, 17,063.1 lb. milk in 305 days, each winning prizes for both milk and butter production, but he also sired *PAULINE MABEL MAID,* who made seven state records, including 32.76 lb. butter, 753.7 lb. milk in 7 days as a three-year-old, her third time of freshening.

King sires beautiful individuals as well as producers. A bull by him or from one of his daughters will make a great herd sire.

LET ME PRICE ONE TO YOU!

VOL. I HARRISBURG, PA., AUGUST 8, 1922 No. 15

A HERD OF STATE CHAMPIONS

LILAC HEDGE FARM, situated at Grand Forks, houses the champion herd of North Dakota and is the property of Jerry D. Bacon & Son, who are well known to Holstein breeders of the surrounding states. It is the champion herd because it is the home of state champions. Animals from this herd have made good not only in short and long time tests, but also at the great fairs, for individuality and production are correlated in the Lilac Hedge animals.

The cow you would be sure to ask for if you went into the capacious barn is Lilac Hedge Colantha Zubrod No. 280579. She is the daughter of King Asiatic Pride Johanna and of Colantha Zubrod and is a granddaughter of King Pontiac Asiatic, a sire whose offspring have won many honors in the eastern fairs, and who was by King of the Pontiacs from Pontiac Asia, one of Hengerveld De Kol's many good daughters.

LILAC HEDGE COLANTHA ZUBROD
35.91 lb. butter in 7 days, 125.80 lb. butter in 30 days, 1,089.77 lb. butter in 365 days, all state records.

Lilac Hedge Colantha Zubrod is a triple state champion, holding highest honors in the seven-, thirty- and three hundred sixty-five-day divisions. Calving at five years, three months and four days old, she produced 658.8 lb. milk, 35.91 lb. butter in seven days and became the seven-day state champion in the mature class. In her last great test, recently completed, she made a number of remarkable records. She freshened at seven years, six months, ten days, was put on long time test, and no less than seventy-four days after freshening, made an outstanding seven-day record—considering the time that had elapsed—738.1 lb. milk, 32.16 lb. butter. In thirty days she produced 125.80 lb. butter from 3,032.5 lb. milk becoming the state champion for butter production; this record was made seventy days after freshening. In thirty consecutive days she produced 3,084 lb. milk, and in seven consecutive days no less than 749 lb. milk. In the full year this remarkable producer made a record of 1,089.77 lb. butter from 25,824. lb. milk, displacing the former state champion, which, by the way, was owned by the State Agriculture College, by more than 8,000 lb. milk and 280 lb. butter. We believe that this great cow holds the state records for milk production in all three divisions as well as the records for butter production.

She was dropped the property of her present owner but was bred by G. F. Smith, Barre, Mass. Mr. Bacon evidently knew a good thing when he retained this animal in his herd.

The wonderful producing capacity of Lilac Hedge Colantha Zubrod is being transmitted to her descendants. She has a daughter, Johanna Zubrod Colantha, with a senior four-year-old record of 559 lb. milk, 25.88 butter, who, in turn, is the dam of the junior two-year-old, Lilac Hedge Zubrod Pontiac, that is expected to emulate the performances of her granddam by making wonderful records in all three great test divisions. Calving at exactly two years, three months, she produced 396.2 lb. milk, 24.21 lb. butter in seven days; 1,670 lb. milk, 95.74 lb. butter in thirty days. In 298 days she produced 770 lb. butter and her owners expect that she will have 900 lb. in the year. She will displace for the year championship her stablemate, Lilith Colantha Matador, a daughter of Matador Segis Walker, which produced 16,611.7 lb. milk, 595.77 lb. butter in a year.

ELMDALE AAGGIE DE KOL
33.48 lb. butter, 849.5 lb. milk in 7 days, 135.5 lb. milk in a day. Grand champion female at North Dakota and South Dakota State Fairs and at Sioux City, Iowa, 1920.

The outstanding individual of the Lilac Hedge Herd is Elmdale Aaggie De Kol. In 1920 this cow traveled the big western circuit and won the grand championship at Sioux City, Iowa, and at the North Dakota and South Dakota State Fairs. She is a big producer as well as a show cow of remarkable quality. As a seven-year-old, she made a record of 534.4 lb. milk, 32.61 lb. butter in a week, tested in very hot weather. This year, she has made a record not yet officially reported, of 33.48 lb. butter, 849.5 lb. milk in a week and 120 lb. butter, 3,280 lb. milk in thirty days, her best day being 135.5 lb. milk.

A good young thing that has showed remarkable producing capacity is Lilac Hedge Korndyke Segis, a daughter of King Watson Segis Star and Lilac Hedge Korndyke. Freshening as a junior two-year-old, she produced 23.6 lb. butter in seven days from 496.4 lb. milk, and 95.53 lb. butter in thirty days, averaging exactly 70 lb. milk a day. She is now on year test and at the present writing it looks as though she will make at least 800 lb. butter in the year.

The leading family of Lilac Hedge herd consists of Lilac Hedge Bismarck Colantha and her descendants.

LILAC HEDGE FAY COLANTHA BISMARCK
20.81 lb. butter in seven days at 30 months old. Dam of the junior herd sire, Sir Pontiac Colantha Bismarck, winner of three 1921 grand championships.

As a senior three-year-old she made 28.83 lb. butter, 511.2 lb. milk in seven days, becoming the state champion of her class and her owner informs us that she has since made over 34 lb. butter in seven days. Her daughter, Lilac Hedge Fay Colantha Bismarck, calving at 30 months old, made 20.81 lb. butter in seven days and has since made a 24-lb. record as a three-year-old. She is the dam of Sir Pontiac Colantha Bismarck, one of the junior herdsires, who was first in his class and grand champion at the North Dakota and South Dakota State Fairs and at Aberdeen, South Dakota, in 1921.

The state champion senior two-year-old is also a member of this herd. This is Violet Farm Net Sirocco Homestead, with a seven-day record of 23.89 lb. butter, 434.4 lb. milk, a daughter of Captain Aaggie Homestead De Kol.

The senior herdsire is Sir Pontiac Ollie, a show bull himself and a son of the famous show bull and show sire, Piebe Laura Ollie Homestead King. His dam is a good record daughter of King of the Pontiacs. Sir Pontiac Ollie is a show bull of marked excellence and has been grand champion at Minnesota and at both North Dakota and South Dakota State Fairs. His progeny have marked individuality and have won prizes at a number of great fairs.

Eight different 30-lb. cows have been developed in the Lilac Hedge herd and it is expected that this number will be materially increased. Individuality is insisted upon as well as the ability to produce at the pail, and a number of animals from this herd have already won blue ribbons at fairs and also have made a prominent showing in the official list.

The buildings at Lilac Hedge would be a credit to any breeding establishment in any state. Their size and capacity make this farm one of the show places of Grand Forks.

Starting fifteen years ago with a grade herd of Holstein cows Mr. Bacon has experimented, bred and built up his herd until he has around 110 animals, all purebreds. He is ever ready to promote the dairy and purebred interests and last year presented a registered bull to the largest township delegation from Grand Forks County attending the National Dairy Show. Recently there was a gopher hunt at Langdon, N. D. and in order that there might be a suitable prize for the winning team, Bacon & Son furnished the county agent with a real good registered bull at a very nominal price. Mr. Bacon is a prominent citizen of his community. Besides being the main guy of one of the city newspapers, he is the proprietor of the Hotel Dakotah, the leading hostelry of Grand Forks.

Milk Improvement

IT is the belief of many who have studied the milk question from different angles that improvement from a sanitary standpoint in milk and butter production would result in increased demand and better prices and that, if methods in the production and distribution were improved, there would soon be very little surplus milk trouble.

Working along these lines, a number of far western cities have been competing in a friendly contest under the direction of R. J. Posson, market milk specialist of the United States Western Dairy Division. These contests have been held with more or less regularity since 1913. The scores are cumulative and are not based on single samples but on several samples collected from each distributor. Two contests have been held this year and in every city there was an improvement in the quality and a lessening of the bacterial count.

The cities are scored. Long Beach, Cal., received in the first contest a score of 71.56, in the recent test the score was 90.67, a very material improvement. Riverside, Cal., advanced from 82.93 to 93.63. The great city of Portland, Ore., received a mark of 92.52 in the latest contest while the first score given the milk of this city was only 76.19. Seattle, Wash., scored 80.50 the first time, 88.24 recently, so the good work is going on rapidly in these western centers of population with a consequent health betterment of the consumer and a wealth increase of the producer.

Don't stand on your dignity Eva, there isn't anything much more slippery.

The Prevention of Transmissible Disease

By T. E. Munce

THE general principles of disease prevention can be applied to all transmissible diseases.

For convenience in systematically discussing this subject, it has been divided into the following headings:

1st. Control of the modes of transmission and dissemination of the cause.

2d. Hygienic measures.

3d. Control and eradication of disease from herds and flocks in sections already affected and prevention of recurrence.

4th. Dissemination of knowledge pertaining to the nature of diseases.

5th. Coöperation.

Control of the Cause

FIRST: Control of the modes of transmission and dissemination of the cause is the most important factor in the prevention of any disease. No matter how unsanitary or how unhygienic the conditions, disease cannot be produced without the presence of the cause. Therefore, our highest ambition should be, in dealing with disease from a prevention standpoint, to make sure that the cause does not reach premises that are free. To accomplish this, one must understand the method of transmission and the mode of dissemination. To make sure that the cause does not reach free premises, we must guard against the movement to these premises of animals or things infected or contaminated with it.

DR. T. E. MUNCE
State Veterinarian and Director of the Bureau of Animal Industry of Pennsylvania. President of the U. S. Livestock Sanitary Association.

It is a well-known and established fact that for most diseases, infected animals are disseminators. Through other things as a medium, disease may be transmitted from the disseminating animal to healthy animals. In this class can be mentioned feeds; feed sacks; shipping crates; wagons; trucks; utensils; manure; streams and watering places in general; hoofs of animals; clothing of man; insects; parasites; birds; reduction plants and their product, etc.

The commonest mode of transmission and dissemination is the introduction of infected animals.

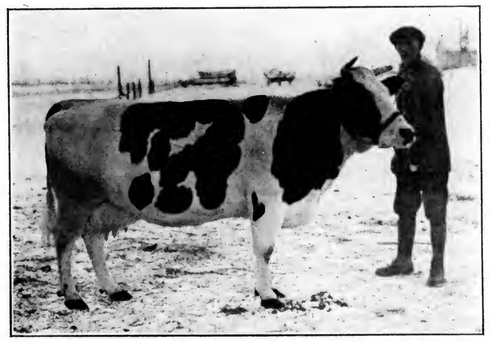
In disease investigational work in a large percentage of cases where disease exists, the history clearly indicates that the first occurrence could be traced to the introduction of new animals. Numerous striking examples of this can be given. Then, should we not discourage the indiscriminate addition of animals? Should we not aim to make clear to stockmen the dangers attached to such a practice, the future economic feature and the value of determining that animals are healthy before they are added?

If animals from infected sections were permitted to leave those sections only after all known measures to determine their health had been applied, if only healthy animals were removed, if all others were quarantined to the infected section until death or slaughter and were properly disposed of, if sanitary measures were practiced in these sections, and if free herds and sections were carefully guarded against disease, then we would be doing much towards the prevention of disease transmission.

Breeding and raising of own stock is a safeguard against infection from outside sources. Additions should be made only when it is absolutely necessary; and then isolation and other precautions should be practiced. All new animals should be kept in isolation until it has been definitely determined that they are free from disease.

Feeds can become contaminated through infected animals sleeping in feed bins, mangers and mows; also from material disseminated from infected animals. Improperly pasteurized milk from infected animals or creameries has often been known to be the medium through which disease was carried to free premises. This is particularly true of tuberculosis and it is not unlikely that infections abortion, calf scours, aphthous fever and certain other diseases in some instances can be traced to a similar source. We are inclined in most instances to overlook the rudiments which, if thoroughly studied, would often answer perplexing problems pertaining to the origin of disease and would solve many problems of prevention and repression.

Animals used for show purposes or for any other purpose that would necessitate their removal from the premises have often been known to be disseminators of organisms causative of disease, after their return to the premises. When returned to the premises, such animals should be isolated until their health is determined.



A system of indentification of animals sold for any purpose would be valuable in tracing diseases to their sources. The owner at the time infection takes place is usually responsible and should be held for the value of diseased animals.

Contaminated offal and refuse from slaughtering establishments, also hides, carcasses and other products of animals which have died from unknown causes are other means of disease dissemination. A striking example of this fact can be given—a reduction plant had spread anthrax among the hogs on a farm by feeding the carcasses of cattle which were not known at the time to have been afflicted with this disease.

The outstanding individual of the Lilac Hedge Herd is Elmdale Aaggie De Kol. In 1920 this cow traveled the big western circuit and won the grand championship at Sioux City, Iowa, and at the North Dakota and South Dakota State Fairs. She is a big producer as well as a show cow of remarkable quality. As a seven-year-old, she made a record of 534.4 lb. milk, 32.61 lb. butter in a week, tested in very hot weather. This year, she has made a record not yet officially reported, of 33.48 lb. butter, 849.5 lb. milk in a week and 120 lb. butter, 3,280 lb. milk in thirty days, her best day being 135.5 lb. milk.

A good young thing that has showed remarkable producing capacity is Lilac Hedge Korndyke Segis, a daughter of King Watson Segis Star and Lilac Hedge Korndyke. Freshening as a junior two-year-old, she produced 23.6 lb. butter in seven days from 496.4 lb. milk, and 95.53 lb. butter in thirty days, averaging exactly 70 lb. milk a day. She is now on year test and at the present writing it looks as though she will make at least 800 lb. butter in the year.

The leading family of Lilac Hedge herd consists of Lilac Hedge Bismarck Colantha and her descendants.

LILAC HEDGE FAY COLANTHA BISMARCK
20.81 lb. butter in seven days at 30 months old. Dam of the junior herd sire, Sir Pontiac Colantha Bismarck, winner of three 1921 grand championships.

As a senior three-year-old she made 28.83 lb. butter, 511.2 lb. milk in seven days, becoming the state champion of her class and her owner informs us that she has since made over 34 lb. butter in seven days. Her daughter, Lilac Hedge Fay Colantha Bismarck, calving at 30 months old, made 20.81 lb. butter in seven days and has since made a 24-lb. record as a three-year-old. She is the dam of Sir Pontiac Colantha Bismarck, one of the junior herdsires, who was first in his class and grand champion at the North Dakota and South Dakota State Fairs and at Aberdeen, South Dakota, in 1921.

The state champion senior two-year-old is also a member of this herd. This is Violet Farm Net Sirocco Homestead, with a seven-day record of 23.89 lb. butter, 434.4 lb. milk, a daughter of Captain Aaggie Homestead De Kol.

The senior herdsire is Sir Pontiac Ollie, a show bull himself and a son of the famous show bull and show sire, Piebe Laura Ollie Homestead King. His dam is a good record daughter of King of the Pontiacs. Sir Pontiac Ollie is a show bull of marked excellence and has been grand champion at Minnesota and at both North Dakota and South Dakota State Fairs. His progeny have marked individuality and have won prizes at a number of great fairs.

Eight different 30-lb. cows have been developed in the Lilac Hedge herd and it is expected that this number will be materially increased. Don't stand on your dignity Eva, there isn't anything much more slippery.

The Prevention of Transmissible Disease

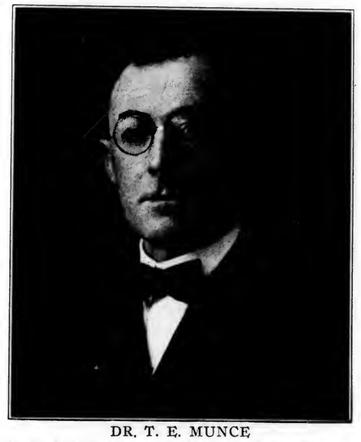
By T. E. Munce

THE general principles of disease prevention can be applied to all transmissible diseases.

For convenience in systematically discussing this subject, it has been divided into the following headings:

1st. Control of the modes of transmission and dissemination of the cause.

2d. Hygienic measures.



3d. Control and eradication of disease from herds and flocks in sections already affected and prevention of recurrence.

4th. Dissemination of knowledge pertaining to the nature of diseases.

5th. Coöperation.

Control of the Cause

First: Control of the modes of transmission and dissemination of the cause is the most important factor in the prevention of any disease. No matter how unsanitary or how unhygienic the conditions, disease cannot be produced without the presence of the cause. Therefore, our highest ambition should be, in dealing with disease from a prevention standpoint, to make sure that the cause does not reach premises that are free. To accomplish this, one must understand the method of transmission and the mode of dissemination. To make sure that the cause does not reach free premises, we must guard against the movement to these premises of animals or things infected or contaminated with it.

DR. T. E. MUNCE
State Veterinarian and Director of the Bureau of Animal Industry of Pennsylvania. President of the U. S. Livestock Sanitary Association.

It is a well-known and established fact that for most diseases, infected animals are d i s s e m i n a t o r s. Through other things as a medium, disease may be transmitted from the disseminating animal to healthy animals. In this class can be mentioned feeds; feed sacks; shipping crates; wagons; trucks; utensils; manure; streams and watering places in general; hoofs of animals; clothing of man; insects; parasites; birds; reduction plants and their product, etc.

The commonest mode of transmission and dissemination is the introduction of infected animals.

In disease investigational work in a large percentage of cases where disease exists, the history clearly indicates that the first occurrence could be traced to the introduction of new animals. Numerous striking examples of this can be given. Then, should we not discourage the indiscriminate addition of animals? Should we not aim to make clear to stockmen the dangers attached to such a practice, the future economic feature and the value of determining that animals are healthy before they are added?

If animals from infected sections were permitted to leave those sections only after all known measures to determine their health had been applied, if only healthy animals were removed, if all others were quarantined to the infected section until death or slaughter and were properly disposed of, if sanitary measures were practiced in these sections, and if free herds and sections were carefully guarded against disease, then we would be doing much towards the prevention of disease transmission.

Breeding and raising of own stock is a safeguard against infection from outside sources. Additions should be made only when it is absolutely necessary; and then isolation and other precautions should be practiced. All new animals should be kept in isolation until it has been definitely determined that they are free from disease.

Feeds can become contaminated through infected animals sleeping in feed bins, mangers and mows; also from material disseminated from infected animals. Improperly pasteurized milk from infected animals or creameries has often been known to be the medium through which disease was carried to free premises. This is particularly true of tuberculosis and it is not unlikely that infections abortion, calf scours, aphthous fever and certain other diseases in some instances can be traced to a similar source. We are inclined in most instances to overlook the rudiments which, if thoroughly studied, would often answer perplexing problems pertaining to the origin of disease and would solve many problems of prevention and repression.

Animals used for show purposes or for any other purpose that would necessitate their removal from the premises have often been known to be disseminators of organisms causative of disease, after their return to the premises. When returned to the premises, such animals should be isolated until their health is determined.

A system of indentification of animals sold for any purpose would be valuable in tracing diseases to their sources. The owner at the time infection takes place is usually responsible and should be held for the value of diseased animals.

Contaminated offal and refuse from slaughtering establishments, also hides, carcasses and other products of animals which have died from unknown causes are other means of disease dissemination. A striking example of this fact can be given—a reduction plant had spread anthrax among the hogs on a farm by feeding the carcasses of cattle which were not known at the time to have been afflicted with this disease.

INTENTIONAL SECOND EXPOSURE

The use of biological products in the form of living vaccines and viruses without due consideration of the harm which they may do is becoming, too rapidly, popular. Many breeders and some veterinarians become too readily enthused over the use of vaccines for the prevention of disease without attaching sufficient importance to the prevailing conditions; and further, without taking into consideration the future value of the livestock investment. Too much dependence is placed on literature which is not backed by sufficient unquestionable research. Vaccines in all cases do not accomplish the things for which they are sometimes given credit. Other factors are often in their favor.

Vaccines, viruses and immune sera have their greatest field of usefulness in the prevention of acute infections diseased; as anthrax, blackleg, rinderpest, rabies, hog cholera, etc. The more acute the disease, the more successfully it appears that it can be prevented by this form of treatment.

Until we have immunizing agents that will successfully prevent diseases, they should be handled by purely prevention methods.

The indiscriminate distribution of vaccines, viruses, etc., which when placed in unfamiliar or careless hands is a possible means of the source of infection for new outbreaks of disease.

Biological products used in conjunction with isolation measures are valuable means of preventing the dissemination of tuberculosis and glanders.

It is within the power of stockmen to prevent disease; and modern stockmen are cognizant of this fact. The veterinarian who can advise them of the most practical methods of keeping their animals healthy will render them the greatest service.

Hygiene

Second: Hygiene is the factor of next importance in the prevention of disease, and in particular, stable, breeding, feeding and watering hygiene.

Stable hygiene comprises the relative location and position of the stables; its plan and structure and interior arrangement; ventilating and lighting systems; capacity for air; drainage; manure and urine disposal; water supply and its arrangement for practicability of disinfection and fumigation. All such details should be duly considered before those contemplating the erection of new buildings proceed.

Herd management in general should be duly considered. It is a dangerous procedure for owners of livestock to permit them to be bred to animals of uncertain health or the health of which is not known. Particular care should be exercised in determining the source of feed and water. The place of storage feeds and watering places for animals should be carefully guarded against contamination.

Pastures should be guarded against exposure to neighbor's animals, sewage and streams of water flowing through nearby neighbor's pastures, whose animal's health is undetermined.

Breeding and raising of own stock is, as stated before a safeguard against infection from outside sources. Additions to herds should be made only when it is necessary; and then isolation and other precautions should be practiced.

The health of young stock should be guarded by proper housing, feeding, exercising, care and management.

The ultimate aim in the breeding and raising of livestock should be to keep them healthy, which necessitates selecting the proper type of breeding stock. They should be properly mated and cared for. The offspring should be well housed and exercised, receive the proper food and pure water and be guarded against disease.

Eradication of Disease

Third: The control and eradication of disease in a herd or a section requires that a diagnosis be established. To correctly establish a diagnosis requires an understanding of the nature of the disease, the cause and its nature, history and symptoms. For some diseases it is necessary to know the post-mortem lesions and the class of animals which are susceptible. In others biological diagnostic agents are required. In still others serological tests and other special laboratory examinations are necessary.

The method of procedure is dependent upon the nature of the cause, whether it is easily destroyed or whether it is a spore-bearing organism and resistant to the usual sanitary measures. The methods are different for the various diseases. However, in most cases it is necessary to remove and properly dispose of affected animals either by quarantine or slaughter, cleaning and disinfection of the exposed premises and prevention of recurrence. In addition to other prevention measures, some diseases are best controlled and recurrence prevented by vaccination. In others it is necessary to apply diagnostic tests annually, in addition to preventive measures, in order to continue their control.

Dissemination of Knowledge

Fourth: The dissemination of knowledge pertaining to the nature of animal diseases and their communicability to man, while not of much importance in the actual prevention of disease, is of paramount importance in stimulating into action the agencies which will do most towards disease prevention.

If stockmen and public are not familiar with the danger of animal diseases and are not aware that it is more economical to produce healthy animals and healthy products, they will not be of much assistance in the prevention of the spread of disease. On the other hand, if stockmen were universally aware of these things and were to unite with the public in a warfare against animal diseases, they would accomplish more than any other organization.

When the public once becomes aroused to the necessity of disease prevention and demands that it be done; when the public conceives of the communicability and the danger of animal diseases to public health, then, and not until then, will disease be successfully prevented. It is possible during this age to build miles and miles of good roads. Why? Because the public so demands.

Since it is the public demand which causes great things to be done, we should disseminate knowledge pertaining to the nature of some animal diseases that will bring forth this demand and not leave this duty for another generation to perform.

Co-operation and Co-ordination

Fifth: "Coöperation" and "coördination" are two words which we should remember; for it is by the practical application of their meaning that most will be accomplished.

Suggestions and Recommendations

Sixth:

1. Let prevention of disease rather than disease itself act as the medium that brings the animal husbandman and the veterinarian together.

2. Closer unity of Federal and State officials dealing with animal diseases, with the various health and educational departments, physicians, hospitals, medical and agricultural colleges and other institutions of learning.

3. Veterinary and agricultural colleges could do more towards disease prevention if stress were placed on this subject during the courses of instruction.

4. There should be a better understanding by the people of the intercommunicability of diseases and the relation of animal diseases to public health.

5. Federal, State, municipal and practicing veterinarians should become better acquainted with, recommend and practice preventive methods.

6. Sections freed from disease may be kept free if the owners of livestock are aware of the danger of purchasing from outside sections and are familiar with the necessary precautions against disease.

7. Federal and State officials should give more attention to maintaining the health of animals on premises and in sections where there is no reason to believe transmissible disease exists.

8. A system of identifying animals whereby they may be traced to previous owners.

9. Closer coöperation of State, Federal and municipal agents, boards of health and butchering establishments, with the view of finding the source of diseased animals.

10. The vendor of a diseased animal sold for food purposes should be liable for the purchase price when such animal is condemned in the hands of the butcher. In this connection special legislation would be helpful.

11. Advisibility of considering the enactment of legislation requiring a tuberculin test of cattle offered at public sales.

12. Strict legislation on the spread of hog cholera and bovine abortion and other transmissible diseases through public sales.

13. Poultry and sheep diseases cause large losses which could be materially reduced if more attention were given to their prevention.

14. Considerable could be done by quarantine, sanitary and disinfecting measures in preventing diseases incidental to shipping.

15. Universal disinfection of stock yards and stock cars.

16. The value of more publicity, especially through agricultural and daily press and farm bureau organizations.

17. Special measures for special diseases.

18. Raising of own stock.

19. No animals should have access to manure piles.

20. Reduction plants and slaughtering establishments as factors in the transmission of disease.

21. Proper facilities for sanitation and disinfection of stables, and arrangements to provide for isolation stables.

22. Individual history of purchased animals and complete history of herd. Recommend purchases from healthy herds.

23. Isolation of all newly purchased animals and animals that have been away from the farm. The isolation period should be sufficient to determine their health.

24. Prompt cleaning and disinfection of exposed premises upon removal of diseased animals.

25. Prohibit the use of living vaccine or virus, except under official permit.

26. Prohibit the use of improperly heated milk from other than healthy herds as food for any animals.

The service of the Bureaus of Animal Industry should be confined to investigations, proper direction, supervision and the dissemination of knowledge pertaining to new methods. The livestock owner and the practicing veterinarian should do the rest. Like Longfellow, we believe that:

"All our strength is in our union;
All our danger is in discord."

SUMMER FEEDING

By George Leslie

THIS is the season when the grass has lost its luscious green freshness, and if a drought comes, as it is fairly sure to in some of the dairy sections of the country, the milk yield, where cows are turned out to pasture, will drop and the cows get poor in flesh.

A material reduction of the milk yield in the summer cuts down the yearly average and reduces the profit on every cow in the herd. In fact, the summer slackening often means the difference between profit and loss on a number of cows in pastured herds.

There is no real need for this great decrease in production, because of dried out pastures, and several very good and convincing reasons why they should not in this season cut down the year's profits.

One reason is summer silage. Another reason is dried beet pulp. Still another is cane molasses. The fourth and best reason is grain feed.

Someone will say, "What about soiling crops?" Why, this: a farmer with the soiling crop idea is not likely to be the one who will turn his cows out to pasture and let his production depend on what the cows get in the fields. Soiling crops are fine, and play a most useful part in the feeding of the dairy herd—soy beans, green alfalfa, green corn, pea and oats, green sorghum, cowpeas etc.,—but the changing seasons, the possible heavy rains, or droughts, injure the crops in the field, while the ensilage corn if well packed in the silo, suffers practically no change.

Again, your silage corn may be planted over a large acreage and with more economy than a succession of soiling crops. Also, your soiling crops have to be cut each day for feeding, which takes time, labor and haulage from the fields to the barn; whereas the corn silage needs only to be taken out of the silo and fed.

Another reason which will occur to the careful feeder is that green crops vary in feeding value considerably. For instance, green alfalfa has a nutritive ratio of 1: 3.5; oats and peas 1:6.1; and green corn 1:12.5. A change from oats and peas to green corn would mean a much wider or carbonaceous ration, and unless the grain or roughage was narrowed, your milk pails would show the difference.

Your summer silage, on the contrary, will maintain its feeding value or nutritive ratio. So, if you have one silo, put up another this fall and fill it as insurance for next summer's dry season; if you have two, and they will not carry you over the summer, put up another. The summer silage habit will allow you to forget the August droughts or any fear of scant pastures.

If you are so unfortunate as not to have a summer silo, get yourself some bags of dried beet pulp to supplement the dried grasses in your pastures. Soak it at night in just enough water to moisten and soften it without getting it soppy, and allow your cows 2 lb. to 5 lb. a day. This succulent has in one pound the feeding value of 5 lb. of corn silage. A most excellent addition to the cow's daily feed at any time of the year, it is especially welcome in the absence of any succulent when pastures fail.

Should you have neither silage nor beet pulp to use, cane molasses will probably surprise you in its effect. If your cows have fallen off in flesh as well as production, the cane molasses, being a highly carbonaceous feed, will soon improve their condition. It is practically 100% digestible and particularly pleasing to the cows' taste. If pasture is fairly good, start with a pint of molasses a day; while if the grass is poor, feed a pint twice a day, mixed with the grain, or on whatever dry roughage you may be using.

Pasture should not be relied on as a cow's only feed at any season, whether the cow is dry or milking. It is false economy. Grain—some grain—is needed to keep the cow milking her best and maintaining her bodily condition.

We have seen this summer far too many herds of dairy cattle which have been "on pasture only," scrawny, bony, with slack udders and lack-lustre eyes, being driven to or from their grazing pastures. The owners of such herds are the men who maintain in season and out that "there is no money in dairy farming." Nor is there, if these cows are a fair sample of their general methods of work. It is well to remember that not a drop of milk ever came out of a cow's udder

without first going down her throat in the form of feed and drink.

Your cow is a four-legged bank; but you won't draw a profitable rate of interest unless you deposit a fund in the way of sufficent feed. Try this: make a mixture of 150 lb. each of cornmeal (or barley or hominy) oats, and cottonseed meal and 100 lb. wheat bran. Give it to your cows on pasture this month of August and as much of September as they are still out, dry and milking. Start with 2 lb. a day and add ½-lb. a day until they are getting 1 lb. of grain to 4 lb. of milk. If you have neither silage, pulp nor molasses, add 50 lb. oil meal to the mixture. The dry cows will take care of from 5 lb. to 10 lb. a day according to their body weight, 1,200 lb. to 1,400 lb. Your milking cows will milk better, your dry cows will flesh up and both will need much less grain later on, and you will surely get enough increased production to net you profit in excess of the cost of the grain.

In August, just as in the other eleven months of the year, milk is from 85 to 87% water and the milking cow needs an ample supply every day. How you can best supply it is your individual problem, but lack of water means less milk in the pail.

Some grain, a succulent feed and plenty of water will cut out the midsummer loss of milk, but you will never know how true this is unless you try it.

A dairy farmer, asked by a city visitor if his cows "gave him lots of milk," disgustedly replied: "Nobody *gives* me nothin'—I swaps 'em fodder for it." He had the right idea of dairying. Give the cow a liberal ration, made of the right things, and she will "swap" you a generous milk and butter fat production; leave her out on parched grass and she will get to look like a scarecrow and won't give enough milk to pay for the labor and time of milking her through the dry season besides cutting down on her yearly average of both yield and profit.

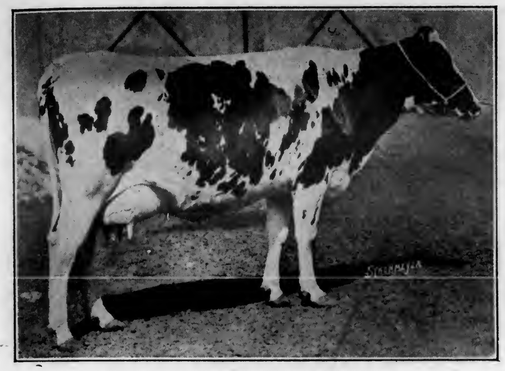
Lowden Lauds Houghton

PRESIDENT FRANK O. LOWDEN of the Holstein-Friesian Association of America made a great impression upon the citizens of Brattleboro when he spoke to the businessmen of that city July 29th. The proceedings started with a luncheon at which Governor James Hartness welcomed the guest of honor to the state.

Mr. Lowden said he was greatly impressed with the magnitude and efficiency of the offices of the association. The influence of the National Association radiated through the country to a degree that cannot be measured. The speaker illustrated his remarks by telling of the records some Holstein-Friesians have made and compared them with the production of the average cow.

HON. FRANK O. LOWDEN
President of the National Holstein-Friesian Association who is telling business men of the country about the problems of the farmer and dairyman.

Mr. Lowden paid a great compliment to Secretary Houghton, saying that the great work of expansion and influence rested largely upon his shoulders and to him should go credit for the work already accomplished. No other man in the country has had the influence in holding breeders to the established rules of purebred breeding as has Secretary Houghton. Vermont has exercised a great influence over the country along agricultural lines and this state has produced men who have become real leaders. The speaker paid a glowing tribute to Stephen A. Douglas who was born in Vermont and was Abraham Lincoln's chief rival. The speaker pointed out how essential it was for the people of Vermont and New England to interest themselves in agricultural problems. Farming forms the leading industry of the United States and we cannot face the future with a serene countenance unless we realize the farms are the real bulwark of American existence.



Referring to world conditions, Mr. Lowden said that "splendid isolation" was an attractive phrase but that Morse when he invented the electric telegraph, Fulton when he invented the steamship and Marconi when he discovered wireless, were busily engaged in destroying that isolation and there is now no isolation on the face of the globe for any nation whatsoever. It might be possible for America to recover her position of isolation if she would let, say, 30% of her wheatfields go back into prairie, 50% of her cottonfields back into forests, close half of her copper mines and curtail her production along other lines. America, perhaps better than any other nation in the world, could live within herself if we were willing to pay the price, but to do so we must readjust our home life from one end to the other and no one is willing to pay that price, therefore, we have got to concern ourselves in the affairs of the world.

President Lowden was accompanied by Fred A. Koenig of the Extension Department of the Holstein-Friesian Association of America. They came to Brattleboro from Northfield where they were the guests of Ambert G. Moody. The day before, Ex-Governor Lowden spoke at Mt. Hermon, Mass., to a group of Holstein breeders. After the proceedings and visiting with acquaintances in the lobby of the Brooks Hotel, Mr. Lowden left for Portland, Maine, where he spoke to the members of the Maine Holstein Breeders' Association and their friends on July 31st and will go from there to address a meeting of agriculturists at the Agricultural College, Storrs, Connecticut.

All things come to those who wait.
'Tis but a hoary bit of lore.
And those who wait will find too late
The things were not worth waiting for.

City of Bridgeport Herd

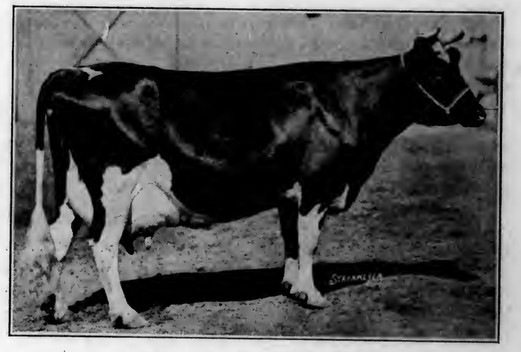
THE Herd of purebred Holsteins at the Bridgeport City Farm, Bridgeport, Connecticut, is rapidly gaining prominence among the breeders of purebred Holsteins. This herd is being developed under the supervision of Angus P. Throne, superintendent of the Department of Public Charities of Bridgeport, which Department is the owner of the Bridgeport City Farm. Mr. Thorne assumed the duties of superintendent of the Department on April 1, 1917.

RYE HILL KORNDYKE KONIGEN
593 lb. milk in 7 days, 2,428.4 lb. in 30 days at 27 months old. Connecticut State Champion for 7- and 30-day milk production in junior two-year-old class. Now on semi-official test. In 220 days she has 15,405.2 lb. milk to her credit.

At that time the herd at the Bridgeport City Farm consisted of 20 scrub cows and a bull. Owing to other pressing matters Mr. Thorne was unable to give much attention to the herd, until 1918, when he obtained permission from the City authorities to sell the scrub cows and replace them with purebred Holsteins. The purchase of purebreds has been made as rapidly as funds would permit. There is now 82 head of purebreds, including young stock, in the herd.

The first purebred sire purchased was Sir Artis Colantha Pontiac, No. 248,785, a grandson of Colantha Johanna Lad. Sir Artis is sired by Sir Korndyke Pontiac Artis Jr., No. 84,806, one of the best bred bulls in Connecticut. The bull has five 30-lb. daughters and several A. R. O. daughters, which have produced as high as 25,000 lb. milk a year.

The dam of Sir Artis is a 24-lb. daughter of Colantha Johanna Lad. The first daughter of Sir Artis freshened July 27th. She will be tested and is expected to make a good record. The junior herdsire is Bridgeport Sir Ormsby Korndyke, No. 313,500, a son of Ormsby Korndyke Lad. The dam of Bridgeport Sir Ormsby Korndyke is Beaver Dam Sarah, a daughter of Sir Prilly Segis, with a record of 20,838 lb. milk and 750 lb. butter for 365 days. She is the State Champion junior three-year-old.



Another sire in use is Allamuchy Ormsby Colantha, No. 243,661, a son of the King of the Ormsbys from a 34-lb. daughter of Colantha Johanna Lad.

That the change from scrub cows to purebreds was a profitable one for the City of Bridgeport can be readily seen when a comparison of the milk production of each is made. The scrub cows on the Bridgeport City Farm produced from 3,500 to 4,000 lb. milk per year. The production of the purebreds averaged 17,438.3 lb. milk, last year.

The following are some of the records made at the Bridgeport City Farm during the past year:

One of the striking features which impresses the visitor at the Hillside Farm is the condition and growth of the young stock. Mr. Richard Cahill, the herdsman, lays great stress on the importance of starting the young calf right. Liberal feeding, constant watchfulness and the open-air treatment are the three rules which he follows in raising the young things which are intended for Bridgeport's future record makers; and that these rules are successful in practice is fully demonstrated by the sturdy growth and development of the young stock.

In speaking of the records already made and the methods in use, Mr. Thorne stated that "None of these records are startling yet they are not so bad when you consider that we have been in business only about three and one-half years. We are trying to build up a heavy producing herd of Holsteins of good individuality, putting the emphasis on milk production rather than on butter fat content. It is my opinion that in order to have a good cow you must begin with the calf. For this reason we are paying considerable attention to our young stock. I believe any fair-minded man would admit that our young stock as a whole are better grown than the young stock on the average dairy farm. We have 29 cows on semi-official yearly test, several of which will make over 20,000 lb. milk in the year."

GOLDBRON DE KOL PIETJE
23.93 lb. butter, 690 lb. milk in 7 days. 17,195.2 lb. milk, 667.90 lb. butter in 305 days as a junior four-year-old, Connecticut State Champion in class. Again in semiofficial test with 19,302.2 lb. milk in 225 days—should finish year with more than 1,000 lb. butter and 27,000 lb. milk.

In 1918 a model dairy barn was erected and an addition was built this year, which provides twelve box stalls for test cows, and another barn is now in course of construction.

The cows on test are fed a ration consisting of corn silage, mangels, beets, alfalfa hay and beet pulp with the grain ration, a home mixture having unicorn as its base.

Last year, thirty-five acres adjoining the farm were purchased, so that the total acreage is now approximately one hundred and eighty acres, of which one hundred and seventy are tillable. Among the crops

HAYLAND ARTIS PAULINE

A daughter of Sir Artis Pontiac, Jr. She has just finished a year record of 914.42 lb. butter, 21,914.3 lb. milk, made on three milkings a day. As a senior three-year-old she produced 514.56 lb. butter from 12,573.7 lb. milk in 305 days, State record in class.

raised this year were 250 tons of silage, 70 tons of hay, 2,500 bushels of potatoes, 27 tons of mangel beets, 300 bushels table beets, 20,000 heads of cabbage, 400 quarts strawberries, 200 bushels of tomatoes, 800 bunches of celery, 180 bushels turnips, 275 bushels of carrots, 270 bushels of onions and 300 bushels of oats.

The vegetables are all for the use of the 200 adult inmates of the Hillside Home and the 46 children inmates of the Margaret Ford Cottage. The milk produced at the Bridgeport City Farm is sufficient for the needs of the Hillside Home, the Margaret Ford Cottage for children, the Isolation Hospital for tubercular patients and the Englewood Hospital for contagious diseases. During the school term, 1,200 pints of milk are supplied daily to the malnutrition classes in the public schools of Bridgeport.

To tell the full story of the development of Bridgeport's Holstein herd and farm would require many times the space which the limits of this article will allow, and in conclusion, it must be said that the citi-

SIR ARTIS COLANTHA PONTIAC

Junior herdsire at City of Bridgeport Farm. Champion two-year-old bull at Eastern States Exposition, 1920.

zens of Bridgeport may well feel proud of the accomplishments attained in the past three years in the agricultural branch of their Department of Public Charities.

ALL RECORDS MADE ON THREE MILKINGS A DAY

Letters to the Editor

HOLSTEIN BREEEDER AND DAIRYMAN,

Dear Sirs—I have received a few sample copies of your paper and am very much pleased with it. I like to see the big guys hit like you have gone after them about the National meeting. I am one of the small breeders just starting and I would like to see that bunch stopped before they get too far.

Wishing you success in your moral fight for a better Holstein Association, I am Yours truly,

July 24, 1922. R. H. D., NEW YORK.

EDITOR, HOLSTEIN BREEDER AND DAIRYMAN:

Here is my check for $5.00. Put me down as a subscriber to your valuable paper for as long as $5.00 will pay and don't let my subscription expire.

Just want to tell you I am going to make it my business to get every association member in my neighborhood to do likewise, because THE HOLSTEIN BREEDER AND DAIRYMAN is the only real friend that the members now have.

God pity us all if you don't stand on the firing line. More power to you. Smoke out the fellow that has been hollering "Stop thief" and at the same time spending thousands upon thousands of dollars of our association's money and sit around smoking, high-priced, fat cigars, while us small fry are milking cows at each end of a 16-hour day.

It looks to me as if Jimmie Reynolds, chairman of the Executive Committee, who has been continuously drawing on the Association treasurer since 1919 and Charles Cole should be in partnership. MICHIGAN.

THE HOLSTEIN BREEDER AND DAIRYMAN,

Gentlemen—Your issue of July 8th came before me this morning. A few days ago I wrote Secretary Houghton asking for information on and the logic used in raising the transfer fee.

While in the East a few years ago, in fact about the time the *Holstein World* was started, I was informed as to the object of its creation and while it has taken some time to do it, it has now apparently accomplished that for which it was organized.

I am surprised that we still have Mr. F. L. Houghton as secretary and some others. I have not read quite enough to be fully posted on the inside working of the political ring now in control but when the small breeder, dairyman and farmer that we have all been working with for years to get them to adopt registered Holsteins become acquainted with the situation, I think you will find them ready to turn the table.

Yours very truly,

July 24, 1922. R. M. S., WISCONSIN.

BREEDER AND DAIRYMAN:

Dear Sir—I want to congratulate you on the stand you have taken in regard to the way the Holstein-Friesian meetings are being conducted. It looks as though the common run of small breeders were not out of it entirely. I had a sale on February 23d and among the animals sold was a calf belonging to my son who is not a member of the Association which we promised to have transferred as we supposed we had six months in which to have it done, we were in no hurry. However, on June 12th we sent in the $1 transfer fee before we knew what had been done at the meeting. In a few days we received a card saying that they would have to have $5 more which we sent and I suppose if the animal lives long enough we will get the papers, before she dies but it is the last money that the Association will ever receive from me unless they change very much from the way they are doing business at the present time. The only thing I am sorry for now is that I was fool enough to pay $25 to join the Association. I would surely subscribe to your paper if I were not disgusted with the whole business and have lost all interest in the Holstein-Friesian breed.

Yours respectfully,

July 20, 1922. P. A. E., NEW YORK.

North Dakota State Fair

The North Dakota State Fair was held at Fargo, July 17th-22d and was said to have been the best balanced fair ever presented in the history of the state. There was a large attendance and the outstanding feature of the show was the live-stock department.

The North Dakota College of Agriculture was represented by exhibits in every department. The boys' and girls' club department was featured in the Agricultural Building. The dairy husbandry department showed an exhibit of ten cows from the Stutsman Holstein Circuit. The purpose of this exhibit was to demonstrate that it is impossible by external examination of animals to determine their production. The year records of each cow were printed on a card and visitors were asked to pick the cow to which the card referred. Another educational feature consisted of two cows, a purebred and a scrub, whose production records were shown. They were used as a contrast to show the value of quality in production. Purebred sire exhibits were shown as well as the state champions of the Jersey, Guernsey and Holstein breeds.

In the Holstein show ring, honors were fairly well divided. The herd of Jerry D. Bacon & Son won the grand championship for males with their Sir Pontiac Colantha Bismarck, and the junior championship for females with Bacon Homestead Lass, a daughter of the Bacon senior herdsire, Sir Pontiac Ollie. Sir Pietertje Ormsby Butter Boy, owned by Ernest H. Schroeder, won the junior male championship and the well-known Belle Hazeltine Ormsby was female grand champion.

The First National Bank, of Fargo, gave a number of special prizes, competition open to any dairy breed. The prize for best young herd of dairy cattle was won by the South Park Farm, with their Jersey exhibit, the Bacon herd of Holsteins being second and the Guernsey exhibit of E. S. Person, Minot, third. The prize for the best calf herd was won by the Bacon herd with South Park Farm second, Person again winning third.

The detailed awards were:

Exhibitors—J. D. Bacon, Grand Forks; G. H. Knobel, Buchanan; North Dakota Agricultural College, Fargo; Ernest H. Schroeder, Glyndon, Minn.; F. H. Skrei, Glyndon, Minn.; Ferguson Bros., Canby, Minn.

Bull, 4 years or over—1st, Bacon, on Canary Artis King of Butter Kings. Bull, 3 years and under 4—1st, Bacon, on Pontiac Colantha Bismarck. Bull, 2 years and under 3—1st, Knobel, on Sir Walker Homestead Oak. Bull, 1 year and under 2—1st, Bacon, on Sir Ollie Colantha Zubrod; 2d, N. D. A. C., on Dean Ormsby Mercedes. Senior Bull Calf—1st, Schroeder, on Sir Peter G. Ormsby Butterboy; 2d, Bacon, on Lilac Hedge Ide; 3d, Skrei, on Sir Pietertje Ormsby; 4th, N. D. A. C., on Cynthia Ormsby.

Cow, 4 years or over—1st, Skrei, on Belle Hazeltine Ormsby; 2d, 3d, Schroeder, on Edenvale Deon Pontiac and Franctje Nightshade Pontiac; 4th, Bacon, on Lilac Hedge Fay Colantha Bismarck. Cow, 3 years and under 4—1st, Skrei, on Belle of the Ormsbys. Heifer, 2 years and under 3—1st, Schroeder, on Queen Fayne Pontiac Ormsby; 2d, 3d, Bacon, on Lilac Hedge Pontiac Colantha and Lilac Korndyke Segis. Senior Yearling Heifer—1st, N. D. A. C., on N. D. A. C. Ormsby Mercedes; 2d, Bacon, on Bacon Colantha Bismarck; 3d, 4th, Schroeder, on Daisy Pietertje Mercedes Ormsby and Lady Veeman Ormsby Korndyke. Junior Yearling Heifer—1st, 3d, Bacon, on Bacon Homestead Lass and Bacon Paul Prilly; 2d, 4th, Skrei, on Minita Pietertje Ormsby Bess and Belle Pietertje Mercedes Ormsby. Senior Heifer Calf—1st, Bacon, on Bacon Segis Netherland; 2d, Skrei; 3d N. D. A. C., on N. D. A. C. Cynthia Adelaide.

Senior and Grand Champion Bull—Bacon, on Sir Pontiac Colantha Bismarck. Junior Champion Bull—Schroeder, on Sir Pietertje Ormsby Butter Boy. Senior and Grand Champion Female—Skrei, on Belle Hazeltine Ormsby. Junior Champion Female—Bacon, on Bacon Homestead Lass.

Graded Herd—1st, Bacon. Yearling Herd—1st, Bacon. Calf Herd—1st, Bacon; 2d, Skrei; 3d, N. D. A. C. Get of Sire—1st, Bacon; 2d, Skrei; 3d, N. D. A. C. Produce of Cow—1st, Bacon.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

August 8, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

The Holstein-Friesian Association of America

WE have refrained from making any editorial comment on the recent annual meeting of the Holstein-Friesian Association of America.

Following the special meeting at St. Paul, last year, we very frankly stated our opinion as to the tendency in the Association's management to eliminate the small breeder from any participation in Holstein affairs other than meekly and humbly furnishing the money for the big breeders in control to spend.

The action at the annual meeting in Kansas City very conclusively confirms the above opinion and without any further comment on our part we would earnestly recommend our Holstein readers to get behind THE HOLSTEIN BREEDER AND DAIRYMAN which is so ably championing the cause of fair dealing and justice to all Holstein breeders, big and little.

THE NEW ENGLAND FARMS.

Distorted Views

THE relative importance of things is badly twisted in the minds of the majority of the population and by the daily newspapers. Pages upon pages are devoted to chronicling the movements of a so-called American fighter who, when America entered the war, rushed or was rushed by his managers into the shipyards so that he would not have to go across the ocean and fight against the common enemy. Should Sir Thomas Lipton decide to again challenge for the American cup there would be, in practically every issue of every large city paper more or less space devoted to a description of the contest, and the movements of those likely to take part in it. For months much space was given to the French lady tennis champion and to the Norse-American champion and their subsequent meeting. When the world golf championship and the amateur sculling championship recently came to America, writers vied with each other in using glowing adjectives when discussing these events. An event that means more to the welfare of the country, a contest of international skill and judgment won by native Americans, is passed over by a few short lines in the daily papers.

Victory of the three Maryland boys, Warren Rice, George Worilow and Joseph Glackin, in the judging contest at the English Royal Stock Show has the possibility of meaning more to the welfare of the people of the United States than have all these other enumerated contests combined. The three boys were first victorious in love stock judging contests in Maryland; they then journeyed to Atlanta and defeated a number of boy teams representing other sections of the United States. Their victory entitled them to a trip to Europe and in the course of this trip they met a team consisting of a girl and two boys, the pick of the young stock judges of England, and beat them by around 200 points.

The younger generation on the farms is being taught how to select animals that will mature quicker, produce more, make better use of the feed given them, and so lessen the labor and increase the income of their owners. This means easier work for the future farmers and their families, and is similar to the installing of labor-saving machinery by manufacturers. The average farm animal of twenty years from now, if this work continues, will be far above the average of the farm animal of to-day and the benefits will be cumulative. This will mean a material increase in the wealth of the country and nation, an increased wealth that will be created on the farms. What the article writers and editors of the United States need is a revised and true perspective.

Fifty Years of Gradual Dairy Improvement

U. S. DEPARTMENT OF AGRICULTURE

MRS. ORDINARY COW is not quite so ordinary as she was fifty years ago. All these years she and her families have been slowly but steadily improving—just how much we cannot say—but from comparative census figures and estimates by the United States Department of Agriculture it appears that a great deal of improvement in milk production has been made since 1870.

The census figures collected that year did not show the quantities of milk used on the farm, so that a comparison of totals cannot be made, but it is possible to compare the quantity of milk per cow sold off the farms at that time with the average per cow in 1921. In 1870, the milk sold off the farms averaged 1,771 pounds for every cow, based on the census count. In 1921, department estimates show the quantity sold off the farms amounted to 2,622 pounds per cow. Leaving out of consideration the milk used in farm homes or fed to calves and pigs, figures for which are not available for the first period, this shows an increase in production of 911 pounds for each cow, or 53 per cent, in 51 years.

While this increase in production of a little more than 1 per cent a year was going on, the increase in the number of purebred dairy cattle was at a much slower rate. In the last 30 years, according to census figures, the purebreds increased only 3 per cent, or one-tenth of 1 per cent a year. But if these figures were to be considered alone the purebreds would not get all the credit they deserve. Good blood in dairy animals has increased at a much greater rate no doubt than has the number of animals that are eligible to registry as of pure blood. Much of the improvement in the productivity of the ordinary cow has been brought about by the use of improved sires—purebred sires. The purebred animal has a double duty to perform. It must increase the supply of purebreds and at the same time improve the general run of animals. The quantity of pure blood that has been introduced into grade and scrub herds in the last 50 years is enormous, but there is not any way of measuring it, except as we notice the gradual improvement of the average animal.

Nell—"Miss Antique says all men are alike."
Belle—"Yes, I guess they all look good to her."

Big Time at Bridgeport

THE Connecticut Holstein-Friesian Breeders Association is planning on a big time August 26th at the Bridgeport City Farm, Bridgeport, Conn., when the annual meeting will be held followed by the sale.

Elaborate plans have been made for the entertainment of the visitors and a big turnout is expected.

The meeting will be held at 10 A. M. At noon there will be a sheep roast and the cook, who has a great reputation, has promised that all present will long remember the day.

The sale will be started immediately after the sheep roast is disposed of.

The City of Bridgeport herd contains a number of state champions and animals of high class individuality. It is under the supervision of Angus P. Thorne, who is also president of the Connecticut Holstein-Friesian Breeders Association.

Friendship is a wonderful thing. A man never realizes how many people are eager to come to his assistance until he doesn't need any.

"All going out and nothing coming in," mourned the man who was getting bald, as he examined his pate in the mirror.

He can never recover until these empirics are kicked out and their poisonous dope eliminated. He can't stand the treatment, and the public demands a change.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Aug. 9—Beatrice, Neb., State Picnic of Holstein Breeders' Associations.
Aug. 10—Tour of the Mercer Holstein and Mercer Dairy Record Associations, New Jersey.
Aug. 10—Licking County, Wisconsin, Sixth Annual Picnic of Holstein Breeders' Association.
Aug. 10—Milladore Holstein Club Picnic.
Aug. 17—New Waterford, Ohio, Columbiana County Holstein Breeders' Annual Picnic.
Aug. 17—Waukesha, Wis., Waukesha County Holstein Breeders' Picnic.
Aug. 18—Royalton, Wis., Waupaca County Holstein Breeders' Association Picnic.
Aug. 21—Lake Geneva, Wis., Rock and Walworth Counties Holstein Picnic and demonstration.
Aug. 23, 1922—Tour to New Jersey State Agriculture College and Forsgate Farm.
Aug. 26—Baltimore, Md., Maryland State Dairymen's Association.
Aug. 26—Bridgeport, Conn., Holstein-Friesian Breeders' Association.
Sept. 25-Oct. 1—Waterloo, Iowa, The Dairy Cattle Congress, E. E. Estel, Mgr.
Oct. 7-14—Minnesota State Fair Grounds, National Dairy Show.
Oct. 28—West Chester, Pa., Field Day and Banquet.
Oct. 10—Dallas, Tex.—Texas Holstein-Friesian Breeders' Association Meeting and Banquet.
Nov. 23—Belvidere, N. J.—Annual Meeting Warren County Association.

Secretaries of breeders' clubs and associations are requested to send dates of coming meetings for publication in this calendar. THE HOLSTEIN BREEDER AND DAIRYMAN will gladly publish such particulars and are always pleased to obtain reports of breeders' meetings, picnics and clubs.

MULTNOMAH BREEDERS' TOUR

The Multnomah County Breeders held their annual tour June 24th starting from Gresham, Oregon. The Jacob Luscher herd at Fairview was first inspected. The Luscher home burned down recently but a new one, larger and finer than the old, is being erected. The Luscher herd has just passed a tuberculin test without a reactor.

The second stop was at the home of County Agent S. B. Hall, who was in charge of the tour. Mr. Hall has very little time to devote to his own business but is laying the foundations for a good herd which he intends to take complete charge of later.

STANHOPE BELLE JOHANNA
32,453.8 lb. milk, 1,242.44 lb. butter in a year. Owned by H. G. Mullenhoff, Gresham, Oregon. The chief object of interest seen on the Multnomah Breeders' Tour.

The farms of Wm. and David McKeowan were the next station. These breeders at one time owned Segis Walker Matador, the full brother of Matador Segis Walker. In the McKeowan herd this bull sired so many good ones that the Carnation people bought him about two years ago. It is expected that exhibits from the McKeowan herd will be seen at Gresham at the county fair, at the state fair at Salem and at the Pacific International.

J. Burns of Sandy has only been in business a few years. His herd bull is a son of Segis Walker Matador and Stanhope Belle Johanna.

The County Farm was the next stop. The herd here is headed by a son of Judge Segis who is proving himself a good sire. U. G. Smith is superintendent of the livestock department and to him should go much credit and also to the Board of County Commissioners. The Holstein breeders gave a vote of approval to the board for its work, extending the hope that the new board will realize the importance of maintaining a herd of purebred Holsteins at County institutions. The testimony of Count and State institutions is to the effect that the maintenance of purebred dairy herds is marked by an improvement in the mental and physical condition of the inmates at a low cost.

The principal meeting of the day was held at the H. G. Mullenhoff farm where Stanhope Belle Johanna was the center of interest. After the dinner there was good speaking. Former State Senator H. A. Lewis and C. D. Minton starting the performance. Mr. Mullenhoff told of the handling of his great cow, Stanhope Belle Johanna, during her test in which she produced 32,453.8 lb. milk and 1,242.44 lb. butter in a year.

Miss Hilda Stafanson who cared for Stanhope Belle Johanna for the last seven months of her test year was presented to the audience. Miss Stafanson said she had not realized how much anyone could learn to love a cow until she started to care for the Holstein champion. She told how she had to milk the cow first on one side and then on the other because the udder was so large she was unable to milk alternate teats.

Stanhope Belle Johanna was eight years old June 24th and all her calves so far have been bulls, three by Segis Walker Matador. She is in fine shape now, is heavy with calf and is expected to surpass her last year's record.

S. E. Hodgen, of Kerr, Gifford County, was presented as the man who encouraged Mr. Mullenhoff to test, who helped compound the rations and acted as advisor and friend all through her year.

The visitors noticed a post on one side of which was the legend "Clackamas County," and on the other "Multnomah County." Stanhope Belle Johanna made her year record in Clackamas County, the house and barn being over the line but the bulk of the farm is in Multnomah County and all the feed which the cow ate to make the milk and butter was produced on the Multnomah County side of the line. The tourists urged that the cow be brought on their side of the line and a special house built for her as Clackamas claims to be a Jersey and Guernsey County.

JOINT PICNIC PLANNED

The Rock County Holstein Breeders' Association has 119 members which is 19 more than was first planned. Four principal objectives were aimed at by this organization the first year of its existence and these four were, a membership of 100, a Boys' and Girls' Calf Club, a purebred auction sale and a creditable county exhibit of Holsteins at the Rock County Fair. The first three jobs are completed and the prospects of the fair exhibit are very encouraging. The exhibit will include 19 purebred calves belonging to members of the boys' and girls' calf club. The Rock County Association were active in the campaign to raise money to build the $8,000 judging and sale pavilion on the Rock County Fair grounds which is now nearly completed and which it is planned to hold a sale of purebred cattle the first week in November.

The directors of the Rock County Association held a meeting July 8th at Janesville, Wis., and decided that the Association will join with the Walworth County Club in holding a picnic on August 21st. It is planned to make the picnic an annual affair the location to be alternated, first in Walworth County and next in Rock County. They propose to hold the first meeting at the Dickinson farm at Lake Geneva which will give the breeders' of both counties an opportunity to look over the splendid Walcowis herd.

WASHINGTON ASSOCIATION RETURNS MEMBERSHIP FEES

A meeting of the Executive Committee of the Washington State Holstein-Friesian Association was held in Seattle, July 7th. President William Bishop, H. C. Stimson, Vice-President and Treasurer George L. Bulkley, Executive Secretary E. A. Stuart and A. E. Smith were present when President Bishop called the meeting to order, the four making a quorum out of seven members of the Executive Committee.

The principal business of the association was to consider the return to the breeders who had paid their 1922 annual dues to former Secretary Burchard. President Bishop and the Executive Committee at former meetings had tentatively agreed to return 50 per cent of the money collected.

E. A. Stuart made a motion that in order to show the breeders the good faith of the Executive Committee that the full amount of money received from breeders for 1922 be returned in every case. Thereupon Mr. Stuart made a motion that inasmuch as there was not enough funds in the treasury after having paid the bills incurred by the former Board of Directors and its secretary, that it was now up to the present board to devise ways and means of returning the full amount of money to the breeders. And in order to accomplish this Mr. Stuart suggested that the three largest breeders of this state should give their joint notes for enough money to make up the deficit. This motion was seconded by A. E. Smith, and was voted upon and passed, whereupon Wm. Bishop, H. C. Stimson and A. E. Stuart gave their joint notes and authorized the treasurer, H. C. Stimson, to borrow the amount necessary and to immediately send out checks to all breeders who have paid their this year's dues, also to pay all bills due against the association.

It can readily be seen by the action of Messrs. Stuart, Bishop and Stimson that these men are sincere in their desire to make the state association a real business success.

Without going into any of the mistakes of the past, the writer will say that he is very sure that the business of the Washington State Holstein-Friesian Association under the able guidance of President Bishop and the other able business men associated with him will now be the real success that the writer anticipated it would and should have been from the outset had better business methods been pursued by the former Board of Directors.

The expense of secretary and all other expenses have been absolutly cut off by the board. Profesor Bulkley is serving as executive secretary without compensation, and the new board has met for the fourth time this year, another evidence of real industry and business efficiency.

In order to raise money for the operation of the state association and also that the state association shall retain all of its rights under the by-laws, rules and regulations of the national association, the state association will hold sales and expects to make these sales a success and to derive financial benefit therefrom. A state sale will be held at Yakima during the State Fair, and the breeders of every county will be invited through the secretary of the county club to participate and consign their cattle to this sale. Letters pertaining to this coming sale will be forwarded at an early date by Secretary Bulkley. Vice-President Stimson stated that we of Washington must have the best conducted sales that it is possible to hold and that the breeders will contribute young cattle that will be good enough in every way to be sold anywhere and that these cattle will bring prestige and honor to their breeders and the State Holstein-Friesian Association. President Bishop, Mr. Stuart and Mr. Smith agreed with Mr. Stimson in his idea as to how the sales should be conducted and also as to the quality of cattle that will be offered.

The next meeting of the board is called for July 18th, at 1:30 p. m., in the Chamber of Commerce, Third Avenue and Cherry Street, Seattle, and all breeders and county agents are cordially invited to attend this meeting. This meeting is called for the purpose of getting the breeders to coöperate with the state association and to talk over the matters pertaining to the holding of sales during the coming summer, and the writer is more than certain that if every breeder who reads this article will come to Seattle, attend these meetings, that they will be convinced of the fact that William Bishop, Harold C. Stimson, E. A. Stewart, Dr. Stockwell, Professor Bulkley and every member of the Board of Directors are men who are sincere and positive in their desire to make the Washington State Holstein-Friesian Association a genuine business success. The breeders can see that the three largest breeders in the state have assessed themselves in order to pay back to the small breeders of the state all of their dues for 1922.

The reason for paying back this money is that before the new board got well under way, the season was far advanced and it did not look to the new board as though they could do the breeder a lot of good in 1922. Therefore, it was decided to pay back this money which is being done in no unselfish wa or with no ulterior motive on the part of the three men who have put their hands in their own pockets and raised the money.—*C. A. Harrison, in Western Breeders' Journal.*

BRATTLEBORO BUSINESS

Twenty-four applications for membership were received at the office of the Secretary for the week ending July 15th. In the same time 1,758 certificates of registry were issued, 1,240 female and 518 male; 1,771 certificates of transfer were written, 1,152 female 619 male.

For the week ending July 22d, twenty applications for membership were received at the office of the secretary. There were 1,629 certificates of registry issued, 1,133 female and 496 male; 1,504 certificates of transfer were written, 1,000 female and 504 male.

The prefixes reserved during the two weeks period are as follows:

Alfaridge, C. M. Chamberlain, Owosso, Mich.
Allenby, Alvin P. Allen, Omro, Wis.
Applelane, Robert K. White, McDonough, N. Y.
Averdale, O. J. Avery, North Collins, N. Y.
Bailiwick, Gilbert L. Bailey, Lexington, Ky.
Black Point, C. Tessa Schmidt, Lake Geneva, Wis.
Branchville, H. Houck, McKean, Pa.
Bryn-Mont, William Brinton, Glenrose, Pa.
Cee-Dee-Em, Clyde D. & D. A. Mason, Richfield Springs, N. Y.
De Jeanne, Samuel C. Jayne, Laceyville, Pa.
Foxhurst, Ferdinand J. Koeppe, Sheboygan, Wis.
Green Edge, W. H. Bender, Wauseon, Ohio.
Magnetic, Frank Weir, Russell, N. Y.
Maple Fair, Harry Ellsworth, Elkhorn, Wis.
Oak Vista, Robert H. Mercer, Ellicott City, Md.
Parrish, U. O. Parrish, Union City, Tenn.
Robles, R. B. Hollister, Paso Robles, Cal.
Royal Spring, W. O. Ashhurst, Georgetown, Ky.
Sevendale, A. H. March, Fayetteville, Tenn.
Spring Ridge, George P. Trimberger, Chilton, Wis.
Starbuck, Charles R. Durland, Audubon, Iowa.
Sunset Ridge, Ralph Meek, Oxford, N. Y.
Swampdale, A. S. Mumbauer, Quakertown, Pa.
Thendara, Frank N. Decker, Syracuse, N. Y.
Tuskegee, Tuskegee Institute, Ala.
Two Spring, Ed. Missling & Sons, Withee, Wis.
Weber, State Industrial School, Ogden City, Utah.
Wiswai, L. B. Hollister, Lone Rock, Ia.

TOUR IN SOUTHERN IDAHO

The Southern Idaho Breeders' Association staged a fine trip in the Weiser and Fayette Valleys in which 87 people visited six Holstein herds, and traveled around 200 miles. The Johnson-Shambaugh ranch was started in the sage brush two years ago and now has 13 purebred Holsteins from the Inter-Mountain Institute stock. In addition they have 120 purebred Duroc hogs.

About eight years ago H. W. Weick, of the Hilltop Farm, started in the Holstein business, buying a cow from O. P. Hendershot, for $300: to-day he has a herd of twenty-two, of which three are not descendants of this cow. His herd is headed by a son of King Segis 10th, the Carnation herdsire. Mr. Weick has two sons interested in Holsteins. Elmer is the owner of a two-year-old heifer which produced 13,872.7 lb. milk in a year and Edwin also owns some fine animals. Both boys have won first prizes in state club contests and had exhibit at the state fair. The Weick herd is now valued at $12,000 by its owner. The junior herdsire is a grandson of Matador Segis Walker.

The longest stop was made at the Inter-Mountain herd at Weiser. The visitors admired Mercena Mabel Hartog, who has a year record of 873.18 lb. butter, 21,083.2 lb. milk made as a senior three-year-old. Another heifer which greatly interested the visitors was Colantha Hartog Lillian, with a year record of 17,531.6 lb, milk, 691.71 lb. butter as a senior two-year-old. Yet another was the four-year-old Dorothy De Kol Walker, now on year test, with 18,000 lb. milk, 700 lb. butter in nine months. It is reported that an offer of $20,000 was made for these three and one other cow, not on official test now, but the Institute turned down the offer. At the present time thirty-two cows are being milked in the Institute herd. Those on test are milked by hand, the others by machine.

After a splendid farm dinner in which dairy products predominated, short addresses were made by Thos. Kellern, president of the association; F. R. Cammack, field dairyman of the University Extension Department; W. G. Messersmith, prominent breeder; and Matt Resondes, official cow tester for Ada and Canyon Counties. Mr. Resondes made the statement that in the small country of Switzerland there are 1,500 cow testers, which is more than there are in the whole United States.

The R. T. Davis ranch, north of Weiser, was next visited. Here was seen Alba Clyde Colantha Burke, the state champion milk producer, with 733 lb. in seven days. She has been fresh two months and is now milking 90 lb. a day. There are fifteen animals in this herd, most of which are heifers.

There are sixty head, of which fifty are females in the H. R. Boomer herd in the Fruitland district. Some of the best herds in the valley are offsprings from Mr. Boomer's stock. The present herdsire was purchased for $1,000 at the Portland International Live Stock Exposition.

The herd of A. Schuler, between Plymouth and Fruitland, was greatly admired as the animals were in show condition. The leading cow in this herd, is Boomer Topsy Veeman Segis, with 500 lb. butter fat in 6 months. A heifer in this herd, Rotha De Kol Walker, is now milking 88 lb. a day. This herd is in charge of Chas. Pritzel, who is milking ten head, all of which have made advanced registry requirements during the past few months.

YAKIMA VALLEY PICNIC

The breeders of Yakima Valley met July 4th at Glencliff, the beautiful farm owned by Stephen E. Chaffee of Sunnyside, Wash. About 75 were in attendance, and enjoyed the day and picnic luncheon.

E. C. Scott, County Club leader told of the work he is doing among the boys of the county, particularly stressing cattle clubs. Plans for the state fair were discussed by H. P. Vermilye, secretary of the fair association, who said that the fair cattle exhibits were doing much to improve the standard of cattle in the state of Washington. He asked the breeders to coöperate with the fair association by making the cattle show this fall as fine and complete as possible. Mr. Chaffee explained his system of managing the farm and herd and his future plans. He has a regular system of crop rotation and feeds practically all he produces to his Holstein herd. Mr. Alec Todd told of what he had seen on his recent trip to the East, of the many large herds he had visited and sales he had attended. Mr. H. C. Davis gave a judging demonstration illustrating his talk by pointing out good and poor points of some of the animals in the Chaffee herd.

James Garretson was elected secretary of the Yakima Valley Holstein Association in place of Stanley Butchart the former secretary.

ST. JOSEPH VALLEY BREEDERS

Twenty-five members of the Holstein Breeders' Association of the St. Joseph Valley held a banquet in the dining room of the Jefferson Hotel, South Bend, Indiana, July 8th, after which followed the association's monthly meeting. The topics of the evening were "Dairying" and "Agriculture" and the principal speaker was Prof. Reid Murray, secretary of the Wisconsin Live Stock Association. Supplementing Prof. Murray's speech were short talks by Brother Felix, of St. Joseph Valley; Mr. O'Keefe, of Plymouth, Ind., and Brother Leo, of Notre Dame.

HILLSDALE BREEDERS' TOUR

It is estimated that 200 people took part in the first annual joint tour of the Hillsdale County Holstein Breeders' Association and the Hillsdale County Calf Club, which took place July 18th. The tour began at the Seth Boyd farm, Waldron, Michigan. Dinner was eaten at the O. R. Rumsey farm, near Hudson.

James Post, president of the Hillsdale County Breeders' Association, acted as chairman and introduced Prof. O. E. Reed, head of the Dairy Department of the Michigan College of Agriculture. Prof. Reed commended these visits to breeders' herds, calf club work and cow testing. H. D. Boardman, of Jackson, told some of the happenings at the Holstein-Friesian Convention at Kansas Ctiy. The State Club Leader, R. A. Turner, reported that Michigan ranks eighth in the United States from the standpoint of boys' and girls' clubs. He said the breeders should sell good calves to the young breeders and the result will be beneficial and profitable to the dairy industry.

N. Pearson, Assistant State Club Leader, said that the state association is planning to build up a club organization which will not only be beneficial to the live stock development but would make better citizens of its members. T. L. Berwick, Wisconsin Club Leader, told of the club work in his native state and gave a practical demonstration of judging dairy animals.

MERCER COUNTY TOUR

The annual dairy tour of the Mercer County Holstein-Friesian Association and the Dairy Record Association is scheduled for August 10th. The meeting place is at the farm of J. W. Hendrickson, Ewing, N. J., at 9:00 a. m., standard time. The Hendrickson herd and alfalfa field will be inspected first, then the visitors will journey to the farms of Henry Schmidt and S. Hansen. Lunch will be eaten on the grounds of the New Jersey State Village. Judging contests will be held, using as subjects some of the cows of the village herd. Dr. Weeks will entertain with moving pictures showing various dairy activities.

The State Village herd is an example of what can be done in building up a high class producing herd. It was started with five purebred cows and a few grades. Good bulls have been used and at the present time there are about 125 head of milkers and young stock. The sixty milkers averaged 9,484 lb. milk the past year.

The senior herdsire is Prince Hengerveld Walker De Kol, a son of Beauty Walker Pietertje Prince, from Princess Hengerveld De Kol, 33.62 lb. butter in seven days, the highest record daughter of the great Hengerveld De Kol. The junior herdsire is Tranquillity Sadie Vale Poach, a son of King of the Sadie Vales from Tranquillity Korndyke Fannie, a 20-lb. junior two-year-old daughter of Korndyke Abbekerk.

LOWDEN SPEAKS TO BIG CROWD

The third annual picnic of the Jefferson County Holstein Breeders' Association was attended by nearly 5,000 people, reports the *Jefferson Banner*. The principal speaker was the Hon. F. O. Lowden, President of the Holstein-Friesian Association of America. A calf judging contest was the feature of the forenoon program. There were 32 animals in the ring.

Viola Oettmeier, of Fort Atkinson, won the girls' calf judging contest with 315 points out of a possible 400; Meta Gritzbauch was second, with 200 and Lela Berg, of Lake Mills, third, with 185. Of girls over 18, Maryette Whitney, Fort Atkinson, won with 310 points and Esther Gritzbauch, of Jefferson, 285 Among the boys under 18, George Jones, Milton Junction, won 365 points; Ernie Gurr, Lake Mills, 360; and Joseph Winkler, Jefferson, 325.

Miss Anna Wollet, of Jefferson, won the calf in the lottery. This was a six-months-old bull calf, donated by Milford Meadows Farm, which is located at Lake Mills, Wis. This calf was sired by Marathon Aaggie. The winner did not need the calf, and he was put up at auction and struck off for $82.50 to Wm. Keinbaum.

BOISE VALLEY BREEDERS

Fifteen breeders of purebred Holstein cattle representing about half the number in the valley held a lengthy meeting at Meridan, Idaho, July 15th, and reorganized the Holstein-Friesian Breeders' Association of Boise and Lafayette Valley. The following officers were elected: Thomas Killen, of Boise, president; H. Weick, Notus, vice-president; R. H. Musser, Boise, secretary-treasurer. The advancement of the valley's herds was the chief topic of the meeting and it was decided to carry on an extensive campaign along this line as soon as more members were secured. Some of the best cattle of the breed are to be found in Boise Valley, including sons and daughters of King Segis 10th, the Carnation Stock Farms' famous sire.

The program for the immediate future is as follows: closer coöperation of the present members; encouragement of new breeders; better publicity for the facts of the industry, especially regarding the quality of the present herds; advertisement of the association idea; encouragement of junior interest in the subject; more liberal showing at county fairs; official testing for butter production; development of high class herdsires from high-producing dams; elimination of the scrub bull from herds of the valley; fostering of the bull association plan and promotion of the dairy industry in general.

CLAYTON COUNTY, IOWA

Thirty Holstein breeders of Clayton, Iowa, with their families met July 12th, at the first annual meeting and picnic of the Clayton County Breeders' Association at the farm of J. L. Cords, near Ekkader. A constitution and by-laws were adopted for the association and officers elected for the coming year

The principal speakers were: A. Roy Combs, County Agent of Clayton County; Ernst Lihn, Farmersburg; J. P. Eves, secretary of the Iowa Holstein Breeders' Association; Fred Ferguson, Assistant Club Leader; Oliver Constable and Raymond Mahowald, of the McGreggor- and Monona-Farmersburg Cow Testing Association.

The following officers were elected for the coming year: President, J. L. Cords; vice-president, Marion Miller; secretary-treasurer, Ernest Lihn; directors: W. L. Pieck, Geo. Tieden for one year; E. Carnicle and Sam Little for three years; H. O. Larson and Ben Klima for two years.

BUFFALO BREEDERS ELECT

The Buffalo County Holstein Breeders' Association held their annual meeting at the Courthouse, Alma, Wis., July 15th, and elected as officers for the ensuing year: Bert Ayres, Gilmanton, President; Oscar Weinandy, Cochrane, vice-president; L. J. Rosenow, Waumandee, secretary-treasurer; Romeo Koepp, Mondovi; Frank Rohrer, Alma, Henry Bade, Nelson, directors.

The breeders of the county are planning to send a county show herd to Chippewa Falls and to other fairs this year. Last year the Buffalo County Exhibit made a splendid showing at the Northern State Fair, winning second place against very strong competition. It is planned to hold a picnic near Gilmanton sometime in August and to make this one of the biggest live stock meetings of the year.

COUNTY UNIT FORMED

An enthusiastic Holstein dairy meeting was held at Garden City, Minnesota, July 18th. A local county association unit was organized with the following members as officers: L. K. Frederickson, President; W. H. Hudson, vice-president; Garvin Crane, secretary-treasurer; Frank Wildes, Kenneth Crane, directors.

Short talks were given by A. L. Veigel, vice-president of the National Bank of Commerce, and president of the Civic-Commerce Association; Garvin Crane, cashier of the Farmers' State Bank, of Garden City; Frank Wildes, of Lake Crystal, H. E. Brush, Amboy, and J. C. Marlow, secretary of the Blue Earth County Holstein Association.

NEW YORK STATE DAIRY ASSOCIATION

The 46th Annual Convention of the New York State Dairymens' Association will be held in the Armory at Watertown, New York, November 14th to 17th inclusive. The president of the association is the well-known writer and lecturer on farm subjects, H. E. Cook, of Denmark. Thos. E. Tiquin, Albany, is secretary. Among the speakers on the program are J. M. Kelley, Vice-president of the Holstein-Friesian Association of America and Dr. Newell Dwight Hillis, pastor of Plymouth church, Brooklyn. It is expected that there will be a Holstein sale held in connection with the meeting.

A LITTLE SIDELIGHT ON WAGES

A workman employed by the Anaconda Copper Company in Butte, saved money for quite a number of years and then bought a ranch. He was happy in his new environment and all went well until the war broke out. Railway wages and mining wages were advanced so much that his help all deserted him. He had a hard struggle. After the boom burst, however, he was again able to get men. But he is again in a dilemma. He recently wrote a railway president asking if railway wages were to be maintained at their high level, "because," he added, "if you are to go on paying war-time wages I know that I am going to lose my men, because they won't feel like working three hours more a day for me at less pay than you give for an eight-hour day. Let me know what you are going to do, so that I may know what to do. If you are not going to reduce wages, I am going to sell out and become a wage-earner again."—*Forbes Magazine* (*New York*).

BACON HERD WINS PRIZES

The grand championship prize for Holstein bulls and Holstein females given by the North Dakota Dairymen's Association and the First National Bank, of Fargo, went to the herd of I. D. Bacon & Son, of Grand Forks. The Bacon herd won a number of other prizes, getting second for largest and best general exhibit of purebred dairy cattle; third for best young calf group, any dairy breed competing. The judge was Prof. H. H. Kildee, of Ames, Iowa. In the open Holstein classes, the Bacon herd had the senior grand champion bull and junior champion female. T. H. Skrei, of Glyndon, Minnesota, had grand champion female and Ernest H. Schroeder, of Glyndon had the junior champion bull.

DAIRY ADVICE IN RHYME

Show me a man who'd dare say,
"It can't be done only on hay,
I'll also feed silage and grain
That in production I may gain."

From henceforth on, he'll possess joy
That no circumstance can destroy,
I'd clasp his hand and wish him well,
For him the bank account will swell.

—*George Wolf.*

French offer a prize for best plan to increase population. Here's ours: Have only poor people.

A Good Boy and a Good Cow

OUR illustration shows Mercedes Upland Pietertje, No. 156119, and her caretaker, the 11-year-old son of E. C. Ludt, of Carlisle, Pa. The cow goes by the name of Landy, and besides being a real good looking animal, she is a producer. Her average production in the Cumberland County Cow Testing Assocation for the past three years is 11,000 lb. milk, and 385 lb. fat, and in addition she produced three females and one male calf. Four of Mr. Ludt's boys have learned to milk by practicing on this cow. Three of her offspring have brought her owner $437.50, and in addition he has two left. Landy has been the property of her present owner for four years, and was purchased for $225. She was born November 15, 1911. Her sire is a brother to King Segis, being by Mercedes Julip's Pietertje Paul. Her dam is a granddaughter of Earl Korndyke De Kol, a son of the famous Belle Korndyke and therefore a brother to Pontiac Korndyke.

MERCEDES UPLAND PIETERTJE
A real producer in the hands of a small breeder and dairyman. She is being held by the 11-year-old son of E. C. Ludt, of Carlisle, Pa., who has taken care of her for the past year.

Mr. Ludt has been a member of the Cumberland County Testing Association for three years and has signed up for the fourth. He says it pays him great big dividends and he is an enthusiastic member. The son milked and took care of this cow for the past year, and under his care she paid a net profit over feed cost of $185. He intends to be a real Holstein breeder and says he won't have any other kind and they must be good ones, just like his favorite old Landy.

Boys' Club Short Course

The boys' club short course at Henderson County, Texas, was an unqualified success, reports County Agent D. Matthews. This course was heartily approved by the business interests of the county and active coöperation was given by the Chamber of Commerce at Athens. Several business communities sent their boys to Athens in large motor trucks, ninety boys being present the first day and 112 the second day. The youngsters came from every section of the county. The people of Athens opened their homes to the boys and many friendships were thus begun. Both boys and hosts were unanimous in the desire for the short course to be an annual event.

Practical lessons were given in judging dairy and beef cattle, poultry and corn. Tests were given during the closing hours and cash prizes were awarded the club members making the highest scores. It is safe to predict that better dairy and beef cattle, poultry and corn will finally find a place upon a majority of the hundred farms represented by the boys in this short course. It was not all work; there were plays and interesting games intermixed with practical instruction. The course was under the direction of district agent J. E. Stanford, assisted by R. W. Persons, W. T. Magee and Horace Thomas, of the Extension Service, with Mr. C. C. French as lecturer and instructor.

Danes to Have Junior Clubs

Junior club work is more prevalent in the United States than anywhere else under the sun. Although agricultural extension methods have been practiced longer in Denmark than in this country, work with boys and girls, as conducted by the United States Department of Agriculture in coöperation with state agricultural colleges has not been organized in the country of the Danes, but plans are being formulated at the present time, reports S. Sorenson, agricultural advisor attached to the Danish Legation at Washington. At present no one under 18 years old takes part in organized club work.

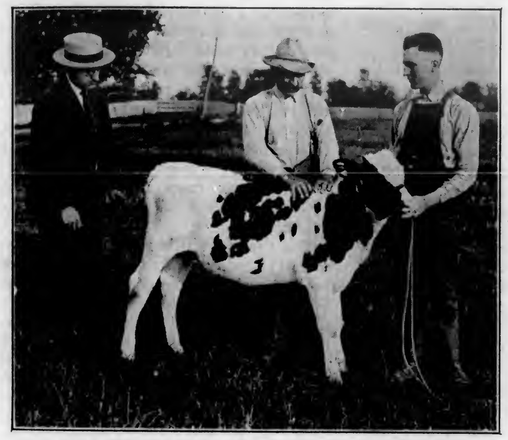
Scouts Own Farm

The Boy Scouts of Texas are probably the only organization of its kind to own a farm. A 200-acre tract near Duncanville, Texas, was given to the Boy Scouts some time ago. In order to aid in stocking the establishment, which is called Wisdom Farm, Dr. A. E. Flowers, of Flowerdale Farm, Dallas, has donated a yearling Holstein bull, Flowerdale King Dodo. In his presentation to the scout executive, Hubert E. Ratliff, the donor said that it was in appreciation of the work done by the boys.

Expect Big Turnout

There will be a big exhibit of animals owned by Juniors at the Wood County Fair, at Marshfield, Wis., as nearly 80 calves are owned in the boys' and girls' clubs in this county. Last year there were 65. In addition to the Marshfield Fair there will be a number of community fairs throughout the county, the intention being to give every young owner an opportunity to display his animals.

In Calf Clubs



Nineteen states have made application for the special Holstein-Friesian Calf Club offer at state fairs this season and it is estimated that 3,700 boys and girls are enrolled in Holstein Calf Clubs.

Holstein Calf Clubs in Pennsylvania

By Allen L. Baker, *Assistant State Club Leader.*

There are thirty calf clubs, with a membership of two hundred and eighty-seven, in Pennsylvania. Of this number, about one-half of the clubs, and one hundred and forty-seven members, are engaged in raising Holstein cattle. These clubs are scattered over a wide range of territory, from Crawford County, on the west, to Bucks County, on the east, and show the widespread popularity of purebred Holsteins.

The Dairy Club Work really embraces three phases: Calf Club; Heifer Club and Junior Cow Club. As the names indicate, the division is made according to the ages of the animals used. Some clubs start with calves, others with heifers and continue on through a period of years as junior cow clubs, when the animals come into production.

HOLSTEIN CALF CLUBS IN PENNSYLVANIA
A member of the Bucks County Club, with his father and Ex-County Agent N. E. Garber, looking over the good points of a Holstein calf. With acknowledgments to Editorial Division, States Relations Service, U. S. Department of Agriculture for photo.

In all these divisions assistance is given to club members through the county farm bureau in demonstrating on the home farm and to the community valuable lessons in regard to proper type, feeding and management.

Quite a few of the junior cow clubs are located in territories where there are cow testing associations and in such localities the club members have their cows tested along with those belonging to their parents and neighbors. An effort is now being made to have members in Junior Cow Clubs who do not have the advantage of a cow testing association to weigh their milk each day and keep a record thereof in order that they may have at least some indication of the relative productivity of their cows.

These clubs, conducted by the Agricultural Extension Department of the Pennsylvania State College, through the County Farm Bureaus, have always had the loyal support of local Holstein Breeders' Associations and The Holstein Breeder and Dairyman. To them is largely due the added interest in this work and the progress that has been made in introducing purebred Holsteins on farms where there have previously been none.

The development of dairy calf club work in Pennsylvania is being seriously handicapped by the lack of funds for the payment of indemnities for cattle slaughtered as the result of the testing for tuberculosis. The Pennsylvania State College has adopted the "safety first" policy in regard to this matter. Past experience has shown that it is a serious matter to place purebred Holstein calves or heifers, free from tuberculosis, in the hands of club members only to have them contract tuberculosis at home and fall down in a subsequent test.

At the present time calf clubs are only started in communities and on farms where a clean test for tuberculosis has been made. This policy has resulted in a material slowing up in the organization of calf clubs because of the slow progress made in the eradication of tuberculosis, but it is felt the safe and sane plan will be best in the end.

Resolutions of Oregon Breeders

Around 100 breeders of Holstein cattle met on the campus of the Oregon Agricutural College, Corvallis, July 22d, for the annual Holstein Hilarity. The College Dairy Building and herd were inspected during the morning.

Following a picnic dinner, Frank W. Connell, President of the Oregon Holstein Cattle Club, told of what he saw at the Kansas City Convention. The dairy specialist of the Oregon Agricultural College, Prof. M. C. Jamison, discussed breed association work, said that breeders should do more advertising and suggested uniform rules of the conduct of official test in all breeds. A paper on "The Economic Effect of Abortion Disease," by Dr. F. W. Miller, was read by Prof. R. C. Jones, who also talked on breeding problems. Manager O. M. Plummer, of the Pacific International Live Stock Exposition, told what may be expected at the 1922 show and urged Holstein breeders to exhibit at the county fairs, state fair and at the Pacific International.

The Harrisburg Holstein Calf Club, one of the best and largest Holstein clubs in the state, attended in a body and created a great deal of interest with their yells and songs.

The following resolutions were adopted at the meetings:

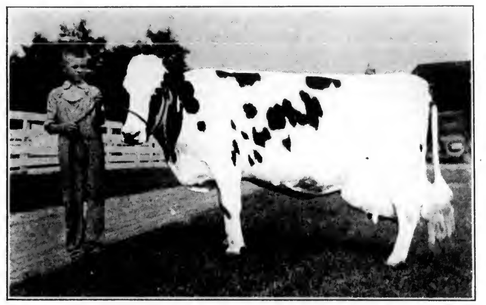
"In view of the fact that we, the Oregon Holstein Breeders, desire to promote the breeding of Holstein cattle in the Pacific Coast States and that we shall not receive sufficient funds from the transfer fees to warrant the employment of a field man for our state we ask that the states west of the Rocky Mountains be organized as one district and a field man be placed in charge of this territory. This field man to be governed by the directors of the National Holstein-Friesian Association of America.

"Resolved, That the Oregon Holstein Cattle Club urge the officials of the Holstein-Friesian Association of America to work with the committee on official testing of the American Dairy Science Association to formulate a set of uniform rules and regulations for conduct of official tests for all breeds.

"Resolved, That we, the members of the Oregon Holstein Cattle Club, in session at Corvalis, Oregon, July 22, 1922, do hereby go on record as favoring the expression of all production records in terms of fat and not in terms of butter.

"Resolved, That we donate $200 for space in the exhibit building at the 1922 Pacific International Live Stock Exposition.

"Resolved, That we donate $50 for Calf Club work. This money being our portion of the prize money in class "C" in the club work as outlined b ythe aNtional Association."



Wife (away from home): "Horrors! I forgot to turn off the electric iron!"

Husband—"It's all right. Nothing will burn long—I forgot to turn off the water in the bathtub."

Husband—"It's all right. Nothing will burn long—I forgot to turn off the water in the bathtub."

INTENTIONAL SECOND EXPOSURE

Cow Testing Association Reports

KANE COUNTY

The June average of the Kane County, Ill., Testing Association No. 3 shows an average increase of 100 pounds of milk and four pounds of fat over that of June, 1921. This increase is largely due to the weeding out of boarder cows and better methods of feeding. There were 602 cows tested and they averaged 884 lb. milk, 29.7 lb. fat. Seventy-five cows produced more than 40 lb. fat, while twelve unprofitable cows were sold from the association. Milk was produced at an average cost of sixty-four cents per hundred pounds for feed.

The high herd average was held by the herd of Oscar Engstrom with 1,740 lb. milk, 52.2 lb. fat. Second high herd was owned by Frank Widmayer with 1,120 lb. milk, 66.5 lb. fat, which is a daily average of 37.3 lb. milk per day for each of 31 cows in the herd. Third high herd was owned by the State Training School for Girls and had an average production of 1,028 lb. milk and 36 lb. fat.

The high cow for the month was owned by Mr. Engstrom. She produced 2,376 lb. milk, 76 lb. fat. Mr. Engstrom has recently purchased five more well-bred registered Holstein cows and a junior yearling Ormsby bull from Wisconsin. Second high cow for the month produced 2,145 lb. milk, 66.5 lb. fat. She was owned by Fred L. Wettering. This cow produced 71.5 lb. milk a day and was milked twice a day.

WHO CAN BEAT THIS?

One of the good herds in the Alden-Akron Dairy Improvement Association is the Aldencrest farm herd owned by Dold & Graves of Alden, N. Y. This is a purebred Holstein herd numbering over 80 head including young stock.

This herd is headed by a grandson of Colantha Johanna Lad, coming through one of his best individual daughters whose transmitting qualities have been proven as she has three A. R. O. daughters, two over 20 lb. as two-year-olds and a 26-lb. junior four-year-old. This herd is strong in the blood of Colantha 4th's Johanna as the former sire, King Korndyke Rag Apple De Kol was by a maternal brother to the present sire and from Etta Korndyke De Kol, whose year record of 25,000 lb. of milk and 1,150 lb. of butter was recently reported.

One of the good records just completed and in fact the first year record ever made on the farm was made on Fleet Pyrene Korndyke Butter Boy. This cow was 11 years old when the record was started so that her record of 23,000 lb. of milk and 972 lb. of butter is of worthy mention. Duchess Walker De Kol also completed a 305-day record of 18,345 lb. of milk and 810 lb. of butter. These records were semi-official.

Since the first of April this excellent herd under the careful management of Donald T. Graves have made some remarkable cow testing Association records. During the month of June a total of 22 cows were milked and 21 of this number produced over 40 lb. of milk daily. The high cow for both milk and butter in the Erie County Association was Duchess Walker De Kol, who gave 2,106 lb. of milk and 80 lb. of butter fat. Another cow to give over a ton of milk was the three-year-old heifer, Aldencrest Grendola Napoleon, who has to her credit 2,085 lb. of milk and 77.1 lb. of fat.

Three two-year-old daughters of the former herdsire, King Korndyke Rag Apple De Kol have an average production in 146 days of 6,733 lb. of milk and 233.7 lb. of butter fat.

Out of a total of 311 cows testing in this Association during the month of June 75 have made the Honor Roll requirements, which are 40 lb. of milk daily or 40 lb. of butter fat for the month. Of this number Aldencrest farms furnished 28% which we are claiming as a State record for number of cows milked.

Some of the most promising animals in the herd are heifers which will freshen this fall as first calf two-year-olds and from which great things are surely expected.

The milkers of this herd are year-around producers as shown by the fact that the Honor Roll cows do not vary greatly from month to month.

The owners of this herd are always glad to show their cattle to visitors and extend every courtesy to guests. I can recommend anyone interested in real good catle to look over this herd.

A. E. Mowers, *Supervisor.*

OHIO TESTING

A purebred Holstein, owned by E. H. Struble, carried off the honors in the Findlay, Ohio, Testing Association in the month of June, with 1,887 lb. milk, and 64.15 lb. butter fat.

The Licking County, Ohio, Testing Association for May was led by a registered Holstein owned by Alex Wilson. She produced 2,396 lb. milk, 98.2 lb. fat. The high producing herd consisted of purebred Holsteins owned by Denzill Lee which averaged 1,304 lb. milk, 45.1 lb. fat.

During the month, 192 cows were on test representing 19 herds. The average production was 751 lb. milk, and 32.5 lb. butter fat. Sixty-two cows representing fifteen different herds each produced more than 1,000 lb. milk and 40 lb. butter-fat. Nineteen made more than 50 lb. fat and five more than sixty pound. Every herd in the association is headed by a registered sire.

PROGRESSIVE ASSOCIATION

In the Progressive testing association, which operates around Waseca, Minn., there were sixteen herds that averaged more than 25 lb. fat in the month of June. The high herd, consisting of eight purebred Holsteins, is owned by Owen Brisbane of Waseca. This herd averaged 1,136.7 lb. milk, 36.32 lb. butter fat. Second high herd was owned by A. E. Christenson & Son and consisted of twenty-two high grade Holsteins, which averaged 36.4 lb. fat from 993 lb. milk.

High cow is owned by Lewis Halvorson of Hartland. She is a grade Holstein, Norma, and produced 73 lb. butter fat from 1,554 lb. milk. Second to her was a black and white cow owned by Christenson & Son of New Richland, with a production of 1,080 lb. milk, 69.1 lb. fat.

Thirty-four cows in the association produced more than 40 lb. fat in the month.

The year's work in the Progressive association ended on June 30th and it is now reorganized for the coming year. The members who have lived in Freeborn County are organizing a separate association in the vicinity of Hartland. They are being assisted by County Agent Ben Rieke of Freeborn County.

GOOD DAUGHTER OF GREAT COW

Nancy Ormsby Skylark, a junior three-year-old, owned by the Maxwell Farms at Hollywood, California, recently made a triffle over 30 lb. butter in seven days. Her dam, Nancy Lucy Hengerveld, the first forty-pound cow in California to have a thirty-pound daughter, is a daughter of Woodcrest Hengerveld De Kol and her record is 620.2 lb. milk, 40.05 lb. butter in seven days. The sire of the younger Nancy is Sir Ormsby Skylark, who also sired the famous Duchess Skylark Ormsby, former world's champion and the first cow in the world to make 1,500 lb. butter in a year. Nearly all our readers know that the Maxwell herd came to Hollywood from Waterloo, Iowa, and is owned by David G. Maxwell (Uncle Dave), who operates a large box manufacturing plant in Chicago.

FOREST CITY, IOWA

During the month of June, 29 herds consisting of 391 cows were tested in the Forest City, Iowa, Testing Association, with an average production of 691 lb. milk, 29.50 lb. fat. High herd was owned by A. T. Keil with a production of 987 lb. milk, 39.16 lb. fat. The first three and the fifth herd in order of production contained considerable Holstein blood.

There were 464 cows tested in the Forest City Association during the past testing year. Of this number, four made over 400 lb. fat each at a feed cost of 13 cents for one pound of fat; twenty-eight made over 300 lb. with a feed cost of 15 cents a pound of fat; one hundred and thirty-two made over 200 lb. fat at a feed cost of 24 cents a pound of fat; and sixteen made less than 100 lb. fat which was at a feed cost of 35 cents a pound of fat.

W. G. Ostrander had the high cow, a five-year-old black and white, who produced 11,859 lb. milk, 455 lb. butter fat; a Holstein, six-years-old, owned by H. D. Branstad, was second with 9,759 lb. milk, and 418 lb. fat; another six-year-old, owned by Mr. Branstad, was third with 10,592 lb. milk and 401 lb. fat.

There were seven purebred dairy sires purchased to replace scrubs, and about eighty-four cows were disposed of as boarders. Mr. A. H. Weber, Tester, says that a considerable number of the cows would have made a better record if they had had better herd management and had been fed balanced rations.

PICK YOUR ENTRIES

A feature at the Southwest Missouri District Fair held August 1st-4th is the cow race which is a combination of official testing and competition. The cows will be milked in public three times a day and they will be ranked daily according to butter fat production. The fair officials donated a hundred dollar prize and each entry will be charged a fee of $10, all entry fees being added to the purse, which is to be divided upon the basis of: first prize, 30% of the total; second prize, 25%; third prize, 20%; fourth prize, 15%; and fifth prize, 10%.

The seven days test will begin on Saturday, July 29th, and a state representative will be present to supervise the contest, weigh and test the milk. To S. C. Lindsey of Carthage and E. C. Bennett, State Dairy Commissioner, are due, in a large degree, the credit for the introduction of this feature, which is the first of its kind in the Southwest.

TESTING IN IOWA

The high record for butter fat production in all the testing associations in Iowa was held by the Jefferson Association, the average of the cows in this association being 39.3 lb. Second came the Dubuque association No. 1, with an average of 33.7 lb. and the Davenport Association was third with an average of 32.6 lb. The highest record cow in the twenty Iowa Associations was an eight-year-old grade Holstein of the Delaware association with a production of 2,663 lb. milk, 85.2 lb. butter fat. The high herd average was made by a purebred Holstein herd in the Kossuth Association, which averaged 1,502 lb. milk, 52.4 lb. butter fat.

DRY PLACES

Teacher: "Johnnie, name two of the world's greatest deserts."

Johnnie: "Sahara and the United States."

FALLS-WILSON

Of the 267 cows tested in the Falls-Wilson, Wis. Testing Association for the month of June, seventy produced more than 40 lb. butter fat, 29 more than 50 lb. and eight better than 60 lb., while one produced more than 75 lb. butter fat. Thirteen herds averaged more than 30 lb. fat and five averaged more than 40 lb.

The high cow for the month was Bess a grade Holstein, owned by Wm. H. Nohl who produced 1,872 lb. milk, 76.8 lb. fat. Second to her came Grevelle, a registered Holstein, owned by M. J. Freihammer. She produced 1,956 lb. milk, 68.5 lb. fat. A grade Holstein, owned by Alfred Wunsch, also produced 68.5 lb. fat.

The high herd for the month was owned by Alfred Wunsch. This herd consisted of seven registered and grade Holsteins and produced 1,397 lb. milk, 49.9 lb. fat. Second high herd, consisted of six registered and grades owned by Wm. Wieberdink has an average production of 1,409 lb. milk, 46.9 lb. fat.

SISTERS WE LIKE

A number of large records are being made at the University Farm, Davis, California. The three Agnes heifers are making a prominent showing. California Agnes Colantha a four-year-old, last year made a record of 21,238.8 lb. milk, 985.5 lb. butter. Starting another test, December 23d last, she has produced up to the first of July of this year in 189 days, 16,237.8 lb. milk, 729.12 lb. butter.

Her three-year-old sister made better than 70 lb. butter the past month and the two-year-old Agnes made 53 lb.

California Pietertje Bloom Mead, in the first two months of her year test produced over 112 lb. butter a month and last year made 802.62 lb. butter. All of these cows were bred at the University Farm as was the sire and dam of the Agnes heifers.

FOUR IN FIRST FIVE

Peggy, a Holstein owned by Clifton B. Ward gave 1,950 lb. milk and 70.20 lb. butter fat in June in the Newport, Mass., County Testing Association. She was exceeded for butter fat by a Guernsey that produced 73.6 lb. Following Peggy came a Holstein owned by Alden Smith which produced 1,794 lb. milk and 68.17 lb. butter fat. The next three cows were all Holsteins. Holsteins, Guernseys, Jerseys and Ayrshires figure in the honor list.

He that is afraid of doing too much always does too little.

A FULL YEAR'S WORK

The Rudolph-Wood Cow Testing Association, consists exclusively of Black and White cows. The twenty-seven members listed own either grades or registered Holsteins or both. The greatest profit maker is Johanna Janet, owned by Wm. Piltz. She made 14,302 lb. milk, 483.5 lb. butter and a net profit of $104.71 over the cost of feed. Second to her was Mabel, owned by C. Van Austen, with a production of 12,215 lb. milk, 436.5 lb. butter and a net profit of $103.37; third was Rosie, also owned by Mr. Van Austen with a production of 14,550 lb. milk, 436.2 lb. butter and a net profit of $101.86; fourth was Rigtje Fobes Lass De Kol, owned by Wm. Piltz with 14,662 lb. milk, 462.1 lb. butter and a net profit of $100.87.

Mr. Piltz has a nine-cow dairy that averaged 406.2 lb. fat, 11,826 lb. milk and made him a net profit of $78.54 per cow. The C. Van Austen herd of thirteen cows is second with an average of 9,761 lb. milk, 336.4 lb. fat and an average net profit of $65.25.

Three hundred and fifteen cows finished the year with an average production of 7,153 lb. milk and 249.7 lb. fat, valued at $98.03, the cost of feed averaging $60.79, making an income above the cost of feed of $37.24. Every dollar spent for feed for the 315 cows returned $1.61 and the average cost of producing 100 lb. milk was 84 cents.

This is the first year the Rudolph Association has been in operation. In the spring of 1921, County Agent R. A. Peterson and a few farmers talked over the possibility of forming a cow testing association and then went around to the different farmers and talked over the situation until there were enough farmers interested to organize. April 1, 1921, the association was ready to begin the work. The tester is Wm. Yonkman, who is responsible for the preparation of the annual report, a neat little booklet of which there are 1,000 copies issued and which has been published at no expense to any member of the association as the advertising carried in the booklet has paid for it.

Milk may be white, but it puts roses in the children's cheeks.

The Holstein Breeder and Dairyman, Harrisburg, Pa.

SOUTH CAROLINA TESTING

Three different cows each produced over 74 lb. fat during April in South Carolina and all three of the cows were Holsteins. Lucy Hengerveld Canary, owned by J. T. Willard, Spartanburg, produced 2,193 lb. milk, 74.9 lb. fat in the fifth month of her lactation period. She was tied for fat production by Korndyke Marvel Pontiac, owned by V. M. Montgomery, also of Spartanburg, with 2,233.5 lb. milk, 74.9 lb. fat. Ormsby Korndyke Hazel, owned by H. D. Jordan, of Ridge Spring, beat both cows for milk production by making 2,394 lb. milk but failed to equal them in fat, her figures being 74.6 lb. fat. A Guernsey was fourth with 67.7 lb. Katie Paul Sadie Vale, a senior three-year-old, of the Montgomery herd was fifth with 67.4 lb. fat; two other members of this herd, Bertha Korndyke Ponto and Strickland Farm Segis May, exceeded 66 lb. fat and Leafy Veeman Fobes De Kol made 63 lb. Mollie Ann, owned by South Carolina State Hospital, at Columbia, made 66 lb. fat; Burke Roe 4th, the property of St. J. A. Lawton, Charleston, made 63.6 lb. fat; and White Lion, a grade Holstein in the Lawton herd produced 1,883 lb. milk, 62.3 lb. fat in the month. In the list of honor cows the Willard herd is represented by three animals, the Montgomery herd by twelve and the Lawton herd by three registered and one grade Holsteins.

May shows a big jump in average production. The leader is Arcady Segis 2d of the Montgomery herd with 2,790.3 lb. milk, 97.6 lb. fat. A Guernsey is second with 82.3 lb. fat from 1,909.6 lb. milk. Katie Paul Sadie Vale, in the seventh month of her lactation period produced 2,204.1 lb. milk, 78.9 lb. fat. This senior three-year-old is making a great year record and Mr. Montgomery has every right to be proud of her. The Montgomery herd has sixteen animals on the honor roll; H. D. Jordan has one; J. T. Willard has five; and St. J. A. Lawton is represented by three purebreds and his great grade, White Lion, the latter making 1,765 lb. milk, 67.8 lb. fat; the South Carolina State Hospital is represented by Molly Ann with 2,018.1 lb. milk, 61.9 lb. fat in the fifth month of her lactation period. During the month a seven-day record of 630.1 lb. milk, 27.55 lb. butter was made by Arcady Segis Artis 2d and a seven-day record of 389.5 lb. milk, 18.86 lb. butter was made by the junior two-year-old, Changeling Queen Johanna Pontiac. Both of these animals are owned by V. M. Montgomery.

Arcady Segis Artis 2d headed the state for the month of June with 2,290.5 lb. milk, 82.2 lb. fat. Ruby Pietertje Burke is second with 2,197.5 lb. milk, 74.6 lb. fat and Wellsland Mildred Johanna is third with 2,064 lb. milk, 72.4 lb. fat. All three are members of the Montgomery herd which, by the way, is represented in the honor list by fifteen animals. To attain the honor roll in South Carolina, a cow must make 50 lb. in a month instead of 40 lb. as in other states. The Jordan herd has one honor cow; J. T. Willard has two; and the South Carolina State Hospital has one; while the Lawton herd is represented by one purebred Holstein and two grades. Seven nice seven-day records are reported for animals of the J. T. Willard herd, the most creditable being 422.2 lb. milk, 20.62 lb. butter for the senior three-year-old, Bellwood Pontiac Queen De Kol.

ALLAMAKEE COWS HIGH

With a production record of 80.1 lb. of butter fat last month, a Holstein cow belonging to Clark Brothers, of Forrest Mills, was the high cow in the newly organized Four-County Testing Association. Clark Brothers have a herd of 27 Holsteins and this herd held the high records for herds in the association also. They produced an average of 1,155 lb. milk and 38.9 lb. butter fat. The good showing of the Clark herd is a strong argument in favor of preserving native woodland pastures in this land of hills and valleys. The dairy farm is run in connection with a mill property on the Yellow river and known as the oldest flour mill in Iowa, grist being ground as early as 1857. A cheese factory adjacent to their dairy farm makes it convenient for them to market their product.—*Dubuque, Iowa Herald.*

SADIE'S TRUE RECORD

The record of Sadie Lilith Cornucopia, the nine-year-old Holstein cow owned by Charles C. Blake of Bethany, Pa., was 14,871 lb. milk and 463.2 lb. butter fat. In the report of the test year of the Central Wayne Testing Association appearing on page 472 of the July 22d issue, the figures are given as 11,273 lb. milk and 349.4 lb. fat. These figures show the average production of Mr. Blake's registered Holstein herd which is the highest average since the organization of the Wayne County Farm Bureau. The Blake herd led for herd average and Sadie Lilith Cornucopia was the highest producer in the Association, which is under the supervision of Kenneth S. Bailey.

IOWA HOLSTEINS LEAD

The W. F. McCord Holstein herd led in the Harding County, Iowa Testing Association for June with an average production of 45 lb. fat from 23 cows. The Holstein herd of Wm. H. Dreier of Iowa Falls, was second with 42.2 lb. and the grade Holstein herd owned by J. R. Wagner of Iowa Falls was third with 42 lb.

The high cow was a grade Holstein in the McCord herd that produced 64.5 lb. butter fat.

During the month 328 cows were tested. Fifty-seven produced over 40 lb. butter fat while the average of all cows was 775 lb. milk and 29.1 lb. butter fat.

"Dearest, I love you. Since the dawn of creation, since the birth of this world, since the beginning of time, I have known and loved you. Darling, will you be mine?"

"Oh, Tom, this is so sudden."

WISCONSIN TESTING

The June Champion of Wisconsin is a registered Holstein owned by Art Hintz of the Bear Creek Association, she making 109.4 lb. butter fat. Second to her is a registered Holstein in the herd of Paul Reed of the Oconomowoc Association with 103.2 lb. fat. Third is a registered Jersey, 99.9 lb. fat; fourth a registered Holstein owned by the Northern Farms Co. of the Ellington Association with 98.5 lb. fat; fifth is a purebred Holstein owned by J. F. Mayer of the Richfield Association with 95 lb. fat and sixth a grade Holstein owned by D. E. Labar of the Delavan-Geneva Association with 91.2 lb. fat.

One hundred and eleven Associations reported results. Purebred Holsteins led in thirty-two instances with grade Holsteins in thirty and Holsteins in two others; it is not stated whether these are grades or purebreds, so that black and white cows lead in 64 Associations. Grade Guernseys lead in twenty-one Associations and purebreds in seven. Four of the Association's leaders are native cows, three are grade Durhams and one is a Brown Swiss. There are six grade Jerseys and three purebred Jersey association leaders, one registered Ayrshire and one grade Ayrshire.

Nine different herds lead their respective Associations with an average of over 50 lb. fat. The highest herd in the state consisted of nine grade and purebred Holsteins owned by Henry Benecke of the Shirley-Denmark Association. These nine cows averaged 1,673 lb. milk and 62.4 lb. butter fat. There is a tie for second position. Nine grade and registered Holsteins owned by Mr. Hintz averaged 1,428 lb. milk, 61.1 lb. fat while six registered Jerseys owned by J. C. Mathews of the Loganville Association averaged 970 lb. milk and 61.1 lb. butter fat.

PUREBRED FIRST; GRADE SECOND

The Wrightstown-Greenleaf Testing Association was led by a purebred Holstein for the month of June. She produced 2,184 lb. milk, 80.8 lb. fat, and is owned by Boelke Bros., Little Rapids, Wis. A grade Holstein, owned by Joseph Brittnacher, held second place with 1,891 lb. milk, 73.7 lb. fat.

Ten cows in the association produced more than 57 lb. fat, and better than 1,000 lb. milk.

High-class producing re-actors bred on a share basis.

WESTERN DAIRY NEWS

The farmers in the vicinity of Fairfield, (Camas County), Idaho, have proven conclusively to the dairymen of the West that coöperative bull associations provide a practical method of solving the breeding problems through the organization of the "Sunshine Valley Coöperative Holstein Bull Association," the second to be organized in that county. The first, "The Camas County Holstein Association," was organized in March, 1920, and proved to be of such value to its members that it attracted the notice of enough farmers, fifteen in all, owning 75 cows, to make the second association possible. The Sunshine Valley Association has purchased three grandsons of King Segis 10th, which will make six years of line breeding possible to its members. The opportunity that the men of Camas County had to observe the operations of the Camas County Association and the fact that it proved to be so successful is but another recommendation for the bull association plan to the Western farmers.

S. C. Shoultes, of the White River Valley Association reports that at a recent sale held by William Wyatt, 24 cows with Association records brought an average price of $154, and 26 head without records averaged $126 a head. In this case production records were worth $28 per cow.

The July News Letter of the Western office, Dairy Division of the United States Department of Agriculture, is headed by a grade Holstein owned by F. Simas, of Arcata, Cal., with a production of 1,920 lb. milk and 115.2 lb. fat. The second cow on the list carried some Holstein blood and produced 101.5 lb. fat. She is owned by J. R. Holmes, of Clatskanie, Ore. A grade Holstein owned by W. H. Winter, of Hill, New Mexico, was third with 1,918 lb. milk and 99.9 lb. fat.

Washington, with its ten associations, gained first place in eight western states with an average production of 36.7 lb. fat from 3,274 cows. No less than 1,163 cows attained the honor roll by making 40 lb. in the month. Oregon is second with 33.7 lb. fat for each of its 3,430 cows enrolled in testing association work. California's 20 associations contained 16,929 cows and averaged 31.23 lb. fat. Nevada, New Mexico Colorado, Arizona and Idaho follow in the order named.

DAIRYMEN HAVE HARD YEAR

Dairy cows owned by members of the Cumberland County Testing Association produced 1,230 tons of milk and 44.09 tons butter fat during the past year, reports A. A. Raudabaugh, the association tester. The expenditure for feed alone amounted to $26,179.49.

The fourth year's work will commence this month. During the past three years the average milk production for each cow enrolled in the association has increased approximately 1,000 lb. and the butter fat production has increased around 1,000 lb.

The registered Holstein herd of I. V. Otto, of Carlisle, Penna., leads with an average of 13,923.6 lb. milk and 462.4 lb. butter fat. One animal in this herd produced 19,263 lb. milk and 620.6 lb. butter fat, which is the highest year's record ever made in Cumberland County. Last year the high record was 17,396 lb. milk and the first year the high record was 18,256 lb. milk. All three years Mr. Otto has had the highest producing cow and the highest herd average.

The records for the year show that the entire cost of producing 100 lb. milk, including feed cost, interest and depreciation, repairs, insurance, taxes, salt, veterinary fees, etc., has been $2.12, as compared with a similar cost of $3.05 one year ago. This is a decreased cost of 95 cents per 100 or 31.1 per cent. One dollar and six cents of the $2.10 represents the feed cost per hundredweight. The average receipt prices per 100 for the year, including those who made and sold butter, as well as those who sold milk, was $2.05. This price compares with $2.94 a year ago, a decrease of 89 cents, or 30.3 per cent.

Only twelve of the twenty-four herds in the association paid all their expense during the year and left a margin of 10 cents per 100 in addition. These were the twelve highest in production, and the average production of these twelve was 9,000 pounds of milk and 335 pounds of fat, or 402 pounds of butter.

To show that the herds continuing in the association are continually improving, comparisons are made for the three years. The 1919-20 average production per cow for the entire association was 7,325 lb. milk and 244.6 lb. fat. The 1920-21 average production per cow for the entire association was 8,266.6 lb. milk and 282.6 lb. fat. The 1921-22 average production per cow in the entire association was 8,518.7 lb. milk and 305.1 lb. fat. This increase was made in face of changing membership and changing herds.

Sixty-three cows produced more than 10,000 lb. milk each for the year; thirty-one animals produced more than 12,000 lb. Forty cows produced more than 400 lb. fat each and fourteen herds averaged 344.4 lb. fat, equivalent to 430 lb. butter.

"Only by retaining the highest producers and by eliminating those factors in production which effect an increased price of the product; only by strict economy in feeding, and by increasing the efficiency of their dairy animals, have the members of the association, which closed its third year July 14th, been able to keep pace with the decreased receipt price for their dairy products," Tester Raudabaugh points out in his report.

Mother—"Why, Bobby, how clean your hands are."

Bobby—"Yeah, but you should have seen them before I helped Bridget make the bread."

Silence is wisdom when speaking is folly.

DICKINSON LEADS

The report of the Delavan-Geneva Test Association for June shows that 455 cows were tested, of which 45 produced above 40 lb. butter fat.

The high cow for the month is owned by D. E. Labar, of Delavan, Wis., whose grade Holstein produced 1,788 lb. milk and 91.2 lb. butter fat. The second high cow is from the Dickinson herd at Lake Geneva, with a production of 1,995 lb. milk and 68.9 lb butter fat.

The high herd consists of 27 head, owned by Mrs. Louise Dickinson. These averaged 1,103.3 lb. milk and 38.2 lb. butter fat. Second is a herd of 10 grade and registered Holsteins owned by Thomas & Gatz, of Delavan, with an average of 1,047 lb. milk and 37.4 lb. butter fat.

ALCARTRA ANN LEADS

The high cow for June in the Hickory Grove, Wis., Test Association was a registered Holstein, Alcartra Ann, owned by Clifford Weber, with a production of 1,819 lb. milk and 72.8 lb. butter fat. Second was a grade Holstein owned by Fred Hass, with 1,825 lb. milk and 69.4 lb. butter fat. The high herd consisted of 18 grade Holsteins owned by Fred Hass with an average of 1,363 lb. milk and 49.4 lb. fat.

The annual picnic was held at Cedar Lake, July 14th. Fred C. Uhrig is tester in charge.

A CLOSE RACE

The leading herd of the Warwick Valley, New York, Association, was owned by Fred Woodruff and averaged 38.8 lb. fat. Wheeler Brothers' herd was second with 38.7 lb. The three high cows for June were all grade Holsteins. Alfred Ely had the first cow with a record of 62 lb. butter fat and 1,617 lb. milk. The second, owned by E. A. Houston, produced 54.9 lb. fat and 1,617 lb. milk. The third cow, owned by Wheeler Brothers, produced 51.4 lb butter fat and 1,470 lb. milk.

A BIG PRODUCER

The big producer of the Stanislaus Testing Association was a registered Holstein owned by E. W. Looney that produced 3,127 lb. milk and 104 lb. butter fat. A registered Holstein in the Six Brothers' Dairy, Elverta, produced 1,648 lb. milk and 71.2 lb. butter fat. The Association had 1,255 cows tested of which 141 each produced over 140 lb. butter fat.

FAIRBAULT-NORTHFIELD

The leader for June in the Fairbault-Northfield, Minn., Test Association was a Holstein cow owned by the I. O. O. F. Farm, she producing 74.32 lb. butter fat. The leading herd was owned by A. Meillier, and consisted of 12 cows that averaged 1,492 lb. milk and 49.45 lb. fat. There were 240 cows tested of which 26 produced over 40 lb. butter fat.

NEW YORK STATE TESTING

The two highest producing cows in the New York State Dairy Improvement Association during May were owned by Sam Barber of Scottsburg and were grade Holsteins. Aaggie, a six-year-old, produced in the fourth month of her lactation period 109.3 lb. fat and 2,358.3 lb. milk, while her stablemate Alice, in the fifth lactation month produced 103 lb. fat and 2,483.1 lb. milk. A registered cow owned by Dale Brothers, of Gasport, produced in the Niagara Association 95.5 lb. fat and 2,162 lb. milk. A grade Holstein owned by the Upland Farms, South Livonia, made 95.3 lb. fat and 1,800 lb. milk and a purebred Holstein owned by Roy W. Reed, of Hemlock, made 93.3 lb. fat and 2,287.8 lb. milk in her fourth lactation month.

The records of 11,977 cows were kept for May and 1,927 or 16.1% made the honor roll. There were 18 cows above 80 lb. fat, 43 between 70 and 80 lb. and 129 between 60 and 70 lb.

When the *Monthly News Letter* was published, 26 of the 31 associations had reported June production. The association leader was a grade Holstein owned by Sam Barber, of the Livonia Association with a record of 101.6 lb. fat and 2,418 lb. milk, leading for both fat and milk. The second for fat production was a registered cow owned by Luther Carrier, of Fulton, she making 101.1 lb. fat and 2,298.1 lb. milk. She was exceeded for milk production by a registered cow owned by the Erie County Farm with 2,350 lb. milk.

The production of 26 association leaders is reported. Of these, ten are purebred Holstein-Friesian and eight are grade Holsteins, while two are simply reported as Holsteins. That means that twenty of the twenty-six reported Association leaders are Black and White cows. Four are Jerseys, one is an Ayrshire and one a Guernsey.

In the Alden-Akron Dairy Improvement Association there is a herd of 16 Holsteins owned by Mr. Frye that has produced in the first eight months of the Association year an average of 8,100 lb. The tester, A. E. Mowers, reports that this production was made under absolutely normal conditions, the cows being milked twice daily and the grain ration being not at all heavy.

Sam Barber's grade Holstein, Aaggie, again the leader in the Livonia Association, freshened February 22, 1922, and in 130 days has produced 10,035.1 lb. milk and 451.4 lb. fat. Another cow in this association, Pocohontas, owned by J. H. Huff, freshened January 15, 1922, and in 165 days has produced 12,316.5 lb. milk and 417 lb. fat.

New York State lays claim to having the world's largest dairy bull. He is Glenside Roan Clay, a dairy shorthorn, and weighs 3,305 lb. One of his daughters, Roan Clay of Torohill Farm, is making a year record of 11,000 lb. milk as a junior three-year-old, while another daughter, Marydale of Torohill, is milking 66 lb. daily.

Mr. Dairyman

Life experience in buying dairy cattle

DAIRYWOMAN'S HERD LEADS

Three hundred and ninety-four cows were tested in the Marshfield Testing Association for the month of June. Of this number, 48 produced more than 40 lb. fat. The first ten of the leading twelve animals in the association were black and whites. The leader, De Kol Peach, a six-year-old, produced 1,190 lb. milk, 57.1 lb. fat. She is owned by Joseph Lee. Second and third high cows were owned by Mrs. B. Motl, number two having 56.4 lb. fat from 1,881 lb. milk while number three had 56 lb. fat from 1,698 lb. milk.

High herd is also owned by Mrs. Motl. This herd consisted of twelve Holsteins, grade and registered and produced an average of 40.5 lb. fat from 1,294 lb. milk.

ONE TENTH HONOR COWS

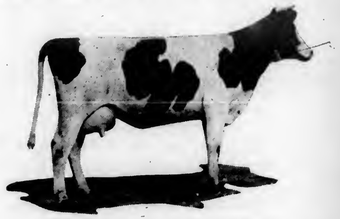
During June, 430 cows were tested in the Wilton Association, of which 42 produced 40 or more pounds of butter fat. Seven produced 50 or more and two above 60 lb. The high cow was Mutual Pauline De Kol Quoque 2d, owned by Ernest Splitt, of Wilton, Wis., with 64.2 lb. butter fat. The Splitt herd, consisting of 11 purebred Holsteins, averaged 46.2 lb. fat during the month. Twenty-three cows owned by R. Haldeman averaged 32.9 lb. fat.

IN ARIZONA

On June 30th, at the end of the Tempe, Arizona Testing Association year, there were 18 herds enrolled with a total of 450 cows. Five produced over 400 lb. butter fat during the year and 58 above 300 lb. of fat. The high cow, owned by M. W. Turley, was named Lady Vernon, and produced 485.5 lb. fat.

HOW ABOUT YOU

"You never show the slightest sign of affection," he fumed. "You'd never dream of calling me dear, as other men's wives do."



She was roused to a first faint flicker of interest.

"Do other men's wives call you dear?" she asked.

Conscience is a still, small voice, but rumor hath a thousand tongues.

HILLSIDE DORIS ORMSBY

This illustration shows Hillside Doris Ormsby, the great yearling heifer, owned by the Central Poor District of Luzerne County, Pa. A story of this heifer was published in the July 22d issue. She freshened at one year, nine months and nineteen days in the herd of J. N. Conyngham, Wilkes-Barre, Pennsylvania. She had been purchased by representatives of the District with the understanding that she was to be fitted for test and given an official record. In charge of Dallas P. Honeywell, the superintendent of Hillside Farms, who is acknowledged to be one of the best cow handlers in Northern Pennsylvania. Hillside Doris Ormsby proceeded to make 19.3 lb. butter in seven days and then was shipped to the District Farm at Retreat, Pa. She did well in her new

HILLSIDE DORIS ORMSBY

20.34 lb. butter, 432.3 lb. milk in seven days; 1,824.7 lb. milk, 81.66 lb. butter in thirty days at 21 months of age. State records for age, owned by Central Poor District of Luzerne County, Pa.

home and was given a chance to increase her record. She produced 432.3 lb. milk, 20.34 lb. butter in seven days and 1,824.7 lb. milk, 81.66 lb. butter in thirty days, producing 65.9 lb milk her best day and completing her record of fifty days after freshening, making 61.1 lb. milk the closing day of her test.

The sire of Hillside Doris Ormsby is King Pontiac Maple Knoll Ormsby a son of the King of the Pontiacs and the 33.16 lb. cow Maple Knoll Helen, who was by King Korndyke Hengerveld Ormsby.

Besides the splendid performance of Hillside Doris Ormsby, which is a state championship record for age. A record better than 16 lb. has been made on a junior two-year-old granddaughter of King of the Ormsbys and a seven-day butter record of 21.41 lb. on a senior two-year-old daughter of King Segis Pontiac Alcartra.

J. O. Vaughn is herdsman of the Retreat Farm in which W. F. Maguire treasure of the Central Poor District takes a great interest.

THE BANKS' SALE

At the S. L. Bank's sale at Tekoa, Washington, July 12th, eighteen registered Holsteins were sold for $2,770, an average of $154, the top price being $350. There were a number of young things in the sale including a bull calf that went for $20 and two heifer calves that sold for $70 each. Eighteen Duroc hogs were sold, including one grade gilt that brought only $17, the total price was $779.50, an average of $44.20. The auctioneer was Harry C. Cranke, of Moscow, Nez Perce, Idaho, who was assisted by Fred Miller. John L. Smith said that it was the best sale he had seen this present year.

The prices and buyers were as follows:

Cow—John Louie, Plummer, Idaho	$155
Heifer Calf—John Smith, Spokane, Washington	150
Cow—Frank Busch, Johnson, Wash.	175
Cow—Sam Warwick, Raoslia, Wash.	165
Cow—E. R. Whitla, Coeur d'Alene, Idaho	150
Cow—Frank Busch	150
Cow—H. G. Lucas, Tekoa	350
Heifer Calf—H. G. Lucas	120
Cow—P. T. Silzel, Oakesdale, Wash.	220
Cow—K. Miller, Diamond, Wash.	150
Cow—John Louie	165
Heifer Calf—H. G. Lucas	160
Heifer—Frank Busch	200
Cow—Frank Busch	150
Heifer—John Louie	145

RECORDS AT DIXON

A number of good records are being made at the Dixon Holstein Testing Plant. Cleomatra Johanna Segis Gem, owned by D. F. Millikan of Lyndon, has a production of 12,857.6 lb. milk, 553.57 lb. butter in 190 days. During May, she produced 1,808.6 lb. milk, 68.05 lb. butter.

Prairiedale Alice De Sota, owned by Geo. Mohrman of Morrison, produced in 168 days, 13,443.1 lb. milk and 522.04 lb. butter. During May, she produced 2,538 lb. milk, 93.6 lb. butter.

Annie Laurie De Kol of Edgetown, owned by Hammond & Reiland of Stockton, has produced in 139 days, 10,039.7 lb. milk and 394.43 lb. butter. She produced 2,081.9 lb. milk, 82.50 lb. butter during May.

Molly Hengerveld Towanda, owned by Harry Wood of Delavan, produced 418.3 lb. butter in 158 days. She produced 2,133.4 lb. milk, 65.60 lb. butter in the month of May.

Tazewell Cornucopia Piebe, owned by A. Nierstheimer of Pekin, produced 209.79 lb. butter in fifty-nine days, while during May she produced 2,283.8 lb. milk, 98.2 lb. butter.

Laura Madrigal Sarcastic Lad, owned by John Rathbun, of Lombard, produced in 184 days, 15,307.9 lb. milk and 616.92 lb. butter. Her production for the month of May was 2,366.1 lb. milk, 85.79 lb. butter.

Colantha Coronis Cornucopia De Kol, owned by E. E. Bain of Lisle, produced in 128 days, 10,087.5 lb. milk, 417.88 lb. butter. She produced 2,339.9 lb. milk, 93.6 lb. butter during May.

Alcartra Crystal Pontiac, owned by C. O. McChesmey of West Chicago, produced 10,628 lb. milk, 419.03 lb. butter in 150 days. During May she produced 1,752.8 lb. milk, 70.77 lb. butter.

These cows will be bred to King Colantha Aaggie Clothilde, the three-year-old bull owned by the testing plant company. This bull is a son of Colantha Sir Aaggie now owned by Chapin & Son of Batavia, New York. Colantha Sir Aaggie is by the century sire Colantha Johanna Lad from Aaggie Cornucopia Pauline, 34.32 lb. butter in seven days as a senior four-year-old, world's record at the time of making. Aaggie Cornucopia Pauline was the first thirty-four pound cow and has two thirty-pound daughters and heads a string of four direct descendant thirty-pound cows. Colantha Johanna Lad is known to everyone as being a sire of remarkable producers and as a son of the first thirty-five pound cow Colantha 4th's Johanna, the only cow that at one time held all world's butter record from 1 day to 365 days inclusive.

The dam of the Dixon herdsire is Aaggie Colantha Abby Hartog, 30.65 lb. butter 616.2 lb. milk in a week as a four-year-old and 868.03 lb. butter, 21,699.1 lb. milk in 305 days as a five-year-old. She is by Aaggie Cornucopia Johanna Lad, century sire and son of Aaggie Cornucopia Pauline. The dam's dam is Colantha Abby Hartog, 668 lb. milk, 33.53 lb. butter in a week and 849.3 lb. butter and nearly 20,000 lb. milk in 305 days as a ten-year-old. She is by Colantha Johanna Lad from Abby Hartog Clothilde, 31.39 lb. butter, 605.9 lb. milk in a week and 129.31 lb. butter, 2,625.2 lb. milk in 30 days. She has five A. R. O. daughters two of which are above 30 lb. and four above 27 lb. and is one of the greatest transmitting cows of the breed.

The three direct maternal dams of King Colantha Aaggie Clothilde are all above thirty pounds. He traces twice to Colantha Johanna Lad and to the former world champion, Colantha 4th's Johanna. He traces twice to the former world's champion Aaggie Cornucopia Pauline through two of her sons. His three nearest dams are over 30 pounds and each dam in his pedigree shown in a four generation chart has made records of better than 30 lb. with the exception of Aaggie Cornucopia, the dam of Aaggie Cornucopia Pauline, who lived before the establishment of the official test.

FOR SALE: Extra well-bred, heifer calves, some by son of Champion Echo Sylvia Pontiac, others by 34-lb. bull. One bull calf by 34-lb. sire from 18-lb. three-year-old daughter of 31-lb. bull. For every two heifers purchased an unrelated bull calf FREE. Price $40 up. Also yearlings and two-year-olds. Herd under federal supervision. Write your wants. MAUD DWIGHT, SOUTH OTSELIC, N. Y.

PULASKI, N. Y.

THE MARYLAND FAIR

The Forty-fourth Annual Maryland State Fair will be held at Timonium the week of Sept. 4th-9th inclusive. The well-known Holstein breeder, John M. Dennis, Lutherville, is vice-president and Granville H. Hibberd, superintendent of the Brooklandwood Farms, is superintendent of the cattle department. Both of these gentlemen are on the Board of Managers. R. E. Haeger, Algonquin, Illinois, will judge the Holsteins.

Timonium is on the Northern Central Railway, about ten miles from the city of Baltimore. The prizes are certainly liberal, $1,862 being set aside for the Black and White breed. There are six prizes in each class and an additional $25 prize for each of the six championships, so that it is possible for an outstanding animal to win a tidy sum of money.

A dairy cattle judging contest will be held for boys over 12 years of age and under 18 years, sons of bona-fide farmers of Maryland. Besides the team prizes of a silver cup, first prize; bronze plaque, second prize; bronze medal, third prize, given the teams making the best scores in judging all breeds, there are four bull calves given as individual prizes, the best judge having the choice of the four and the next best the choice of the three remaining and so on. In addition to these there are four prizes for judging each of the four great dairy breeds, sixteen money prizes in all, the first prize being $20, second, $15, third, $10, and fourth, $5. No contestant can win more than one individual money prize.

The Timonium Fair will have two official veterinarians in attendance. The personnel of the Board of Managers is assurance that everything will be done to insure the comfort and safety of the animals shown and their attendants. The United States Department of Agriculture and the University of Maryland will have special exhibits and the Maryland Fair is well worth the attention of breeders of Holsteins.

CONNECTICUT BREEDERS' SALE

At the city farm, Bridgeport, Conn., on Saturday August 26th, the Connecticut Holstein-Friesian Breeders' Association will hold their annual sale to which will be consigned 50 head of healthy Holsteins.

Among the entries will be a 32-lb. proven sire, a full brother to the famous Vanderkamp Segis De Kol who has a seven-day official record of 37.59 lb. butter, has four seven-day butter records above 30 lb. and a year record well above 1,000 lb.

In addition there are grandsons of the great Winterthur herdsire, King of the Ormsbys from cows with large year records also a son of the Chapin bull, Colantha Johanna Lad 8th from a cow that has made 31 lb. butter in seven days, 954 lb. butter and more than 20,200 lb. milk in 10 months.

These bulls are certainly something out of the ordinary and should attract buyers from a long distance. The cows consigned have A. R. O. records and are in calf by some of the best bred bulls in New England. Every animal above six months of age is tuberculin tested. The auctioneer will be the well-known Holstein breeder, Lyman Keeler.

New England is the home of many high record cows and the animals in this section of the country are producers. If interested you should write to Angus P. Thorne who is president of the Connecticut Holstein-Friesian Breeders' Association, for a catalog. Look up the sale advertisement in this issue for his address.

GRADE COW COMPETITION

The National Dairy Association is sending out blanks for entry to the grade cow show which will be held at the National Dairy Exposition this fall. Grade cows to be eligible must be sired by purebred bulls and must have cow test association production of at least 350 lb. butter fat in a year. There are five classes for each of the five breeds, Ayrshire, Brown Swiss, Guernsey, Holstein and Jersey. There are ten prizes ranking from $30 to $10 for cows that have produced 500 lb. or more butter fat in a year and equal prizes for cows that have held records of better than 350 lb. and less than 500 lb. For a group of five cows from a single cow testing association prizes of the same value will be given and also for a group of four cows, daughters of one registered bull. For the champion grade cow of each breed, there is an additional prize of $10. The other prizes are graded as $30 for the first prize; $25 for the second prize; $20 for the third and fourth prize; $15 for the fifth, sixth and seventh prizes and $10 for the eighth, ninth, and tenth prizes. Entries must be received by the National Dairy Association on or before Sept. 16, 1922 and each entry must be accompanied by an entry fee of $5 for each animal.

A BULL GATEKEEPER

John Johnson attempted to get into the fair grounds at Red Lake Falls, Minn., without paying his way at the gate. A Holstein bull owned by the Spaulding Farm Company was tied in a stall by the outside fence and irritated by the hot weather, the noise and the many visitors had loosened a couple of boards, making an opening through which Johnson attempted to crawl. The bull knocked his visitor down, bruising his head, face and neck severely. Attendants rescued the man and an examination showed no broken bones, but the man was still unconscious the next morning.

Moral: Don't attempt to beat your way into fair grounds through a bull stall.

Clergyman—"I brought back the second-hand car I bought from you last week. It is too obstreperous."

Dealer—"What's wrong? Can't you run it?"

Clergyman—"Not and stay in the ministry."

BETTER STOCK CAMPAIGN

The state of Ohio has displaced Virginia in the Better Sire Campaign, having 537 enrollments during the three months ending June 30th. Virginia has held the honor of first position ever since the campaign started in 1919.

The champion county during the last quarter, however was Rockingham County, Va., which received 247 emblems in the period. The two highest counties were Greene, Ohio, with 177 and Columbia County, Ohio, with 103. Although no entries were received in the last quarter from Pulaski County, Va., that county still retains the premiership by a good margin, having 450 enrollments. Greene County, Ohio, follows with 309 and Rockingham, Va., with 258. There are only thirteen counties in the entire United States with 100 or more persons enrolled.

Ohio has an enrollment of 1,970 persons. Virginia has 1,853 and Nebraska has 1,249. No other county has more than 500, Washington coming next with 401.

The United States Department of Agriculture is publishing valuable literature on live stock improvement including colored posters. They are also giving a new emblem which resembles a steel engraving and has a much better appearance than the one heretofore used. The distribution of this emblem began July 1st and anyone already enrolled in the Better Sire—Better Stock movement can obtain the new style emblem by requesting it and returning the one already issued.

John Masching of Emington, Ill., has a Holstein that has produced 7,798 lb. milk, 351.4 lb. butter in six months starting her test 38 days after freshening.

"So you desire to become my son-in-law?"

"No, I don't. But if I marry your daughter, sir, I don't very well see how I can get out of it.

Can Spare a
Breeder's Herd

of young cows, FIFTEEN animals, two to four years old, everyone with a semi-official record or now running on test.

This is the first Accredited herd in the state and NO abortion.

A few nice bull calves, 1 mo. to 9 mo. by our KING WALDORF SYLVIA, a double grandson of May Echo Sylvia. His pedigree shows lots of World Record backing and several 40 lb. crosses. His 10 nearest dams average 37.32 lb. and his 30 nearest dams average 30 lb. A lot of well known cows are bred to him. The value of this strain is increasing.

Scudder Farms,
Trenton, N. J. Route No. 6

CALIFORNIA BANNER COUNTY

The banner dairy county of California has long been considered to be Stanislaus County. It has forty breeders of purebred dairy stock and contains around 50,000 cows, of which 75% are termed Holsteins. On the west side of the San Joaquin River there are, according to a recent survey, 14,763 cows, of which 95% are black and whites.

Cow testing is done on a large scale. There are around 1,600 enrolled, of which over 1,200 are now on test. The farm bureau has a dairy committee and is backing a movement to secure better cows and sires. Bankers realize the value of cow testing and their association has suggested that land owners insert a clause in all dairy leases that lessees should test cows monthly during the period of the lease, should have purebred herdsires and be members of the testing association.

One of the fine Holstein herds is that of C. L. Morris, a few miles west of Modesto. It is headed by a son of King of the Pontiacs from a daughter of Colantha Johanna Lad. Certified milk is produced in this establishment and sold to the milk distributors of Modesto.

Another noted breeder is H. E. Cornwell, who owns the bull, Sir Johanna De Kol Rag Apple. The Cornwell herd numbers 70 head and their prize female is Jessie Fobes Prilly. The Cornwell farm which is located a short distance north of Modesto also has a fine drove of purebred Duroc hogs.

Other well-known breeders of this section are E. M. Morrow and E. E. Freeman, while in the Turlock section is located the Stammerjohan or Six Brothers dairy of which much has been written.

IN MICHIGAN

The Holstein herd on the Everett Homestead, Chelsea, Mich., is headed by Sir Segis Colantha Pietertje, No. 351469. This bull is sired by a son of Mary Walker Pietertje, 31.63 lb. butter in seven days, dam of two 30-lb. daughters, and daughter of Buttercup Clothilde Pietertje, 32.92 lb. butter. The Everett Homestead of 200 acres is owned by Henry L. Everett, Chicago, and is managed by Fred Fielder. Mr. Everett purchased Sir Segis Colantha Pietertje from R. B. Waltrous, of the Friesland Farms, Chelsea, who exhibited this bull at the Jackson Fair last fall and won first prize with him as a calf. The judge pronounced him the best individual on the grounds.

Besides Holsteins, the Everett Homestead has registered Duroc hogs and Rambouillet sheep. Mr. Everett is a graduate of the Ypsilanti State Normal and spent ten years in the Philippines.

All men should have their rights, but it does seem as though a lot of us are left-handed.

A fellow can always make a hit with a girl by telling her how much he misses her.

SUSQUEHANNA SALE

The Susquehanna County Holstein-Friesian Association plan a sale to be held on the Fair Grounds at Montrose, Pa., Sept. 15th. The animals to be consigned will be federally tested. All consignments will be from herds that are under state and federal supervision and that have had at least one test before selections are made. Some of the animals will be from accredited herds. The entry requirements are that all cattle accepted shall be of good breeding and shall be high-class individuality. They will be selected by a competent judge, not a resident of Susquehanna County, so that there can be no accusation of favoritism. The consignors are members of good standing in the Susquehanna County Holstein-Friesian Association. The sale is managed by a committee but all correspondence should be addressed to J. Terrence Sheen, secretary of the local association.

LOWDEN CATTLE TO SHOW

Exhibits from the herds of the Hon. F. O. Lowden, president of the Holstein-Friesian Association of America and U. S. Senator Medill McCormick, Rock River Farms, will be seen at the Central States Fair and Exposition at Aurora, Illinois, August 18-26. Mr. Lowden's farms at Sinissippi are under the management of tenants on a share basis, and he has urged them to send some of their best registered animals to this exposition. Chief Justice Harry Olson, of the Chicago Municipal Court, who has a big stock farm in Indiana, is also expected to be an exhibitor, as is Arthur Meeker, vice-president of Armour & Co.

A NEW HORNLESS BREED

Writing in the *Chicago News*, De Witt C. Wing, of the *Breeders' Gazette*, mentions that Sweden has produced and is improving a hornless breed of dairy cattle which is doubtless spreading into Norway. Somebody page George E. Stevenson!

Mr. Wing mentions that the Dutch are increasing the efficiency of the Holstein-Friesians as creators of dairy products in their own country.

SOME LUCK

"Aha!" exclaimed a man on Main street, "see a pin and pick it up, and all the day you'll have good luck," and as he bent over to pick it up, his hat fell into the mud, his glasses dropped from his nose and smashed on the sidewalk, he burst three suspender buttons and tore the button hole out of the neckband of his shirt.—*New York Globe.*

DAIRY SIRE

While some of the dairymen of King County, Wash., were making an inspection tour of the herds enrolled in the local association, they were shown a purebred Holstein bull which had nine daughters that averaged over 500 lb. fat in a year. The sire is the property of the Methow Valley Farm.

BULLETIN ON JOHNE'S DISEASE

Bulletin No. 343 issued by the University of Wisconsin Experiment Station is on Johne's Disease, a cattle trouble of which little is known by the rank and file of breeders. It is possible that this disease has often been confounded with other diseases, and with some stages of tuberculosis. It is marked by intermittent diarrhea and emaciation and is caused by an organism which grows in the intestinal walls. The disease is quite prevalent in Europe especially in Denmark. It is estimated that one per cent of the cattle in England are affected and in Birmingham, England, an average of six cases are found in each 1,000 cattle killed in the municipal abattoir. It is also known in the Channel Islands.

No suggestions are made as to treatment. It seems that, as with tuberculosis, slaughter of diseased animals is advisable to prevent the spread of the trouble. The diagnostic agent is called Johnin and is prepared in somewhat the same way as tuberculin and is injected into the animal, the place of the injection being the jugular vein and not into the fleshy tissue. If the animal is diseased a rising temperature can be expected very much the same as with the tuberculin test except that the temperature rises much more quickly. The temperature is taken every two hours after injection up to and including the twelfth hour.

Cattle owners should post themselves on this disease which the bulletin compilers, B. A. Beach and E. G. Hastings, term a cattle menace, by obtaining this bulletin from the University of Wisconsin.

HEARD BY THE STALLS

Two attendants at a cattle show were comparing experiences. Said the fellow in blue overalls "A cow ran away with me once and I wasn't out for two months."

The fellow in brown countered "I ran away with a cow once and I wasn't out for five years."

C. L. TEMPLAR, - Syracuse, New York

OKLAHOMA DAIRYING

The dairy industry of Oklahoma is growing fast. A report of the United States Department of Agriculture shows there are 26 creameries, 44 ice cream plants, 30 combination plants, and 850 cream stations operating either within the State or just outside its borders and buying butter fat from Oklahoma farmers. There was delivered to these plants last year 9,939.895 lb. butter fat in the form of sour cream; 10,034,266 lb. sweet milk was bought for making ice cream; and 62,261,983 lb. milk passed through pasteurizing plants. The 9,529,722 lb. butter made was valued at $3,240,105, the average price being 34 cents a pound. A total of 894,076 gallons of ice cream was made, bringing an average price of $1.07 a gallon, or a total of almost a million dollars. The dairy industry of Oklahoma develops in the counties where the cattle tick is eradicated and is scarcely visible in those areas still infested with ticks.

CATTLE REACH JAPAN

From Wisconsin to Japan is quite a distance but this trip was completed July 14th by seven head of purebred Holstein females that left the Rust Brothers farm in West Allis July 7th. They were purchased for the farm of Yoshia Ogaua where the Japanese government is conducting agricultural experiments and is building a herd of purebred Holstein-Friesian cattle.

The Rust Brothers have made a number of shipments to Japan during the past 10 years.

I asked her if she rolled them,
She said she'd never tried,
Just then a mouse ran swiftly by,
And now I know she lied.

One rosebud to the living,
One single kind word said,
Is worth a dozen eulogies
And wreaths unto the dead.

SWEDISH SCIENTISTS PRAISE AMERICAN

Two of the best known Swedish agriculturists, in recent articles published in Sweden, warmly praise the work of the late Professor Henry Prentiss Armsby who was long the head of the Agricultural Department at the Pennsylvania State College and whose work on food nutrition is of tremendous importance to the American cattle industry. The writers recommend the adoption of the Armsby net energy value, the "Therm," as the best feeding standard unit to use in the computation of rations for live stock. Information to this effect has been received at the Pennsylvania State College by Professor Jons A. Fries, who has been acting director of the Institute of Animal Nutrition since the death of Dr. Armsby, last October.

Writing in *"Landtmannen,"* the Swedish agricultural paper, Dr. A. Westerlund discusses at length, "The Modern Method of Computing the Value of Feed for Maintenance and Production" and in this article recommends the universal adoption of the Therm, which was first applied by Professor Armsby to the measurement of energy in feeding stuffs. The Therm is equal to 1,000 calories, one calory, as defined in physics, being the amount of heat that will raise the temperature of one cubic centimeter of water one degree Centigrade.

In the same paper, Professor Nils Hansson compares the work of Dr. Armsby to that of the great German scholars of animal nutrition, Emil Wolff, Julius Kuhn, and Oscar Kellner. He characterizes Dr. Armsby as "the greatest agricultural scientist produced in America."

THE MAINE CHAMPION

The champion cow of the Maine College of Agriculture is Pauline Shepard Pontiac, whose year record made as a senior four-year-old is 15,760.3 lb. milk, 726.73 lb. butter. Pauline was bred by Herbert Adams of Lubec, Maine and is a granddaughter of Midland Johanna Prince, sire of Lady Shepard Avalon, whose record of 545.84 lb. butter was supreme in the class for the state of Maine until displaced by the College of Agriculture animal.

The Main College of Agriculture is located at Orono and the animal industry department is in charge of Prof. S. Corbett to whom much credit is due for the fine record made by the new champion.

SOME COW!

This advertisement appeared in a newspaper the other day: "Wanted, a steady, respectable young man to look after a garden and milk a cow who has a good voice and is accustomed to sing in the choir."—*Selected.*

Young Lawyer—"I haven't lost a case yet."

Rival—"Oh, you'll get a case some day."

MAKING A HOLSTEIN CENTER

Six progressive farmers of McPherson County, Kansas have tackled the problem of making their town, Monitor, a Holstein center. These men are Ralph Spohn, Glenn Buckman, M. E. Lingle, Chas. Spohn, Grover Andes and A. C. Ferris.

To-day there are thirty-five herds of purebred Holsteins in the community besides a considerable number of grades. Ralph and Chas. Spohn now have only registered animals but they started with grades. One bull owned in partnership heads both the herds and each contain seven cows. Glenn Buckman has six cows, two heifers, three heifer calves and a registered bull. The Lingle herd contains ten cows of which seven are registered.

Each farmer owns a machine that is requisite for success in the dairy industry and that is a milk scale. The milk is weighed night and morning and a careful record is kept of each animal. The six farmers are trying to organize a testing association in their community and are being assisted by the County Agent, V. M. Emmert.

LEADS EVERY MONTH

There were 252 cows tested in the Hancock Illinois Testing Association during the month of June. The average milk production was 690 lb. and the average butter fat production was 30.2 lb. Nineteen of the herds in the association are headed by purebred sires. The high herd for the month is owned by W. C. Van Pappelendam, whose six purebred Holsteins averaged 1,481 lb. milk, 46.9 lb. butter fat. This herd has led the association every month as well as leading the state association for two consecutive months.

DISINFECT AND WHITEWASH

After testing it is advisable to disinfect barns and buildings in which cattle are kept. After thoroughly cleaning and fumigating them it is often prudent to use whitewash. To make ordinary whitewash slake ten pounds quick lime with two gallons water. Allow to stand in a pail for one hour before using. Government whitewash is made as follows: Slake half a bushel of lime in boiling water, covering to keep in the steam. Strain the liquid and add a peck of salt previously dissolved in warm water, three pounds ground rice boiled to a thin paste and stirred in while hot, one-half pound of Spanish whiting, and one pound glue dissolved by soaking in cold water and then hung over a slow fire in a glue pot. To this mixture add five gallons of hot water, stir well, and let stand for several days covered from dust. It is best applied hot.

SHIPMENT ARRIVES SAFELY

The shipment of purebred Holsteins purchased in Vermont by F. A. Perret Gentil, of Curacao, Dutch West Indies, reached their destination in good condition. They were shipped by express to New York City and from there, by ship, in charge of Wm. B. Allen, of Brattleboro, Vt., who reports an eventful voyage. The ship ran into a cyclone on its journey but little damage was done. The purchase price was about $5,000 and the express charges were practically $2,000.

It may surprise many to learn that Mr. Gentil is a member of the Holstein-Friesian Association of America and has been for five years. He has imported a number of purebreds into his territory.

BIG FELLOWS GET PRIZES

The reason the American Jersey Cattle Club eliminated donating extra prize money to the fairs was that three great Jersey breeders won about 70% of the prize money, Longview getting 26%; Freylinghuysen, 23%; and Ayer & McKinney, 21%. As with all breed associations, all of the prizes in every division are not won every year and these amounted to around 10% so that there was only about 20% of the fund distributed among all other competing Jersey breeders. The Jersey association plan to use their funds in sending out field men and claim it is up to the show management to furnish the prizes.

A NEW BREED

The *Western Breeders' Journal* has discovered that a "Shorthorn" ram owned by Leher Bros., Tangent, Oregon, won the championship at the Calgary Exhibition, beating the animals exhibited by the Prince of Wales from his Canadian ranch. As this news item is listed with a sheep story, we assume that the reporter intended to say "Southdown."

No, there is no similarity between the milkweed and the cowslip, nor do buttercups grow on either.

THE FIRST AMERICAN MILK TRADE

Did you ever hear that the first American commercial transaction of which there is any record was a milk deal? In the ancient saga of Eric the Red the story is told how the adventurer Biarni, blown out of his course when sailing from Iceland to Greenland, caught the first glimpse of the mainland of America, but did not land. He told the story to Lief, the son of Eric, who thereupon sailed for the New World and was the first European to set foot on its shores. The Norsemen called the Indians "Skrellings," traded, fought and intermarried with them.

The ancient chronicler tells, in quaint and often humorous words, the story of how Thorfin Karlsefni and his men spent a winter in the New World and how they got the best of a deal with the red men:

"The Skrellings put down their bundles and loosed them, and offered their wares for barter, and were especially anxious to exchange these for weapons; but Karlsefni forbade his men to sell their weapons, and, taking counsel with himself, he bade the women carry out milk to the Skrellings, which they no sooner saw than they wanted to buy it, and nothing else. Now the outcome of the Skrellings' trading was that they carried away their wares in their stomachs, while they left their packs and peltries behind with Karlsefni and his companions."

IN FLY TIME

The Wisconsin State College of Agriculture is responsible for a couple of suggestions to abate the fly nuisance. One of these recipes, to be used as a spray is: two gallon of kerosene; one quart pine tar; one-half pint crude carbolic acid, which costs fifty cents a gallon; and one quart of fish oil. Another remedy which is to be applied with a sponge or cloth is: one gallon kerosene; five ounces powdered Naphthaline; one pound laundry soap dissolved in hot water; add enough water to make a four-gallon mixture.

R. ADDISON STUART DEAD

R. Addison Stuart, who for many years was identified with his brother, Eldridge A. Stuart, in the management of the Carnation Milk Products Company, died at his home in Seattle on the morning of July 12th, of heart disease.

Mr. Stuart was born in Deep River, N. C., in 1854, and has been a resident of Seattle since 1900. He is survived by his widow, two sons, one daughter, two brothers and one sister.

The greatest study of mankind is man. Where woman is concerned a little learning is a dangerous thing.

Naturally the man who looks before he leaps isn't so apt to find himself in a hole.

MIDLOTHIAN HORSE SALE

A sale of saddle bred horses was held on the Maple Farm, Midlothian, June 24th, the auctioneers being P. M. Gross and J. E. Mack. Forty-three animals of varying ages were sold for $7,430, an average of practically $173. The high price was $675.

Maple Farm is owned by Ernest V. Maltby, one of Illinois' leading Holstein breeders. In his employ is the well-known young Illinois cattleman, Ferd Blake, formerly of Elm Leaf Farm, Belvedere.

The Maple Farm, of Midlothian, is twenty miles from Chicago. It is one of the many great establishments that can be found in northern Illinois and was formerly the home of the noted Ettinger Guernsey herd. It is worth a long trip to look over the buildings at this establishment, to say nothing of the many splendid animals in the Midlothian herd. Both Holsteins and horses are of exceptional high quality and exhibits of saddle-bred horses from this establishment have won high honors on the Big Fair Circuit.

SUMMITT COUNTY

Two hundred and seventy-four cows were tested in the Summitt County, Ohio, Testing Association during the month of June. Of this number, 37 produced more than 40 lb. butter fat and 63 produced more than 1,000 lb. milk. The average production was 815.5 lb. milk, 29.43 lb. fat for the month.

The high herd for fat production was owned by Harvey Luther, Richfield, whose herd of ten purebred Holsteins averaged 41.86 lb. butter fat while the eight-cow dairy owned by Chester Lee, Boston, was high for milk production with an average of 1,137 lb.

Black and white cows held highest places for butter fat production the leader, owned by N. E. Konisglow, Boston, making 63.34 lb., and next to her was a Holstein owned by E. W. Luther, Richfield, which made 60.61 lb. fat.

THE BROOK

"Hush, oh, hush!" in the shadow singing,
Over the pebbles brown and gray,
Croons the brook to the rushes, swinging
Loosely moored, by its wandering way.
"Hush, oh, hush!" through the elfin-haunted
Sun-shot alleys of fen and wood,
Echoes the lullaby, softly chanted,
The croon of world-old motherhood.

"Hush, oh, hush!" life's not for striving;
The stars swing peacefully, calm and high,
"Hush, oh, hush!" and the pain of living
Is lulled to rest as the brook goes by.
"Hush, oh, hush, for time is fleeting,
All things bow to one mighty Will!"
Is it the stream or my heart repeating
Eternity's lesson, "Peace, be still?"

—*Katherine Atherton Grimes.*

DEYSHER AT LEXINGTON

One of the out-of-town visitors to the breeders' meeting at the trotting track, Lexington, Ky., on July 20th was the well-known Holstein breeder, A. S. Deysher, of Reading, Pa. Mr. Deysher owns two or three good trotters himself that will be seen at some of the big meetings this fall.

One of the surprises of the meeting was the performance of a converted pacer, Marjorie the Great. Last fall she made a record of 2:09 wearing hobbles. This year she showed such an aptitude for the trotting gait that she was trained and was started at Lexington to beat 2:30¼. She circled the course in 2:11, doing the last half in 1:05. Marjorie is a daughter of Peter the Great; is owned and driven by J. O. McAlister, of Lexington.

SALE CIRCUIT FORMED

The Southern Wisconsin Sales Circuit has been formed by the sales managers and secretaries of the Rock, Greene, Dane and Walworth County Holstein Breeders' Associations, at a meeting held at Janesville, July 14th.

There will be five days of sales and Col. J. E. Mack, of Fort Atkinson, has been engaged as auctioneer for the entire week, and will be assisted by local men. The same style catalog will be used at all these sales and the advertising will be united. Some 385 animals are promised. The first sale will be held at Elkhorn, on Oct. 30th. The next one will be at Janesville, the next day, then the following two days will be at Monroe, finishing Nov. 3d, at Madison.

PAGE KELLEY

It is rumored that Luther Burbank is experimenting with a cross between a Holstein cow and a burro, with the object of producing milk with a kick in it. Bet that Kelley won't have to talk to the owners in order to raise money for the purpose of advertising that milk, it will sell itself, and Oh, Boy! won't there be some demand! Every barn will have at least one family cow.

TEST CALVES FOR INTERSTATE SHIPMENT

The ruling of the United States Department of Agriculture that "all calves under six months of age, as well as older animals, must be tuberculin tested and accompanied with the proper certificate before they will be accepted for interstate shipment" is not understood clearly by many cattlemen, and, as with all changes, many of us fail to see any reason for the innovation. An explanation of why they made this ruling is being made by the Department in publishing some of their recent investigations. They report that out of 108 badly infected herds, there were 506 calves under one year old that reacted to the tuberculin test out of a total of 1,240 calves tested; of 10,983 calves tested during six months, 904 reacted. The intradermic test is to be accepted only for cattle going to states where this test is recognized. When the subcutaneous test is used, the accompanying chart must show at least three temperatures taken at intervals of two or three hours before injection of tuberculin, and at least six temperatures must be taken after injection, beginning not later than eight hours after the injection. This ruling also requires that the test must run for a period of not less than eighteen hours after injection.

SUSPICIOUS

Mr. Nuwed had applied for a library book entitled "The Girl He Left Behind Him."

The book was out but the librarian promised to notify him when the book came in. As Mrs. Nuwed is of a suspicious nature the postcard caused trouble, for it read as follows

"Mr. Nuwed is notified that the girl he left behind him is now in the library and will be kept for him until next Tuesday morning."

MEXICO AGAIN

Eighty head of Holsteins, grades and purebreds, were shipped from Hartford, Wis., July 13th, bound for Mexico. They went by express in three stock cars, and the charges will be about $2,800. Another shipment of three more car loads is expected to leave in about three weeks.

Two car loads, of which President Obregon purchased several animals, left Plymouth on Memorial Day.

BUY GOOD BULL

S. T. Queen and Egeler Brothers, of Clyde Park, Montana, have purchased from the Oregon Agricultural College the bull Oregon Sir Soldene Elton. The dam has a record of over 800 lb. butter made in a year as a four-year-old and has won honors on the show circuit. The sire is a grandson of Florence Idella Sharp, who has three different year records above 1,000 lb. butter.

CALIFORNIA AGAIN

The daughters of Finderne Pride Johanna Korndyke continue to make splendid long-time records. The junior four-year-old, Irene Segis Pontiac a short time ago completed a 365-day record of 1,008.75 lb. butter from 23,301.3 lb. milk. She is owned by the Palo Alto Stock-Farm at Palo Alto, Cal., who also own Kiatta Pontiac Pride, the junior four-year-old that produced 1,138.25 lb. butter and 31,489.1 lb. milk in a year, thus becoming the world milk champion of her class.

Ormsby Mechthilde Prilly, calving at three years, three months old completed a 365-day record of 1,017.59 lb. butter from 24,258.3 lb. milk. She is the second daughter of King Segis Alcartra Prilly to make over a thousand pound of butter in a year in her first lactation period.

Fairmont Colantha Prilly calved at 26 months of age and made in 305 days, 853 lb. butter from 20,067 lb. milk which is the world's record for butter in the 305-day division of the junior two-year-old class. She is a three-quarter sister to King Segis Alcartra Prilly, being by the Arfmann herdsire, King Segis Pontiac Alcartra and from Prilly Princess Colantha Lyons a daughter of King Lyons and Prilly Princess Julia De Kol, who is dam of King Segis Pontiac Alcartra. It is interesting to note that Fairmont Colantha Prilly is one of heifer twins born July 6, 1919.

GREAT COW CHANGES HANDS

Fred Hartsook, of Lankershim, Cal., has purchased the great cow Ava Model Hengerveld 2d from Frank Hatch, of Modesto. The price paid was $5,000, and if the calf the cow is now carrying proves to be a bull it is to be the property of Mr. Hatch. Ava Model Hengerveld 2d as a five-year-old made a seven-day record of 28.63 lb. of butter, 667.1 lb. milk and a year record of 971.56 lb. butter and 21,222.3 lb. milk. As a six-year-old she increased her record to 708.9 lb. milk and 30.53 lb. butter in a week and 25,874.1 lb. milk and 1,129.21 lb. butter in the year. She was sired by Highland Ondinus, a son of Colantha Johanna Lad.

The health fairy doesn't live in a tea or coffee cup, but little folks can see one in the bottom of a glass of milk.

THE BRAZILIAN CENTENNIAL

The United States Department of Agriculture is sending out broadcast a statement received from the United States Commissioner General, stationed at Rio de Janeiro. Owing to limited accommodations on the grounds of the Brazilian Centennial Exposition the size of exhibits from foreign countries will be limited to twenty animals in each classification, although special permission may be obtained for larger exhibits. It will be remembered that Director W. B. Barney was appointed by the Board of Directors of the Holstein-Friesian Association of America to investigate the possibilities of South American demand for Holsteins. As it is expected that animals sent from foreign countries to participate in the Exposition will be sold after the close of the exposition, we assume that a report from our breed representative along these lines will be forthcoming. The statement from the United States Commissioner General follows.

"*From each foreign nation* a maximum of 20 adult animals will be eligible to compete in each classification; that is to say, 20 horses, 20 hogs, 20 cattle, 20 sheep, 20 goats, etc., which total number for each classification must include all breeds of their kind. Take for example an exhibit of cattle for the United States of America,—The 20 animals admitted to entry under Exposition regulations may be all Holsteins or any other breed, or it may be a mixed herd to include Jersey, Hereford, Durham, etc. But it makes no difference whether the exhibit is from one or any number of exhibitors. Provided an additional number of animals of each class may be admitted when special permission to admit a large number in toto is applied for and granted by the Exposition management. This rule also applies to horses, hogs, sheep, and goats.

"We are advised that this restriction was made on account of the accommodations on the Exposition grounds being limited. We are further advised that Switzerland, France, and Argentine have made application and have been granted permission to send 60, 70 and 120 head of cattle respectively for exhibit and sale purposes, but only 20 head from each country will be admitted to the Exposition grounds and provided with the proper care and feed at the expense of the Exposition management within the dates as provided in the regulations namely, from September 1, 1922.

"The Exposition management will undertake to provide the necessary ground space for the accommodation of all foreign animals of pure breed that may be sent to Rio de Janeiro prior to the opening of the National Live-Stock Show September 20th, and admit same free of duty but care and feed for the additional animals must be provided by the exhibitors themselves at their own expense.

"We are informed that if a sufficient number of animals over and above the stipulated 20 of each species to each nation, is received to make it worth while, that a special live-stock show composed of foreign stock exclusively will be staged immediately on the close of the National Exhibit. An exception is made for poultry, there being no limit to the number of birds eligible for exhibit."

He that is much flattered soon learns to flatter himself.

THE HOLSTEIN COW

Truth is one while opinions vary,
Many men of many minds,
Were there as many breeds as farmers
Men would choose the different kinds.

Men have little choice in common,
And their views may differ, quite,
'Tis said they all would want the same woman
If they all thought just alike.

And thus it is with breeds of cattle,
Each one choosing what they will;
Some for Devons, some for Durhams,
Some think Jerseys fill the bill.

But, the best for beef or butter
To whom all other breeds must bow,
Few can equal, none can beat her,
That's the handsome Holstein Cow.

—*From Echoes of Memory, by Luman A. Ballou.*

CO-OPERATIVE DAIRY SIRES

Campbell County is the only county in Kentucky with two coöperative Purebred Dairy Sire Associations. One of these associations owns three purebred Jersey sires and the other organization owns four Holstein sires that cost approximately $1,000 each. These Bull Associations are greatly favored by the Dairy Extension Department of the College of Agriculture.

Restaurant Manager—"Glad to see you, sir. And how did you find the steak?"

Patron—"Oh, easy enough. It was right under the potato."

Lackawanna County Holsteins

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders—pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal jurisdiction.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

Lackawanna County Breeders' Association

Harry B. Miller, President Robert Winship, Secretary

Lilith Gem Kolkluff

a former member of the MERRYALL HERD, sold by us to the PENNSYLVANIA STATE COLLEGE, recently completed her sixth year's work in that herd by making, in 365 days, 22,084 lb. milk, 825.1 lb. butter, practically equalling her former year record of 22,247 lb. milk, 851 lb. butter. For four years she has averaged 20,294.4 lb. milk, 775.2 lb. butter. Her daughter, DE KOL KLASSJE LILITH, made 18,601.1 lb. milk, 749,95 lb. butter, in a year, in everyday work in the STATE COLLEGE HERD.

We have others of this type. Come and see them.

A son of Hazelwood Ormsby Posch 2d, one of the world's greatest show cows and one of the greatest cows the breed has ever known.

SIR CHIMACUM LUTSCKE POSCH No. 332,790, was born December 10, 1920, and is ready for immediate use. He is well grown and nicely marked.

His Sire: Sir Chimacum Wayne Lutscke is from the world's first 31,000 lb. cow, Lutscke Vale Cornucopia. (World's record when made.)

His Dam: Hazelwood Ormsby Posch, 2d, a great show cow and splendid producer, her records are as follows:

Butter, 7 days 3 yr.....	20.25 lb.	Butter, 7 days 8 yr.....	24.88 lb.
Milk, 7 days.....	497.70 lb.	Milk, 7 days.....	655.10 lb.
Butter, 305 days 4½ yr.	666.66 lb.	Butter, 7 days 9 yr.....	24.39 lb.
Milk,.....	16,399.90 lb.	Milk, 7 days.....	716.1 lb.
Butter, 7 days 7 yr.....	23.69 lb.	Milk, best day.....	106. lb.
Milk 7 days.....	594.10 lb.

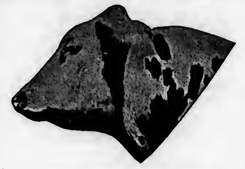
A yearling with 8,977 lb. milk in 305 days



In the herd are 31 daughters of a 30-lb. sire, 16 daughters of It Mona Pontiac, 9 granddaughters of Belle Segis (former World's Champion 3½-year-old) and other closely related groups such as can be found only in an old long-established herd.

Close to forty cows and heifers are bred to freshen in the fall and early winter. Several young bulls of quality are to be sold including a son of a 1,000-lb. year's butter record dam. The herd is of high individual quality as proved by its prize-winnings at leading fairs.

Write for a Hastings catalog to the owner,

C. M. BOTTEMA, Indianapolis, Indiana

Polled Holsteins

combine all the virtues and good points of the greatest breed of dairy cattle on earth with the desirable characteristic of "Hornlessness."

Why cut or burn off horns when they can be bred off by using a "hornless" sire?"

Place a Polled Holstein Bull at the head of your herd. Prices and Quality are both right.

Advertising in THE HOLSTEIN BREEDER AND DAIRYMAN is an investment, something that will pay dividends right along in the way of quick sales and that you can get the value of in added herd prestige.

Advertising enlarges the circle of customers, and enables one to sell bulls while they are young, and females when you wish to dispose of them.

THE BREEDER AND DAIRYMAN does not wish to sell the whole magazine to owners of herds, does not wish them to spend so much that they will never be able to get the value of their money.

Rather we wish our friends to look upon advertising in THE BREEDER AND DAIRYMAN as a necessary herd expense, similar to testing, veterinary services, sanitation, etc.

We would sooner have a half dozen advertising pages each one carrying the message of four to twenty stock owners than the same number used by six breeders each taking a page. We wish to serve numbers rather than the few.

Prices have fallen from the high peak which was the result of war demands for all things, and our paper, in its scale of advertising charges, has definitely recognized this fact. It will pay you to get in touch with our advertising department right away.

The Holstein Breeder and Dairyman

VOL. I HARRISBURG, PA., AUGUST 22, 1922 No. 16

The Clemson College Holstein Herd

By I. R. Jones

THE Holstein herd at the Clemson Agricultural College, South Carolina, is composed of twenty-three animals of which twelve are over two years of age. Six of the latter animals have advanced registry records and five of the others are now on test. No sensational records have been completed but good average records of 400 to 600 pounds of butter as two- and three-year-olds have been obtained.

Of the cows now on test two, Lady Ruth Pietertje, 418,098, and Strickland Farm Ella Pontiac, 392,146, were recently purchased from the select herd of V. M. Montgomery, Springdale Farms, Spartanburg, S. C. At the same time the college was the recipient of a $1,000 heifer, Korndyke Segis Posch Polly, 744,749, as the generous gift of Mr. Montgomery.

Lady Ruth Pietertje is a large cow weighing about 1,500 pounds. She exhibits the dairy type and conformation sought for in cows to be used as foundation animals. She has two seven-day records: one of 574 pounds of milk and 23.391 pounds of butter at the age of 3 years, 10 months, 22 days; and the other 629.4 pounds of milk and 24.708 pounds of butter at the age of 4 years, 11 months, 6 days, the latter record being made at the beginning of her present lactation period. She is now on semi-official test and in her first 5 months has a credit of approximately 11,000 pounds of milk and 435 pounds of butter.

Strickland Farm Ella Pontiac, 392,146, is a good type of Holstein cow but lacks somewhat the size and capacity of Lady Ruth Pietertje. She calved on September 26, 1921 at the age of 4 years, 5 months, 2 days. She was put on test in October and in seven days produced 547.2 pounds of milk and 23.605 pounds of butter; while in thirty days she made 2,261.4 pounds of milk and 85.698 pounds of butter. Continued on semi-official test, she has a credit up to June 1st of about 16,000 pounds of milk and 610 pounds of butter.

Clemson Lady Clothilde, Helen Queen Ona and Queen Ona Bernardo, three good producing heifers in the herd at Clemson College, South Carolina's great agricultural institution.

Korndyke Segis Posch Polly is a well-grown calf showing much individuality. She was born January 5, 1922, being sired by Polly Posch's Son, 182,921, and out of Strickland Farm Korndyke Segis, 497,699. Polly Posch's Son is the exceptionally well developed and valuable individual owned jointly by Mr. Montgomery and Mr. H. D. Jordan, Ridge Spring, S. C, This bull has the same dam as Ormsby Korndyke Lad, while his sire, Korndyke Butter Boy, 38,496, has 65 A. R. O. daughters and 35 proven sons. Polly Posch's Son has three A. R. O. daughters and eight now, on test. Both Lady Ruth Pietertje and Strickland Farm Ella Pontiac have been bred to this bull. The dam of Korndyke Segis Posch Polly has the very creditable seven-day record of 486.3 pounds of milk and 21.055 pounds of butter at the age of 3 years, 10 months, 29 days.

The animals in the cut, reading left to right, are Clemson Lady Clothilde, 564,401, Helen Queen Ona, 447,815, and Queen Ona Bernardo, 491,413. Clemson Lady Clothilde began her test on October 1, 1921, at the age of 2 years, 6 months, 7 days. She will make about 12,000 pounds of milk and 500 pounds of butter for the year. This heifer gives promise of better things in the future.

Helen Queen Ona finished her test on December 1, 1921, with a record for the year of 12,796 pounds of milk and 592.79 pounds of butter, at the age of 3 years, 9 months, 28 days. This cow is lacking somewhat in Holstein type, but shows up as a very profitable producer.

Queen Ona Bernardo is a show animal, exhibiting good Holstein type and considerable individuality. She won second prize in her class in the South Carolina State Fair in 1921. She dropped a fine heifer calf at this Fair, and was put on test on her return to

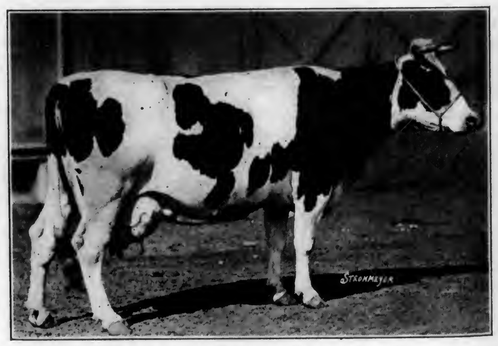
the college. At her present rate of production, she should make about 14,000 pounds of milk and 575 pounds of butter for the year. She began test at the age of 2 years, 9 months, 16 days.

Clemson Lady Clothilde and Queen Ona Bernardo are daughters of King Ona Pontiac while Helen Queen Ona is a daughter of King Ona himself. The dam of King Ona is Ona Button De Kol, 26,761.2 lb. milk, 1,345.55 lb. butter in a year, daughter of a 1,100-lb. year record cow and dam of several high record daughters including one with 1,144.83 lb. butter in a year. King Ona Pontiac is by King Ona and is from Lindale Bonnie Pauline, 30,024.1 lb. milk and 1,250.07 lb. butter in a year. Both bulls are proven sires whose daughters are making large records both in short time and long time tests.

The bull used on the herd is Sarcastic Hero Lad, 310,535, owned by the U. S. Dairy Division, and loaned to the college for use in breeding experiments. He is a fair individual, whose offspring seem to show more class than he. His sire is Star Farm Johanna Lad, 45,224, with fourteen A. R. O. daughters, and his dam Old Inn Jewel Pontiac, 307,700, with a record of 14,851.9 pounds of milk and 688.8 pounds of butter.

The dairy barns at Clemson College compare favorably with those of the largest state agricultural colleges. The herd barn is composed of two wings and the barn proper. The wings each have stanchions to accommodate sixty animals. In the barn proper are found the test cow pens, feed room, offices, and above a hay loft. The calf barn is an up to date structure that will accommodate thirty calves. Four 14x32 silos provide ample room for silage, and soilage crops. A manure pit takes care of this item. Two bull pens with two compartments each house the four purebred animals used on the various breeds composing the dairy herd.

Connecticut Beauties



ONE of the handsomest animals the members of the Connecticut Holstein-Friesian Breeders' Association and their friends will look over August 26th on the City Farm, Bridgeport, Conn., will be Pearl Korndyke Maid No. 293,892. This handsome cow is a member of the Bridgeport City Farm herd and is now on semi-official test with a credit of 18,017.2 lb. milk in eleven months.

PEARL KORNDYKE MAID
18,017.2 lb. milk in eleven months. One of the show cows in the City of Bridgeport herd, Bridgeport, Conn.

Pearl Korndyke Maid was born September 9, 1915. Her pedigree shows a combination of wonderful producing strains. Her sire, King Korndyke Maid, is by Pontiac Korndyke from Pontiac Korndyke Maid a 33.76-lb. cow who is also sired by Pontiac Korndyke. The dam of Pearl Korndyke Maid is Pearl Korndyke Ormsby an A. R. O. Daughter of Ormsby Korndyke Lad from a record daughter of Pearl of the Dairy's Joe De Kol. Pearl Korndyke Maid is as close as it is possible to get to those three great sires, Pontiac Korndyke, Ormsby Korndyke Lad and Pearl of the Dairy's Joe De Kol, bulls whose descendants include many of the greatest record cows of the breed.

In the Bridgeport herd they will also find De Kol Vivian Colantha 2d No. 299,184. This cow was born September 23, 1914. Her sire is Mt. Hermon Creamelle Don and her dam is De Kol Vivian Colantha an untested daughter of De Kol Echo Colantha and Friesland Dione De Kol. We might tell you that De Kol Vivian Colantha 2d was a 20-lb. four-year-old but that will give you a very slight idea of her quality until you know more about her record. She freshened at four-years one month and thirteen days but was not tested until 113 days after freshening at which time she produced 457 lb. milk and 20.15 lb. butter in a week. She has a semi-official record, completed some little time ago of 20,116.6 lb. milk and 781.25 lb. butter.

DE KOL VIVIAN COLANTHA 2d
20,116.6 lb. milk and 781.25 lb. butter in 365 days. Owned by the City of Bridgeport Farms, Bridgeport, Conn. Mr. Angus P. Thorne, superintendent.

These records as well as the others made in the City of Bridgeport herd, are certainly very creditable, especially when it is considered that the cows on test are milked only three times a day and that there is no effort made to get the highest possible production from them. The cows are simply given good care and feed, the city farm is run as a breeder and dairyman's herd should be and the records are simply results of the weighing and testing of the milk produced in every-day work.

Feeding Dry Cows

By George Leslie

BEGINNING in September, prepare for a heavy milk yield in the winter, when you will get the best price for it. A bag of grain fed the *dry cow* is worth two bags fed the fresh cow.

The year's production of an animal that freshens in poor condition is far below that of one well fed when dry, and that is susceptible of proof. The following instances are taken from records in the possession of the writer and the figures are correct and to be relied on.

A three-year-old, with first calf, not fitted or well fed, as we understand feeding in our practice, gave 1,798.7 lb. milk in the first three months, and a total of 7,843.6 lb. in the year. Before she calved the second time she was well fed while dry, and in her first three months of lactation made 3,128.6 lb. milk, while for the year she gave 14,581 lb. Her butter fat in the second lactation period was within 80 lb. of being twice that of the first period. Her highest fat was 42 lb. in the seventh month of her first lactation; while she gave, beginning with the second month, over 54 lb. for six months of the year, over 60 lb. for three separate months and 67 lb. for the highest month. In other words, her production was practically 100% more than that of the first lactation, which cannot be credited to the one year's difference in age.

Another young cow, not well fed, made 9,234.8 lb. milk in a year, but had that changed to 14,370 lb. by being fitted when dry and well fed afterward. Her average fat percentage for the year was the same the next year, but her total fat was 250 lb. more.

Both these cows were on a farm in a hilly country in the eastern section of the United States, in barns which could have been much improved in comfort and sanitation; had no other change than that from poor to good feeding methods, including a good grain ration while dry; but the results showed the wisdom of feeding dry cows for milk.

So, if you have cows that will come in during November, get them thoroughly dry, and begin by feeding 2 lb. a day of the mixture we shall give below. We say 2 lb. because if you have not been graining these cows that are drying off, it will not do to give much in the beginning. Substitute the new grain for your present feeding slowly, day by day, so as not to upset the digestion. Increase carefully until a 1,200-lb. Holstein has 7 lb. a day, one weighing 1,400 lb. a daily allowance of 9 lb., while heavier cows may have 10 lb.; but do not go beyond the last amount for general herd feeding. The grain mixture is as follows:

200 lb. wheat bran
200 lb. cornmeal or hominy or barley
150 lb. cottonseed meal (high test)
150 lb. linseed oil meal, O. P.
100 lb. ground oats

Allow a liberal supply of both hay and silage or roots of some kind or dried beet pulp. See that the cows have salt where they can get it as they want it, and all the water they will drink. If you have a legume hay—alfalfa, clover, soybean, etc., with the above grains you need not fear the lack of mineral matter in the ration. If you feed mixed hay or timothy, the steamed bone meal which is to be had through feed merchants will be a good addition to your ration for these dry cows.

Feeding the dry cow is in the nature of insurance on a later heavy production. Also, you will find that when the cow comes in, she will need a very much lighter grain ration to bring her to her full milk flow, which evens up on the cost of feed.

Another benefit which comes from the dry cow's feeding is to the health of the calf. It will be stronger and better nourished, and the dam will have plenty of reserve flesh, which is entirely different from fatty tissue, to enable her to give you a heavy milk flow, a good fat percentage and still keep a well-nourished body, while taking a light grain ration. You can use the same mixture as when the cow is dry, if you like it, and the cow should come to her best flow on 1 lb. of it to 4 lb. or even 4½ lb. milk, according to the fat percentage.

Not theories, but good hard facts are herewith presented to you for your acceptance, and you can easily prove their worth. You will save money in feed and make money by increased production if you will bear in mind and then act on the maxim that one bag of feed fed the *dry* cow is worth two bags fed after she calves.

Getting Ready for the Big Show

THE competition of the juniors at this years' National Dairy Show promises to be real stiff, judging from the number of clubs that are planning to send teams. While it is doubtful at the present writing whether or not there will be a team from Maryland, other states are going ahead and developing teams by elimination.

The second judging and inspection tour of Poweshiek County, Iowa, was enjoyed by the Club boys the first week in August. Beef cattle, horses, hogs and dairy cattle were scored and placed. This was valuable practice for some of the subjects will be exhibited at the Iowa State Fair this year. Holsteins were judged at the farm of R. C. Heatwole, at Brooklyn, but most of the cattle inspected were of the beef breeds.

The Boys' and Girls' Calf Club members, to the number of forty, met at the farm of John P. Spinneweber, Jefferson, Ohio, and, after listening to a talk by Mr. McKellip of the Ohio State University, judged two rings of Holsteins afterwards going to a Jersey establishment and judging there.

The eight members who did the best work will receive training until the Ashtabula County Fair and at that time, four will be selected to represent the county at the Ohio State Fair where they will compete with teams from other counties, the winning team to represent Ohio at the National Dairy Show.

The Maryland Boys' Victory

BRIEF reports of the Maryland Club Boys' English trip appeared in the July 22d and August 8th issues of the BREEDER AND DAIRYMAN. We are pleased to present pictures of the travellers taken in England right on the scene.

The gold challenge cup, for which the American and English teams competed at the Royal Agricultural Show at Cambridge, England, was given by the *Daily Mail,* one of the great papers owned by the company of which the late Lord Northcliff was the head.

The three American boys come from Cecil County, Maryland, and were trained in dairy cattle judging by County Agent W. C. Snarr for the State contest at the Maryland State Fair, held at Timonium. Here they won a trip to the National Dairy Show and then went on to the Southeastern Fair, Atlanta, Ga., where they defeated thirteen teams from other states and won the English trip as the prize. On the American team were Warren Rice, seventeen, who made the highest individual score at the National Dairy Show and again at the Southeastern Fair, George Worrilow, sixteen, and Joseph Glackin, fifteen.

Added interest was given to the international contest by the presence on the English team of a girl club member, Miss H. Tansley. Her two team mates were W. F. C. Tucker and H. Staples. The English team made a total of 589 points against 779 scored by the young Americans. Considering the fact that the English team was selected from an organization that has been in operation little more than a year, the showing made against the more experienced Maryland team has been highly praised.

Warren Rice and Joseph Glackin, of the Maryland team, studying the points of a British Friesian at the English Royal Stock Show. Miss H. Tansley and H. Staples of the English team, taking notes.

The significant feature of the contest is that it marks the beginning of international livestock judging contests for agricultural club members. The gold cup offered by the *Daily Mail* is to be held for one year. Next year, it is expected that Sweden as well as England and America will be represented with a team in the contest.

The organization from which the English team was selected is known as the International Federation of Young Farmers' Clubs and was created about a year ago by the *London Daily Mail* with Lord Northcliff as patron. The various clubs which make up the federation throughout England are supported by private funds and depend upon personal interest of people who are able to finance the boys and girls in starting their various projects.

The two competing teams were required to judge four British-Friesian, four Guernsey and four Dairy Shorthorn cows and were given fifteen minutes to make selections and two minutes to state their reasons to the judges. The judges were James Mackintosh, of the Dairy Husbandry Section of the National Institute

F. E. Bussy, director of the *London Daily Mail,* presenting the gold challenge cup to the three Maryland club boys who won the International Livestock judging Contest at the Royal Stock Show, Cambridge, England, July 5th. Left to right: Mr. Bussy, Warren Rice, George Worrilow and Joseph Glackin.

of Dairy Research, Reading, England, and W. C. Snarr, county agent of Montgomery County, Marvland.

On the day following the contest the Maryland team was entertained at a presentation luncheon at the Daily Mail Model Village, Welwyn Garden City, Hertfordshire, where they received the gold challenge cup from F. E. Bussy, a director of the *Daily Mail,* and silver medals presented by that paper.

An English account of the judging contest has this to say of the work of the Maryland boys: "One of the best known judges at the Royal Show conversed with the members of the American team. He remarked that their knowledge of cattle judging was amazing, and that he hoped the Young Farmers' Club Movement would spread rapidly in England as he was convinced that it would be of the greatest value to English farmers."

Letters to the Editor

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.
Gentlemen:

I received the August 8th issue of THE HOLSTEIN BREEDER AND DAIRYMAN and was very much pleased with it.

If I were a good writer, I would like to sit down and tell just how I feel. I believe the Aitken whirlwind campaign cheapens the Holstein industry in the public eye more than any other thing, aside from the publicity that has been given the Cole statement.

I was caught in the famous Aitken whirlwind campaign when it swept across the state of New York in 1920 and was counted five times, stung $25. That was the amount of my contribution to the $17,000 that was spent by the New York State Association like drunken sailors during the first eight months period of its existence under the paid state secretary plan and all I believe was left at the end of this eight months period was something like $2,000 debts.

If Mr. Brady in New York or any one else on this green earth can bring an action restraining the Association's directors from turning over any of the Association's funds where it will be squandered to finance state sale organization they should be considered great benefactors and as working for the best interests of the breed.

I attended the meeting at Syracuse in 1921 and recall the remarks that were made on the floor of the convention to the effect that the then present officers should be retained in office until the question of records has been cleaned up. Personally, I feel that the question of records can be considered and disposed of by a Board of Directors made up of men who have not been accused of exploiting the Association's resources or who are not guilty of disregarding the by-laws in order to disfranchize the members and deprive them of their right to manage their own affairs.

Very truly yours,
NEW YORK BREEDER.

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pennsylvania.
My dear sir:

When you told us about the gang that was trying to get control of our Association for the purpose of taxing the membership and spending the money, I thought you were rather severe in your criticism but when they raised the Transfer Fee to a dollar and a half, which is six times more than it was four years ago and everything else you predicted they would do they have done, I begin to think you are perfectly right in every word you have writen.

I was particularly interested in your July 8th issue. The statements that you make about James A. Reynolds, Chairman of the Executive Committee and his $6,000 deal with Charles Cole before Cole made the confession at Chicago which he afterwards retracted, in my mind puts a new light on the whole situation regarding the reflection that has been cast upon our Association's records. When this same James Reynolds solicits and votes proxies at the Special Meeting called at St. Paul, where we were deprived of our direct right to vote in managing the affairs of our Association after he had received $5,000 from the Association for services and the by-laws state that: "A salaried officer or a paid employee shall not solicit or vote proxies," I begin to think that the man in Buffalo who has been fighting for his rights in the courts is justified in going to law to protect his interests and really he is fighting in the interest of the membership of the Association who have been robbed of all their rights to manage their own affairs by this same group of men who have been accused many times of wanting to get control of the Association for no other purpose than to spend the money.

I was in hopes that the legal proceedings that were brought against the Association's officers in New York City would result in having the Association restored to its members and we would be able to get back to the working plan that was in existence before the gang took control at the Philadelphia Meeting.

I am thoroughly disgusted with the whole situation. Send me your paper and keep up the fight. Very truly yours,

---

August 14, 1922.

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pennsylvania.

I am enclosing one dollar for a two year's subscription to THE HOLSTEIN BREEDER AND DAIRYMAN.

We like your paper very much and my wife insists that I subscribe for it. Our two boys, 14 and 16, are becoming very much interested, particularly so since we joined a Cow Testing Association and Frank has become a member of the Calf Club.

I like to have the boys read your paper because we want to make real *dairymen* out of them and not *cow jockeys.* Keep up your fight against the Politicians and Cow Jockeys: we must get them out and stop them spending our money. When they put Mr. Gardner and Mr. Houghton out of office and made just plain hired men of them, I felt they had gone just one step too far.

Very truly yours,
WISCONSIN BREEDER.

Hero worship is a harmless occupation. Fame is a bubble that can burst without doing much damage to the innocent bystander.

Oh, come into the garden, Maude,
Our crop will bring us cash,
The corn and beans I lately sowed
Are growing succotash.

"Last week he sent me candy, saying sweets to the sweet."

"A pretty sentiment. What of it?"

"But now he sends me an ivory hair brush."

Jones—"Tell me just what a good business man is?"

Brown—"That's easy. A good business man is one who can buy goods from a Scotchman and sell them to a Jew—at a profit!"

"Your face seems familiar," said the eminent clubwoman and welfare worker. "Thank you, Mary, for them kind words," responded the gentleman, "I'm your husband."

Woman may be the weaker vessel, but when she can't break a man's heart she can at least burst into tears.

"Doesn't your wife get lonesome at home all day alone?" "Oh, no! She has a mirror in every room!"

The people who complain that they have a great deal to put up with might try pawning their troubles.

The man who turns his back on a friend must expect to be talked about behind it.

The Maryland Boys' Victory

BRIEF reports of the Maryland Club Boys' English trip appeared in the July 22d and August 8th issues of the BREEDER AND DAIRYMAN. We are pleased to present pictures of the travellers taken in England right on the scene.

The gold challenge cup, for which the American and English teams competed at the Royal Agricultural Show at Cambridge, England, was given by the *Daily Mail,* one of the great papers owned by the company of which the late Lord Northcliff was the head.

The three American boys come from Cecil County, Maryland, and were trained in dairy cattle judging by County Agent W. C. Snarr for the State contest at the Maryland State Fair, held at Timonium. Here they won a trip to the National Dairy Show and then went on to the Southeastern Fair, Atlanta, Ga., where they defeated thirteen teams from other states and won the English trip as the prize. On the American team were Warren Rice, seventeen, who made the highest individual score at the National Dairy Show and again at the Southeastern Fair, George Worrilow, sixteen, and Joseph Glackin, fifteen.

Added interest was given to the international contest by the presence on the English team of a girl club member, Miss H. Tansley. Her two team mates were W. F. C. Tucker and H. Staples. The English team made a total of 589 points against 779 scored by the young Americans. Considering the fact that the English team was selected from an organization that has been in operation little more than a year, the showing made against the more experienced Maryland team has been highly praised.

Warren Rice and Joseph Glackin, of the Maryland team, studying the points of a British Friesian at the English Royal Stock Show. Miss H. Tansley and H. Staples of the English team, taking notes.

The significant feature of the contest is that it marks the beginning of international livestock judging contests for agricultural club members. The gold cup offered by the *Daily Mail* is to be held for one year. Next year, it is expected that Sweden as well as England and America will be represented with a team in the contest.

The organization from which the English team was selected is known as the International Federation of Young Farmers' Clubs and was created about a year ago by the *London Daily Mail* with Lord Northcliff as patron. The various clubs which make up the federation throughout England are supported by private funds and depend upon personal interest of people who are able to finance the boys and girls in starting their various projects.

The two competing teams were required to judge four British-Friesian, four Guernsey and four Dairy Shorthorn cows and were given fifteen minutes to make selections and two minutes to state their reasons to the judges. The judges were James Mackintosh, of the Dairy Husbandry Section of the National Institute

F. E. Bussy, director of the *London Daily Mail,* presenting the gold challenge cup to the three Maryland club boys who won the International Livestock judging Contest at the Royal Stock Show, Cambridge, England, July 5th. Left to right: Mr. Bussy, Warren Rice, George Worrilow and Joseph Glackin.

of Dairy Research, Reading, England, and W. C. Snarr, county agent of Montgomery County, Maryland.

On the day following the contest the Maryland team was entertained at a presentation luncheon at the Daily Mail Model Village, Welwyn Garden City, Hertfordshire, where they received the gold challenge cup from F. E. Bussy, a director of the *Daily Mail,* and silver medals presented by that paper.

An English account of the judging contest has this to say of the work of the Maryland boys: "One of the best known judges at the Royal Show conversed with the members of the American team. He remarked that their knowledge of cattle judging was amazing, and that he hoped the Young Farmers' Club Movement would spread rapidly in England as he was convinced that it would be of the greatest value to English farmers."

Letters to the Editor

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.
Gentlemen:

I received the August 8th issue of THE HOLSTEIN BREEDER AND DAIRYMAN and was very much pleased with it.

If I were a good writer, I would like to sit down and tell just how I feel. I believe the Aitken whirlwind campaign cheapens the Holstein industry in the public eye more than any other thing, aside from the publicity that has been given the Cole statement.

I was caught in the famous Aitken whirlwind campaign when it swept across the state of New York in 1920 and was counted five times, stung $25. That was the amount of my contribution to the $17,000 that was spent by the New York State Association like drunken sailors during the first eight months period of its existence under the paid state secretary plan and all I believe was left at the end of this eight months period was something like $2,000 debts.

If Mr. Brady in New York or any one else on this green earth can bring an action restraining the Association's directors from turning over any of the Association's funds where it will be squandered to finance state sale organization they should be considered great benefactors and as working for the best interests of the breed.

I attended the meeting at Syracuse in 1921 and recall the remarks that were made on the floor of the convention to the effect that the then present officers should be retained in office until the question of records has been cleaned up. Personally, I feel that the question of records can be considered and disposed of by a Board of Directors made up of men who have not been accused of exploiting the Association's resources or who are not guilty of disregarding the by-laws in order to disfranchize the members and deprive them of their right to manage their own affairs.

Very truly yours,
NEW YORK BREEDER.

THE HOLSTEIN BREEDER AND DAIRYMAN.
Harrisburg, Pennsylvania.
My dear sir:

When you told us about the gang that was trying to get control of our Association for the purpose of taxing the membership and spending the money, I thought you were rather severe in your criticism but when they raised the Transfer Fee to a dollar and a half, which is six times more than it was four years ago and everything else you predicted they would do they have done, I begin to think you are perfectly right in every word you have writen.

I was particularly interested in your July 8th issue. The statements that you make about James A. Reynolds, Chairman of the Executive Committee and his $6,000 deal with Charles Cole before Cole made the confession at Chicago which he afterwards retracted, in my mind puts a new light on the whole situation regarding the reflection that has been cast upon our Association's records. When this same James Reynolds solicits and votes proxies at the Special Meeting called at St. Paul, where we were deprived of our direct right to vote in managing the affairs of our Association after he had received $5,000 from the Association for services and the by-laws state that: "A salaried officer or a paid employee shall not solicit or vote proxies," I begin to think that the man in Buffalo who has been fighting for his rights in the courts is justified in going to law to protect his interests and really he is fighting in the interest of the membership of the Association who have been robbed of all their rights to manage their own affairs by this same group of men who have been accused many times of wanting to get control of the Association for no other purpose than to spend the money.

I was in hopes that the legal proceedings that were brought against the Association's officers in New York City would result in having the Association restored to its members and we would be able to get back to the working plan that was in existence before the gang took control at the Philadelphia Meeting.

I am thoroughly disgusted with the whole situation. Send me your paper and keep up the fight. Very truly yours,

INTENTIONAL SECOND EXPOSURE

Barney at Washington Conference

REPRESENTATIVES of the various agricultural interests of the country met at a conference held in Washington, D. C., the week of August 14th. The Holstein-Friesian Association of America was represented by Director W. B. Barney, late Commissioner of Agriculture of the State of Iowa. A representative of the HOLSTEIN BREEDER AND DAIRYMAN in a brief interview learned that for many years Mr. Barney had been fighting representatives of the cotton seed and peanut oil industries, because these oils were used in the manufacture of butter substitutes, but that the present instance was his first experience of working with these representatives against a common enemy, for the cotton seed oil industry, the peanut oil industry and also the fish oil industry are threatened by vegetable oils brought into this country produced as they are by the lowest priced labor in the world. He quoted A. M. Loomis, Secretary of the National Dairy Union, as saying that American farmers do not properly appreciate their danger. While the dairy industry is threatened, the free importation of vegetable oil vitally affects the growers of corn, cotton, peanuts, soy beans and flax as well as the live stock industry. These vegetable compounds are used in the manufacture of lard substitutes. Farmers are threatened directly and indirectly, Mr. Loomis says, and if vegetable oils are imported free the result will injuriously affect nine out of every ten farmers in the entire country.

Senator Gooding, of Idaho, whose work along agricultural lines has been of great importance this session, called the conference and President Lowden asked Mr. Barney to represent the Holstein-Friesian Association of America. Besides those who are pleading for free importation of vegetable oils there is another party that suggest a tax on oils used for edible purposes and want oils used for non-edible purposes to be admitted free. Mr. Barney pointed out that the adoption of such a plan would require an army of inspectors to see that the law was carried out. The temptation to use oils admitted free for the manufacture of food products would be as strong as the temptation to bootleg.

The Senators and Representatives with whom the members of the conference came in contact seemed impressed by the arguments of the farmer representatives and Mr. Barney seemed very confident that cheap foreign oils would not be admitted into this country without some measure of protection for the American farmer.

Speaking of the necessity of law enforcement, Mr. Barney told of an instance in his early days as Dairy Commissioner in Iowa. When he assumed office, there was no law in the state regulating the percentage of butterfat in ice cream. Finally the Iowa representatives passed a bill requiring a minimum of 12% fat. In the course of investigations and prosecutions, one case came up where the so-called cream carried only five-eights of one percent butterfat.

The law was attacked on the grounds that the requirements were too high and that the law was unconstitutional and in restraint of trade. The case was carried through the Iowa courts and to the Supreme Court of the United States which handed down a decision sustaining the contention of the Iowa dairy and legal departments.

The Iowa farmer is up against the proposition of having the goods he produces sell at low prices while he pays nearly war prices for most of the things he has to buy. The farmer seems to be the only man who really knows that the war is over. The manufacturer and dealer have not fully grasped that fact.

The Iowa dairy districts are in much better shape than the other farming communities of the state. The President of the Iowa Bankers Association, a man who knew scarcely anything about a cow, at a recent meeting said that Northwestern Iowa, the great dairy district of the state, was in a far better financial condition than any other section of Iowa. He also said that the same was true of Wisconsin and Nebraska dairy districts.

Iowans are purchasing many cows from the dairy districts of Wisconsin and other nearby states and dairying in Iowa is increasing by leaps and bounds. Many buildings are being erected in all parts of Iowa and directly the railroads and coal labor troubles are straightened out, Mr. Barney expects a business revival in the central western states. He pointed out that the majority of the working men were good livers and liberal spenders and when work was plentiful and wages good they increased their purchases which quickened the channels of trade and the result was everyone felt prosperous.

Donovan and McCarthy went out one election to vote the Democratic ticket all day. At 3 o'clock in the afternoon Donovan was going in the booth for the fifty-ninth time and McCarthy was back in line for his trip. The judge of the election asked Donovan his name. "Rosenbloom," he said. "It isn't and you can't vote here," said the judge. "It is my name and I'm going to vote," said Donovan. Back in the line McCarthy shouted: "That's right, Donovan, don't let him bluff you."

Life is a grindstone over which we bend,
And pay creation's debt by flickering candle,
And none may shirk. Unto the very end
Taskmaster Time forever turns the handle.
Life is a grindstone. Every man submits
Himself unto the task that Time imposes;
And some of us emerge with sharpened wits,
And some emerge with merely sharpened noses.

The manager of a factory asked the foreman if the new man he had hired was making progress. "Progress!" exclaimed the foreman, disgustedly. "Progress! I've taught him everything I know and he is still an ignorant fool."

"Well, Willie, are you very good to your little sister?" asked the friend of the family.

"Sure," replied Willie. "I even eat her candy for her, 'cause it makes her sick."

If prosperity did not have to climb so many political fences it might arrive sooner.

Calf Club Roundup

THE Northfield Community have gained an enviable reputation in Minnesota for being able to put things across. On the last Sunday in July there was a calf club roundup and testing Association picnic at which 170 cars and probably 800 people in attendance. After short talks by Geo. Humphrey and John Taylor, E. L. Liddle, Monroe County Agricultural Agent spoke on Agricultural Publicity. He was followed by Merlin Hull, who spoke on present agricultural issues and said that there was need of stringent regulation and control of dairy product substitutes.

The calf club exhibition consisted of twelve Guernseys and thirteen Holsteins which were placed by Mr. Liddle. The Northfield Guernsey Breeders' Association and the Northfield Holstein Breeders' Association gave fine show halters and blankets to the boys and girls, and club leader, John Taylor gave three prizes for the best shown calves. The Holstein awards were as follows:

Junior Holstein heifer calves, 1st—Curtin Olson, prize, blanket.

Senior Holstein heifer calves (10 shown, five first placed) 1st—Leonard Eide, show halter; 2d—Oswald Hagen—Duck show blanket; 3d—Royce Humphrey, Burlap blanket; 4th—Jack Humphrey, show halter; 5th—Alice Humphrey, show halter.

Show halters were also awarded to Clarence Jacobson, Gaylord Jacobson, Alice Thompson, Mildred Frederickson and Harold Hanson for the same class.

Donovan got a job tapping wheels on cars for a big railroad company. He was whacking away at the wheels one day when McCarthy came along. "Don't tap the wheels on that car, that's the president's own car," said McCarthy. "I will tap them, it's me duty and I'll tap them, no matter whose car they are on," said Donovan. He started in to tap. The president of the road put his head out of the window and asked him what he was doing. "I'm tapping the wheels," said Donovan. "How long have you been doing this work?" said the president. "Forty years," said Donovan. "And you were never promoted?" asked the president. "No: there was eighteen vice-presidents ahead of me," said Donovan. "What do you tap the wheels for?" asked the president. "I'll be danged if I know," said Donovan.

Hello Girl—"Some of the things said over the wires are not fit for me to hear."

Line man—"Aw, you can't expect to work around electricity and not get shocked."

TAKING 'EM THROUGH

Jimmy—"This don't turn hard, Maurice; why didn't we make the transfer fee $3.00? Then we could get money twice as fast, and money is what we want. You know we have just paid O. U. Kellogg $15,000 for fees and $700 or $800 for expense money.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

August 22, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

What the Breeders Think

THE HOLSTEIN BREEDER AND DAIRYMAN is continuously receiving letters of appreciation from breeders in every section of the United States, men who are pleased with the firm policy that the BREEDER AND DAIRYMAN is pursuing against the Extravagant, Mismanagement and Political Manipulation of the affairs of the Holstein-Friesian Association of America.

On the other hand, the men who comprise the political organization, built up by whirlwind campaign methods and paid for by breeders and dairymen, that has take over the management of the Association and deprived the members of every right to manage their own affairs, criticize and find fault with our policy. But this we must expect, realizing it is part of the price we must pay in our fight for honest and conservative management of the Association, and only reminds us of the story of the old lawyer who told his son and successor "When you have a poor case, don't argue but abuse your adversary."

If the men we criticize financed their own cause and stood their own expenses, we would have less to say. But this is not the case. They do not use their funds but they use money that comes from the rank and file of the owners of Holsteins, the majority of whom, in these days of unbalanced prices for farm products, have no money to spare. To the man who sells animals for thousands of dollars, a transfer fee of $1.50 or even several times that amount, is no hardship. But, to the men who depends on the sale of bull calves or of a surplus female to pay off the mortgage, to pay for improvements on the farm or for the wherewithal to pay for the education of his sons and daughters, a tax of three, four or five percent can be and oftimes is, a real hardship.

The present Board of Directors of The Holstein-Friesian Association of America is controlled by men who know little, from experience, of the problems that beset the men who milk their own cows and are dependent upon the returns from their dairy for a livelihood.

Too large a proportion of the directors are men who breed Holsteins as a pastime or as a side issue and do not have to consider the operation from a money making standpoint. Some of these men are so well supplied with this world's goods that if they can lose a few thousand dollars each year in their farm operations, it can be deducted from their yearly income and is one way of spending money for pastime without having to deduct the income tax first.

We do not wish to convey to our readers the impression that men of wealth have not been instrumental in doing their part to build up the reputation of the breed and place the Holstein cow in a position where she is recognized as the leading dairy cow in the world. Quite the opposite, we appreciate that men of wealth have invested large sums in buildings and equipment, purchasing the best animals of the breed and have employed experts to feed and care for them with a view of further developing the breed and demonstrating their superior ability as producers of human food. Often this has beeen done in the interests of improving the breed and with no thought of returns in dollars and cents. THE BREEDER AND DAIRYMAN surely recognizes and appreciates what these men have done.

It is perfectly just and right that the men who breed cattle as a pastime be supplied with all the Holstein cows their money will buy, or that they wish to pay for, for their experimental purposes. For we have lots of cows, but they should not be permitted to take our good old Holstein-Friesian Association of which we have only one and dissect it for experimental purposes.

But this is not all. There is an undesirable element that has crept into the management of our Association lured there by the $330,000 surplus and a workable plan for raising additional sums through increasing the transfer fee.

This group is composed of the Professional Politicians who equipped with a pleasant smile and extending the glad hand, have crept into the organization by resorting to shrewd political methods and after fortifying themselves in important positions and building up a political machine through the medium of the paid state secretary and by the whirlwind campaign method, they succeed in disfranchising the membership.

THE HOLSTEIN BREEDER AND DAIRYMAN proposes to protect the interests of the men who breed Holsteins and make dairying their business, who own the majority of Holstein-Friesian cattle and comprise 90% of the membership of the National Association. We propose to tell the truth fearlessly and unreservedly, believing that, only by following such a course can a breed journal truthfully represent the men who own the majority of the animals of our favorite breed.

See Me As I See Myself

WE have read Mr. L. L. Oldham's, Secretary of the Holstein-Friesian Association of Wisconsin account of the Manitowoc and Sheboygan County Holstein Breeders Picnic and we are in a query to know if the breeders of Wisconsin are as proud of Mr. Oldham's ability as *he* seems to be.

WE QUOTE MR. OLDHAM

"Such well known figures as State Club Leader, "Tom" Bewick; Congressman Voigt, author of the filled-milk bill which recently passed the House at Washington; Attorney General W. J. Morgan, now candidate for Governor and State Secretary L. L. Oldham, need no further introduction to Wisconsin audiences interested in agricultural development. *The speech of Secretary Oldham is of particular interest* at this writing as it shows the trend of Holstein affairs in Wisconsin at this writing as a result of the recent national meeting at Kansas City the forepart of June. *"We Quote Mr. Oldham."*

Mr. Oldham devotes the greater part of two pages in quoting *himself* and makes no reference to Congressman Voigt or Attorney General W. J. Morgan's part in the program. Possibly *he* did not deem their remarks worth while. Or if *he* did quote their speeches, in comparison to *his,* it would make Mr. Oldham's speech look like two counterfeit nickles.

We will leave our readers to judge as to the purpose of Mr. Oldham's article.

Dairying Is a World Industry

SPEAKING before a meeting of dairy representatives and its allied trades, held in London, England, July 28th, Professor H. E. Van Norman president of the World's Congress Association said:

"The Dairy industry is now a world industry. Changes in one country affect all others. Conditions are not the same since the war."

Dr. Van Norman voiced a fact that many of us are apt to overlook. The dairy industry IS world wide. The world's shipping milk supply (milk not consumed on the farm or made into butter and cheese) can be depicted as a great lake, fed by streams of varying size, each coming from a different country. From this lake flow streams of different sizes, according to the consumption of milk in its various forms—fluid, condensed, evaporated or manufactured—in the diverse countries of the world.

When in any country, consumption falls off, there is a larger amount left that has to find an outlet in some other market. When the inflow swells unduly, the price drops until consumption increases. When the supply is diminished from any cause, the price rises until the consumer restricts his purchases.

Markets can be manipulated for short periods and fictitious prices obtained, but in the long run the law of supply and demand prevails. This law is immutable. It is one of the oldest laws governing trade and its operation cannot be successfully stopped, although it is true that for a limited period, its operation can apparently be prevented. Notice that we say apparently. It can be likened to a river which can be dammed for a short time but the dam does not prevent the water accumulating until the force behind grows so strong that the dam breaks and all opposition is swept away.

The canned milk business grew with leaps and bounds during the Great War. The warring nations used their energy and resources to destroy each other, the neutral nations reaped the world's trade and stimulated by higher prices, increased their output. When peace came, there was a brief period of readjustment and then as the dairy output for the European countries increased, there was a lowered demand for condensed and evaporated milk in Europe and American trade in these commodities fell off.

The dairy business was unduly inflated from 1914 to 1921. Since then there has been a period of deflation and the pendulum has swung in the other direction. It will come back to normal and there are signs that it is gradually coming back, and, as it comes back the Holstein breeding business will come with it. Those who have maintained their herds as well as those who are now starting with purebreds, will reap the benefit of the comeback.

Add Action to Knowledge

"KNOWLEDGE is Power," but only action will bring forth the fruit of our knowledge. It is not what we know that will bring good results in the management of our dairy herds; it is what we do. We all know the fundamentals of successful dairying, but how many dairymen to-day are not successful, and even fail, because they are not using the best methods in the management of their herds.

This is *Knowledge:* For success in dairying:—

Only well bred dairy cows pay.

Unprofitable cows are those which do not pay a good market price for their feed and in addition, give a reasonable profit.

Records of production and cost of feed are the only ways by which to know the cows in your herd.

The use of purebred dairy bulls is the best and most economical means of increasing the production of your herd.

Breeding for production is only half the battle; win the rest of it by proper feeding.

This is *Action:* For success in dairying:—

Use only well bred dairy cows.

Get rid of unprofitable cows.

Know your cows. Join a cow testing association. If already a member, study the records furnished by your tester.

Kill your scrub bull. Use only a purebred bull.

Feed plentifully. Use a variety of feeds. Cows which are heavy feeders are usually large and economical producers. *Virginia Dairy News Letter.*

"What a very stunning coat-of-arms. I'm sure you ought to be very proud of it." "We are. But George says it will cost a lot to put on the door of the limousine." "Why? Because it's so intricate?" "No, because we have to get the limousine first."

A FORTY-THREE YEAR OLD HERD

To say that any one animal, male or female, in either the Ayrshire, Guernsey or Jersey breed is the greatest that ever lived, in influence on the development of that breed in this country, would cause at least sixteen breeders who favored various strains of blood to rise in vigorous protest. Adherents of the Finlaystone, Auchenbrain, Barcheskie, Sheet Anchor, Glenwood Girl, May Rose, St. Lambert, Golden Fern orMajestyfamilies would not calmly yield first place in the public esteem, as each of these names means much to its admirers.

In the Holstein-Friesian ranks we find a different state of affairs. We have a cow that holds, and probably always will hold undisputed place as the greatest animal of this fastest-growing, heaviest-miking breed. This cow, whose name is part of the designation of thousands of Holstein-Friesians, was De Kol 2d, 734, A. R. 412, imported in 1885 and purchased shortly afterward by the Dutcher herd, at Pawling, N. Y.

During the period of growth and development covered by the following two decades, many herds in the United States were founded on the blood of this cow, more particularly through her male descendants; but unluckily the possible benefits of such breedings were lost through the breaking up of herds by various changes of fortune, or by the introduction of other strains as Holstein breeding operations were enlarged and newer families became prominent in the public eye by reason of records and advertising.

Few indeed are the herds (even in the eastern states where Holsteins were first used and had the firm foundation laid on which the breed's present prosperity rests), which can show animals in which descent from De Kol 2d is practically direct in every female.

One of the few is the Circle View Herd, in Solebury, Pa., owned by Mr. C. J. Koller, composed entirely of females that trace directly from old De Kol 2d, and where the bulls also have this blood in some measure.

The greatest writer of all time said that when men died the good deeds they did were "oft intered with their bones." The use of the qualifying "oft" saved him from many contradictions of which the history of this Holstein-Friesian herd is one; because it is the influence of the good work done by an old-time breeder, long gone to his reward, that lives to-day in the work at Circle View. The plan that he laid out and followed all his life will be carried on by Mr. Koller, who stresses the fact that the present herd continues to be first of all De Kol 2d herd. This name is known to all Holstein breeders, young and old, of course; but there are many of the younger generation to which it is not much more than a name, and we think the history of the breeding of Mr. Koller's cattle, in a truly modern dairy herd, will not only be interesting but informative, and possibly useful.

Just here it may be well to note some of the history of De Kol 2d. A daughter of Willem 3d, and De Kol, she was bred in North Holland by P. De Boer, and imported when a yearling, being, as before stated, bought by Mr. Dutcher for the Maplecroft herd, where she made her four-year-old record of 33.375 lb. of unsalted butter, with 12.58 lb. milk to one lb. butter. This record, closed March 22, 1889, made her the first 33-lb. A. R. cow of any breed in America. The particulars of the record apear in Vol. IV. of the Holstein-Friesian Advanced Register, S. Hoxie, Supt., published 1891.

Later she was sold to the Stevens herd, in New York State, where she made her further record of 26.57 lb. in a strict official test, and had five sons who were used on the Brookside cattle, producing a long line of heavy milking descendants which reached their highest peak of fame in the only double century sire in the world, King of the Pontiacs. An article written in 1908 says that the sons of De Kol 2d, "together have an array of A. R. O. daughters unapproached in number and size of records by any other cow that ever lived. Possibly the nearest living descendant of De Kol 2d two years ago was Princess Hengerveld De Kol (the highest record daughter of the century sire Hengerveld De Kol), then 14 years old, whom we saw at the Bloomingdale herd in New Jersey, where she was born and died. She was a large, strong cow, with a back which showed no drop and broad, strong loins, being in fact very like her grandam Magadora in both conformation of body and udder as well as markings. This is by the way, but we are glad to have seen a cow of the "old line" breeding, as there are few left. Having dealt with the famous old matron, we will return to the breeding of the present Circle View Herd.

Forty-three years ago the late Mr. Joseph Haviland, of Glenns Falls, N. Y., bought from the Unadilla Valley Cattle Association their imported cow Lodema Akkrum 1908 H. H. B.; three years later the bull Lightsome Lad (imported in dam Lightsome by Smiths & Powell, of Syracuse, N. Y.) the cow Gussie 2741, also imported by this firm; and in 1883 their imported cow Carrie Deane 4419.

From the two females, Lodema Akkrum and Carrie Deane, was developed a long line of good producing Holstein-Friesians bred by the Haviland family. Later than 1882 no females were admitted to this herd, all the milking cows of which were bought about five years ago by Mr. Koller as a foundation herd for the Circle View Farm. The method of development of the Haviland herd was as follows:

The original cow, Lodema Akkrum, had a daughter, Lady Akkrum 8153, who was bred to the imported bull Lightsome Lad, the resulting progeny, Duke Akkrum, being mated with the imported cow Carrie Deane. Right here is where the start was made with De Kol 2d blood through the bull America 2d's Wayne Paul De Kol, who sired Pauline Deane, her dam being Carrie Deane 4th. This first used De Kol bull traced not only to the old cow herself, but to a pair almost as famous, Pauline Paul and America.

Another infusion of De Kol 2d's blood came through using Plum Hengerveld De Kol 2d, her great-great-grandson, on Pauline Deane, who had two daughters, Pauline Deane 3d and Pauline Deane 5th. The first had a record of 21.55 lb. and the latter one of 22.07 lb.

In keeping with the custom by that time firmly established, the bulls Hebron De Kol and Unadilla Canary Lillith were brought into the herd and bred to the daughters of Pauline Deane, thus keeping predominant the influence of the famous matron, the first named tracing to her on both sides of his pedigree, and the latter having seven crosses of her blood.

This is the breeding of the herd bought by Mr. Koller from the Haviland Estate. On the females, 32 in number, the bulls now being used are Briar King Segis Alcartra 237278 and King Segis Unadilla 345088.

As the name would indicate, the former is a son of the first Holstein bull to be sold at public auction for the then remarkable price of $10,000, King Segis Pontiac Alcartra, for years head of the Arfmann herd at Middletown, N. Y. The De Kol 2d line is through the dam, Briar Pietje Daisy, who also contributes the blood of that eminent imported matron, Pietje 22d. The junior sire gives De Kol 2d influence through eight direct ancestors, and his dam Gussie Unadilla (24.78 lb.) traces to the imported cow Gussie 2,741 through Gussie Lightsome.

Keeping the original plan unimpaired, so far as females are concerned, by using none but those bred in the herd, and taking in bulls only where they show De Kol 2d blood by direct inheritance, will maintain the standard set in the herd founded nearly half a century ago, in the matter of blood lines to be perpetuated.

The Holstein-Friesian breed has, in a seeming misfortune, the advantage of the other dairy breeds; that is, they cannot import cattle from the mother country of their breed. The other three dairy breeds can and do, constantly, barring occasional embargoes when there is an outbreak of foot and mouth disease. As a consequence, breeders are tempted, especially when they have what may be called old-fashioned breeding, to wander off after something that by judicious advertising, is made the fad of the present year or so. In the Guernsey breed that is how so many herds of the large, strong Sheet Anchor or Yeksa or Glenwood strains have gradually been absorbed by imported lines; in the Jersey breed the old line Eurotas and Combination and—greatest of all—the St. Lambert families have been discarded by many in favor of the Golden Lads; and in the Ayrshire breed imported cattle have almost entirely replaced the domestic breeding of 30 years ago. The Holsteins have simply had to keep on breeding with the stock they had, as after the first few years of importations there was only a small number brought in, and then the embargo was put on. Consequently improvement has been made by the selection of the best in type and performance and the present standing of the black-and-white breed as the foremost in numbers and production of both milk and butter fat shows the inherent excellence of the Holland blood, even when not helped by any infusion from the parent stock. We consider the Circle View Herd a wonderful example of continuous breeding by selection, and a vindication of the wisdom of the standards set by the pioneer Holstein men in the United States.

The milk from Mr. Koller's herd is shipped to dealers in Philadelphia and the proprietor says that the business is "profitable both from a dairying and stock basis." He formerly had the Guernseys, but says he "would not think of changing back." While they have not made A. R. records at Circle View, they feel it may be necessary to do so ultimately in order to satisfy the popular demand; but until that time prefer to sell the breeding stock "on the basis of conformation and the production of milk under ordinary farm conditions."

It would seem that the old Haviland herd has found a home after the original owner's own heart; and the breed will still have the old De Kol 2d line carefully bred on and on, which in these iconoclastic days is a rare and most commendable performance.

A. G. Morrell.

BE YOUR BEST

If you can't be a pine on the top of the hill
Be a scrub in the valley—but be
The best little scrub by the side of the rill;
Be a bush if you can't be a tree.
If you can't be a bush be a bit of the grass
Some highway the happier make.
If you can't be a muskie then just be a bass
But the liveliest bass in the lake.
We can't all be captains, we've got to be crew,
There's something for all of us here
There's big work to do and there's lesser to do,
And the task we must do is the near;

If you can't be a highway then just be a trail,
If you can't be the sun be a star;
It isn't by size that you win or you fail—
Be the best of whatever you are.

A LIFT IN THE RIGHT PLACE

There are other and better ways of helping a neighbor farmer than putting one's hands in one's pocket and giving him money. A farmer of our acquaintance has been a helper to every man in the community, and that, too, without realizing that he was doing anything in this direction. Here is the way he has done it: He has built a good milk house; he has gradually worked into a better herd of cows. He has made his farm home brighter and more attractive, and he has never been downcast when things went bad for a year or two. In these ways he has put new fire into the hearts of his neighbors and led the way to a higher kind of farming than ever was seen in that locality before.

WHEN COWS SHOULD FRESHEN

There are varying opinions as to the best time to have cows freshen, but after a thorough study of the records of 10,870 cows in 64 testing associations the United States Department of Agriculture has found that cows dropping their calves in the fall produce more milk and butter fat. In the 64 associations fall freshening ranked first 29 times in average milk production; winter freshening ranked first 18 times; summer freshening 10 times; and spring freshening 7 times. In butter fat production fall freshening was first 38 times, winter 13 times, summer 8 times, and spring 7 times. The tabulated results and detailed explanations have just been published in *Department Bulletin 1071*, Influence of Season of Freshening on Production and Income from Dairy Cows, by J. C. McDowell.

On an average the cows that freshened in the fall, September, October and November, produced 6,689 pounds of milk, while those that freshened in the winter, summer, and spring produced 6,439, 5,941, and 5,842 pounds, respectively. These fall cows produced on an average, 268 pounds of butter fat. Those that calved in winter, summer, and spring made, in order, 258, 236, and 236 pounds. In spite of higher feed cost, the fall-freshened cows made more income over feed cost. The winter ones were second, spring third, and summer fourth.

On the basis of individual months, the largest income over feed cost was made by the cows freshening in December, with October second, November third, and January fourth. The cows calving in October ranked first in both milk and butter fat production.

Although the evidence shows conclusively that fall or early winter freshening is desirable in most parts of the country there are exceptions to the rule. The dairyman who has a steady market for milk at fair prices during all seasons of the year will usually find it to his advantage to keep the supply fairly uniform from month to month. The percentage of cows that should freshen each month in the year will vary to some extent in different localities and on different farms in the same locality. At present in market milk districts there is usually a surplus of milk in the late spring and early summer, and more cows should be allowed to freshen in the fall.

The *bulletin* may be obtained free by addressing the Department of Agriculture, Washington, D. C.

WHAT DO YOU THINK?

How long are the people of this country to remain quiet while Gompers, Lewis, Jewell and other union leaders try to stop industry and starve the people?

Under the misnomer of "collective bargaining," these labor leaders claim the right to stop every railroad train and coal mine in this country. No one objects to "collective bargaining," but we all ought to object to "monopolstic bargaining."

Why should the working rules or wages apply to an entire country when local conditions differ so greatly? Why should the same wages be paid a man in Androscoggin County as in New York city?

There are nearly 300,000 miles of ra road track in the United States, some in thickly settled districts like metropolitan New York, some in farming districts like the Dakotas and Texas; some in the Rocky Mountains. There are nearly 10,000 bituminous coal mines in the United States, with veins of coal varying in thickness, some in thickly settled communities, some in mountain districts. Why should the same wage and working condition apply everywhere? The work may be the same, but the conditions differ materially. Ho can one arbitration board decide all the multitudinous questions that arise in the United States? It cannot.

It is about time that our national officials, executive and legislative, appreciated that the unions are a small percentage of the people of this country, and begin to consider the rest of us.

Why should the United States statutes attempt to exempt labor unions from laws that apply to the rest of the people? Why should the state legislatures, under the guise of "humanitarianism," pass laws which Lewis says will prevent any coal being mined in Illinois or Indiana until he gives the word?

It is time for the great majority of the people to demand their rights. They need no more government bureaus covering the entire country. They want no compromises with those who would stop industry and starve the people. What we need are laws applicable to everybody with no exception in favor of any class. What we need is less submissiveness to Gompers, Jewel and Lewis and more consideration of 110,000,000 people.

The coal and railroad strikes will not have been in vain if Congress and state legislatures will stop class legislation. This country is not yet ready for a reign of Lenin and Trotzky—*Boston Herald.*

Mind your own business and you won't be so apt to have other people doing it for you.

About the only exercise many a fellow gets consists of patting himself on the back.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Aug. 23, 1922—Tour to New Jersey State Agriculture College and Forsgate Farm.
Aug. 26—Baltimore, Md., Maryland State Dairymen's Association.
Aug. 26—Bridgeport, Conn., Holstein-Friesian Breeders' Association.
Sept. 25-Oct. 1—Waterloo, Iowa, The Dairy Cattle Congress, E. E. Estel, Mgr.
Oct. 7-14—Minnesota State Fair Grounds, National Dairy Show.
Oct. 28—West Chester, Pa., Field Day and Banquet.
Oct. 10—Dallas, Tex.—Texas Holstein-Friesian Breeders' Association Meeting and Banquet.
Nov. 23—Belvidere, N. J.—Annual Meeting Warren County Association.

KATY GERBEN STILL ALIVE

Thirty dairymen of Gage County, Neb., with their families visited the College of Agriculture at Lincoln, July 26th. Professor H. P. Davis, head of the Dairy Department, acted as host, showed the animals and told about their records. The production figures, age of the animal and pedigree are on boards over each stall. The famous Katy Gerben, now 19 years old, was a center of interest. This cow has given birth to 14 calves and her sons have stood at the head of some of the greatest herds of their native state.

MEDINA BULL ASSOCIATION

Forty-two Ohio Holstein breeders have formed the Medina County Holstein Bull Association and have raised money to purchase three high class Holstein sires. It is the intention to have three "breeding blocks" and a purchasing committee of five is now on the lookout for the right animals. The plan is to choose closely related bulls, preferably half-brothers and to obtain, if possibe, show bulls from cows with large year records.

The association was organized by the coöperative efforts of the Medina County Farm Bureau; Medina County Holstein Club and the Ohio Holstein-Friesian Association. The officers of the new organization are: President, Theo Chapman, Brunswick; vice-president, O. L. Robinson, Medina; secretary-treasurer, Clair I. Miller, Medina.

GENESEE BREEDERS TOUR

A party of nearly one hundred, consisting of Holstein breeders, farmers and friends interested in the dairying industry in Genesee County, Mich. made a forty-mile drive on July 22d, visiting seven Holstein establishments. The party met at the home of C. S. Mott, starting from there about ten o'clock, a. m. Their first stop was at the farm of W. E. Fellows, where they looked over a seventy-animal herd. From there they went to the farm of Walter Hill, at Davidson, then to the homes of Herbert Watson, Floyd Hollenbeck and George Roberts, calf club members, and from there to the homes of Walter Conquest and I. A. Gould, where a picnic dinner was partaken of. After dinner there was a short speaking program, opened by G. L. Spillane, president of the Genesee Holstein-Friesian Association. Other speakers were Ex-President D. D. Aitken; Nevels Pearson, Assistant State Club Leader; and Earl J. Cooper, of the Calf Club Department of the Holstein-Friesian Association of America. At the J. E. Burroughs farm, Mr. Cooper gave a demonstration on fitting an animal for the ring, while Mr. Pearson explained handling animals in the ring. While primarily for the benefit of calf club members the older members of the party also enjoyed the work.

WOOD COUNTY PICNIC

Around five hundred dairymen attended the Wood County Holstein Breeders' Association picnic at Huser's Union Grove Dairy Farm. Besides the members and their families, delegations of business men from Wisconsin Rapids, Arpin and Vesper were present.

A. O. Collentine, of the Wisconsin State College of Agriculture, Madison, gave the address of the day, which consisted of sound advice on dairying and was entitled "Marketing Wisconsin's Dairy Cattle." He told of the success of the John Erickon herd and spoke of the market in the United States and Mexico for Wisconsin Holsteins, saying that three million dollars worth of cattle had been sold out of the state. He endorsed the tuberculosis clean-up campaign and urged the Wood County breeders to have a 100% record.

C. F. Kruger, president of the Wisconsin Rapids Retail Association stated that associations were formed in cities to promote business by rendering the greatest service to their patrons. He said that, through the development of the associations, the farmers could accomplish the same results in rendering greater service in cattle breeding and in marketing of dairy products. C. H. Imig, Rudolph, Wisconsin, who is president of the association, presided, and urged the breeders to keep up boosting. He also spoke of the good records made by the fine cattle in the Union Grove Farm herd. E. E. Royce, LaFollette candidate for the Assembly, said that he was interested in Holstein breeding and was a booster for it. He had been a LaFollette Progressive for twenty years. W. W. Clark, the present assemblyman, who is a candidate for renomination on the Republican ticket, said he also was very much interested in the Holstein breeding business and saw a big future in it for everyone.

BUILDING A HOLSTEIN COMMUNITY

It is the intention to make Washington Island, Wis., a strictly Holstein community. Meeting the middle of July the breeders incorporated as a coöperative association for the purpose of purchasing new purebred sires.

Under the agreement which was reached, each cattle owner is assessed $2.00 per cow for the purchase of these sires. The Island will be divided into blocks, there being two at present, with a third that is expected to be completed by spring. These three blocks together with the bull owned by Chris A. Hanson will put a high class sire within easy reach of every herd on the Island. In the meeting it was voted to purchase a seven-months-old bull from the Murphy Farms at Horse Shoe Bay and another nearly a year old from the Gillett Farm, at Rosendale.

E. N. Murphy sold the Association a son of his Abbekerk bull from a daughter of King Lilith. The dam of the young bull is on year test with a prospect of producing 800 lb. butter in a year as a two-year-old.

The Gillett bull is sired by King Bess from a daughter of Colantha Johanna Champion.

OUR OFFICE EFFICIENT

Owners of purebred Holsteins are apt to find fault with the secretary's office on account of the delay in getting certificates of register and transfer, overlooking the fact that there are many items to be checked up, that the work is divided among a number of clerks, that the volume of business compels the installation and operation of a system whereby each clerk has his or her particular part to attend to and that each change of operator consumes time.

It is refreshing to find that, compared with other associations and similar offices, our own stands at the top, as shown by the following letter received from Mr. L. N. Fairchild, of Purdue University, who has charge of registering the animals of that great institution.

July 21, 1922.

"Holstein-Friesian Ass'n., Brattleboro, Vermont.
Gentlemen:

We received certificates of transfer of the bulls, Perry Beets Bakker of Purdue and Bakker Beets Colantha of Purdue, and wish to say that your Association is the most prompt of any in getting these certificates to us at once after applications are made out. We thank you very much for this courtesy and will send check to cover the fees at once."

Yours very truly,
L. N. Fairchild,
Associate Professor in Dairying.

BRATTLEBORO BUSINESS

Twenty-five applications for membership were received at the office of the Secretary for the week ending July 29th. In the same time 1,574 certificates of registry were issued, 1,085 female and 489 male; 1,260 certificates of transfer were written, 791 female and 469 male.

For the week ending August 5th, twenty-one applications for membership were received. There were 1,557 certificates of registry issued, 1,116 female and 441 male; 1,199 certificates of transfer were written, 780 female and 419 male.

The prefixes reserved during the two weeks period are as follows:

Catalpa Shade, Clarence H. A. Luttman, Watertown, Wis.
Clara Vista, Cleon F. Carpenter, Alpine, N. Y.
Deer Lake, Robert Weesner, St. Croix Falls, Wis.
Fairest View, F. G. Lehman, Watertown, Wis.
Falfadale, Frank E. Ziese, Crown Point, Ind.
Glenceryll, B. B. Thomas & Son, Dorset, Ohio.
Gold Standard, Frank T. Fowler, Chicago, Ill.
Harhubengar, Ben P. Smith, Brookhaven, Miss.
Hilono, Hilo Sugar Co., Hilo, Hawaii.
Krishna, V. R. Holmes, Anoka, Minn.
Loma Linda, College of Medical Evangelists, Loma Linda, Cal.
Lomaga, Archie H. Gates, Bay City, Mich.
Madson, Alfred H. Madson, Manitowoc, Wis.
Maurer, Louis C. Maurer, Manchester, Iowa.
Miller-Meade, Arthur G. Miller, Oconomowoc, Wis.
Mont Mary, Dr. J. Thomas Kelley, Washington, D. C.
Needyoumore, Joseph and Edmund Ault, Lime City, Ohio.
Pierfol, Lyman G. Pierce, Brewer, Maine.
Richlawn, Ed. Hill, Jr., Carrolton, Ky.
Springmont, Daniel Nevinger, Alexander, N. Y.
Wayhigh, H. J. Driessel, Barton, Wis.

GIVE AWAY PUREBRED BULLS

The Colorado State Holstein Breeders' Association held their annual picnic and business meeting at Monument Park, Colorado Springs, August 3d. The business session was held in the afternoon and some fine talks were given.

E. E. Murphy, of Leavenworth, Kansas, spoke on organization and coöperation, and stressed the necessity of breeders working together.

Professor George E. Morton, of the Colorado State Agricultural College, explained the Voigt Bill, and urged members of the Association to write to their senators asking them to vote for this measure, which prohibits the inter-state shipping of milk containing any fat other than its natural butter fat.

W. S. Holly, president of the Colorado Association, reported the club activities of the past year and Arthur Ponsford, of Denver, who was a delegate to the Kansas City Convention, made a brief report of that event.

C. F. Lauderback, business manager of the Modern Woodman Sanitorium, urged the members of the Association, as a body to bring pressure upon the state legislature, asking an appropriation of $100,000 to aid tuberculosis eradication.

Five breeding establishments donated purebred bulls to be given to scrub bull owners present at the outing who would promise to sell their scrub animals on the market and use the purebred bulls. Only two owners of scrubs were present so it was decided to give each one and let the president and secretary of the Association locate scrub owners who would get rid of their herdsires and accept the purebred ones in place. The breeders furnishing the purebred bulls were the Modern Woodman Sanatorium and George Sinton, of Colorado Springs, the Model Dairy Farm of Holly, Turkey Creek Farm, of Colorado Springs, and Mrs. R. G. D. Douglas, of Rush. Mrs. Chas. W. Fisher, of Pueblo, and Jessie A. Davidson, of Lamar, each received a purebred bull.

MAINE BREEDERS HEAR LOWDEN

The annual Field Day of the Maine Holstein-Friesian Breeders' Association at Sagadahoc Farms, South Portland, was a real success, July 25th. Members and their friends were made at home by Myron C. Peabody, who is president of the Maine Association and also is superintendent of the Sagadahoc Farms. The forenoon was spent in inspecting the farm and stock.

After a picnic dinner, President Peabody called the company to order. Prof. Chas. L. Blackman, Field Secretary of the New England Holstein-Friesian Association, gave a judging demonstration. Dr. J. B. Reidy, of Augusta, Federal Inspector in charge of tuberculosis prevention in Maine, told of the work of his farm department, and said that the dairy herds of Maine are equal to the best and superior to most in the country. Prof. L. S. Corbett, head of the department of animal industry of the University of Maine, told something of the work done at his institution.

F. L. Houghton, Secretary of the Holstein-Friesian Association of America, congratulated the Maine breeders in their enthusiasm and success and said that Sagadahoc Farms was a source of inspiration for Maine Holstein owners. E. M. Hamlin, of Milo, superintendent of the American Thread Company, gave a brief account of the herd built up by that company for the benefit of their employees and the comunity.

The last speaker, the Hon. Frank O. Lowden, who is spending his vacation at Swampscot, Mass., expressed the regret that Gov. Baxter was not present. The Governor was detained by business arising from the coal situation. Ex-Governor Lowden told of the history of the Holstein breed, showed how the breed had grown from its importation into this country. In the course of his remarks, he said that the genuine Holstein breeder not only thinks his breed is the best: he knows it is, and he has abundant figures to back him up in his judgment.

After the conclusion of Mr. Lowden's speech, there was a reception in which the breeders were introduced to Mr. Lowden and to Secretary Houghton. This part of the affair was wholly informal but was none the less enjoyable.

IN THE YAKIMA VALLEY

The Holstein breeders of the Upper Yakima Valley to the number of 75 enjoyed a tour July 13th, visiting some of the herds for which the valley is famous. The boys of the Moxee and Ahtanum Clubs were included and if they did not get an inspiration to become live stock owners, it was not the fault of the local boosters.

The caravan, which consisted of 21 cars, gathered at the farm of William Todd & Sons at 9 a. m., and looked over the splendid daughters of Sir Ormsby Korndyke Piebe. Four of the nine animals now on test at the Todd Farm are daughters of the Piebe bull and at the rate they are now producing these heifers will make 800 lb. butter in their first lactation period. A daughter of Sir Johanna Ruth Fayne and a daughter of Johanna Colantha Champion are in the test string. Cascade Blossom, whose record of 24,043.7 lb. milk in 305 days was world's record at time of making, is again in test and was much admired. The party visited the herd of Miss Emma Engler, who now has 17 head of purebreds. Her herdsire is from a full sister of the world's champion cow, Segis Pietertje Prospect.

A stop was made at the J. C. Hansen place. Mr. Hansen has two sons, each a member of the club each owning two heifers. The herd of W. E. Lockwood contained five producing cows and eight heifers. This sire came from Wisconsin and is getting some fine light-colored calves.

The noon hour was spent with M. W. Poyner. Here a basket lunch with ice cream was enjoyed after which Don. G. Magruder, dairy specialist of the Washington State College, pointed out the importance of follow-up work to see that beginners with purebred stock cared for them properly and gave them a fair chance to produce in accordance with their capacity and breeding. Selling purebred stock to farmers who do not give them suitable care will give the industry a bad name.

Auctioneer Gue talked on coöperation, illustrating his talk with an account of the Tillamook County coöperative cheese

factories where 23 factories are under one-man control. He predicted a high butter fat market this fall. The Dewey Ames herd at Gromore as well as the Lloyd Garretson herd were visited. There are 26 purebreds in the Garretson herd with three animals on year test.

The herds of G. B. Harris and Wm. Duffield at Moxee were visited and the tour concluded with a call at the Duffield farm where the herd is headed by a son of the Garretson bull from Cascade Piebe who was sold at last spring's Brentwood sale.

The excursion was planned by A. E. Lovett, and E. S. Scott in coöperation with members of the Yakima Holstein Breeders' Association.

EVERSON NEARLY EIGHTY

Speaking to an audience of 4,000, consisting of southern Wisconsin dairymen and friends at the fair grounds, Jefferson, Wis., July 13th, at the annual picnic and summer frolic of the Jefferson County Holstein Breeders' Association, President Lowden told his hearers something about coöperative societies for the sale of farm products and farm marketing problems. He contrasted present American business conditions with English problems after the close of the Napoleonic wars a century ago, repeating in part his speeches before great gatherings of Holstein breeders. President Lowden paid tributes to two Jefferson County products, namely Dean Faville, of the Wyoming Agricultural College and the late Dr. Faville.

Mr. Lowden was introduced to the gathering by the veteran Holstein breeder, Wm. Everson, of Everson & Sons, Lake Mills, Wis. Mr. Everson is now in his eightieth year and is hale and hearty.

DRIVING HOME THE COWS

You may talk about the spring-time
And the birds that sing so sweet,
And the waking voice of nature—
That, of course, is hard to beat:
But the sound to cheer a troubled soul,
And his feeling to arouse,
Is to hear the farm boy's cheerful voice
When he's driving home the cows.

If, perhaps, you have not slept well,
And your spirits, sinking low,
Till there's naught you think can raise them,
That's the time you're glad to know
That there's someone who is happy,
In whose life no care allows,
From the fields his voice comes floating
As the boy drives home the cows.

In the evening, as you wonder
What that boy can be about,
And you call him, loud and louder,
Then in answer comes a shout
From the distant hill-top yonder
Where the peaceful cattle browse,
Soon his clear young voice is ringing,
As he's driving home the cows.

When you're hunting 'round for blossoms
And for sights and sounds of spring,
With a critic's view of nature,
Judging roughly everything;
Call not any sound the sweetest,
And on nothing stake your vows,
Till you hear those happy, joyous notes,
As the boy drives home the cows.

A YOUNG MOTHER

The Association Press papers have been carrying a short story telling that a Holstein heifer less than a year old, owned by L. S. Wingrove, of California Hot Springs, Cal., gave birth to a calf. The calf, however, was born dead. The dam of the heifer is only three years old herself. Both the heifer and her mother are said to be milking well. We believe this is a record and reported not because we believe early breeding should be encouraged, but just as a news item.

Answers to Correspondents

"Can you recommend a remedy for squeaky wheels?" Jim Wayback.

"Apply oleo liberally to the axle. That's its proper place."

"My uncle died and left me a Jersey bull. What should I do with it?"—Johnny Jumpup.

"Sic it onto Jack Dempsey."

Mary has a heifer that persists in fence-jumping. "Try pasturing the heifer on the other side of the fence, Mary, if she is as contrary as you state she will jump back and be on the right side again."

Joe wants to know what to do with a calf that suckles two cows.

"Nothing at all, Joey, nothing at all. Let the calf alone; evidently it is capable of taking care of iself."

"I have a cow that kicks every time she is milked and gets her foot in the pail. What shall I do?"—Countryman.

Get in touch with Vice-President John M. Kelley. We understand he is looking for milk with a kick in it.

"There is a nice girl living on the next farm and with whom I am in love, but she doesn't seem to care for me. How can I win her?"—Lonesome Bill.

"Find out when her birthday comes, Bill, make her a present of a registered Holstein heifer, then she will make a pet of the gift and love the giver."

"I won a Jersey calf at a dairyman's picnic where it was raffled. I love Holsteins, own a heifer calf now and my Dad has a registered Holstein herd. What shall I do with my prize?"—Jimmy Jones.

"Isn't there some boy to whom you owe a grudge, Jimmy? If so, you might give it to him, get rid of the Jersey and at the same time pay the grudge. Otherwise we would advise putting it into a bran sack and dropping it along the roadside some dark night."

"There is a young man who wants to marry me but we disagree on dairy matters. He likes Jerseys and I prefer Holsteins. What is your advice?"—Eva B.

"Get another fellow, Eva. Pet some of the Holstein exhibits at your county fair next month and you will probably get acquainted with someone who is worthy of you and will appreciate your good taste. A Jerseyman can never make you happy for his income will not be large enough to support and dress a fine girl like you."

OR A MIRACLE MAN

She—"What would you call a man who hid behind a woman's skirts?"

He—"A magician."

Feb. 1-10—Tampa, Fla., South Florida Fair.

CALEDONIA TRI-COUNTY FAIR

The Holstein Show at the Caledonia Tri-County Fair, Caledonia, N. Y., Aug. 8-11 was the best this year that it has been since this fair commenced. The black and white show has always taken the lead here, owing to the marked predominance of the Holstein-Friesian breed among the cattle of this territory and more liberal premiums are offered in this section than for the other breeds. The exhibit was strongest in the junior classes, the young stock showing good promise for the future and that breeders are paying more attention to type.

Mr. H. K. Jarvis, of Port Byron, N. Y., again placed the ribbons, laying special emphasis on the cash value of the animal and holding distinctly to type regardless of breeding or records.

The chief exhibitors were: E. Johnson & Sons, Caledonia, N. Y.; Oak Knoll Farms, from the same town, William Sheldon, Avon., N. Y., and Edward E. Doty & Sons, of Geneseo. Mr. Johnson was the heaviest winner both in total awards and in the aged classes. Mr. Sheldon's fine two-year-old led her class, as did this heifer's fine bull calf in his class. Mr. Doty's senior yearling heifer and senior heifer calf took the blue in their respective classes. Mr. Johnson won the exhibitor's herd prize, this herd being led by Woodcrest King Urma. He also took first with his get of sire and produce of cow. Mr. Doty's breeder's young herd easily carried off the honors in this class, being made up as it was entirely of prize winners from competition earlier in the day.

DENNIS TROPHY AT TIMONIUM

Despite the fact that the three-boy judging team from Cecil County, Maryland, which won at the 1921 Timonium Fair went on to Atlanta, Georgia, and repeated their victory, incidentally winning a trip to Europe in the course of which they defeated a team of English juniors in the Royal Stock Show, Cambridge, England, thereby adding to the glory of their native state, the management of the Maryland State Fair this year, much to their regret, find themselves financially unable to appropriate funds for a similar special trip to this year's National Dairy Show. But the livestock breeders of Maryland are bestirring themselves, and headed by the energetic Guernsey breeder, Louis McLane Merryman, are endeavoring to raise funds to send this year's winning team to St. Paul. A number of county and district teams of juniors will be in evidence at Timonium during the week of September 4th to 9th.

In addition to the many valuable prizes that will be awarded to owners of winning Holsteins this year, that public-spirited breeder, John M. Dennis, of Essex Farms, will give a silver trophy to the Holstein exhibitor winning the most money, the trophy to become the permanent property of the first exhibitor to win the same for three years. Bob Haeger has already expressed regret that his great show herd is dispersed so that he will be unable to compete but he will be on hand to hand out the ribbons.

SPECIAL PRIZES AT YORK FAIR

The York Fair is considered one of the best in southern Pennsylvania and it is intended to make the 1922 event surpass its predecessors. This fair has a generous prize list and there will be a number of special prizes this year, donated by the business men of the community interested in the dairy industry.

The well-known Holstein breeder, H. E. Robertson, of the Robertson Farms, will give a prize of $50 for the best purebred Holstein herd. The Robertson herd, which is usually shown, will be ineligible to compete for this prize. John E. Baker will give a prize of $50 for the best purebred Holstein young herd. J. W. Eshelman & Son, dealers in feed, will donate $25 for the best Holstein bull of any age which will make the championship of the 1922 York Fair a desirable award from a money standpoint. The Anderson Brothers Feed Company offers an equal amount for the best purebred Holstein female while C. H. Dempwolf & Co., dealers in fertilizers, will give $25 for the best Holstein heifer under two years of age. Special prizes are offered for other dairy breeds.

The York Sanitary Milk Company gives special prizes to be awarded to the highest milk and butter producers of any breed, who, during twelve months previous to the York Fair makes the highest cow testing association record. Twenty-five dollars is given to the cow producing the most milk and another prize of $25 to the cow producing the most butter fat.

FAIR AT DEVIL'S LAKE

Lottie Bristol Aaltje, a sister of the noted Hester Aaltje Korndyke, and four of her daughters were stellar attractions at the Lake Region Fair, held the week ending July 14th, at Devil's Lake, N. D. Lottie won the grand championship and her daughters won several prizes. They are owned by Sorenson Brothers, of Webster, who had the largest dairy cattle exhibit at the fair. A. J. McLarty, of Starkweather, N. D., showed a nice string of young heifers with his herdsire, a grandson of Sir Pietertje Ormsby Mercedes 41st, and won his share of prize ribbons. W. L. Kunkle, of Southan, won first prize in aged bull class and the grand championship with King Pietertje, a son of Sir Pietertje Ormsby Mercedes 41st. Chas. Frank, O. I. Thon and Ernie Gunn, all of Devil's Lake, also exhibited. The judge was Dr. Don McMahon, of the North Dakota Agricultural College.

RICHLAND FAIR AWARDS

At the recent Richland County Fair held at Wahpeton, N. D., N. H. Jones exhibited seven head and won four prizes, including first on aged bull and second and third on cows. Dr. D. E. Ryan showed six animals, winning first on two-year-old bull, first and champion with cow, second and third on two-year-old heifers, first yearling heifer and third heifer calf. The Doctor also showed three Poland-Chinas and won three prizes. Howard Williams showed six Holsteins and won four ribbons, including first on herd, first prize two-year-old heifer and second prize for both senior and junior heifer calves.

DAIRYMEN'S LEAGUE BUSINESS

The July gross pool price of the Dairymen's League Cooperative Asssociation is $1.68 per hundred pounds for milk testing 3% butter fat. This is the base price of the 201-210-mile zone.

Out of the gross pool price $.028 is deducted for administrative expenses; $.002 to be sent to locals for their expenses; $.008 for advertising expenses; $.002 for insurance against bad accounts, and $.02 for extraordinary depreciation, making a total expense deducted of $.06 per hundred. This leaves a total to be paid to the farmers of $1.62. Of this 20c per hundred is borrowed by the Association on certificate of indebtedness plan for investment in milk plants and equipment to be owned by the farmers through the association.

The 1922 July net price of $1.62 per hundred is $.08 lower than the July pooled price for 1921. Considering the general fall of prices throughout the country, this is a good showing on the part of the Coöperative Association, although farmers and students of dairy economics consider this price is below the cost of production.

While all the reports are not yet in, yet it is known that during July, the Asssociation pooled the milk of 53,798 members. Of this number 39,635 delivered milk to 647 plants operated by dealers and 14,163 members delivered to 130 plants operated by the Coöperative Association. It will be noted from these figures that the Coöperative Association itself handled nearly one-third of all the pooled milk.

Reports from the dealers for July show that there was a total of 315,535,602 pounds of pooled milk. Checks covering payment of this milk delivered by members of the Coöperative Association during July will be mailed on or before August twenty-fifth.

With conditions in the milk market improving somewhat, and with August milk already sold at higher prices to the dealers, the situation begins to look a little better to dairy farmers in the Association than it has for some time.

IKEY KNEW HOW

A Hebrew storekeeper, much to the astonishment of his neighbors, suddenly decorated his shop window with a gorgeous new blind. It was the sensation of the day and few of his brethren failed to make some remark to him about it.

"Nice blind you've got there, Isaac," said one.

"Yes, Aaron."

'How much did it cost you, Isaac?"

"It didn't cost me anything, Aaron. My customers paid for it."

"What! Your customers paid for it?"

"Yes, Aaron. I put a leedle box on my counter, 'For the blind,' and they paid for it."

Wanted—An Offer

for a bull calf more than 90% white, six of whose seven nearest dams average 21,521 lb. milk, 1084 lb. of butter, 4% fat.

Dam, a sister to Keystone Beauty Plum Johanna, who holds the world's record, strictly official, for any cow of any breed under full age. Dam has a junior three-year-old record of 15,443 lb. of milk, 749 lb. of butter, 3.9% fat.

Cow Testing Association Reports

CANADIAN TEST RECORDS

The Canadian report covering records accepted during July is very brief, yet contains some fine records. Only two animals appear in the mature class as making seven-day records and both crossed the 30-lb. mark. Belle Model Champion Sylvia, owned by the Hon. A. C. Hardy, of Brockville, Ont., made 550.2 lb. milk and 30.29 lb. butter, while Lady Baroness, the dam of Belle Pontiac, the world's champion for year butter production, is reported with 491.6 lb. milk, and 30.27 lb. butter. She was nine years, seven months and four days old at the time she freshened and is owned by Thos. A. Barron, of Brantford, Ont. No records are reported for the junior four-year-olds or junior three-year-olds and small records in the senior classes. Two 20-lb. senior two-year-olds are reported but there is an outstanding record in the junior two-year-old class, that of Rose Echo Sylvia, with 608.2 lb. milk and 28.21 lb. butter in a week. She was two years and 16 days old at the time of freshening and is owned by Carman Baker, of Brighton, Ont.

Certificates for 25 Record of Performance tests were awarded in July, 19 for year records and 6 for 10-months tests. Mechthilde Christmas Gift, owned by Walburn Rivers, of Ingersoll, Ont., made 20,639 lb. milk and 1,051.25 lb. butter. Four other cows made between 800 and 900 lb. butter in this class.

Two records of over 800 lb. are made by four-year-olds, the leader being S. C. P. Nora Carroll, with 17,469 lb. milk and 863.75 lb. butter. She is owned by J. M. Steves, of Steveston, B. C., while Walburn Rivers owns Pioneer Duchess Mechthilde, with 17,051 lb. milk and 802.50 lb. butter. Two three-year-olds are reported, the leader being Maida Pietje, with 14,054 lb. milk and 750 lb. butter. Her owner is Geo. E. Houle, of Nicolet, Que. The leader of the two-year-olds is Colony Faforit Newman, owned by the Colony Farm, Essondale, B. C., with 19,408 lb. milk and 808.75 lb. butter.

The best record made in the 10-months-old division is that of Cedardale Violet Segis Korndyke, with 14,190 lb. milk and 717.50 lb. butter. She was a four-year-old, and is owned by A. J. Tamblyn, of Orono, Ont.

VIRGINIA TESTING

The July Virginia Dairy News Letter tells that during the previous month, 4,569 cows belonging to 198 herds and enrolled in 12 associations were tested. Of this number 386 produced above 40 lb. butter fat and 96 exceeded 50 lb. While failing to attain first position, black and white cows occupy six of the twelve leading places. The highest Holstein is owned by the Ft. Cheswell Farm, in the Southwestern Virginia Association, and produced 1,389 lb. milk and 66.7 lb. butter fat. Other owners of Holsteins in the first twelve are E. E. Wambersie, Ben Middleton, M. A. Mahoney and J. H. Hiben.

The grade Holstein herd of ten cows owned by H. L. Butler & Son, of the Culpeper Association stands second for the entire state, with an average of 1,170 lb. milk and 41.73 lb. fat. In third position is the seventeen-cow dairy of the Ft. Cheswell Farm, with an average of 1,026 lb. milk and 40.70 lb. fat.

No less than 120 Holsteins were on official test during June. V. P. I. Veeman Korndyke De Kol made the highest record in the two days by producing 201.9 lb. milk and 6.351 lb. butter fat. She is owned by the Virginia Polytechnic Institute, which has 11 cows in test, the lowest one producing 92.9 lb. milk and 3.191 lb. fat in the two days. The Seward Stock Farm has 26 animals making over 3 lb. fat in two days, while C. E. Gardner, J. C. Stafford, F. S. Walker, Dunlop Bros. and E. E. Wambersie all have cows on test that are making nice records.

The letter advises as a home mixed grain ration for dairy cows a mixture of 300 lb. wheat bran, 200 lb. cotton seed meal, 200 lb. gluten feed and 300 lb. hominy.

TAKE FIRST PLACES

Although the Larimer County Association is as yet in its infancy, it has been very successful to date. The high cow for June is a purebred Holstein owned by Wm. Sullivan, of Fort Collins, Colo. Mr. Sullivan was one of the leaders in getting the Association started and his cow produced 1,578 lb. milk and 56.8 lb. fat in a month. The high herd is owned by H. H. Griffin, of Fort Collins. The high cow for the entire state is No. 112 in the herd of Guy Gilbert, of Lamar, with 88.6 lb. fat while the well-known Holstein herd of Whowell and Polley, of Johnstown, has the high herd average of 52.65 lb. butter for the 21 cows on test.

BEAT THE JERSEYS

The July monthly report of the Davenport, Iowa, Testing Association shows that a herd of eleven Holsteins owned by Thiessen Offringa, averaged 978 lb. milk and 36.7 lb. butter fat. An eight-cow Jersey herd was second with an average of 35.2 lb. fat.

LINDSEY TO THE FORE

The May champion of Missouri was a purebred Holstein, Fobes Homestead Rauwerd, owned by S. C. Lindsey, Carthage, with a production of 2,199.6 lb. milk, 81.83 lb. butter fat.

PRODUCING KANSAS HERD

The purebred Holstein herd owned by Harry Snook, of Winfield, is making quite a showing in the Cowley County Test Association. This herd has had the highest average milk production in the state of Kansas four different months during the year and had headed the Cowley County Association five times during the year for butter fat production.

Peachy, one of the purebred Holsteins of this herd has several times been the high cow of Cowley County and during May ranked second in the state report, producing 2,251 lb. milk and 72 lb. fat. She produced 1,416 lb milk and 53.8 lb. fat during July, leading her Association. The Snook herd averaged 769 lb. milk and 30.1 lb. fat and was high in Cowley County. A member of this herd, Betty, has produced 17,601 lb. milk and 575.3 lb. butter fat and has 65 days to go to finish the year.

KLASS COWS IN FRONT

The registered Holstein herd of Louis Klass, of Maple Park, Ill., heads the Kane County Test Association No. 2, July list. Twenty purebred Holsteins in the Klass herd averaged 957 lb. milk and 30.62 lb. butter fat. Klass cows occupied the first three positions. Veeman, a five-year-old, produced 1,975 lb. milk and 65 lb. fat, Lady producing 2,003 lb. milk and 60 lb. fat while White Ira, a junior two-year-old, is credited with 1,613 lb. milk and 53 lb. butter fat in 29 days. Despite hot weather and short pasture the cows are holding up well in the Kane Association, owing to good care and feed.

IN MANLY, IOWA

The Manly, Iowa, Testing Association month closed July 15th with 433 cows on test of which 73 averaged better than 1 lb. butter fat per day. The leader was a grade Holstein owned by O. J. Turbett, of Northwood, with 67.4 lb. A grade Holstein owned by H. A. Bartlett of Manly was second with 61.2 lb. and another by the same owner was 55.4 lb. The average for the 433 cows was 22.1 lb. butter fat, 590 lb. milk, while the average for June was 25.08 lb. butter fat, 668 lb. milk.

GOOD GIRL, IVY

Ivy, owned by W. L. Hanning led the cows of the Vanderburgh County, Indiana, for the month of June in butter fat and milk production reports Clint Hesler, tester in charge. Ivy produced 62 lb. butter fat, 1,823 lb. milk. Besides Ivy, five cows produced over 50 lb. fat while twenty-five produced more than 40 lb.

COUNTISS TO ENTER COLLEGE

"Feed, Test and Weed" has been the motto of the Knox-Warren, Ill., Testing Association during the past year. As a result, the average of yearly production was raised from 6,953 lb. milk and 274.5 lb. butter fat in the year 1920-21 to 7,493 lb. milk and 306.8 lb. butter fat in 1921-22. The average feed cost per cow this year amounted to only $67.04 compared to $88.46 per cow the previous year. A purebred Holstein owned by E. H. Kirkpatrick produced 17,249 lb. milk, heading the association for milk production. She made 525.1 lb. butter fat at a cost of $129.36, but she was beaten out for first position by Martha's Majesty, a purebred Jersey, by 2.4 lb. butter fat.

The highest milk producing herd consisted of purebred Holsteins owned by Zina S. Crane with an average of 12,064 lb. milk and 354.3 lb. butter fat. The Crane herd is the first federal accredited tuberculosis free herd in the Association.

The members of the Association regret that the tester, J. B. Countiss leaves them to take up special work at the University of Illinois. He has given general satisfaction to his patrons.

The testing association reports of Mr. J. B. Countiss have been freely copied by the dairy press all over the country and, as the Knox-Warren association contains a large proportion of big producing purebreds, by the Jersey Bulletin and the Holstein publications. THE BREEDER AND DAIRYMAN wishes Mr. Countiss the best of success and a wider sphere of usefulness.

THE MODEL HERD

The high cow in the Arkansas Valley during June is a registered Holstein owned by the Model Dairy Farm at Holly, Colorado, with a production of 1,069 lb. milk, 74.9 lb. butter fat with a profit of $23.85 over feed cost. The high herd was owned by Harry Heath of Lamar, whose twenty-six cows averaged 1,272 lb. milk, 41.4 lb. butter fat with an average profit of $10.90. The four highest herds contain 72 cows and showed a profit over feed cost of $9.50 per cow.

A warning from Berlin says that American tourists are being grossly overcharged. Maybe the hospitable Germans just want to make the visitors feel at *home.—Nashville Southern Lumberman.*

Life experience in buying dairy cattle

DUBUQUE ASSOCIATION FIRST

An average of 33.3 lb. butter fat from all the cows enrolled was the record of the Dubuque Association No. 1, which stood at the head of the list of the Iowa Cow Testing Associations for average production during June. The Dallas Association was second with an average production of butter fat of 31.4 lb. and a milk average of 850 lb. or 26 lb. higher than Dubuque No. 1. The lowest butter fat average made by any of the nineteen Iowa Test Associations was 24.1 lb.

The cow producing the most milk and butter fat during the month was a grade Holstein belonging to D. J. Schnittjer, of the Delaware Association. She gave 2,335 lb. milk containing 79.4 lb. butter fat. She produced slightly more in May and in that month also led the association.

The highest herd average was made by 12 cows owned by Martin Deeny in the Dallas Association with an average of 1,153 lb. milk and 53.1 lb. butter fat.

AS USUAL, HOLSTEINS LEAD

Holsteins lead the Volant Cow Testing Association during the month of July, reports Paul J. Stonebraker, tester in charge. Twenty-five herds containing 287 cows were tested. Fifty-six cows produced over 40 lb. fat and 18 over 50 lb., while 35 cows produced over 1,000 lb. milk and 26 over 1,200. The leader for fat production is a Holstein cow owned by D. B. Reynolds, she making 63.4 lb. fat from 1,477 lb. milk with an average of 4.3%. A stable mate is second with 62.3 lb. fat from 1,629 lb. milk. The leading milk producer is a Holstein owned by W. McMillen and Son, with 1,940 lb. milk and 60.3 lb. fat. The Holstein herd of R. B. Stoner has two cows over 55 lb. fat. C. M. Hartzell has one with exactly 58 lb. fat from 1,873 lb. milk and there are several other Holstein herds represented in the honor list. The Volant Association operates in Lawrence County, Pa.

CLARENCE AND CANARY

A 17-year-old boy named Clarence Kuehl, of Hazel Green, Wis., owns Pauline Ormsby De Kol Canary, a cow that has had her name in the paper a number of times. Pauline recently produced 2,018 lb. milk and 103 lb. butter fat in 30 days and in three months has a record of 5,618 lb. milk and 234.5 lb. butter fat. Clarence expects to show Canary this fall at some of the county fairs.

RUNDE HERD FIRST

Arthur A. Jenz, official tester for the Hazel Green Cow Testing Association, reports that a six-year-old Holstein owned by Walter Runde, of Louisburg, Wis., produced 2191 lb. milk and 72.3 lb. butter fat. The Runde herd consists of 12 cows that averaged 1,214 lb. milk and 430 lb. fat, some of the cows being fresh last fall.

RETESTING

Nander M. Nelson, President of the Wisconsin Testers' Association, recently commented on the rules which the Fort Atkinson Association proposed for retesting herds that had exceeded an average of 45 lb. of fat per cow in a month and for retesting any cow that produced an excess of 75 lb. fat in a month for test association work.

Mr. Nelson said that this was a step in the right direction as far as making test associations records more accurate and reliable, but he questioned whether association members would approve of the suggestions on account of the expense and work. A tester could not be expected to contract for 26 herds or working days outside of the retests that would have to be made. From two to four days would have to be reserved for retests. The question of who should pay for the retests was also brought up by Mr. Nelson. If the owner of the high producing cow should, he may decide that the work was costing enough before and that the added expense was just a little too much. If one member dropped out of the association work, others might follow and so bring about a discontinuance of the association. In his own association six members had herds averaging more than 45 lb. fat per cow and another member had a cow that would require a retest if the Fort Atkinson suggestions were adopted.

A GOOD COMPANY

Nineteen herds in the Mower County Testing Association No. 1, averaged over 25 lb. butter fat during the month ending July 15th, reports William Knuth, tester.

Mr. Knuth reported that 404 cows were tested of which 83 produced 40 or more pounds butter fat. The highest producing cow is a purebred Holstein owned by the Minnesota Holstein Company, with 106.9 lb. butter fat. The high herd average is 1,504 lb. milk and 55.2 lb. fat for 20 cows owned by the Minnesota Holstein Company.

If all the iron that has sunk
Into the sea as battle junk
Had been employed great walls to rear
No housing problems would appear.

If all the toil in wars revealed
Had been employed to till the field
The world would find as years go by,
No shortage in the food supply.

High-class producing re-actors bred on a share basis.

A COUNTY WITHOUT A RAILROAD

Calhoun County, Ill., does not have a single mile of railroad. This county is situated at the junction of the Mississippi and Illinois rivers, is 6½ miles one way and 40 miles the other, contains approximately 165,000 acres.

They have some good cows in that county just the same. During the hot month of July, a grade Holstein owned by Anna B. Pillatt, gave 1,660 lb. milk, containing 64.8 lb. butter fat. She was beaten for the first position by a ten-year-old registered Jersey that produced 69.3 lb. fat. These two cows are having quite a contest for first position, the Holstein leading in June and the Jersey in May.

The Pillatt herd, consisting of eight grade Holsteins, had the highest average in the county, that of 998 lb. milk and 39.8 lb. butter fat. In addition to all the alfalfa they would clean up, they received a grain ration consisting of four parts ground corn, three parts ground oats, one part bran and one part cottonseed meal.

KIT AFTER CHAMPIONSHIP

Kit, a five-year-old grade Holstein owned by Rockwell and Katterhenry of Beloit, Wis., is making a great record in the Beloit Cow Testing Association. She produced 503.8 lb. butter fat since January 16, 1922. The state record for last year was 726.2 lb. fat and 15,440 lb. milk.

Kit has held the first place in her association for five months but was defeated by a small margin in July. She averaged 2,173 lb. milk per month or a total of 14,123 lb. for 6½ months.

During July, 429 cows in twenty-five herds were tested. Twenty-two cows produced more than 40 lb. butter fat and thirty-two above 1,000 lb. milk while the average yield was 656 lb. milk and 25.2 lb. fat. The high cow was Belle, a grade Holstein owned by A. Marsten, which produced 1,665 lb. milk and 66.6 lb. butter fat. Kit was second with 62.7 lb. fat from 1,977 lb. milk. An extra herd was tested this month, that of William Hatch. One of his cows produced 70.8 lb. butter fat and would have been the association leader if her owner had been a member of the association.

LEADS IN WEST VIRGINIA

The best herd average in the Southwest Virginia Association during the month of June was made by 17 Holsteins, of the Fort Chiswell Farms, Max Meadows, Va., they averaging 1,026 lb milk and 40.07 lb. butter fat. Sixty cows in the Association made over 40 lb. butter in the month and the average for all cows was 682 lb. milk and 26.5 lb. fat. The tester is H. Straw, of Bristol.

Now America will lend Germany the money to pay the Allies to pay America to buy German goods to make Germany rich enough to pay her debts.—*New Britain Herald.*

JENKINSON COW FIRST

Loup View Corona, one of Nebraska's greatest cows, headed the list of animals on test in Nebraska during June, despite the fact that it was to be her fourth month in test. She produced 5.782 lb. butter fat in the two days, is owned by W. J. Jenkinson, of Monroe, and is a senior four-year-old. Second to her was Fonda Belle Hengerveld, owned by C. H. VanArsdale, of Beatrice, with 5.737 lb. in her seventh month on test. Kilpatrick Brothers, of Beatrice, took third place with Flower Crest Canary Violet, with 5.617 lb. fat in her fifth month on test. Varsity Derby Sultana, owned and bred by University of Nebraska, was fourth with 5.472 lb. fat and fifth place went to Lakeland Duchess Johanna, owned by the Woodlawn Dairy, of Lincoln, with 5.423 lb. in the eighth test month.

The Jenkinson herd also owned Loup View Thilda, second in the senior three-year-old class, with 4.397 lb. fat and Loup View Copia Darkness second in the junior three-year-old class, 4.468 lb. fat.

HOLSTEINS SHOW WELL

During the month of July, 234 cows were tested in the Hancock County, Ill., Association. The average production was 639 lb. milk and 29 lb. butter fat, slightly below the figures for last month. Hot weather, together with lots of flies, have been hard on the cows and those that have dry pasture and no supplementary feed are down in milk and losing flesh. The six-cow dairy of W. C. VanPappelendam again heads the list with an average of 1,416 lb. milk and 47.9 lb. fat. Mr. VanPappelendam has the second, third and fifth cow in the individual list, but was beaten out for first position by 2.3 lb. fat, the figures being 58.6 lb for Louis Jagel's cow and 56.2 lb. for VanPappelendam's best producer. In the Hancock County Association are enrolled 43 purebred and 84 grade Jerseys, 10 purebred and 78 grade Holsteins, 37 purebred and 11 grade Guernseys, two purebred and 14 grade Shorthorns.

LOLL LEADS

The Bruce County, Wis., Association's thirty-day period ended July 15th. The leading herd consisted of purebred and grade Holsteins owned by August F. Loll. They averaged 1,357 lb. milk and 44.9 lb. fat. A registered Holstein of the Loll herd produced 1,885 lb. milk and 73.5 lb. fat.

Some people's idea of clean movies is having the girls in bathing.

BANK DEVELOPING DAIRYING

Nearly 400 head of cattle have been placed on farms in South Dakota since March 1st through the dairy section of the Sioux Falls Savings Bank extension department. Most of the animals are grade Holsteins but there are some Guernseys. A number of purebreds of which the majority have been bulls have also been placed. One farmer near Baltic bought 27 head.

The cattle are purchased by the bank and sold to the farmer who gives a chattel mortgage on the stock and a note to run 18 months paying this by one-eighteenth of the amount each month, although he has the privilege of paying more at any time if he so desires.

F. W. Schaffer, manager of the extension department asserts that the success of agriculture in South Dakota depends very largely on the developing of dairying. The farmer must get away from raising grain only, and must make a manufacturing plant of his farm. "With a dairy herd he is assured of a steady income."

FIRST AND SECOND

Two grade Holsteins owned by Mrs. A. Jochmann stood first and second in the Ellington, Wis., Cow Testing Association, for the thirty days ending July 31st. Louise, a seven-year-old, produced 1,831 lb. milk and 75 lb. fat, her milk averaging 4.1%. Her stable-mate, a six-year-old, gave 1,792 lb. milk, which tested 3.9% and contained 69.8 lb. butter fat.

The high herd average was made by 14 registered Holsteins owned by N. Losselyong, of Appleton. They averaged 1,197 lb. milk and 36.5 lb. butter fat.

QUADRUPLETS

A four-year-old Holstein cow in the herd of the Illinois Soldiers' and Sailors' Home at Quincy, gave birth to quadruplets on July 21st. The smallest calf weighed 35 lb. at birth and the largest 38 lb. One of the calves died a few minutes after coming into this world but the remaining three appear healthy and sturdy. All four were heifers.

This is the second lactation period for the mother who gave birth to one calf about a year ago.

A WHOPPER

A purebred Holstein calf, born on the farm of Ole Sherry, Vernon County, Wisconsin, weighed 175 lb. at birth reports the *Monroe Times.*

The Holstein Breeder and Dairyman, Harrisburg, Pa.

KEENEY'S DAIRY RULES

Mark H. Keeney, the capable and efficient dairy specialist of the New Jersey College of Agriculture, is very popular among the dairymen of New Jersey and one reason for the popularity which he enjoys is that he knows how to do the things he talks about, having learned them from practical experience. Mr. Keeney recently published a number of suggestions for dairymen of his state and as these are applicable to owners of cows everywhere we are reproducing them in their entirety:

1. Feed all the roughage a cow will clean up. Part of it should be a legume such as clover or alfalfa.
2. Feed some succulent feed such as silage or roots.
3. Feed a balanced ration.
4. Feed grain in accordance to milk production; for a Holstein or Ayrshire, approximately one pound of grain for each four pounds of milk; for a Guernsey or Jersey, about one pound of grain for each three pounds of milk. A variety of grains in the mixture is desirable.
5. During short pastures supplement with silage or some green feed, together with some grain.
6. Feed and milk regularly.
7. Supply an abundance of pure fresh water at all times.
8. Give access to salt daily.
9. Purchase grain feeds on the basis of their protein and energy content and not alone on just the cost per hundredweight.

DOWN IN LOUISIANA

Ten purebred Holstein milkers were purchased a short time ago by Governor John M. Parker and representatives of the Louisiana State University Dairy Farm. One of these animals is Annie Canary Pontiac, a six-year-old daughter of Annie Neeltje Mercedes 2d and Pabst Canary Pontiac Champion. Annie is milking 70 lb. a day at the present time and her individuality and producing capacity make her an object of interest to visitors of the University Farm. The present University herd consists of 40 purebred Jerseys nearly all raised on the farm and thirty Holsteins, more than half of which were raised in the herd. An equal number of purebred Guernseys will be purchased so that the students may have examples of the three leading breeds of dairy cattle during their studies.

FIRST IN COUNTY

The first thousand-pound cow in Kings County, Cal., is Copa De Oro Holland Bawn, she making 1,103.45 lb. butter and 26,234 lb. milk in 365 days. She is owned by Arthur and Maxfield of Hanford and is a daughter of King Holland Paul De Kol.

SUDAN GRASS GROWING IN FAVOR

Sudan Grass has been grown in the United States for a number of years but it was not until eight years ago that much appeared in the agricultural press regarding this forage crop. It is now grown extensively in many parts of the United States and is rapidly becoming known in the colder regions as a supplementary crop while extensive fields can be found in many of the southern and western states.

As with sorghums, there is danger of prussic acid when the growing plant receives a severe check but there is very little danger in the region east of the 98th meridian and west of that the danger is practically negligible says the United States Department of Agriculture, unless the grass is injured by drought.

A mixture of Sudan grass and cowpeas is used for summer pasture by a farmer near Taylorville, Ky. In using this feed he finds it most satisfactory to have two pastures, which are grazed alternately for periods of two weeks. In putting in this forage crop he uses a mixture of 8 to 10 pounds of Sudan grass seed and 1 bushel of cowpeas; to get an even distribution of the plants the two crops are sown separately. It is claimed for this mixture that it provides variety in the pasture and leaves the soil in better condition for the following crop than pure Sudan grass pasture. This farmer tells the United States Department of Agriculture that the mixture is superior to red clover, bluegrass, and any of the common pasture grasses, during the drouth season that usually comes in July and August.

Owners of purebreds, especially Holstein breeders are progressive and their progressiveness is shown by their willingness to try new crops especially when recommended by the Agricultural Experiment Stations. There are several patches of Sudan grass on large Holstein establishments in New York State and the plant has done well in the vicinity of Syracuse, where it is used as a supplementary feed in August and September.

Reports from Nebraska, Iowa, Illinois, and Indiana also commend Sudan grass as a summer pasture crop. Its value as an emergency hay crop is firmly established. The acreage seeded each year will no doubt continue to increase for some time, as more farmers come to know of its possibilities for hay and pasture.

A third edition of Farmers' Bulletin 1126, Sudan Grass, has been found necessary because of the general interest in the crop. Since July 1920, 70,000 copies have been printed and 65,000 of them distributed. Copies may be had by addressing the United States Department of Agriculture, Washington, D. C.

The 850-pound shark killed by New York bathers may have been looking for Wall Street.

Every now and then a man loses his best friend by marrying her.

BILL CAN SHOOT TOO

Director W. S. Moscrip formed one of the winning team representing the southern end of Washington County, Minnesota, at the Washington breeders' Association picnic held at Crocus Park, July 22d. The team representing the southern end of the county defeated the northern team in the trap shoot by 190 to 188. Mr. Moscrip and W. H. Bean tied for first place each scoring 43 but in the shoot off, Mr. Moscrip broke 37 out of a possible 40 while Bean broke but 34. The winner received an auto lunch basket, donated by the Interstate Lumber Company.

It was estimated that 1,500 people were in attendance from all parts of the county. The breeders from the southern end of the county also won the horse-shoe pitching contest, the tug-of-war, and the baseball game, the latter by a score of five to four.

NOW ENTHUSIASTIC

It is reported that a farmer of Burleigh County, South Dakota made the inspection trip of the New Salem Dairy circuit about a year ago and while on the trip purchased two purebred Holstein heifers paying $225 each for them. One of his heifers freshened with a bull calf and during the year produced 10,000 lb. milk which was valued at two cents a pound. The bull calf was sold for $75 so that income was $275. The owner figures the cost of feed and pasture and interest on his investment at $75, so that the net profit was $200, the heifer virtually paying for herself in the first year. Needless to say her owner is now a Holstein enthusiast.

FIELD PEAS IN THE SOUTH

Canada field peas are well-known and are a satisfactory crop in many dairy sections, especially when sown with oats. They are becoming known in southern states. In Bowie County, Texas, a demonstrator by the name of J. W. Harkness sowed twelve acres of Canada peas on the first of December and harvested them April 15th in time to plant cotton on the same land. The peas grew nearly shoulder-high and yielded about fifteen bushel per acre.

MAKES PROVINCIAL RECORD

Una Walker, a purebred Holstein owned by Dr. Ian McLachlan, of Rosthern, Sask., has recently made the largest record ever made in the Province, by producing 19,091 lb. milk, 833 lb. butter in a year test. She was fed sunflower silage with a home grown grain ration.

UNIQUE PLAN TO SELL STOCK

Mrs. Maud Dwight of South Otselic, N. Y., has thought out a way to move her bull calves. She places a low price on surplus heifers and then when any one customer takes two heifers, she makes him a present of an unrelated bull calf. She not only makes possible purchasers a very tempting offer, giving beginners the opportunity to start purebred herds, but she also saves to the breed animals of unquestioned quality, carrying in their veins the blood of some of the best producing families known.

The head of the Dwight herd is Judge Lyons Walker a bull of royal breeding whose 21 nearest dams average in 7-day official work more than 30 lb. butter and 600 lb. milk. This bull has 87½% the same blood as Clara Clothilde Lyons that made five different world's records for milk production as a two-year-old heifer. Judge Lyons Walker is a splendid individual himself largely white in color, and already has a few daughters in the A. R. O. list with his best ones yet to be heard from. The junior sire is a son of Champion Echo Sylvia Pontiac whose daughters are making such wonderful records and who was, as is well known, a son of May Echo Sylvia, the only cow in the world that ever produced 1,000 lb. milk in a week. The junior sire is from a daughter of Woodcrest Sir Clyde himself, a wonderful transmitting bull, with the next dam a daughter of May Echo Sylvia herself. The dam of the junior sire produced 26 lb. butter and 659.8 lb. milk in a week as a four-year-old. This bull is, as might be expected, a splendid individual and his first crop of calves show splendid quality and individuality.

The cows in the Dwight herd carry the blood of some of the best producing strains known and are large producers. Members of this herd have given 95 lb. milk a day in every-day work. Some time we plan to show a few representatives of this herd to readers of THE BREEDER AND DAIRYMAN.

LARGEST CONNECTICUT HERD

The largest herd of purebred Holsteins in Connecticut is said to belong to C. Paul Farrand of Washington, who, in addition to his herd of 90 head, a short time ago purchased 62 from Senator Clifford Hough, of Hartford and Washington, manager of the Connecticut Milk Producers' Association. The Farrand herd is headed by Count Paul Ladoga Posch, a bull of splendid individuality and high class breeding.

BARTLETT TALKS BY RADIO

When J. W. Bartlett, secretary of the New Jersey Holstein-Friesian Association, at the request of the management of the broadcasting station in Newark delivered an address by radiophone on "History of New Jersey Holstein," the story was picked up over a wide territory, was heard in Oklahoma and in other places nearly as far away. Mr. Bartlett certainly pulled off a neat advertising stunt.

FURNISHING CAPITAL FOR THE LEAGUE

Members of the Dairymen's League Coöperative Association, Inc., furnished their organization with $4,307,918.38 in the year between April 1, 1921 and April 1, 1922. This large sum is to be used as a fund for the purchase of plants and equipment and for working capital. This sum of money has been accumulated by deductions from the farmer's monthly checks for milk and has averaged for the year 16.8c per 100 lb. milk sold. Certificates for their proportionate shares are being mailed to the members of the association at the present time. They are due in five years and pay interest at 6%, payable annually. A number of banks have indicated their willingness to recognize these certificates as first-class collateral for loans to farmers.

BUILDING A GOOD HERD

In 1917 Eugene Maracini of Dos Palos, Cal., purchased his first purebred Holstein, Ellen Hartog Hengerveld from W. J. Higdon of Tulare. He still owns this cow and she is at present giving around 85 lb. milk a day. He has in the herd an eight-months-old son, King Hengerveld Johanna, two daughters and a granddaughter of this cow. The daughters and the bull are sired by Sir Bessie Johanna, a son of Sir Bessie Fobes Tritomia. The granddaughter is sired by King Hengerveld Prilly Inka whose dam produced nearly 700 lb. milk in seven days and 140 lb. butter in 30 days while his sire is King Segis Alcartra Prilly the great sire recently sold by the Bridgford Company to the Pabst Stock Farm. At the present time there are over 60 head of registered cattle in the herd and there has never been a single case of tuberculosis.

GOOD MASONS ALL

The Masonic Home, Charlton, Mass., has a good producing herd of 100 head consisting of purebred Holsteins and grade Guernseys. They are under the care of Superintendent J. H. Lillibridge who, despite the fact that he has a farm of 444 acres to care for, can tell the pedigree and records of each of his black and white pets. The home at present houses 60 inmates or guests, of which one-third are women. Each guest has an individual room and is at perfect liberty to go and come. They are not required to do any manual labor although most of them prefer to assist the attendants from time to time. The products of the farm are largely consumed on the premises, but some of the milk is shipped to Worcester and there sold.

IOWA HAD THE FIRST

The first coöperative creamery in America was built at Iowa. Butter made at that creamery took first prize in the international competition of the Philadelphia Centennial Exposition in 1876.

A swelled head is easily broken. Paste this in your hat.

BUILT A PRODUCING HERD

Herman F. Schmidt of Carlisle township, Minn., started farming in 1919, purchasing thirteen grade Holstein cows, four grade heifers and two registered Holstein heifers from the Telkamp herd. He has his second registered Holstein bull and has several two-year-olds of his own breeding now milking. Last year his thirteen cows averaged 300.1 lb. butter fat. This year with six two-year-olds, the results are very gratifying. One of his registered heifers freshened at twenty-months-old on September 19, 1921, and produced to the middle of July, 8,229 lb. milk and 279 lb. fat. A four-year-old freshened August 28th last year and has made 13,928 lb. milk and 393 lb. fat while a six-year-old freshened January 7th and has produced 10,463 lb. milk and 428 lb. fat. A two-year-old heifer freshened September 30th and has made the splendid showing of 10,577 lb. milk and 426 lb. fat.

The herd is milked twice a day and a milking machine is used during the flush period. The feed consists of farm grains, silage, alfalfa hay and last year he purchased only 1,000 lb. oil meal.

DAIRY EXPERTS HONORED

J. A. Gamble, professor of dairy husbandry at the University of Maryland, and S. H. Harvey, associate professor, were recently appointed associate editors on the staff of the *Journal of Dairy Science*, the official publication of the American Dairy Science Association.

The *Journal of Dairy Science* is published every two months, and its pages are devoted to technical articles dealing with the dairy industry. Mr. Harvey is now contributing a series of translations and abstracts of articles from the leading scientific dairy publications of France.

The Government, says Secretary Hoover, would like to hear from all consumers who have been overcharged for coal. Now, then, all together, ladies and gentlemen.—*Philadelphia Evening Public Ledger.*

FISKE IN NEW ENTERPRISE

The breeders who attended the Kansas City Convention became acquainted, if they were not already, with Major Harlo J. Fiske, of the Pickering Farm, for the Major was very much in evidence during the convention and had a great deal to do with the exhibits and entertainment

MAJOR HARLO J. FISKE

Cattle expert and business man, who is now leaving Pickering Farms to go into business for himself.

of the visitors. They will, therefore, be interested in learning that the genial manager of the Pickering Farm is leaving that establishment to go into business for himself.

Mr. Fiske assumed charge of the Pickering Farm, Belton, Mo., directly after leaving Ft. Leavenworth, Kansas, and under his management one of the largest and best herds of Herefords and Holsteins in the southwestern country has been established. At Ft. Leavenworth, where he was stationed for three years during the war, Major Fiske, in his capacity of Superintendent of Vocational Training and Officer in Charge, established and built up what is known as the Farm Colony in connection with the U. S. Disciplinary Barracks. While he was manager of the government farm, many of the political and religious prisoners commonly known as "conscientious objectors" were under his supervision.

Before going to Fort Leavenworth, Mr. Fiske for two years was general manager of the Pabst Stock Farm, Oconomowoc, Wis. Previous to this time, Mr. Fiske built "Skylands" which is known as one of the most beautiful estates in the country. "Skylands" is located at Sterlington, New York, and during the seven years of the Major's management was owned by the late Francis Lynde Stetson, of New York City.

Mr. Fiske is, at the present time, vice-president of the American School of Poultry Husbandry and has an active interest in the Quisenberry Food Manufacturing Company, which is producing and selling what is known as Fiske's Favorite Feed, which was originated and is still controlled by him. His future business will be that of Farm and Livestock Advisor, with an office located at 115 East 31st Street, Kansas City, Mo., and another in New York City. THE DAIRYMAN wishes him success.

A house without fly screens doesn't need an alarm clock.

HAS THIS FAMILY AN EQUAL?

We have just completed semi-official records on two additional daughters of our old cow, Cornucopia Plum Johanna, who died at 16 years of age last winter. One of these daughters is a four-year-old by a son of Keystone Plum Johanna. She is reported for ten months and has just freshened again within the 14 months, making a record of 13,968.1 lb. milk, 731.5 lb. butter, with a fat test of 4.2%. The second one, a junior three-year-old, recently completed a record in 365 days of 15,443.4 lb. milk, 748.9 lb. butter, with a 3.9% test for the year. Cornucopia Plum Johanna has one other daughter that has just freshened as a three-year-old with her second calf. With first calf she had a defective udder and was not tested, but she looks as though she would be capable of equaling any of her sisters. Cornucopia and her five daughters with long-time records, all but one of which was made under full age, show an average for the six of 18,723.1 lb. milk, 918.35 lb. butter, with a fat percentage of almost 4%. The lowest percentage of any one of them is 3.8%, the highest 4.24%. I wonder if there is any other family showing these records with as high an average percentage of fat for a dam and five daughters. The list follows:

Age	*Name*	*lb. milk*	*lb. butter*		
9 yrs.	Cornucopia Plum Johanna	19,958.6	1,056.79	4.24%	Dam
5 "	Keystone Plum Johanna	22,190.7	1,052.96	3.80%	1st daughter
4 "	Keystone Beauty Plum Johanna	27,587.5	1,294.71	4.02%	2d "
2 "	Plum Johanna Korndyke	13,190.3	625.25	3.79%	3d "
4 "	Cornucopia Plum Johanna 2d (10 months record)	13,968.1	731.50	4.18%	4th "
3 "	Napol Cornucopia Plum Beauty	15,443.4	748.90	3.88%	5th "
		6 |112,338.6	5,510.11		
		18,723.1	918.35		

Yours truly,
GEO. E. STEVENSON.

Four and twenty Yankees, feeling very dry,
Took a trip to Montreal to get a drink of rye.
When the rye was opened they all began to sing,
"To hell with Mr. Volstead; God save the King."

Maybe if the gardener planted weeds, vegetables would come up and crowd them out.

Oct. 20—Harvard, Ill., Jefferson County Holstein-Friesian Association Sale.
Oct. 24—Brockville, Ont., Canada, May Echo Sylvia Sale, Avondale Farm.
Nov. 1-2—Monroe, Wis., Green County Breeders' Semi-Annual Sale, T. A. Hosely, Sec.

ZELDEN RUST DISPERSAL

The Zelden Rust Herd, which is to be dispersed at the farm of the owner, C. M. Bottema, Indianapolis, Indiana, on September 11th, has impressed us as a herd of quite unusual character as we have been going over the records of its members in preparation for the coming sale. It appears that this outfit has won more money from the National Association in prizes for official records than any other five herds in Indiana; and we understand that the herd has won more money in the show ring than all other Indiana herds combined. The herd as now constituted includes a number of Indiana state champions in long-time test. The milking dairy consists largely of A. R. O. record and yearly record members, several of which have crossed the 18,000 mark while a four-year-old has made a record of more than 22,000 lb. milk in a year. The herd includes 31 daughters of a 30-lb. sire. Close to forty cows and heifers are bred to freshen in the fall and early winter. E. M. HASTINGS Co.

NEW YORK FALL SALE

The standard of quality of animals appearing in the sales held under the auspices of the New York State Holstein-Friesian Association is expected to be maintained at the fall sale of the state breeders, which will be held at Middletown, N. Y., October 3d and 4th. The sale will be held in the county fair grounds and at least 150 head are expected. Secretary E. R. Zimmer has notified the county club officials responsible for the selection of consignments from their districts to use every care and to enter only animals that are healthy, sound and right in every way. The state association is making an effort to maintain and even improve upon the standard set in previous events and will refuse animals not of sufficiently high grade.

HOW MUCH DOES A CALF EAT?

Few cattle owners know the cost of raising a calf, or how much feed one consumes in a given period of time. Estimates are made but many of these are pure guesses and are wide of the mark. At the United States Dairy Experiment Farm at Beltsville, Md., exact accounts were kept on a number of calves. Accounts were kept with twelve animals for a year and the following table shows the amounts of milk, grain, alfalfa and silage used to raise these twelve calves. The experiment was continued for two years with eleven of the twelve animals. Four of the eleven were purebred or grade Holsteins and seven were purebred or grade Guernseys. The average live weight at two-years-old was 861 lb. The table shows the amounts of feed consumed for five periods.

Feed	*First 6 months*	*Second 6 months*	*First year*	*Second year*	*Two years*
Milk	125.3	....	125.3	.....	125.3
Skim milk	2,486.1	....	2,486.1	.....	2,486.1
Grain	317.7	565.6	883.3	1,224.	2,107.3
Alfalfa hay	112.1	454.	566.1	1,033.	1,599.1
Corn silage	728.5	2,919.	3,647.5	7,517.1	11,164.6

BAXTER BATHES FULLY CLOTHED

When next you see Colonel Geo. W. Baxter, don't slap him on the shoulder nor ask him for the time as maybe his watch is still at the repair shop and it is very likely that his shoulders have not yet gotten over being sunburned.

Everyone knows the Colonel has a weakness for the ladies and is considered to be as capable a judge of the fair sex as he is of Holsteins. Just what he was doing at the time, we cannot say, but as the auctioneering business is rather flat during the warm weather, it is possible that George was looking over possibilities for a show, "Baxter's Bathing Beauties," maybe. Anyway, Mr. Baxter was up at Mountain Lake, N. Y., one hot day and having a good time with a number of young ladies who were bathing. He was fully dressed and was seated in a boat splashing water on the bathers, when one dove under the boat and came up behind Mr. Baxter and gave the boat a tip. Whether she intended to do any more than startle friend George, we do not know, but the boat upset and in went G. W., clothes, money, watch and all.

He had no other clothes with him, so donned a bathing suit and tried to make the best of things. At 6 p. m. George was still in bathing costume and when asked the reason for staying around the water so late, replied, "he was waiting for his clothes to dry." We understand that, since that day, the Colonel stays on the shore when watching the fair sex bathe.

SPECKLE SPRINTED

A twelve-year-old grade Holstein, Speckle, owned by John Sargent produced 80.2 lb. butter fat in June in the Door County, Wis., Testing Association, her nearest competitor being a Guernsey with 67.9 lb. Thirty-one different animals produced over 45 lb. fat in the month. Fred Sperber and William Robinson were represented in this list by registered Holsteins.

SCANDAL IN THE BARNYARD

Rose, a Holstein cow belonging to Andrew Larson, of Geneva, is very much worried about the twins. The two wobbly-legged youngsters arrived one day early last week and followed their mother to the farmyard, where their big ears were continually flapping forward as some novel sight presented itself to their newborn eyes. Rose licked them meditatively, but for the most of the time she mooed nervously and there were little wrinkles of worry around her eyes. What would the barnyard neighbors think about h r offspring.

The Plymouth Rock rooster strolled over with its usual dignified strut, the harem straggling along behind. He stretched up his neck and then walked all around Rose and the twins, finally stopping with a deep, throaty chuckle. The hens ran up and cocked their heads from one side to the other, forgetting for a moment their former industrious scratching.

A pig ambled along grunting, and stopped, his little squinty eyes twinkling. A flock of geese attracted by the gathering joined it and immediately began an animated honking among themselves and the commotion caused all the other barnyard residents to run up to see what all the excitement was about.

And there in the middle of them stood poor Rose, her embarrassment increasing with each new arrival.

"What will they say?" was the thought uppermost in her mind.

She did not have to wait because the were all saying it at the same time.

"Well I never."

"Did you ever see anything like that before?"

"Aren't they funny-looking?"

"Now what do you think about it?" said Mrs. Quack, the barnyard gossip, solemnly. 'We'll have to look into such goings-on in this neighborhood, I guess."

All the racket brought Mr. and Mrs. Larson out to see what the trouble was and that was when they first saw Rose and the twins. At first they thought only one of them belonged to Rose and that the other one had lost its mother, but they found out later that they were wrong.

One of the youngsters was a perfect picture of its mother with white splotches where there weren't black, satiny ones. But the other twin! It was the cause of all the barnyard talk. Red and white. Was it a reversion to plebeian ancestry or———. Well, gossip the world over will have its run.—*Ellendale Eagle.*

Humpty Dumpty sat on the wall,
The things he saw there caused him to fall,
Twelve thousand for salary and nine for expense
It is great what you see when you sit on the fence.

THE FIRST SWAT

The real originator of the "Swat the Fly" slogan was the cow the Lord placed in the Garden of Eden and her tail had to speak for her.

FERTILIZERS AND SOIL ACIDITY

The Experiment Station connected with the Rhode Island State College has published Bulletin No. 189, which intimates that fertilizers carrying phosphate-bearing ingredients, even the so-called acid phosphate, tend to reduce soil acidity.

Of the nitrate-bearing mixtures, ground starfish and nitrate of soda reduce the soil acidity while the other carriers of nitrogen tend to increase the soil acidity. Among these latter sulfate of ammonia very decidedly increases the soil acidity, whence its especial value in the Rhode Island Experiment Station method of eliminating weeds from lawns. When such acidity is not desired the addition of lime serves to counteract this effect.

All of the mixtures supplying potash tend to reduce slightly the soil acidity, but not greatly except for the carbonates of sodium and potassium which greatly reduce soil acidity.

The non-leguminous green manure crops, such as rye, decrease the soil acidity, while leguminous green manure crops, such as clover, increase the soil acidity. Knowing these tendencies the modern farmer can mix his fertilizers in such manner as to maintain the soil in the desired condition of soil acidity or alkalinity while furnishing just the amounts of the various plant food elements needed.

These conclusions are from a series of studies by Dr. Paul S. Burgess. By carefully studying the records of experiments which have been carried on for the past 25 years, Dr. Burgess has undertaken to foretell the difficulties that we will run into within one or two generations, with the fertilizers at present in common use.

PAPER MILK BOTTLES AGAIN

A number of inquiries recently received by the United States Department of Agriculture seem to be based upon newspaper reports that the Government has approved a new kind of milk container made of paper. So far as the department is concerned, no statement of either approval or disapproval has been made regarding any specific type of milk container, from either the sanitary or the economic standpoint.

ALBERTA BUYS FROM HARDY

The Department of Agriculture of the province of Alberta, Canada, is building purebred dairy herds and recently purchased a good young Holstein bull from Avondale Farms. Mr. A. C. Hardy, the owner of Avondale Farms, was a short time ago appointed Dominion Senator for his district, an appointment which is for life.

It is true that it costs more to live now than it did in grandpa's time, but it is well to pause and reflect over the fact that life now is worth more than it was in his day.

HOLSTEIN MILK FOR MEMORY

The Mason City, Iowa, *Globe Gazette* tells a good story on the Rotarians and Kiwanians of that city. They arranged for a memory expert to lecture to them on memory culture. The lecture was duly delivered and at the close the expert sold a number of the club members memory culture courses for $12.00 each. In the course of a farewell talk he told his students to keep young and snappy by drinking three quarts of Holstein milk a day and said that it would have to be Holstein milk only and that if they followed his instructions in this matter they would awaken every morning with a desire to sing and dance and skip about all day. "Youth and vigor will be yours eternally." Just how much John M. Kelley is to pay the memory expert for this advice is not stated.

MANKATO INCORPORATED

The Mankato Holstein Farm Company, doing business at Mankato, Minn., and well known as owners and breeders of purebred cattle, have been incorporated. The capital stock is $300,000 and the business is the raising and improving of purebred Holsteins. The incorporators are local business men and are: J. C. Marlow, W. W. Randall, L. Salet, Jr., E. Bail, Harry K. Cain, F. W. Hunt, C. W. Fisher, Dr. W. A. Beach, Gustaf Widell, M. H. Chesborough, A. J. Veigel, L. M. DePuydt, O. W. Schmidt, A. H. Silber, G. A. McCarger, John C. Hagen, Earl Smith, W. H. Detamore and A. G. Roemer.

McCANDLISH RETIRES

Prof. A. C. McCandlish, head of the Dairy Husbandry Department at Ames, Iowa, has resigned his position and will return to his old home in Scotland where he will go into the dairy business. He will sail from Montreal.

The home farm has been in the McCandlish family for generations and it is reported that the owner will stock it with Holsteins. His successor at Ames is Earl Weaver, who has been associate professor of Dairy Husbandry.

A QUINTET OF CALVES

Five calves at a birth is reported for a cow owned by Edw. Reineit, of Wheatland Township, Sandusky, Mich. The date of birth was July 23d. The sire carried Holstein blood, the dam is a red cow with Durham characteristics. Two of the calves were black and white. Only one of the babies is now living.

FLIES

During the summer months the fly menace shows itself with results which are troublesome and at times dangerous. Conditions and surroundings which are unclean and insanitary, and the improper disposal of waste, such as manure, milky residues, and other refuse, afford breeding and feeding places for flies.

A multitude of flies on the dairy farm may result in the serious contamination of milk, making it dangerous to the public health. Infectious diseases may be carried by the common fly to the milk supply. Cattle are often harassed by flies, causing great discomfort and increased irritability. A financial loss is usually the result. From both sanitary and economic viewpoints every effort should be made to control the fly nuisance.

If possible, remove all manure daily from the barn and barnyard. All privies should be fly-tight. The milk house should be well screened and fly paper generously used. Screen doors should be self-closing and should open outward. All pails and other milk utensils should be kept in a clean place which is protected from flies. Surface coolers, bottle fillers and other milk machinery should be well screened or protected. It is important that receptacles containing milk be covered. Protection against flies which may gain entrance to the barn and milk room is important. A flytrap, which will assist in overcoming the fly problem, may be easily and cheaply constructed. The milk house should be well screened and kept free from flies.

The following Farmers' Bulletins dealing with flies may be purchased from the Superintendent of Documents, Government Printing Office, Washington, D. C., for 5 cents the copy:

Farmers' Bulletin No. 540—"The Stable Fly;" Farmers' Bulletin No. 851—"The House Fly;" Farmers' Bulletin No. 734—"Flytraps and Their Operation."

COMING HOLSTEIN BREEDER

Mr. John A. Carroll, president of the Hyde Park State Bank has purchased a 140-acre farm three miles south of Hinsdale, Ill., from David L. Whitlock of Aurora. The consideration is reported as $35,000. Mr. Carroll will call his new property the "Hyde Park Farm," will erect a country home on the farm this fall and intends to specialize in breeding and raising purebred Holsteins.

SEEING IS BELIEVING

To show the good people of Eugene, Oregon what 103.4 lb. of milk really meant, Arp, owner of Arp's Dairy, recently displayed 51 quart bottles of milk, one pint and a half pint in the window of a Eugene bank. The passersby got a good idea of one day's milk production of the great Arp champion, Chimacum Korndyke Sena.

A pedigree is all right in its way, but the apple of discord grows on many a family tree.

WYOMING COUNTY ASSOCIATION

Lady Heeringa Alcartra produced 59.7 lb. fat from 1,326.8 lb. milk during July in the Wyoming County, Pa., Cow Testing Association and was the highest producer in the association. She was owned by D. M. Bartron, of Tunkhannock. Jennie, a grade Holstein owned by Willard Harding, exceeded her for milk, but not for fat, her figures being 1,574.8 lb. milk, containing 55.1 lb. fat. The 18 registered Holsteins owned by F. M. Rider, of Factoryville have the best average; 963.6 lb. milk and 33.8 lb. fat.

The Wyoming Association is made up almost entirely of winter dairies. During July, 20 cows each produced over 40 lb. fat and five over 50 lb., while 38 cows exceeded a 1,000 lb. milk and 10 exceeded 1,200 lb.

Ray G. Sloat, tester in charge, calls our attention to the fact that in the report of the June production the figures for the F. M. Rider herd are given as 1,205 lb. milk and 52.4 lb. fat when the correct fat production should be 42.4 lb. fat. The Rider herd was high for both June and July.

THE HOLLAND WAY

The Friesian Herd Book Association of Holland was formed in 1879 and has now 3,500 members. There are also 45,-151 animals now living registered on these books, about 14 per cent of the cattle of Friesland. Their problems of registration, etc., are rather different from ours. There are no other animals in Friesland except purebred Friesian.

The system employed by the Friesian Herd Book Association is to register no females until they are at least two years, 10 months old and have calved once. They are then inspected by competent judges and must score at least 70 points under their scale of points before being accepted for registration. A careful check is kept of the breeding operations, a service certificate being required to be filed with the association within six months of date of service and a notice of the birth of all calves to be filed within five days from the date of birth. Bulls have a preliminary judging at 13 months of age and a final judging at 18 months. Production records are made on each individual cow under the supervision of the association. The records are for one lactation period not to exceed 330 days. —*Western Breeders' Journal.*

HEAT

"Why do you call a fast automobile rider a scorcher?"

"Because he goes out at a hot pace, makes pedestrians boiling mad, warms up the police, gets roasted in court and calls it a burning shame."—*Boys' Life.*

The man who goes down and rises again is made of good stuff.

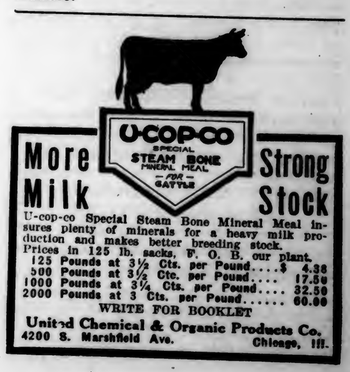
It's a good plan to meet trouble halfway, but we don't have to go that far.

COLLEGE BUYS CHAMPION

The Oklahoma State champion, Empress Wayne Gerben has been purchased by the Oklahoma Agricultural and Mechanical College from J. H. Vaughn of Stillwater. Empress recently established a new state record by producing 26,658.3 lb. milk and 884.47 lb. butter. Empress was the grand champion at the Oklahoma State Fair last year and has won championships at other fairs including the Kansas State Fair.

The college is completing a new Dairy barn at the cost of $50,000 which is intended to house 80 head of cattle. There are now 14 purebred Jerseys and 8 Holsteins in the college herd with more to be added before the student year begins. It is planned to add animals of the Guernsey and Ayrshire breeds next year.

THE DRESSLER TWINS



H. A. Dressler, of Burlington, Kansas, has twin yearling heifers of which he is very proud and he certainly has every right to be. Nora Pearl Veeman, gave 393 lb. milk, 17.48 lb. butter in a seven-day official test and her sister, Dora Pearl Veeman, produced 330 lb. milk and 16.4 lb. butter. These records were made in July, which, in Kansas, as in most other states, is considered the worst month in the year for record making. These are certainly fine records, age and conditions considered, records of which any herd, no matter where situated, would be proud.

NEW STATE CHAMPION

The Holstein herd of Bezemek & Christ, Albuquerque, New Mexico, is one of the best in the state and has developed at least two state champions. A junior two-year-old heifer that produced in the past year 14,049 lb. milk, 691 lb. butter. She displaces her half sister, Segis Tehee Manse, with 13,870.5 lb. milk, 571.8 lb. butter. The state champion is Aaggie Tehee Beets, with 1,028.97 lb. butter from 21,662.1 lb. milk.

TUBERCULOSIS ERADICATION CAMPAIGN

The United States Department of Agriculture reports that over a quarter of a million head of cattle were tested during June, the exact number being 250,886. In number, Missouri leads with 19,372, closely followed by Wisconsin with 19,135 and Iowa with 18,042. The number of accredited cattle has grown to 363,902 in 16,216 herds. Wisconsin has the most herds and the most cattle, the numbers being 1,754 herds and 39,735 head. Minnesota has 1,506 herds with 34,833 head and Indiana has 1,308 herds with 22,326 head. Pennsylvania and Vermont tie for fourth position with 1,165 herds. In total number of cattle under supervision Missouri leads with 205,792. New York is second with 196,560 and Montana is third with 159,851. New York has 125,000 cattle on their waiting list to be tested and Michigan has 120,984. In the entire United States there are 1,548,183 head of cattle in herds that have passed one clean test and 363,902 animals on the accredited list. There are 508,128 animals on the waiting list to be tested in the future.

WILL EXHIBIT CLUB CALF

Visitors to the Clark County Fair may have the opportunity of looking over a fine heifer calf which C. O. Kiles, of Grant, recently purchased from the herd of Geo. Wilson, at Granton, Wis., for one of his boys so that the boy might be a member of the Granton Calf Club.

The name of the heifer is Tranquillity Ormsby Crow's Roost. The sire's dam has a record of 881 lb. butter made in a year as a three-year-old, her dam has a thousand-pound four-year-old and her sire is the son of Finderne Mutual Fayne, who has made a year record as a junior two-year-old of over 1,200 lb. butter.

The dam is from a sister to Paul Calamo Korndyke, R. E. Haeger's great show bull, and was sired by King of the Ormsbys.

MAUD NETHERLAND WAYNE DE KOL 2d FRESH

Maud Netherland Wayne De Kol 2d No. 390907, on August 2d, dropped a fine bull calf sired by Creamcup Pontiac Burke. Maud is sired by Sir Hengerveld Clyde, is owned by W. H. Ketchum, of Palo Alto, Cal., and a short time ago completed a record of 32,631.9 lb. milk and 13,121.10 lb butter, carrying calf fully six months of this time. Maude is now eight years old. It is not anticipated that she will be put on test in any attempt to increase her present record, which is one of the greatest ever made west of the Rocky Mountains.

Failure, to the man who learns, means experience, and experience is equipment, and equipment is wealth.

Earnest men are so few in the world that their very earnestness becomes at once the badge of their nobility.

A LANCASTER COUNTY HERD

One of the real good herds in Lancaster County, Pennsylvania, is owned by H. Elvin Herr, of New Danville. The herdsire is a son of Ormsby Korndyke Lad and his dam is Shady Maple Carlotta Princess, with a seven-day record of 632.4 lb. milk, 32.44 lb. butter and a 354-day record of 22,668.6 lb. milk, 1,099.4 lb. butter, her milk averaging 3.88% fat. She is a daughter of King Pontiac Carlotta, a son of King of the Pontiacs, from Pontiac Soldene, a 26-lb. daughter of Hengerveld De Kol. Pontiac Soldene was from a 26-lb. cow whose dam was a daughter of Shadybrook Gerben, who herself has a 26-lb. seven-day butter record but is better known as the St. Louis World's Fair Champion over all breeds.

The Herr establishment consists of two farms, one of fifty acres and the other of one hundred and twenty acres. The herd contains approximately 75 head. A few good official records and several creditable long time records have been made but it is the plan to run this herd as a producing dairy herd rather than to ascertain the record-making ability of the animals, yet the record-makers on this farm include a 30-lb. three-year-old and a two-year-old that produced over 21 lb. butter in seven days in her first lactation period.

Mr. Herr is secretary of the Lancaster County Holstein-Friesian Association, an organization called into being last May. The president of this organization is John H. Shirk, of Lancaster. There are already forty-four members enrolled and as there are nearly 100 owners of Holsteins in Lancaster County it is expected that the membership will be materially increased as the Lancaster County men are full of enthusiasm for their favorite breed.

RECORD BUTTER SHIPMENT

A shipment of dairy produce valued at $1,150,000 left Montreal recently for a British port. One vessel had a cargo consisting of 55,354 packages butter, of which 46,394 packages were shipped by Montreal exporters and 8,960 by Western houses. The total weight was approximately 3,600,000 lb.

Four cars loaded with butter were shipped from Regina billed to the British Isles. A representative of the Saskatchewan Coöperative Creameries a short time ago made a trip to Europe and made arrangements to export the bulk of the butter made by the company direct from Regina to Great Britain. It is expected that between 25 and 30 carloads will be shipped this year.

The thing that goes the farthest
Towards making life worth while,
That costs the least, and does the most
Is just a pleasant smile.

"Did you ever meet a man of so lofty a mind?"

"No. At the height of his argument I got dizzy and had to leave."

HOLSTEINS FOR OKLAHOMA UNIVERSITY

Professor A. C. Baer, head of the Department of Dairy Husbandry, of the University of Oklahoma, recently purchased two good Holsteins from John Zoberlin, of Plymouth, Wis. These animals are to form the foundation of a demonstration herd which will be exhibited to dairymen of the state and serve as an object lesson to the university students.

One of the animals is K. S. P. Aaggie Walker, the other is Rosa Segis Johanna, with a record of 30.88 lb. butter and 643.4 lb. milk in seven days. She is on year test, has around 800 lb. butter to her credit already with quite a while to go to finish the year. It is Professor Baer's intention to complete the record on this cow.

BUILDING PUREBRED HERD

W. J. Reynolds, of Lark, N. D., recently purchased twenty head of purebred Holsteins from Illinois cattlemen. Mr. Reynolds, who is one of the progressive members of the Flasher Holstein Breeders' Circuit, last fall disposed of all his grade Holsteins and has replaced them with purebreds.

FIFTEEN HEIFERS ON TEST

Some good records are in the making in W. J. Higdon's herd, at Tulare, Cal. There are 15 two-year-old daughters of King Korndyke Pontiac 20th on test and they are making records that will be a credit both to themselves and to their sire.

Wife—"My new gown is a perfect dream."

Hub.—"I sincerely hope so. I may wake up before the bill comes in."

Plant seeds of love in soil of gloom,
The planter oft succeeds
In making orange-blossoms bloom
Where once grew widow's weeds.

"MEAD'S THE MAN!"

I have pardonable pride in passing along that little line of appreciation uttered by many clients for whom I have conducted sales. A satisfied customer is the best advertisement.

THE THREE EEDINGS

The herd of Olin Ruste is enrolled in the Barneveld Cow Testing Association for the fifth year. The Ruste herd is accredited and is headed by Admiral Walker Prilly 20th, a bull whose dam has a year record of over 25,000 lb. milk and more than 1,100 lb. butter. Climax Prilly Mayo, a member of this herd, was judged to be the best individual at the Mt. Horeb Holstein picnic on July 25th. She stood third in the association last year, with a production of 14,980 lb. milk, 527 lb. butter fat for 330 days, milked twice a day. Her profit above cost of feed was $120.55.

The *Dodgeville Chronicle* offered a prize of $100 to the herd that produced the most butter fat in Iowa County. This went to Mr. Ruste and in his letter of acknowledgment he has this to say:

"It has sometimes been said that the chief worries of our childhood are the three Rs, "reading, 'riting and 'rithmetic," and of our business life the three Bs, bass, baseball and business; so I presume the three worries of the dairy farmer must be the three 'eedings: breeding, weeding and feeding.

"This is the fifth year we have been members of the Barneveld Cow Testing Association. The first year our sixteen head of Holsteins averaged 7,150 lb. milk and 245 lb. fat—the second highest herd in the association. The second year the herd averaged 8,418 lb. milk and 293 lb. fat, giving us fourth place in the association. The third year, by breeding, weeding and feeding some more, we topped the association fat production with our 12 purebred Holstein cows, they making the average of 10,395 lb. milk and 368 lb. fat. The fourth year found us with 11 mature cows (one old cow sold to market), all in the prime of their lives, and the heavy small-grain crop the year before made the temptation for heavy grain feeding more encouraging. You will notice our herd averages have been increasing every year. This is due to feeding more grain in winter as well as on pasture. The first year only one or two of the best cows were fed grain on pasture, just to see if it paid. Then we included more and more of the cows until we now feed all cows grain the greater part of the year.

Now the fourth year, ten of the eleven cows freshened in February and March and one in July. Our asociation year started February 28th, and I want to say right here that to see those ten cows (that freshened in the spring) morning and evening with their large udders was a grand sight. A. J. Cramer was out here in April, while Mr. Meyers was here and watched these cows milked. That night and morning they averaged a little over 60 lb. milk, milking from 55 lb. to 68 lb. each with two milkings per day. They consumed 35 to 40 lb. silage, 12 to 15 lb. grain and whatever alfalfa or clover hay they wanted during the spring months and were grain-fed on pasture. Our herd averaged 12,417 lb. milk and 426 lb. fat. Throughout the whole year they were milked and fed regularly (12 hours between milkings), and drank from water buckets in the barn in winter.

"This year the udder of one of our best cows, Gerds Beryl Wayne De Kol, became infected, which reduced our average. This cow gave us ten years of faithful service, with a calf every year, six of these heifers and all now in the herd. She produced almost a hundred thousand pounds of milk.

WHAT TESTING DID

Until November, 1920, Max Arp, of Eugene, Ore., had never sold a bull calf except for slaughter. At that time he started official testing and has since sold 17 bull calves, the prices ranging from $100 to $350, selling the first one August, 1921. The latest transaction was the selling of a three-months-old calf to Webb Mast, of Coos County. This calf was sired by Sir Johanna Fayne Bonheur De Kol, and his dam was Lucy Freela Pontiac 3d. The calf is a full brother to the Arp junior herdsire.

In the Arp herd there are twelve cows now on long time test. The average of the records is 21,582 lb. milk and 723.38 lb. butter fat.

There are two state champions for butter production in the herd, Mercedes Alcartra Mead, with 25,096 lb. milk and 905.75 lb. butter, made as a senior four-year-old and Mercedes Beauty Alcartra, with 20,431.8 lb. milk and 886.83 lb. butter, made as a junior three-year-old. The highest record made by a cow in the Arp dairy is 26,520.8 lb. milk and 1,036.63 lb. butter, by Lucy Freela Pontiac.

BREAKING IDAHO RECORDS

The University of Idaho has a splendid Holstein herd consisting of 44 females. Although only 18 of this number are of milking age, animals in the University herd have broken eleven state records in the past ten months. The latest champions are mother and daughter. Idaho Lily Butter Girl De Kol No. 338,832 produced 14,219.1 lb. milk and 634.34 lb. butter in ten months. She was five years, six months and 18 days old at time of commencing this test. Idaho Segis Lily, daughter of Butter Girl, recently completed a year record of 19,366.2 lb. milk and 760.74 lb. butter, calving at three years, one month and one day old. The previous record in the class was 15,342 lb. milk and 658.81 lb. butter. These two cows were bred and developed in the University herd.

Unfortunately, the bobbing of hair doesn't always have the same effect. When Samson was shorn, they made him go to work.—*Hartford Times.*

"What will become of our young people?" wails a reformer. Oh, they'll grow old and worry about the young people.—*Bridgeport Star.*

A Classified Advertisement costs but little and tells many about the animals you wish to tell.

THE DESIRED COMBINATION

The combination of high class individuality and tremendous producing capacity is one for which all breeders aim. In the famous cow Hazelwood Ormsby Posch 2d, this aim has been realized. She was shown four different years, meeting the best animals in the Northwest, and as a heifer calf going on to the Dairy Cattle Congress and the National Dairy Show and winning the junior championship at both places.

Then, in official test she has a number of notable performances to her credit. As a junior three-year-old she made a 20-lb. seven-day butter record averaging 71.1 lb. milk a day. She has a splendid 10 months record made as a four-year-old. She has been officially tested three successive years as a seven- eight- and nine-year-old cow. As a seven-year-old, she averaged practically 85 lb. milk a day. As an eight-year-old, she raised her average to 93½ lb. and as a nine-year-old did even better, averaging 102.3 lb. milk a day and giving 106 lb. her best day on test. She is one of the many great cows in the Abner Deysher herd.

The son of this great cow, Sir Chimacum Lutscke Posch, is certainly bred to sire both producers and splendid individuals. He has a wonderful dam, while his sire, Sir Chimacum Wayne Lutscke, is from the famous Lutscke Vale Cornucopia, 789.7 lb. milk in seven days and 31,246.9 lb. milk in a year, the world's record at time of making. She is one of the many great daughters of Aaggie Cornucopia Johanna Lad, Jr., show bull himself and sire and grandsire of many famous show animals.

With such ancestry, Sir Chimacum Lutscke Posch is destined to pass on to his offspring an inheritance of untold value.

It is generally agreed that whoever founded England located it too near Ireland.—*New York Tribune.*

What's the matter with old Uncle Grouch?" "He doesn't know what to do with the daylight he saves.'

To practice what you preach it is necessary to be constantly attending rehearsals.

A stitch in time saves nine. After you are broke you may have some difficulty in mending your ways.

MARKET REPORTS

Aug. 17, PHILADELPHIA BUTTER.—There appears to be an ample supply of butter of all grades to meet the relatively light demand and prices generally remain unchanged. Preference still shown for fine butter with very little disposition to trade in medium and undergrades.

CHEESE.—Trading continues fairly active and although advices indicate firmness at primary points there was still no change in prices. The greater part of recent trading was done in Fancy Fresh Daisies and New York Flats.

NEW YORK BUTTER.— Market appears steady with unsettled undertone at unchanged prices. Trading which was quite active in spots covered all grades. Because of shortage of fancy butter buyers in few instances paid up to 35c for technical 92 score. Receipts light and running off in quality, probably due in part to delayed shipments. Speculative interest continues in 87 to 90 scores and rumors of export inquiry for medium grades circulating quite widely. Eighty-nine score centralized cars moving at around 32c.

CHEESE.—There was a fair volume of trading and market appears firm with Fancy Twins and Young Americas ¼c and Flats ½c higher. Western demand active for State Flats. Both Fancy State Flats and Twins in light supply. In spite of fact that considerable portion of trade turning to average Fancy Cheese at relatively lower prices, grades below Fancy showing some accumulation.

CHICAGO BUTTER.—A fair to good demand and light supplies were largely responsible for the steady to firm conditions of market. Fancy Butter was scarce and an improvement in the demand for medium to low scores kept the market well cleared of these grades. Demand centered around 89-91 score cars found a fair demand on a steady market at the above prices.

CHEESE.—Market rules fairly firm. Both local and out-of-town trade was fairly active on practically all styles but the bulk of the buying was apparently against consumptive needs, dealers generally believing there was little or no speculative interest evident.

BOSTON BUTTER.—The supply of fine butter was light and the market was fairly firm. The market on lower scores is easy and unsettled with very little inquiry for that class of goods. There was very little trading and few sales were reported.

CHEESE.—Buyers continue taking only enough cheese for their immediate needs. The small trade reported was confined mostly to York State Twins at the outside quotations.

WASHINGTON DAIRY PRODUCTS.—Butter markets firmer than a week ago. Receipts heavy but active trading at lower prices prevailing has helped avoid accumulations. Production showing some signs of decrease.

Closing prices, 92 score butter—New York 34¾; Philadelphia, 35½c; Boston 36c; Chicago, 33¾c.

Cheese markets about steady. Wisconsin prices declined slightly early in week and trading showed an increase since then.

Prices at Wisconsin Primary Cheese Markets Aug. 15.—Twins and Daisies 18¾c; Double Daisies 18¼c; Young Americas 19c; Square Prints 21c.

HAY.—Market holding firm for hay of good quality because of light receipts. Notices of country shippings decreasing as rail strike continues. Poor hay generally in excess of demand and selling at heavy discounts.

Quoted Aug. 16.—No. 1 Timothy—New York $31.50, Philadelphia and Pittsburgh $19, Chicago, $24, Atlanta, $23, St. Louis $21. No. 2 Timothy $1 to $4 below No. 1 prices. No. 1 Alfalfa—St. Louis $21.50, Memphis $23. No. 1 Prairie—St. Louis $17.50, Chicago $19.

FEED.—Millfed Markets unchanged. Fairly good jobbing demand for wheat-feeds from the northeast. Interior buying mostly for immediate requirements. Offerings most feeds ample. Production fair.

Quoted Aug. 16—Bran $14.25, middlings $16.50, flour middlings $23, Minneapolis No. 1 Alfalfa meal $19.75, Kansas City, 33% linseed meal $44.75, Minneapolis, $45.50, Chicago, $45.40 Philadelphia; white hominy feed $24.50 St. Louis; Gluten feed $29.85 Chicago; 30% cottonseed meal $34 Atlanta, $34 Memphis.

CALIFORNIA SHOW HERD IN PROSPECT

The Holstein breeders of California are planning to assemble a state show herd to compete at the Pacific International Exposition at Portland, Ore., this fall. At a recent meeting they appointed district representatives to get a line on the most promising animals shown at early local fairs. An expert judge will be called upon to pass on the comparative merits of the animals of the various sections and select the best for show work. The committee consists of president Frank L. Morris, of the California Holstein Breeders' Association, with Kenneth W. Abbott for Southern California, W. J. Higdon for the lower San Joaquin, Harry V. Bridgford for Central California and DeLancey Lewis for the coast section.

In Scotland, 2,000 barrels of whisky burned. Prohibition prevents such horrors here.

AT CENTRAL VILLAGE

Mr. W. S. Brown, of Central Village, Conn., recently sold a nice heifer to Norman H. White, a Boston business man who has a farm at Central Village, Mass.

The Brown herd contains a number of real good animals, thirty of which are bred to Hollywood Glen Alex Segis. This bull is a son of Judge Segis and is from Glen Alex Queen De Kol, the world's record holder in the senior two-year-old class. She is credited with 42.36 lb. butter and 603.8 lb. milk in seven days and has two other records above the thirty-pound mark. She is a daughter of Tietje Queen De Kol, who herself has a 42-lb. seven-day record and is the dam of four tested daughters, two of which have 40-lb. seven-day butter records. Pages could be devoted to telling the many good things that can be said of this family.

The sire of this bull is the famous Judge Segis, whose offspring have won many ribbons in the show rings of the great Northwest in the last few years.

Judge Segis, who is a son of King Segis and a grandson of Judge Hengerveld De Kol, has a long list of high record daughters, one of which has four different years exceeded 30 lb. butter in a week.

At the Brentwood sale last spring, Mr. Brown purchased the two-year-old heifer Empress Prilly, from the Bridgford consignment. This splendid heifer is by King Abbekerk Johanna Segis and is from a daughter of King Segis Alcartra Prilly and the 34-lb. cow Empress Korndyke Pontiac. The sire of Empress Prilly is King Abbekerk Johanna Segis, whose dam is that wonderful cow Adirondac Wietske Dairy Maid, whose record of 23,401.9 lb. milk and 1,420.14 lb. butter was reported in the first test bulletin of the current Holstein fiscal year. She already had to her credit a year record of 1,295.11 lb. butter and 31,899.8 lb. milk and by many is considered the greatest producing cow living to-day.

Empress Prilly is heavy with calf by King Segis Alcartra Prilly, whose daughters hold a number of California state records. One of his daughters, Louise Alcartra Prilly, is a 40-lb. junior three-year-old, and holds the world's record for both seven and thirty-day butter production in that class. The daughters of this bull are making tremendous records and his acquisition by the Pabst Stock Farm is one of the greatest Holstein transactions of the present year, one that may have a wonderful influence on the Holstein industry.

Virtue is its own reward. Fate pins no medals on a man simply for doing his duty.

Don't have your hammer out all the time. Even opportunity only knocks once.

Classified Advertisements have pulling power.

DAVIS ON THE FARMERS' PAY

The fraternal body which calls itself "The Loyal Order of Moose" maintains at Mooseheart, Ill., an orphanage which at the present time contains upward of 1,000 children. This institution is called "Mooseheart," and the little town is named after it. The farm connected with this institution contains 1,023 acres, of which around 800 acres are under cultivation. There is up-to-date agricultural equipment and a herd of 200 Holsteins. The director-general of the Loyal Order of Moose is Secreatry of Labor Jas. J. Davis. Mr. Davis worked as a boy in the iron mills at Sharon, Pa. In those days the farmers of Mercer County used to come into the town and when the work around the furnaces was slack get the mill boys to go out on the farms to work. Mr. Davis tells that one old farmer for whom he worked many times said he could always tell which man or boy was the best worker by watching him eat. The man or boy who ate his meal with the most dispatch and business-like way was sure to go to work. Secretary Davis believes that a laboring man of the ciy and of the country as well as the farmer himself should earn enough to enable him to maintain his place in the buying community of the nation. When the workman and the farmer earns a saving wage he saves and the whole country saves. When the workman or farmer buys the whole community profits.

If you wish to buy or sell anything, it will pay you to study and use our Classified Advertising columns.

HOW MUCH SILAGE HAVE YOU?

The question of how much silage there is in a silo is one that often comes up on the farm, sometimes when the property changes hands and other times when it becomes necessary to figure the amount of feed on hand and to know whether to increase the herd or dispose of some of its members. Then, too, if the dairyman keeps books, as he should, when inventory time comes around the amount of silage on hand has to be ascertained.

The determination of the amount of silage in the silo is not a problem that can be reduced to exact figures. The ripeness of the corn, the water it contains, the way it is packed, are all factors so variable that the most careful figures that can be made are only estimates. It is known, however, that silage does follow certain laws in settling. The weight of each cubic foot of silage increases as its depth below the top layer increases. A cubic foot of silage at a depth of 20 feet does not weigh twice as much as a cubic foot at a depth of ten feet, however. The following table is taken from Circular No. 39, Missouri Experiment Station. Silage at a depth of five feet weighs approximately 33.4 lb. per cubic foot, at ten feet 35 lb., at 15 feet 36.4 lb., at 20 feet 37.5 lb., at 25 feet 38.3 lb., at 30 feet 39 lb., and at 40 and 50 feet the silage will average in weight 40.3 lb. and 41.4 lb. per cubic foot respectively. To find the capacity of any silo multiply one-half the inside diameter by itself, then by 3.1416 and then by the depth of the settled silage. This is the volume. Multiply the volume by the weight of the silage at that depth. This will give the contents of the silo in pounds. Divide by 2,000 lb. and you have the contents in tons, approximately.

AT THE MAINE UNIVERSITY

Dr. Leon S. Merrill, Dean of the Maine College of Agriculture, speaking at the University of Maine Field Day, said in part: "Last year at the University of Maine there were 1,470 students enrolled of which 212 were for the summer course. The College of Agriculture made a gain of 9% over its enrollment of the previous year and gives promise of getting back to pre-war attendance. All agricultural colleges suffered during the war. Farmers' Week, an annual feature which Maine was the second agricultural institution in the country to adopt, was especially successful this year in both attendance and interest. The winter short courses, once popular with the young farmers of Mane had to be abandoned three years ago because of lack of housing facilities."

The University herd consists of a little more than 100 head of purebreds representing four breeds, Ayrshires, Guernseys, Jerseys and Holsteins. These animals are used in class work of the agricultural students.

On the college farm there had been harvested up to August 2d, 209 tons of hay and 178 tons of silage. About 55 acres of the college farm were devoted this year to silage crops of oats, peas, millet, corn and sunflowers. The average yield of oats and peas was 7½ tons per acre, a little below the normal average.

Do You Know That Dress Designers Earn from $50 to $150 a Week?

Do you know there Is a Constantly Increasing Demand for Good Dressmakers?
Be Independent. Learn Dressmaking and Designing From the Women's College of Arts and Sciences **SPECIAL SHORT TERM COURSE.**
Study right in your own home, any time that is convenient. There is No other course like this **SPECIAL COURSE** in the World.
"After my third lesson I made a blouse for myself, and two for a neighbor," *writes Mrs. D——.*
"I have made the price of my course sewing for friends and I am only working on my fifth lesson," *writes Mrs. M.——.*
"All my girl friends envy me the pretty dresses I have made." This is from a girl of sixteen years after she had four lessons.
"I have not had time to do any sewing for myself since starting the Women's College Course. My friends and neighbors keep me so busy, and I have had to refuse a lot of work," *writes Mrs. C——.*

HOW I PAID THE MORTGAGE

"We had bad luck that year. Crops ruined by long-continued drought, and not enough eggs or milk to sell at a profit, and a big payment due on the mortgage in a few months. Just when it seemed we would have to give up our farm and home, a friend showed me an advertisement of the Dressmaking Courses of the Women's College, and told me if I would take up a course she could get me plenty of sewing. I wrote for information, and was so impressed with the wonderful advantages offered that I borrowed the money to pay for their Special Course. I never thought it possible that one could learn so quickly and thoroughly by correspondence. After the third lesson I was able to make waists for my neighbors, after the fourth I could make skirts and simple house-dresses. I learned such good style and up-to-date methods that I had more orders than I could take care of. In six months I had made enough to pay off the remainder of the mortgage, and get us on our feet again."
This is only one of many such experiences. We are getting hundreds of such letters every week.
This course is so low-priced that any woman, no matter how limited her means, can afford to take it. Do not let this opportunity slip by.

A SPECIAL OFFER

FOR SALE

HIS SIRE:

The great Empire Segis from King Joh and Gypsy Lyons with a seven-day record of 33.63 lb. butter. Her sire was the noted King Lyons and her dam Gypsy Hengerveld with a three-year-old seven-day record of 29.24 lb. butter and 514.4 lb milk.

King Joh was by King Segis Pontiac Alcartra, the $50,000 bull, from Uneeda Korndyke Abigail with a seven-day record of 33.02 lb. butter and 637.7 lb. milk.

KING ECHO SYLVIA SEGIS MODEL

A Highly Bred Bull from High Producing Dams

HIS DAM:

Queen Echo Model Walker made as a junior two-year-old 19.34 lb. butter and 418.9 lb. milk. Then, as a junior three-year-old came back with 22.20 lb. butter, 551.1 lb. milk. Her sire is King Echo Sylvia Model from Champion Echo Sylvia Pontiac and Belle Model Pietje 2d, with 28.16 lb. butter, 484.30 lb. milk.

The dam of Queen Echo Model Walker is Queen Walker Pietertje with 30.77 lb. butter, 504.21 lb. milk, she being from King Colantha Clothilde and Segis Walker Pietertje with 27.85 lb. butter, 471.40 lb. milk.

The seven nearest dams of King Echo Sylvia Segis Model average 29.27 lb. and we expect this will be well over 30 lb. when his dam freshens again as she is a prospective 30-lb cow. His fifteen nearest dams without a skip averaged 30.12 lb. in their seven-day official test work and thirty dams in his pedigree (no cow counted twice) have an average of 32.02 lb.

He was born March 4, 1921, is dark in color and is ready for heavy service. **Price $400.**

Come and see him and his dam. *They will please you.*

ABNER S. DEYSHER

BERKS FARM — Herd Under Federal Supervision — READING, PA.

Important Mid-Western Holstein Dispersal

Zelden Rust Federally Accredited Herd

125-Registered 60-Day Guaranteed Holsteins-125

At the farm of the owner, C. M. Bottema, 3 miles Southeast of Indianapolis, one-fourth mile from Stop 3 on Shelbyville Line. Sale will begin promptly at 9 A. M., Monday, September 11, 1922.

3 TO 9 MONTHS' TIME WILL BE GIVEN ON APPROVED NOTES

The Milking Dairy Includes—

Cows with records of:
- 26.65 lb. butter in 7 days;
- 26.00 " " " " "
- 25.92 " " " " "
- 18,931 lb. milk in 305 days
- 18,706 " " " 358 "
- 18,572 " " " 305 "
- 18,468 " " " " "
- 17,015 " " " " "

4-year-olds with records of:
- 22,166 lb. milk in 1 year
- 13,747 " " " 287 days
- 13,685 " " " " "
- 852 " butter in 1 year

3-year-olds with records of:
- 14,762 lb. milk in 1 year
- 14,744 " " " " "
- 13,138 " " " 344 days
- 12,153 " " " 286 "

2-year-olds with records of:
- 15,210 lb. milk in 243 days
- 14,620 " " " 305 "
- 13,510 " " " 251 "
- 12,465 " " " 1 year
- 12,329 " " " " "
- 12,252 " " " 305 days
- 11,145 " " " 300 "

A yearling with 8,977 lb. milk in 305 days

In the herd are 31 daughters of a 30-lb. sire, 16 daughters of It Mona Pontiac, 9 granddaughters of Belle Segis (former World's Champion 3½-year-old) and other closely related groups such as can be found only in an old long-established herd.

Close to forty cows and heifers are bred to freshen in the fall and early winter. Several young bulls of quality are to be sold including a son of a 1,000-lb. year's butter record dam. The herd is of high individual quality as proved by its prize-winnings at leading fairs.

Write for a Hastings catalog to the owner,

C. M. BOTTEMA, Indianapolis, Indiana

Polled Holsteins

combine all the virtues and good points of the greatest breed of dairy cattle on earth with the desirable characteristic of "Hornlessness."

Why cut or burn off horns when they can be bred off by using a "hornless" sire?"

Place a Polled Holstein Bull at the head of your herd. Prices and Quality are both right.

Advertising in THE HOLSTEIN BREEDER AND DAIRYMAN is an investment, something that will pay dividends right along in the way of quick sales and that you can get the value of in added herd prestige.

Advertising enlarges the circle of customers, and enables one to sell bulls while they are young, and females when you wish to dispose of them.

THE BREEDER AND DAIRYMAN does not wish to sell the whole magazine to owners of herds, does not wish them to spend so much that they will never be able to get the value of their money.

Rather we wish our friends to look upon advertising in THE BREEDER AND DAIRYMAN as a necessary herd expense, similar to testing, veterinary services, sanitation, etc.

We would sooner have a half dozen advertising pages each one carrying the message of four to twenty stock owners than the same number used by six breeders each taking a page. We wish to serve numbers rather than the few.

Prices have fallen from the high peak which was the result of war demands for all things, and our paper, in its scale of advertising charges, has definitely recognized this fact. It will pay you to get in touch with our advertising department right away.

The Holstein Breeder and Dairyman

Box 110 Harrisburg, Penna.

Reminiscences of an Early Importer

By George E. Brown

I BECAME interested in Holsteins by mere chance. While on a visit to my old home in Lawrence, Mass., a friend asked me to go with him to visit the farm and fine herd of Holsteins at Andover, owned by Wm. A. Russell, a wealthy paper manufacturer.

This trip resulted in my taking charge of the herd and farm, on March 1, 1872, and devoting fifty years to importing and breeding blooded horses and cattle.

Having lived in Illinois, and knowing the need of better cattle there, I prevailed upon Mr. Russell to let me take a load of bulls there in 1873 and two loads of bulls and cows in 1874. These three lots were the first of the breed in the Middle West.

After making two trips to Holland for Mr. Russell, I decided to import English horses and Holstein cattle on my own account, for I realized the great possibilities for the business; the horses in the West and the cattle all over the United States.

My many annual trips to Europe proved profitable as well as enjoyable vacations; besides allowing me the sight-seeing round of the ordinary tourist, my business gave me access to homes in England and Holland that the regular tourist does not have.

Holland was particularly interesting because it was so different from other parts of Europe. The richest portions of this country have been reclaimed from the sea and lie twenty or more feet below sea level, protected by immense dikes.

The roads and farms are laid out in regular squares. Farm fences consist of ditches four to six feet wide. The roads are built of the soil from the ditches on each side, and are fifteen or twenty feet wide, having a brick-paved carriage track, ten feet wide, which is lined on each side by a row of nice shade trees. The banks are grassed over and are kept trimmed like city lawns.

Water commissioners keep the water to proper level. When it is getting too high that in the low ditches is pumped into the higher ones and from them into large reservoirs on the seabanks and when the tide is low, the outer reservoir gates are opened and the water runs out. If it is too low in the ditches, the same gates are opened at high tide and the water is allowed to run in, hence Holland never suffers from floods or drought. Formerly all the pumping was done by large windmills but now steam was used in many places.

The dwellings on farms are novelties to an American. The same roof, which slants four ways, covers the family apartments, the cow and horse stable, carriage room and hay loft. The buildings are built of brick and stand on piles, hence there are no cellars. Two rooms face the road, each having a front door. One of these is a parlor and is never opened except on special occasions—funerals or holidays. The other is a sitting room and bedroom for the owner and his wife. A door from this room opens into the cow stable, where cows in double stalls face the outside wall, behind them a gutter, two feet wide and sixteen or eighteen inches deep. The feed mangers are made of brick and cement and are also used as a water trough, the water being pumped through from the kitchen. Strings are suspended behind the cows and their tails are fastened to keep them from being soiled in the gutter. An alley four feet wide extends from the bedroom to the kitchen in the far corner. A partition ten feet wide separates this alley from the hay room. Openings in the partition afford sleeping places for the children and help. These have doors to close when the berths are not in use. The buildings are set on piles and sometimes one side settles. I saw one large church which had settled and was out of plumb. This church had a heavy bell in the tower and they dared not ring the bell for fear the vibrations would cause the church to fall.

Dutch cows are really a part of the family; they are watched, fed and cleaned regularly, as so many children. When they go into the stable, they do not go out until spring. When once out, they stay out until fall. If the weather is cold while they are out, they are protected by canvas sheets or blankets tied fast around them. At milking time they come to a yard where they are fastened to stakes. When the maid goes out to milk she carries two large wooden buckets suspended from a yoke on her shoulders. No matter how gentle the cow is, her legs are tied with a cord while being milked.

As soon as the cows are turned out, every square inch of the stable is scrubbed as clean as any house. The rough brick floors of the stalls are taken out and replaced by glazed tile. The stalls are decorated with fine antique chinaware and pictures. One or more of the stalls are occupied by ladies' work tables and chairs. On one of the tables is a steaming teapot and a bottle of Maderia wine and a caller is expected to partake of one or the other.

Roadhouses are found all along the main highways where travelers are expected to stop and "take something." A shed is provided near by in which to drive the teams and they are fed while the boss is drinking; small movable mangers are filled with grass; the man

in attendance expects a tip, two pennies being enough. My guide was a prominent farmer who could speak good English. He had his own team and a two-seated carriage. He usually invited one or two friends to go along for the day. I paid the bills. He would invite me with usually one or two friends, to attend the theatre and I paid for the tickets. Excepting some ladies, everyone smokes, even little kids, consequently the theatre was a cloud of smoke. Cigars are cheap—two for a cent—mostly seaweed, I suppose.

Weekly market days are holidays and nearly every one in the country goes to town, taking along whatever they have to sell. Horses, cows, calves, sheep and pigs are placed in one section; butter, cheese, vegetables, poultry and eggs in another. A coarse mat is laid on the pavement and the round cheese piled up like so many cannon balls.

It was very amusing to watch Dutchmen drive a trade. The seller names the price, then holds out his hand; if the buyer refuses, he makes an offer, then holds out *his* hand; if the seller accepts, he slaps the buyer's hand and the deal is closed. One hears a continued slapping in all directions till business is closed about noon, when the crowd disperses to different places to settle and have a drink at the seller's expense. The afternoon is spent in various kinds of pleasure-seeking. Usually a few young fellows who think they have good horses ride them to town bareback. In nearly every town there is one wide street with a strip of soft ground on each side of the paving which is used for racing. The young fellows with horses will pair off, two at a time, going out thirty or forty rods and coming in as fast as they can gallop. After all have had a round, the winners of each race pair off. When they have finished, the final winners feel as grand as a 2.10 winner in America.

I was often amused or annoyed at some of the Dutch customs. Their rules for registry were so different from ours that I paid no attention to them, but tried to trace the pedigrees of good cows and bulls as far as possible. On one occasion I was trying to buy a yearling bull that I had seen the year before. The owner showed me a different cow as his dam from the one he showed me the previous year. I told him so and he replied *"that one was his mother last year."*

On another farm I tried to buy some nice calves, but the owner refused to price them, saying he would not sell them until fall. I asked what he expected to get then and he told me. I asked why he would not take that price now. He replied, 'What would I do with my soup?" (the whey). I said, "Throw it in the ditch." He said, "O, I will not throw anything away."

At another place I found a fine cow in the feed lot to be fattened. She was the dam of several choice bulls and heifers that I had bought. I asked why she was there and the owner said it was "her turn to go." It is the rule to turn a certain number each year. I asked her price and took her quick. I kept her several years and she produced some of my very best animals, never going dry a day while she lived. I sold one bull from her for $400. If I had kept him three years longer he would have brought several times as much.

Dutch farmers seldom kept bulls till older than two years so did not know their real value at the date of selling. They did not know the great value of the breed until Americans proved it to them. I did not know the value of many that passed through my hands until it was too late. I was never able to get a competent and reliable herdsman so I did not try for high records. I fitted out one Illinois farmer with yearlings at $250 and $275 and mature cows at $400. He in a few years sold calves from them at $1,000. If I have not made as much money as some have done, I have the satisfaction of knowing I have imported ancestors of the very best producers that are now selling up in the thousands.

Possibility of Tuberculosis Eradication

IN an address delivered at St. Louis, Sept. 1, before the American Veterinary Medical Association, Dr. J. A. Kiernan, of the United States Department of Agriculture and chairman of the International Committee on Tuberculosis brought out facts that indicate the ultimate eradication of the disease among animals in the United States is a practical possibility. An inventory has been taken of the extent of the plague in every county in all the states and a large map, prepared by the Department, shows that over most of the country the infection is relatively light.

"In 37 states comprising 46.2 per cent of the area of this country and containing more than 40 per cent of the cattle of the country there is less than one per cent of tuberculosis," said Dr. Kiernan. "The live stock owners in those states have decided that the disease shall be eradicated from their herds and that no more infection shall be introduced. In this area there is such an active sentiment against the plague that it does not seem too much to expect that within ten years it will be entirely eradicated or reduced to a minimum.

Inasmuch as it has been demonstrated that bovine tuberculosis may be eradicated from an individual herd or a group of herds or from all the herds within a circumscribed area, there is no reason to believe that the campaign, inaugurated in 1917, will be abandoned until it is wiped out in every county in the United States. There are now few men who attempt to ship tuberculous animals as healthy stock. The dairymen of Nevada or Arizona or Florida who contemplates buying improved cattle looks up the record of the state, the county and the individual herds. He wants to know not only that the cows he buys are healthy but that the entire herd from which the purchase was made is free of the disease."

Dr. Kiernan called attention to the rapid progress that is being made in many of the states where there is a high percentage of tuberculosis. He said that the work of eradicating it in entire counties is becoming popular and that this method is now being carried on in 150 counties.

From July 1, 1917 to June 30, 1922, 175,000 tuberculous cattle were destroyed in this country. When the campaign began it was thought by some persons that the destruction of so many cattle would cause a shortage of dairy products and cause alarm among consumers. But this has not been the case. The per capita consumption of milk has increased and the number of milk cows increased 341,000 head in 1921.

Susquehanna County Leads in Holsteins

By Charles P. Fague

IN the far northeastern part of Pennsylvania is found the leading county of the state in purebred Holsteins. Large purebred herds of black and whites have been built up because of the demand for an efficient milking machine to supply milk to the greatest center of urban population in the United States, namely, New York City and its suburbs. Susquehanna County lies within the 200 mile zone and is a great reservoir of milk that is drawn upon daily to supply the needs of millions of human beings. The Lehigh Valley, D. L. & W., and Erie railroads run through the county to New York City and are lined with fluid milk stations. During the day, long trains of milk cars are rushed into the city and empty cars returned. About 95% of the dairies producing fluid milk are purebred and grade Holstein cattle. Practically every herd is headed by a purebred herd sire and nearly every herd has one or more purebred females. Many are entirely of purebreds. Susquehanna County at one time led the state with six cow testing associations, and these proved the superiority of the purebred over grades each year, both in production and in economy of production. The farmers depend upon milk for 90% of their income and so the science of milk production is given careful consideration. They are in the purebred industry because they have found that purebreds pay, and all the big breeders depend primarily upon their milk checks for a living. The small breeders realized that it was the purebred blood that made their best grades profitable and so they went one step farther and purchased purebreds. During the last twenty-five years the purebreds have increased rapidly until Susquehanna County leads the state in numbers with Bradford County her nearest competitor.

There are over 135 members of the National Holstein-Friesian Association and a large number of members in the county and state association. Advanced Registry testing is going on continually to bring out the outstanding individuals in performance. Several records above 30 lb. butter in a week have been made and some cows have gone above 700 lb. of milk in seven days. Cow testing associations have made unofficial records on hundreds of cows.

Susquehanna County leads the state in number of bull associations and Pennsylvania leads the United States. Cow Testing Associations are now checking up on the performance of the daughters of these bulls as compared with their dams.

Tuberculin testing has advanced rapidly during the past two years, due to the work of the Farm Bureau. Over half of the herds tested show no reactors at all. Of the remainder only about 7% react.

The breeders lay strong emphasis upon individuality. At the National Holstein Sale in 1921, the Pennsylvania herd won second prize and half of the Pennsylvania consignment came from Susquehanna County. About 280 boys and girls took part in cattle judging contests run by the Farm Bureau last year to train them for selecting good individuals in the future.

During the past year, individual sales have been slow but the county association has taken hold of the situation and has appointed a sales committee to conduct annual sales each fall. Sales only of cattle under Federal Supervision will be held. A committee selects the cattle from each breeder's herd. Emphasis is being placed upon health, individuality and performance when selecting for sales.

An advertising campaign as a county unit has begun. Altogether it looks as though Susquehanna County will not only maintain her lead in purebred Holsteins, but increase it.

Work of the Dairymen's League

ACCORDING to the report of Manager W. W. Hovey, the Dairymen's League Coöperative Association Inc., sold milk during June that brought in $7,080,241.15. This is the biggest month in the League's history. Of this amount $5,129,573.08 was for fluid milk sold to dealers. The balance of $1,950,668.07 covers sales from plants operated by the League and is divided as follows:

Fluid and skim milk	$287,260.59
Cream	279,408.72
Homo	1,791.23
Buttermilk	1,253.05
Plain condensed	26,758.18
Sweetened condensed:	
Domestic	9,160.70
Export	37,473.90
Evaporated:	
Domestic	323,183.93
Export	28,613.74
Sweetened skim condensed (bulk)	14,037.59
Whole preserved condensed (bulk)	19,019.21
Skim powder	15,994.89
Butter	349,943.97
Cheese	459,071.80
Pot cheese	132.08
Ice cream	97,564.49
	$1,950,668.07

Incidentally, dairymen have discovered the value of advertising and of boosting their own products. The demand for farmer-made ice cream, butter, cheese, etc. has practically kept up with the supply. The sales of products from the eight or ten manufacturing plants of the League have increased with amazing rapidity since February last. During July, the Auburn, Carthage and Milton, Pa. plants manufactured considerably over 100,000 gallons of ice cream. The quantity of butter made and sold by the Association in June was over three times the quantity sold in February last, while the quantity of cheese was five times as great. Sales of evaporated and condensed milk have made similar increases.

The people who prate of their mansions in the sky must think of their religion as a fire escape.

Woodcrest Ormsby Walker

WOODCREST Ormsby Walker, No. 291,182, is of those good cows that has produced over 100 lb. milk a day for a month or more. Calving at five years, eight months and 14 days old, she was put in official test 24 days from freshening in which she made 707.1 lb. milk and 25.75 lb. butter in a week and in thirty days produced 3,010.6 lb. milk and 102.32 lb. butter. Continued on long time test she produced in 343 days 20,556.5 lb. milk and 764.62 lb. butter. She is a daughter of King Walker and of Woodcrest Ormsby Butter Girl, a 23-lb. junior three-year-old daughter of Pietje 22d Son.

WOODCREST ORMSBY WALKER
Woodcrest Ormsby Walker, 101 lb. milk a day for seven days, 100 lb. milk a day for thirty days, 20,556.5 lb. milk and 764.2 lb. butter in 343 days. Owned by Department of Public Charities, Bridgeport, Conn.

Woodcrest Ormsby Walker is one of the many good ones on the Bridgeport City Farms which is owned by the Department of Public Charities, Bridgeport, Conn. This farm is under the supervison of Angus Thorne, president of the Connecticut Holstein-Friesian Breeders' Association.

No Bankruptcy Here

THE New Salem Holstein Breeders' Circuit is a district of North Dakota that went bankrupt growing wheat and other grain crops, owing to drouth.

In 1921, seventeen farmers milked 227 cows that produced 1,515,421 lb. milk containing 54,144 lb. butter fat. Practically no grain was threshed that year in this district. It was all cut for hay and fed to cows that earned for their 17 owners $18,834.25, when otherwise they might have had nothing. The feed cost was estimated at $8,172.69.

These cows were all purebred or grade Holsteins and during the year the average production was 7,663 lb. milk. The feed cost was $41.63, the selling price $95.46, which shows an average profit of $54.20 and this in a drouth year at local creamery prices. Some of the men sold whole milk and made more money. But this is not all.

During the year, 41 bulls were sold for breeding purposes. Most of these were calves. The average price was $50 per head. There were 36 purebred females sold for an average of $150 per head and the majority of these were young. In addition, 41 grade females were sold for an average price of $65.

The New Salem Circuit employs a man to test milk and keep records. The best cow in the circuit produced 14,089.8 lb. milk and 500.4 lb. butter fat last year while 19 cows produced above 360 lb. fat.

Showy Son of a Show Cow

AS a show animal, Woodmont Echo Sylvia Champion, No. 274172, is worthy of his dam, Butter Boy Empress, who herself was the grand champion female at the 1921 New York State Fair, where she was not only winner in the class for Aged Cows, but also stood at the head in the class for A. R. O. cows. Butter Boy Empress produced 660 lb. milk and 30.27 lb. butter in seven days, and averaged practically 90 lb. a day for a month. Woodmont Echo Sylvia Champion is by Sir Pietje Echo Sylvia, who is a son of the famous Avondale sire, Champion Echo Sylvia Pontiac, and was from the 32.36 lb. junior four-year-old, Woodcrest Cornelia Pietje, a cow that has won highest honors in many great Canadian show rings.

Woodmont Echo Sylvia Champion at present stands at the head of three accredited herds of Susquehanna County, Pa. Our picture shows him being held by the well-known Pennsylvania judge and breeder, B. F. Jones, who needs little introduction to Holstein fans in the eastern part of the United States.

The present owners of Woodmont Echo Sylvia Champion are men who are dependent upon the pro-

WOODMONT ECHO SYLVIA CHAMPION
Consigned to the Backus Sale, Syracuse, September 18th and 19th, by G. F. Decker, H. R. Decker, and B. F. Jones & Son. His dam and the two nearest dams of his sire have seven-day records that average 34.51 lb. butter and 724.6 lb. milk

duction of their herds for a living; they are breeders and dairymen, with the dairymen strongly emphasized. They are anxious that the daughters of their herdsire should be given an opportunity to show their quality in official work, and so are consigning this bull to the sale which will be conducted by the Backus Brothers Pedigree Co. at Syracuse, September 18th and 19th, but will first exhibit the bull at this year's New York State Fair, where they hope that Champion will emulate the great showing made by his dam, Butter Boy Empress, last year.

Donovan got a job as a barber and while shaving a man one day he let the hot towel drop on the customer's face. "Gee, that's hot," said the customer. "I know it is, I couldn't hold it" said Donovan.

Some Tuberculosis History

AMONG the articles of important events happening thirty five years ago, as published by the *Newton* (Pa.) *Enterprise,* there appeared the following:

"Newton Enterprise, Newton, Penna., June 4, 1887. —Eleven cows and a bull belonging to C. Sidney Mather, of Middletown Township, having been found to be afflicted with tuberculosis were killed in the presence of State Veterinarian Bridge, and all buried in a trench on the farm, after the hides and fat were removed. The herd was attacked with the disease about a year previous and was condemned at a meeting of neighbors, who feared the spread of the disease. The value of the cattle was appraised by Joseph Milnor, Godfrey Schaffer and Samuel M. Fite at $250, to which amount the owner was reimbursed by the community."

That was before the days of compensation in such cases by the state.

It would thus appear that tuberculosis was diagnosed in this herd, the cattle condemned by State Veterinarian Dr. Francis Bridge and indemnity paid to the owner five years after Koch discovered the tubercle bacillus in 1882 and three years before tuberculin was first prepared.—*American Veterinary Medical Journal.*

Watering Livestock

By George Leslie

DID it ever occur to you, so as to make a lasting impression, that when your Holstein-Friesian cows give 50 to 75 lb. milk a day, that there is in it 43 lb. to 64½ lb. of just plain water? Or, again, do you realize that 50% of the animal body is also just water? Probably not; even good feeders sometimes put over the Eighteenth Amendment in the cow barn, not so much by intention as through lack of a realization of how much the cow needs water and how much water she needs.

Of course this does not apply to barns where automatic drinking cups give a plentiful supply at all times. It is to the dairy farmer who carries water to his cows or drives his herd out to a brook or trough in the barn yard that we speak.

While the cow may need and want considerably more than you allow her to have, she has no way of showing it except by the pail, and we do not always understand fully the story of the contents of the milk pail, day by day.

It is true that grains, hays, and green feeds provide water in varying measure. According to Henry & Morrison, the most used standard grains have from 8% to 12% water, with a fair average of 10%; hays in general use about 11% to 12%, with 15% to 16% for mixed oat and pea and fourth cutting alfalfa. Other cuttings of this great legume average about 8% water. Corn silage provides about 75% and fresh green roughage, wet beet pulp and roots anywhere from 50% to 90% water.

It will be noted that the highest water content is in what feeders term the succulents—green fodders, roots, pulp, silages—which is one of the reasons for their great usefulness in the dairy cow's ration.

Give your dry cows (this time we don't mean "thirsty") four gallons and your milking cows 12 gallons of water a day, at least, if you can supply it to them; while if you take them to water, don't hurry them so that they are only partially satisfied, let them drink *all they will.* These are average allowances. Cows making very heavy yields need more and should be given water at least twice a day. For general herd practice, one watering a day, provided always that the cows get *all they want,* will suffice.

A freshly calved cow should have the chill taken off the water she gets for the first three days after calving. Very cold water given at this time may help to make a caked bag or affect the cow's digestion unfavorably, both tending to lower production.

Calves, even on milk, should have water, a little at a time, several times a day, but this should not be really cold, especially for young calves or in winter.

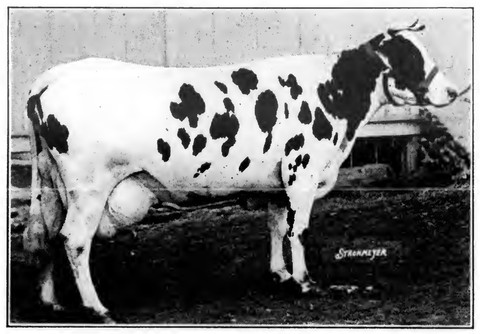
In the "old bad days" of the dairy business, when the milkman and the pump used to be pals, some wag said:

"Little drops of water,
Mingled with the milk,
Make the milkman's daughter
Gowns of finest silk."

Getting water into the milk that way, after the cow had made the milk, was of course most reprehensible if profitable to the milkman. It is much more profitable to the man who owns the cow to give her all the water she needs and let her put it to its rightful uses for her health and best production.

Our Cover

OUR cover illustration shows a scene on the farm of Innis P. Brown, Nashville, Tenn. The fine Holstein cow shown is Jane Ormsby Mercedes, No. 513766, a daughter of Ormsby King Jane and Mercedes Parthenea Colantha. This animal, when a calf, was sold to Mr. Brown by C. W. Ellis, Jr., Cortland, New York, and she certainly has done well in her southern home.



Jane Ormsby Mercedes was born January 7, 1919, and is therefore only a three-year-old. Writing on June 27th to Mr. Ellis, her present owner said that she recently dropped a beautiful bull calf, and was giving from 63 to 65 lb. mlk a day, her milk testing from 3.6 to 3.9% fat.

Donovan and McCarthy were walking down the street when they spied Sullivan all dolled up in a fine new suit of clothes. Catching up with him they inquired the occasion for the new suit. "Well, I'll tell you," said Sullivan, "I'm on me way to Murphy's to ask him for the hand of his daughter Julia in marriage." "That's a h—— of a way to spoil a new suit," said Donovan.

Donovan went to another Englishman for a job and the Englishman asked him for his reference from his last employer. "I tore it up," said Donovan. "What did you tear it up for?" asked the Englishman. "It wasn't fit to read," said Donovan.

Woodcrest Ormsby Walker

WOODCREST Ormsby Walker, No. 291,182, is of those good cows that has produced over 100 lb. milk a day for a month or more. Calving at five years, eight months and 14 days old, she was put in official test 24 days from freshening in which she made 707.1 lb. milk and 25.75 lb. butter in a week and in thirty days produced 3,010.6 lb. milk and 102.32 lb. butter. Continued on long time test she produced in 343 days 20,556.5 lb. milk and 764.62 lb. butter. She is a daughter of King Walker and of Woodcrest Ormsby Butter Girl, a 23-lb. junior three-year-old daughter of Pietje 22d Son.

WOODCREST ORMSBY WALKER
Woodcrest Ormsby Walker, 101 lb. milk a day for seven days, 100 lb. milk a day for thirty days, 20,556.5 lb. milk and 764.2 lb. butter in 343 days. Owned by Department of Public Charities, Bridgeport, Conn.

Woodcrest Ormsby Walker is one of the many good ones on the Bridgeport City Farms which is owned by the Department of Public Charities, Bridgeport, Conn. This farm is under the supervison of Angus Thorne, president of the Connecticut Holstein-Friesian Breeders' Association.

No Bankruptcy Here

THE New Salem Holstein Breeders' Circuit is a district of North Dakota that went bankrupt growing wheat and other grain crops, owing to drouth.

In 1921, seventeen farmers milked 227 cows that produced 1,515,421 lb. milk containing 54,144 lb. butter fat. Practically no grain was threshed that year in this district. It was all cut for hay and fed to cows that earned for their 17 owners $18,834.25, when otherwise they might have had nothing. The feed cost was estimated at $8,172.69.

These cows were all purebred or grade Holsteins and during the year the average production was 7,663 lb. milk. The feed cost was $41.63, the selling price $95.46, which shows an average profit of $54.20 and this in a drouth year at local creamery prices. Some of the men sold whole milk and made more money. But this is not all.

During the year, 41 bulls were sold for breeding purposes. Most of these were calves. The average price was $50 per head. There were 36 purebred females sold for an average of $150 per head and the majority of these were young. In addition, 41 grade females were sold for an average price of $65.

The New Salem Circuit employs a man to test milk and keep records. The best cow in the circuit produced 14,089.8 lb. milk and 500.4 lb. butter fat last year while 19 cows produced above 360 lb. fat.

Showy Son of a Show Cow

AS a show animal, Woodmont Echo Sylvia Champion, No. 274172, is worthy of his dam, Butter Boy Empress, who herself was the grand champion female at the 1921 New York State Fair, where she was not only winner in the class for Aged Cows, but also stood at the head in the class for A. R. O. cows. Butter Boy Empress produced 660 lb. milk and 30.27 lb. butter in seven days, and averaged practically 90 lb. a day for a month. Woodmont Echo Sylvia Champion is by Sir Pietje Echo Sylvia, who is a son of the famous Avondale sire, Champion Echo Sylvia Pontiac, and was from the 32.36 lb. junior four-year-old, Woodcrest Cornelia Pietje, a cow that has won highest honors in many great Canadian show rings.

Woodmont Echo Sylvia Champion at present stands at the head of three accredited herds of Susquehanna County, Pa. Our picture shows him being held by the well-known Pennsylvania judge and breeder, B. F. Jones, who needs little introduction to Holstein fans in the eastern part of the United States.

The present owners of Woodmont Echo Sylvia Champion are men who are dependent upon the pro-

WOODMONT ECHO SYLVIA CHAMPION
Consigned to the Backus Sale, Syracuse, September 18th and 19th, by G. F. Decker, H. R. Decker, and B. F. Jones & Son. His dam and the two nearest dams of his sire have seven-day records that average 34.51 lb. butter and 724.6 lb. milk

duction of their herds for a living; they are breeders and dairymen, with the dairymen strongly emphasized. They are anxious that the daughters of their herdsire should be given an opportunity to show their quality in official work, and so are consigning this bull to the sale which will be conducted by the Backus Brothers Pedigree Co. at Syracuse, September 18th and 19th, but will first exhibit the bull at this year's New York State Fair, where they hope that Champion will emulate the great showing made by his dam, Butter Boy Empress, last year.

Donovan got a job as a barber and while shaving a man one day he let the hot towel drop on the customer's face. "Gee, that's hot," said the customer. "I know it is, I couldn't hold it" said Donovan.

Some Tuberculosis History

AMONG the articles of important events happening thirty five years ago, as published by the *Newton* (Pa.) *Enterprise,* there appeared the following:

"*Newton Enterprise,* Newton, Penna., June 4, 1887. —Eleven cows and a bull belonging to C. Sidney Mather, of Middletown Township, having been found to be afflicted with tuberculosis were killed in the presence of State Veterinarian Bridge, and all buried in a trench on the farm, after the hides and fat were removed. The herd was attacked with the disease about a year previous and was condemned at a meeting of neighbors, who feared the spread of the disease. The value of the cattle was appraised by Joseph Milnor, Godfrey Schaffer and Samuel M. Fite at $250, to which amount the owner was reimbursed by the community."

That was before the days of compensation in such cases by the state.

It would thus appear that tuberculosis was diagnosed in this herd, the cattle condemned by State Veterinarian Dr. Francis Bridge and indemnity paid to the owner five years after Koch discovered the tubercle bacillus in 1882 and three years before tuberculin was first prepared.—*American Veterinary Medical Journal.*

Watering Livestock

By George Leslie

DID it ever occur to you, so as to make a lasting impression, that when your Holstein-Friesian cows give 50 to 75 lb. milk a day, that there is in it 43 lb. to 64½ lb. of just plain water? Or, again, do you realize that 50% of the animal body is also just water? Probably not; even good feeders sometimes put over the Eighteenth Amendment in the cow barn, not so much by intention as through lack of a realization of how much the cow needs water and how much water she needs.

Of course this does not apply to barns where automatic drinking cups give a plentiful supply at all times. It is to the dairy farmer who carries water to his cows or drives his herd out to a brook or trough in the barn yard that we speak.

While the cow may need and want considerably more than you allow her to have, she has no way of showing it except by the pail, and we do not always understand fully the story of the contents of the milk pail, day by day.

It is true that grains, hays, and green feeds provide water in varying measure. According to Henry & Morrison, the most used standard grains have from 8% to 12% water, with a fair average of 10%; hays in general use about 11% to 12%, with 15% to 16% for mixed oat and pea and fourth cutting alfalfa. Other cuttings of this great legume average about 8% water. Corn silage provides about 75% and fresh green roughage, wet beet pulp and roots anywhere from 50% to 90% water.

It will be noted that the highest water content is in what feeders term the succulents—green fodders, roots, pulp, silages—which is one of the reasons for their great usefulness in the dairy cow's ration.

Give your dry cows (this time we don't mean "thirsty") four gallons and your milking cows 12 gallons of water a day, at least, if you can supply it to them; while if you take them to water, don't hurry them so that they are only partially satisfied, let them drink *all they will.* These are average allowances. Cows making very heavy yields need more and should be given water at least twice a day. For general herd practice, one watering a day, provided always that the cows get *all they want,* will suffice.

A freshly calved cow should have the chill taken off the water she gets for the first three days after calving. Very cold water given at this time may help to make a caked bag or affect the cow's digestion unfavorably, both tending to lower production.

Calves, even on milk, should have water, a little at a time, several times a day, but this should not be really cold, especially for young calves or in winter.

In the "old bad days" of the dairy business, when the milkman and the pump used to be pals, some wag said:

"Little drops of water,
Mingled with the milk,
Make the milkman's daughter
Gowns of finest silk."

Getting water into the milk that way, after the cow had made the milk, was of course most reprehensible if profitable to the milkman. It is much more profitable to the man who owns the cow to give her all the water she needs and let her put it to its rightful uses for her health and best production.

INTENTIONAL SECOND EXPOSURE

Potential Thirty-five Thousand Pound Cow

THE great cow, Queen Carlotta De Kol No. 311674, owned by Brock & Jenks, of Genoa, N. Y., is making a tremendous record on long time test. On August 21st she had been on test nine months and twenty days, during which time she had given 29,142.7 lb. milk with approximately one thousand pounds of butter. On that day she was milking 85 lbs. a day despite the extremely hot weather and Mr. Jenks expects her to make, barring any accident, well over 35,000 lb. in the full year.

When Queen Carlotta De Kol was a senior four-year-old she made a seven-day official record of 30.56 lb. butter and 656 lb. milk. She is a daughter of Joe Gelsche Carlotta Clothilde, 2d, and of Juna Price De Kol. She is a good individual and has a remarkable milk vein development, carries a central milk vein in

QUEEN CARLOTTA DE KOL,
Now on test with expectations of making 35,000 lb. milk in the year. Owned by Brock and Jenks, of Genoa, N. Y.

addition to the ones on each side and has at least 16 different milk wells. In the words of her owner, "an outward symbol of her wonderful capacity."

Queen Carlotta De Kol is kept in an ordinary screened box stall which is equipped with an electric fan which works over her on muggy days. Between the midnight milking and the 5 A. M. milking she is let out for exercise in the near-by orchard. She has never missed a meal during her test. Her ration consisted of 40 lb. of grain "Purina cow chow," 10 lb. of beet pulp, weighed when dry but soaked before feeding, 1½ bu. of corn silage and all the alfalfa hay she would consume.

The picture shows her with her caretaker and milker, Floyd Dietzer, to whom is due much of the credit for the splendid record this cow is making.

Boys at Maryland Fair

THE Maryland State Fair is famous for its calf club contests and for the judging ability of its boy competitors. The 1922 state wide dairy cattle judging contest for the junior members, which has always been a feature at Timonium is scheduled again this year. Among the counties which have not hitherto been represented but will have teams this year, are Alleghany, Baltimore, Howard and Montgomery.

Other contests at Timonium in which the club members will compete will be the exhibits of purebred dairy calves, pigs and poultry, for which substantial prizes are being offered in all classes.

While calf club work in Maryland is less than three years old, there are now more than 80 purebred heifers in the hands of agricultural club boys and girls. They are divided amongst the counties as follows: Baltimore County, 16; Cecil County, 2; Dorchester County, 1; Harford County, 32; Kent County, 4; Montgomery County, 10; Queen Anne's County, 14; and Worcester County, 3. In Harford County many of the heifers have freshened and are producing.

Missouri State Fair

THE Missouri State Fair was rather disappointing from point of the number of Holsteins. Only thirty-seven head were shown. A. J. King, of Kansas City, Missouri, exhibited twenty head and won five championships and eleven blue ribbons. His bull, King Sylvia Carnation, a son of Carnation King Sylvia, won first prize in the yearling class and was made junior and grand champion male. Fannie Belle Pauline De Kol, 2d, of the King herd, was first prize aged cow, senior and grand champion female. This cow has an official record of 28.32 lb. butter from 731.7 lb. milk and is a granddaughter of Aaggie Cornucopia Johanna Lad. She will be remembered as winning second prize at the show connected with the Second

FANNIE BELLE PAULINE DE KOL 2d, No. 216432
First prize aged cow, senior and grand champion, 1922 Missouri State Fair. Owned by A. J. King, Kansas City, Missouri.

National Coöperative Sale held at Syracuse, New York, June, 1921. She was consigned to this sale by W. F. Brown, Meshoppen, Pa., and was bred by F. M. Riker, Factoryville, Pa., whose herd of eighteen milkers have been making such a splendid showing this season in the Wyoming Testing Association.

Mr. King purchased this cow at Syracuse for $1,250 and at that time told a representative of the BREEDER AND DAIRYMAN that she would be heard of again as a show cow if she lived.

Lady Superba Pabst, of the King herd, was first prize junior heifer calf and junior champion.

Pettis County Holstein-Friesian Association showed a number of animals by Brookings Cornucopia and won first prize on "Get of Sire."

Answers to Correspondents

My cows are unruly and are always getting into things. Please tell me what to do. Fred.

Salt them liberally, Fred. They are too fresh.

I run a farm with a dozen cows and I can't seem to get ahead. Ham. B. Hind.

Test your cows, beef the poor ones. Don't keep cows unless they keep you.

What are your favorite colors? Mary Ellen.

Black and white, of course. We should think anyone would know that.

I love a girl who is poor while a rich girl with a large Holstein herd loves me. Both are good looking. Which had I better marry? Handsome Sam.

Marry where your heart is, Sam. Meanwhile, send photo and address of the other lady.

No, Susie, buttercups, butterplates and butter fingers are not things to be eaten. Nor should you eat butterine, if you value your health.

Sam—We don't believe nature ever intended an eight-hour day for farmers but she almost insists on an eight-hour night. The doctor orders me to stay in the country but the cows, calves and birds make so much noise that I can't lie abed like I used to in the city. Slee P. Head.

Would advise consulting the village undertaker. He will put you where you can have a good long rest and where no bawling cattle or singing birds will disturb you.

Two different fellows want to marry me. One is a farmer who has just a high school education but a nice herd of Holsteins, the other is a city fellow with two college degrees. Please give your opinion. Sara Jane.

Well, Sara, once on a time we had a calf that nursed two cows and the more he nursed the bigger calf he grew. Think it over.

When you wish to sell one, two or three animals, try a Classified Advertisement in the BREEDER AND DAIRYMAN. It will do the trick.

Donovan's wife was upbraiding him for his action at the party the night before. "And what did I do?" asked Donovan. "What did you do?" replied the wife. "When we were at the table and the woman on your right asked you for the nut cracker, what did you hand her?" she queried. "Well, what did I hand her?" asked Donovan on the defense. "You handed her a beer bottle."

INTENTIONAL SECOND EXPOSURE

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

September 8, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Hackney Responsible for Cabana Law Actions

THE sensation of the Cabana examination at Syracuse was Mr. Cabana's statement that it was the action and words of ex-Vice-President Hackney that caused him to fight the Directors in the law courts. After Cabana had answered questions not only on the Cole and record questions but also on his knowledge of purchases and sales of Pine Grove Farm cattle, had been thanked for his candor by Colonel G. Watson French, and, after a three-hour quiz, had been recalled to the stand and questioned for another hour, ex-Vice-President Hackney threatened before the entire Board, that unless he (Cabana), took Niemann, Cole and Brooks and had them go over the records and point out in which records fraud had been perpetrated, the Association would wipe all the Pine Grove Farm Records off the books. No director present said a dissenting word, despite the fact that Mr. Hackney was as vice-president, NOT A MEMBER OF THE BOARD AND NOT LEGALLY ENTITLED TO VOTE in any way on the question. This was an unwarranted assumption of power by Mr. Hackney, to say nothing of its want of wisdom and tact and precipitated matters.

This gave Cabana, so he claims, the idea that the Board had prejudged his case, had, using his own words, "Made up their minds to crucify him" as not a director present dissented and is the reason he appealed to the law courts.

THE BLAME FOR MUCH OF THE LEGAL TROUBLE of the Association and the scandal which has so grievously afflicted the Holstein industry should be laid at the doors of I. M. Hackney, whose foolishness and bull-headedness has resulted in thousands of dollars being paid lawyers from the coffers of the Holstein-Friesian Association of America and untold loss to those who own purebred Holsteins owing to the shaking of the dairy public's confidence in Holstein-Friesian test records.

Comments

THE investigation into the records made at Pine Grove farms has been a long drawn out and tedious affair. We believe that the action taken by the Board of Directors on Sunday, August 27th, marks the end of the first chapter of the litigation. The Injunction Proceedings brought by Mr. Edward P. George of Chaffee, New York, against the Directors restraining them from acting as Directors, vacated on Saturday the 26th and sustained on Monday the 28th, restrained the Directors from doing anything further in the matter until the George case is heard in the Courts on September the 11th.

If, as a result of the injunction that Mr. George has brought against the Board of Directors, the Board is declared vacant, it will mean that the case will have to be tried over again from the beginning by a legally elected Board. If the Court finds that the Board is legal and the action taken on Sunday by the Board holds, then it is readily apparent that the case will be appealed to the Courts of Justice where the evidence will be reviewed on both sides and the matter decided by disinterested jurors, whose decision will not necessarily be final as either side will have the privilege of appealing to higher Courts until the matter is finally decided by the Supreme Court of the United States.

During the time that this case has been under investigation the publicity that has been given the matter has practically paralyzed the Holstein industry and has placed the Directors in a position where it has made it very difficult for them to render an unbiased verdict. One of the Directors even refused to set in judgment upon the case.

The first regrettable feature entering into the investigation was the unwarranted and premature statements published in the *Holstein Journals* in August 1919, over the signature of D. D. Aitken, then acting as President of the Association.

This published statement coming from the President of the Association threw a cloud over the Holstein Industry that has resulted in financial loss to every owner of purebred Holstein cattle and not only that, it placed the Directors in a position where they would be liable for damages in case, after a full investigation of the matter, the records in question were not found to be fraudulent. Every director was placed in the position of having to render a verdict of Guilty in order to protect the Board of Directors.

The very fact that these statements were published by the President of the Association prematurely before a full investigation has been made and, as a direct result of this publication, owners of cattle related to animals in question sustained a direct loss of thousands upon thousands of dollars.

It is the belief of some that the truth could have been determined and the whole thing settled in the beginning if those in charge of the investigation were as eager to get at the truth as they were to show their authority. It is a matter of record that at a hearing held in Cleveland early in August 1919, that Oliver Cabana, Jr., owner of Pine Grove Farms, offered to lend his assistance and coöperation to get down to the bottom of the whole thing and learn the truth. Realizing that it would place the Board of Directors in a very awkward position to act as prosecutors and jury, he suggested that the matter be left to disinterested arbitrators who should be given the power to go ahead and make the most thorough and rigid investigation and that he would be willing to abide by their decisions and pay every cent of the cost of the investigation.

In response to this proposal, Mr. J. M. Hackney, then vice-president of the Association, addressed Mr. Cabana in his characteristic domineering way, that, unless he got Messrs. Niemann, Cole and Brooks to go over his records and through his dairy and point out the cows on which fraudulent tests had been made, that every record made at Pine Grove Farm would be removed from the books. Mr. Hackney made this proposal without any dissenting voice from the directors present and we understand that it was at this time that Mr. Cabana determined in his own mind that the Board of Directors were out to crucify him and that the matter of determining the truth or falsity of records was not the only thing that they had in mind.

It has been brought out during the investigation of the Pine Grove records that in the mad effort of a certain group of men to get control of the Association (with a view of exploiting its resources,) that the Association has been left in a position where the legality of its Board of Directors and methods of holding elections are questioned, and at the present time there are two court proceedings pending to determine the number of directors the Association is entitled to and the legality of the present board.

The ultimate outcome of the investigation of the Pine Grove records when the matter is tried out in the courts is hard to determine as previously no Holstein breeder who has had records expunged has appealed to the courts. The Guernsey Association has been through such a legal procedure with the result that the records that were expunged were ordered replaced on the books by the court.

It has been said, "The most important feature of the Cabana case was to allow the right of a membership Association such as The Holstein-Friesian Association of America to make and adopt by-laws, rules and regulations for the conduct of its own business and for the elimination of any fraudulent records, either of breeding or production."

We believe that the most important thing to be determined in the Cabana issue is whether the records made at Pine Grove Farm were honestly or fraudulently made.

The Holstein-Friesian Association of America or any other similar Association has a right and always has had a right to make and amend by-laws, rules and regulations and function under them as long as they kept within the law, but it is one of the fundamental laws in our good United States that before anyone is punished or has his property rights removed, they shall be afforded a fair trial before an unbiased tribunal.

Whether the findings of the Board of Directors would be altered if the defendant's evidence had been presented and considered, we cannot say, but we are convinced that sooner or later the truth and the whole truth will be known and we understand that it is Mr. Cabana's intention to have the whole question thoroughly tried out in the Courts of Justice.

Summing up the results so far attained in the Cole episode, *Be It Resolved,* that a perjured liar, a rich man who is willing to fight and a Board of Directors composed of Cow Jockeys, Millionaires and Politicians, make the best possible picking for legal talent and is the most efficient combination yet devised to put a crimp in the purebred cattle business.

Fun for the Lawyers

THE legal troubles of the Holstein-Friesian Association of America are accumulating fast. The temporary injunction of Edward P. George was re-obtained on the morning of Monday, August 28, and will be argued at Buffalo, Sept. 11. In his petition he says that he knows of two parties, Edward S. Jordan, a nonmember and John T. Shananhan, a member of the Association, who plan to bring action against the Association when the Cole records are expunged.

Then Mr. Brady has appealed his action, which was decided against him on a technicality.

Without a shadow of a doubt Mr. Cabana will bring action to review the whole record case in the courts. If Cole can only be placed on the witness stand and submitted to examination under oath by the opposing counsel, it would be worth the cost to get at the truth if it can be obtained from a man who first swore the questioned records were correct, then swore they were false and the third time swore that they were truly made.

The Holstein-Friesian Association of America is wide open to attack until a clean cut decision is given as to the legality of the present Board of Directors. It was Justice Sears, a judge of the Supreme Court of the State of New York, sitting in judgment, at Buffalo, that first said that there was no evidence, as far as he could find, that the Association was ever legally entitled to have nine directors. The courts alone can decide whether or not the amendment to the Membership Corporations Law of the State of New York, passed May 5, 1921, validated previous elections and actions of the Board.

This may be fun for the lawyers but how about those who own Holsteins and find their prospective customers holding back because of lack of confidence in the Holstein cow, Holstein records and our National Association?

Then, when the average man thinks over the fact that lawyers have been in control of the management of our Association during the time the errors were made which render the Association liable to attack at any time, words fail.

Classified Advertisements have pulling power.

The Proceedings at Syracuse

THE directors of the Holstein-Friesian Association of America met at the Hotel Onondaga, Syracuse, New York, August 24-25-26. The afternoon of the twenty-fourth was taken up by meetings of the prize and extension committees.

On the morning of Friday, August 25th, the directors and officers of the Association met in Parlor D. President Lowden called the meeting to order at 10 A. M. and the secretary read the Call for the meeting. The roll call showed all present with the exception of Messrs. Davidson, Schroeder, Fox and Vice-President Kelley. Mr. Fox came in shortly afterwards.

President Lowden said that the first thing was the investigation of records made by one Charles E. Cole. The Association was represented by its attorneys, O. U. Kellogg, of Cortland, N. Y.; Louis Babcock, of Buffalo, N. Y., and C. M. Horn, of Cleveland, Ohio. Harry W. Killeen, of Buffalo, N. Y., served notice upon the directors present of an injunction obtained by Edward P. George, of Chaffee, N. Y., who has been a member of the Association for the past four years. This injunction was dated August 22d, and was granted by Wesley C. Dudley, Justice of the Supreme Court of the State of New York and it called upon the individual directors to appear at Buffalo at 10 A. M., September 11 to show why the injunction should not be made permanent. Mr. Kellogg asked why the injunction papers had not been served before. Mr. Killeen answered that the papers had to be held until the directors came under the jurisdiction of the New York State Courts as fourteen of the sixteen resided out of the state. He said that the present proceedings were against the directors as individuals and not against the Association. Mr. Lowden asked how many times it was necessary to fight the same question and inferred that the legality of the Board had already been decided in the Cabana injunction and Brady case. Mr. Killeen answered that it had never been decided, that Justice Sears at Buffalo ruled that the question of the Board's legality was not the subject of a direct attack in his court and was only a collateral attack and this being so he could not decide the question. In the Brady case, Mr. Brady was estopped from proceeding on the grounds that he had taken part in the St. Paul meeting which established the delegate system, by giving his proxy to Judge Peasley who, after voting in meeting against the system, after the vote was taken moved to make the election unanimous.

After the papers were served, President Lowden read that the action did not prevent ordinary routine business nor the disbursement or the receipt of money, and Mr. Killeen said that that was not the intention, that the present action was against the directors as individuals and not against the officers or the Association as such. Thereupon, the Board went into executive session, while Messrs. Horn and Babcock traveled to Buffalo in order to appear before Justice Dudley, 10 A. M. Saturday, August 25, where they succeeded in having the injunction vacated on the grounds that the law requires that a preliminary notice of the intention to obtain an injunction be given a corporation, which was not done in this particular instance.

Proceedings on the Second Day

The Board of Directors again assembled in the Hotel Ballroom Saturday evening, August 26. President Lowden called the meeting to order at ten minutes to nine and a roll call showed all directors present with the exception of Col. French, Mr. Davidson and Mr. Schroeder. It was announced that Mr. Bell would not sit in judgment, feeling that under the circumstances he could not give an unbiased decision.

Oliver Cabana, Jr., was present with M. L. Allen, superintendent of Pine Grove Farms. Harry W. Killeen, who represented Cabana in the previous law proceedings, conducted Mr. Cabana's case. In opening he first questioned the wisdom of admitting "hearsay" evidence and also questioned the legality of the Board of Directors on the grounds that the Association was legally entitled to only six directors. He warned the Board that any questions decided now or decisions given, might invite litigation in the future. He reviewed the history of the legal proceedings, reasserted that Justice Sears in his decision said that the question of the legality of the Board was not before him, as a direct attack, and Mr. Killeen also stated that the Brady injunction was not judged on its merits but that Mr. Brady was estopped because he had participated in the St. Paul election and that Mr. Brady had appealed from this decision. He also said that the George injunction was vacated because no previous notice had been given to the Association of Mr. George's intention to apply for an injunction. He said the questions at issue should be held for a legal board to decide. At this point, and acting in the interests of Mr. Edward P. George, Mr. Killeen served notice of a new injunction order on the Directors. This new order was returnable Monday morning, August 28 at 10 A. M. in Buffalo and was to show cause why the George injunction should not be sustained until the case was called September 11 at Buffalo. Mr. Killeen asked that the present investigatioin be held until a court decision be given and he challenged the Board as not being legally elected and he challenged on the grounds of bias the right of James A. Reynolds, Col. French, Col. Pabst, and Fred F. Field to sit in judgment in this case. President Lowden ordered the objections received and said that they would be considered by the Board.

Mr. Kellogg, for the Association, submitted the minutes of the meeting at Buffalo, August 17-18, 1920, as being those of the first two days of this investigation. Mr. Killeen objected on the grounds that they were incompetent, irrevelant, immaterial and included "hearsay" evidence.

From James Reynolds, Mr. Kellogg brought out the fact that Mr. Reynolds accompanied by Mr. M. S. Prescott had visited Mr. Cole and had offered to pay Cole's expenses to the inquiry and that Cole said he would be present. Mr. Killeen stated that Mr. Cabana had, on Tuesday, August 22, sent Cole a draft of $100 to pay expenses and had offered to pay his expenses in full in order to get him to attend.

The first witness was Elmer C. Stady, of Buffalo, who gave his phone number but no street address, a former test supervisor who said that he conducted a retest on Segis Hengerveld Fayne Johanna on April 15 to 17, 1918, at Pine Grove Farms; that there were two other inspectors present and that Chas. E. Cole milked the cow and was dressed in a loose frock and overalls. The peculiar movements of Cole when on the milking stool attracted his attention and afterwards when Cole was walking away from him, he saw a milky substance on the crotch of Cole's overalls, and he called the attention of another supervisor, Harold Spencer, to this. This was at the second day at the 4:30 P. M. milking, the fourth milking at which he was present. After this, the three testers talked things over and decided to communicate with Professor Wing, but did not phone because they did not want Cole to hear them talking. A letter was written to Professor Wing which Stady and Spencer signed and Spencer started on foot to Elma post office, about a mile away, to mail the letter. There was no evidence introduced at the hearing that Professor Wing ever received such a letter. On cross-examination, it was brought out that there were two cows on test at the time and that Mr. Stady remained on regular test and was there from April 15 to 25 inclusive. Mr. Stady said that the barn was high and light and also was electrically lighted at night and that Cole was not an extremely fast milker, taking from twelve to fifteen minutes to milk this particular cow.

Mr. Killeen asked the Association to produce the test supervisor, Harold Spencer, said to reside at Lancaster, New York. Mr. Kellogg said they had been unable to get him to attend any of the meetings.

W. H. Mace, of Cortland, N. Y., said that he and Mr. Fred Niemann, then manager of Pine Grove Farms, were together during the Hastings sale at Syracuse, April, 1918, and that Niemann was called home because he said, they were having trouble with the men on the farm.

Mr. Kellogg submitted charts of the tests made by thirty-three animals at Pine Grove Farms, as well as charts of the tests made by some of these animals other years. These were handed in in bulk at which Mr. Killeen vigorously protested. A large bundle of test slips were also offered in evidence, said to be slips used by the testers while at Pine Grove Farms. The charts, Mr. Kellogg said, had been made from these slips. Transfer certificates were submitted showing the transfer of ownership on the books of the Association of Segis Fayne Johanna and a number of other cows from their previous owners to Oliver Cabana, Jr. This was all the evidence offered on behalf of the Association.

Mr. Killeen asked for an adjournment on the grounds that much of the evidence such as charts of the cows whose records are in question and of large record cows owned by other breeders were locked in the Cabana vault; that Mr. Cabana's bookkeeper alone knew the combination and Mr. Cabana was unable to open the vault. President Lowden replied that the defense knew that the Board would go ahead with the inquiry at 8:30 P. M. and Mr. Killeen answered that they did not get the judge's decision until after the bookkeeper had left. Cole's denial of his first confession was in the vault as well as his statements about his conversations with directors Reynolds, French and Fields.

The first witness called for the defense was Mr. M. L. Allen. Mr. Allen said he started work at Pine Grove Farms in 1912 and for years was superintendent of that establishment. He identified a photo of the inside of the Pine Grove test barn and gave evidence as to the lighting. He said that he was in charge of the farm when Segis Fayne Johanna made her fifty-pound record as Mr. Niemann was on a vacation; that Segis Fayne Johanna weighed a ton when she was on test and was in fine condition and very fat. He testified that Waldo Brooks boarded with Cole; that Cole was a very light dresser, wearing few clothes while around the barn. Here Mr. Kellogg objected to evidence as to size and lighting of the barn and of Cole's clothes. Mr. Lowden objected to the repetition of evidence. Allen said that in his opinion Cole did not wear enough clothes to hide a hot water bottle nor did Brooks. He thought that Brooks tested Albina Josie when she made her 40 lb. official record and Cole tested her when she made 33 lb. He saw nothing wrong at either time.

At this point Kellogg offered in evidence a photo of Segis Fayne Johanna with Cole standing by her head as showing the costume usually worn by Cole. He also offered a chart of the record of Fairview Korndyke Hengerveld, 3d, making thirty-four records under investigation.

Mr. Cabana being called as witness, testified that he was the owner of Pine Grove Farms; that at one time they had nearly four hundred head of cattle and over eighty employees; that Mr. Charles Cole was recommended to him by the late Charles M. Dow, of Jamestown, New York; that he started him on a straight salary and the first bonuses paid to him were very small, ranging from five dollars to one hundred dollars. That Mr. J. T. Williams, then general manager of Frank O. Lowden's Sinissippi Farms and Woodlawn Farms offered larger bonuses to Mr. Cole for making large records and it was thought necessary for Pine Grove Farms to adopt the same bonus schedule that Mr. Williams was willing to pay, or lose their men. He, Mr. Cabana, demurred for a time but after six months, Pine Grove Farms met the William's Bonus Schedule. In his vault at Buffalo, he has the original bonus chart on Mr. William's stationery, and over Mr. William's signature. Mr. Cabana stated that the first intimation of any crookedness at Pine Grove Farms came from John Arfmann. When asked if he knew of any fraud by Cole and Brooks, he replied, "I should say not, no indeed." Acrimony developed at the Buffalo meeting and in his opinion all the directors have had pre-judged the case. This statement was objected to by Mr. Kellogg.

Mr. Cabana said that at a previous examination, after he had been on the stand for three hours and was called for the second time because one or more Directors was not present at the first examination, that

Colonel French and other members of the Board thanked him for his candor. At this second examination, Mr. Hackney said, "Unless you get Niemann, Cole and Brooks to tell in which cow's records fraud was perpetrated we will wipe out every Pine Grove record. When Mr. Hackney made this threat, no director spoke in dissent and this was his grounds for his accusation of bias and his reason for commencing his action. He believed that the directors were out to crucify him.

He stated that at the New York City meeting, where Cole was present there were also present Mr. Faitoute, Mr. Stillwell, of the D. W. Field Farm, three Mr. Brills and others, about fourteen in all. At this meeting Cole retracted his confession but no statement was taken down in writing.

On cross-examination by Mr. Kellogg, Mr. Cabana could not recall the exact amount paid as bonuses on the records or the number of World Records made at Pine Grove Farms. He also stated that he did not know that Fred Niemann, his superintendent, shared in the bonuses paid to Cole and Brooks. He stated that Mr. Cole was in Buffalo, Thursday, August 24th and was in his office about 3 P. M. on that date. Mr. Kellogg demanded why Cole was not present at the hearing and Mr. Cabana said that Cole left Syracuse, saying that he was going to attend the inquiry and he did not know why he was not present. Mr. Cabana said that he still owned two or three cows whose records were in question.

Mr. Kellogg then offered in evidence, Mr. Cabana's statements made at the hearings in Cleveland and at Buffalo before the Executive Committee and the Board and also copies of the records made at Pine Grove Farms since August, 1919, and also offered in evidence copies of charts giving the bonuses paid at Pine Grove Farms which were said to be copies of the bonus chart compiled originally by Mr. Williams.

Mr. Killeen asked for adjournment until other men who owned cows tested at Pine Grove could be examined. The defendant proposed to get former employees of Pine Grove Farms as witnessess and also to put on the stand, testers who had supervised many of the records in question. He then said that Mr. Cole had offered to retract his first confession before several men while in New York City.

The time was now 12:32 A. M., Sunday morning, August 27. President Lowden said that the Board would go into executive session, consider the evidence before it and would take into consideration Mr. Killeen's plea for adjournment.

The Board sat until nearly five o'clock Sunday morning and it was announced that they expunged from the Advanced Registry thirty-three records, leaving the record of Korndyke Winona on the books.

Why Is Cole Still a Member?

IT will be a tremendous surprise to many who have become interested in the Cabana-Cole trouble to learn that Charles E. Cole, of Granville, N. Y., is still a member of the Holstein-Friesian Association of America. It is now more than three years ago since Cole swore under oath that he cheated while testing cows under Advanced Registry rules. That one thing alone called for his immediate expulsion. The local Holstein Breeders' Club to which he belonged struck him off the rolls: why did not the National Association?

The fact that he first swore that the records as reported were true, then swore that he cheated while making them, then swore that he did not, proves that the word of such a man is worthless. The breeding of purebred cattle is a business conducted largely upon honor; if the breeder is without honor what is there left?

That Cole is a perjurer is shown by his conflicting statements made under oath.

Then why do the directors of the Holstein-Friesian Association of America submit members of the Association to the indignity of being classed as fellow members with such a man?

The Grounds for the George Injunction

THE petition for an injunction against the directors of the Holstein-Friesian Association of America, requested by Edward P. George, of Chaffee, N. Y., was drawn up on somewhat similar lines to the Brady petition. The temporary injunction was obtained August 22d, served on the directors at Syracuse August 24th, vacated August 25th on the grounds that preliminary notice had not been given the directors of the corporation, put in force again at Buffalo on Monday morning, August 28th by Justice Pooley and will be argued at Buffalo September 11th, at which time the directors are called upon to show cause why the injunction should not be made permanent.

The legal grounds for the action are, briefly, as follows:

That certificates of reincorporation were filed in the office of the New York Secretary of State January 2, 1914, and in the office of the County Clerk of Onondaga County, January 6, 1914, such certificate of reincorporation providing for six directors only.

That at the annual meeting of 1914, which was held in Chicago, the number of directors was increased to nine and the Association functioned with nine directors until the June meeting of 1919 held at Philadelphia, where the number was increased to sixteen.

That no certificate required by law for the increase of the directors from six to nine was ever filed in the office of the New York Secretary of State or in the office of the clerk of Onondaga County, New York.

That the election of directors at Philadelphia, June, 1919, is null and void, being held outside the State of New York, the state of incorporation; also that ten directors were elected at that meeting before the filing of the certificate required by the Membership Corporations Law of the State of New York as then in force.

That said certificate was not executed until about July 7, 1919, was not filed at the office of the Secretary of State until July 16, 1919, and not until August 4th in the Onondaga County Clerk's office.

That an amended certificate was filed at Albany, September 21, 1921 and a duplicate at Syracuse, certifying to the increase of directors made June 4, 1919, over two years before. This certificate was signed by D. D. Aitken, and F. L. Houghton, who were president and secretary, respectively, at the meeting held at Philadelphia. Mr. Aitken ceased to be president of the Holstein-Friesian Association of America June 2, 1921.

That the filing of such amended certificate did not validate or legalize the increase as the amendment to the Membership Corporation Law of the State of New York, enabling the Association and similar bodies to meet outside of New York State did not become effective until May 5, 1921, and was not retroactive nor did it validate illegal acts already committed.

That the special act of the Legislature of the State of New York under which the Holstein-Friesian Association of America was incorporated provided that members of good standing should be entitled to vote personally or by proxy at the meetings. This is not now the case.

New Herdbook Published

VOLUME 47 of the Holstein-Friesian Herd Book is now being sent to members who have their order on file. The book contains particulars of 46,500 entries, of which 13,800 are male and 32,700 are female. The date of closing these entires was October 15, 1921, at which time 355,600 males and 692,000 females have been registered on the books of the Association.

The report contains a report of the various directors' meetings between the annual meeting at Syracuse, June 1921 and the special meetings held at St. Paul, Minnesota, October 10, 1921. The proceedings at the meetings of the Board of Directors and at St. Paul are full of interest to members of the Holstein-Friesian Association of America, showing the real views of our directors on several questions, such as the present delegate system and charging for advanced registry certificates. The proceedings at St. Paul should be studied carefully in view of the fact that the delegate system as at present in force is likely to govern the actions of the Association for some time to come.

Only a limited number of these Herd Books were printed and it is advisable for all who wish for them to write to Secretary F. L. Hougton, Brattleboro, Vermont, at once for a copy for which the charge is $2.00.

Letters to the Editor

AROUND WAVERLY, PENNSYLVANIA

Dear Editor:

Just a line to say Miller Bros. have given a Holstein bull calf to the Waverly Community House Fair to be raffled off on Saturday, September 2d.

A ton of Chestnut coal will also be given by Mr. J. E. Edwards, another Holstein breeder.

The Lackawanna Poultry Breeders will form an association, Tuesday, August 29th. A committee will pass on all flocks, and if good specimens of the breed they will get the Committeee's stamp of approval.

Very truly yours,
ROBT. WINSHIP.

Technique of Tuberculosis Testing

BY HENRY W. TURNER
Pennsylvania Bureau of Animal Industry. Harrisburg, Pennsylvania

MOST discussions of tuberculin tests are confined to efficiency of results rather than the importance of uniform methods of conducting tests.

The tuberculin test is a scientific operation, depending for efficiency upon the careful administration of the test and a close and intelligent observation of the animals during the time that the test is in operation. It is not a mechanical process by which any one who can make a hypodermic injection or read a thermometer can obtain satisfactory results. The veterinarian is an important factor in tuberculosis control work. To do the work efficiently, he must be familiar with tuberculosis in its various forms and be able to recognize the physical symptoms of the disease as well as the manner of spread, and understand the best preventive measures for combating it. With these facts, and having for efficiency upon the careful administration of the tuberculin test, he is qualified to use this test as a method of control in freeing infected herds from the disease.

GENERAL INSTRUCTION.

When a tuberculin test is to be made, the owners of the cattle should be notified several days in advance of the time set for the test on his herd, and requested to have his cattle stabled a few hours prior to the time the verterinarian will arrive and have available all data pertaining to the herd. Assuming that these arrangements have been made, the veterinarian must be prompt in keeping the appointment, and immediately upon arrival at the farm should discuss with the owner the contract under which the test is to be made. It is important that the owner should understand just what will be required of him, and know the benefits he may derive. A thorough understanding between the owner and the veterinarian should be had before proceeding with the test, as this may avert dissatisfaction later. The owner's future attitude toward tuberculosis control work, whether it is to be favorable or otherwise, may depend largely upon his impressions of the veterinarian's manner and methods. For this reason the veterinarian should be agreeable, careful in every detail, and considerate. Tact and consideration are usually successful in establishing respect and confidence in the man and his work.

The history of the herd should now be obtained—where the animals originated; whether previous tuberculin tests have been made of the herd or any of the individuals; whether any animals have been sold or slaughtered or have died recently and the cause. The number of animals in the herd should be obtained and a physical inspection of the animals made to detect tuberculosis or any other disease or conditions which might influence the accuracy of the test. Arrange with the owner at this time for all help that will be needed in handling cattle during the test.

Errors are so likely to occur in handling large herds that the only safe way is to formulate a plan of work, and adhere strictly to it. The animals should be arranged in the stable in a manner most convenient.

Give each animal a stable number corresponding with the stall number, record it as well as the herd number, registry number, name, date of birth or approximate age, sex, and brief description. These points of identification of each animal must be established and recorded before proceeding with any tuberculin test.

THE SUBCUTANEOUS TEST.

Special Instructions.

Before proceeding with the test the owner should be instructed as to the care and management of the herd during the test.

1. The amount of feed, including roughage, should be materially reduced in dairies which are fed heavily, and feeding should never be done directly before the time for a temperature measurement.

2. Watering: Where individual drinking cups are not provided, it is best to water the animals immediately after the tuberculin is injected, and when it is possible they should be allowed small quantities of water often, but never immediately before taking a temperature.

3. Ventilation should be regulated to secure as far as possible a moderate temperature. A record of the barn temperature should be kept.

4. Milking should be done as usual.

5. Stables should be kept clean.

6. No animals should be moved without the permission of the veterinarian.

MANNER OF ADMINISTERING THE TEST.

Before beginning the test, the veterinarian should provide himself with clean over-garments and disinfected rubbers or boots.

In applying the subcutaneous test, at least three preliminary temperatures are taken two hours apart and recorded with the date and hour on the temperature sheet. The thermometers used must have been standardized by the United States Bureau of Standards, and must be clean and disinfected. They should be lubricated with a non-irritating oil containing a small amount of non-irritating disinfectant, and be inserted well into the rectum, remaining in the animal at least two minutes. A five-inch thermometer seems to give the best satisfaction.

The injection of tuberculin should be made immediately after reading the last of the preliminary temperatures, provided they have been normal. No animal with a high or irregular temperature should be injected. The dose of tuberculin used should depend upon the age and weight of the animal, and whether any previous test has been made within a short time. The dose of United States Bureau of Animal Industry tuberculin under usual conditions is from 2 to 6 c.c. In retests or with suspicious animals larger doses are recommended. The dose of tuberculin used and time of injection should be recorded on the sheet.

The syringe and needles should be sterilized before beginning the test and the needle should be disinfected after each injection. The point of injection should be either at the side of the neck, or the soft skin back of the fore-leg, under the skin, and not into the muscles. The skin is raised with one hand and the injection made quickly but carefully with the other. Disinfection of the skin at the point of injection is generally recommended, though it is a question whether it is effective; but the disinfection of the needle before each injection is of the utmost importance.

INTERPRETATION OF RESULTS.

For years a gradual rise of 2 degrees or more above the preliminary temperatures, followed by a return to the normal was considered a reaction, but for accuracy we cannot be guided entirely by this rule. We must consider the history of the herd, the age and condition of the animal, and the extent of disease in the herd. Care and judgment must be exercised in deciding the results of the test, as it is often difficult to interpret a reaction. A reaction is not simply a sudden rise in temperature for a short time, but it is a gradual rise with a high temperature for a period of at least two temperature measurements (it may be longer) then it recedes slowly, thus forming the typical curve of a reaction which is the most important indicator for the interpretation of the test. The rise of temperature in reacting animals varies from 1 to 5 degrees or more above the normal temperature of the individual. A raise in temperatue is often accompanied by the animals showing physical symptoms, which may be manifested by a roughened coat, a chill depression, diarrhea, or, in some cases, loss of appetite.

An animal during test may give rise in temperature from causes other than tuberculin, which may be mistaken for a reaction. For this reason it is necessary to study carefully all elevations of temperature before finally deciding that an animal is a reactor.

VARIOUS INFLUENCES WHICH MAY AFFECT THE RELIABILITY OF THE SUBCUTANEOUS TEST.

1. Driving or moving the animals any distance in hot weather.

2. Direct rays of hot sun on an animal.

3. Close and badly ventilated barns.

4. Exposure to cold drafts, and subsequent chilling.

5. Depriving the animals of water during the test, or, conversely, permitting them to drink large quantities of cold water.

6. Allowing bulls to be used for service during the test.

7. Cows on official record test, or excessive bagging of cows.

8. Repeated or recent tuberculin tests.

9. Changes in feeding and attendants may affect nervous cows.

10. Animals which have never been tied or confined, or those which have been on pasture for some time, when stabled for the test frequently show irregular temperatures.

11. Animals with acute indigestion.

12. Animals affected with inflammation of the genital organs, or inflammation of the udder, hemorrhagic septicemia, actinomycosis, or any condition which might carry a high temperature.

13. Some animals normally show an elevation of temperature at feeding or milking times.

14. Chronic bullers often show erratic temperatures.

15. Repeated or recent injection of tuberculin may produce tolerance.

16. Animals in heat, springers and calving are normal functions and should not be acccompanied with any elevation of temperature.

Junior Department

Training For Memphis

Thirty-five boys from different parts of Shelby County, Tennessee, attended the annual boys' encampment and short course. Particular attention was paid to the boys who were competing for positions on the Shelby County Boys' judging team.

Among the herds they examined and judged were a class of Holstein cattle belonging to the West Tennessee Normal School.

Lawrence Coldbank, of Germantown, A. G. Warner, of Cedar Grove, and Oliver Schasser, of Capleville, were selected to represent Shelby County in the judging contests to be conducted at the West Tennessee Fair at Jackson, Tennessee, and the Tri-State Fair in Memphis.

The boys were instructed in milk testing, feeding and judging. They made excursions to large industrial concerns in the city of Memphis, including the Memphis Packing Co., the Edgar-Morgan Feed Co., and the Memphis Cotton Oil Co. They were guests of the Cotton States Merchants' Association on a boat ride and had free use of the Municipal Swimming Pool as guests of the management.

Deserved His Victory

By winning first place in the dairy judging contest at the annual Chatham round-up, early in August, Harry Monroe, Manistique, Michigan, won a valuable purebred Holstein calf as a prize. With P. G. Ludin and the other two members of the Schoolcraft County judging team, Walter Lindroth and William Beyers, he is entitled to attend the state fair at Detroit with all expenses paid.

The county agent, T. Shane, feels quite good over Harry's victory as when he went into this district to give the boys a few points on the subject of cattle judging, there were only two boys present, one of which was Harry Monroe. When the time for the judging Harry scored 333 out of the possible 400 and led his competitors by a wide margin.

Junior Contest In New York

Adrian Dolittle, of Kirkwood, was the best judge of Holstein cattle at the outing of the Broome County Holstein Breeders' Association which was held at the farm of former Congressman W. H. Hill, Westover, N. Y., August 26th. As a reward he received a handsome bull calf from a record cow, the prize being donated by Mr. Hill. Second prize of $10 went to Guy Paddleford, of Greene, and third prize to Elton Tibbets, of Maine. There were nine contestants, all boys.

There were many Holstein breeders at the meeting. The morning was occupied with an inspection of Mr. Hill's farm with its one hundred head of purebred cattle and its water and other fowl

Prof. C. L. Allen, Cornell, gave a judging lecture, using Winterthur Johanna King Segis Bilm, the first prize junior heifer at this year's Brentwood show. After the judging contest, Prof. Allen entered the ring with the four animals used in the contest and pointed out the why and wherefore of the prize awards.

Mercer County Tour

The Mercer County Holstein and Dairy Record Associations held their tour August 8th. There were about 35 cars loaded with interested dairymen. They started from the farm of J. W. Hendrickson, near Ewingville, where they looked over the Holstein herd and Fred Gaunt, tester for the Mercer County Dairy Record Association pointed out different cows and told of their records for milk production made during the past year. The alfalfa and soy bean fields attracted much attention.

The next stop was at the farm of Carl Schmidt and Sons, near Ewingville. The bulls of this herd will be shown at the Trenton Fair.

At Bennington, the fields of alfalfa and sweet clover owned by S. Hensen, were given considerable attention. The alfalfa was grown under various methods with and without lime and plainly showed that lime is needed in this section for successful alfalfa growing. The sweet clover had been sown in wheat this spring, had made a growth of 18 inches to 2 feet and was very thick.

The next stop was at the New Jersey State Village of Epileptics at Skillman, where lunch was eaten. After lunch, a judging contest was held on ten head of cattle. After the visitors had tried their skill, M. H. Keeney, Dairy Specialist of the New Jersey Station and J. W. Bartlett, New Jersey Field Secretary, placed the animals.

Mr. Keeney explained the reasons and caused quite a spirited discussion. C. F. Matthews, of Clinton Farms, was first in the senior contest for the Mercer County Dairy Record Association cup, Ernest Simpkins, of Yardville, was second and John Ficken, of Skillman, was third. In the junior judging contest for the Mercer County Holstein Association cup, Robert Simpkins, of Yardville, was first and Charles Parker, of Trenton, R. F. D. No. 6, was second.

Donovan and McCarthy were eating in a restaurant and after a while Donovan got nervous watching McCarthy looking so intently at the hat rack while he ate. "For half an hour now you've been looking at the hat rack, don't be worrying about your hat, I haven't looked that way once since we came to the table," said Donovan. "You don't have to, your hat has been gone for twenty minutes," said McCarthy.

LADY SUPERBA PABST

First prize heifer calf and junior champion, 1922 Missouri State Fair. Owned by A. J. King, Kansas City, Missouri.

Shows, Fairs and Expositions

Sept. 8-18—Ottowa, Ont., Central Canada Exposition.
Sept. 9-16—London, Canada, The Western Fair.
Sept. 11-15—Huron, South Dakota State Fair.
Sept. 11-16—Topeka, Kansas State Fair.
Sept. 11-16—Louisville, Kentucky State Fair.
Sept. 11-16—Syracuse, New York, State Fair.
Sept. 11-16—Jackson, West Tennessee District Fair.
Sept. 11-22—Jackson, Tenn., West Tennessee District Fair.
Sept. 11-15—Chippewa Falls, Wis., Northern Wisconsin State Fair.
Sept. 11-15—Kankakee, Ill., Kankakee Interstate Fair.
Sept. 11-16—New Westminster, B. C., Provincial Exhibition.
Sept. 12-16—Lewiston, Ida., Live Stock Show.
Sept. 12-23—Omaha, Neb., Ak-Sar-Ben.
Sept. 12-16—White River Junction, Vermont State Fair.
Sept. 12-15—Douglas, Wyoming State Fair.
Sept. 13-17—Reading, Pa., Reading Fair.
Sept. 16-22—Hutchinson, Kansas State Fair.
Sept. 16-22—Nashville, Tenn., State Fair.
Sept. 16-23—Springfield, Illinois State Fair.
Sept. 17-23—Springfield, Mass., Eastern States Exposition.
Sept. 17-22—Sioux City, Iowa, Interstate Fair.
Sept. 18-22—Grand Rapids, West Michigan State Fair.
Sept. 18-23—Allentown, Penna., Lehigh County Fair.
Sept. 18-23—Yakima, Washington State Fair.
Sept. 18-23—Sainte Scholastique, Can., L'Exposition de Sainte Scholastique.
Sept. 19-22—Montrose, Col., Western Slope Fair.
Sept. 19-22—Billings, Mont., Midland Empire Fair.

Oct. 12-21—Raleigh, North Carolina State Fair.
Oct. 16-21—Jackson, Miss., Mississippi State Fair.
Oct. 19-29—Shreveport, Louisianna State Fair.
Oct. 23-27—Columbia, South Carolina State Fair.
Oct. 26-Nov. 4—Macon, Georgia State Fair.
Oct. 28-Nov. 2—Spokane, Wash., Western Royal Live Stock Show.
Oct. 30-Nov. 4—Savannah, Ga., Savannah Tri-State Exposition.
Nov. 4-11—Portland, Ore., Pacific International Live Stock Exposition.
Nov. 11-18—Kansas City, Mo., American Royal Live Stock Show.
Nov. 17-25—Jacksonville, Florida State Fair and Exposition.
Nov. 9-19—Houston, Texas., Houston Fair.
Nov. 18-25—Kansas City, Mo., American Royal Live Stock Show.
Dec. 2-9—Chicago, Ill., International Live Stock Show.
Jan. 13-20, 1923—Denver, Col., National Western Stock Show.
Feb. 1-10—Tampa, Fla., South Florida Fair.

CHEROKEE COUNTY FAIR

The Cherokee County Fair, held at Columbus, Kan., the week of August 7-12, saw the greatest assembly of livestock and agricultural products that ever has been gathered together in Cherokee County. Despite the fact that the Fair Association had provided for more exhibits this year, at the last minute emergency tents had to be provided for displays. Cherokee County is one of the most important agricultural districts of Kansas and has a diversified and permanent agriculture. The Holstein awards were as follows:

Bull, 3 years or over: Suburban Home Company, Hood & Nichols, Asbury, Mo., first; Whitaker Farm, Walnut Grove, Mo., second; L. E. Dull, Columbus, third.

Bull, 2 years or over: Suburban Home Company.

Senior yearling bull calf: John Johnson, Scammon, first; Whitaker Farm, second; Suburban Home Company, third.

Junior yearling bull calf: Whitaker Farm, first; Suburban Home Company, second.

Senior bull calf: Whitaker Farm, first; Paul W. Freeman, Joplin, second; Whitaker Farm, third.

Junior bull calf: Whitaker Farm, first; Suburban Home Company, second.

Cow, 3 years or over: Whitaker Farm, first; Suburban Home Company, second; Whitaker Farm, third.

Cow, 2 years or over: Whitaker Farm, first; Suburban Home Company, second.

Senior yearling heifer calf: Whitaker Farm, first and second; Suburban Home Company, third.

Junior yearling heifer calf: Whitaker Farm, first; Freeman, second; Suburban Home Company, third.

Senior heifer calf: Freeman, first; Suburban Home Company, second; John Thompson, Scammon, third.

Junior heifer calf: Suburban Home Company, first; Freeman, second; Whitaker Farm, third.

Calf herd: Freeman, first; Suburban Home Company, second; Whitaker Farm, third.

Graded herd: Whitaker Farm, first; Suburban Home Company, second.

Junior and senior champion cow, grand champion cow: Whitaker Farm.

Junior and senior champion bull, grand champion bull: Suburban Home Company.

CENTRAL STATES EXPOSITION

The First Central States Exposition, held at Aurora, Ill., was a decided success. It is conveniently located, the grounds are capacious (135 acres), and well drained and the buildings large and well ventilated. Nearly 800 cattle were shown, Holsteins outnumbering all other dairy breeds with around 180 head. The Judge was Professor J. B. Fitch, of the Kansas State College. Exhibits were made by Fitchome Farm, of Aurora, Ill., Ellwood & Nelson, A. F. Randolph, Canton, Ill., the Roberts Holstein Company, of Waterman, Ill., Hargrove & Arnold, Norwalk, Iowa, Klussendorf Bros., Waukesha, Wis., while county herds came from Du Page and Whiteside Counties, Ill., and Waukesha and Jefferson Counties, Wis.

North Star Parthenea Sir Beets, owned by L. V. Garvens headed a class of thirteen aged bulls and went on to senior and grand championship. The two-year-old leader was King Levare Homestead, owned by E. E. Bain. The first prize senior yearling, Prince Denver Creamelle, of the Jefferson County Asylum herd, was junior champion. The junior yearling prize winner was King Ormsby Veeman De Kol, of the Fitchome Farm. Baird Bros. owned the first junior bull calf and A. F. Randolph & Son the first prize senior male.

The aged cow class numbered 28 head of good ones, the winner being Westview De Kol Walker, of the Baird herd, the runner up Doetje Nellie Segis, owned by Klussendorf. The Baird cow was senior and grand champion. Madam Artis Wayne Denver, from the Jefferson Asylum, was first senior yearling and junior champion. The first prize in the other classes went to the following:—

Three-year-old: Rathbun Johanna Dione Sarcastic, J. K. Rathbun, owner.

Two-year-old: Princess Piebe Ormsby Della, Klussendorf.

Junior yearling: Dorothy Ormsby Piebe, Hargrove & Arnold.

Senior heifer calf: Whitehurst Mercedes Ormsby Artis, A. F. Randolph.

Junior heifer calf: Piebe Artis Burke, Hargrove & Arnold.

Graded herd was won by Klussendorf; Yearling herd by Jefferson County Asylum with Hargrove & Arnold second; Calf herd by Randolph with Hargrove & Arnold second; Get of Sire by Jefferson County Asylum and produce of cow by Baird Bros.

BANGOR FAIR

Big crowds attended the thirty-ninth annual fair at Bangor, Maine, August 21 to 25, and saw a number of good cattle win prizes. Exhibits came from several noted herds, including the University of Maine, Orono; The American Thread Company, Milo; Summit Lumber Co., Davidson; Eastman Hill Stock Farm, Lovell; Austin W. Jones, Bangor; Pike & Hodges, Lubec and Fairfield, and Sagadahoc Farms, South Portland. The awards were:

Bull, three years and over; The American Thread Co., first; Pike & Hodges, second; Eastman Hill Stock Farm, third; Austin W. Jones, fourth.

Bull, two years; Eastman, first.

Bull, one year; University of Maine, first.

Bull calf, senior; R. C. Donaldson, first; Summit Lumber Co., second; Jones, third.

Bull calf, junior, Eastman, first and second.

Cow, aged; American Thread Co., first; Jones, second and fourth; University of Maine, third.

Cow, three years; University of Maine, first and second; Jones, third and fourth.

Heifer, two years; University of Maine, first and third; Eastman, second; Jones, fourth.

Heifer, senior yearling; John F. Longley Sons, Inc., Detroit, first; American Thread Co., second; University of Maine, third.

Heifer, junior yearling; Pike & Hodges, first; Jones, second and fourth; University of Maine, third.

Heifer calf ,senior; Sagadahoc Farms, first; American Thread Co., second; Longley Sons, third; University of Maine, fourth.

Heifer calf, junior; American Thread Co., first and third; J. Rufus Longley, second; Blanch Bros., fourth.

Exhibitor's aged herd; Jones, first.

Breeders' young herd; University of Maine, first; Jones, second.

One bull and two heifers, all under one year, bred by exhibitor; Eastman, first; Jones, second; University of Maine, third.

Get of sire, three animals, University of Maine, first, second and third; Eastman, fourth.

Progeny of dam, two animals, University of Maine, first; Eastman, second and third; Jones, fourth.

Male senior championship, two years and over; Eastman.

Male junior championship, under two years, Eastman.

Male grand championship; Eastman.

Female senior championship, two years and over; American Thread Co.

Female junior championship, under two years; Pike & Hodges.

Female grand championship, Pike & Hodges.

THE DAIRY CATTLE CONGRESS

The Iowa State Dairy Husbandry Department will stage an exhibit at the 13th annual Dairy Cattle Congress which will give the present standing of the College investigations showing the value of purebred sires. Iowa is one of the best dairy cattle markets in the United States at this time and last year spent $225,000 for dairy cattle in one of her sister states.

Iowa now has 7,200 cows enrolled in test association work. This will be recognized at this year's Cattle Congress where classes will be provided for grade cows who are from Iowa associations and who have produced at least 360 lb. butter fat in a year. The prizes are for the best 10 among the three grade dairy breeds and for the best five groups from one association there to be five cows to a group.

This makes 35 premiums for grade cows and the prizes offered total $422. The prize for purebred Holsteins will be on the same generous scale as in previous exhibitions, except that more emphasis will be placed on the young stock exhibits and there will be more premiums in some of the classes.

Pageants in which appear children dressed to show the comparative values of food are a part of the program under the supervision of Miss Imlay. The junior Holstein enthusiasts enrolled in the purebred heifer clubs will have their innings in the judging arena on September 27th while H. H. Kildee, head of the Animal Husbandry Department of the Iowa State College will place the awards on the Holstein exhibits on Thursday, September 28th, and Friday, September 29th.

OUR OFFICIAL JUDGES

The list of official judges of the Holstein-Friesian Association was revised August 25, 1922, by the committee present at Syracuse and the following are those designated, the names being grouped by states:

F. L. Morris, Woodland, Calif.
Prof. W. J. Fraser, University of Illinois, Urbana, Ill.
R. E. Haeger, Algonquin, Ill.
Prof. W. W. Yapp, University of Illinois, Urbana, Ill.
L. S. Gillette, Fostoria, Iowa.
J. P. Eves, Waterloo, Terminal Bldg., Iowa.
Prof. H. H. Kildee, Iowa State College, Ames, Iowa
Prof. J. B. Fitch, Kansas State College, Manhattan, Kansas.
A. R. Merrill, Storrs, Conn.
Prof. C. L. Blackman, 244 Main St., Springfield, Mass.
M. T. Carrigan, Concord, Mass.
Prof. T. E. Elder, Mt. Hermon, Mass.
Frank P. Knowles, Auburn, Mass.
J. H. D. Whitcomb, Littleton, Mass.
R. C. Reed, Howell, Mich.
John B. Irwin, Richfield Sta., Minneapolis, Minn.
W. S. Moscrip, Lake Elmo, Minn.
W. F. Schilling, Northfield, Minn.
Axel Hansen, Savage, Minn.
V. S. Culver, Austin, Minn.
A. L. Haecker, Lincoln, First National Bank Bldg., Nebr.
C. H. Baldwin, Dept. of Farms & Markets, Albany, N. Y.
Henry K. Jarvis, Fly Creek, N. Y.
H. A. Moyer, 259 Wolf St., Syracuse, N. Y.
M. S. Nye, Preble, N. Y.
Wm. M. Rider, Syracuse, N. Y.
Ward W. Stevens, Liverpool, N. Y.
H. D. Warner, Pawling, N. Y.
Prof. H. H. Wing, Cornell University, Ithaca, N. Y.
Prof. J. R. Dice, Agricultural College, N. Dak.
Howard C. Barker, Chardon, Ohio.
F. W. Pierce, East Claridon, Ohio.
W. H. Standish, Lyons, Ohio.
John A. Bell, Jr., 1519 Oliver Bldg., Pittsburgh, Pa.
B. F. Jones, South Montrose, Pa.
Prof. W. H. Tomhave, State College, Pa.
Prof. C. Larsen, South Dakota State College, Brookings, S. Dak.
Prof. R. E. Hunt, Virginia Polytechnic Institute, Blacksburg.
William Bishop, Chimacum, Wash.
John L. Smith, Route 1, Spokane, Wash.
George S. Bulkley, 1060 Stuart Bldg., Seattle, Wash.
Prof. G. C. Humphrey, University of Wisconsin, Madison, Wis.
O. E. Mullen, Watertown, Wis.
A. C. Oosterhuis, Oconomowoc, Wis.

PLEASANT VALLEY FAIR

Several hundred people attended the Pleasant Valley Community Fair, held near Trenton, N. J., August 16th. The exhibit of purebred livestock by the members of the Pleasant Valley Calf Club attracted attention and earned many favorable comments. The club has made remarkable progress during the past year.

Nearly every club member competed in the dairy judging competition for the special prize which had been offered by

the Mercer County Holstein-Friesian Association and which will be presented in December. Mildred Wooden was first, Mary E. Hansen, 2d, Dorothy Wooden 3d. Following the dairy cow competition, M. H. Keeney, State Extension Specialist, judged the calf club exhibit and worked hard for over two hours placing the 28 animals. His awards were as follows: In Class 1, heifers under 6 months, Mary Hansen, first; Albert Burd, second; William Burd, third. Class 2, heifers, 6 to 12 months, Mildred Wooden, first; Dorothy Wooden second; Mary E. Hansen, third. Class 3, heifers, 12 to 18 months, Stella Hansen, first; Mabel Hansen, second; Helen Hansen, third; Charles Hunter, fourth; Jack Rogers, fifth. Class 4, 18 months or over, George Wooden, first; Howard Burd, second; Walter Burd, third; Charles Rogers, fourth; William Hansen, fifth. The grand championship heifer award was given to George Wooden.

Class 7, bulls under 18 months, Joseph Hansen, first; Howard Hunter, second. Class 8, bulls 18 months or over, Albert Burd, first; John Hansen, second. Grand champion bull, Joseph Hansen. Guernsey heifer and bull, Joseph Johnson. Any other purebred animal outside of calf club, George Wooden, first; Charles Hunter, second.

Two special prizes were offered by the Mercer County Junior Holstein Association and the Mercer County Senior Holstein Association for the best fitted and best trained animals.

This class gave Mr. Keeney more trouble than any other, but he finally awarded first prize to Mabel Hansen, 2d to William Hansen and 3d to Stella Hansen.

VIRGINIA STATE FAIR

Holstein Day at the Virginia State Fair will be Tuesday, October 3d. The judge will be Professor T. E. Elder, of the Mt. Hermon School for Boys, Mt. Hermon, Mass. Mr. Elder plans to begin his work around 9:30 in the morning.

Good entries from both within and without the state are coming. Culpeper, Orange and Henrico Counties will have County Holstein Herds there, which will compete in the open classes as well. Many breeders throughout the state are making plans for a complete exhibit and dairymen and breeders from all over the state will attend the Fair that day, which promises to be of intense interest.

The Holstein industry in the Old Dominion state has developed greatly during the past year and we doubt if an equal development can be shown for any other state in the Union. At the Brentwood Sale last spring, some of the highest priced animals went to Virginia breeders an done of these animals was the son of Segis Pietertje Prospect, the world's champion cow for year milk production. The purchase of Virginia breeders are not confined to public sales and one of the big transactions was the transfer of a 35 lb. son of Ormsby Korndyke Lad from the herd of his breeder to that of a firm of Virginia cattle owners. There have been a number of similar instances all indicating that the Holstein breed is rapidly growing in Virginia, and so a big turnout may be expected at the state fair at Richmond, especially on Holstein Day, October 3d.

NATIONAL DAIRY SHOW

The Central Passenger Association and the Trunk Line Association have granted reduced rates on the certificate plan to those attending the National Dairy Show at St. Paul, Minn., October 9-14.

This concession by the great railroad lines is likely to save considerable money to easterners who plan to attend the great exposition at Hamline.

ERIE EXPOSITION

All animals shown at the Erie Exposition this year had to be tuberculin tested within six months of showing and health charts had to be produced on request. This rule probably deterred many local owners from exhibiting cattle and other kinds of stock for many local men have, in previous years, shown cattle, sheep and swine and, not having had their herds tested, did not exhibit at all this year.

There was a strong show of black-and-whites, however, the exhibitors being L. C. King, of Kinsman, Ohio; Dr. G. C. Broughton, of Erie; and J. B. Moore, of Garland, Penna., the latter herd winning a majority of first prizes.

BOONE COUNTY FAIR

The first annual exhibition of the Boone County Purebred Livestock Association was held at Lebanon, Ind., August 17th, and was a decided success. There were about 500 animals exhibited, a good attendance and the work of the judges gave general satisfaction. The Holstein awards were as follows:

Aged bull, V. R. Laughner, 1st; junior yearling bull, D. C. Price. Junior bull calf, Presley Newby, 1st; Jerome Kersey, 2d. Champion bull, V. R. Laughner. Aged cow, V. R. Laughner, 1st and 2d; Jerome Kersey, 3d. Cow, junior two-year-old, Roy Peterman, 1st; V. R. Laughner, 2d; Jerome Kersey, 3d. Senior yearling heifer, V. R. Laughner 1st. Junior yearling heifer, V. R. Laughner, 1st. Senior heifer calf, V. R. Laughner Junior heifer calf, Presley Newby, 1st, V. R. Laughner, 2d. Champion cow, V. R. Laughner, Professor C. H. George, of Purdue, was the judge.

AT FLEMINGTON

Only Holsteins were exhibited at the Hunterdon County Fair, which was held at Flemington, N. J., the week of August 25th. Yet competition was keen and good animals shown. The first prizes went to the following:

Aged bull, John Bush, Flemington.

Yearling bull, L. R. Harris, Lambertville; bull calf, John Bush; cows, over four years, John H. Van Doren, Flemington; cows, three years and under four, Sylvanus Apgar, Milford; cows two years and under three, Apgar & Philkill, Milford; senior yearling female, Gobel Farm; junior yearling female, Leslie Case; senior heifer, Gobel Farm; junior calf, Apgar & Philkill.

MISSISSIPPI VALLEY EXPOSITION

The Mississippi Valley Fair and Exposition at Davenport, Iowa, was well attended and the livestock exhibits were very creditable. Holstein-Friesians were exhibited by Walter Carlin, Walcott, Ia., and P. H. Naber, Mucatine, all the championships going to the latter herd.

SHOWING THE WAY

The McHenry County Fair, held at Woodstock, Ill., is said to be the first fair in Illinois to require that all cattle exhibited must have passed a tuberculin test some time within the previous three months. At this year's fair, three car loads of dairy cattle were exhibited by the Jefferson County Holstein-Friesian Breeders' Association, of Wisconsin, for the purpose of attracting purchasers by showing the quality of cattle bred and raised in Jefferson County.

IRON COUNTY BREEDERS UNITE

The Iron County Holstein Breeders' Association was organized August 16th. The object of the association is to promote the breeding and improvement of high grade and purebred Holstein cattle in Iron County, Mich., to aid its members in buying, breeding and selling first class animals; also to establish a good reputation for Iron County as a Holstein center. It is planned to have a booth at the county fair to advertise the merits of Holstein cattle and Holstein milk.

The following were elected directors: Joe Fauri, Walter Fisher, Gust Casagranda, Albert Drake, Harry Wills, Victor Soderman, Guido Cacagranda. The officers are: Gust Casagranda, president; Harry Wills, vice-president and secretary and treasurer, Victor Soderman.

CONVENTION HEADQUARTERS FOR 1923

The headquarters for the 1923 annual convention of the Holstein-Friesian Association of America is to be the Hotel Cleveland, one of the many high class hostelries in the city of Cleveland.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Sept. 25-Oct. 1—Waterloo, Iowa, The Dairy Cattle Congress, E. E. Estel, Mgr.
Oct. 7-14—Minnesota State Fair Grounds, National Dairy Show.
Oct. 10—Dallas, Tex.—Texas Holstein-Friesian Breeders' Association Meeting and Banquet.
Oct. 17—Bell Farm, Coraopolis, Pa., Third Annual Field Day.
Oct. 28—West Chester, Pa., Field Day and Banquet.
Nov. 23—Belvidere, N. J.—Annual Meeting Warren County Association.

BREEDERS UNITE

Members of the Brown Swiss, Short Horn, and Holstein Associations in Green Lake County, Wis., are working as a unit for the eradication of tuberculosis. About one hundred and fifty members of the different associations have expressed the desire to have their herds under Federal supervision.

IOWA PICNIC

About 200 persons were present at the picnic of the Dubuque County Holstein-Friesian Association held on the farm of Howard Simpson, Epworth, Iowa, on August 18th. Talks were given by Earl J. Cooper, calf club leader of the Holstein-Friesian Association of America; H. R. Searles, of the Dairy Husbandry Extension, Ames, and Leo A. Meyer, Dyersville, secretary of the County Association.

HEAR GOOD TALKS

Members of the Washington County, Penna., Holstein Bull Association held their annual picnic at the home of M. S. Wilson in North Strabane township. After a picnic dinner, talks were given by Prof. E. L. Anthony, of the Animal Husbandry Department of West Virginia University, and by R. H. Olmstead, of the Dairy Extension Department of Pennsylvania State College.

ORGANIZING IN NORTH DAKOTA

Dairymen of Stutsman County met at the City Hall, Jamestown, North Dakota, on August 12th and organized the Stutsman County Holstein Breeders' Association. Plans for holding a sale of Holstein cattle were discussed as well as plans to advertise the merits of this breed. All the cattle in this sale are owned by members of the Jamestown Cow Testing Association and have milk records.

BELL AND JONES SPEAK

Holstein breeders around Greenville, Penna., held a meeting at the Penn High School Building, August 18th, for the purpose of organizing a Holstein-Friesian Breeders' Club. The principal speakers were John A. Bell, President, and W. Hugh Jones, Secretary of the Pennsylvania Federation of Holstein-Friesian Clubs. A committee was appointed to draw up a constitution and by-laws. R. R. Welch told about the Grove City organization and its work.

WILL SHOW COUNTY HERD

The Wausau, Wis., Holstein Breeders' club met in the office of the county agent August 11th and perfected plans for the Holstein showing at the Marathon County Fair, where a club herd will be shown. County Agent Rogan explained the value of showing high grade stock at county fairs and said that you can get more advertising that way than by almost any other means because of the number of dairymen attending from far distances.

The officers of the club are: President, Richard E. Golisch; vice-president, V. G. Denfield; secretary, Jerry Witter; directors, L. W. Gleason, E. Coleman, H. Witter, C. H. Jennejohn, and Wm. Langhoff.

GEAUGA BREEDERS MEET

The Geauga County Holstein Club met at the Farm Bureau office at Burton, Ohio, August 10th. A committee, consisting of Howard Smith, Will Bartholomew and B. J. Shanower, was appointed to supervise the boys' and girl's calf club work and work with the Farm Bureau in carrying out this project.

E. M. Clark, Secretary of the Ohio Holstein-Friesian Association, gave an interesting talk in which he outlined the Ohio Managers' Plan.

PLAN FOR CONVENTION

The Board of Officers of the Ohio Holstein-Friesian Association held a meeting in its offices at Cleveland, July 26th, in order to form an organization which will take care of the 1923 convention of the Holstein-Friesian Association of America. Howard C. Barker, president of the Ohio State Association was elected chairman.

A tentative program has already been worked out, but to insure full success the hearty support of every Holstein breeder in Ohio will be required.

NEBRASKA PICNIC

The Holstein breeders of Gage County, Nebraska, met at the Chautauqua grounds, Beatrice, August 9th, the occasion the annual picnic of the Nebraska Holstein-Friesian Association. After luncheon, Prof. H. P. Davis, head of the dairy department of the State University, spoke on dairying and stock raising. Other speakers were J. E. Palm, Secretary of the State Holstein Breeders' Association; Dan Hildebrand of Seward, President of the State Association; O. H. Liebers, of Lincoln; F. A. Leadley, Editor of the Nebraska *Farmer;* A. G. Sattel, Editor of the Nebraska *Farm Journal;* and J. K. Shepherd of Lacona, N. Y.

PIERCE COUNTY PICNIC

About 150 persons attended the Pierce County Holstein Breeders' picnic held at the A. L. Leonard farm near Ottman Corners, Wis., on August 5th. Interesting talks were given by Prof. Hulce of the animal husbandry department of the College of Agriculture, by County Agent H. G. Seyforth and by D. J. Parks. An orchestra furnished excellent music during tht dinner hour and the community singing under the direction of Rev. W. H. Slack was an interesting feature.

At the business meeting the following officers were elected; H. C. Stebnitz, Martell, president; E. W. Peake, Spring Lake, secretary; John E. Nelson, Trimbelle, treasurer; G. K. Moore, Trimbelle, and Chas. Austrum, Gilman, directors.

PICNIC AT HARGROVE & ARNOLD'S

The Holstein breeders and their friends to the number of 150, gathered in the Hargrove & Arnold farm, Norwalk, Ia., August 8th, for their first annual picnic. The speakers included: Earl Weaver, head of the dairy husbandry department; H. H. Kildee, head of the animal husbandry department, Iowa State College; W. B. Barney, ex-food and dairy commissioner and the oldest director of the Holstein-Friesian Association of America; R. G. Clark, new state food and dairy commissioner; and Z. C. Thornburg, president of the Iowa Holstein Breeders' Association.

J. P. Eves of the Iowa State Dairy Association, had charge of the arrangements for the day. Professor Weaver said that there was only one purebred dairy bull in Iowa to every 40 grade or scrub bulls and only two per cent of the dairy cows in the state were purebred. He said there was no limit in sight to the purebred dairy cow market and told of the work at the Iowa experiment station where purebred

Holstein sires had increased the production of the offspring of scrub dams 58% in the first generation and 110% in the second generation. These figures, he said, included all the offspring without any selection whatever. Had they selected the best they could have made a much greater showing.

Professor Kildee gave a dairy cow judging demonstration and said that Hargrove & Arnold had won success by building up a herd through the use of good sires, that they did not buy a high priced lot of cows, but started with good working cows and by the use of high class sires had from this foundation built up a great herd of producers and show animals.

The cow that attracted the most attention was Rose DeKol Wayne Butter Boy, one of the famous foundation animals of the herd. She is holder of the world's record for combined milk and butter fat for four consecutive years production and in the first three months of this lactation period has produced more than 500 lb. butter. She has eight female descendants on the premises, while her only son, King Piebe is owned jointly by Hargrove & Arnold, Z. C. Thornburg of Des Moines, and H. C. Nieman of Avoca, Ia.

FULTON COUNTY PICNIC

The Fulton County Holstein-Friesian Association as well as a number of other dairymen attended the annual picnic at Wauseon, Ohio, August 15th.

At the business meeting W. L. Biddle was elected president of the association: Howard Meyers, secretary-treasurer and C. P. Grisier, assistant secretary.

E. M. Clark, of Cleveland, Ohio, Field Secretary for the Ohio Holstein Association, and M. L. Howard, Henry County agent, of Napoleon, addressed the Association.

The meeting then adjourned to the Princess Theater, where free moving pictures were given, showing some of the best Holstein herds and individuals in the world.

The association enjoyed a splendid day, in spite of the heat and received inspiration to still further advance the work in behalf of the Black and White milk and butter machine, the Holstein cow.

CALF CLUB ROUND-UPS IN JACKSON COUNTY

Jackson County, Wis., is having a number of calf club roundups. The first one was at York where 25 calves were exhibited and attracted considerable attention. These roundups are under the supervision of Wakelin McNeal, assistant state club leader. Mr. L. C. Hatch, director of the LaCrosse County School of Agriculture, spoke at Melrose and North Bend. The calves were judged by E. V. Drier, the Smith-Hughes Agricultural instructor at the Galesville High School. Mr. McNeal judged at Black River Falls and the County Agent at Taylor. The Holstein winners at the different shows were:

Melrose: Holstein senior heifers—First, Ray Kelner; 2d, Nellie Button; 3d, Walter Button; 4th, Ramola Kelner; 5th, Adolph Kostohryz. Junior heifers—1st, Adolph Kostohryz; 2d, Walter Button; 3d, Annie Kelner.

North Bend: Senior Holstein heifers—1st, Clare Marshall; 2d, Lloyd Haugstad; 3d, Lester Haugstad. First prize bull calf—Vilas Baird, of North Bend.

Black River Falls: Holstein heifers—1st, Hazel Drecktrah; 2d, Everett Drecktrah; 3d, Elmer Nemec; 4th, Everett Drecktrah; 5th, Douglas Bright; 6th, Louis Drecktrah. Best showman: Elmer Nemec.

LOYAL AND LEAL

Twelve hundred people attended the picnic at Loyal, Wis., August 10th and were guests of the Loyal Holstein Breeders' Club.

The cattle were judged by L. L. Oldham, secretary of the state Holstein Association. The first prize for senior bull calves went to Myron Osgoodis, of Granton, John Wuethrich was 2d and Mr. Hincker, of Greenwood, was third. In the senior heifer class, John Wuethrich's animal was first and George Wilson, of Granton, was 2d.

In the junior heifer class there were three entries; two of which were club calves. John D. Wuethrich, Jr., won first place on his animal, with Roy Stevenson 2d and John Wuethrich, Sr., 3d.

An interesting feature of the picnic was the cow testing association demonstration. It showed how cow testing picked out the good and poor cows.

The speaking program began at 2:30, and consisted of short talks by R. M. Jenks, H. M. Knipfel, E. L. Luther, Supt. of Farmer Institutes, Henry Williams, Doctor Eliason, Wm. Krause, President of Clark County Holstein Association, L. L. Oldham and a representative of the National Dairy Show, and songs by Wilson and Wuethrich and County Agent Peterson, of Wood County.

BRATTLEBORO BUSINESS

Thirty applications for membership were received at the office of the Secretary for the week ending August 12th.

There were 1,529 certificates of registry issued, 1,054 female and 475 male; 1,159 certicates of transfer were written, 740 female and 419 male.

During the week ending August 19th, eighteen applications for membership were received.

The number of certificates of registry issued was 1,640, of which 1,164 were female and 476 male; 1,146 certificates of transfer were written, 754 female and 392 male.

Twenty-six applications for membership were received during the week ending August 26th.

During the same period, 1,741 certificates of registry were issued, 1,249 female and 492 male; 1,346 certificates of transfer were written, 929 female, 417 male.

The list of herd prefixes reserved for the three weeks period follow:

Catholic Home, St. Joseph's Industrial School, Clayton, Del.
Chenacqua, Adolph Finkler, Hartland, Wis.
Crestland, W. H. Koch, Emerson, Ohio.
Edendana, J. Dana Pemberton, Eden Prairie, Minn.
Elkwis, C. A. Cobb, Elkhorn, Wis.
Farmingdale, Richard Carter Bryan, Queenstown, Md.
Glenrae, J. N. Cook, Orland, Calif.
Hearts Delight, Thomas D. Urmston, Cynthiana, Ky.
Graber, David C. Graber & Sons, Marshallville, Ohio.
Helderberg, Stevens & Frink, Altamont, N. Y.
Kodale, John F. Cody, New Richmond, Wis.
Indian Crest, William Rogers, Greenwich, N. Y.
Lochia, Margaret L. Parrish, Naples, N. Y.
Mapleo, H. E. Moats, Jamestown, Pa.
Pedieann, Fred L. Smith, Cambridgeport, Vt.
Peony Park, Howland Brothers, Northfield, Minn.
Reinickel, N. W. Rinehart, Union, Ohio.
Rosalia Brook, Bundschuh, Brothers, Maybrook, N. Y.
Seven Springs, P. H. Naber, Muscatine, Iowa.
Sitka, Raymond Kempf Fremont, Mich.
Spruce Knoll, Archie Hammarquist, Ft. Atkinson, Wis.
Sturdy Oak, Maxwell A. McKenzie, Barneveld, Wis.
Van Wie, Charles Roger Guernsey, Schoharie, N. Y.
Wahtawasa, Dan Fierheller, Milledgeville, Ill.
Walk-Over, T. H. Malone, Rowanta, Virginia.
Warsaw, E. W. Niece & Son, Raven Rock, N. J.
Weldon, D. D. Daggett, Omro, Wis.
Wilsey, Fred Warriner, North Lawrence, N. Y.

INTERNATIONAL DAIRY EXTENSION SERVICE,
BRATTLEBORO, VERMONT

MINNESOTA TWILIGHT MEETING

A twilight dairy meeting was held on the farm of Evan Williams, of Lake Crystal, Minnesota, August 15th, with a large attendance. Electric lights had been strung through the grove surrounding the Williams home and made it possible for horse-shoe pitching games, etc., to be carried on until late in the evening. A team from this unit will compete at the Garden City Fair, where teams representing the beef, Guernsey and Holstein breeders will compete for County Breeders' Association honors.

There was a musical program and talks were given by H. L. Sohre, Good Thunder, President of the Blue Earth County Holstein Breeders' Association; J. C. Marlow, secretary of the Blue Earth Association; A. H. Silber, Mankato, and George Austin, Lake Crystal.

A judging demonstration was given by J. C. Marlow, who scored three cows of the Williams herd, and a bull calf, owned by Louis Anderson, son of Wallie Anderson, a near neighbor of the Williams. Louis won this calf at the State Holstein Breeders' meeting which was held at Mankato, where it was given by E. H. Sohre & Son, of Good Thunder. Louis gives his calf excellent care and it is developing into a fine bull.

SIGN BOARD ADVERTISING

The Holstein club of Neillsville, Wis., has just had a big sign painted which is to advertise the Holstein breed, the dairy industry and Clark County. Across the top are the words, "For a Greater Clark County," under this "more milk, more ice cream, more butter, more cheese." In the center is a pasture scene with two life-sized Holsteins of the most approved type. Across the bottom is the signature, "Neillsville Holstein Club," while the painting is adorned with pictures of prints of butter, bottles of milk, dishes of ice cream and full cream cheese. The sign was painted by C. H. Chandler, while the Bruley Elevator Co. donated this space for the good of the community.

WISCONSIN ASSOCIATION FILES CERTIFICATE

On August 24th, certificates of amendment to the articles of incorporation of the Holstein-Friesian Association of Wisconsin were filed with the Register of Deeds at Fond du Lac. The name of the Association is changed to the Holstein-Friesian Breeders' Association of Wisconsin with the principal office at Madison. The Association is to be nonstock and non-dividend paying. The Board of Directors, which consists of 12 members, is divided into three classes, one-third of which retire annually. Each county in the state affiliated with the organization is entitled to one delegate for each fifty members or major fraction thereof. The amended articles were signed by the president, H. F. Schroeder and Secretary L. L. Oldham. The application was filed April 24, 1922, at Madison.

HAVE GOOD OFFICERS

The Rice County Farm Bureau is one of the newer bureaus in the state of Kansas. It was organized January, 1921, and began active work March 1st, of that year. At its first annual meeting all three officers and the county agent were reëlected. They are President A. F. Kiser, of Geneseo, vice-president George Worth, of Pollard, secretary-treasurer, Charles Hodgson, of Little River and County Agent Walter B. Adair, of Lyons.

Mr. Kiser was born on one of the farms which he now operates. Has lived on a farm all his life and is now handling 400 acres of land. He keeps Duroc-Jersey hogs and stock cattle and is a 1914 graduate of the Kansas State Agricultural College.

Mr. Worth came to Rice County from Iowa twelve years ago. He now has a herd of 25 Holsteins, about half of which are purebreds, has a modern equipped plant, has installed a power plant of his own which gives him electricity for lighting purposes and general farm operations.

Mr. Hodgson was born and reared on the farm which he now operates. His father was the first settler in Rice County, having homesteaded there in 1870. Mr. Hodgson operates 800 acres in all, is a believer in diversified farming and goes in for dairying, cattle feeding, the raising of hogs and sheep and the growing of alfalfa, corn and sweet clover.

Mr. Adair is a graduate of Kansas State Agricultural College, finishing in 1916. Before going to college he farmed a quarter section of land near Osawatomie, Kan. He has been a teacher of vocational agriculture at Kimball, Neb., Dillon, Mont., and at the Reno County high school, at Nickerson.

DAIRYMEN'S LEAGUE SEPTEMBER PRICE

The Dairymen's League Coöperative Association's asking price for September milk was decided upon by the Board of Directors at its monthly meeting at Utica, N. Y., August 23d-24th, and are as follows:

Class 1. Milk sold in fluid form, $2.90 per 100 pounds.

Class 2. Milk sold for use chiefly in the making of cream and ice cream, $2.

Class 3-A. Milk sold for the manufacture of canned milk 55 cents per 100 pounds over the price to be determined for milk for butter in September.

Class 3-B. Milk for the maunfacture of fancy hard cheeses, 40 cents per 100 pounds over the price to be determined for milk for butter in September.

Class 4. Milk for butter and cheese to be determined in the usual manner by the average wholesale prices of these products in the New York City market during September.

The price asked for Class 1 milk is 21 cents per 100 pounds more than the present price. It is exactly the same price as the dealers paid the association in September, 1921, during which the month they charged consumers 15 cents a quart. The retail price for Grade B milk in New York City now is 15 cents a quart, the dealers paying $2.69 for fluid milk.

Class 2 price will remain the same as in August.

Class 3-A price is an increase of 15 cents and Class 3-B is an increase of 10 cents per 100 pounds over the August price.

Cow Testing Association Reports

RACINE-KENOSHA HAS THREE 500-POUNDERS

The Racine-Kenosha Cow Testing Association completed its second year June 1, under the supervision of tester E. Sebastian. Despite the fact that the past year was very discouraging because of the low prices paid for dairy products, rapid progress is being made in Racine and Kenosha counties. The low prices for milk have forced the farmer to realize that poor producing cows and poorly fed cows are poor tax payers.

Mr. Sebastian in his summary says: "Poor marketing machinery after the post-war boom has been responsible for a large proportion of the hardships endured by the dairyman during the past year. A variation of thirty per cent in the market value of butter fat produced on farms within the same township points unerringly to the fact that the farmer must eventually own and operate his own market through coöperation.

"Efficiency in production is absolutely essential to the dairyman's welfare. The cow testing association is the only present medium through which the farmer can secure efficient production."

The Roland E. Lee herd stands first for production, and, with the exception of a two-cow dairy, leads for profit above feed cost. The Lee herd consists of fifteen registered Holsteins which average 9,635 lb. milk, 343.1 lb. fat. The roughage cost was $72.63 and the cost of grain feed averaged $45.91, or a total feed cost of $118.54. The value of the production was $187.39 per cow or a profit above feed cost of $68.85. The Lee herd was fed more grain than any other herd in the association and was the more profitable. Grade Holstein herds stand second, third, and fourth in butter fat production.

The high cow, a registered Holstein of the Lee herd, Molly Abbekerk Johanna De Kol, produced 15,084 lb. milk, 547.5 lb. fat and made more net profit than any competitor. She had $67.79 worth of grain and her roughage was figured at $77.21, a total feed cost of $145, which is more than the value of the milk given by the average cow in the association. The value of her milk was $299.63 so that she earned $154.63 above her feed cost. A Lee cow stood third with 12,826 lb. milk, 501.5 lb. fat; a grade Holstein, owned by Fred C. Hanson, was second with 11,469 lb. milk, 524.2 lb. fat and a registered Holstein, owned by Howard Sheen, was fourth with 12,211 lb. milk, 491.7 lb. fat.

During the year 707 cows were tested, of which 405 finished the year. Thirty-four cows averaged over a pound of butter fat a day. Last year there were twenty-seven. The association average for this year was 7,006 lb. milk and last year was 6,963 lb. In 1922, the fat average was 263.5 lb. while last year it was 244.3 lb.

One of the features was the production of Bessie Colantha Change. This two-year-old was in association work eight months and eighteen days, during which time she produced 12,268 lb. milk, 469.3 lb. fat. She is owned by Clinton Skewes and was milked only twice daily. This heifer shows exceptional persistency, her milk and test being practically uniform every month since she went on test.

A PSALM OF DEVOTION

"I love my scrub cow. She gives me employment every day in the year. She consumes my hay and grain, and grows fat and sleek. She is a thing of beauty, though a burden forever. To produce milk and butter fat would detract from her physical beauty, therefore it is unreasonable to expect it of her. She helps to reduce my income tax. I love my scrub cow. She is a luxury. Dairymen are entitled to luxuries as well as other people. My neighbor tells me to sell her to the butcher, but my neighbor is a hard-hearted man, so is the butcher. The official tester says that the profits from three of my best producers will keep her in comfort, so why should I worry. I love my scrub cow. It requires much time to feed her, but very little time to milk her. My banker says that the small amount of milk she contributes can justly be called "the milk of human kindness" for it is human kindness that allows her to exist. Even Parson Jones was heard to remark that, greater love hath no man than he who wears his young life away to support a scrub cow, expecting no reward, not even the respect of real dairymen. I love my scrub cow. Who can doubt it???"—*Cumberland, Wis., Association Report.*

FIRST AND SECOND

Seventy-nine of the 465 cows tested in the Shirley-Denmark Testing Association produced more than 40 lb. butter fat in the month of July, while twenty-one produced better than 50 lb. fat.

Canary Princess Belle, owned by Lawrence Larson, Denmark, Wis., was the leader, producing 87.8 lb. butter fat from 2,043 lb. milk. Next to her was a purebred Holstein, owned by Henry Benecke, with a credit of 1,811 lb. milk, 70.6 lb. butter fat. A grade Guernsey was third followed by five purebred Holsteins.

The herd owned by Henry Benecke, consisting of eleven purebred and grade Holsteins, topped the list with an average of 1,483 lb. milk, 52.5 lb. fat. The tester is Manning H. Nelson.

The price of wheat is down, but they are not saying it with flour.

MONROE ASSOCIATION FINISHES YEAR

The first annual report of the Monroe Cow Testing Association is being sent out by the Wisconsin College of Agriculture. It covers the work herds in Green County, Wis. As might be expected in this great Swiss Cheese producing district, Holsteins predominate and no other breed is mentioned in the honor list. During the year 775 cows were tested, of which 514 in 28 herds finished the year. The average amount of milk produced was 8,046.08 lb. per cow and the average fat was 263.84 lb. The average value of the product was $118.73 while the profit above feed cost averaged $48.03.

In the Association there are 23 herds tuberculin tested. All herd sires are purebreds and there were 49 cows that averaged over one pound fat a day for the entire year. We notice that there are no families listed as using butter substitutes.

The leading herd consists of 30 grade Holsteins owned by Ludlow Schild. Their average was 11,145 lb. milk and 367 lb. fat and the average profit above feed cost was $95.66. The eighteen cow dairy of Henry F. Stauffacher averaged 10,851 lb. milk, 340 lb. fat and returned an average net profit of $76.63. Sixteen registered Holsteins owned by Fred Trumpy & Son averaged 9,455 lb. milk and 321 lb. fat while registered Holstein herds owned by Roderick & Stuessy, Otto Zimmerli and Chester Frautschy follow in the order named. Alfred Barth & Sons with 21 cows described as registered and grade Holsteins, averaged 304 lb. fat and $59.82 net profit.

The two leading cows are grade Holsteins of the Ludlow & Schild herd. The leader, Lola, a four-year-old, produced 14,199 lb. milk, 535.4 lb. fat and averaged 3.77%. The value of her product was $240.93. The feed cost was estimated as $87.19 and the net profit as $153.74. Her stable mate, Annie, produced 14,941 lb. milk, 530.8 lb. fat and returned a net profit of $153.96. Reka Lorraine Ormsby 2d of the H. S. Stauffacher herd produced 15,181 lb. milk and 515.18 lb. fat and made a net profit of $136.66 while her stable mate, Fencliff DeKol Fayne 2d, produced 14,066 lb. milk and 474.5 lb. fat. Of the remaining cows in the first 12, Ludlow and Schild owned three, Fred Trumpy & Son, two, and H. S. Stauffacher, Roderick & Stuessy and A. Barth & Sons, one each. All the cows in the first twelve with the exception of the Ludlow and Schild animals are registered Holsteins.

HIS IGNORANCE

Man wants but little here below,
According to the poet,
But when he's really got enough
The blame' fool doesn't know it.
—*Country Gentleman.*

HILLSBORO ASSOCIATION ISSUES REPORT

The Hillsboro Cow Testing Association has issued its first annual report which tells of the activities of the association from June 1, 1921, to June 1, 1922. This, however, is not the first time the Hillsboro dairyman have been a testing association as the first one ran from Nov. 15, 1914, to Nov. 15, 1915. Four different dairies were in both associations and each one shows an increase in production. The herd of John Amberg shows only a milk increase of 8 lb. per cow, the figures being 5,101 lb. milk, and 5,109 lb. milk but the fat average increased from 268.4 lb. to 300.7 lb. The herd of Albert Fick shows an increase from 5,998 lb. to 7,709 lb. milk and from 252.8 lb. fat to 320.5 lb. The herd of J. F. Setzer shows a decrease of 310 lb. milk, but an increase of 4.7 lb. fat. But the herd of J. R. Winchell increased from an average of 5,375 lb. milk, 239.9 lb. fat to 5,566 lb. milk, 273.2 lb. fat. In the 1914 association the three high cows made 471.7 lb. fat, 430.1 lb. and 418.5 lb. fat while in the 1921 association the three leaders produced 473.3 lb., 469.8 lb. and 453.4 lb. butter fat respectively.

The average for the entire association was 6,566 lb. milk, 269.3 lb. fat for the 341 cows that completed the year's test while the average Wisconsin cow is credited with 190 lb. butter fat yearly. Nine herds in the association are accredited and nearly all the others are tuberculin tested.

The high herd consists of grade Holsteins owned by Albert Kahler. They averaged 8,755 lb. milk, 334.4 lb. fat. The feed cost was $56.60 and the net profit was $74.22. The purebred Holstein herd of F. Havlik was second with an average production of 8,021 lb. milk, 323.4 lb. fat and a net profit of $74.37. The next three herds consist of grade and purebred Holsteins.

The high cow was a grade Holstein, Violet, owned by Albert Fick, Wonewoc, Wisconsin. She was eleven years old, is sired by a purebred bull and her dam carried at least 50% Holstein blood. Violet was the most profitable cow in the association returning $3.14 for every dollar invested in feed, which consisted of 5,830 lb. silage, 1,420 lb. hay, 1,852 lb. grain. She freshened April 22, 1921 and was milked 339 days during which she produced 9,374 lb. milk, 473.3 lb. fat.

A grade Holstein, owned by F. Dreischmeier, was second with 10,244 lb. milk, 469.8 lb. fat and a net profit of $113.29. Another Fick grade Holstein was third. A cow described as a "native" of the Dreischmeier herd was fourth and then followed three purebred Holsteins owned by F. Havlik. The highest returned $114.33 net profit, and the lowest $101.48. The tester, V. Sorenson, calls attention to an example of the transmission of producing capacity in the Havlik herd. The ten-year-old cow, Hillspring Diamond Korndyke made 439.7 lb. fat; a four-year-old daughter of this cow made 406.2 lb. and a six-year-old daughter made 396.4 lb. fat.

On Oct. 5, 1921, the six high cows for four months test, were shown at the Hillsboro Fair and attracted lots of attention. It is the intention to show a number of cows this fall. At the end of the enrollment year the association was strong enough to divide into two new ones, Elroy and Hillsboro, which are now functioning.

SOUTH CAROLINA TESTING

Purebred Holsteins held the first six places in the list of cows tested during July in South Carolina. The herd of V. M. Montgomery, Spartanburg, furnished the first three cows, Arcady Segis Atia 2d, leading with 76.9 lb. butter fat. Her milk production being 2,208.8 lb., stood second. In the second place was Ruby Pietertje Burke, 2,084 lb. milk, 69.4 lb. butter while the senior three-year-old Katie Paul Sadie Vale was third with 1,887.9 lb. milk, 66 lb. fat in her ninth lactation month. In fourth position was Colantha Walker 2d, owned by J. T Willard, Spartanburg, with 64.5 lb. fat, her milk production being 2,228.2 lb., the highest appearing in the honor list although she is only a senior three-year-old.

Montgomery cows are in fifth and sixth positions with a Guernsey seventh. The Montgomery herd is represented by twelve animals and the Willard herd by five.

The production reported for four grade Holsteins owned by St. J. A. Lawton of Charleston is bound to attract lots of attention. Daphney is the leader with 1,775 lb. milk, 62.2 lb. butter fat; Dora with 1,543.8 lb. milk, 52.8 lb. butter fat is second; White Lion, mentioned in these columns several times, has 1,362.5 lb. milk, 52.4 lb. fat to her credit while Grace is reported with 1,473 lb. milk, 51.3 lb. butter fat.

There were 109 cows reported during the month, of which 24 made the honor roll. Forty-seven Holsteins of which seventeen made over 50 lb. fat in the month and fifty Guernseys of which seven attained the honors.

SWINEHART LEADS

The highest producing cow in the Avoca, Wis., Testing Association for the month ending July 16th was a grade Holstein that had a production of 1,668 lb. milk, 73.4 butter fat. She was owned by S. W. Swinehart, Avoca, who also owned the high herd. This consisted of seventeen grade and purebred Holsteins and averaged 1,157 lb. milk and 39.8 lb. butter fat.

There were thirty-two cows that produced more than 40 lb. fat in the month, five better than 50 lb., one over 60 lb., and one over 70 lb.

REAL PROGRESS IN BRUNSWICK COUNTY

Three hundred and eighteen cows representing nineteen herds were tested in the Burlington County, New Jersey, Association, during the month of August. There were twenty-two with forty pounds of butter fat and five with fifty pounds or better; eight producing 1,200 pounds or more of milk. A. R. Jackson had the highest cow for the month with 81.8 lb. butter fat to her credit and 1,996 lb. milk. She is a purebred Holstein named "Bloomfield Fair Oaks."

A canvass of the members in the Association shows that all the members who have bulls of their own are using purebred herdsires, which means all but two of the twenty-one members. Two members of the Association have accredited herds and three others have adopted the accredited herd plan and are now under Federal and State supervision.

There are at least ten members that are going to show some of their stock at the Mount Holly Fair, one-half of the membership in the Association, which is quite a creditable showing.

The price of high protein feeds have dropped a bit and it is hoped that more cottonseed and oil meal will be fed next month, which will result in more and better milk.

WARREN H. KELLOG, *Tester.*
Burlington County, New Jersey.

FLIES LOWER PRODUCTION

There were 420 cows tested in the Clinton Wisconsin Testing Association for the month of July. Of these, five produced more than 40 lb. butter fat. The production of many of the cows was greatly reduced because of the dry pastures and the flies.

High herd consisted of nine Holsteins, owned by Lewis Williams, with an average production of 1,021 lb. milk, 37.3 lb. butter fat. This herd had blue grass pasture and was fed about ten pounds of grain per day, consisting of ground corn and ground oats, with one pound of cottonseed meal.

Second high herd was composed of twelve Holsteins, owned by John Knutson. Their production was 920 lb. milk, 32.8 lb. butter fat. A thirteen cow dairy, owned by Craighurst Farms, was third with an average of 937 lb. milk, 31.4 lb. fat.

High cow was also owned by Mr. Williams. This was a purebred Holstein that produced 1,528 lb. milk, 56.5 lb. butter fat. A grade Holstein, owned by C. A. Larsen, was second with 1,610 lb. milk, 54.7 lb. fat, and another grade Holstein owned by David Dean was third with 1,063 lb. milk, 53.2 lb. butter fat.

NEW YORK STATE TESTING

The August News Letter of Supervisor G. W. Tailby, Jr., shows that during July, twenty associations reported progress. The leaders in nine instances are termed grade Holsteins, in seven as purebred Holsteins and in one as just Holstein, making seventeen out of twenty association leaders Black and White. Two others were Jerseys and one an Ayrshire.

The leader for June production was the great producing Holstein grade Aaggie, owned by Sam Barber, of Scottsburg, and enrolled in the Livonia Association of Livingston County. She freshened on Washington's birthday and in April was the biggest milk producer, in May led her nearest competitor for butterfat by 13 lbs. and was second for milk. In June, she was the leader for both milk and butterfat with 101.6 lb. fat and 2,418 lb. milk. In 130 days she has, so L. P. Zumstein, Supervisor of the Livonia Association reports, produced 10,835.1 lb. milk and 451.4 lb. butterfat. Second to her in June is the purebred Princess, owned by Luther Carrier, of Fulton, with 101.1 lb. fat and 2,298.1 lb. milk. Third is a grade Holstein owned by Wilbur Ashley, also of Livonia, with 90.9 lb. fat and 1,818 lb. milk. Dale Brothers, of Gasport, have a registered cow that made 84.1 lb. fat and 2,262.6 lb. milk, while another of Mr. Carrier's cows produced 82.5 lb. fat and 2,292.1 lb. milk. In the Livonia Association, Pocohontas, owned by J. H. Huff, freshened January 15th and in 165 days has milked 12,316.5 lb. milk and produced 417 lb. fat.

Of the 10,554 cows whose records were kept in June, 1,426 or 13.5% made the honor roll. Of this number 60 produced between 60 and 70 lb. fat and lb. fat and six above 80 lbs. during the month.

In the East Aurora Association, 14 cows in the herd of Ray Tomlinson, of Wales Center, have completed year records which average 10,093 lb. milk and thirteen produced between 70 and 80 339 lb. fat. The best producer is a purebred Holstein, Frisky Fayne De Kol. She is a six-year-old, freshened July 22, 1921, and started milking at the rate of 55.5 lb. per day and 311 days afterwards at the end of her testing period, was milking better than 40 lb. a day and made a record of 14,466 lb. milk and 439 lb. fat on twice a day milking. A purebred two-year-old Holstein in this herd produced 10,805.8 lb. milk and 342.3 lb. fat during the first 282 days of her lactation period.

The Holstein Breeder and Dairyman

HIGHEST ASSOCIATION RECORD

Adeline Hengerveld De Kol 2d, purebred Holstein cow in the Aldencrest herd owned by Dold and Graves of Alden, N. Y., broke the New York State Dairy Improvement Association records by producing during the month of July 3, 705.3 lb. milk containing 112.29 lb. fat. Her high day was 132.8 lb., and in seven days she produced 902.4 lb. This is said to be the highest milk record ever reported in cow testing work. Adeline was under strict supervision with two check tests. Her regular two day test was made by A. E. Mowers, of Cuba, and her check tests were conducted by C. C. Spaulding, of East Aurora, and Carl Shelby, of Cornell University.

WYOMING COUNTY TESTING

Jennie, a grade Holstein, owned by Willard Harding, produced the greatest amount of milk and fat for the month of August. Her production was 1,550 lb. milk, 54.3 lb. fat.

The high herd average was retained by F. M. Riker of Factoryville. His eighteen purebred Holsteins averaged 748.7 lb. milk, 26 lb. fat.

Only nine cows produced more than 40 lb. fat, while seventeen produced over 1,000 lb. milk and eight over 1,200 lb. milk. There are now three accredited herds in the Wyoming County Cow Testing Association.

Tunkhannock, Pa.

THE CALF KICKED BACK

While Blaine Ely of Waynesboro, Pennsylvania, was taking a calf to the slaughter house the calf kicked on the deal and came very near slaughtering Mr. Ely. The pair were in an auto truck and the calf kicked Mr. Ely in the left eye knocking him to the ground, where, as he fell he struck his head on the watering trough and was rendered unconscious. Really we cannot find it in our hearts to blame the calf. Anyone would kick if they were being carried off to be killed.

BOSTON COW ON A JAG

That cows occasionally "go on a jag" is known to everyone who has had cows break into the orchard when apples were thick on the ground. Since prohibition came into effect, there have been a number of cases reported of cows getting into the dumped mash from stills, said stills having been hurriedly emptied when prohibition enforcement officers were in the neighborhood. The Boston *Post* of August 13th reports a case of a Holstein cow of Malden, one of the Hub city's suburbs. The moonshine mash heap was on the Malden athletic ground. Betty got out of pasture and not only got "jagged" but was instrumental in leading the rest of her herdmates into temptation. The news item was accompanied by a picture of a grade Holstein attached, by her halter, to an old-fashioned prisoners' ball and chain.

CONDITION POWDER

Occasionally an animal goes slightly off feed for no apparent cause or appears to need a tonic, or condition powder. In the Cumberland, Wisconsin, Cow Testing Association report, the tester, W. E. Constable, gives a number of short talks on things likely to be valuable to the dairyman and also the following receipt for condition powder:

Oilmeal, 20 lb.
Powdered charcoal, 1 lb.
Epsom salts, 1 lb.
Common salt, 1 lb.
Saltpetre, 12 oz.
Powdered gentian, 12 oz.
Fenugreek, 9 oz.
Give one tablespoonful twice a day in the feed.

FURNISH CREAM FOR BIG BUGS

The California Hotels Farm Company have a ranch seven miles southeast of Riverside, on which is a herd of 46 registered Holstein cattle. The herdsire is Colantha Northland Segis, a son of Pearl King Segis Pontiac and the A. R. O. cow, Hartwood Netherland Segis. The 29 young cows in milk are all in their first or second lactation period and are producing 1,000 lb. milk daily and averaging 35 lb. each, five months after calving. These cows came from Illinois and were selected by C. L. Bratzler, who is now connected with the Glenwood Stock Farm at Riverside. In the herd are daughters of King Segis Pontiac, the great show bull Paul Calamo Korndyke, Colantha Pontiac Korndyke and Pearl King Segis Pontiac.

The herd is in charge of Ross Flintjer and the milk and cream produced is used in the three big Pasadena Hotels owned by the company, the Maryland, Huntington and Green.

MILLER HERD ACCREDITED

The Miller herd at Mapleway Stock Farm, Clarks Summit, Pa., has just received an accredited herd certificate. The second clean test was passed last June. This is one of the many good herds in northern Pennsylvania. The animals are large producers as well as good individuals and are kept as dairy cows, that is, for production instead of for show. To retain her position in the Miller herd a cow has to be not only capable of producing heavily but also of making a substantial profit above the cost of her feed, the Miller Brothers realizing that the true merit of the Holstein breed is its profitableness.

THE WAY IT GOES

We looked across the burning plain
And wondered if 'twould ever rain;
And when we'd had a week of rain
We wondered if 'twould e'er abstain.

May 2, 1923—Clintonville, Spring Consignment Sale.

McGILLIVRAY DISPERSAL

Ninety-two purebred heifers, ranging from calves to two-year-olds were sold at James McGillivray Dispersal Sale, Sacramento, Cal., August 17th, for the sum of $11,685, an average of $124.

The get of seven bulls were represented in the herd. These sires were: Prince Gelsche Walker Paul, Yolo Valdessa Hengerveld, Yolo Korndyke Walker, Colony Zarilda Newman, Prince Echo Sylvia Segis, Yolo Mead Paul and Rag Apple Walker Korndyke. M. C. Meade, of Los Angeles, secured all the heifers by Colony Zarilda Newman, paying an average of $158.75 for the twenty head.

The cows in milk in the McGillivray herd were sold more than a year ago and with the present sale Mr. McGillivray practically closed out his Holstein interests. The heifers are tuberculin tested and sold subject to a sixty-day retest.

There were many present, but prices were not as strong as had been expected and were not up to the quality of the stock offered. Mr. Mead took forty head, including the twenty daughters of Colony Zarilda Newman.

The sale was conducted by the California Breeders' Sale and Pedigree Company, with C. L. Hughes, of Sacramento, as sales manager. Col. Ben A. Rhoades, of Los Angeles, was auctioneer, and Col. J. A. Davis, also of Los Angeles, was ring man.

The animals bringing $150 or more with names and addresses of their purchasers are as follows:

Queen Mead Gelsche Paul	Bought by R. M. Scott, Woodland	$195
Inka Tritomia Gelsche Paul	Bought by T. L. McEnerney, Galt	155
Juebie Gelsche Snowflake		155
Valdessa Katrina		165
Dotty Spotfoot Valdessa	Bought by H. C. Withcrow, Live Oak	160
Salamba Valdessa Korndyke	Bought by J. E. Gore, Delhi	150
Oleta Korndyke Valdessa		200
Selma Mead Paul	Bought by Berrywood Stock Farm, Hueneme	180
Colantha Echo Sylvia Segis	Bought by Burr Latta, Elk Grove	160
Mapessa Zarilda Newman	Bought by M. E. Mead, Santa Anita	150
Queen Mead Zarilda Newman		175
Medjecka Zarilda Newman		190
Carlotta Zarilda Newman		185

Holstein sires had increased the production of the offspring of scrub dams 58% in the first generation and 110% in the second generation. These figures, he said, included all the offspring without any selection whatever. Had they selected the best they could have made a much greater showing.

Professor Kildee gave a dairy cow judging demonstration and said that Hargrove & Arnold had won success by building up a herd through the use of good sires, that they did not buy a high priced lot of cows, but started with good working cows and by the use of high class sires had from this foundation built up a great herd of producers and show animals.

The cow that attracted the most attention was Rose DeKol Wayne Butter Boy, one of the famous foundation animals of the herd. She is holder of the world's record for combined milk and butter fat for four consecutive years production and in the first three months of this lactation period has produced more than 500 lb. butter. She has eight female descendants on the premises, while her only son, King Piebe is owned jointly by Hargrove & Arnold, Z. C. Thornburg of Des Moines, and H. C. Nieman of Avoca, Ia.

FULTON COUNTY PICNIC

The Fulton County Holstein-Friesian Association as well as a number of other dairymen attended the annual picnic at Wauseon, Ohio, August 15th.

At the business meeting W. L. Biddle was elected president of the association: Howard Meyers, secretary-treasurer and C. P. Grisier, assistant secretary.

E. M. Clark, of Cleveland, Ohio, Field Secretary for the Ohio Holstein Association, and M. L. Howard, Henry County agent, of Napoleon, addressed the Association.

The meeting then adjourned to the Princess Theater, where free moving pictures were given, showing some of the best Holstein herds and individuals in the world.

The association enjoyed a splendid day, in spite of the heat and received inspiration to still further advance the work in behalf of the Black and White milk and butter machine, the Holstein cow.

CALF CLUB ROUND-UPS IN JACKSON COUNTY

Jackson County, Wis., is having a number of calf club roundups. The first one was at York where 25 calves were exhibited and attracted considerable attention. These roundups are under the supervision of Wakelin McNeal, assistant state club leader. Mr. L. C. Hatch, director of the LaCrosse County School of Agriculture, spoke at Melrose and North Bend. The calves were judged by E. V. Drier, the Smith-Hughes Agricultural instructor at the Galesville High School. Mr. McNeal judged at Black River Falls and the County Agent at Taylor. The Holstein winners at the different shows were:

Melrose: Holstein senior heifers—First, Ray Kelner; 2d, Nellie Button; 3d, Walter Button; 4th, Ramola Kelner; 5th, Adolph Kostohryz. Junior heifers—1st, Adolph Kostohryz; 2d, Walter Button; 3d, Annie Kelner.

North Bend: Senior Holstein heifers—1st, Clare Marshall; 2d, Lloyd Haugstad; 3d, Lester Haugstad. First prize bull calf—Vilas Baird, of North Bend.

Black River Falls: Holstein heifers—1st, Hazel Drecktrah; 2d, Everett Drecktrah; 3d, Elmer Nemec; 4th, Everett Drecktrah; 5th, Douglas Bright; 6th, Louis Drecktrah. Best showman: Elmer Nemec.

LOYAL AND LEAL

Twelve hundred people attended the picnic at Loyal, Wis., August 10th and were guests of the Loyal Holstein Breeders' Club.

The cattle were judged by L. L. Oldham, secretary of the state Holstein Association. The first prize for senior bull calves went to Myron Osgoodis, of Granton, John Wuethrich was 2d and Mr. Hincker, of Greenwood, was third. In the senior heifer class, John Wuethrich's animal was first and George Wilson, of Granton, was 2d.

In the junior heifer class there were three entries; two of which were club calves. John D. Wuethrich, Jr., won first place on his animal, with Roy Stevenson 2d and John Wuethrich, Sr., 3d.

An interesting feature of the picnic was the cow testing association demonstration. It showed how cow testing picked out the good and poor cows.

The speaking program began at 2:30, and consisted of short talks by R. M. Jenks, H. M. Knipfel, E. L. Luther, Supt. of Farmer Institutes, Henry Williams, Doctor Eliason, Wm. Krause, President of Clark County Holstein Association, L. L. Oldham and a representative of the National Dairy Show, and songs by Wilson and Wuethrich and County Agent Peterson, of Wood County.

BRATTLEBORO BUSINESS

Thirty applications for membership were received at the office of the Secretary for the week ending August 12th.

There were 1,529 certificates of registry issued, 1,054 female and 475 male; 1,159 certicates of transfer were written, 740 female and 419 male.

During the week ending August 19th, eighteen applications for membership were received.

The number of certificates of registry issued was 1,640, of which 1,164 were female and 476 male; 1,146 certificates of transfer were written, 754 female and 392 male.

Twenty-six applications for membership were received during the week ending August 26th.

During the same period, 1,741 certificates of registry were issued, 1,249 female and 492 male; 1,346 certificates of transfer were written, 929 female, 417 male.

The list of herd prefixes reserved for the three weeks period follow:

Catholic Home, St. Joseph's Industrial School, Clayton, Del.

MINNESOTA TWILIGHT MEETING

A twilight dairy meeting was held on the farm of Evan Williams, of Lake Crystal, Minnesota, August 15th, with a large attendance. Electric lights had been strung through the grove surrounding the Williams home and made it possible for horse-shoe pitching games, etc., to be carried on until late in the evening. A team from this unit will compete at the Garden City Fair, where teams representing the beef, Guernsey and Holstein breeders will compete for County Breeders' Association honors.

There was a musical program and talks were given by H. L. Sohre, Good Thunder, President of the Blue Earth County Holstein Breeders' Association; J. C. Marlow, secretary of the Blue Earth Association; A. H. Silber, Mankato, and George Austin, Lake Crystal.

A judging demonstration was given by J. C. Marlow, who scored three cows of the Williams herd, and a bull calf, owned by Louis Anderson, son of Wallie Anderson, a near neighbor of the Williams. Louis won this calf at the State Holstein Breeders' meeting which was held at Mankato, where it was given by E. H. Sohre & Son, of Good Thunder. Louis gives his calf excellent care and it is developing into a fine bull.

SIGN BOARD ADVERTISING

The Holstein club of Neillsville, Wis., has just had a big sign painted which is to advertise the Holstein breed, the dairy industry and Clark County. Across the top are the words, "For a Greater Clark County," under this "more milk, more ice cream, more butter, more cheese." In the center is a pasture scene with two life-sized Holsteins of the most approved type. Across the bottom is the signature, "Neillsville Holstein Club," while the painting is adorned with pictures of prints of butter, bottles of milk, dishes of ice cream and full cream cheese. The sign was painted by C. H. Chandler, while the Bruley Elevator Co. donated this space for the good of the community.

WISCONSIN ASSOCIATION FILES CERTIFICATE

On August 24th, certificates of amendment to the articles of incorporation of the Holstein-Friesian Association of Wisconsin were filed with the Register of Deeds at Fond du Lac. The name of the Association is changed to the Holstein-Friesian Breeders' Association of Wisconsin with the principal office at Madison. The Association is to be nonstock and non-dividend paying. The Board of Directors, which consists of 12 members, is divided into three classes, one-third of which retire annually. Each county in the state affiliated with the organization is entitled to one delegate for each fifty members or major fraction thereof. The amended articles were signed by the president, H. F. Schroeder and Secretary L. L. Oldham. The application was filed April 24, 1922, at Madison.

HAVE GOOD OFFICERS

The Rice County Farm Bureau is one of the newer bureaus in the state of Kansas. It was organized January, 1921, and began active work March 1st, of that year. At its first annual meeting all three officers and the county agent were reëlected. They are President A. F. Kiser, of Geneseo, vice-president George Worth, of Pollard, secretary-treasurer, Charles Hodgson, of Little River and County Agent Walter B. Adair, of Lyons.

Mr. Kiser was born on one of the farms which he now operates. Has lived on a farm all his life and is now handling 400 acres of land. He keeps Duroc-Jersey hogs and stock cattle and is a 1914 graduate of the Kansas State Agricultural College.

Mr. Worth came to Rice County from Iowa twelve years ago. He now has a herd of 25 Holsteins, about half of which are purebreds, has a modern equipped plant, has installed a power plant of his own which gives him electricity for lighting purposes and general farm operations.

Mr. Hodgson was born and reared on the farm which he now operates. His father was the first settler in Rice County, having homesteaded there in 1870. Mr. Hodgson operates 800 acres in all, is a believer in diversified farming and goes in for dairying, cattle feeding, the raising of hogs and sheep and the growing of alfalfa, corn and sweet clover.

Mr. Adair is a graduate of Kansas State Agricultural College, finishing in 1916. Before going to college he farmed a quarter section of land near Osawatomie, Kan. He has been a teacher of vocational agriculture at Kimball, Neb., Dillon, Mont., and at the Reno County high school, at Nickerson.

DAIRYMEN'S LEAGUE SEPTEMBER PRICE

The Dairymen's League Coöperative Association's asking price for September milk was decided upon by the Board of Directors at its monthly meeting at Utica, N. Y., August 23d-24th, and are as follows:

Class 1. Milk sold in fluid form, $2.90 per 100 pounds.

Class 2. Milk sold for use chiefly in the making of cream and ice cream, $2.

Class 3-A. Milk sold for the manufacture of canned milk 55 cents per 100 pounds over the price to be determined for milk for butter in September.

Class 3-B. Milk for the maunfacture of fancy hard cheeses, 40 cents per 100 pounds over the price to be determined for milk for butter in September.

Class 4. Milk for butter and cheese to be determined in the usual manner by the average wholesale prices of these products in the New York City market during September.

The price asked for Class 1 milk is 21 cents per 100 pounds more than the present price. It is exactly the same price as the dealers paid the association in September, 1921, during which the month they charged consumers 15 cents a quart. The retail price for Grade B milk in New York City now is 15 cents a quart, the dealers paying $2.69 for fluid milk.

Class 2 price will remain the same as in August.

Class 3-A price is an increase of 15 cents and Class 3-B is an increase of 10 cents per 100 pounds over the August price.

Cow Testing Association Reports

RACINE-KENOSHA HAS THREE 500-POUNDERS

The Racine-Kenosha Cow Testing Association completed its second year June 1, under the supervision of tester E. Sebastian. Despite the fact that the past year was very discouraging because of the low prices paid for dairy products, rapid progress is being made in Racine and Kenosha counties. The low prices for milk have forced the farmer to realize that poor producing cows and poorly fed cows are poor tax payers.

Mr. Sebastian in his summary says: "Poor marketing machinery after the post-war boom has been responsible for a large proportion of the hardships endured by the dairyman during the past year. A variation of thirty per cent in the market value of butter fat produced on farms within the same township points unerringly to the fact that the farmer must eventually own and operate his own market through coöperation.

"Efficiency in production is absolutely essential to the dairyman's welfare. The cow testing association is the only present medium through which the farmer can secure efficient production."

The Roland E. Lee herd stands first for production, and, with the exception of a two-cow dairy, leads for profit above feed cost. The Lee herd consists of fifteen registered Holsteins which average 9,635 lb. milk, 343.1 lb. fat. The roughage cost was $72.63 and the cost of grain feed averaged $45.91, or a total feed cost of $118.54. The value of the production was $187.39 per cow or a profit above feed cost of $68.85. The Lee herd was fed more grain than any other herd in the association and was the more profitable. Grade Holstein herds stand second, third, and fourth in butter fat production.

The high cow, a registered Holstein of the Lee herd, Molly Abbekerk Johanna De Kol, produced 15,084 lb. milk, 547.5 lb. fat and made more net profit than any competitor. She had $67.79 worth of grain and her roughage was figured at $77.21, a total feed cost of $145, which is more than the value of the milk given by the average cow in the association. The value of her milk was $299.63 so that she earned $154.63 above her feed cost. A Lee cow stood third with 12,826 lb. milk, 501.5 lb. fat; a grade Holstein, owned by Fred C. Hanson, was second with 11,469 lb. milk, 524.2 lb. fat and a registered Holstein, owned by Howard Sheen, was fourth with 12,211 lb. milk, 491.7 lb. fat.

During the year 707 cows were tested, of which 405 finished the year. Thirty-four cows averaged over a pound of butter fat a day. Last year there were twenty-seven. The association average for this year was 7,006 lb. milk and last year was 6,963 lb. In 1922, the fat average was 263.5 lb. while last year it was 244.3 lb.

One of the features was the production of Bessie Colantha Change. This two-year-old was in association work eight months and eighteen days, during which time she produced 12,268 lb. milk, 469.3 lb. fat. She is owned by Clinton Skewes and was milked only twice daily. This heifer shows exceptional persistency, her milk and test being practically uniform every month since she went on test.

A PSALM OF DEVOTION

"I love my scrub cow. She gives me employment every day in the year. She consumes my hay and grain, and grows fat and sleek. She is a thing of beauty, though a burden forever. To produce milk and butter fat would detract from her physical beauty, therefore it is unreasonable to expect it of her. She helps to reduce my income tax. I love my scrub cow. She is a luxury. Dairymen are entitled to luxuries as well as other people. My neighbor tells me to sell her to the butcher, but my neighbor is a hard-hearted man, so is the butcher. The official tester says that the profits from three of my best producers will keep her in comfort, so why should I worry. I love my scrub cow. It requires much time to feed her, but very little time to milk her. My banker says that the small amount of milk she contributes can justly be called "the milk of human kindness" for it is human kindness that allows her to exist. Even Parson Jones was heard to remark that, greater love hath no man than he who wears his young life away to support a scrub cow, expecting no reward, not even the respect of real dairymen. I love my scrub cow. Who can doubt it???"—*Cumberland, Wis., Association Report.*

FIRST AND SECOND

Seventy-nine of the 465 cows tested in the Shirley-Denmark Testing Association produced more than 40 lb. butter fat in the month of July, while twenty-one produced better than 50 lb. fat.

Canary Princess Belle, owned by Lawrence Larson, Denmark, Wis., was the leader, producing 87.8 lb. butter fat from 2,043 lb. milk. Next to her was a purebred Holstein, owned by Henry Benecke, with a credit of 1,811 lb. milk, 70.6 lb. butter fat. A grade Guernsey was third followed by five purebred Holsteins.

The herd owned by Henry Benecke, consisting of eleven purebred and grade Holsteins, topped the list with an average of 1,483 lb. milk, 52.5 lb. fat. The tester is Manning H. Nelson.

The price of wheat is down, but they are not saying it with flour.

MONROE ASSOCIATION FINISHES YEAR

The first annual report of the Monroe Cow Testing Association is being sent out by the Wisconsin College of Agriculture. It covers the work herds in Green County, Wis. As might be expected in this great Swiss Cheese producing district, Holsteins predominate and no other breed is mentioned in the honor list. During the year 775 cows were tested, of which 514 in 28 herds finished the year. The average amount of milk produced was 8,046.08 lb. per cow and the average fat was 263.84 lb. The average value of the product was $118.73 while the profit above feed cost averaged $48.03.

In the Association there are 23 herds tuberculin tested. All herd sires are purebreds and there were 49 cows that averaged over one pound fat a day for the entire year. We notice that there are no families listed as using butter substitutes.

The leading herd consists of 30 grade Holsteins owned by Ludlow Schild. Their average was 11,145 lb. milk and 367 lb. fat and the average profit above feed cost was $95.66. The eighteen cow dairy of Henry F. Stauffacher averaged 10,851 lb. milk, 340 lb. fat and returned an average net profit of $76.63. Sixteen registered Holsteins owned by Fred Trumpy & Son averaged 9,455 lb. milk and 321 lb. fat while registered Holstein herds owned by Roderick & Stuessy, Otto Zimmerli and Chester Frautschy follow in the order named. Alfred Barth & Sons with 21 cows described as registered and grade Holsteins, averaged 304 lb. fat and $59.82 net profit.

The two leading cows are grade Holsteins of the Ludlow & Schild herd. The leader, Lola, a four-year-old, produced 14,199 lb. milk, 535.4 lb. fat and averaged 3.77%. The value of her product was $240.93. The feed cost was estimated as $87.19 and the net profit as $153.74. Her stable mate, Annie, produced 14,941 lb. milk, 530.8 lb. fat and returned a net profit of $153.96. Reka Lorraine Ormsby 2d of the H. S. Stauffacher herd produced 15,181 lb. milk and 515.18 lb. fat and made a net profit of $136.66 while her stable mate, Fencliff DeKol Fayne 2d, produced 14,066 lb. milk and 474.5 lb. fat. Of the remaining cows in the first 12, Ludlow and Schild owned three, Fred Trumpy & Son, two, and H. S. Stauffacher, Roderick & Stuessy and A. Barth & Sons, one each. All the cows in the first twelve with the exception of the Ludlow and Schild animals are registered Holsteins.

HIS IGNORANCE

Man wants but little here below,
According to the poet,
But when he's really got enough
The blame' fool doesn't know it.
—*Country Gentleman.*

HILLSBORO ASSOCIATION ISSUES REPORT

The Hillsboro Cow Testing Association has issued its first annual report which tells of the activities of the association from June 1, 1921, to June 1, 1922. This, however, is not the first time the Hillsboro dairyman have been a testing association as the first one ran from Nov. 15, 1914, to Nov. 15, 1915. Four different dairies were in both associations and each one shows an increase in production. The herd of John Amberg shows only a milk increase of 8 lb. per cow, the figures being 5,101 lb. milk, and 5,109 lb. milk but the fat average increased from 268.4 lb. to 300.7 lb. The herd of Albert Fick shows an increase from 5,998 lb. to 7,709 lb. milk and from 252.8 lb. fat to 320.5 lb. The herd of J. F. Setzer shows a decrease of 310 lb. milk, but an increase of 4.7 lb. fat. But the herd of J. R. Winchell increased from an average of 5,375 lb. milk, 239.9 lb. fat to 5,566 lb. milk, 273.2 lb. fat. In the 1914 association the three high cows made 471.7 lb. fat, 430.1 lb. and 418.5 lb. fat while in the 1921 association the three leaders produced 473.3 lb., 469.8 lb. and 453.4 lb. butter fat respectively.

The average for the entire association was 6,566 lb. milk, 269.3 lb. fat for the 341 cows that completed the year's test while the average Wisconsin cow is credited with 190 lb. butter fat yearly. Nine herds in the association are accredited and nearly all the others are tuberculin tested.

The high herd consists of grade Holsteins owned by Albert Kahler. They averaged 8,755 lb. milk, 334.4 lb. fat. The feed cost was $56.60 and the net profit was $74.22. The purebred Holstein herd of F. Havlik was second with an average production of 8,021 lb. milk, 323.4 lb. fat and a net profit of $74.37. The next three herds consist of grade and purebred Holsteins.

The high cow was a grade Holstein, Violet, owned by Albert Fick, Wonewoc, Wisconsin. She was eleven years old, is sired by a purebred bull and her dam carried at least 50% Holstein blood. Violet was the most profitable cow in the association returning $3.14 for every dollar invested in feed, which consisted of 5,830 lb. silage, 1,420 lb. hay, 1,852 lb. grain. She freshened April 22, 1921 and was milked 339 days during which she produced 9,374 lb. milk, 473.3 lb. fat.

A grade Holstein, owned by F. Dreischmeier, was second with 10,244 lb. milk, 469.8 lb. fat and a net profit of $113.29. Another Fick grade Holstein was third. A cow described as a "native" of the Dreischmeier herd was fourth and then followed three purebred Holsteins owned by F. Havlik. The highest returned $114.33 net profit, and the lowest $101.48. The tester, V. Sorenson, calls attention to an example of the transmission of producing capacity in the Havlik herd. The ten-year-old cow, Hillspring Diamond Korndyke made 439.7 lb. fat; a four-year-old daughter of this cow made 406.2 lb. and a six-year-old daughter made 396.4 lb. fat.

On Oct. 5, 1921, the six high cows for four months test, were shown at the Hillsboro Fair and attracted lots of attention. It is the intention to show a number of cows this fall. At the end of the enrollment year the association was strong enough to divide into two new ones, Elroy and Hillsboro, which are now functioning.

Geneseo, N. Y.

SOUTH CAROLINA TESTING

Purebred Holsteins held the first six places in the list of cows tested during July in South Carolina. The herd of V. M. Montgomery, Spartanburg, furnished the first three cows, Arcady Segis Atia 2d, leading with 76.9 lb. butter fat. Her milk production being 2,208.8 lb., stood second. In the second place was Ruby Pietertje Burke, 2,084 lb. milk, 69.4 lb. butter while the senior three-year-old Katie Paul Sadie Vale was third with 1,887.9 lb. milk, 66 lb. fat in her ninth lactation month. In fourth position was Colantha Walker 2d, owned by J. T Willard, Spartanburg, with 64.5 lb. fat, her milk production being 2,228.2 lb., the highest appearing in the honor list although she is only a senior three-year-old.

Montgomery cows are in fifth and sixth positions with a Guernsey seventh. The Montgomery herd is represented by twelve animals and the Willard herd by five.

The production reported for four grade Holsteins owned by St. J. A. Lawton of Charleston is bound to attract lots of attention. Daphney is the leader with 1,775 lb. milk, 62.2 lb. butter fat; Dora with 1,543.8 lb. milk, 52.8 lb. butter fat is second; White Lion, mentioned in these columns several times, has 1,362.5 lb. milk, 52.4 lb. fat to her credit while Grace is reported with 1,473 lb. milk, 51.3 lb. butter fat.

There were 109 cows reported during the month, of which 24 made the honor roll. Forty-seven Holsteins of which seventeen made over 50 lb. fat in the month and fifty Guernseys of which seven attained the honors.

SWINEHART LEADS

The highest producing cow in the Avoca, Wis., Testing Association for the month ending July 16th was a grade Holstein that had a production of 1,668 lb. milk, 73.4 butter fat. She was owned by S. W. Swinehart, Avoca, who also owned the high herd. This consisted of seventeen grade and purebred Holsteins and averaged 1,157 lb. milk and 39.8 lb. butter fat.

There were thirty-two cows that produced more than 40 lb. fat in the month, five better than 50 lb., one over 60 lb., and one over 70 lb.

REAL PROGRESS IN BRUNSWICK COUNTY

Three hundred and eighteen cows representing nineteen herds were tested in the Burlington County, New Jersey, Association, during the month of August. There were twenty-two with forty pounds of butter fat and five with fifty pounds or better; eight producing 1,200 pounds or more of milk. A. R. Jackson had the highest cow for the month with 81.8 lb. butter fat to her credit and 1,996 lb. milk. She is a purebred Holstein named "Bloomfield Fair Oaks."

A canvass of the members in the Association shows that all the members who have bulls of their own are using purebred herdsires, which means all but two of the twenty-one members. Two members of the Association have accredited herds and three others have adopted the accredited herd plan and are now under Federal and State supervision.

There are at least ten members that are going to show some of their stock at the Mount Holly Fair, one-half of the membership in the Association, which is quite a creditable showing.

The price of high protein feeds have dropped a bit and it is hoped that more cottonseed and oil meal will be fed next month, which will result in more and better milk.

WARREN H. KELLOG, *Tester.*
Burlington County, New Jersey.

FLIES LOWER PRODUCTION

There were 420 cows tested in the Clinton Wisconsin Testing Association for the month of July. Of these, five produced more than 40 lb. butter fat. The production of many of the cows was greatly reduced because of the dry pastures and the flies.

High herd consisted of nine Holsteins, owned by Lewis Williams, with an average production of 1,021 lb. milk, 37.3 lb. butter fat. This herd had blue grass pasture and was fed about ten pounds of grain per day, consisting of ground corn and ground oats, with one pound of cottonseed meal.

Second high herd was composed of twelve Holsteins, owned by John Knutson. Their production was 920 lb. milk, 32.8 lb. butter fat. A thirteen cow dairy, owned by Craighurst Farms, was third with an average of 937 lb. milk, 31.4 lb. fat.

High cow was also owned by Mr. Williams. This was a purebred Holstein that produced 1,528 lb. milk, 56.5 lb. butter fat. A grade Holstein, owned by C. A. Larsen, was second with 1,610 lb. milk, 54.7 lb. fat, and another grade Holstein owned by David Dean was third with 1,063 lb. milk, 53.2 lb. butter fat.

NEW YORK STATE TESTING

The August News Letter of Supervisor G. W. Tailby, Jr., shows that during July, twenty associations reported progress. The leaders in nine instances are termed grade Holsteins, in seven as purebred Holsteins and in one as just Holstein, making seventeen out of twenty association leaders Black and White. Two others were Jerseys and one an Ayrshire.

The leader for June production was the great producing Holstein grade Aaggie, owned by Sam Barber, of Scottsburg, and enrolled in the Livonia Association of Livingston County. She freshened on Washington's birthday and in April was the biggest milk producer, in May led her nearest competitor for butterfat by 13 lbs. and was second for milk. In June, she was the leader for both milk and butterfat with 101.6 lb. fat and 2,418 lb. milk. In 130 days she has, so L. P. Zumstein, Supervisor of the Livonia Association reports, produced 10,835.1 lb. milk and 451.4 lb. butterfat. Second to her in June is the purebred Princess, owned by Luther Carrier, of Fulton, with 101.1 lb. fat and 2,298.1 lb. milk. Third is a grade Holstein owned by Wilbur Ashley, also of Livonia, with 90.9 lb. fat and 1,818 lb. milk. Dale Brothers, of Gasport, have a registered cow that made 84.1 lb. fat and 2,262.6 lb. milk, while another of Mr. Carrier's cows produced 82.5 lb. fat and 2,292.1 lb. milk. In the Livonia Association, Pocohontas, owned by J. H. Huff, freshened January 15th and in 165 days has milked 12,316.5 lb. milk and produced 417 lb. fat.

Of the 10,554 cows whose records were kept in June, 1,426 or 13.5% made the honor roll. Of this number 60 produced between 60 and 70 lb. fat and lb. fat and six above 80 lbs. during the month.

In the East Aurora Association, 14 cows in the herd of Ray Tomlinson, of Wales Center, have completed year records which average 10,093 lb. milk and thirteen produced between 70 and 80 339 lb. fat. The best producer is a purebred Holstein, Frisky Fayne De Kol. She is a six-year-old, freshened July 22, 1921, and started milking at the rate of 55.5 lb. per day and 311 days afterwards at the end of her testing period, was milking better than 40 lb. a day and made a record of 14,466 lb. milk and 439 lb. fat on twice a day milking. A purebred two-year-old Holstein in this herd produced 10,805.8 lb. milk and 342.3 lb. fat during the first 282 days of her lactation period.

The Holstein Breeder and Dairyman

HIGHEST ASSOCIATION RECORD

Adeline Hengerveld De Kol 2d, purebred Holstein cow in the Aldencrest herd owned by Dold and Graves of Alden, N. Y., broke the New York State Dairy Improvement Association records by producing during the month of July 3, 705.3 lb. milk containing 112.29 lb. fat. Her high day was 132.8 lb., and in seven days she produced 902.4 lb. This is said to be the highest milk record ever reported in cow testing work. Adeline was under strict supervision with two check tests. Her regular two day test was made by A. E. Mowers, of Cuba, and her check tests were conducted by C. C. Spaulding, of East Aurora, and Carl Shelby, of Cornell University.

WYOMING COUNTY TESTING

Jennie, a grade Holstein, owned by Willard Harding, produced the greatest amount of milk and fat for the month of August. Her production was 1,550 lb. milk, 54.3 lb. fat.

The high herd average was retained by F. M. Riker of Factoryville. His eighteen purebred Holsteins averaged 748.7 lb. milk, 26 lb. fat.

Only nine cows produced more than 40 lb. fat, while seventeen produced over 1,000 lb. milk and eight over 1,200 lb. milk. There are now three accredited herds in the Wyoming County Cow Testing Association.

Tunkhannock, Pa.

THE CALF KICKED BACK

While Blaine Ely of Waynesboro, Pennsylvania, was taking a calf to the slaughter house the calf kicked on the deal and came very near slaughtering Mr. Ely. The pair were in an auto truck and the calf kicked Mr. Ely in the left eye knocking him to the ground, where, as he fell he struck his head on the watering trough and was rendered unconscious. Really we cannot find it in our hearts to blame the calf. Anyone would kick if they were being carried off to be killed.

BOSTON COW ON A JAG

That cows occasionally "go on a jag" is known to everyone who has had cows break into the orchard when apples were thick on the ground. Since prohibition came into effect, there have been a number of cases reported of cows getting into the dumped mash from stills, said stills having been hurriedly emptied when prohibition enforcement officers were in the neighborhood. The Boston *Post* of August 13th reports a case of a Holstein cow of Malden, one of the Hub city's suburbs. The moonshine mash heap was on the Malden athletic ground. Betty got out of pasture and not only got "jagged" but was instrumental in leading the rest of her herdmates into temptation. The news item was accompanied by a picture of a grade Holstein attached, by her halter, to an old-fashioned prisoners' ball and chain.

CONDITION POWDER

Occasionally an animal goes slightly off feed for no apparent cause or appears to need a tonic, or condition powder. In the Cumberland, Wisconsin, Cow Testing Association report, the tester, W. E. Constable, gives a number of short talks on things likely to be valuable to the dairyman and also the following receipt for condition powder:

Oilmeal, 20 lb.
Powdered charcoal, 1 lb.
Epsom salts, 1 lb.
Common salt, 1 lb.
Saltpetre, 12 oz.
Powdered gentian, 12 oz.
Fenugreek, 9 oz.

Give one tablespoonful twice a day in the feed.

FURNISH CREAM FOR BIG BUGS

The California Hotels Farm Company have a ranch seven miles southeast of Riverside, on which is a herd of 46 registered Holstein cattle. The herdsire is Colantha Northland Segis, a son of Pearl King Segis Pontiac and the A. R. O. cow, Hartwood Netherland Segis. The 29 young cows in milk are all in their first or second lactation period and are producing 1,000 lb. milk daily and averaging 35 lb. each, five months after calving. These cows came from Illinois and were selected by C. L. Bratzler, who is now connected with the Glenwood Stock Farm at Riverside. In the herd are daughters of King Segis Pontiac, the great show bull Paul Calamo Korndyke, Colantha Pontiac Korndyke and Pearl King Segis Pontiac.

The herd is in charge of Ross Flintjer and the milk and cream produced is used in the three big Pasadena Hotels owned by the company, the Maryland, Huntington and Green.

MILLER HERD ACCREDITED

The Miller herd at Mapleway Stock Farm, Clarks Summit, Pa., has just received an accredited herd certificate. The second clean test was passed last June. This is one of the many good herds in northern Pennsylvania. The animals are large producers as well as good individuals and are kept as dairy cows, that is, for production instead of for show. To retain her position in the Miller herd a cow has to be not only capable of producing heavily but also of making a substantial profit above the cost of her feed, the Miller Brothers realizing that the true merit of the Holstein breed is its profitableness.

THE WAY IT GOES

We looked across the burning plain
And wondered if 'twould ever rain;
And when we'd had a week of rain
We wondered if 'twould e'er abstain.

McGILLIVRAY DISPERSAL

Ninety-two purebred heifers, ranging from calves to two-year-olds were sold at James McGillivray Dispersal Sale, Sacramento, Cal., August 17th, for the sum of $11,685, an average of $124.

The get of seven bulls were represented in the herd. These sires were: Prince Gelsche Walker Paul, Yolo Valdessa Hengerveld, Yolo Korndyke Walker, Colony Zarilda Newman, Prince Echo Sylvia Segis, Yolo Mead Paul and Rag Apple Walker Korndyke. M. C. Meade, of Los Angeles, secured all the heifers by Colony Zarilda Newman, paying an average of $158.75 for the twenty head.

The cows in milk in the McGillivray herd were sold more than a year ago and with the present sale Mr. McGillivray practically closed out his Holstein interests. The heifers are tuberculin tested and sold subject to a sixty-day retest.

There were many present, but prices were not as strong as had been expected and were not up to the quality of the stock offered. Mr. Mead took forty head, including the twenty daughters of Colony Zarilda Newman.

The sale was conducted by the California Breeders' Sale and Pedigree Company, with C. L. Hughes, of Sacramento, as sales manager. Col. Ben A. Rhoades, of Los Angeles, was auctioneer, and Col. J. A. Davis, also of Los Angeles, was ring man.

The animals bringing $150 or more with names and addresses of their purchasers are as follows:

THE SYRACUSE STATE FAIR SALE

A sale that promises to bring together cattlemen from long distances is the one that will be conducted by R. Austin Backus, at Syracuse, September 18th and 19th, the first two weeks following the New York State Fair. The sale will be held on the fair grounds and Mr. Backus informs us that at least 50% of the offerings will be exhibited at the fair which certainly indicates the high class individuality of the animals consigned. A number of the animals come from accredited herds and at least 75% will come from herds under state and federal supervision while all animals are tuberculin tested and are sold subject to a 60-day retest.

There are a number of real high class herdsires among the offerings. The great show bull, Woodmont Echo Sylvia Champion, will surely cause many who see him to wish to own him. An animal of superior type himself, he is a son of Butter Boy Empress, a 30-lb. cow that was grand champion at the 1921 state fair and was termed by Judge Haeger one of the three best animals seen on the circuit last fall. There is a yearling bull sired by King Korndyke Daisy Veeman, who is a son of King Korndyke Sadie Vale, from a 30-lb. four-year-old daughter of Sir Veeman Hengerveld. His dam is the 31.82-lb. cow Artis Pontiac Boon, a granddaughter of King of the Pontiacs, while her dam is a 30-lb. daughter of the 30-lb. cow De Kol Boon Lilith, so that the three direct descendant maternal dams of this bull are all above the 30-lb. mark. In the sale there are two other sons of 30-lb. cows, also a son of Finderne Pride Johanna Korndyke, whose daughters are making such wonderful records in long-time test.

The females in this sale will include A. R. O. cows and their daughters. There are two daughters of cows with 29-lb. official seven-day butter records, also granddaughters of many of the greatest sires of the day. There is expected to be 135 head in the sale, which will be held under canvas, probably in the judging pavilion.

Those who attend the New York State Fair and are at all interested should plan to stay over and take in this sale.

The Backus Bros. Pedigree Co. will have a booth at the state fair where details regarding the sale can be obtained. This is an opportunity to combine business and pleasure and to those who love the breed attending a sale of this character is a pleasurable business.

CLEAN-UP IN NEW YORK STATE

In Steuben County, New York, the battle is on against tuberculosis, and before long veterinarians will have tested every one of the more than 50,000 cattle in the area. The United States Department of Agriculture reports that this is the biggest job in square miles covered and in number of animals that has yet been undertaken under the area plan of eradication now being adopted in many parts of the country.

The procedure followed in this county is a good example of the way to carry on such a drive. In the first place Steuben County requested the State Bureau of Animal Industry to put on a drive in coöperation with the United States Department of Agriculture. The livestock owners were promised that the work would be done provided it was organized along approved lines. The County Board of Supervisors appropriated $5,000 to pay for the transportation of inspectors, for ear tags and other incidentals. Each member of the Board, consisting of 32 men, assumed the responsibility for organizing the campaign in his own township, visited every cattle owner in his jurisdiction and had him sign an agreement placing his herd under State and Federal supervision.

Meetings were held at Bath, the county seat, and the details of the campaign were worked out with the County Farm Bureau. The supervisors supplied automobiles to take the veterinarians from farm to farm. On August 14th the work was started. All the reactors found are branded with a "T" on the left jaw and marked with a tag in the left ear, then segregated from the rest of the herd to be held until all the cattle in the county have been tested. After the testing each reactor will be appraised and a minimum salvage price placed on it so that none of them will be sold for less than the price they should bring on the market. Then all of the tuberculous cattle will be removed from the farms, the premises cleaned and disinfected and approved before any indemnity money is paid.

The herds in which reactors are found will be kept under supervision and retests will be made at regular intervals until the disease is eliminated. No cattle will be added to these herds except animals from herds under State of Federal supervision.

DEYSHER DONATES BULL

The well-known Holstein breeder, A. S. Deysher, about the middle of August, presented to the Topton Orphans' Home, at Topton, Pennsylvania, a fine young bull, King Tweede Pearl, which will be used at the head of the good herd of Holsteins which is being built up at the home.

The dam of King Tweede Pearl is K. K. S. V. Pearl. This heifer, three months after freshening as a junior two-year-old, produced 12.24 lb. butter in seven days. She is royally bred, being by the noted sire King Korndyke Sadie Vale from S. V. H. Pearl, 35.21 lb. butter, 525.9 lb. milk in seven days, one of the best daughters of Sir Veeman Hengerveld.

King Tweede Pearl traces to some of the greatest transmitting sires of the breed as well as to many heavy producers. Among his ancestors on the sire's side are King of the Pontiacs, Pontiac Korndyke, Hengerveld De Kol and De Kol 2d's Butter Boy 3d. On the dam's side he traces to King Segis, Pontiac Korndyke, Hengerveld De Kol, and Sir Veeman Hengerveld. His female ancestry includes Tweede De Kol Lass, 34.39 lb., the dam of the first 44-lb. cow, K. P. Pontiac Lass; and Tweede White Lady, a 37-lb. cow with a record of 1,127 lb. butter in a year. While on the dam side his maternal ancestors include Sadie Vale Concordia 4th with 41.06 lb. butter in a week and her dam Sadie Vale Concordia, the first cow to make a 30-lb. official seven-day butter record.

A COMFORT HERD IN CALIFORNIA

Despite the fact that he resides at Guernsey, California, A. B. Comfort, starting a few years ago with a modest foundation, has been quietly building up a high-class herd of Holsteins. Back in 1915, Mr. Comfort purchased at public sale the bull, Juliana De Kol King Segis for $1,800. This bull is a son of King Segis Pontiac Emperor, the great show bull of the Morris herd, who is by King Segis Pontiac from the full sister of King of the Pontiacs.

The dam of Juliana De Kol King Segis was at one time the world's record senior two-year-old in the thirty day division and was junior champion at the St. Louis Exposition.

This bull has sired a number of good record daughters. Aaggie Segis Juliana as a junior four-year-old produced 965.58 lb. butter, from 24,257.7 lb. milk in a year. Juliana Pietertje Segis, calving at two years, eight months made a year record of 883.40 lb. butter from 23,073.8 lb. milk. A number of other daughters have made large seven day records with a big milk flow.

In this herd are a number of daughters of Tirzah La Polka Pietertje Lad, formerly at the head of the Chas. J. Welch herd. Of these, La Polka Katrina Mercedes made in seven days, 27.78 lb. butter from 577 lb. milk and in a year made 999.62 lb. butter from 26,320.1 lb. milk. Another daughter of Tirzah La Polka Holland produced 847.66 lb. butter from 22,611.2 lb. milk in a year, while La Polka Pietertje Tuebie, 25.66 lb. butter from 603.7 lb. milk in a week, is now making a splendid year record and is the dam of Juliana Pietertje Segis, mentioned above.

The present Comfort herd sire is King Riverside Mead, a son of King Mead, of Riverside and the thousand pound cow, Pet Salambo, of Riverside. The first daughter of this bull to be tested, Artis De Kol Segis, 2d, has made 17.18 lb. butter from 428.3 lb. milk in seven days.

SERVICE THAT SAVES

Our Catalog Service saves TIME because we have the largest force of trained clerks and the most modern facilities for turning out high class work in a hurry.

Our Catalog Service saves MONEY because we have so perfected the operations of compiling and printing sale catalogs that our prices are the lowest for dependable catalog service.

Our Catalog Service saves WORRY because we do not make promises we cannot fulfil. Therefore our deliveries can be depended upon. The character of our compilers and the completeness of our files insures our clients against worry and against incomplete pedigrees and needless mistakes.

You will therefore save money by sending for our catalog samples and prices before contracting for your coming sale.

TAKING AFTER MOTHER

Winnie Cornucopia De Kol Korndyke No. 366330, owned by the J. S. Gibson Co., of Williams, Cal., has just completed a year record as a five-year-old, making 1,115 lb. butter from 28,354.5 lb. milk. This great cow, dropped the property of the Gibson Co., is a daughter of King Kasteleintje Segis and the famous Winnie Korndyke Cornucopia De Kol, who as an eight-year-old made a year record of 31,034.2 lb. milk and 1,201.06 lb. butter, and was California's first 1,200 lb. cow.

Old Winnie is the only cow in California with a 1,200 lb. year butter record that has produced a daughter with a record of over 1,100 lb. butter in a year. This mother and daughter are not equalled by any other cow and daughter in the state of California for milk production, their year record totalling 59,388.8 lbs. The herd bull of the Gibson herd, Winnie Korndyke De Kol Alcartra, is a son of old Winnie and therefore a brother to the new record maker. His sire is Prince Alcartra Korndyke, the oldest son of Tillie Alcartra. We will let our readers figure the averages and statements that can be made about this herdsire. So pedigree experts, get busy!

DAIRY INDUSTRY HANDBOOK

The world's production and international trade in dairy products is becoming a most important factor in our dairy industry. It is desirable that those engaged in this industry be kept informed, and to that end the Department of Agriculture recently published a handbook of 72 pages containing 135 tables giving a mass of dairy statistics for the leading dairying countries. Figures on production, prices, exports, imports and other data of everyday interest in value are given. This handbook is distributed free by the Division of Publications of the U. S. Department of Agriculture, Washington, D. C., to those who make request for a copy.

A-SEEIN' THINGS

I've seen a brick walk 'round the house,
The corn stalk on the ground:
I've seen the cow slip in the dale
A cat fish in the pond.
I've seen a bun dance on a plate,
A lamp light on the floor;
I've seen a horse fly through the air
And a hat stand by the door.
—*Okla. Farmer.*

DAIRYING STABILIZES AGRICULTURE

Agriculture without dairying is like an engine without a flywheel. The purpose of the flywheel is to stabilize and carry the force over the dead line. One-crop agriculture is like a powerful engine; without dairying there is nothing to steady it.

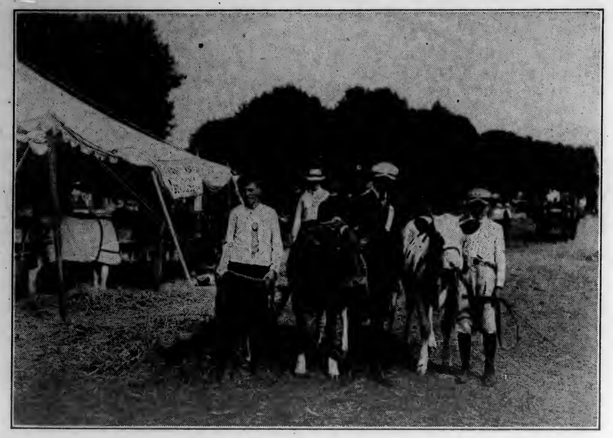
The lesson of the farmers in Arizona who listened to the song of the one-crop siren with the result that they disposed of 60,000 head of cows and devoted their entire effort to the production of cotton, is a lesson which farmers everywhere should take home and study.

The cotton venture would have been a good one if cotton had maintained its price. Conditions in the world are such that much can happen between the planting of the crop and the final sale after harvest, and the small farmer particularly is playing a hard game when all his stakes are placed on one throw of the dice.

These Arizona farmers are now looking for cows to restock their farms. They have learned a lesson they never will forget and the cost was fearful. They will continue to raise cotton, of course. Good crops of long staple cotton constitute a powerful engine for prosperity. But they will resume dairy farming on a bigger scale than ever for they have found it to be the flywheel—the stabilizing, shock-absorbing flywheel—of agriculture.—*Oklahoma Farmer.*

ARIZONA CHAMPION

Teresa Belle 3d, the champion cow of Arizona, is starting on another test and will endeavor to break her present record of 26,336 lb. milk and 1,015 lb. butter. Teresa holds the state records for thirty days as well as the year for an Arizona product and was bred in the herd of the University of Arizona at Tucson. She will be shown at the Arizona state fair this year to demonstrate to the farmers of the state what a real cow looks like.



Brave by Proxy.—"Yes," said the dentist, "to insure painless extraction, you'll have to take gas, and that's fifty cents extra."

"Oh!" said Casey, "I guess the old way'll be best; never mind the gas."

"You're a brave man," said the dentist.

"Oh!" said Casey, "it ain't me that's got the tooth; it's my wife."

From left to right they are: Joseph Hoopes, Bel Air, Ronald Jones, Sharon, and Norman Pennington, Chestertown

DAN PATCH BARN BURNT

In the early evening of August 18th, a fire broke out in the barn at the old International Stock Farm, Savage, Minn., formerly the home of the famous pacer, Dan Patch, and now the residence of Duke Pietertje Korndyke Ormsby. The cause is supposed to have been spontaneous combustion in the hay barn. The damage is said to be $100,000, of which only a small portion is covered by insurance. Plans have already been made for the erection of a new stable which will be 250 feet long and 46 feet wide. Readers of THE BREEDER AND DAIRYMAN will regret that Axel Hansen and Mr. MacIntyre have suffered such a heavy financial loss.

FROM WISCONSIN TO SPAIN

Sixty head of Barron County Holteins left Barron, Wis., August 8th, in three Palace Stock cars. Their itinerary called for a stop-over at Mexico City where twenty will be taken off and from which place forty will be eventually shipped to Spain. The shipment is in the charge of Lloyd Krahenbuhl and O. C. Hanson, who will bid farewell to their charges when they are safely aboard the boat at New Orleans.

The purchase was made by Dr. D. A. MacLean, a prominent veterinarian of New Orleans, who is employed by a syndicate that is importing cattle into Mexico and Spain. The Doctor says this will not be the last of his purchases.

PEDIGREE MAKING IN THE WEST

The Western Holstein Pedigree Company will, on January 1, begin the fifth year of its operation as a commercial pedigree house although Harrie W. Gleim, the manager of the company has been known as a pedigree expert for many years.

Mr. Gleim is very well satisfied with the Holstein breeders' patronage of his company and tells us that during the past two years the Western Holstein Pedigree Company has catalogued 75% of all the Holstein sales held in the territory west of the Missouri including Minnesota.

BUSINESS IN INDIANA

The Tipton County, Indiana, Purebred Live Stock Company, on August 22, purchased of J. J. Keisling, Kokomo, some splendid Holsteins which are to be placed on the farms of Tipton County. There are six daughters of King Sylvia Korndyke, who is closely related to Carnation King Sylvia, the first five dams of this bull have seven day records averaging 38½ lb. butter and the ten nearest dams average 35 lb. The purchase also included a number of granddaughters of old Pontiac Korndyke.

Buyers everywhere read over classified advertisements. Why not list the stock you have to sell? The cost is low, the results are sure and certain.

DAIRYMEN'S LEAGUE ICE CREAM AT NEW YORK STATE FAIR

The Dairymen's League Coöperative Association has the ice cream concession at the New York State Fair Grounds this year, and will set up six booths at which it will retail Dairymen's League ice cream. Regular employees of the association will be in charge of each booth. The association also has the ice cream walking privilege on the grandstands.

Organized dairymen, as represented by the Dairymen's League Coöperative Association, Inc., apple, potato and wool growers, and other bodies of producers, have taken ample spaces for their exhibits. The Grange-League-Federation Exchange, the farmers' coöperative buying and selling agency, has been allotted generous space for an exhibit of all the supplies and products it handles.

The Dairymen's League Coöperative Association will occupy its permanent booth in the Dairy Building, where it will have a complete display of all milk products manufactured by the association. This display, which promises to be very complete, will take up one-half of the booth. The other half will be utilized as an association headquarters.

FULL SISTERS AND GOOD ONES

M. J. Roche, of Pinckney, Mich., has a couple of full sisters on year test that are making fine records. One is a six-year-old and the other a five-year-old. They already have in ten months of their time and promise to aggregate 50,000 lb. milk and 1,950 lb. butter. There are three cows in the Roche herd on long time test and all three are good ones. The full sisters are a pair that would be hard to beat in the show ring for produce of dam. They are making their records right in the stanchions and in spite of handicaps, for their owner styles himself a "common farmer" who is alone a good share of the time, and at present is milking 15 cows by hand without any help.

TEN SILO FILLING HINTS

Professor R. S. Hulce of the Wisconsin State College of Agriculture is the author of ten hints to silo fillers. Nos. 4 and 10 should always be borne in mind for lives have been lost for want of such simple precautions. The fermenting silage forms carbon dioxide gas, which, being heavier than air, cannot escape from the silo unless there is a current of air to carry it along. Anyone entering a closed silo runs the risk of suffocation. Mr. Hulce's suggestions are:

1. The tons of silage that can be gotten into a silo have been over estimated from 20 to 25%.

2. See that none of the silo doors are missing before starting to fill. Straighten stave silo and adjust guy wires.

3. Set knives of cutter so that pieces of silage will not be over ½" long. Pack silage well by tramping as silo is being filled. If silage is not well packed so air is excluded, moulds will grow.

4. During filling process never put the doors in far above the surface layer of silage, since carbon dioxide which forms cannot escape and a person entering the silo may be overcome by the gas.

5. When conditions permit, cut corn when the kernels have dented and commenced to glaze. When corn is cut in milk the silage is high in water content and low in dry matter.

6. Corn cut for silage when mature and dry does not make a silage relished by stock. Many kernels of mature corn silage pass through the animal undigested.

7. If the leaves and husks have dried before silo filling, it will be necessary to add water in order to get the silage to pack.

8. A good grade of corn silage and legume hay form the basis of the best ration for milk production.

9. Silo walls should be thoroughly cleaned. A cement wash should be applied to inside of concrete silo if silo is not in good condition.

10. Extra precaution.—Run silo blower a few minutes in the morning when refilling to drive out gas which may have accumulated. This may avoid having men overcome by gas.

ONE HUNDRED FEMALES

In 1919 Walt F. Mitchell, of Visalia, Cal., sold his milking cows, retaining a number of young heifers. These have increased until he has now around 100 head, of which 35 are in milk. The younger things are daughters of King Abbekerk Johanna Segis, a son of Adirondac Wietske Dairy Maid, whose record of 34,401.9 lb. milk and 1,420.14 lb. butter was reported in the first test bulletin of the current Holstein fiscal year. She already had to her credit a year record of 1,295.11 lb. butter and 31,988.8 lb. milk and by many is considered the greatest producing cow living to-day.

ON ECONOMICAL FEEDING

A very good record has been made by Beauty Van Pelt Johanna, a registered Holstein, owned by Louis H. Pape, of Dyersville. She produced 17,733 lb. milk, 727.1 lb. butter in a year's test on twice a day milking and had been fed for economical production. The net income from this cow was $184.84, without giving the skim milk any value.

BUYS ENTIRE HERD

The herd of C. A. and James Miller, of Ripon, California, has been purchased for the F. L. Hogue Company, of Modesto, which is developing a herd of registered Holsteins which is planned to be the largest in Stanislaus County and which already consists of over 200 head. The Miller herd includes K. P. Tola Joe, a daughter of King of the Pontiacs that made over 31 lb. butter in seven days; Lady Victoria Walker, a daughter of King Walker 5th and It Idyl Segis, a daughter of It and K. P. Idyl Segis, who is a thirty-five pound official seven-day butter record daughter of King of the Pontiacs. There are a number of good ones in the Hogue herd. Among them are Blanche Hengerveld of Nevada, 963.94 lb. butter from 22,343.2 lb. milk; Copa De Oro Katrina De Kol 2d, 962 lb. butter in a year; Mollie De Kol Pontiac Mead, 829.59 lb. butter from 19,219.4 lb. milk; and Belle Faskie Hengerveld De Kol 2d, 777.8 lb. butter from 24,150.8 lb. milk in 295 days. This cow had to be taken off test owing to an injury to one of her teats. She was the 1918 California State Fair Champion.

The herd is headed by Dutch Vina, a son of Segis Pontiac De Kol Dutch and the 1,140 year record cow, Vina Pietertje Hengerveld De Kol 2d. The junior herd sire is Moorland King Mead Haskins, a son of King Mead of Riverside from a 32 lb. three-year-old daughter of the 32 lb. four-year-old Mabel Haskins of San Jose.

SALES FROM MERRYALL FARMS

You and your readers may be interested to know that Merryall Farms at Wyalusing, Pa., have recently sold two young bulls that we certainly are proud to place at the head of good herds in this state.

King Merdu Johanna 365944, was sold to D. M. Brown, Elkland, Pa. Mr. Brown is starting an up-to-date herd and has made a good start toward it when he places such a sire as this young fellow at its head. His sire is King Pontiac Merdu 2d, a splendid son of King Pontiac Merdu, who is from a 34 lb four-year-old. The dam of Mr. Brown's bull is a wonderful three-year-old granddaughter of Korndyke Abbekerk, whom everyone knows about. This three-year-old has just finished a year semi-official record of 18,892 lb. milk and 816 lb. butter. This is the first time she was ever tested and she started the test in very thin condition. She made 20.7 lb. butter in seven days from 485.9 lb. milk, 130 days after freshening. She is also safe in calf again to King Sylvia Johanna Pontiac, our 40-lb. brother to Carnation King Sylvia, and we feel sure she can increase this record by a large margin.

We sold to H. W. Creasy, of Mahanoy City, Pa., the bull Merryall King Hengerveld, whose sire has five dams that average 33.6 butter in seven days. His dam is Merryall Lilith Hengerveld, whose three nearest dams average 22,500, lb. milk and 960 lb. butter in a year. Merryall Lilith Hengerveld made 22.78 lb. butter in seven days from 548.9 lb. milk. She also made over 4,300 lb. milk and 175 lb. butter in sixty days. She has a daughter that has just finished a year record of over 12,000 lb. milk and 496.7 lb. butter, freshening at 1 year 7 months and 20 days. The two cows that we sold to Pennsylvania State College, known the state over as "The Liliths," are close up in the pedigree of this young bull, they being dam and granddam of his dam. This bull is a faultless individual and we are much pleased to have him go into such good hands, for we feel sure he will have a chance there, and will add to the fame of this already popular family known for their wonderful production year after year at Penn State an dalso at Merryall Farms. We feel sure that this sire will put Mr. Creasy will in the lead of his fellow breeders in Schuylkill County.

Signed,
C. W. NEWMAN.

When you wish to sell one, two or three animals, try a Classified Advertisement in THE BREEDER AND DAIRYMAN. It will do the trick.

It won't cost you much to try our Classified Advertising columns. They will help you move your surplus stock at a very low cost.

A BUSY FALL

Glenn R. Mead, the livewire auctioneer is rapidly filling his fall sale dates. Sept. 22d, he will help John A. Johnson, Collins, N. Y., disperse his herd and the following day will officiate at Lancaster, at the Fred W. Zwilling dispersal sale. Glenn will be in the box October 2d at Franklinville at the dispersal sale of W. H. Allen, and a week later will be in evidence at the reduction sale of Senator A. T. Fancher, Salamanca, N. Y. The three herds to be dispersed are all well known and the Fancher herd is famous as the home of Fancher Farm Maxie, the world champion senior four-year-old. Mr. Mead is a hard worker and is a great favorite in western New York. No gathering of Holstein breeders in that territory is considered complete without the genial Glenn.

ONE LESS ON THE ROADS

(St. Johnsbury, Vt., Caledonian.)

A Rutland automobilist, who pleaded guilty of running his car on country roads while under the influence of liquor, was brought into court and sentenced to not less than a year in states prison. That's the idea.

SUBSTITUTE DESIRED

"I wish I had a baby brother to wheel in my go-cart, mamma," said small Elsie. "My dolls are always getting broken when it tips over."—*Boston Transcript.*

In the Backus Sale at Syracuse, Sept. 18-19, 1922, will be sold

Woodmont Echo Sylvia Champion, No. 274172

Born—April 22, 1919 **Weight at 38 months, 2,177 lbs.**

Dam and two nearest dams of his sire average,
Butter 34.51 Milk 724.6 in 7 days.

He is a son of Butter Boy Empress, who averaged within a fraction of 90 lb. milk a day for 30 days, with 30.27 lb. butter and 660 lb. milk in seven days. She was First Prize Cow, Senior Champion, Grand Champion, and First Prize A. R. O. Cow at the New York State Fair last year.

He is a grandson of Woodcrest Cornelia Pietje, with 32.36 lb. butter as a junior four-year-old. She is the cow that made such impressive winnings in the largest Canadian Shows a few years ago.

This Bull Will Be Exhibited at the New York State Fair the week preceding the Sale.

He now heads three ACCREDITED HERDS.

We have two crops of his heifers and are more concerned in his future than the price he brings. We hope to place him in the best breeding and show herd in the land.

South Montrose, Pa., Susquehanna Co.

P. S.—Four daughters of Tobe Rag Apple Korndyke and one daughter of King Tweed Spring Farm, consigned to the Susquehanna County Breeders' Sale of cattle under Federal Supervision, at Montrose, Pa., SEPTEMBER 15, 1922, are bred to this sire.

SUSQUEHANNA COUNTY HOLSTEIN BREEDERS' SALE

AT THE FAIR GROUNDS MONTROSE, PA. SEPTEMBER 15, 1922

54 PUREBRED HOLSTEINS 54

WILL BE SOLD FROM HERDS UNDER FEDERAL SUPERVISION OR ACCREDITED HERDS ONLY.

8 Daughters of a 37 lb. Bull,
7 Cows with A. R. O. records up to 26 lbs.
5 Bulls from A. R. O. Dams

7 Daughters of a 35 lb. Bull, (16 A. R. O. Daughters)
4 Daughters of a 31 lb. Bull, (25 A. R. O. Daughters)
3 Daughters of a 30 lb. Bull, (25 A. R. O. Daughters)

The majority are young heifers, due to freshen just before or after the Sale, or within the next few months, by service to high record sires. They were selected by an impartial committee from the following representative herds of the leading Holstein County of Pennsylvania:

H. D. & T. J. BROWN, H. S. BROWN & SONS, H. R. DECKER, ELLIS DUNLAP, E. D. ELLSWORTH
H. L. HOLLISTER, B. F. JONES & SON, LATHROP FARM, F. E. MACK, L. N. MACK, J. J. SHELDON

STATEMENT OF THE SELECTING COMMITTEE:

"This consignment of cattle, consisting of 49 Females and 5 Males were selected from eleven herds, comprising 450 head of cattle. We consider them an outstanding lot, very superior in type, particular attention has been paid to top lines and udders.

"These animals were picked by the committee and not by the breeders, stress being laid on individuality, and we feel that the group will be a credit to both the breeders and to Susquehanna County."

HOW THINGS CHANGE

1919 THE HOLSTEIN-FRIESIAN REGISTER 987

CHARLES E. COLE ENTERS BIG FIELD

An announcement of more than ordinary interest is that made by J T Williams of Woodlawn Farm, Sterling, Illinois, that he has perfected arrangements with Charles E Cole, of Granville, New York, whereby Mr Cole becomes a stockholder and partner with him in Woodlawn Farm company, vice-president and manager of the official record department of the company and will sometime in July move to Sterling and become actively identified with the Williams interests, which embrace not only Woodlawn Farm, one of the largest, oldest and best known Holstein institutions of the central west, but also affiliated with the Sinnissippi Farms of Governor Lowden, which combined organization embraces some 6000 acres of land and now have on their farms over 600 head of purebred registered Holstein cattle, which will be eventually increased to considerably over 1000 head of purebreds.

GOV. FRANK O LOWDEN

The success of Charles E. Cole when he was in charge of the testing department at Pine Grove Farms, at which place he made the then world's champion 50-lb. record, two other records above 47 lbs., and a world's record in every class from junior 2-year-old to full-aged cows; and his further success at his own farm at Granville, where he has recently completed a 48-lb. record, besides numerous other records above 30 lbs., gives Mr. Cole the distinction of being the only man who ever made more than one record above 47 lbs., he having made four of them; also having made 14 records above 40 lbs., and well up towards 100 records above 30 lbs.—a phenomenal showing never approached by any other man in the history of the Holstein breed; and what makes it all the more remarkable is that Mr. Cole is yet considerably under 30 years of age, with apparently the best part of his life before him.

CHARLES E. COLE

This arrangement whereby Mr. Cole becomes the head of the testing department at the Sinnissippi-Woodlawn Farms organization, with their large herds, splendid facilities, favorable location to the markets of the west and south, certainly means something of tremendous importance to the Holstein interests of that great territory. That Mr Cole will put the Sinnissippi-Woodlawn Farms organization in the front ranks of the Holstein breeders of the country is self-evident to those who are familiar with his ability and the splendid herds of cattle that are now on the farms. Another point of great interest to the Holstein breeders, not only of the middle west but the entire country, is the announcement that a limited number of approved outside cows will be taken on to be tested for official records.

The great young sire, King of the Rag Apples, for whom it is claimed that he carries more of the blood of world's champions than any bull living or dead, will be the premier sire in use by this organization. Backed by the wealth and broad, varied successful business experience of Governor Lowden; the ability as a developer of world's champion and high-record cows of Charles E. Cole, and the successful, varied experience as a live-stock breeder and active manager of large stock farms of J. T. Williams, the future of King of the Rag Apples as a coming sire seems assured.

THE 1918 REPORTS from British Columbia cow-testing associations show that the Black-and-Whites are more than holding their own in the northwestern province. In the Delta cow-testing association the three leading 2- and 3-year-olds were all Holsteins; the highest 2-year-old, owned by Alex. Davie, of Ladnor, producing 10,330 lbs. milk, 397.4 lbs. butterfat. In the 3-year-old class a grade Holstein owned by Mr Davie produced 19,516 lbs. milk, 755 lbs. butterfat. The report of the Langley-Surrey association showed the Holsteins leading in similar classes; a grade 2-year-old, owned by W. H. Kidd, of Cloverdale, heading the list with 9305 lbs. milk, 366.2 lbs. fat; and a purebred, owned by F. V. Worrell, of Milner, heading the 3-year-olds with 19,745 lbs milk containing 622.7 lbs. fat. These records are for 300 days. The highest milk record made by a cow of any other breed was 11,538 lbs., and the highest fat record, 549.4 lbs.

PHOTOCOPY OF ORIGINAL

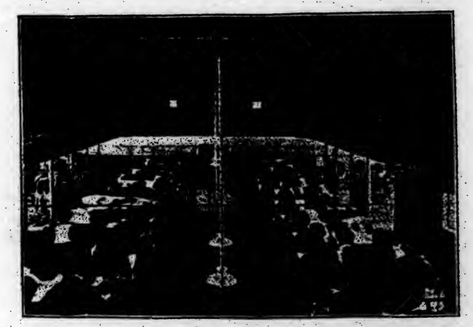
The
Holstein Breeder and Dairyman

VOL. I HARRISBURG, PA., SEPTEMBER 22, 1922 No. 18

A Pioneer Home of the Breed

THE most noted Holland firm of cattle breeders is, without question, that of K. N. Kuperus & Sons, of Marssum, in the Province of Friesland. In the early days of American importation, many animals from this herd were brought into this country, and all animals with Kuperus forming part of their names trace to this famous establishment. A number of importations were made from this herd, and the frequency can be appreciated when we state there was one May 2, 1885, and another June 1st of the same year. In the later shipment was Schuiling 2d, ancestor of the Schuiling strain. The sire of this animal was Pel No. 122, in the Friesian Herd Book. The Pel family has long been known as one of the best Friesland strains, and the noted cows, Changeling and Ready Change, are American descendants of this famous old-time Holland sire.

THE FIRM OF K. N. KUPERUS & SONS
Breeders and exporters of Friesian Herdbook Cattle.



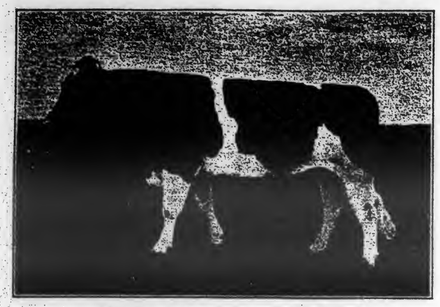
Probably the first importation from the Kuperus herd was made by Thomas B. Wales, former secretary of the Holstein-Friesian Association of America. In the lot was a heifer, then about eighteen months old, which was registered in the American Herd Book under the name of "Mercedes," and it was her defeat of the celebrated Jersey cow, Mary Anne of St. Lambert, in the competition for the *Breeders' Gazette* Challenge Cup, in 1883, that first brought the Holstein breed into public prominence in this country as producers of butter. This importation was made in the year 1879. Mr. Wales was accompanied by Solomon Hoxie, then secretary of the Dutch-Friesian Association, and it was their first visit to Holland. It is interesting to note that in the same year the Friesland Herd Book Association was founded.

In 1884, Mr. K. N. Kuperus was instrumental in exporting over 800 animals to the United States, and exportations from the Kuperus herd have since gone to South Africa, Sweden, Russia, Australia, Mexico, the Argentine, and Japan, as well as to other countries.

With Mr. Kuperus are associated his two sons. Their farms are at Marssum and Engelum, both near Leeuwarden, a territory from whence came a number of animals whose descendants include some of the greatest producers known to-day in America.

The area of these farms is 187 acres. The land is a heavy clay soil and is practically all in grass. About one-third of the area is used for pasture, the other two-thirds being devoted to the production of hay. Instead of fences, the land is divided by ditches into fields varying from two to ten acres in size. In summer about sixty-five milking cows, twenty-five yearly heifers, and forty-five calves with three or four service bulls are kept on this limited area, together with a half dozen horses and some fifty Friesland sheep and lambs. Only registered stock is kept.

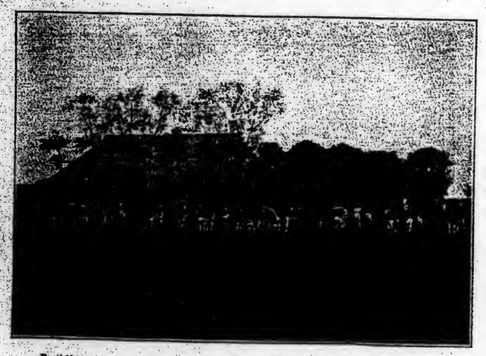
The cattle are turned out to grass in the early part of May and are never stabled until about the beginning of November, when they go into the stables, remaining there until spring. While outdoors, if the weather should be cold, the cows are blanketed. The calves are allowed to come into the stable for two or three weeks after they are first turned to pasture in May, but after that time stay out until fall.



Cowstable at Sirtema State Farm, Engelum, near Marssum, Holland. The home of N. K. Kuperus.

The calves receive a supplementary feed until about the middle of June. Twice a day they get some linseed cake meal with about one litre, equivalent to 1.05 quarts of whole milk with whey or buttermilk added. The older heifer calves are gradually weaned but the

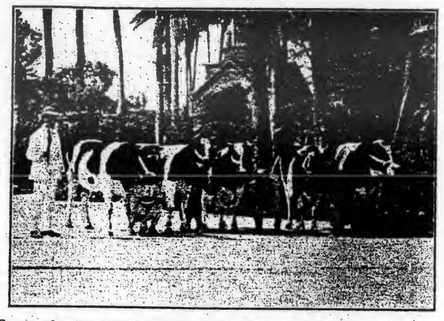
younger heifers and the bull calves are fed for some time longer, and quite often are fed milk from the Friesland sheep.



During the summer the cows and heifers get grass and nothing else. The animals are milked twice daily at 4 a. m and 4 p. m. After the first of November, the

RUTJE'S DIAMANT No. 11284 F. H.
Winner of four first prizes. Born March 5, 1919. One of the Kuperus herd bulls.

animals get plenty of hay with a grain ration consisting of barley meal and linseed cake meal mixed with water, and sometimes dried pulp with linseed cake meal and soya bean meal. The heifer calves get a small supplementary feed of linseed cake meal, while the bull calves are fed more, particularly as they grow older.



The cows freshen in February or March. The heifers come in around twenty-four months old. Immediately after birth, the calves are taken from their dams and put in a pen bedded with dry straw and are rubbed dry with straw. When they are an hour old they get a little of the dam's milk, and for the first three days are fed three times a day, and after that twice a

Buildings and cattle on one of the Kuperus farms, formerly the residence of Mr. K. N. Kuperus.

day. For the next four weeks they are fed on full milk and buttermilk, and after that they get whey, some buttermilk and some full milk, until they are turned into pasture.

Since 1897, the milk of each cow in the Kuperus herd has been weighed and tested for butter fat by a certified supervisor, who is called the milk controller. He tests every two weeks, taking a sample of the milk one evening and the next morning. In the Leeuwarden district several test associations have been established in recent years. These consist of twelve to thirty-six members. The milk controller has his assistants, who are termed samplers. These weigh the milk of each cow and test it at the local coöperative creamery, of which there are a great many. In these creameries the milk of 800 to 2,000 cows is made into butter and cheese, the milk being paid for according to the percentage of butter fat. The dairymen receive back seventy per cent of the whey and twelve per cent of the buttermilk, in addition to which they can buy extra buttermilk if they so desire.

Group of prize winning cattle at the Havana, Cuba, Exposition 1914. Exhibited and sold by K. N. Kuperus & Sons, showing the enterprise of this noted Holland firm of cattle breeders.

The milk controller and samplers are under a head controller who is appointed by the Friesian Herd Book Association, which from time to time publish records of the animals similar to those published by the breed associations in this country, and these records are treated as official.

Under date of August 9th a letter from the firm of K. N. Kuperus & Son says that the cattle business in Holland shows signs of improvement, and that some foreign countries are already calling for cattle.

The hospitality of the members of the Kuperus family is proverbial. Several members of the family speak and write English and are always ready to welcome visitors, especially from America. Anyone visiting the home of the breed should not fail to include this great breeding establishment in his itinerary.

Raising the Dairy Cow

By Harry Austin Clapp

Feed and Care of the Dam Before Calving

IN this day and age, it is pretty well understood by successful dairymen that calf raising should begin before birth, and in the opinion of the writer, the future cow can be made or ruined during the six weeks previous to calf birth. Sometimes it is difficult to dry off a big milker, but to avoid injury this should not be done abruptly. Best practice provides that the cow shall be milked in the usual manner, say twice one day, the next day once, then twice, then only once each day, then every other day, then but once in two days or three or four, then once during a week. Heavy concentrates should be withdrawn and she should be fed such feeds as will keep her in a thrifty condition, even allowing her to put some fat on her body, for it it quite desirable that the cow should freshen in extra fine physical condition.

A good dairy cow during the rest period of sixty days will put more or less fat on her body, but if she is a good dairy cow, she will give this excess fat back in the bucket after she freshens. Just before calving she should have feeds that are laxative, though this is not quite so necessary if she is on fresh pasture. It is the custom in many places in the South to feed nothing after the cow is dry, as, so they say, the cow does not need feed unless she is producing milk. Nothing is farther from the truth. During the last six weeks the cow is, one might say, putting the finishing touches on the unborn calf. Good care and feed during this period means strong, rugged calves, easy birth, and the dam in good physical condition, ready for the year's work. At no period of the young animal's life does feed and care pay greater profits.

Gestation Period.

The gestation period runs about 274 days, though many cows carry the young for longer periods, and some for less. If a record of service is kept—the rules of the Holstein-Friesian Association require a breeder of purebreds to keep such a record—one can know within a few days of the time the calf will arrive and be ready to render any assistance if required.

The cow should not be bothered during calf birth unless it is seen that trouble may result. She should have a secluded place where she may be alone and unmolested by other animals.

After the calf has been delivered, it is a good plan to give the cow a hot bran or oat mash. This is relished, and some dairymen, the writer among them, believe that it aids in expulsion of the afterbirth.

Heavy producers and cows with the fifth calf should be closely watched for signs of milk fever. Feed should consist mostly of bran, oats, and should be light at first. After a week has passed the feed may be safely increased by about a half pound per day, and at least one month should pass before the cow is on what might be called full feed. The ninth milking may be safely saved for human consumption. A simple test to tell when milk is fit for use is to heat a small quantity to boiling; if the sample does not thicken, due to the albumin content, it is usable.

Fall and Spring Freshening

It is the general custom among Southern dairymen to have calves dropped in the spring. If the custom could be changed to fall, good authorities agree that total yearly production would be increased as much as 20 to 25 per cent and cash returns would show a similar increase.

Spring freshening comes when the cow is in full flow on spring pasture and when the flow begins to decline pasture is poorer, with result that the cow has nothing to pick up on. Calves go onto poor, indifferent pastures, and fail to make proper growth. Prices of the product are always lower. Farm work is always rushing. Result is that cows are neglected, which further decreases cash returns. Let the cows come fresh in the fall, and conditions are quite different. Prices higher, farm work slack, and both dam and calf receive better care. She goes over the winter on the strength of her full flow and the feed given her and at once, going into fresh spring pasture, she picks up her flow in a generous quantity. The calf goes through the winter months on the dam's milk and a small quantity of grain, and is ready for spring pasture and goes on it ready to eat and digest grass. She makes good growth. Larger quantities of skim milk are available for use in growing calves, pigs and chickens.

Raising Calves by Hand

The reasons for raising dairy calves by hand are too numerous to mention. Among them are, better calves can be raised, costs less, they develop better bone and digestive ability, less liable to disease in infancy.

Profitable dairying depends on raising and develop-

PHOTOCOPY OF ORIGINAL

ing calves, rather than on the purchase of cows to replace those which have declined in production. Good dairymen do not care to sell their best cows, hence the man who buys cows for replacement is obliged to take rejections. No man can hope to attain great success milking rejected cows. The wise way, the profitable way to dairy is to sell butter fat, keep the skim milk at home, feed pigs, chickens, and raise your own dairy heifers. Butter fat is worth at the present time about $640.00 per ton. No man can afford to feed a ration to a calf any portion of which is worth such a price. If this article suggested the use of a calf feed costing $640.00 per ton it would not be worthy of printing. Experiments at our many experiment stations have established as a fact, that calves raised on skim milk are just as good as those nursed by the dam. In the South this statement is doubted in many places, but its truth can easily be demonstrated by any dairy farmer. Skim milk calves raised by modern methods, properly cared for, develop good boned, well grown calves. Follow these rules and you will be astonished at the result: Leave the calf with dam for 24 hours if everything is normal, then take away. Milk the cow and feed the whole milk, fresh and warm, at the rate of about six pounds per day in three feeds, of two pounds each. It is very important that regular feeding hours be observed. Do not feed milk from any cow but the mother for at least a week, after which time milk from other cows may be used if necessary. Feed milk from the same cow, the mother preferred.

If the calf is very large, thrifty and vigorous, when ten days old, milk may be increased to 2½ pounds per feed. Use judgment and avoid overfeeding. When the calf is two weeks old begin changing from whole milk to skim milk, and make this change gradually by taking out one pound of whole milk by weight, not by guess, and putting in an equal weight of skim milk. When the calf is three weeks old it will be on skim milk. At this time it will begin to eat a little grain. Give equal parts, wheat bran, whole oats, and whole corn. Experiments (Otis, Kan. Bul. 126) show that calves fed whole grain were less subject to scours and more thrifty than when fed ground grain. Experiments also show that whole grain may be ground by the calf and digestive ability stimulated. A tablespoonful is sufficient and it may be increased as calf shows ability to eat.

A small wisp of clean, sweet alfalfa will be relished and will aid in the development of capacity. Do not feed cotton seed or meal to young calves. As the calf grows older the quantity of skim milk may be increased as follows:

Nine pounds per day in three feeds when 5 weeks old.

Ten pounds per day in three feeds when 7 weeks old.

Twelve pounds per day in three feeds when 9 weeks old.

Fifteen pounds per day in three feeds when 10 weeks old.

Eighteen pounds per day in three feeds when 12 weeks old.

This is about as much skim milk as any calf needs. Grain rations begin to be of more importance and the calf should have what it will clean up. Clean, sweet hay and plenty of fresh, pure water, a sunny paddock to run in and shelter from storms, and development is assured. Tie the calves up while receiving the milk ration and until they are through licking their muzzles. If this is not done they will often suck each others' ears or udders, both pernicious habits and difficult to break. Sucking udders ruins the future udder.

Give each calf its own bucket, and after each use wash and scald it so that it is clean enough for family use; then, and only then, is it clean enough for a young calf. If the entire lot of calves are fed from same bucket or trough, disease is sure to spread among them all. If the milk is fed fresh from the separator it will have about the correct temperature. If allowed to become cold, heat to 100 degrees, and do not guess at the temperature; use a thermometer. Guessing is never profitable in calf feeding. About ten years ago the writer attended a lecture at the Texas College Station delivered by Prof. J. W. Ridgway, the subject being calf breeding. During the lecture he gave a list of *don'ts*, and they are reproduced in this article, for these *dont's* are the fundamentals of calf breeding.

Don'ts In Calf Breeding

Don't, under any circumstances, feed cold or even cool milk. If milk is cold, warm it.

Don't feed calves old milk. Use fresh milk.

Don't feed calves from dirty buckets. Calf buckets should be washed, steamed or scalded as thoroughly as milk buckets.

Don't risk your judgment in apportioning milk; either weigh or measure, weighing preferred.

Don't let one calf drink from another's bucket. See that each calf gets its share.

Don't feed your calves at all if for any reason you haven't time to feed them right. It is much better they go hungry for one feeding than to feed them improperly.

(To be continued.)

Increase, Not a Decrease

DURING the five-year period between July 1, 1917 to July 1, 1921, no less than 175,000 cows were destroyed in the tuberculosis eradication campaign. Many thought that there would be a milk shortage when so many producers were put out of business, but there has been a remarkable increase in both production and consumption of milk and dairy products. Last year, 1921, milk production in the United States aggregated nearly 99 billion pounds, a noteworthy gain over the previous year. Production of butter fat likewise increased. In 1921 alone, milk cows increased 341,000 which is a figure nearly twice as great as the slaughter of tuberculous cattle during the entire five-year period.

Donovan and McCarthy were working in the mines and in one of the workings, following a cave-in, Donovan was found holding up 9,000 tons of coal with his back. He shouted to McCarthy for help and McCarthy came running over. "What will I do?" asked McCarthy. "Take your sledge, and knock me from under," said Donovan.

Don't chase a will-o'-the-wisp—hoe potatoes.

Bold Attempt to Throttle Truth

Directors of The Holstein-Friesian Association Dare to Dictate Policy of Press—Pass Confidential Resolution—Demand Breed Papers—Keep Facts From Members.

OF all the many outrageous assaults made upon the rights of the membership by those who assume to direct the policies of the Holstein-Friesian Association, the resolution passed at Kansas City attempting to suppress the publication by the breed papers of the truth regarding the Association's activities stands out not only as a bold, unjustified attack upon the freedom of the press; but, a still bolder demonstration of that political intrigue which has crept into our Association's affairs and of a determination to rule or ruin the Association.

As an evidence of unmitigated gall and of an official egotism that smells because of its rottenness, we want every reader of the Breeder and Dairyman to read the resolution passed at Kansas City meeting so that there can be no doubt in the minds of anyone as to just what these men meant when they passed this resolution demanding that the breed papers refrain from publishing the truth regarding the inside workings of the political organization controlling the Association.

Not content with having handed over to D. D. Aitken, former president of the Association, the tidy sum of $24,000.00 in salary, and the still further tidy sum of approximately $9,000.00 for expenses when better men have served the Association as president without ever drawing a dollar from the treasury;

Not content with having sought to sneak through a resolution at the Syracuse Convention, held in 1919, giving the board of directors power to make, amend or repeal our by-laws as they might deem advisable, thereby taking away from the membership the right to control; and turning over to a political clique absolute control of the $300,000.00 reserve fund;

Not content with having plunged the Association into the wildest sort of extravagance through the whirlwind campaign methods and the expenditure of over $140,000.00 for so-called "Extension Work" in a single year without showing a dollar's worth of goods coming into the industry or to the members;

Not content with taking away the right of the members to elect their secretary, superintendent of advanced registry, treasurer and other officers and placing this power in the hands of the board of directors, thereby disfranchising every delegate elected by the members, as Judge Peasley pointed out at the Kansas City meeting;

Not content with having so mismanaged the affairs of the Holstein-Friesian Association that its resources or income has dwindled from over $520,000.00 to one-half this amount;

Not content with having put a tax of some $150,000.00 to $200,000.00 a year on the plain breeder and dairyman with which to provide a fund for the building up of a cow-swapping exhibit under the name of State Sale, supervised by paid state secretaries, at salaries ranging from $5,000.00 a year upward, these gentlemen whose high-minded sense of duty finds expression in drawing thousands of dollars yearly from the Association's treasury under the name of "Expense" and for services that the Association would be better off had they never been performed, *now demand that the breed papers shall not print the truth about the Association's affairs.*

The answer of the Breeder and Dairyman is a positive refusal of the demand and an unqualified defiance of the mandate issued by these gentlemen to have the pages of its journal prostituted to a betrayal of the rights which belongs to every member to know what goes on, even "behind closed doors," where their money pays the bills, and a further betrayal of that duty which this paper owes to the men who breed cattle for a livelihood and who constitute 85% or 90% of the membership of the Association.

The Holstein-Friesian Association is a breed organization, the principal function of which is to keep the breed pure through official registration. It Is Not, and Never Was Intended to Become a Complicated Organization Requiring a Large Directorate, a Multitude of Committees or an Army of Paid Political Lackeys to Manage Its Affairs.

Resolution Adopted by Board of Directors, Kansas City, June 8, 1922

Whereas, There have appeared in the publications devoted to the Holstein-Friesian interests various articles, correspondence and editorial comment devoted to matters of administration, the work of the directors and of committees, and of legal matters pending, articles perhaps sincere, but based upon incomplete knowledge, propaganda and incomplete information, and particularly upon matters necessarily only known to the directors or counsel for the Association, the publication of which would be indiscreet.

Now, therefore, in the belief that such publicity has a tendency to misinform the public and prove injurious to the Holstein interests, it is

Resolved, That this board deprecates such publicity and suggests to such publishers that a change of policy in this regard be adopted, amounting to a reversal of such policy, and that they refrain hereafter from action likely to be prejudicial to the Association and to breed interests, and that a copy of this resolution be delivered to the Holstein publications as a confidential communication.

PHOTOCOPY OF ORIGINAL

It was managed for twenty-five years by honest, high-minded men. Its presidents served without pay and conscientiously performed every duty. Its principal officer is, always has been, and of necessity should be, its secretary. Under Secretary F. L. Houghton and the able assistance afforded him by the officers elected to fill the position of president, treasurer, and directors, the Association prospered and the breed of Holstein cattle steadily improved.

Under a transfer fee of 25 cents and due to careful, conservative, economical administration of the Association affairs, a reserve fund of nearly $300,000.00 was accumulated. Tranquility prevailed, the members had confidence in its officers and in the management of the Association's affairs. There was no extravagance indulged in, no fictitious prices of cattle created through the cattle-swapping exhibits that have become a stench to the nostrils of honest men, and the Holstein cow came to be known favorably as the greatest dairy animal in the world.

At Philadelphia, in June, 1919, all of this was changed. That insidious, dangerous animal, "Political Intrigue," crept into the Association affairs. Old trusted servants of our Association were cast aside. Men who had previously been unknown as breeders came into control. Mr. James A. Reynolds, the man who boasts of having been a politician for twenty-five years, elected a member of the Association in 1918, who was then herdsman on a farm in Ohio, was pushed into position as director of the Association and made chairman of the Executive Committee. In this meeting at Philadelphia, sneak methods developed fast and furious. First came the election of sixteen directors in violation of the law, and the next thing that happened, this body of men who, as a Supreme Court Justice in the State of New York has closely indicated, were illegally elected, went behind closed doors and for the first time in the history of the Association, voted a salary of $12,000.00 to D. D. Aitken, a salary for the office of president, when Mr. Aitken's principal knowledge of Holstein cattle was obtained through the development of a hobby.

At this same meeting, although the notice in the "Call" of the meeting proposed an increase in transfer fee from 25 cents to 50 cents, steam roller methods were used and the fee was raised to $1.00 instead of 50 cents.

Soon thereafter came "The Aitken Whirlwind Campaign." Political organizations required "pap" for the faithful and paid state secretaries came into existence at fat salaries, and the cow-swapping state sale exhibits began to establish fictitious values and lose money for the promoters.

Directors' meetings were frequently called and sixteen directors from all over the United States were brought together at tremendous expense, necessarily resulting in big hotel bills, Pullman car fares, cigars, refreshments, tips for the porters, waiters, and bell hops, all of which were paid for by the money taken from the pockets of men who milk cows for a living. A certain Holstein paper began publishing fish stories about the wonderful things soon to be accomplished. We were told that the Association has been improperly managed, although the reserve fund of $300,000.00 had been built up on a 25-cent transfer fee, which in itself gave the lie to this devilish propaganda, paid for through the medium of extravagant publicity and other needless Association extravagance. *"And what has been the result?"*

The Association's income has decreased from $522,000.00 in 1919-20, to $220,000.00 in 1921-22. Approximately $33,000 went into the pockets of D. D. Aitken for salary and expenses, something like $10,000.00 has found a snug resting place in the pockets of Jimmie Reynolds. Tens of thousands of dollars have been foolishly spent in directors' meetings, which has so bedeviled the Association that the old-time breeder no longer recognizes the child of his creation. Approximately $50,000.00 have been spent for legal services. Of this sum, $15,000.00 has recently found its way into the pockets of Mr. O. U. Kellogg, to say nothing of the thousands of dollars paid to other lawyers.

The Holstein breed of cattle has been dishonored and put to shame through the lack of that ability in the Association management that made the Holstein industry such a promising success during the twenty-six years of existence prior to the Philadelphia meeting in 1919, plus the damnable and demoralizing effect of politicians in the present Association management, and now comes the demand that this paper, together with other breed papers, bow the knee in servitude to the men under whose management the Holstein-Friesian Association has been headed straight for the rocks of disaster and the value of the Holstein cow and her products placed at the lowest mark it has registered in ten years.

Gentlemen, THE HOLSTEIN BREEDER AND DAIRYMAN refuses your demand and serves notice that it will continue to print the truth and will continue to fight your further exploitation of our Association and your attempt to disfranchise the small breeder and dairyman who compose the rank and file of the Association's membership, own the largest number of cattle, and pay the most money into the Association's treasury in registration and transfer fees.

The BREEDER AND DAIRYMAN came into existence because the small breeders and members of the Holstein-Friesian Association sorely needed a journal to fight for their interests They have been unjustly, unnecessarily taxed to provide money with which to foster a political machine, they have been disfranchised by men who ought to have been their friends. They have about come to that point where the "worm will turn." And when they do, look out for that cyclone of indignation which will sweep politicians out of the Association and restore it to the hands of its members.

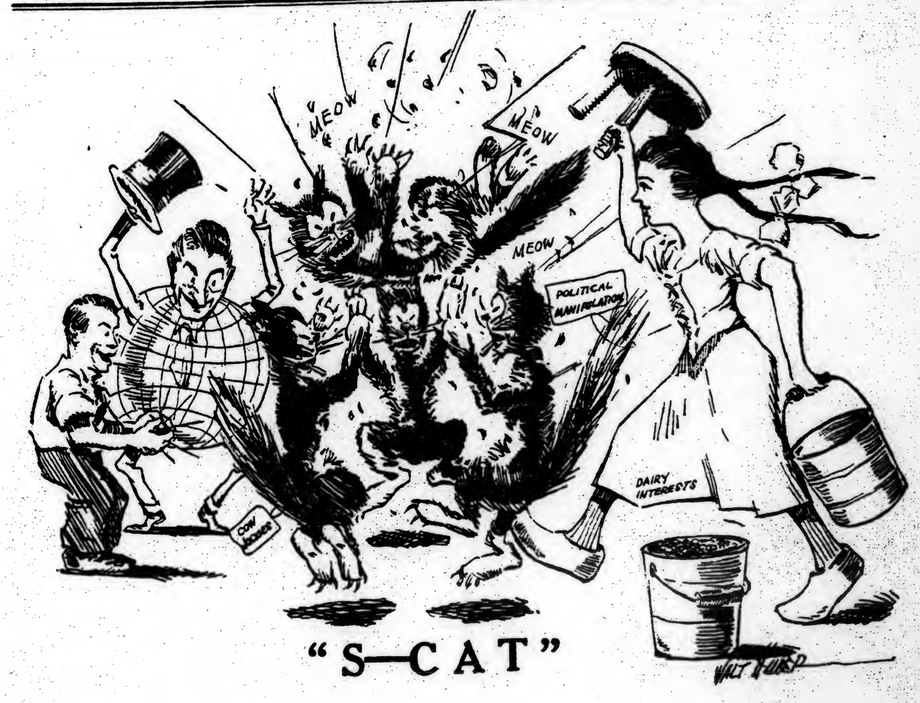
You now know where we stand. We are out in the open. You cannot buy space enough and your bank account is not large enough to bargain for our surrender of that duty which we owe and propose to perform for the small breeder and dairyman.

We propose to stand on the firing line of the interests of these men so long as there shall exist any dastardly, political octopus in the Association's affairs, reaching out its tentacles in an effort to destroy the plain people. This is our answer, *your demand is refused*. In the words of John Paul Jones: "We have just begun to fight."

Deserve honor and you will honor yourself.

Mr. Dairyman

By HARRY AUSTIN CLAPP, COLLEGEPORT, TEXAS



PERHAPS there is no man engaged in the production or handling of food products that are so sensitive to contamination as that produced by the dairyman. It is the greatest of all human foods and should be handled with great care from the moment it is produced until ready to serve on the consumer's table. Like all things in this world, quality counts, not only in the dollars realized, but in the satisfaction of knowing that something worth while has been produced.

An even, large and profitable flow of milk is to be desired and such a production is too valuable a product to be spoiled by filthy methods. In the production of a fine quality of cream, two great essentials are necessary. The use of perfect cleanliness in the production and the holding of the product at as low a temperature as possible to retard the action of bacteria and prevent souring, ropiness and other bad factors.

In my judgment, we must first begin with the milker. He should have clean hands, clean clothes, and he should never use wet hands. The udder and teats should be washed in clean water and dried before the milking begins. This is the first great essential towards the production of clean milk. Milk as drawn from the udder of a healthy cow is clean and as free from bacterial action as possible.

All utensils should be washed in cold water and then scalded in boiling water, in which soda or some other similar preparation has been dissolved and a final rinsing with liberal quantities of hot water and placed in the sun. The heat of the water will dry them and the sunshine will keep them sweet.

The separator should be cleaned and scalded after each use and fresh cream should be cooled before pouring into the storage can and then should not be introduced into the can until all is well stirred. Never pour warm, fresh cream into a can of cold cream. On many of our farms ice is not available and other methods of cooling must be used. If a well of cool water is on the farm the way is easy, for it is only necessary that the can be lowered into the well. If this cannot be done, place the can in a tub half filled with water, place over the can a gunny sack, allowing the sack to dip into the water. Evaporation will lower the temperature to a satisfactory degree. Better still, make a covering of cheese cloth, large enough to cover the can. Place a tin bucket with a hole in the bottom over the cream can, plug the hole with a fold of the cheese cloth cover. Fill the bucket with water and set where the wind can blow on it. The water will seep down the sides of the can, keeping the cover wet, and evaporation will keep the contents at a temperature about 55 to 60 degrees. Such cream can be easily shipped and will enable the creamery to produce a good grade of butter. If you establish a reputation for producing extra quality you are certain to reap your reward.

September 22, 1922

The Holstein Breeder and Dairyman **was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.**

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Our Cover Illustration

OUR cover illustration shows College King Cornucopia De Kol, a splendid individual, bred and owned by the Union College of College View, Nebraska. This bull was shown at the recent Nebraska State Fair where he won first prize in his class as a junior yearling, and went on to junior championship. He is a son of College King Segis Alcartra, who has a number of good record daughters and was by the well-known Arfmann herd sire, King Segis Pontiac Alcartra from the former world's champion four-year-old, Fairmont Zerma Segis Pietje, 35.61 lb. butter in seven day official test. The dam of this young show bull is Mabel Cornucopia De Kol, who has a seven day record of 21.95 lb. butter from 480.9 lb. milk and is a daughter of Aaggie Cornucopia Pauline Count 31st.

Quality Brings Higher Prices

QUALITY in dairy products is of the utmost importance. The consumer is easily sickened of milk and butter that is, in the slightest degree, off flavor but he is willing and eager to pay a good price for high quality. The market reports from all parts of the country tell the story until it becomes tiresome in its repetition "Scarcity of fancy butter—lower grades a drug in the market."

The fault for poor quality is often right back at the point of origin, right on the farm. Lack of cleanliness in the stables and at milking time, improper cooling, storing in places exposed to taints or with poor ventilation, letting the milk and cream stand in the shipping cans exposed to the hot sun, unclean pails and cans, all have an influence upon the quality that results in serious loss to the producer.

The United States Department of Agriculture, in a circular just issued says that several million dollars annually are lost to producers and manufacturers because of imperfect conditions and methods in the production, manufacture and marketing of dairy products. During 1920, the marginal difference in the prices of high and low quality butter amounted at times to as much as 15c between 87 score and 92 score. Lack of proper attention or care in the creamery in grading the cream, or in churning, working salting or packing the butter are stated to be mainly responsible for this condition.

It is stated that there has never before been a time in the history of American butter making when it paid so well to produce high-quality butter as during recent years. The margin between the highest prices and prices for medium and low grades is steadily widening.

The foundation for dairy products with "that quality appeal" is laid on the farm and no pains should be spared to insure that the milk or cream shipped should be the best it is possible to produce.

Buyers do Serious Thinking

THE many reports received at the office of THE HOLSTEIN BREEDER AND DAIRYMAN would indicate that the demand for Holstein cattle is steadily improving. Buyers are going out among the breeders and making their selections from the working dairies that are under Federal supervision for the control of tuberculosis, and relying to a great degree on Cow Testing Association records. The published cow testing reports sent out by the Dairy Department of the Agricultural Colleges in the leading dairy states is of great assistance to prospective purchasers in locating herds composed of animals of superior quality. It is very evident that the dairy public is beginning to awaken to the fact that a cow with a 12,000 to 15,000-lb. cow testing association record made under normal conditions with a net return over cost of feed, labor and interest on investment, is equal to a 23,000-lb. or 25,000-lb. record made under forced conditions at a loss to the owner.

Our Policy

THE policy of this paper is, and has been from the time of its first issue, clearly stated and definitely outlined at the head of its editorial columns.

So that there may be no misunderstanding as to our position on any and all matters pertaining to the welfare of the men who breed Holstein cattle for a livelihood and who represent the *real* backbone of the Holstein-Friesian Association, we repeat some of the things for which we stand. Read this carefully:

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

It seems to us that these words can permit of no misunderstanding as to our purpose, and our purpose in calling special attention to our editorial policy is because of its bearing upon the position we have taken in this issue regarding the attempt of the Association's directors to throttle the press and compel servility upon the part of the breed papers and the furtherance of the dark lantern cover-up methods that have crept into the Association's affairs since 1919.

We hold that the *political manipulation of the Association's management, the exploiting of its resources and the creating of fictitious values and the making of artificial records,* that have so discredited the Holstein cow and the Holstein industry and have plunged the Association into legal entanglements, are not chargeable to the breeders and dairymen who depend on the returns of their dairy for a livelihood and who constitute 90% of the membership of the National Association, but should be charged to the Politicians, Promoters and their Millionaire friends. These are the men who are responsible for robbing the Holstein cow and the Association of its good name and who insist that the treasury be kept filled by levying a tax on the breeders through increased transfer fees.

We believe and the public demands that the Holstein industry be taken out of the hands of speculators and placed under the control and management of men who rightfully should be in control.

We have devoted a great deal of space in telling our readers of the political manipulation of the Holstein-Friesian Association and the exploitation of its resources. We also hold that the conducting of dishonest sales either held under and by the authority or approval of the National Association's directors or under the supervision of a paid secretary directing the operation of a so-called State Club, is just as injurious to the welfare of the plain breeder and dairyman as are artificial records or dishonest advertising. Any policy that tends to establish fictitious prices or artificial records is a positive injury to any breed of cattle and to the men who breed cattle with a view of making an honest living through the sale of milk and dairy products and increased stock. Likewise, any policy of the Association management that tends to promote either fictitious prices or artificial records is a violation of the best interests of the Association and its membership.

We propose to deal with this subject in no uncertain manner in our subsequent issues. We have in our possession an abundance of proof showing that these things have prevailed, have been known to officers and directors of the Association, and in some instances have been indulged in by these supposed representatives of the plain people, *and we propose to turn on the spotlight and let the truth be known.* This is one of the reasons why the BREEDER AND DAIRYMAN refuses to be bound and gagged by dictation of the Association's directors and why it will not comply with any Star Chamber Resolution either confidential or otherwise that has for its purpose throttling the press, the suppression of the truth, and the underhanded exploitation of the men who breed Holstein cattle for a livelihood.

Preparing for Winter Feeding

BY GEORGE LESLIE

NOW that the pasture season is closing the cows, when taken into the barn, must have a change of roughage. This comes when the autumn work is heaviest and it is easy to get careless as to the first barn feeding. If cows have not been grained on pasture, they will, on being kept in the barn, and changing from green to dry roughage, get rather poor. They must be fed slowly with grain, and should have nutritious hay, alfalfa, clover, cow pea or soybean. Even a mixed hay with plenty of clover, is better than timothy. If you have a crop of the latter, sell it and buy a legume, even at a higher price. A good legume hay is worth at least three times as much in feeding value as timothy.

As long as it lasts, the corn fodder, fed green, will help out on the daily roughage, and a few pounds of beet tops will be greatly relished. See that they are freed from the soil by shaking well, and, that they are not in a decayed condition. Heavy feeding of the beet tops is not healthful, but a few pounds, say ten to fifteen pounds a day, with hay and fodder or hay alone, will be satisfactory.

The cows that calve in the next two months should be started on good grain ration as advised in the BREEDER AND DAIRYMAN of August 22d, so that they will get into good flesh and have milk-making material to draw on when they come in.

The cows well along in milk may be kept up during this change of season by care in feeding their roughage in liberal amounts, and an increase of milk-making materials in their grain. What this should be depends on what they have been fed on pasture. If a light grain feed or a wide ration, give one-fourth pound cottonseed meal and one-fourth pound linseed meal in addition to the present grain, and only the total of one-half pound for three or four days; then, if they increase in flow, add another quarter pound, making one-half pound of each, or a total increase of one pound grain. This will hold them to a better flow until they are dried off.

See that heifers coming in with first calf this late fall are given plenty of nutritious roughage and succulence, and are kept in good flesh. A mixture of two pounds each of bran, oats, cornmeal or barley, and one-half pound oil meal a day is a good grain feed for these young heifers and will give them a good start.

Once a year the newsboys in London are given an outing some place on the Thames River, where they can swim to their heart's content. As one little boy was getting into the water his friend said:

"Johnnie, you're pretty dirty!"

"Yes," said Johnnie, "I missed the train last year."

The greatest oaks have been little acorns.

PHOTOCOPY OF ORIGINAL

Bessie Colantha Change

THE best producing heifer in the Racine-Kenosha Cow Testing Association in the recently ended Association year was Bessie Colantha Change, No. 516276 H. F. H. B. During eight months and eighteen days in her Association year she produced 12,268 lb. milk and 469.3 lb. fat, equivalent to 586.63 lb. butter on the 80% basis. She is a very even milker and varied but very little from the commencement to the end of the test. She is a daughter of Dutchland Creamelle Sir Ascalon, who was by Dutchland Creamelle Korndyke Lad from Dutchland Colantha Ascalon. Her dam was Bairdland Colantha Johanna Change, a daughter of Daisy Johanna. She was bred by S. A. Baird and Son, and is owned by Clinton Skewes, the proprietor of Trelwaren Dairy Farm, Union Grove, Wis.

Bessie freshened as a two-year-old; and during her first lactation period of twelve months produced 15,083

BESSIE COLANTHA CHANGE
Champion heifer in the Racine-Kenosha Association for the recently ended test year

lb. milk and 570.3 lb. fat, equivalent to 712.9 lb. butter. This record would not be exceptional were it not for the fact that she was milked but twice daily with the exception of a ten-day period when on official test. She carried a calf during more than six months of her test period.

She was not allowed a box stall except immediately after calving, and shared average farm treatment with the remainder of the herd. Her consumption of feed was 12,500 lb. corn ensilage, 2,700 lb. mixed hay with pasture during the season. The concentrates fed were bran 840 lb., oats 1,250 lb., barley 350 lb., oil meal 350 lb., and corn and cob meal 1,500 lb. The cost of roughage was $69.00 and cost of concentrates $51.30, making a total feed cost of $120.50. The value of her product was $298.00, leaving $177.56 as value of product above feed cost.

A small boy who was sitting next to a very haughty old lady in a crowded train kept sniffling in a most annoying manner. At last the lady could bear it no longer and turned to the boy:

"Boy, have you a handkerchief?" she demanded.

The boy looked at her a few seconds, and then in a dignified tone, said: "Yes, I have, but I don't lend it to strangers."—*Washington Farmer.*

Nebraska State Fair

CORWIN FARMS, Rock Valley, Iowa, won their share of prizes at the Nebraska State Fair, their aged bull, King Korndyke Sadie Vale Pietertje, winning first prize in his class and going on to senior and grand championship, duplicating his honors won at the Iowa State Fair. The junior champion was College King Cornucopia De Kol, the first prize junior year-

CORWIN COLANTHA FLORENCE ORMSBY
First prize senior yearling at the Iowa and Nebraska State Fairs, junior champion female at the latter. Owned by Corwin Farms, Rock Valley, Iowa.

ling. This bull was bred, owned and exhibited by Union College of College View, Nebraska. The first prize aged cow was Belle Huntress 2d, owned by Woodlawn Dairy, Lincoln, Nebraska, and she was also senior and grand champion. The first prize senior yearling

GET OF SIR PIETERTJE ORMSBY MERCEDES 14th.

heifer and junior champion female was Corwin Colantha Florence Ormsby. She also was first prize yearling at the Iowa State Fair. Shown by the Corwin Farms, she also formed one of their prize winning "get of sire," which was sired by Sir Pietertje Ormsby Mercedes 14th. The judge was Will Forbes.

Mother—"How is it that you didn't win the spelling prize, darling?"

Mary—"Oh, just because I put a 'z' too many in scissors, mother!"

The Injunction Proceedings

THE injunction brought by Mr. Edward P. George of Chaffee, N. Y., against the directors of the Holstein-Friesian Association of America, came up for hearing Tuesday, September 18th at Buffalo and was argued before Judge Pooley.

Mr. George was represented by Judge Frank A. Laughlin of New York City, Harry W. Killeen and Mr. Kelley of Buffalo. The directors were represented by Louis Babcock of Buffalo, C. M. Horn of Cleveland, Ohio and O. U. Kellogg of Cortland, N. Y., James A. Reynolds and John A. Bell, Jr., were also present.

The questions raised in the George proceedings are:

1. Declaring the legal number of the directors of Holstein-Friesian Association of America to be six.

2. Declaring the resolution, passed at the annual meeting of said association held at Philadelphia, Pennsylvania, June 4, 1919, attempting to increase the number of directors of said association to sixteen to be null, void and of no effect.

3. Declaring all of the offices of director of said association to be vacant.

4. Declaring illegal, irregular and void, all of the annual meetings of said association held without the state of New York, except the annual meeting held at Kansas City, Missouri, in June, 1922.

5. Declaring, illegal, void and of no effect, the by-laws adopted at the special meeting of said association held in Saint Paul, in the state of Minnesota on or about October 10, 1921, providing for a delegate system.

6. Ordering a new election for the offices of director of said association to be held within New York State under the supervision of the court.

7. Enjoining and restraining the acting directors from taking any action, or performing any function of the office of director of said association until the hearing and determination by this court of the application made hereon, and the holding of said election under the supervision of this court.

8. Awarding said Edward P. George such other and further relief as right and justice may require.

Mr. Babcock, speaking for the directors, moved that the injunction be dismissed, that the questions raised by Mr. George were practically identical to those raised in the Brady case that had been disposed of by an opinion written by Judge Donnely.

Judge Laughlin in opening the argument on behalf of Mr. George stated that the questions raised in the George petition were similar to those in the Brady case, that in Judge Donnely's memorandum opinion written in the Brady case he did not decide the questions at issue but disposed of the matter by stating that the petitioner, Mr. Brady, having participated in the election had no right to raise the questions, Judge Laughlin stated that Mr. George did not participate in the election of directors at Syracuse or at the special meeting called at St. Paul.

In arguing the case, Judge Laughlin referred to the fact that the certificate of reincorporation filed by the Association, January 6, 1914, provides that they should have six directors.

Notwithstanding this fact, from June, 1914 to June, 1919, nine directors had served when the Association was only entitled to six. With reference to the action taken at the Philadelphia Convention in 1919, ten directors were elected at that meeting before the amended certificate increasing the directors to sixteen had been filed as required by the membership corporation law of the state of New York, making the election invalid for that reason as well as for the fact that the meeting was held outside of the state of New York.

With reference to holding meetings outside of the state of New York, Judge Laughlin cited the opinion written by the attorney-general of that state in 1911 to the effect that the Association had no legal right to elect officers or transact business at meeting held outside of New York State. Notwithstanding this opinion the Association held a meeting in Chicago in 1914 and held meetings at other places and other times outside of the state of New York and elected officers and transacted business in direct violation of the law.

As additional proof, aside from the Attorney-general's opinion and the opinion written by Judge Sears, Judge Laughlin referred to the bill passed by the New York State Assembly in 1921, introduced at the instance of the Association making it legal for membership Associations to hold meetings, elect officers and transact business outside of the state of New York. The Judge stated that this was an admission on the part of the Association that it had no legal right previous to the passage of this bill to elect officers or transact business outside of the State of New York.

Mr. Babcock in opening the case for the directors, mentioned that the Association was a large Association, composed of 22,000 members and among its officers were many leading men, mentioning that Mr. Frank O. Lowden was president of the Association. He also stated that it had been customary for the Association to hold meetings and transact business outside of the state of New York, etc.

At this point, Judge Pooley stated that the question was, *"not what they had been doing but what they had a right under the law to do."*

The attorneys representing the directors evidently concede that the Association has not been conducted in accordance with the laws of the state of New York under which it was incorporated. Conceding this point the major part of their argument was devoted to Mr. George's right to question the legality of the election of the Board of Directors and the other questions which were raised in the petition.

At the termination of the argument, Mr. Babcock requested that the attorneys for the directors be given at least a week's time in which to prepare a brief. This request was granted.

We anticipate that Judge Pooley will be prompt in rendering his decision as soon as the briefs are presented and that it will be clean cut and conclusive, based on the law and not evading the issue in question.

Monthly Comparison of Association Business

The Business Report dated August 31st issued from the Secretary's Office, shows very little change from reports of the past three or four months except that the receipts from transfer fees are higher than they were a year ago, yet they are not three times as high although the transfer fees a year ago were one-third of what they are now. The transfer receipts in August 1921 were $4,341.50 and in August 1922 they were $12,428. The volume of business was a little more than it was a year ago, there being 5,738 transfer certificates issued in August of this year against 5,136 a year ago. Probably the principal reason for this is that the increased fee has a tendency to compel nonmembers to become members of the Association as double $1.50 for a transfer certificate looks immensely bigger than double 50 cents. Thus the increase in transfer fee works both ways; it increases the receipts and at the same time decreases the number of Holstein owners who pay double fees on account of not being members of the Holstein-Friesian Association of America.

The number of registrations shows an increase over the corresponding month of last year and this holds true not only for August but also for the three previous months. The breed is steadily increasing in numbers. The membership applications are approximately the same as they were a year ago. One hundred and four joined the Association in August, 96 in July and 80 in June, while the average for the first eight months of the present year is 119.

A brief study of the table showing the business of this year and of the two previous years demonstrates that the Holstein industry is far below the standard of 1920. The fall months are expected to tell a better story and if there is to be a revival of business it cannot come any too soon for those who are engaged in it.

MARYLAND STATE FAIR

The 1922 Maryland State Fair was the best and most successful Baltimore County event in the forty-four years of its existence, exceeding its predecessors from the standpoint of visitors and exhibitors. It is estimated 150,000 persons visited the grounds during the fair.

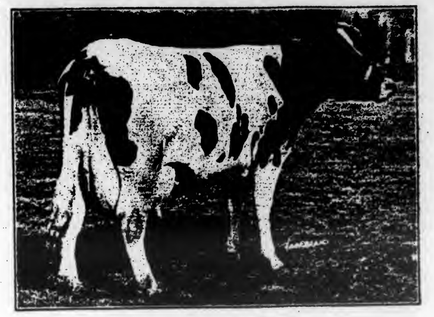
The cattle were of the high quality usually seen at Timonium, but it is rather strange that more Holstein breeders do not exhibit, for the prizes are very generous and considerably above those given at fairs with a much greater reputation. Brooklandwood Farms and J. M. Dennis showed, as usual, and had hot competition from the Pennsylvania herd of H. E. Robertson. The Dennis herd won twenty-two ribbons and the Robertson herd twenty-five. The Brooklandwood bull, Brooklandwood King Pontiac, has developed considerably during the past year, and Judge Haeger proclaimed him one of the greatest show bulls living to-day. He went right on through to grand championship. We may also say that the Brooklandwood Farms Guernsey herdsire, Audacity of Edgemoor, was also grand champion of his breed, and sired the prize-winning get of sire. The offspring of this bull are really something out of the ordinary.

The popular Holstein breeder, John M. Dennis, won a good share of the prizes and the most money, so wins the first leg of the John M. Dennis Trophy, which he donated to the fair to be awarded to the exhibitor winning the most money in the Holstein-Friesian classes. This trophy has to be won three times before it becomes the property of any one exhibitor. Dennis was the second largest money winner in the cattle division. The Middlesex Meadow Farm, at South Lincoln, won the most with their Ayrshire classes, and Capt. Isaac E. Emerson, of Brooklandwood, with Guernseys and Holsteins being third from a money winning standpoint.

The well-known Holstein judge, R. E. Hager, placed the awards as follows:

Bull, three years or over: 1st, Brooklandwood Farms, on Brooklandwood King Pontiac; 2d, John M. Dennis, Riderville, Md., on Dutchland Konigen Sir Rag Apple.

Bull, two years: 1st, John M. Dennis, on S. X. Cornucopia Vale Korndyke; 2d, U. S. Naval Academy Dairy, Gambrills, on Duke Matador Piebe.



THE HON. JOHN H. DENNIS
Owner of Essex Farms, principal money winning Holstein breeder at the Maryland State Fair

Yearling Bull: 1st, H. E. Robertson, York, Pa., on King Piebe of York 3d; 2d, John M. Dennis, on S. X. King Pontiac Ina; 3d, U. S. Naval Academy, on Aaggie Hartog Creamelle.

Senior Bull Calf: 1st, John M. Dennis, on S. X. King Korndyke; 2d, H. E. Robertson, on King Piebe of York 13th.

Junior Bull Calf: 1st, H. E. Robertson, on King Piebe of York 15th; 2d, C. D. Cullen, Duyckinck & Sterrett, of Rising Sun, Md., on unnamed entry; 3d, John M. Dennis, on S. X. King Pontiac Segis Johanna; 4th, H. E. Robertson, on King Piebe of York 19th.

Cow, four years old or over: 1st, Dennis, on Countess Pontiac Lyons Colantha; 2d, Robertson, on Dimeta Burke De Spofford; 3d, Dennis, on Clover Leaf Nina Korndyke; 4th, W. Rowland Smith, Rising Sun, on Florence Markwell 3d; 5th, Dennis, on Jewel Johanna Posch.

DIMETA BURKE DE SPOFFORD
Second prize aged cow at Maryland State Fair

Cow, three years and under four: 1st, Brooklandwood Farms, on Rosetta Pontiac Hengerveld; 2d, Brooklandwood Farms, on Brooklandwood Queen Pietertje; 3d, Robertson, on Echo Leeds Belle; 4th, Robertson, on Alcartra Phœbe Wayne.

Cow, two years and under three: 1st, Dennis, on S. X. Belle Model Echo Sylvia; 2d, W. Rowland Smith, on Lady Grace Segis Pontiac; 3d, Robertson, on Rag Apple Veeman Nana.

Senior yearling Heifer: 1st, Dennis, on S. X. Pontiac Mary; 2d, Norman E. Pennington, of Kennedyville, on Bess Clothilde Pontiac Burke; 3d, U. S. Naval Academy, on Severn Neta Allenvail; 4th, John Jœsting, on Johanna De Kol Grape Pontiac.

Junior yearling Heifer: 1st, W. Rowland Smith, on Rancocas Pohlcrest Maid; 2d, Dennis, on S. X. Pontiac Jewel; 3d, Robertson, on King Piebe of York Aaggie; 4th, Dennis, on S. X. Pontiac Rose.

Senior Heifer Calf: 1st, Brooklandwood Farms, on Rosetta Pontiac Hengerveld 2d; 2d, Dennis, on S. X. Pontiac Margie 3d.

Junior Heifer Calf: 1st, Dennis, on S. X. Echo Sylvia Johanna; 2d, Woodrow & James, Rising Sun, Md., on Bonnie Pontiac Ormsby De Kol; 3d, Woodrow & James, on Lily Pontiac Lady Ormsby; 4th, Dennis, on S. X. Echo Sylvia Jewel.

Get of Sire: 1st, Dennis, on Get of King Pontiac Netherland Pershing; 2d, Woodrow & James, on Get of Beaver Dam Ormsby De Kol; 3d, H. E. Robertson, on Get of King Piebe of York; 4th, Dennis, on Get of King Pontiac Netherland Pershing.

Produce of Dam: 1st, Brooklandwood Farms, on Produce of Rosetta Hengerveld De Kol 2d; 2d, Dennis, on Produce of Jewel Johanna Posch; 3d, Robertson.

Breeder's Calf Herd: 1st, Dennis; 2d, C. D. Cullen; 3d, Robertson.

Breeder's Young Herd: 1st, Dennis; 2d, Robertson.

Exhibitor's Herd: 1st, Dennis; 2d, Robertson.

Four Cows in Milk: 1st, Dennis; 2d, Robertson.

Advanced Registry Cow: 1st, Dennis, on Jewel Johanna Posch; 2d, Robertson; 3d, Brooklandwood Farms, on Brooklandwood Queen Pietertje.

Junior Champion Bull: 1st, Robertson, on King Piebe of York 3d.

Senior and Grand Champion Bull: 1st, Brooklandwood Farms, on Brooklandwood King Pontiac.

Junior Champion Cow: W. Rowland Smith, on Rancocas Pohlcrest Maid.

Senior and Grand Champion female: Dennis.

TRI-STATE FAIR

The Tri-State Fair, held at Aberdeen, S. D., September 4th to 8th, is now one of the most important fairs in the Northwest, although this is only the second year of its operation. Exhibits come from distant points and the livestock exposition brought some of the very best animals in the surrounding counties and states, the huge cattle barn being filled to overflowing. The Holstein awards were as follows:

Exhibitors: State Hospital, Yankton; State School and Home, Redfield; C. McDowell, Aberdeen.

Bull, 4 years or over: 1st, State Hospital, on King Pietertje Ormsby Fobes. Bull, 2 years and under 3: 1st, State Hospital, on King Colantha Ormsby Bess 11th; 2d, State School and Home, on Pride of the Bess Burke's. Bull, 1 year and under 2: 1st, 2d, State School and Home, on Redfield Mark and Redfield Hengerveld Colantha. Bull, senior calf: 1st, State School and Home; 2d, State Hospital, on Yankton Hazelhurst Rue; 3d, State Hospital on Yankton Colantha Bess Ormsby.

Cow, 4 years old or over: 1st, 3d, State Hospital, on Yankton Mayme Ure Gerben and Prospective Washington Beryl; 2d, State School and Home, on Redfield Korndyke Maid; 4th, McDowell, on Canary Pietertje Ormsby. Cow, 3 years and under 4: 1st, State School and Home, on Redfield Emma. Heifer, 2 years and under 3: 1st, State Hospital, on Yankton Beryl; 2d, 3d, State School and Home, on Redfield Segis Johanna and Sue Lady. Heifer, senior yearling: 1st, 3d, State Hospital, on Yankton Pontiac De Kol Maid and Yankton Hazelhurst Pontiac Burke; 2d, State School and Home, on Redfield Colantha Hengerveld Maid. Heifer, junior yearling: 1st, 2d, State School and Home, on Redfield Fanny and Redfield Colantha Sue Maid; 3d, State Hospital, on Yankton Gerben Maid. Heifer, senior calf: 1st, State School and Home, on Redfield Hannah; 2d, 3d, State Hospital, on Yankton Gladys Rue Pontiac and Yankton Pontiac Colantha 2d.

Graded Herd: 1st, State School and Home; 2d, State Hospital.

Yearling Herd: 1st, State School and Home.

Calf Herd: 1st, State School and Home; 2d, State Hospital.

Produce of Cow: 1st, State School and Home; 2d, State Hospital.

Get of Sire: 1st, State Hospital; 2d, State School and Home.

Junior Champion Bull: State School and Home. Senior and Grand Champion Bull: State Hospital, on King Pietertje Ormsby Fobes.

Junior Champion Female: State School and Home, on Redfield Hannah. Senior and Grand Champion Female—State School and Home, on Redfield Emma.

MISSOURI SLOPE FAIR

The attendance at the twelfth annual Missouri Slope Fair held at Mandan, N. D., August 28th-31st, was estimated by the secretary at 11,000. Because this fair usually occurs during the thresting season the directors are considering holding the fair at an earlier date, either immediately following or just prior to the Fargo and Grand Forks Fairs. There are several things to be considered as, while an earlier date has its advantages, fall fairs usually have a better agricultural exhibit owing to the maturity of the grains and grasses and vegetables exhibited. The attendance and the quantity and quality of exhibits this year will probably result in larger exhibition buildings in the near future.

Holsteins decidedly predominated in the dairy breeds and were judged by A. M. Challey, of Devils Lake. Holsteins were exhibited by the State Training School, Mandan; Mrs. Jennie Moran, Bismarck; T. H. Knoble, Buchanan; Sawtelle & Stowell, Flasher; North Dakota Holstein Breeding Circuit, New Salem; A. O. Weeks, Flasher; Zachmeir Bros., W. F. Reynolds, Lark.

The awards were distributed as follows:

Bull, 3 years or over: 1st, State Training School; 2d, Moran. Bull, 2 years, under 3: 1st, Knoble. Senior Yearling Bull: 1st, Sawtelle & Stowell. Senior Bull Calf: 1st, North Dakota Holstein Breeding Circuit. Junior Bull Calf: 1st, Weeks; 2d, Zachmeir Bros.; 3d, Sawtelle & Stowell.

Cow, 3 years or over: 1st, 2d, Knoble; 3d, North Dakota Holstein Breeding Circuit. Cow or Heifer, 2 years, under 3: 1st, Sawtelle & Stowell; 2d, Knoble; 3d, Moran. Senior Yearling Heifer: 1st, Sawtelle & Stowell; 2d, Moran; 3d, Knoble. Junior Yearling Heifer: 1st, Sawtelle & Stowell; 2d, North Dakota Holstein Breeding Circuit; 3d, Weeks. Senior Heifer Calf: 1st, Sawtelle & Stowell; 2d, Knoble; 3d, Reynolds. Junior Heifer Calf: 1st, Moran; 2d, 3d, Sawtelle & Stowell.

Senior and Grand Champion Bull: Knoble. Junior Champion Bull: North Dakota Breeding Circuit. Senior and Grand Champion Female: Knoble. Junior Champion Female: Moran.

Breeder's Young Herd: 1st, Sawtelle & Stowell; 2d, North Dakota Breeding Circuit. Breeder's Calf Herd—1st, Sawtelle & Stowell; 2d, North Dakota Breeding Circuit. Four animals, either sex, get of one sire: 1st, Sawtelle & Stowell; 2d, Knoble; 3d, Holstein Breeding Circuit. Two animals, get of one cow: 1st, Sawtelle & Stowell; 2d, North Dakota Holstein Breeding Circuit; 3d, Weeks. Aged Herd: Knoble.

THE NEW YORK STATE FAIR

In point of numbers the Holstein showing at the 1922 New York State Fair was well above the average. The animals generally were good individuals but there was no outstanding male or female, no Minerva Beets or Iowana Sir Ollie. Promptly at nine o'clock on Tuesday morning, Judge Hæger was calling for the bull calf class, which was the first on the program.

The winner was a real nice young fellow, exhibited by H. V. Bump, Cambridge, New York, a son of North Star General Champion. He was easily the best of the sixteen in the class, and later went on to junior championship. The Grayfield Farms entry, Chief Pontiac Ormsby, was first prize in the junior bull class, with L. A. Judd's Fairholm Milk King Pontiac standing second.

Four two-year-olds were led out, the winner being a dark colored, nicely built animal exhibited by Grayfield Farms. It is interesting to note that he was North Star General Champion, the sire of the first prize bull calf. E. A. Powell showed three good bulls in this class, the best of which was Excelsior Johanna, a very nice animal except that he was a little rough at the tailhead.

In the three-year-old bull class, Woodmont Echo Sylvia Champion, exhibited by the Pennsylvania breeders, G. F. Decker, H. R. Decker and B. F. Jones & Son, was an easy winner. He is a deep bodied bull, straight and high headed, and has a rich, mellow hide. He is a nervous, active fellow and did not stand for the judge to handle him.

The aged bull class was headed by Prince Colanthus Abbekerk Sylvia, from the Yates Farms. He was long bodied, a good handler, light colored, probably not so good at the heart girth as he might be. Sir Echo Sylvia Larkspur, another Canadian bred bull, a son of Champion Echo Sylvia Pontiac, was second. Denroe Rag Apple Prince, shown by Miller Bros., was third. This animal was generally termed the Jemima bull by the men at the ringside, he being a son of Denroe Lady Jemima.

Thirty-two matrons came out in the aged cow class. They were a milky looking lot, but there was not an outstanding show cow in the bunch. The first choice of the ringside was Mildred Pontiac Corona De Kol, from the Hawley & Murphy exhibit. She carried one of the finest looking udders that we have ever seen on a cow, level and every quarter filled in good shape, but Judge Hæger was not satisfied with just looking at her. He handled her udder and detected that she had one hind quarter a little slack and she gradually traveled down the line until she stood sixth, just outside the money. The best fitted cow in the ring, Harriette of Grayfields, was placed first. This daughter of Sir Fairview Pontiac Korndyke was first prize cow in the three-year-old class last year. She has a square udder and is a pretty fair kind of cow. The Fairchild entry, Lorenzo Duchess Korndyke Lyons, was second, and C .B. Markell & Son's Clothilde Harriet Korndyke was third. Last year's champion, Butter Boy Empress, was probably the best show cow in the ring, but was badly out of condition. The veining of this cow, particularly her udder veining, is something remarkable, and had she been in show shape we think she would have repeated her last year's victory. This year she was placed fourth. Cornell University exhibited Glista Darling, a daughter of Glista Coreva, and won fifth prize.

Grayfield Farms repeated in the three-year-old class, Lucky Strike of Grayfields, being first, and Gracea of Grayfields, third. Sandwiched between them was Pearl Asiatic, a heifer with a long string of show victories to her credit. She was from the Knowles herd, as was Ormsby Countess, that stood in fourth position. Number five was Lady Johanna Posch Pride, from the Erie County Farm. This class of eleven was a real show.

Seventeen good two-year-old heifers competed, and this was another good class. The winner, Elma Sadie Vale Korndyke, was not in bloom, and until Judge Hæger pointed out her excellence, she was overlooked by many of the spectators. She was dark colored with a nice udder, was level on the back and her veining was extraordinary for an animal of her age. The judge predicted that if she progressed as well as she promises she would make a great show cow.

Seventeen senior yearlings competed with the result that Canary Johanna Posch, of the Yates Farms, was placed first. She is a twin and her mate was shown with her, but did not get in the money. LeRoy Munro furnished the winners of the second and third places, in Drumlin Netherland Maud and Drumlin Ita, daughters of Brookside Model Sir Abbekerk. The Grayfield Farms entry was fourth, with K. H. S. Aaggie Riverside 4th, from the A. W. Brown exhibit, fifth. The winner was later on given junior championship.

There were twelve junior yearlings, and the winner was the smallest one in the bunch, for she was very nice, deep bodied and looked like making a real cow. Her name was Aaggie Princess Almira, and she was from the Knowles herd. Grayfield Farms was second, Yates third and fifth, and Markell, fourth.

No less than thirty-three heifer calves passed before the judge, and he certainly had his work cut out before he placed the ribbons. A small boy held a dark colored heifer from the Syracuse University herd, and he was the most pleased fellow the judging pavilion ever held when Mr. Hæger placed his heifer at the head of the list, and he acted as though he could hardly believe his own ears. Yates Farm furnished the winner of second place in a daughter of Count Paul Posch, and Grayfield Farms had third and fifth, with the R. C. Albright entry, fourth.

The prize for exhibitor's herd went to the Grayfield Farms, with Yates a close second. For some reason Grayfield Farms did not exhibit a yearling herd, and Yates Farm won first, with F. A. Wigsten second, and E. A. Powell, third. Yates Farms won again in the calf herd, with Grayfield Farms second, and LeRoy Munro, third. This was a real good class.

The get of sire class was a battle between Grayfields and Yates Farms, the former winning. Munro was third, Knowles, fourth, and Hartshorn, fifth. Grayfield Farms, as might be expected, exhibited the get of Sir Fairview Pontiac Korndyke; the Yates Farms animals were by Count Paul Posch, and the Munro animals were by Brookside Model Sir Abbekerk.

The Produce of Cow class was a good class. Yates Farm won this time, with Grayfields second, and Knowles, third.

The competition in the four best cows over three years old was close and good. Grayfields was first, with E. A. Powell second, and Knowles, third. The prize for four best females two years old or over, bred by exhibitor, went to Grayfield Farms, with Knowles second, and Hartshorn, third.

The junior championship went to the entry of H. V. Bump, and we believe that no one disagreed with the judge. The senior championship was different. Each of the three bulls had his partisans and they were very evenly matched, but Mr. Hæger preferred Prince Colanthus Abbekerk Sylvia, and gave him both senior and grand championship.

Harriette of Grayfields, turned the tables on Butter Boy Empress in the Advanced Registry cow class, the animal to be bred and owned in New York State, the younger cow winning this year, while Butter Boy Empress won last year.

Harriette of Grayfields was easily senior and grand champion. The junior champion was Canary Johanna Posch, of the Yates Farm exhibit.

The class for special county exhibits gave the judge considerable work; each entry had outstanding animals and each held one or more poor ones, and it was quite a time before Mr. Hæger indicated that the Washington County Holstein Club was winner of first place, and Erie County second, Madison County Holstein Breeders' Association third, and the Holstein-Friesian Club of Tompkins County, fourth.

The detailed prize list follows:

Aged Bull: 1st, Yates Farms, on Prince Colanthus Abbekerk Sylvia; 2d, Fairchild, on Sir Echo Sylvia Lockspur; 3d, Miller Bros., on Denroe Rag Apple Prince; 4th, White, on Judge Lyons 3d; 5th, Lee, on King Lyons Spofford Segis.

Three-year-olds: 1st, Decker & Jones, on Woodmont Echo Sylvia Champion; 2d, Schwartz & Case, on Max Finderne Pohlcrest; 3d, Hawley & Murphy, on Oswego River Alma Lyons.

Two-year-olds: 1st, Grayfield Farms, on North Star General Champion; 2d, Powell, on Excelsior Johanna; 3d, Powell, on Northside Aaggie King; Powell, on De Kol Webb Pontiac.

Yearlings: 1st, Grayfield, on Chief Pontiac Segis Ormsby; 2d, L. A. Judd, on Fairholm Milk King Pontiac; 3d, Yates, on Paul Pontiac Posch; 4th, Cornell University, on Prince Aaggie Wayne Ormsby 30th; 5th, F. A. Wigsen, on unnamed entry.

WOODMONT ECHO SYLVIA CHAMPION

First prize three-year-old bull at the New York State Fair. B. F. Jones of South Montrose, Pennsylvania is handling him

Bull Calf: 1st, H. V. Bump, on son of North Star General Champion and Emma Pontiac Ilex: 2d, Hartshorn, on King Beauty Sylvia Lyons; 3d, Yates, on Count Posch Korndyke; 4th, White, on Brookside Segis Hartog Burke; 5th, O. A. Somes, on Drumlin Model Segis.

Aged Cow class: 1st, Grayfield Farms, on Harriette of Grayfields; 2d, Fairchild, on Lorenzo Duchess Korndyke Lyons; 3d, C. B. Markell & Son, on Clothilde Harriet Korndyke; 4th, H. C. Wood, on Butter Boy Empress; 5th, Cornell University, on Glista Darling.

Three-year-olds: 1st, Grayfields, on Lucky Strike of Grayfields; 2d, Knowles, on Pearl Asiatic; 3d, Grayfields, on Gracea of Grayfields; 4th, Knowles, on Ormsby Countess; 5th, Erie County Farm, on Lady Johanna Posch Pride.

Two-year-olds: 1st, C. McHugh, on Elma Sadie Vale; 2d, C. S. Colegrove, on Tidy Cornucopia Abbekerk 2d; 3d, Yates Farms, on Mary Posch Canary; 4th, Grayfield Farms, on Harriette of Grayfields 2d; 5th, L. Breese & Son, on Ethel Pontiac Kookee.

Senior Yearling Heifer: 1st, Yates Farms, on Canary Johanna Posch; 2d, LeRoy Munro, on Drumlin Netherland Maud; 3d, LeRoy Munro, on Drumlin Ita; 4th, Grayfield Farms, on Lady Thyrsa Walker Fayne; 5th, A. W. Brown, on K. H. S. Aaggie Riverside 4th.

Junior Yearling Heifer: 1st, Frank P. Knowles, on Aaggie Princess Almira; 2d, Grayfield Farms, Princess Valdessa Pat; 3d, Yates Farms, on Belle Canary Abbekerk; 4th, C. B. Markell & Son, on Model Lyons Segis; 5th, Yates Farms, on Segis Johanna Lady Posch.

PHOTOCOPY OF ORIGINAL

Senior Heifer Calf: 1st, Syracuse University, on unnamed entry; 2d, Yates Farms, on Pauline Jobyna Posch; 3d, Grayfield Farms, on Appleland Pietertje Colantha; 4th, R. C. Albright, on Johanna Rose Hengerveld Alpason; 5th, Grayfield Farms, on Segis Idylwilde Tweedle Dee Dean.

Exhibitor's Herd: 1st, Grayfields Farms; 2d, Yates Farms; 3d, Miller Bros.; 4th, E. A. Powell.

Yearling Herd: 1st, Yates Farms; 2d, F. A. Wigsten; 3d, E. A. Powell.

Calf Herd: 1st, Yates Farms; 2d, Grayfield Farms; 3d, LeRoy Munro; 4th, Lloyd D. Upham; 5th, Frank P. Knowles.

Get of Sire: 1st, Grayfield Farms, on get of Sir Fairview Pontiac Korndyke; 2d, Yates Farms, on get of Count Paul Posch; 3d, LeRoy Munro, on get of Brookside Model Sir Abbekerk; 4th, Frank P. Knowles, on get of K. P. Asiatic Ormsby; 5th, A. A. Hartshorn, on get of King Echo Sylvia Model.

Produce of Cow: 1st, Yates Farms; 2d, Grayfield Farms; 3d, Frank P. Knowles; 4th, A. A. Hartshorn; 5th, E. A. Powell.

Best four cows over 3 years old: 1st, Grayfield Farms; 2d, E. A. Powell; 3d, F. R. Knowles.

Best four females, 2 years old or over, bred by exhibitor: 1st, Grayfield Farms; 2d, A. A. Hartshorn; 3d, F. P. Knowles.

Champion Bull, over two years old: Yates Farm, on Prince Colanthus Abbekerk Sylvia.

Champion Bull under two years old: H. V. Bump.

Champion Cow, over two years: Harriette of Grayfields.

Champion Cow, under two years: Yates Farm, on Canary Johanna Posch.

Grand Champion Male: Prince Colanthus Abbekerk Sylvia.

Grand Champion Female: Harriette of Grayfields.

Advanced Registry Cow, bred and owned in New York State: 1st, Grayfield Farms, on Harriette of Grayfields; 2d, H. C. Wood, on Butter Boy Empress; 3d, W. T. Smith, on Netherland Pietje Hengerveld; 4th, Mary Munro, on Delia Parthenea Pietertje; 5th, E. A. Powell entry.

Special County Exhibits: 1st, Washington County Holstein Club; 2d, Erie County Holstein Club; 3d, Madison County Holstein Breeders' Association; 4th, Holstein-Friesian Club of Tompkins County.

THE ROCHESTER, NEW YORK, EXPOSITION

The Holstein show at the Rochester Exposition equaled if it did not surpass any previous exhibition held there. There were not a very large number of animals but the quality was of a high order, coming from the herds of Clover Heights Farm, L. B. Jones, proprietor, Pittsford, N. Y.; Chas. Bauch & Son, Spencerport, N. Y.; William F. Sheldon, Avon, N. Y., and Edward E. Doty & Sons, Geneseo, N. Y.

Clover Heights was the heaviest winner, taking six firsts and three seconds in the classes. Clover Heights also won the exhibitor's herd, Mr. Bauch winning the breeders' young herd, get of sire and produce of dam. The championships were divided among the four herds, Clover Heights taking senior and grand champion bull with King Korndyke Hartog Artis. Mr. Sheldon taking senior and grand champion cow with K. P. D. Movie Duplicate. Mr. Doty had the junior champion bull in King Segis Paul Posch, and Mr. Bauch the junior champion cow in Lothi Segis Model. The awards were:

Class 1—Bull, 3 years or over.
1. King Korndyke Hartog Artis. Clover Heights.
2. Spring Farm King 24th. Clover Heights.

Class 2—Bull, 2 years and under 3.
1. C. H. Commodore De Kol. Clover Heights.

Class 3—Bull, 1 year and under 2.
1. King Ormsby Veeman Ideal. Clover Heights.

Class 4—Bull calf under 1 year.
1. King Segis Paul Posch. Edward E. Doty & Sons.
2. C. H. King Pontiac Sadie. Clover Heights.

Class 5—Cow, 4 years or over.
1. Sadie Wayne of C. H. Clover Heights.
2. C. H. Beryl Wayne Pietje. Clover Heights.

Class 6—Cow, 3 years and under 4.
1. Peace Day Dolly. Clover Heights.

Class 7—Heifer, 2 years and under 3.
1. K. P. D. Movie Duplicate. Wm. F. Sheldon.
2. C. H. Sadie Vale Pietje. Clover Heights.

Class 8—Heifer, 1 year old and under 2.
1. C. H. Agatha Vale. Clover Heights.
2. Dotyfarm Colantha Katie. Edward E. Doty & Sons.

Class 9—Heifer calf under 1 year.
1. Lothi Segis Model. Chas. Bauch & Son.

Exhibitor's herd.
1. Clover Heights Farm.
2. Clover Heights Farm.

Breeders' Young Herd.
1. Chas. Bauch & Son.
2. Clover Heights.

Get of Sire.
1. Chas. Bauch & Son.
2. Clover Heights.

Produce of Cow.
1. Chas. Bauch & Son.
2. Clover Heights.

MAINE STATE FAIR

The Maine State Fair was a success in every way, with good weather and numerous visitors. The competition between teams of oxen is one of the unique attractions of this fair, and this year there were many in evidence, including a pair of Durhams that girted eight feet and two inches.

Holsteins were exhibited by the Eastman Hill Stock Farm of Lovell; Arthur D. Cummings, of Oxford, and Joseph Robinson, of the Clover Lane Stock Farm, Oxford, whose show string included the 30-lb. cow S. V. H. Nellie Veeman. Each won a number of prizes. The judge was L. V. Tirrell, of the New Hampshire State College, and his placings were:

Aged herd, A. D. Cummings, Oxford, 1. Young herd, Cummings, 1, 2; Clover Leaf Stock Farm, 3.

Bull, two years old, Eastman Hill Stock Farm, Oxford, 2. Bull calf, Eastman Hill Stock Farm, 1; Cummings, 2, 3, 4. Cows four years old, Clover Lane Stock Farm, 1; Cummings, 2, 3. Cows three years old, Cummings, 1; Clover Lane Stock Farm, 2, 3. Heifers, two years old, Eastman Hill Stock Farm, 1; Clover Lane Stock Farm, 2; Cummings, 2, 3; Eastman Hill Stock Farm, 4. Yearling heifers, Clover Lane Stock Farm, 1; Cummings, 2. Junior yearling heifer, Clover Lane Stock Farm, 1; Cummings, 2, 3. Senior heifer calf, Cummings, 1, 2; Clover Lane Stock Farm, 3, 4. Junior heifer calf, Eastman Hill Stock Farm, 1, 2, 3.

CONGRESSMAN ANDERSON AT SYRACUSE

One of the most prominent visitors and speakers at the New York State Fair was the Honorable Sydney Anderson, Congressman from Minnesota. Congressman Anderson is chairman of the Joint Congressional Committee which has been engaged for several months investigating the causes of the present farm situation; the reasons for the difference between the prices of agricultural products paid to the producer and the ultimate cost to the consumer, and the marketing and transportation facilities of the country. No more thorough or better study has been made of the national agricultural situation in years than that of this committee. Their reports of conditions cover several volumes.

One of the chief remedies proposed by Mr. Anderson's committee is that of coöperation on the part of farmers, and the committee is unqualified in its recommendations to Congress and to farmers in support of the coöperative movement. Recently there have been some statements in trade and agricultural circles that this important endorsement of coöperation by the Congressional Committee applied only to the coöperative selling of farm products and not to the purchasing of farm supplies on the part of coöperative associations. In answer to a letter on this subject, a member of the committee replies as follows:

"Beg to advise that I have taken this matter up, while in Washington, with several members of the commission and *can find none who are opposed to farm coöperative buying.* There may be one or two of the commission whom I have not interviewed and who, because of their environment, are not in accord with this project, but I feel sure that the commission is in sympathy with such a movement and will back it."

On the same subject, Congressman TenEyck, also a member of the committee, in a recent speech is quoted as follows:

"It is essential that he (the farmer) organized for coöperative bargaining. This should include not only coöperation in selling his products, but coöperation in purchasing those articles which are necessary for conducting his business."

These statements show that the committee and others who have made a thorough study of the present economic situation in agriculture thoroughly understand and agree that it is as necessary for farmers to keep their costs of production down by buying well as it is to get fair prices for their products by selling them well.

KENT COUNTY SHOW

The Holstein Show staged by the Kent County Holstein Association at Chestertown, Maryland, at the second annual Farmers' Day Picnic was an honor to Kent County and the Holstein breed. The animals were judged by Dr. De Voe Meade of the University of Maryland, who placed the handsome ribbons as follows:

Aged Bulls: Entry of E. R. Pennington, first; Merrick Clements, second; Harry Nichols, third.

Senior Bull Calf: Webb Hill, first; M. P. Edwards, second.

Junior Bull Calf: N. V. Walters, first; John Sutton, second.

Matured Cows, three years and over: E. R. Pennington, first and second; F. T. Nicholson, third.

Two to Three-year-old Cows: John C. Sutton, first; E. R. Pennington, second.

Senior Yearlings: John C. Sutton, first; E. R. Pennington, second.

Junior Yearlings: N. V. Walters, first.

Senior Calf: Norman Pennington, first; E. R. Pennington, second; Henry Williams, third.

Junior Calf: S. T. Bramble, first and second; W. T. Nicholson, third.

Get of Sire: Merrick Clements, first; E. R. Pennington, second.

Junior Champion Bull: Webb Hill.
Senior Champion Bull: E. R. Pennington.
Grand Champion Bull: E. R. Pennington.
Junior Champion Cow: John C. Sutton.
Senior Champion Cow: E. R. Pennington.
Grand Champion Cow: E. R. Pennington.

INTERSTATE FAIR

Three states and Canada competed in the Interstate Fair at Spokane. Rain marred the second and third days of the Fair yet the event was one of the best in the Association's history and the attendance was about 100,000.

The two chief competitors in the Holsteins were John L. Smith of Spokane and Western State Hospital of Steilacoom. The Hospital won junior championship, the others went to the Smith herd.

Hazelwood Heilo Butter King, now a junior yearling that last winter as a senior calf won the grand championship at the Western Royal, was made junior champion bull, but gave way to the aged bull, Segis Pietertje Clothilde for the grand championship. The University of Idaho, the State College of Washington and Sudhoff Brothers of Spokane fared well in the winnings, the university herd having probably a little the better of the secondary winnings.

Bulls: Three years or over—1, John L. Smith, Spokane, Wash., on Segis Pietertje Clothilde (senior and grand champion); 2 and 3, University of Idaho, Moscow, on Matador Violet Idaho and King Segis Violet Posch Idaho; 4, Sudhoff Bros., Spokane, on Idaho Hengerveld Belle Fayne. Two-year-olds—1, Western State hospital, Steilacoom, Wash., on Sir Pietertje Ormsby Blossom. Senior Yearling—1, Western State hospital, on Carnation King Matador Mutual. Junior yearling—1, Smith on Hazelwood Heilo Butter King (junior champion); 2, University of Idaho, on King Posch Segis Idaho. Senior calf—1, Western State hospital, on Steilacoom Sir Ormsby Veeman; 2, Smith, on Hazelwood Stella Champion; 3, University of Idaho, on Idaho Matador Conqueror; 4, State College of Washington, Pullman, on Chinook Piebe Adam. Junior calf—1 and 4, Smith, on Hazelwood Sir Bessie Segis and Hazelwood Heilo Homestead; 2, State College of Washington, on Chinook Piebe Excellent; 3, Western State hospital, on Steilacoom Sir Pontiac Blossom.

Females: Three years or over—1 and 3, Smith, on Hazelwood Ormsby Butter Girl and Lady Bracelet Jewel; 2, University of Idaho, Segis Walker Colantha; 4, Western State hospital, on Bessie Pearl Tritomia. Two-year-olds—1 and 3, Smith, on Hazelwood Leda Heilo Korndyke (senior and grand champion) and Hazelwood Johanna Skylark; 2, State College of Washington, on Hazelwood Heilo Josephine Ormsby; 4, Western State hospital, on Steilacoom DeKol Colantha. Senior yearling—1 and 2, Smith, on Hazelwood Bessie Pauline Heilo, and Hazlewood Ormsby Heilo Duchess; 3, State College of Washington, on Hazelwood Heilo Aaggie DeKol; 4, University of Idaho, on Idaho University DeKol Korndyke Violet. Junior yearling—1 and 4, Western State hospital, on Steilacoom Bonnie Ormsby Lass (junior champion), and Steilacoom Ormsby Sadie Vale; 2 and 3, Smith, on Hazelwood Ormsby Homestead and Hazelwood Heilo Fobes Tritomia. Senior calf—1 and 4, Western State hospital, on Steilacoom Molly Hengerveld Ormsby and Steilacoom Blossom Zanke Mercedes; 2 and 3, Smith on Hazelwood Ormsby Duchess and Hazelwood Heilo Posch Ormsby. Junior calf—1, Western State hospital, on Steilacoom Jewel Pontiac Korndyke; 2 and 4, Smith on Hazelwood Heilo Butter Girl and Hazelwood Bessie Pauline Posch; 3, State College of Washington, on Chinook Piebe Dora.

BELL FARM FIELD DAY

The Third Annual Field Day of Bell Farm will be held October 17th. The Bell Farm Field Day is an event which is anticipated by breeders of Pennsylvania and nearby states and attracts visitors from long distances. The Bell Farm has an enviable and we almost said, unique reputation. In this herd are a number of animals that have made tremendous records both in short and long time tests. While this fact alone is enough to focus eyes of Holstein owners upon Coraopolis, there are a number of other remarkable things about the Bell herd.

A large majority of the animals in the herd are descendants of the great Mabel Segis Korndyke, an outstanding individual herself and a great producer that is credited with being the first animal under full age to make a 40 lb. official seven-day butter record. Second, no large herd in the country has been managed with an eye to individuality and to health as has this great breeding establishment.

The product of this herd is sold as certified milk in the city of Pittsburgh. The bacterial count is kept at a minimum. So thorough is the management that not only is the bulk product periodically inspected, but individual bacterial tests are made and the results are startling to the man who has not had personal experience with this kind of work.

There are so many things that could be said about the Bell herd that we will not take time to say more here, but we assure our readers that if they are able to get away on October 17th, they can enjoy that day with both pleasure and profit to themselves, if they attend the Third Annual Field Day at the Bell Farm.

SOUTHWEST WASHINGTON FAIR

The Holsteins at the Southwest Washington Fair were judged by Professor E. F. Fitts, extension specialist of Oregon Agricultural College. The first two days were favored with fair weather but rain fell the last three days and the total attendance for the week was below expectations. The fair was unfortunate as, although insurance had been taken against rain the showers were either in the late afternoon or the night, outside of the time requisite for collection of rain insurance.

The largest exhibitor was the Carnation Stock Farms with 23 head. The Western State Hospital at Steilacoom had 13 and W. A. Hamilton and Sons of Chehalis had 11 head. Carnation won eight blue ribbons and the state herd seven. Tom Nisbet's cow Inka Grace of Wayne was senior and grand champion but she had a strong competitor in the junior champion Steilacoom Bonnie Ormsby Lass from the state herd. Matador Segis Walker 6th was senior and grand champion

PHOTOCOPY OF ORIGINAL

and Carnation King Matador Mutual of the Hospital herd was junior champion. The detailed list of awards follows:

Bulls, 3 years or over—1, Carnation Stock Farms, Seattle, on Matador Segis Walker 6th (senior and grand champion); 2, Tom Nisbet, Chehalis, on Glencoe Perfection; 3, St. Urban Holstein association, Winlock on Sir Clothilde Chimacum; 4, W. A. Hamilton & Sons, Chehalis, on The King of Chimacum; 5, S. L. Beck, Chehalis, on Sir Mercedes Wayne Sarcastic. Two-year-old—1, State hospital on Sir Pietertje Ormsby Blossom; 2, Hamilton on The King of Chimacum 2d. Yearling—1, Western State hospital, Steilacoom, on Carnation King Matador Mutual (junior champion); 2, Carnation Stock Farms on Colantha Walker Matador. Senior calf—1 and 4, Western State Hospital on Steilacoom Sir Ormsby Veeman and Steilacoom Cascade Molly De Kol; 2, 3 and 5, Carnation Stock Farms on Ensign Matador Model Abbekirk, Carnation King Topsy De Kol and Carnation Segis Walker Veeman. Junior calf—1, 2 and 4, Carnation Stock Farms on unnamed; 2, State hospital on unnamed; 5, Mat Kohtala, Centralia, on unnamed.

Females cow 4 years or over—1, Nisbet on Inka Grace of Wayne (senior and grand champion); 2, Carnation Stock Farms on May Walker Skylark; 3, Hamilton, on C. K. K. S. V. Burke De Kol; 4, Chris Hendrichsen, Onalaska, on Nisqually Olga Johanna; 5, State hospital on Bessie Pearl Tritomia. Three-year-old—1 and 2, Carnation Stock Farms on Queen Bonheur Pontiac De Kol and Carnation Matador Queen. Two-year-old—1 and 2, Carnation Stock Farms on Matador Oregon Mechthilde and Carnation Matador Ada Segis; 3, State hospital on Steilacoom De Kol Colantha; 4, Hamilton on Newaukum Burke Segis; 5, Nisbet on Newaukum Lunde Segis. Senior yearlings—1, 2 and 3, Carnation Stock Farms on Carnation Matador Coquette, Carnation Matador Nena and Carnation Matador Wietske; 4, Hamilton on Newaukum Jessie Jelkje; 5, Nisbet on Kitsap Molly Segis Walker. Junior yearling—1, State hospital on Steilacoom Bonnie Ormsby Lass (junior champion); 2 and 4, Carnation Stock Farms on Carnation Matador Christmas and Carnation Matador Sylvia Lizzie; 3 and 5, Hamilton on Newaukum De Kol Segis and unnamed. Senior calf—1 and 3, State hospital on Steilacoom Molly Ormsby Hengerveld and Steilacoom Blossom Zanke Mercedes; 2, Nisbet on Olympic Greenbank Queen; 4, Carnation Stock Farms on Carnation Sylvia Perfect Johanna; 5, Hendrichsen on unnamed. Junior calf—1, Hamilton on unnamed; 2, State hospital on Steilacoom Jewel Pontiac Korndyke; 3, Hendrichsen on unnamed; 4 and 5, Carnation Stock Farms on Carnation Matador Newman and unnamed.

Aged herd—1, Caration Stock Farms; 2, State hospital; 3, Nisbet. Young herd—1, State hospital; 2, Carnation Stock Farms. Calf herd—1, State hospital; 2, Carnation Stock Farms. Get of sire—1 and 3, Carnation Stock Farms; 2, State hospital. Produce of dam—1, Carnation Stock Farms; 2, State hospital; 3, E. A. Donaldson, Adna.

GROVE CITY CATTLE SHOW

Big crowds attended the Fifth Annual Cattle Show of the Grove City Accredited Herd and Sales Association, it being estimated that more than 5,000 were present the second day.

The cattle exhibited totaled 232 head. They were in three new steel barns, were exhibited by breeds, and consisted of 97 head of Holsteins, 63 Guernseys, and 72 Jerseys, all tuberculin tested. They came from five counties in western Pennsylvania.

The principal speaker was Dr. J. W. Thomas, president of the Pennsylvania State College. Other speakers were C. W. Larson, of the United States Department of Agriculture; Dean Van Norman, president of the World's Dairy Congress Association, and Alex. W. Dunbar, vice-president of the Bank of Pittsburgh.

A banquet was given to the visiting members of the State Bankers' Agricultural Association by the Grove City National Bank. The event was held at the Grove City Country Club, and the toastmaster was Dr. Morgan Barnes, a director of the Grove City National Bank.

The well-known Holstein breeder, B. F. Jones, of South Montrose, Pa., judged the Black and Whites. The grand champion bull was King Pietro Schuiling, a 22,000-lb. animal owned by C. E. Carnahan, who also owned the grand champion female, Segis Beets. The detailed awards were as follows:

Grand champion bull and cow: Won by C. E. Carnahan, of Butler, Pa. Get of sire, bull and three daughters: Won by H. M. Montgomery, of Grove City; second, George Sering, of Harrisville. Produce of dam, cow and two daughters: Won by J. C. Graham, of Mercer; second, G. D. Barnes, Grove City; third, H. M. Montgomery & Sons, of Grove City; fourth, J. A. Glenn, of Mercer.

DAIRYMEN'S LEAGUE AUGUST PRICE

The pooled price for August milk, as announced by the Dairymen's League Coöperative Association, is $1.755 per hundred pounds. This is for milk testing three per cent butter fat, and is the base price at the 201-210 mile freight zone. Prices to each farmer will vary according to his freight distance from market and the amount of butter fat which his milk contains.

The price of $1.755 is the price to the farmer after expenses of administration, advertising and other expenses have been deducted. A loan to the Association of fifteen cents a hundred from the $1.755 is made on the certificate of indebtedness plan for investment in marketing facilities for caring for the farmers' milk. The August price is $.135 per hundred pounds higher than the price farmers received for July milk. Checks covering payment for August milk will be mailed to the farmers on September 25th.

HUMOR IN THE HEADINGS

"The Pear Crop Is Promising, but Peaches Are Short."

Peaches are often short, though we have seen some who were divinely tall and still others about medium height.

Every man would be satisfied with his lot if it wasn't for some other fellow's.

Wanted—An Offer

for a bull calf more than 90% white, six of whose seven nearest dams average 21,521 lb. milk, 1084 lb. of butter, 4% fat.

Dam, a sister to Keystone Beauty Plum Johanna, who holds the world's record, strictly official, for any cow of any breed under full age. Dam has a junior three-year-old record of 15,443 lb. of milk, 749 lb. of butter, 3.9% fat.

He is Naturally Hornless and a Beauty

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Sept. 25-Oct. 1—Waterloo, Iowa, The Dairy Cattle Congress, E. E. Estel, Mgr.
Oct. 7-14—Minnesota State Fair Grounds, National Dairy Show.
Oct. 10—Dallas, Tex.—Texas Holstein-Friesian Breeders' Association Meeting and Banquet.
Oct. 17—Bell Farm, Coraopolis, Pa., Third Annual Field Day.
Oct. 24—Deysher Farm, Reading, Pa., Lancaster County Breeders' Auto Run and Picnic.
Oct. 28—West Chester, Pa., Field Day and Banquet.
Nov. 23—Belvidere, N. J.—Annual Meeting Warren County Association.

SHAKESPEARE AND SCRUB BULLS

The proceedings at Dairymen's Day at the Sonoma-Marin Counties' Fair, Petaluma, California, August 17th, was enlivened by the trial of a scrub bull.

On the Kenilworth race track a ring was built in which the trial was held. The judge was Judge Emmet Seawell, elected August 29th Associate Justice of the Supreme Court of California. Frank J. Burke, city attorney of Petaluma, was court clerk and John M. Boyes, sheriff of Sonoma County, was bailiff and a jury was empaneled, consisting of twelve members. The accused animal stood in a limousine truck, and was defended by H. A. Weinland, farm advisor of Sonoma County, who dodged the issue and glorified the markings of the animal and his value as a farm watch dog and book agent chaser. M. B. Boissevain, farm advisor of Marion County, appeared on behalf of the dairymen and summoned as witnesses three dairymen and as expert, W. B. Hopkins, of the Petaluma Coöperative Creamery, who submitted statistical charts on the relative returns from daughters of purebred and scrub sires. The clerk read the indictment against the defendant, which was as follows, and is strong enough to cause concern to all scrub animals:

THE DAIRYMEN OF SONOMA-MARIN COUNTIES, PLAINTIFFS, *vs.* SCRUB BULL, DEFENDANT.

1. That plaintiffs are bona-fide residents of the dairy section of Sonoma-Marin counties, State of California, and, by occupation, dairymen.
2. That the defendant is one of the animals "bullicious scrubiferous bovinus," which resembled the Holstein family of cattle, but of which he is not, as shown by his color-markings.
3. That the defendant is the leader of a gang of robbers, which operate throughout the Sonoma-Marin dairy section.
4. That the defendant has been carrying on, with his kind, thieving operations in this section as long as man can remember.
5. That the defendant works in a very underhanded and subtle manner, stealing money from every dairyman who has common cows, robbing the unsuspecting, the careless and the ignorant alike.
6. That the defendant lowers all breeds of cattle he comes in contact with, by bringing into their line blood of unknown and poor quality.
7. That every country, like our own, subject to the ravages of the scrub bull, is less prosperous than it would be if all dairymen had good, purebred dairy bulls.

All of which is contrary to good dairy practice, and against the peace and prosperity of the dairymen of Sonoma-Marin section.

The proceedings took ninety minutes. Judge Seawell charged the jury which, after a few minutes' deliberation, brought in a verdict of "Guilty." Denying counsel's request for appeal, the Judge sentenced the prisoner to "Death" and ordered that the carcass be made into "hot dogs."

In the afternoon, the dead body was borne back on a bier and Sam Greene, secretary-manager of the California Dairy Council, spoke the obituary, parodying Mark Anthony's oration over the body of Cæsar.

THE BURIAL OF TAURUS, SCRUB BULL

Friends, Farmers, Dairymen, Lend me your Ears!
I come to bury this here scrub, Taurus,
Not to praise him.
The evil that men do, lives after them;
The good is oft interred with their bones.
So it is with this miserable beast,
Whose ignominious end
We here are congregated to celebrate.
The evil done by this poor, nameless scrub
Will live to the dying day of the last
Low-producing daughter for whose existence
He is responsible.
The only good he can do is to die,
That his putrid carcass may be used as fertilizer,
Or to increase the general supply of soap-grease!
For a short space of years he reigned as king.
But he was not ambitious. It was a grievous fault.
And grievously shall he answer for it.
He hath brought numerous progeny into the world
Whose lacteal product did the general want fill,
But only at great cost
And insufferable labor to their owners.
Time was when men did hold Taurus of great value,
And of his qualities did tell with pride.
I speak not to disprove what those men spoke,
But here I am to speak what I do know.
You all did love him once, though without cause.
What cause doth justify you now to mourn for him?
But yesterday the fame of Taurus
Might have stood against the world!
Now he lies here,
And none so poor to do him reverence.
O masters! If I were disposed to stir
Your hearts and minds to mutiny and rage,
I should hold you, here, spellbound
With stories of his cursed wrongs!
Good friends, sweet friends, let me not stir you up
To such sudden flood of mutiny.
They that have used such bulls are honorable men.
What private griefs they had.
I know not that made them do it;
But certain it is that those men,
Though honorable, yet were not wise.

If you have tears, prepare to shed them now,
The while I tell you of
His crimes and misdemeanors.
I am no orator as Hopkins is;
But, as you know me all, a plain, blunt man;
And I have neither wit, nor words, nor worth;
Action, nor utterance, nor power
Of speech to stir men's blood.
I only speak right on!
I tell you that which you yourselves do know.
I show you Taurus' lack of points
(Poor, poor, dumb mouths),
And bid them speak for me:
Observe his sullen mien.
Take note his crooked back, and broken rump;
Slab-sided ribs, and narrow chest;
His dull, dead eye; his rough and homely coat.
O my masters! can there be men
Who yet believe that such a beast
Is fit to raise up dairy herds
For good Americans!!
Away with him!
Let us look upon his like no more!
And here, to-day, make high resolve
That Sonoma and Marin counties will rid
Their fields and their hills and valleys

PHOTOCOPY OF ORIGINAL

Of his detested kind forever!
Here was a scrub,
Representative of a thousand others.
We'll burn his body in the market-place,
And, with the brands, fire the funeral pyres
Of hundreds like him.
Now let it work.
Knowledge thou art afoot:
Take what course thou wilt!

THE POETICAL SCHILLINGS

At the fifth annual meeting of the Maryland State Dairymens' Association held August 26th, at Baltimore, one of the speakers was W. F. Schilling, well-known Holstein breeder of Minnesota, who is president of the Twin City Milk Producers' Association, and vice-president of the National Milk Producers' Association. Mr. Schilling has been addressing dairymen's gatherings in many parts of the country, telling of the work of the Twin City Milk Producers and urging coöperative marketing methods for dairymen. He commended the Maryland Association's new plant in Baltimore as an insurance policy even if it was not used, as without it the producers would be at the mercy of the dealers. He had been away from home a long time and his wife had sent him the following rhymed letter:

Husband, dear husband, come home to me now,
I'm scenting the odor of spring:
You've stayed long enough with the farmers there,
You're much safer under my wing.
The old horse is pawing the stable like mad,
The colt's in a terrible stew;
Old Holstein has had a pair of twin calves,
And the pigs are squealing for you.
Husband, dear husband, come home to me, dear,
It's time to be settin' the hens;
And something seems to be telling me, love,
You're not always seen with the men.
You've fixed up the milk business sure, my dear,
And everything else seems fine;
But the corn is waiting to go in the ground,
For that old sweetheart of mine.
Husband, dear husband, come home to me, dear,
I've mended your old farm socks,
If we don't sell our wheat, we'll surely be beat,
And the old farm will be on the rocks,
Come to your Margaret, honey dear,
The sights will ruin your eyes,
They say you are jazzing and shimmying there,
And I am, indeed, surprised.
Husband, dear husband, come home right away,
The lambs are skipping about;
The robins of spring are now on the wing,
And the 'taters are beginning to sprout.
The grass on the hill is getting quite green,
And the maples are running their sap;
I am getting the spring fever for you, dear,
I want to be held in your lap.
They say there is desperate flirtin' down there,
With widows and maids not a few;
I haven't been kissed since the morning you left,
But dearie, how is it with you?

Not to be outdone by his spouse, Mr. Schilling has composed an answer which he also read:

Margaret, dear Margaret, I cannot come home,
I have tackled a terrible job;
The farmers down here do act mighty queer,
And surely enjoy being robbed.
Each farmer is trying to go it alone,
And his wife's in a terrible stew;
She hasn't had the price of a new summer hat,
And she don't know what in thunder to do.
Margaret, dear Margaret, I cannot come home,
I am trying to make them see,
That coöperation will help them to save their farms
And they will happier be.
Their barns need painting, their fences are old,
Agriculture is being hard hit;
The boys and the girls are moving to town,
And the old folks are ready to quit.
Margaret, dear Margaret, I cannot come home,
I'm needed right here in this line.
Tell the old Holstein to slow up a bit,
I'm satisfied with one at a time
If the pigs seem to miss me,
And annoy you a lot;
Just silence their faces
With a good pail of slop.
Margaret, dear Margaret, I cannot come home,
Though lonesome you surely must be;
The dancing I do should not worry you,
Nor the widows and maids that I see.
I've looked them all over,
With a critical eye,
And the ones that I'd want
Are indeed very shy.
I have puckered my mouth many times for a kiss,
When lonesome for you I would be;
But the widows and chickens say go to the dickens;
They've no use for an old cuss like me.

The report of the secretary-treasurer, I. W. Heaps, and Dairy Councillor E. A. Brown, were accepted. Four directors whose three year terms had expired were reëlected. They are: W. A. Wheeler, of Street; Howard S. Kuhn, Lisbon; L. S. Kerr, Broadbeck; and John T. Cauthorn, of Sykesville.

STARTING WELL

An association was recently organized by forty-two Holstein-Friesian breeders of St. Louis County, Minnesota. They elected as officers for the ensuing year: L. Jacobson of Iron, as president; Chris Jensen, Duluth, vice-president; H. G. Larson, Meadowlands, secretary; and Henry Ide, Lynnwood, treasurer.

OPTIMISTIC

Jackson County Holstein Breeders held their first meeting after the summer season at the Y. M. C. A. Hall, Jackson, Mich., on Sept. 7th. Luncheon was served after which a business session was held and dairy conditions were discussed. It is the opinion of the members that blooded dairy stock will be greatly in demand for the year 1923 and that dairy conditions are on the up-grade.

COLFAX HOLSTEIN CLUB

A meeting of the Colfax Holstein Club was held on the lawn of the home of E. B. Hill, Colfax, Wis., on August 25th. There was a good attendance, and all enjoyed the band concert and also the interesting and instructive talks which were given by N. O. Rippen, principal of the Colfax High School; Mr. Gordon of the Dunn County Agricultural School, who talked of bovine tuberculosis; and Mr. Amey, a pioneer in farm institute work who talked on "Better Dairy Cows, Not More."

MEET TO PROMOTE BREED

Twenty-five farmers interested in breeding Holstein cattle met in Grange Hall at Dushore, Friday evening, September 1st, to discuss methods of promoting the breed in Sullivan County, Pennsylvania.

W. Hugh Jones of South Montrose, Secretary of the Pennsylvania Federation of Holstein-Friesian Clubs, gave a splendid address on the need of organizing the breeders and suggested plans for promoting the breed in this County. He also explained the details of the local clubs that are a part or units of the State Association. County clubs may be organized among the breeders by having the breeders pay $3.00 a year dues; one dollar to go to the State Holstein-Friesian Association and two dollars to remain in the local club treasury. The money in the local club is to be used for advancing the Holstein breed in this County. It was felt that a local club should be organized in Sullivan County and the constitution and by-laws as recommended by the State Association be adopted. The officers elected for the ensuing year were: Frank V. Rohe, president; Chas. F. Lusch, vice-president; County Agent R. G. Waltz, secretary-treasurer; and two directors elected by ballot—Guy Baker and Henry Vogle. The executive committee was instructed to meet and make a definite program of work for the club to develop in Sullivan County.

C. P. Fague, County Agent of Susquehanna County, gave a brief outline of the Holstein activities in that County. He said that the breeders of that County were taking an active part in promoting the breed by exhibiting at County, State and National Fairs, encouraging the accredited tuberculosis eradication plan, and arranging for a sale of high quality animals to be held in conjunction with the County Fair.

All farmers in Sullivan County owning one or more purebred Holsteins are eligible to join the County Club and become members of the state Holstein-Friesian Association. A number have already joined and an effort will be made to have every farmer owning a purebred Holstein to become a member of the local County Club.

BRATTLEBORO BUSINESS

Twenty-four applications for membership were received at the office of the secretary during the week ending September 2d.

There were 2,023 certificates of registry issued in the same period, of which 1,477 were female, and 546 were male; 1,251 certificates of transfer were written, 827 female, and 424 male.

During the week of September 9th, eighteen applications for membership were received.

One thousand forty-nine certificates of registry were issued, 1,062 female and 387 male; 968 certificates of transfer were written, 706 female, and 262 male.

The herd prefixes reserved during the two weeks' period are:

Brown Brook, Clinton L. Brown, Pueblo, Colo.
Brownleigh, A. A. Brown, Georgetown Sta., N. Y.
Cahoon, Lee Sargent, Otego, N. Y.
Clarkcoill, Temple R. Lovett, Marshall, Ill.
Deephope, A. L. Thorburn, Norwich, Vt.
Grand Ridge, S. D. Cornell, Grandview, Wash.
High Spot, Geert De Haan, Kalamazoo, Mich.
Klarenhof, Ferdinand Huebner, Mantiowoc, Wis.
Lilac Lane, Gelting Bros., Almena, Wis.
Maelawn, W. A. Martin, Lancaster, N. H.
Mammoth Spring, A. C. Hartle, Bellefonte, Pa.
Orewood, W. L. Workman, Beaverton, Oregon.
Shady Rellim, Arthur G. Miller, Oconomowoc, Wis.
Van Horne, Owen D. Young, Jordanville, N. Y.
Williscrest, Ephraim S. Willis, Bridgeton, N. J.

Answers to Correspondents

Speaking about bathing in milk to insure a beautiful skin, Mary, we wouldn't have you do anything in private that you wouldn't do in public.

* * *

No Susie, Holstein breeders are not always right nor are they angels. Angels, we are told, are always up in the air and harping about something.

* * *

John and Jane: Sure, get married if you want to. Two heads are better than one, unless they both ache.

* * *

Frank reports a two-headed calf. Not at all unusual. Going by the porch last evening we saw two heads on one shoulder.

* * *

Polly Ticks: We are sorry that we cannot tell the difference between a milk cow and a butter cow. A few days ago we saw a dairymaid try to turn a cow to milk and the animal turned to butt(h)er.

* * *

I want to paint my fences black and white and have lots of Government whitewash on hand. What can I use for the black.
Kon Sistent.

Use Cole tar. Some folks we know of use it every time they want to blacken anything or anybody although you cannot always depend on it.

* * *

Yes, Frankie, our idea of *perpetual motion* is taxing the breeders to raise more funds to pay state secretaries to advertise in breed papers which urge taxing the breeders to raise more funds to build state associations to hire state secretaries who place big advertisements in breed papers, etc., etc., ad nauseum.

* * *

We are not informed as to the comparative ability of animals as scholars, Eva. We know the rabbit multiplies rapidly but we don't think it is very good at algebra.

* * *

Bill: Sorry we cannot tell you whether a horse or an auto is easier to drive. Still, we never heard of a flivver getting its tail over the lines.

Annie: We think you are mean to throw things at the cows when they came to your picnic party. Wasn't it their pasture, anyway? You wouldn't have dared to had their husband been with them.

* * *

Pew Gelist: Drinking milk three times a day would help you develop a punch. Haven't you ever heard of milk punch?

* * *

Nosey: No prohibition officer we ever heard of would close up a milk bar selling only Holstein Highballs, Jersey Juleps and Guernsey Fizzes.

THE AUTUMNAL BALL

Preparations already are well under way
For society's crowning event of the fall,
And the leaves are selecting the dancing frocks gay
They'll wear at the coming autumnal grand ball.
The crickets,
In thickets
Secluded and dense,
Are rehearsing the music their band will dispense,
And the wind with its broom
Will sweep clean the big room
Where the dancers will play 'neath the blue roof immense.
The foremost affair of the season each year
Is the ball where in crimson and gold,
Brown and purple and silver, the dancers appear,
When the days have grown shorter and cold.
And the dancers are gay, as they circle and swing,
For they know they will gather again in the spring.

Little Billie wrote a note of thanks to his godmother for a Bible. He brought it to his mother for approval. This is what he had written: "Dear Godmother: Have just finished your nice book and enjoyed it so much

* * *

Meek—"I forgot myself today and spoke sharply my wife."

Peek—"Did she resent it?"

Meek—"For a moment she did. After she thought it over she shook hands with me and congratulated me on my bravery."

* * *

A French scientist says that the jaws grow weaker as the brain grows, so we print this information for the rag chewers.

* * *

Father—"Why is it that you are always at the bottom of the class?"

Sonny—"It doesn't matter daddy: they teach the same things at both ends."

* * *

The only way to attain perfection is to follow all the advice you give to other people.

Cow Testing Association Reports

GOOD OHIO PRODUCERS

Queen Aaggie Gerben De Kol owned by E. W. Luther, of Peninsula, Ohio, has produced 10,046 lb. milk and 307.6 lb. butterfat in five and one-half months in the Summit County Cow Testing Association.

In this Association Harvey Luther's herd of registered Holsteins led in average fat production and in the first six months have averaged 39.2 lb. fat per month. The herd owned by Chester E. Lee leads for milk with an average of 1,124 lbs. a month. The high milk cow for July was Opal Maplecrest Pontiac DeKol owned by J. H. Kongislow with 1,584.1 lb. milk and 52.28 lb. fat. The Dickerson Brothers' herd averaged 36.75 lb. fat and led in this respect.

GOOD COWS IN EACH BREED

Some of the cows in the South Franklin County, Pa., Cow Testing Association have done real well in August, the poorest milk month in the year.

The three highest cows are owned by E. S. Grim. The leader, a grade Holstein, produced 1,472 lb. milk, 88.3 lb. butter fat while her stablemate, another grade Holstein, made 1,783 lb. milk, 85.6 lb. fat. A grade Guernsey in the same herd produced 1,070 lb. milk, 64.2 lb. fat. H. H. Potter has a purebred Guernsey that made 874 lb. milk with a test of 7%, her fat production for the month being 61.1 lb. A purebred Holstein, owned by Isaac Myers made 1,938 lb. milk, 52.3 lb. fat while the registered cow, the property of W. L. Young, made 1,575 lb. milk, 45.7 lb. fat. A grade Jersey, the property of W. E. Gossert, produced 849 lb. milk, 50.9 lb. fat.

R. S. Heisey, *Tester.*

Waynesboro, Pa.

BYRON, WISCONSIN

The high cow in the Byron, Wis., Test Association was a purebred Holstein owned by A. E. Tulledge. She made 2,628 lb. milk and 78.7 lb. butter fat. Mrs. A. H. Clark's registered Brown Swiss herd held high herd average. The registered Holstein herd of E. H. Korrer stood high in the list. There were 536 cows tested of which 41 produced over 40 lb. fat.

TRI-TOWN ASSOCIATION

Twenty-five herds containing 360 cows were tested in the Tri-Town Township, Ohio, Testing Association. The leader was a grade Holstein eight years old, owned by Carl Howard. She produced 1,879 lb. milk, 51.01 lb. butter fat in the month of July.

Love can afford to laugh at locksmiths provided it holds the key to the situation.

MERCER COUNTY DAIRY REPORT

Eighteen herds were tested during the month of August making a total of 303 cows tested.

There were 26 cows that produced over 40 lb. of butter fat and 7 that produced 50 lb. of butter fat and over.

The following are the cows that made 50 lb. of butter fat and over:

Cow	Owner	Breed	Milk.	Butter Fat
121	N. J. State Village	Pure-bred Holstein	1410	52.2
1	C. Arthur Miller	Grade Holstein	1182	50.8
10	C. Arthur Miller	Grade Holstein	1280	53.8
21	C. Arthur Miller	Grade Guernsey	1264	51.8
131	N. J. State Hospital	Grade Holstein	1472	58.9
265	N. J. State Hospital	Grade Holstein	1418	53.9
222	N. J. State Hospital	Grade Holstein	1522	51.7

The five leading herds are as follows:

Owner	Breed	Milk	Fat	Per Cent
N. J. State Hospital	P-B and Grade Holsteins	1037.4	34.9	3.36
Joseph C. Southard	Grade Holsteins	1019.3	34.5	3.38
C. Arthur Miller	Grade Holsteins	1012.4	37.	3.65
N. J. State Village	P-B and Grade Holsteins	827.6	25.2	3.05
Russell B. Longstreet	Grade Holsteins and Guernseys	778.2	25.3	3.30

The condition of the cows was found to be rather poor in flesh, due to the pasture being old and tough. The best production was realized when the cows were fed from 4 to 10 lbs. grain.

The cheapest milk was produced by Howard M. Rogers at a cost of 74 cents per hundred. His ration consisted of 4 lb. of Brick's dairy feed, 16% protein, cow peas and pasture crop.

Fred Gaunt,
Tester in Charge.

TUBERCULOSIS AND TEST ASSOCIATIONS

Washington County, Wisconsin, has been making an attempt to clean up tuberculosis. Dr. N. H. Howlett, federal inspector, recently tested 113 herds in this county. These herds contained 2,379 cows and there were only 55 reactors. There are five cow testing associations in the county, namely, Allentown-Kohlsville, Farmington, Rockfield, Richfield, and West Bend and all five are now free from tuberculosis reports County Agent Milton H. Button, who claims that Washington is the first county that has fought tuberculosis through its Cow Testing Associations.

TESTING PAYS CASH

Again the public sale demonstrates, in two different sections of western Washington, the value of cow-testing association records of production to the owner of a dairy herd. William Wyatt of the White River Valley association obtained an average of $154 each for 24 cows with records, at public sale, and $126 per head for 26 equally good-looking cows without records. Wyatt's herd was one of grade Holsteins, as was that of J. B. Ebinger of Ford's Prairie, whose dispersal sale at Elma, July 26th, averaged $123. The average grade Holstein in this section of the state brings from $50 to $75, but the fact that these cows of Ebinger's had been tested for a year in the Grays Harbor County association and showed average annual production of 350 lb. fat each, made them worth $50.00 to $75.00 more per head to the dairymen who attended the sale. There was not one of the hard-headed farmers who crowded the ring-side but knew a cow's certified ability to produce 300 to 450 lb. butter fat in a year was worth dollars and cents to him—and was willing to pay for the certification. The method of grading cows by owner's estimate is rapidly falling into the discard. —*Washington Farmer.*

Catalog Service

THAT SAVES

You will save TIME, MONEY and WORRY by letting the Wisconsin Live Stock Advertising Company prepare your sale catalogs.

You may make your selection from numerous catalog styles ranging in price from $1.50 per animal and upwards depending upon the catalog you select.

Your catalog in our hands means that it will be given prompt, efficient attention; that it will be edited by the best pedigree experts from the most complete files; and, that it will be delivered when promised.

Your interest in getting the most for your money directs that you place your catalog job with the Wisconsin Live Stock Advertising Co. Send for samples and prices.

P.S.—Our quotations include free publicity service which may include some valuable suggestions you have not thought of. Our Motto is SERVICE.

SOUTH HENNEPIN ASSOCIATION

There were 386 cows tested in the South Hennepin, Minnesota, Testing Association for the month of August. Thirty-four of these produced more than 40 lb. butterfat, two between 60 lb. and 70 lb. fat, and two more than 70 lb. The average of all the cows in the Association was 679 lb. milk, 25.55 lb. butterfat.

A five-year-old black and white led the association for both milk and fat. She produced 2,169 lb. milk, 78 lb. fat and is owned by J. C. Campbell. Next to her was another Holstein, owned by Marlen Farm, with a production of 72.1 lb. fat from 2,120 lb. milk.

High herd for the month was owned by Marlen Farm and consisted of twenty-two black and white cows. They averaged 41.24 lb. fat from 1,225 lb. milk. An eleven cow Guernsey dairy followed with 31.89 lb. fat, 712 lb. milk, while third was the twenty-seven cow Holstein dairy owned by J. C. Campbell, with an average of 31.14 lb. fat from 905 lb. milk.

A KANSAS "KITTY"

The leading milk producer in Bourbon County, Kansas, during the month of July was a grade Holstein, "Boh," owned by C. W. Dawson with a total of 1,958 lb. milk while next to her was the grade Holstein, "Kitty," with 1,600 lb. "Kitty" has been the leader for several months but during July her production fell off. A purebred Holstein owned by T. M. Givens, was third with 1,569 lb. milk. A grade Jersey led for fat production with 60.6 lb., but "Kitty" was second with 57.6 lb. The purebred Holstein, Inka, was third with 56.6 lb.

HOLSTEINS HOLSTEINS

PROGRESS IN WISCONSIN TEST WORK

Cow testing work is progressing rapidly in Wisconsin and the following, taken from the August *News Letter* is good evidence for the Register of Production is rapidly growing. Cows that produce 365 lb. butter in a year, that is, average a pound of butter a day for a full year, are admitted to this Register. Their names are periodically published and at the end of the year a booklet showing the complete list of registry cows is published together with the names and addresses of the owners.

During the first two years, 1919-1920, after the Register of Production was started, 421 cows of all breeds, registered, grade and native, were listed in the Register as compared with 778 cows or total of 1,199, the following year, 1921, which includes 37 reentries. More than twice as many purebred cows, or 255, entered last year as compared with 116 during the first two years.

No. of Reg. of Production Record Cows Entered

Breed	1918-1920	1921	Total to date
Reg. Holstein	86	180	266
Gr. Holstein	170	271	439
Reg. Guernsey	22	46	68
Gr. Guernsey	82	162	244
Reg. Jersey	6	21	27
Gr. Jersey	24	43	67
Reg. Brown Swiss		7	7
Gr. Brown Swiss		7	7
Reg. Ayrshire	2	1	3
Gr. Ayrshire		2	2
Gr. Shorthorn	2	7	9
Red Polled		2	2
Native	27	29	56
	421	778	1,199

The 1921 summary for 57 associations on 28,215 yearly record cows produced an average of 6,938 lb. milk containing 264.5 lb. butter fat. The 1922 summary for 73 associations including yearly records on 34,364 cows gave an average yield of 6,976 lb. milk and 265.7 lb. butter fat. During the period of two years the production was increased to the extent of 38 lbs. more milk and 1.2 lbs. more butter fat.

MATADOR HENGERVELD BESS

Matador Hengerveld Bess, owned by the Bloomingdale Farms, Somerville, New Jersey, is on long time test and making a great showing. In 177 days she has to her credit, 15,322.4 lb. of milk and 725.32 lb. butter. She is a daughter of Matador Segis Walker and as mentioned in the February issue of the *Holstein Breeder and Dairyman*, she is possessed of outstanding individuality. Her son by King Model was, at the time of our visit, as nice a bull as any one could wish for and good enough to deserve high honors in any show ring.

Have some sense and the dollars will take care of themselves.

IN THE PLATTE VALLEY

Twenty-eight cows in the Platte Valley, Nebraska, Testing Association produced more than 40 lb. fat during the month of July. Of these, three made more than 60 lb. and four others more than 50 lb. fat. Three hundred and eighteen cows were tested and produced an average of 662 lb. milk and 24.8 lb. fat. The average production of all cows tested in the United States is 3,627 pounds a year, while the production of cows in 38,532 cow testing associations was 5,980 lb. Thirteen unprofitable cows in the Platte Valley Association were sold during July.

Cherry, a grade Holstein, owned by M. L. Keisel, led in fat production and was second in milk. She made 66.2 lb. fat from 1,743 lb. milk. Next to her in fat production but leader for milk was a purebred Holstein owned by Sam Barton & Sons, of Gering. This was La Kata, which produced 61 lb. fat from 1,931 lb. milk. Mr. Barton & Sons also owned the high herd which consisted of seventeen purebred black and whites and averaged 40 lb. fat from 1,212 lb. milk.

FROM AN ILLINOIS DAIRYMAN

Test Association reports from Kane County, Illinois, showed that the Milky Way Herd, owned by Louis H. Klaas, of Maple Park, was making a splendid showing for milk and fat production. Mr. Klaas is a true breeder and dairyman, a farmer who milks and cares for his own cattle and who really farms his land, and is a grower of crops that denote, even to the hurried passer-by, that on the Milky Way Farm lives the highest type of manhood, a good American Farmer.

A short note of inquiry asking about the herd and about general Holstein conditions in that part of the country brought the following:—

Editor, Breeder and Dairyman:

I wish to thank you for your valued inquiry of some time ago in regard to our high position in the cow testing association and I beg your pardon for not answering sooner; but I have been so

PHOTOCOPY OF ORIGINAL

busy with threshing, alfalfa haying and silo filling that it just seemed I could not get time or strength to write to you.

You ask how our herd came to top the Kane Co. Cow Testing Association No. 2 for July. First of all I would say that some herd had to be on top. But why ours? "There's a reason." Our herd consists of about twenty head of *purebred Holsteins.* Our foundation stock were granddaughters of Pontiac Korndyke and of Colantha Johanna Lad. Then we had the good fortune to secure a herd-sire who is a son of King Pontiac Champion and out of one of the good daughters of King Segis Pontiac. His daughters possess excellence of form and constitution. One, a junior two-year-old, made a 17 lb. record in July, milking nearly 60 lb. a day in the hot weather and not fitted for testing.

A second reason for topping the list is that we have learned after much experience, the necessity as well as the value of summer feeding. We also kept some of the highest producers in the barn during the daytime. Our herd again topped the list for August.

During July we not only had the highest herd in Kane County Association No. 2, but we had the two highest milk producers of the three associations in Kane County in which 1,718 cows are tested. Their records were 1,975 lb. milk and 82 lb. butter, and 2,005 lb. milk and 75 lb. butter, these cows both being out of granddaughters of Colantha Johanna Lad.

As to Holstein conditions must say that they are very satisfactory in view of the fact that we have had good call for all of our bulls at favorable prices and are all sold out down to even little calves.

Just a little later when I get more time, I will write you a short article on how I became a better feeder and on how to provide an adequate feed supply. LOUIS H. KLASS.

MISSOURI COW RACE

The Pickering Farm, located at Belton, won quite a number of the prizes in the Missouri Dairy Cow Competition according to the tentative list put out by the Missouri College of Agriculture. The A. Morrison Jr., Special given for the highest average production of butter fat for a Holstein herd is credited to six cows of the Pickering Farm with an average production of 673.15 lb. butter fat. The Champion Milling and Grain Co. gave a special prize for the largest year's milk production. The four leading producers, as might be expected, were Holsteins, the first, second and fourth cows being from the Pickering Institution, No. 3 being owned by the University of Missouri. The following shows the actual and credited production of these four animals.

	Actual	*LBS. MILK Credit*
Wadmantje Finderne Pride Pontiac ..... Pickering Farm, Belton.	22,154.4	27,471.5
Ora Finderne Pontiac ..... Pickering Farm, Belton.	17,526.6	21,733.0
Campus Josephine Galaxy ..... University of Mo., Columbia.	20,510.1	21,536.6
Queene Finderne Pontiac Clothilde ..... Pickering Farm, Belton.	16,986.9	21,063.8

In making the scores, the records of cows under five years old are increased by amounts given under a handicap system. The records of animals from two to two and one-half years old are increased by 30% of the actual amount produced; of cows two and one-half to three years old, by 24%; three to three and one-half years old, by 18%; three and one-half to four years old, by 15%; four to four and one-half years old, by 8% and four and one-half to five years old, by 5%.

The largest amount of butter fat produced in a year by animals owned by a breeder who began official testing not earlier than September 1, 1920, is credited to Wadmantje Finderne Pride Pontiac of the Pickering Farms, her score being 689.55 lb. fat actually produced, while her credited production is 838.4 lb. Lady Mayflower Rest Easy also of Pickering produced 678.57 lb. fat and is credited with 800.72 lb.

The prize given to Holsteins for a cow producing the largest amount of butter fat in 365 days, such cow not milked over twice a day after the 45 days from the beginning of the record—similar to the dairyman's class in the 305 day division—went to Molly Hengerveld Model DeKol with a production of 486.07 lb. fat and a credit of 602.72 lb. She is owned by E. J. Rodekohr of Corder, Missouri.

The four highest producers during the month of June were all Holsteins and eight of the first ten are Black and White cows. U. S. Belle Mutual Homestead Oak DeKol is first with a credited production of 2,295.1 lb. milk and 75.326 lb. fat. She belongs to Pickering as also does the second animal, DeKol Velstig Flossie 3d with 2,276.7 lb. milk and 74.678 lb. fat. Third is Lewismonts Sally Wayne owned by George Burrel with 2,134.3 lb. milk and 70.627 lb. fat while Fobes Homestead Rauwerd owned by S. C. Lindsey is fourth with 1,865.7 lb. milk and 68.846 lb. fat. Pickering Farm own the sixth, ninth and tenth animals while seventh position is occupied by one of the many good Holsteins of the Bellefontaine Farm.

FRANKLIN COUNTY, OHIO

The high cow of the 257 cows tested in the Darby, Ohio, Testing Association was owned by Robert Lewis, of Grove City. This cow, a Holstein, produced 58.6 lb. butterfat from 1,504 lb. milk. High herd was owned by L. C. Porschet, of Hillards, and consisted of six cows with an average of 38.8 lb. fat from 1,148 lb. milk.

Three hundred cows were tested in the Madison Township Association of which twenty produced more than 40 lb. fat and nine produced more than 50 lb. The high cow for the month was owned by Elmer Bachman, of Canal Winchester, and produced 71 lb. fat from 1,128 lb. milk. Mr. Bachman also owned the high herd of twelve cows which averaged 43.4 lb. fat.

A man brought before the judge was asked by his honor: "What are you here fore?" The prisoner replied: "For words, your Honor." "Well, then," said the Judge, "I'll make them into a sentence."

GRADE HOLSTEINS LEAD

Two hundred and ninety-eight cows were tested in the Winnebago County, Ill., Testing Association for the month of August. The leader was a grade Holstein owned by U. A. B. Wilke, with a production of 1,029 lb. milk, 49.39 lb. butterfat. Second to her was another grade Holstein owned by W. L. Smith. This cow produced 43.96 lb. fat from 1,188 lb. milk. A grade Holstein herd, composed of twelve cows and owned by Nicholson Bros., carried off the high herd average by averaging 902 lb. milk, 31.31 lb. fat. This herd was fed on pasture supplemented by forty pounds silage per head every day. The twenty-two cow dairy, consisting of grade and purebred Holsteins, owned by Mr. Wilke, made the second high average with 681 lb. milk, 26.22 lb. fat.

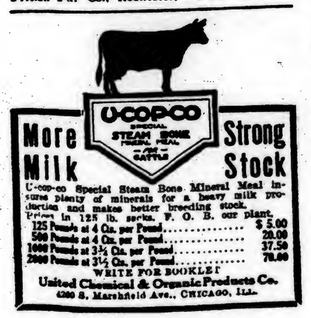
MAMA'S BOY

When asked whose boy he is, Charles replies: "I am mama's boy and papa's little shaver."

FINE YOUNG BULLS

The Deysher herd is advertising a number of splendid young bulls, last year's crop of calves being generally of the male order. In the present issue they advertise a son of a 30 lb. three-year-old she being a heifer that averaged over 77 lb. milk a day during the week of her official test. She is splendidly bred, being by the well-known sire, Woodcrest Sir Clyde from a 23 lb. two-year-old daughter of King Pontiac Artis Canada who is one of the best transmitting sons of the great King of the Pontiacs and was from Pontiac Artis the highest year record daughter of Hengerveld DeKol. Pontiac Artis' year record was the second largest ever credited to a Holstein cow at time of making.

The sire of Berks Sir Clyde Pontiac is King Tweede Spring Farm, a bull whose daughters are making splendid records. As a five-year-old sire he has ten daughters that average over 20 lb. butter in seven days. He is a son of Spring Farm King and is from Dressie Lady Pontiac a cow with a record of more than 30 lb. butter in seven days with over 600 lb. milk. She is a daughter of Spring Farm King Pontiac another good son of King of the Pontiacs. Berks Sir Clyde Pontiac traces three times to King of the Pontiacs and through three of his best sons, while his paternal grandsire is Spring Farm King, full brother of K. P. Pontiac Lass, the highest record daughter of the only double century sire.



Judging men is like judging cows. You can usually tell a "sucker" but you can't tell them much.

MAXWELL HERD DISPERSAL SUCCESSFUL

One of the most successful sales ever held in Southern California was the dispersal of the Maxwell herd, August 30-31, at Hollywood. It was not a complete dispersion for "Uncle Dave" retained his very young calves. In all one hundred and one head were sold for $41,795, an average of $413. The thirteen bulls averaged $360. On the first day of the sale, forty-eight head brought $16,940, an average of $353, while the second day's sale brought an average of $460 for fifty-three head. Seven different animals reached four figures.

The top price was $1,600 for Rosamaines Dora Netherlands, an inbred daughter of King Pontiac Netherland Segis 3d. She was purchased by the well-known Holstein breeder Fred Hartsook, who also took Queen Mercedes Ormsby Pietertje for $1,050, Iris De Kol Canary for $1,500 and three others.

The Carlton Farms took the well-known producer and show animal, K. S. P. J. Pet Segis for $1,050 and half a dozen other good ones. Carlton Farms is owned by Carlton College of Minnesota and was represented by F. F. Showers, who manages their establishment at Chow chilla. Mr. Showers purchased on his own account the herd sire, Major Pietertje Ormsby, for $1,500 and this son of Sir. Pietertje Ormsby Mercedes has been siring some fine stuff.

The sale was under the management of the California Breeders' Sales and Pedigree Company with C. L. Hughes as manager, Colonel Ben A. Rhoades and Colonel John A. Davis of the firm of Rhoades and Rhoades as auctioneers while Jack Shillcock led the animals in the ring with his usual skill.

Lunch was provided under the supervision of Mrs. Maxwell, who already has a host of friends in California. The many friends of Mr. and Mrs. Maxwell in Illinois, Iowa and California are regretting the dispersion of this great herd, which was gathered together by "Uncle Dave" without sparing time, expense or labor. Animals of the Maxwell herd have won high honors in the show ring and have made official records that stand near the head of the list. We hope to see the small herd remaining grow until it occupies as prominent a position in the Holstein industry as did the great herd just dispersed.

The names of the animals bringing $200 or more with names and addresses of the purchasers follow:

	Purchased by F. F. Showers, Chowchilla, Cal.

WORD FROM CARNATION FARMS

The twenty-fourth cow in the Carnation herd to produce over a thousand lb. of butter in year test is Gerben Parthenea Piebe De Kol 3d, No. 292,547. She is also the twelfth to make over 27,000 lb. of milk in the year. Her record is 1,032.7 lb. butter and 27,421.8 lb. milk, owners' figures. The record was completed August 8th. She is a daughter of Dutchland Governor Sir Colantha and reached her seventh birthday the day after she finished this record.

The Carnation people report that Matador Segis Walker has sired 206 daughters, thirty of which were born this calendar year.

DAIRY UTENSILS SHOULD BE DRIED

Milk cans and dairy utensils should be dried after scalding. Bacteria need moisture as well as proper temperature to enable them to grow and only a very thin film of water is needed.

In addition, dairy utensils must be protected from contamination with dust, other dirt, and flies. Experiments carried on by the United States Department of Agriculture show that in milk cans which were covered before being dried the number of bacteria increased 700 times in 24 hours. An average of 7 tests showed that the count increased from 1,111,514 to 775,751,439. Milk put into cans in which the bacteria have been permitted to multiply to such an extent will spoil much sooner than milk put into cans before being covered.

To secure rapid drying the cans must be sterilized with steam or boiling water. If a sterilizer is used the cans may be left in it until time for them to be used again, but there must be some means of ventilation to carry off the moisture. Cans may be set on a rack to dry, but they should be protected from flies and dust, preferably in a well-screened milk house.

FREDDIE NOTICED

Teacher.—Which letter follows the letter H?

Freddie.—I don't know, teacher.

Teacher.—What have I on both sides of my nose?

Freddie.—Freckles, ma'am.

It is just as well to put off till tomorrow the trouble you can look for today. Someone else may find it.

GOOD DAM AND DAUGHTER

A couple of very fine records have been made on the Carnation Farms by two cows, mother and daughter. The older cow is Gerben Parthenea Piebe DeKol 3d who as a five-year-old made a record of 27,421.8 lb. milk and 1,032.7 lb. butter in 365 days. She is a daughter of Dutchland Governor Sir Colantha. She has a daughter, Gerben Segis Walker Piebe, sired by Matador Segis Walker that has never milked from half of her udder. She freshened for the first time at two years and 24 days old and put in official test, made 17.02 lb. butter in a week from two quarters. At the time of her second freshening, she was three years and eight months old and then made a seven-day record of 410.6 lb. milk and 22.99 lb. butter. She was continued on long time test and in a year made the remarkable record under the conditions, of 21,310.7 lb. milk and 810.3 lb. butter. Besides being producers, the animals of this family possess remarkable individuality and a full brother to the heifer was the first prize yearling bull at the 1920 National Dairy Show.

HER DEDUCTION

"I see," remarked the summer boarder in her brightest conversational manner as she laid down the farm paper, "that last year crops sold at less than the cost of production."

"Yes, ma'am," said the patient farmer, "that was unfortunately the case with almost every one of us."

"Well, in times like that," she went on with an extremely intelligent expression, "you must have to do some pretty intensive farming to come out ahead."—*Country Gentleman.*

HIS AMBITION

As little Louis reached the mature age of three and was about to discard rompers for manly knickerbockers, his mother determined to make the occasion memorable. The breakfast table was laden with good things, as the newly-dressed child was led into the room. "Ah," cried the proud mother, "now you are a little man!"

Louis was in ecstasies. Displaying his garments to their advantage, he edged closer to his mother and whispered: "Mom, can I call pa Bill now?"—*Judge.*

BETTER "LAY-UP"

Dick—How I adore you! I would gladly lay down my life for you, my darling!

Dora—but wouldn't it be better if you would lay something up for me, so that we could get married sometime within the next few years?

Our idea of a philosopher is one who has hay fever and thanks Heaven he isn't an elephant.

Opportunity sometimes makes a hero of a man, but he can't always hold the job.

FINE BULL COMES TO HENRICO COUNTY

Oliver & Walp who own a fine herd of registered Holsteins have just purchased from the Virginia Polytechnic Institute their sire, Virginia Korndyke Butter Boy. The first ten daughters of this bull produced an average yearly increase over that of their dams of 4,913 lb. milk. The increase in production of only one of these is worth $161.30. If these dairymen raise ten daughters to their herd a year, his value in one year would be $1,613.

The above figures are conservative and the firm of Oliver & Walp realizes that a good sire, through the increased production of his daughters over their dams, is what every dairyman should strive for.

Virginia Korndyke Butter Boy has a pedigree which combines the blood lines of many famous animals. This bull is remarkably close to some of the greatest foundation cows of the breed. His dam was Belle Korndyke's Daughter, who has an official record of 627.5 lb. milk, 25.42 lb. butter in seven days; 2,565.4 lb. milk, 102.63 lb. butter in thirty days, and was a very fine individual. She was sired by De Kol 2d's Butter Boy 3d and was from the famous Belle Korndyke, whose record of 25.77 lb. butter was the third highest seven-day butter record in the world at time of making.

Belle Korndyke is considered the foundation cow of the Korndyke family, noted for production, constitution and longevity. Among her great transmitting sons was Pontiac Korndyke, sire of King of the Pontiacs and a number of other wonderful sires.

The sire of Virginia Korndyke Butter Boy was Albina Butter Boy, a son of De Kol 2d's Butter Boy 2d and Jannek Albina De Kol 3d, a cow that produced over 29 lb. butter in seven days as a four-year-old and milked 100 lb. milk a day. De Kol 2d's Butter Boy 3d, the double grandsire of the Virginia bull, is a century sire, and a bull whose daughters and granddaughters have made wonderful records both in short time and long time tests, while among his sons are some of the most famous sires known to the Holstein breed. Of course, it is well known to all Holstein fans that Butter Boy 3d was a son of De Kol 2d and a grandson of Netherland Hengerveld, cows which, when Belle Korndyke made her record, were the only two that had exceeded her in seven-day official test work.

The firm of Oliver & Walp is a member of the Henrico Cow Testing Association and Mr. Oliver is secretary of the Henrico Holstein Club and the Virginia Holstein Club.

Teacher (to scholar)—What are you laughing at? Not me?

Scholar—No, sir.

Teacher—Then what else is there in the room to laugh at?

Have a mind of your own. No one agrees with the man who agrees with everybody.

FINE NEVADA HERD

In Longleath herd a number of splendid records have been recently completed. LaPolka Omaha Mabel DeKol as a six-year-old, produced 23,377.1 lb. milk and 1,010.69 lb. butter in 365 days. When fresh she made 28.01 lb. butter and 648.1 lb. milk in seven days with a correspondingly large 30-day record. LaPolka DeKol Queen Pietertje No. 439587, calving at four years and one month old, produced 644.5 lb. milk and 33.94 lb. butter in seven days and 2,703.9 lb. butter in thirty days. Golden Valley Esther Ormsby No. 418106 freshened at four years and six months old, made a seven-day record of 657.9 lb. milk and 35.74 lb. butter and in thirty days produced 2,713.7 lb. milk and 136.85 lb. butter. She will be continued on year test, is a very large cow and is expected to make a very large record.

A son of La Polka Ormsby Mabel DeKol was sold to the University of Nevada. This bull was sired by King Ormsby Canary Johanna. Longleath Farm is owned by J. H. Long of Fallon, Nevada, and houses one of the very best herds of Holstein cattle in the State. A number of the animals in this herd, which is under Federal supervision, besides having very large production records, have also won high honors at leading fairs.

STEUBEN COUNTY HEALTHY

The tuberculosis eradication campaign is rapidly progressing in New York State. Steuben County is being cleaned up and President Bigler was reporting at the Syracuse State Fair that 42,000 animals were tuberculin tested in this county with a loss of only 3.6%.

VOLANT ASSOCIATION

A grade Holstein owned by Alford Bros., led the Volant Testing Association during the month of August with 68.3 lb. fat from 1,393 lb. milk, showing the very creditable test of 4.9%. Alford Bros. have eight cows that have exceeded 36 lb. fat in the month, seven over 40 lb. and in this number is a grade Jersey, a purebred Holstein and the rest are Black and White grades. The second largest production for a Holstein cow is one owned by D. B. Reynolds, with 61.9 lb. fat from 1,345 lb. milk. There are eighteen members of the Reynolds herd that have made over 32 lb. fat in the month and ten over 40 lb. The third cow, also a member of the Reynolds herd, produced 57.8 lb. fat, 1,376 lb. milk.

In the Volant Association, which operates in Lawrence County, Pa., twenty-five herds were tested containing 264 cows. Paul J. Stonebraker, tester, says forty-six cows exceeded 40 lb. fat and eleven more than 50 lb., while eighteen produced more than 1,200 lb. milk.

SYLVIA BULL IN ALBERTA

The Alberta Department of Agriculture workers feel quite pleased over the acquisition of Sir Sylvia Car Born, a bull about 18 months old secured by the department for the Government Demonstration Farm at Stoney Plain. This animal was selected by the Hon. George Hoadley, Minister of Agriculture and S. G. Carlyle, livestock commissioner of the province and manager of the ranch owned by the Prince of Wales. These gentlemen visited a number of herds in Canada and United States, finally purchasing the animal from Senator A. C. Hardy of Brockville, Ont.

Dairying has developed in the last few years to a great and important industry in western Canada due to the building of creameries by coöperative organizations of farmers and to financial aid from the Federal and Provincial governments who realize the importance of the dairy industry.

LIGHTNING DESTROYS PENROSE BARN

Lightning struck the $15,000 barn at the Penrose Ranch, Turkey Creek, Colo., August 29th. While three attendants and a dozen cows were temporarily stunned, all were saved but the barn was an entire loss. The other buildings were prevented from burning by the ranch workers who obtained water from a nearby reservoir.

Tom—"So you've broken off with the pretty schoolmarm?"

Dick—"Yes. Why do you know, if I failed to show up an evening she wanted a written excuse signed by my mother."

Success may reward those with a pull, but it come quicker to those who get out and push.

A BOY CONCRETE EXPERT

Dana F. Baxter, a 12-year-old lad, has been announced as the winner of the first prize in the first national essay contest on the farm uses of concrete conducted by the Portland cement association, Baxter is a student in the St. Johnsbury Jr. high school of Vermont. His accomplishment is all the more significant when it is considered that nearly 500 entries were received from practically every state in the union and from Canada.

The contest was conducted in two divisions: one for high school students and the other for college students. The judges, five in number, were men of national reputation in the educational field. The merit of the essays was determined on the following basis: Subject Matter 75%, English 15%, neatness and arrangement 10%.

The grade given Baxter's essay in the high school contest was several points higher than any grade received by college contestants. That the prize winner is fully conversant with the practical uses of concrete is shown by the quality of his essay which is produced herewith—EDITOR.

Dana's Essay

Years ago the farmers' chief building material was wood. In those days wood was plentiful, handy and cheap, but now on account of forest fires and constant use it is very high and scarce. On this account a building material with all good points, and none of the bad points of wood had to be provided. It was found concrete was an excellent substitute, and although the first cost was a little higher, in the end it was far more satisfactory.

St. Johnsbury, Vt., is a typical rural New England town of about 7,000 population and agriculture is one of its important industries. At the junior high school, which I attend, farm mechanics is one of the subjects taught, and one of the most interesting branches has been the course in concrete construction. The history of cement is taught from its earliest beginnings in ancient times down to its present modern method of constructon.

For the past four years a team of boys from our school has demonstrated concrete work at the great Eastern States exposition at Springfield, Mass., representing Vermont, and have won the inter-state championship each year. We have always demonstrated some phase of concrete construction on the farm. We have constructed concrete horse weights, horse blocks, flower boxes, fence and hitching posts, lawn pedestals, garden benches troughs, walls, steps and walks.

A concrete walk is a very valuable asset about the farm home, as good walks and roads help make the farm work easier, besides adding to the general appearance of the grounds.

Building construction on the farm is an investment, and in any investment we are anxious to know what dividends we will get from our money invested. When you build with concrete you build for permanency. In most construction the yearly charge for permanency is expensive, high fire insurance and wear and tear on the buildings and their upkeep.

Concrete construction has many valuable advantages. It is fire proof, saving high fire insurance premiums. It does not wear out, and therefore has no expense for renewal and painting. It protects the contents and live stock through proper sanitation, which has a wide community effect through the proper output of pure milk.

It is a precaution against sickness and death of live stock and against vermin and filth. Concrete stable floors, water tanks and drains are examples of conservation and increased value to farm property.

Concrete silos transmute their benefits in preserving silage, thus insuring better feeding value. This is carried on to better beef, veal, milk and dairy products which mean more profit. Concrete manure pits return to the soil practically all of the strength of natural fertilizer instead of allowing 30 to 50% to wash or dry away. This means better and bigger crops or in other words more money.

Concrete on the farm can be done by the farmer himself with only the ordinary farm help. The necessary materials can easily be obtained, the cement from a local dealer, and the sand and gravel no doubt from the farm itself at no cost except the labor.

The equipment is simple and inexpensive. Concrete construction when summed up means that buildings of this material are water proof, fire proof, rot proof, rust proof, vermin proof, and comes nearer to being time proof than any other material.—*New England Homestead.*

Succumb not to gloom and to sorrow
But gather good cheer while you may.
Because rain's predicted to-morrow,
Don't miss any sunshine to-day.

COOK BY SUN HEAT

A scientist of the Smithsonian Institution has perfected a cooker to use the heat of the sun as fuel. The apparatus consists of a parabolic cylindrical mirror with polished aluminum surface which focuses the rays of the sun on a tube filled with mineral oil which in turn communicates with an iron reservoir in which are two baking ovens. The heated oil circulating produces a very high temperature in the ovens and it is possible to cook meat, vegetables, bread and other foodstuffs.—*New England Farms.*

THE START OF ONE WAR

Johnny had just started learning history, and very proud of himself he was. One evening as he sat studying his lesson, he thought he would test his grandfather's knowledge of the subject, so he asked.

"Grandpa, do you know what great war broke out in 1850?"

The old man raised his head from the evening paper and looked thoughtfully at the lad. Then the sudden light came into his eyes.

"Why," said he, "that was the year I married your grandmother."

Teacher—Tommy, if you don't behave I shall have to send a note home to your father.

Tommy—You'd better not. My ma's as jealous as a cat.—*Vaudeville News.*

OPPORTUNITY

They do me wrong who say I come no more
When once I knock and fail to find you in;
For every day I stand outside your door,
And bid you wake and rise and fight and win.
Wail not for precious chances passed away,
Weep not for golden ages on the wane;
Each night I burn the records of the day,
At sunrise every soul is born again.
Laugh like a boy at splendors that have sped,
To vanished joys be blind and deaf and dumb;
My judgments seal the dead past with its dead,
But never bind a moment yet to come.
Though in the mire, wring not your hands and weep,
I lend my arm to all who say "I can"!
No shamefaced outcast ever sank so deep
But he might rise and be again a man.
Walter Malone.

A MODEST START

Has your new son-in-law any livestock to begin farming with?" inquired the village gossip of Uncle Jeremiah Snodgrass.

"Well, he's got my goat," replied Uncle Jeremiah, as he gave the off horse a vindictive cut and went rattling out of town.

SOME APPETITE

The farmer had sold a young bull to a man in a distant town, so one of the hands was deputed to lead him to the station, the only "packing" being an addressed label suspended from his neck.

Two hours later the farmer was startled to see his employee strolling casually back, the calf walking placidly behind him.

"Here, man!" shouted the angry farmer. "What on earth are you doing? That animal ought to have gone by train!"

"Taint my fault," said the farmhand. "The brute's been an' et up where he was goin'!"

GLAD HE TOLD HIM

A very inquisitive man was sitting at the table next to a man who had lost an arm above the elbow.

"I see you have lost an arm," finally was ventured.

The one-armed man picked up his empty sleeve and peeered into it. "Great Scott! I believe I have," he answered.

A SYMPTOM

Chauncey Reginald Archibald Asherton (to prospective father-in-law)—"Youah daughtah has promised to mawy me and eh—ah—I'd like to know if there is any insanity in youah family?"

Crusty Old Papa (looking him over)—"There must be."

PHOTOCOPY OF ORIGINAL

WASHINGTON DAIRY NOTES

Fifty head of registered Holsteins will be sold at public auction during the Grays Harbor County Fair at Elma. George Gue will be the auctioneer.

Lewis County Holstein breeders held their annual picnic during the month. A cow judging demonstration was conducted by county agent R. G. Fowler.

Representatives of each of the Tacoma banks, together with several bankers and business men of Seattle, recently met in Tacoma to discuss plans for the organization of a Livestock Loan Association for Washington. Committees were appointed to work out the plan, and county agent Lorin T. Oldroyd was authorized to help the bankers of Pierce County with the work.

As a direct result of the Western Washington Livestock Tour, county agent E. B. Stookey reports that A. E. Lundeen sold a registered Jersey bull calf; L. F. Davis, of Rainer, expects to buy a registered Guernsey bull calf, and John Hegloff will take some of his purebred Holstein cows to Grays Harbor County for service to an outstanding sire. Also, J. H. Taylor, of Montesano, purchased five fine purebred heifers from C. E. Starr, of Olympia.

The harder some people try to keep up with the times the farther they get behind with their bills.

WHAT'S THE USE

Edward, aged five, evinced a determination not to go to school at all. Finally his favorite aunt was called in to use her persuasive powers.

"Surely, Edward," she said, "you want to go to school with your big brother this autumn."

"No, ma'am," said Edward; "I have decided not to go to school. I can't read, I can't write and I can't sing. So what use would I be at school?" —*Harper's Magazine.*

IN THE SMALL TOWN

A customer entered the small town barber shop.

"How soon can you cut my hair?" he asked of the proprieter, who was seated in an easy chair, perusing the pages of a dime novel.

"Bill," said the barber, addressing his errand boy, "run over and tell the editor that I'd like my scissors, if he's got done editin' the paper. Gentleman waitin' for a haircut."

The world is a looking glass, and gives back to every man the reflection of his own face. Frown at it, and it in turn will look sourly upon you; laugh at it and with it, and it is a jolly companion."—*Thackeray.*

You never can tell. Many a man blows his own horn only to come out at the little end of it.

"DARLING"

"How do you like school, darling?" asked the fond mother after Tommy's first day at school.

"It's fine," replied Tommy. I've licked two kids already for calling me mother's little darling."

GO TO COLLEGE INSTEAD

After a few days in the first grade, little George came home weary of school and said to his mother: "Mother I think I'll stop school and just wait and go to college."

CURED HER

"Does Alice bring her troubles to you now as she used to?"

"No; not since I began pointing out that she was to blame for having them."

"He's a lightning lover," she said with a smirk to her friend. "We met a week ago. The day before yesterday he kissed me. Yesterday we got engaged, and now, already, he owes me twenty-five dollars."

When the last great Scorer
Comes to write against your name
He writes not how you won or lost,
But how you played the game.

When the average man is looking for his best friend he needn't travel very far from a mirror.

Do You Know That Dress Designers Earn from $50 to $150 a Week?

Do you know there Is a Constantly Increasing Demand for Good Dressmakers?
Be Independent. Learn Dressmaking and Designing From the Women's College of Arts and Sciences SPECIAL SHORT TERM COURSE.
Study right in your own home, any time that is convenient. There is No other course like this SPECIAL COURSE in the World.

"After my third lesson I made a blouse for myself, and two for a neighbor," *writes Mrs. D——.*
"I have made the price of my course sewing for friends and I am only working on my fifth lesson," *writes Mrs. M.——.*
"All my girl friends envy me the pretty dresses I have made." This is from a girl of sixteen years after she had four lessons.
"I have not had time to do any sewing for myself since starting the Women's College Course. My friends and neighbors keep me so busy, and I have had to refuse a lot of work," *writes Mrs. C——.*

HOW I PAID THE MORTGAGE

"We had bad luck that year. Crops ruined by long-continued drought, and not enough eggs or milk to sell at a profit, and a big payment due on the mortgage in a few months. Just when it seemed we would have to give up our farm and home, a friend showed me an advertisement of the Dressmaking Courses of the Women's College, and told me if I would take up a course she could get me plenty of sewing. I wrote for information, and was so impressed with the wonderful advantages offered that I borrowed the money to pay for their Special Course. I never thought it possible that one could learn so quickly and thoroughly by correspondence. After the third lesson I was able to make waists for my neighbors, after the fourth I could make skirts and simple house-dresses. I learned such good style and up-to-date methods that I had more orders than I could take care of. In six months I had made enough to pay off the remainder of the mortgage, and get us on our feet again."
This is only one of many such experiences. We are getting hundreds of such letters every week.
This course is so low-priced that any woman, no matter how limited her means, can afford to take it. Do not let this opportunity slip by.

The paper read by the men who milk cows for a living. They are looking for cows to milk this fall and winter.

Merryall Farm Raises Good Ones

Cows that not only produce but transmit their producing capacity to their descendants, generation after generation.

The Great State College Cow

LILITH GEM KOLKLUFF

a former member of this herd, produced as a six-year-old, 22,247.1 lb. milk, 851.1 lb. butter in a year and averaged over 20,000 lb. milk, 775 lb. butter for four years.

Her daughter, DE KOL KLASSJE LILITH, produced 749.95 lb. butter in a year.

KLASSJE has a daughter, MERRYALL LILITH HENGERVELD, that made 4,300 lb. milk, 175 lb. butter in 60 days and is going strong in the year test and she, too, has a daughter that, calving at 1 year, 7 months, 20 days old, made a year record of over TWELVE THOUSAND pounds milk and nearly FIVE HUNDRED POUNDS BUTTER.

FOUR GENERATIONS of producing females show the value of Merryall cattle.

Come and see the good ones in this herd, which is headed by KING SYLVIA JOHANNA PONTIAC a brother to Carnation King Sylvia.

MERRYALL FARMS

An everyday, all-the-year round breeding and dairyman's establishment

Home of the Royally Bred Young Bull

KING SYLVIA JOHANNA PONTIAC

Son of KING ECHO SYLVIA JOHANNA who also sired the $106,000 bull, and of the great cow OTEGO VALLEY CHRISTMAS BELLE:

Butter, 40.56 lbs., Milk, 651.2 lbs. in 7 days.

One of her daughters has twice made over 31 lbs. butter in seven day official test.

Besides being royally bred he is a SHOW BULL, straight as a line, square rump, deep chest and barrel, a dandy handler and he just fills your eye. COME AND SEE HIM.

Our herd is run for production coupled with economy and profit. Cows in this herd have made and are still making dandy records in both short time official and long time semi-official work. A present member of this herd in semi-official work has made in the past eight months, 16,000 lbs. milk and 600 lbs. butter; a cow we sold to State College produced 22,247 lbs. milk, 851.1 lbs. butter in a year; and we think we have others just as good. COME AND SEE FOR YOURSELF.

BERKS FARM

FIRST CONSIDERS

Breeding and Individuality

It is Not How Many a Man Owns
—But How Good They Are—

Below is a son of the $106,000 bull the type of the individuals you will find at Berks Farm,

KING SYLVIA SEGIS ORILLA

This fine young bull is by the $106,000 bull Carnation King Sylvia and Carnation Matador Orilla a promising young heifer with a good two-year-old record.

Some fine animals for sale. Write us your needs.

The farm is situated eight miles from Reading on the Reading and Adamstown trolley road. Cars stop on farm. Long distance telephone. Visitors welcome.

ABNER S. DEYSHER

Berks Farm, *Herd Under Federal Supervision* **Reading, Pa.**

Accredited Herd Dispersal

AT THE

May Apple Stock Farm, Tunkhannock, Pa.

Thursday, Oct. 12, 1922, starting at 11 o'clock

THIRTY-FOUR head of very large, extra good individual cows, heifers and bulls, headed by the herdsire

KING PIETJE AAGGIE PONTIAC No. 267,266

An extra good individual and a sire of quality. His daughters win firsts at Fairs and Calf Club Shows. His sire, King Pontiac Alcartra Pietje, was by the Century sire King Segis Pontiac Alcartra from the former World Champion four-year-old, Fairmont Zerma Segis Pietje, 35.61 lb. butter in a week. His dam, Aaggie Cornucopia Pauline Girl 2d, made 31.76 lb. butter in a week, her dam 25.31 lb., her dam 31.05 lb. and the fourth dam is the former World Champion Aaggie Cornucopia Pauline, 34.32 lb. at four years.

FIFTEEN DAUGHTERS of this bull will be in the sale, five bred two-year-olds and eleven calves from five to twelve months old, from dams with Cow Testing Association records from 1800 lb. to 2874 lb. milk in 30 days, one two-year-old milking 70.9 lb. in one day and testing 4.2% without fitting. The milk of this herd has averaged 3.8% fat for the past three years.

One of the best herds in Northeastern Pennsylvania. Come and get a few for foundation stock.

FIFTY FINE SHEEP WILL ALSO BE OFFERED

Terms: Six months time with approved security. For catalogs write the Farm Bureau office or the owner. Conveyances will meet eastern and western trains at Tunkhannock. DINNER SERVED

D. M. Bartron, Tunkhannock, Pa.

FIRST ANNUAL SALE

OF THE

Ohio Valley Holstein-Friesian Breeders' Association

at STATE FAIR GROUNDS, Wheeling, W. Va.

OCTOBER 19, 1922

52 HEAD REGISTERED HOLSTEINS 52

NINETEEN cows fresh and near fresh, bred heifers and young stuff, 8 bull calves and one two-year-old son of Sir Veeman Hengerveld out of a daughter of King Korndyke Sadie Vale.

The cattle for this sale were approved by E. J. Perry, Dairy Specialist from the West Virginia University Extension Division, and include the tops from ten herds.

The outstanding offerings in the sale include Bridess De Kol Wayne Hengerveld, No. 257808, champion Holstein-Friesian cow at the 1922 Wheeling State Fair, 2 daughters of Pontiac Aaggie Korndyke from daughters of Friend Hengerveld De Kol Butter Boy and several granddaughters of Pontiac Aaggie Korndyke, Korndyke Fayne Butter Boy No. 136040, King Pontiac Champion, Sir Veeman Hengerveld and Colantha Johanna Lad. The get of these sires have made Holstein history wherever tested out.

All cattle tuberculin tested and sold with a 60-day retest guarantee. Every animal guaranteed a breeder.

The Breed in England

By Eugene B. Bennett

AS HOLSTEINS are one of the first interests of the writer whenever he travels, he tries to see Holsteins. Thence in going to England he went prepared with a letter of introduction from our excellent secretary, Mr. Houghton to Mr. Hobson, Secretary of the British Friesian Association. By-the-way, in England they do not call their cattle Holstein-Friesians, but simply Friesians. Why is this not much better and why should not we do the same? The name is much simpler, and then our cattle are descendants of cattle imported from the Dutch province of Friesland, so the name Friesian is more appropriate and correct, and finally, why continue the word Holstein after the terrible German war, and when few or none of our cattle are descendants of those from that German Province.

ENGENE B. BENNETT
Former President of the Pennsylvania Holstein-Friesian Clubs

Mr. Hobson received me pleasantly, and assisted me most friendly and hospitably.

The breeding of Holsteins or Friesians in England is yet in its infancy, but at the same time it has made great strides. There are at this time eighteen hundred breeders of purebred Friesian cattle in England. Some excellent records have been made by British Friesians for milk and butter fat production, but British Friesian breeders are not breeding with the sole consideration of producing high record cows. Their principal aim in breeding seems to be to produce the cow of the most perfect type, consequently every animal they have to show would score very high on a scale of points. Every animal they have has an excellent back line, is broad across the hind quarters, has well rounded rumps, and an excellent udder.

As the writer has been an American breeder, he wished to see record Holstein-Friesian cattle. Having asked Mr. Hobson what herds had the best records in England, he was advised to see the herd of Mr. Eaton, at Thurston Hall, Framfield, Sussex County and Colonel Thynne, near Worthing, also in Sussex.

Long is to be remembered the very pleasant July day spent at Mr. Eaton's farm. Mr. Eaton owns at this time the best record cow in England. Through his kindness, I am able to show a picture of his cow Kirkhill Flo 3d, who has a record of 2,602 gallons milk = 26,020 lb., and 1,316 lb. butter in 365 days, or 5½ lb. in 24 hours, with second calf. This is, at this time, the champion record of England. As to butter, this record compares quite favorably with that of the great American Holstein-Friesian, "Tilly Alcartra." Mr. Eaton's test cows are only milked three times a day, and have not the advantage of corn silage that most American cows have. Mr. Eaton has six big silos, but corn cannot be produced to ripen for silo filing in an English climate as it can with us. Grown in England or in France it is generally cut and fed green. Feeding for records has not been reduced to the science that it has been with us, but in spite of all this, I will say the British Friesian breeder is ahead of the American Holstein-Friesan breeder, because he has bred for individuality and type. The pictured udder of Kirkhill Flo 3d certainly shows an udder that would score well for type and it has scored for record.

Good pictures should make an article as good cows should make records. Nothing can prove better that Mr. Eaton is breeding for type and individuality than the picture of his great herd bull Kirkhill (Imp.) Karel 405, the sire of Kirkhill Flo 3d. Another type shown in picture is the excellent daughters that this great bull has sired.

As Mr. Eaton took me through his cow stable where many of his test cows were being milked for the afternoon, I noticed every cow to be one of perfect individuality and type. The cow stables on Mr. Eaton's estate are marvels for sanitation. They are barns that could be used for the production of certified milk with us. They had cement floors, the latest iron fittings, water before the cows, and a high ceiling with no loft above; they were lighted by arc electric lights. Many of our American breeders of Holstein-Friesians would do well to copy these stables at Thurston Hall. The pastures at Thurston Hall are excellent, all of the cows save the test cows were in pasture.

On returning to England from Holland, I visited the herd of Colonel Thynne, near Worthing, in Sussex, and saw some of his cattle, which are excellent individuals. His herd sire is King Ikron 1131 (P. I.), (Pure Imported), and his cows are excellent individuals. His record cow is Brookside Colantha 17,060, whose record is 23,682½ lb. in 365 days and 24,039½ lb. in 257 days. She is an excellent individual but her color is a sort of a dun and would bar her from registration with us.

All English test work is for either 300 day or 365 day periods, mostly for the former period. The English do not closely follow our feeding system nor has

KING IKRON (PURE IMPORTED)
Sire heading herd of Colonel Thynne, Worthing, Sussex, England

feeding become the science that it has with us. During the summer season the cows are fed mostly upon pasture and outside of Holland I have never seen richer or better pasturage. Cows are seldom milked more than three times a day during testing. It would be a rare thing indeed for a cow to be milked four times a day. Nevertheless the British accomplish some excellent results and this is due to their having cattle of such fine individuality.

The farm-help problem in England is not nearly so serious as it is in America. The average wages for farm help are about ten shillings a week (a shilling being

DAUGHTERS OF KIRKHILL (IMPORTED) KAREL 2d
Bred and owned by Mr. G. T. Eaton

equivalent to 24 cents in normal times). Board is provided for single men and cottages and gardens for married men. A state of general content is noticeable among farm laborers. It is a common thing to find farm laborers who have not left the farm for as long as six years together and then only for some unusual event. Most farm laborers in England, particularly where their work requires an element of skill, have no desire to leave the farm.

Some things are very different in England to what they are in this country, but who knows but what the English way may be the best after all. 'I cannot see any reason at all for such a thing as a fifty-gallon conical shape milk can. Furthermore, I cannot see any reason for three work horses hitched one in front of

KIRKHILL FLO 3d
The British Champion, 26,020 lb. milk and 1,316 lb. butter in 365 days in her second lactation period. Owned by Mr. G. T. Eaton, Framfield, Sussex, England

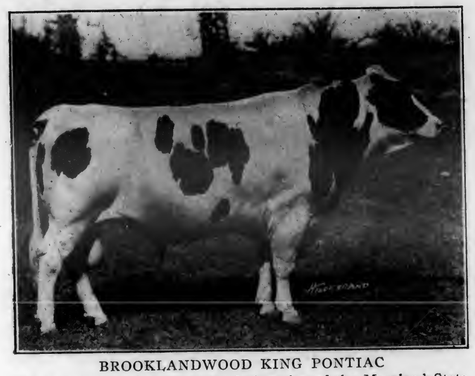
the other but everything is a matter of what you are accustomed to and who knows but what their way may be the best for their conditions.

There is no surplus of milk in England because the art of the production of milk has not yet reached the height that it has with us. Furthermore, much more

THE UDDER OF A CHAMPION
Close-up of the udder of Kirkhill Flo 3d

milk in England is made into butter and cheese than with us, and practically no milk is imported into England as fluid milk but there is much complaint at the present time on account of their market being injured by the importation of condensed milk from this country.

In Adversity and Prosperity



THE dairy cow is famed as a cash producer; her product can be marketed every day. This is perhaps one reason why the dairy cow is our best friend in time of adversity or in prosperity. In this day of tight money and high interest rates, cash is appreciated, so it is a good time to take account of the good work of the cow. Study a little more her needs and requirements. Use her now and continue to use her after she pulls you out of the depression.—*Idaho Farmer.*

Sunday School Teacher—"What did Noah do when the flood subsided?"

Willie Wise—"He got down from the waterwagon."

Grand Champion Three Successive Years

THE grand champion bull for three successive years at the Maryland State Fair has been Brooklandwood King Pontiac No. 221394, a bull bred, owned and shown by the Brooklandwood Farms, Lutherville, Maryland. The Maryland State Fair held at Timonium is noted for the quality of the stock shown

BROOKLANDWOOD KING PONTIAC
For three successive years grand champion of the Maryland State Fair. Owned by Brooklandwood Stock Farms, Lutherville.

and to win denotes possession of show characteristics of a high order. In 1920, Brooklandwood King Pontiac, who was born June 29, 1917, not only headed his class and won the senior and grand championship but headed the first prize herd exhibits and sired the first prize "get of sire" as well as a number of other prize winners. In 1921, besides winning first prize in the aged bull class he annexed the senior and grand championship, a feat duplicated in 1922.

Most of the younger members of the Brooklandwood herd are sired by this bull, who is a son of King Segis Pontiac Alcartra, Jr., he by the century sire, King Segis Pontiac Alcartra from the 32.12 lb. cow, Aaggie Grace Beryl Wayne. The dam of this bull was King Pontiac Royal Buttercup. Calving at two years, fifteen days old, she produced in 360 days 14,875.9 lb. milk, 734.38 lb. butter. She was by King Pontiac Royal, one of the good sons of King of the Pontiacs and was from Pietertje De Kol Segis, a cow with a year record of 22,836.4 lb. milk, 968.66 lb. butter.

As his picture shows, Brooklandwood King Pontiac is a very handsome fellow. He is long bodied, is deep, straight and level. He is good over the rump and has a rich, mellow hide. Bob Haeger, who has judged this bull at Timonium for three successive years claims that he is one of the best show bulls of the breed in the country.

The boys at Brooklandwood are divided in their allegiance between King and the Guernsey herdsire, Audacity of Edgemoor, who has also been grand champion at the Maryland State Fair for the past three years. A representative of the BREEDER AND DAIRYMAN had the privilege of looking over both these bulls early in the year and also a number of their sons and daughters and we assure our readers that these animals are well worth a long journey just for the pleasure of looking them over.

Brooklandwood Farms are the property of Capt. Isaac E. Emerson, head of the Emerson Drug Company and many other Maryland enterprises. The well-known Holstein enthusiast, Granville H. Hibberd, is superintendent of Brooklandwood Farms.

Raising the Dairy Cow

By Harry Austin Clapp

SUGGESTIONS AFTER BIRTH

SOON as possible after the calf is dropped treat naval stump with weak solution of carbolic acid. Some tie the cord. Some authorities advise against this practice, claiming that tying prevents drainage. Treatment with carbolic acid or some similar preparation prevents white scours, a most fatal disease from which calves seldom recover. This is not to be confounded with ordinary scours which is produced by poor feeding methods. Keep bowels loose, but look out for yellow or white discharges, sticky and offensive. Stop all feed and give tablespoon dose of castor oil. Raw eggs, shell included, will sometimes stop a case of scours. Follow castor oil with a tablespoonful three times a day of the following mixture: One ounce Bismuth subnitrate, one-half ounce of salol and two ounces of bicarbonate of soda. They sometimes die from scours produced from overfeeding. Avoid overfeeding. If your calf has been shipped in, it will arrive dirty, tired, sore, hungry, thirsty. Don't be sorry for it and load it up with a big feed of cold milk. Feed about one pint of warm milk from a clean bucket; repeat in half hour and so on, taking about three days to get it on a full feed. If you are too busy, too lazy, too indifferent to warm up milk, let it go hungry until you can feed warm milk. Increase feed gradually and you will avoid complications. Do not overfeed. This kills calves. Remember it is a baby, with undeveloped digestive organs. Treat it accordingly. We want you to develop big cows, heavy producers."

GRAIN, HAY AND OTHER FEEDS

As stated in another paragraph the dairy calf will begin to eat grain at a very early age, and the ration used by the writer consists of equal parts of wheat bran, whole oats and whole corn. This has been used for several years and produces results which are not only satisfactory but cheap. At the Virginia Experiment Station (Va. Bul. 172) it was found that when calves were fed ground corn with skim milk a gain of 1.4 pounds daily was made, but when whole corn was used

the gain was 1.6 pounds or 14 per cent greater. Many other experiments could be given. Linseed meal is a most valuable concentrate to add to the calf ration but it is not easy to obtain in the South. Hay, preferably clean, sweet alfalfa, should be given at an early age. It is relished and develops capacity. Only a small wisp at first. As the first stomach of the calf develops the quantity of hay may be increased and it should be encouraged to eat plenty of hay in order that great capacity may be developed. Do not place in the rack more than will be cleaned up. A small amount of silage may be fed with profit as soon as the calf is six weeks old. Two pounds per day is none too much and that may be increased slowly as the calf gets older. Fall calves are in fine condition to go onto fresh spring pasture and this practice enables the feeder to cut down a bit on the grain ration, making development for less money. Green pasture will produce scours, so turn them on gradually, only a short time the first day, gradually increasing the periods until they may be allowed on pasture all day.

Raising Calves Without Milk

On many farms, especially those near large cities which afford a ready market for whole milk, difficulty is experienced in raising calves. In such cases good calves may be raised on skim milk substitutes, of which there are several on the market. Many experiments have been made to determine the value of calf meals but most of them report that calves fed on these milk substitutes made nearly as good growth as those fed on skim milk. Savage and Tailby in two trials at the Cornell Station with 37 calves compared three calf meals each and skim milk powder with skim milk. The calves fed skim milk made the best gains, closely followed by those fed skim milk powder. Those fed calf meals made fair to good gains, but at greater cost. Though in most cases less thrifty at the close of the trial when five months old, by the time they were 2 to 3 years old they had developed into as good animals as those fed milk. After carefully reading the results of many experiments and supplementing the result with his own experience the writer does not hesitate to advise the use of commercial calf meals or one mixed on the farm, to those who do not have sufficient milk available. Costs a little more, requires some more work, but results are satisfactory.

Whole Milk vs. Skim Milk Calves

So many Southern farmers deny that calves may be successfully raised on skim milk that the writer has included in this paper the result of an experiment conducted by the Kansas Experiment Station (Kan. Bul. 126). Three lots of calves were used, fed on skim milk, fed on whole milk, and nursed by the dam.

Experiment on skim milk: Ten calves, fed 154 days, average gain per day, 2.33; daily gain per head, 1.51; cost per 100 pounds gain, $2.26.

Whole milk: Ten calves, fed 154 days, average gain per day, 2.87; daily gain per head, 1.86; cost per 100 pounds gain, $7.06.

Nursed by dam: Twenty-two calves, fed 140 days; average gain per day, 2.48; daily gain per head, 1.77; cost per 100 pounds gain, $4.44.

A study of this table shows at a glance the economy of feeding skim milk. As a rule the dairyman who skims the milk at home accomplishes five great things; he can raise good children with fine physical and mental development, he raises his own pork cheaply, he produces his own eggs and poultry meat for his table, he develops his heifer calves into heavy producing cows, and last but not by any means least, he steadily but surely increases the productive ability of his land. This means that he lives at home, has as a rule a better home, gives his family greater advantages and develops into a more intelligent business farmer.

This paper does not pretend to present an exhaustive study of the business of raising and developing dairy calves. It only touches the high lights. The rules given are those of practical experience supplemented by the results of extensive reading of many experiments. He who follows the instructions will have little difficulty in raising calves and breeding up a productive dairy herd.

Pacific Coast Records Broken

ONE of the most noteworthy records ever completed on the Pacific Coast is that of Hollywood Lilith Palmyra Abbekerk, No. 400491, in the herd of the Los Angeles County Farm.

In 305 days, as a senior four-year-old, this wonderful cow has made 22,245 pounds of milk and 982.94 pounds of butter, which is the Pacific Coast record for both milk and butter and the second highest record for milk and for butter ever completed by any animal of the breed. This record is all the more remarkable because made following the birth of twin calves and is the highest record ever made in this class by any cow having twin calves. At the beginning of this lactation period, the World Record was held by Rose De Kol Wayne Butterboy, and her production figures were exceeded by the County Farm cow by just .9 of a pound of butter and 829 pounds of milk; but, meanwhile, another star had risen and annexed the World's Records with a little greater production.

If it had not been for a rather serious injury by a fall to the County Farm entry in May which reduced her production in the last three months, it is probable that she would now be in first place for both butter and milk. This is the second long-time-production record made by this cow, the first beginning at the age of three years, six months, twenty-seven days, when she made 21,606.8 pounds of milk, containing 883.7 pounds of butter in 365 days. During this lactation she was shipped from Seattle to the County Farm, went through the Public Sale Ring, and carried twin calves during nearly one-half of the period.

She has now made three 7-day records, beginning with 19.84 pounds of butter and 477.9 pounds of milk as a two-year-old; at her three-year-old freshening she increased this to 22.89 pounds of butter and 546.3 pounds of milk; while after last calving she milked as high as 106 pounds of milk per day and 710 pounds in seven days. She is officially credited with a 7-day record of 30.44 pounds of butter and 685.7 pounds of milk; continuing on 30-day official test, she made 125.05 pounds of butter and 2902.7 pounds of milk. During the ten months lactation she was under official test for 83 days, or 27% of the entire time. Her average test for the lactation period is 3.53% of butter fat.

This wonderful cow is not only a noteworthy producer,—but is a most excellent example of good dairy type showing quality in every line. She has a wonderful appetite, a strong constitution, and has been a regular breeder. Her mammary system is noted for large, branching milk veins, with three milk wells on each side. She already has one A. R. O. daughter—a two-year-old at Hollywood Farms, which we are informed,

HOLLYWOOD LILITH PALMYRA ABBEKERK
22,245 lb. milk, 982.94 lb. butter in 305 days as a senior four-year-old. Pacific Coast Champion for both milk and butter. Owned by the Los Angeles County Farm.

made 19 pounds of butter in seven days and milked 80 pounds per day. The County Farm has her daughter by the famous Carnation Stock Farm sire, Matador Segis Walker, and she is due again this month to King Korndyke Pontiac Mead. This calf will have an average of over 1,000 pounds of butter in yearly test for his seven nearest dams, including the 305-day record of his dam and five other records made in three-year-old and four-year-old form, and will combine some of the greatest lines of descent from King Segis Pontiac, Pontiac Korndyke, King of the Pontiacs, and the famous De Kol of Valley Mead strain, on which the County Farm Herd is founded.

Hollywood Lilith Palmyra Abbekerk completes three direct generations of 30-pound cows, her dam being a double granddaughter of Korndyke Abbekerk through his highest-record daughter, who has 35.38 pounds of butter and 713 pounds of milk in 7-day test. Korndyke Abbekerk is a son of Pontiac Korndyke from a daughter of Hengerveld De Kol, thus being three-quarter brother to King of the Pontiacs. He is a noted sire of show-ring winners, the most prominent being Paul Calamo Korndyke, the greatest male show-ring winner of the breed.

On the sire's side, her inheritance is no less promising; she is by Hollywood Lilith Palmyra, whose two years of service in the Hollywood Farm in Washington brought him two senior four-year-old daughters making over 29,000 pounds of milk each, two World-Record breakers, and six daughters that have made 30 to 36 pounds of butter in 7-day test as three-year-olds and four-year-olds. He is by a good transmitting son of King Fayne Segis, sire of a number of high record cows, and himself a son of King Segis. Hollywood Lilith Palmyra is from the 32-pound cow, Lilith Queen Pauline, whose yearly record is 1,077 pounds of butter and over 26,000 pounds of milk. The County Farm Record-Breaker and five of her seven nearest dams are all above 30 pounds in seven days and her seven nearest sires all have 30-pound daughters, 32 of the number having surpassed this production. Her three nearest dams have yearly records averaging 960 pounds.

With this wonderful combination of high-producing capacity, individuality, and dairy-type, and a lineage entirely consisting of great-producing-and-transmitting animals, the owners would be very fortunate if they should obtain a bull calf at the next freshening, and they hope to be able to head their herd with one of her descendants.

Scientists and Dairy By-products

IN an address to the Eastern Section of the American Dairy Science Association in session at Springfield, Mass., September 20th, H. E. Van Norman, of the World's Dairy Congress, suggested that the scientific world is neglecting a vast opportunity to discover uses for dairy by-products. He called attention to the fact that in the manufacture of butter and cheese there was a large proportion of milk solids left in the skim milk, buttermilk and whey. In Europe, especially England, Denmark and Sweden, there is much interest in the development of profitable uses for dairy by-products. A man with a relatively small amount of these by-products will not, and cannot, go to much trouble to find uses for them. The meat packing industry, which is concentrated in a relatively few large establishments, found itself possessed of great quantities of by-products, and called on its scientifically trained men to discover profitable uses for them. The result is that this industry is now often pointed to as a glowing example of efficiency in the use of all by-products.

"The dairy industry is confronted with the necessity of developing better uses for its by-products. There is a steadily growing market for skim milk powder. The baker has been taught by the manufacturer that he can use skim milk powder in the making of bread and make better bread at a financial advantage to himself. This has opened up a tremendous market for skim milk in the form of powder at prices greater than could be gained by feeding it to farm animals. I was in a laboratory the other day, where a by-product of whey has been perfected. The research man, after working a year to find someone who would use it, got a call for 20,000 pounds of the product in one order, and was fortunately able to direct the customer to a source of supply. This is suggestive of the opportunities for helpful scientific investigation which lie ahead of members of the American Dairy Science Association."

All things may come to those who wait;
But in this world of bustle,
The only worthwhile things come straight
To those who go and hustle.

The Marinette County Asylum Herd and Herdsires King Segis Breeding in Wisconsin

By Leland B. Rounds

THE Marinette County Insane Asylum, Peshtigo, Wis., is an institution that has quietly become a worthy member of the Holstein fraternity. Its high aim in the purebred game is almost unique—to improve the dairy industry of its vicinity for a reasonable remuneration. The superintendent is Mr. R. M. Smith, and aside for a herdsman, the herd work is done by the inmates. Because of this and for the further reason that it would largely defeat the purpose of this breeding establishment, no official testing has yet been done there. Thus the asylum herd can afford to deal with farmers of limited means and is enabled to widely distribute foundation purebreds of both sexes.

This herd was started over twelve years ago with Sir Johanna Flanders Hengerveld at its head. Soon the King Segis breeding, which now so largely predominates in the blood lines represented there, was introduced through Sir Segis Prescott Hengerveld, No. 60775. He has a 25.5-lb. daughter, and was by the good 31-lb. sire, King Hengerveld, from a 20,98-lb. daughter of the renowned King Segis. This was before King Segis' descendants began to make such sensational records, which shows perhaps real foresight. Then came King Walker Segis 3d, No. 102845, who has a 21-lb. daughter and is a 26-lb. son of King Walker Segis. The latter is by the 30-lb. sire, King Walker, and from a 28-lb. senior three-year-old daughter of King Segis, while King Walker Segis 3d's dam is also strongly Segis bred. An outcross was then obtained by the leasing of University Johanna Excell, No. 93771. He has a daughter with a year record of 800 lb. butter and 18,000 lb. milk, and 7 A. R. O. daughters, including two above 20 lb. He has a good sire, his dam and sire's dam are both 20-lb. cows with creditable year records, and he is a grandson of both Sir Johanna De Kol and Sarcastic Lad.

Next followed King De Kol Lyons, No. 137275, who has a daughter with a seven-day record of 26.71 lb. butter and 544.1 lb. milk, and who has splendid A. R. O. breeding. He is by King Lyons (through his dam a grandson of King Segis), in fact, his dam and sire's dam are both A. R. O. daughters of King Segis. His dam is from a 30-lb. daughter of a 33-lb. cow. The records of his eleven nearest dams average butter, seven days, 30.16 lb.; milk, 600.3 lb., while the seven-day records of his thirteen nearest dams average, butter, 29.42 lb., and milk, 601.8 lb. Four of his six nearest dams have seven-day butter records above 30 lb., also four of his six nearest dams have seven-day milk records above 623 lb. The older members of the herd are largely daughters, grandaughters, etc., of the five sires just mentioned to show the foundation upon which this organization is built.

The present herdsires are Judge Walker Lyons, No. 196617, already proven, and Joh Lyons Segis, No. 278,363. Their calves from the matrons of the herd have remarkable backing and intense line breeding. Judge Walker Lyons is by King Lyons, and thus a brother to the bull who preceded him at the head of this Marinette Farm. King Lyons is the youngest sire to have ten 30-lb. daughters and four 30-lb. granddaughters. Judge Walker Lyons is from a 22.85-lb. daughter of a 30-lb. cow. His sire and dam's sire are both from 28-lb. daughters of King Segis. The seven-day records of his five nearest, ten nearest and twelve nearest dams all average over 30 lb. butter and 582 lb. milk. The seven-day records of his 19 nearest tested dams (only one skip) average, butter, 29.19 lb., and milk, 590.9 lb. Six of his ten nearest dams are 30-lb. cows, five of whom have 600-lb. milk records.

Joh Lyons Segis has sensational breeding, all things considered. He is by a proven 30-lb. sire and from a 22.5-lb. senior two-year-old dam. His sire and dam are both by the coming 33-lb. sire, King Joh, who has a 40-lb. four-and-one-half-year-old daughter, and is from an A. R. O. daughter of King Lyons. King Joh is by the 31-lb. "Century" sire, King Segis Pontiac Alcartra, and thus brother to the great King Segis Alcartra Prilly. The latter is an exceptional show bull and sire of show winners, is sire of a world's champion seven- and thirty-day butter record, 40-lb. senior three-year-old, also of a world's champion 27,000-lb. year milk record, senior two-year-old, and of many California State champions, and was recently purchased by the Pabst Stock Farms. Joh Lyons Segis traces seven times to and derives 25% of his blood from King Segis. The seven-day records of his 27 nearest dams average, butter, 31.35 lb.; milk, 585.4 lb., and they include nineteen 30-lb. cows, fifteen of whom gave over 611 lb. milk. The records of his 51 nearest dams average, butter, 30.03 lb., and milk, 596.3 lb. Can anyone beat this last statement? The seven-day records of his 58 nearest dams average, butter, 28.99 lb., and milk, 580 lb. The records of his 84 nearest tested dams (only five skips) average, butter, 28.49 lb., and milk, 575.9 lb. in seven days. Only three of the 84 had seven-day milk records below 400 lb. Furthermore, 65 of his direct female ancestors have seven-day butter records all above 25.73 lb. that average, butter, 30.02 lb., and milk records above 490 lb. that average 601.7 lb., 67 of them are above 500 lb., and 98 of his 103 nearest dams have A. R. O. records. Also 31 of his direct female ancestors have seven-day milk records above 600 lb., and 24 are 30-lb. cows. Every sire in his direct ancestry is literally a member of the breed's "Hall of Fame."

These herdsires were all obtained at very reasonable prices, because their own dams had comparatively small records and never increased them on account of misfortune. That is another reason why this establishment can furnish high-class breeding at low prices.

There are over 100 females in the herd. Twenty-three different people have purchased four or more females at one time here, and as far as is known, every one of them are still Holstein breeders. Two customers in this same county have purchased their fifth successive herdsire here. There is a Marinette County Holstein-Friesian Association, and it held a sale of fifty animals last May, most of which were closely descended from asylum animals. At times, Marinette County has a cow testing association, and the asylum is always in it, making year records up to nearly 800 lb. of butter and over 14,000 lb. of milk. As yet very little official testing has been done on cows sold from the asylum, but one, sired by a bull bred there, made over 27 lb. butter in seven days last spring with an inexperiencd feeder.

The true mission of the purebred dairy breeds is to improve the dairy animals of the country, and this the Marinette County Asylum herd is doing. This herd has done and can continue to do more for the advancement of purebred Holstein-Friesians and the dairy interests than many far more prominent breeding establishments.

Field Day at the Bell Farm

THE Third Annual Field Day of the Allegheny Holstein Breeders, promises to be a historic event in Pennsylvania Holstein history. This Field Day will be held at the noted Bell Farm, Coraopolis, Pa., on Tuesday, October 17th, and the chief speakers will be Dr. John M. Thomas, president of the Pennsylvania State College, and the Hon. Fred Rasmussen, Pennsylvania Secretary of Agriculture. Dr. Thomas is an entertaining and witty speaker, an all-around good fellow and his talks carry his audiences with them. Mr. Rasmussen is a state official of which Pennsylvania is proud and when the Honorable Fred talks on farming or stock raising, his hearers immediately know that the speaker knows his subject.

Among the entertainment that will be provided will be a judging contest at which a well bred bull calf will be given as a prize. There will be a small auction at which five females and six bull calves from the Bell Herd will be offered to the highest bidder. Lunch will be provided by the generosity of John A. Bell, Jr., and there will be many other items of entertainment to amuse and delight the guests. Do not miss this opportunity of looking over the famous Bell herd and hearing these noted speakers. If you do, you will miss something really worth while.

Where Liberal Feeding Paid

IN THE Wisconsin News Letter, Mr. A. J. Cramer reports an interesting experiment on graining a cow before and after calving conducted at the Government Experiment Station at Beltsville, Md. She was born November 21, 1914, and the experiment was during the period 1918-20. She freshened the first year of the experiment, on February 5, 1918, and was fed for thirty days before freshening a ration containing 31 lb. of protein and consisting of 60 lb. corn silage, 300 lb. alfalfa hay, 240 lb. corn stover, 54 lb. corn and cob meal, 43 lb. wheat bran, 21 lb. cottonseed meal.

Current prices are used to determine the cost of this ration which was $7.18 for the month. During the 335 days of her lactation period she consumed 11,956 lb. corn silage, 1,402 lb. clover hay, 367 lb. corn meal. 505 lb. corn and cob meal, 590 lb. wheat bran, 614 lb. cottonseed meal, 48 lb. oil meal, 44 lb. ground oats, 323 lb. dried distiller's grains, 210 lb. hominy feed, which is figured at $84.01, so that the total cost of her feed during the first year was $91.19. Her milk yield was 7,273 lb. and the butter fat produced was 251.7 lb. which at 40 cents per pound was valued at $100.68, so that the profit over feed cost was only $9.49.

The second year she freshened May 13, 1920, and during the sixty days before calving time she received a ration consisting of the following: 1,800 lb. corn silage, 288 lb. soy bean hay, 72 lb. alfalfa hay, 75 lb. corn and cob meal, 75 lb. ground oats, 75 lb. wheat bran, 36 lb. cottonseed meal, 36 lb. oil meal, this contained 114 lb. protein and cost $12.84. She was fed for 305 days after calving the following: 6,010 lb. corn silage, 5,200 lb. alfalfa hay, 1,211 lb. ground oats, 606 lb. wheat bran, 446 lb. cottonseed meal, 907 lb. oil meal, 604 lb. gluten feed, 1,824 lb. dried beet pulp, which cost $165.01 making a total feed cost for the second year of $177.85. During the 305 day lactation period she produced 15,745 lb. milk containing 603.3 lb. butter fat, which at 40 cents per pound amounted to $241.32. Deducting the feed cost for this year the profit is shown to be $63.47, so that there was increased profit of $53.98 over the feed cost when this cow was fed liberally. The actual total increase was 116% more milk and 139% more fat. Mr. Cramer says that more than three-fourths of this increase is due to the better and more liberal amounts fed in 1920 and 1921 both before and after calving.

To Stabilize Cattle Prices

A NATIONAL Purebred Dairy Cattle Board of Trade to systemize and stabilize values of purebred dairy cattle in the United States is the latest dream of some leading breeders and cattle owners. The suggested head of the movement is Harry L. Aitken, a Holstein breeder of Waukesha, Wisconsin. The promoters point to the Cheese Board at Plymouth, Wis., the Livestock and Grain Exchanges at Chicago and the Elgin Butter Board as examples of what can be done along similar lines.

The suggested home for this National Purebred Cattle Board of Trade is Waukesha, which is noted for Holsteins and Guernseys and is looked upon by many as the greatest dairy county in the United States.

While it is reported that C. P. Norgord, the Wisconsin Commissioner of Agriculture, as well as prominent state officials and dairy leaders is back of the movement, we fail to see how such a cattle exchange or board of trade can stabilize values and prices. We do not wish to pass judgment upon the movement at the present time but will keep our readers informed about developments and meanwhile advise them to look deeply into the movement before signing up for shares.

Sympathetic Person—"Hello! What's the matter, little boy?" Are you lost?"

Little Boy—"Yes, I am, I mighta known better'n to come out with gran'ma. She's always losin' somethin'.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

October 8, 1922

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Our Biggest Neighbor

THE great Republic of Brazil is celebrating its centennial. It may surprise many of our readers to learn that Brazil is nearly as great, in point of population, as the United States was when the centennial exposition was held in Philadelphia in 1876. Two years ago the Brazilian census showed nearly thirty-one million while the 1880 census of this country, when immigration was adding a half million a year to our population was only just over fifty millions.

Brazil is by far the largest of the South American nations and much of its territory lies in the fertile Amazon valley, where there is a considerable district that has not yet been mapped.

Brazil is a great livestock country and lately has been rapidly progressing along purebred lines. They have developed a breed of dairy cattle that can hold its own with our better known breeds. For several years the United States Department of Agriculture has maintained livestock commissioners in Brazil to facilitate the introduction of American purebred livestock.

Pay Debts With Potash

IT LOOKS now as if the farmers will be able to buy that necessary fertilizer, potash, free of duty. Did it ever occur to you that this is one commodity that France and Germany can both export to this country and thereby help to pay off their war and reparation indebtedness? The result of large importations to this country would be to lower the price of commercial fertilizers thereby lowering the cost of crop production, and benefit the soil while the disadvantages are few and small. Potash importations do not conflict with American agriculture or industry to anything like the extent that importations of foods or manufactured articles would.

Our Cover Illustration

ON the cover of this issue of the BREEDER AND DAIRYMAN we present to our readers the great British Friesian sire, Kirkhill (imported) Karel 2d, who heads the Thurston herd, owned by Mr. G. T. Eaton, of Framfield, in the County of Sussex, England. Among the good ones sired by this bull is the present champion of Britain, the cow Kirkhill Flo 3d, with a record of 26,020 lb. milk and 1,316 lb. butter made in 365 days, a record all the more remarkable because it was made in the second lactation period of this great cow. The Eaton bull is evidently a great sire, as his champion daughter is a real good individual as well as a wonderful producer, while the barnyard picture showing other daughters of this sire indicate that he is transmitting to his offspring, individuality of the highest order.

The picture of this bull, as well as that of his daughters, were taken by Mr. E. B. Bennett while on his recent trip to England and Holland.

Another Politician at $6,000.00 and Expenses

IN the HOLSTEIN BREEDER AND DAIRYMAN under date of May 22d, we printed excerpts from an article appearing in *The Evening Gazette,* published at Cedar Rapids, Iowa, under date of Wednesday, November 30, 1921.

With the announcement that the Directors of The Holstein-Friesian Association had employed a *Politician* of Mr. Barney's type as Extension Director at a salary of $6,000 a year and expenses, we feel called upon to reprint the article that appeared in our May 22d issue that our readers and members of the Holstein-Friesian Association can reread and more fully appreciate that we are stating *Facts When We Say The Association Is Being Mismanaged And Its Resources Exploited By Politicians And Cow Jockeys.*

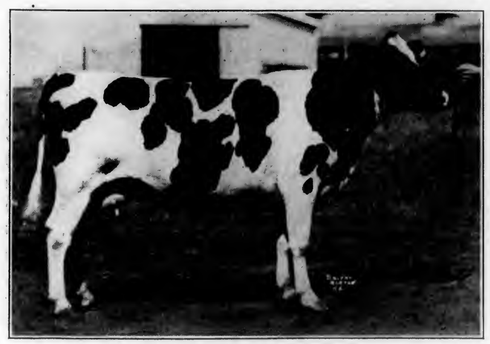
TOLD TO RESIGN OR HE WOULD BE FIRED

William B. Barney, Iowa State Dairy and Food Commissioner, to-day handed his resignation to Governor N. E. Kendall. The resignation was forced on him by the State Executive Council. Secretary of State Walter Ramsey, commissioned for that duty by the council, yesterday informed Commissioner Barney that he would have to resign.

"The resignation comes as the result of charges brought against Commissioner Barney more than one year ago by *The Evening Gazette.* He was charged with inefficiency and maladministration as to his office, and with having been a member of the firm of W. B. Barney and Son, Chapin, Iowa, a party to sales of tubercular cattle. At a hearing which consumed the entire last week of October these charges were thoroughly aired before the executive council which includes the governor, secretary of state, state auditor and state treasurer.

"Charges were brought against Commissioner Barney in early November, 1920. It was not until the state commissioner had written the *Gazette* condemning it for its methods in championing tuberculin tested milk that the newspaper's attention was turned to the state officer. Then he was directly charged with incompetency and maladministration, and with being a party to sales of tubercular cattle from his own herd at Chapin."
—*The Cedar Rapids Evening Gazette.*

It is quite possible that Mr. Barney's reputation as indicated by the above news item, is perfectly within keeping with the duties which he is supposed to perform for the men who have appointed him. We do not believe that the best interests of the Holstein-Friesian breeders will be served by transferring the Holstein-Friesian Association of America into a National Cow Swapping Association. We do not believe it is proper for the Holstein-Friesian Association of America to lend assistance in organizing and supporting State Associations for the purpose of selling or swapping of purebred Holstein cattle with the view of creating fictitious prices.



We predict that the career upon which the Association is now embarked will end in the same disastrous way as did the Aitken Whirlwind Campaign and reflect still more discredit upon the Holstein industry.

Eventually the management of the Holstein-Friesian Association must be restored to the breeders and dairymen who constitute over ninety per cent of the members and who depend on dairying for a livelihood.

The Association should be operated for the purposes of registering and transferring cattle to maintain the purity of the blood and to conduct a reasonable amount of educational extension work and not operated as an organization to collect funds from the dairymen through increased transfer fees to satisfy money-thirsty politicians.

Kansas Free Fair

FOUR of the championships at the Kansas Free Fair held at Topeka, were won by the herd of H. C. Larsen, Dike, Iowa, his aged bull, Sir Rag Apple Losch, winning the senior championship. The junior and grand championship male honors went to

FORUM PONTIAC QUEEN
First prize two-year-old heifer at the 1922 Kansas Free Fair at Topeka. Owned by H. O. Larsen, Dike, Iowa

the senior calf, Forum Ormsby Superior. Larsen won the junior championship with the heifer calf, Forum Mattie Masterpiece. The first prize two-year-old bull was Rex Clothilde Aaggie Forum, and the first prize two-year-old female was Forum Pontiac Queen, both members of the Larsen herd. Larsen won first and second on Graded Herds and first on Calf Herd.

Lady Lockhart Colanthus De Kol won the senior and grand championship for Geo. Young & Son, Manhattan, Kansas. This firm won "get of sire" with the offspring

LADY LOCKHART COLANTHUS DE KOL
Winner of first prize in aged cow class, senior and grand championships at the Kansas Free Fair. Owned by Geo. Young & Son, Manhattan, Kansas

of Maid Henry Pontiac De Kol and produce of dam with that of Lady Volga Colanthus 3d.

The dairy show was comparatively small. Seventeen breeders showed 130 animals. Holsteins predominated, seventy-three animals being exhibited by eleven breeders.

The Federal Department of Agriculture and the Kansas College of Agrictulture had large exhibits which attracted much attention, the college exhibit being especially good.

The Holstein judges were Prof. H. W. Cave, Manhattan, Kansas, and L. S. Gillette, Fostoria, Iowa.

The dealer was charged with selling adulterated milk and he pleaded not guilty. "But," said the judge, "the testimony shows that your milk contained 25 per cent water."

"Then it must be high-grade milk," said the dealer. "If your honor will look up the word 'milk' in your dictionary you will find that it contains 80 to 90 per cent water. I should have sold mine for cream."

One link broken, the whole chain is broken.

New York City and Its Milk

THE Health Commissioner of New York City, Dr. Royal S. Copeland, has been taking a four-day trip through the up-state dairying sections of New York State acquainting himself first hand with some of the problems of dairymen who supply milk for New York City.

One of the suggestions Dr. Copeland made is that the directors of the Dairyman's League Coöperative Association appoint a standing conference committee, the function of which will be to confer at regular intervals with the New York City Board of Health on milk regulations and similar subjects with a view to correct misunderstandings and remove unnecessary restrictions.

Dr. Copeland is authority for the statement that "Endeavors of local officials in New York City have resulted in what is really a phenomenal sale of milk in the metropolis. The consumption of milk in New York is five times as great as in London, a city of about equal size. The practical effects of this large consumption of milk is reflected in the infant death rate which is 17 points under the death rate of the rest of the state. New York has a lower death rate among infants than is observed in any other city of the state."

In an address to farmers and their families at Cooperstown, N. Y., held under auspices of the Dairymen's League, Dr. Copeland called attention to the difficulties of instructing the people of New York City on matters of health. The fact that 42 languages are spoken in the city is one of the big difficulties. Thousands of people pass through this great seaport, coming from and going to other countries and this makes it necessary for the Health Department to constantly study conditions everywhere in the world and to be on guard not only for the sake of New York City but for the rest of the country as disease introduced can rapidly spread throughout the entire United States.

The speaker paid a glowing tribute to the work of Nathan Straus who first started the work for pure milk in New York. In 1891 when Mr. Straus started this great work, the infant death rate was 241 per thousand. Last year it was 71 per thousand, the lowest death rate in the world. The Commissioner emphasized the fact that one of the most important things in guarding the health of the people is to keep their resistance high by educating them in the manner of the best foods which necessarily means plenty of pure milk.

"You dairy farmers are engaged in just as important a work as mine," he said, "that is, supplying good milk to the babies of New York. We are trying our best to teach the thousands of mothers that these babies must have good clean milk."

In New York City 3,000,000 quarts of milk are drunk daily. Placed side by side, this means 164 miles of quart bottles. London, a city of practically equal size uses only 600,000 quarts and the supply is of inferior quality. In reply to a question about filled milk, the Commissioner said, "I have sat in my office for five years and they have brought me all sorts of propositions to get me to agree to the sale in New York of filled milk and butter and cream substitutes. Manufacturers brought me samples of oleo, made not from butter fat but from cocoanut oil, to show me how smooth it is. It isn't half as smooth as they are. We have about 6,000 restaurants and hotels in New York. You know cocoanut oil is much cheaper than butter fat and so the manufacturers have done everything to get the Board of Health to permit the sale of their products, but if we were to permit the sale of cocoanut oil as a dairy product and permit its use in cream and butter and in other ways that it might be used, you would immediately lose the sale for a large part of your product."

Holsteins at Waterloo

THE Dairy Cattle Congress is always a success but never quite so marked as this year. It is the meeting place of the small breeder and the man with National reputation. The farmers who hope to be real dairymen—who are starting perhaps with a small foundation, come here each year for new ideas and greater encouragement and they always find an abundance of both. The long established breeders, the men with ample herds and extensive breeding plants gather at other shows but the real educational work is done by the Dairy Cattle Congress.

It fosters the Dairy Industry by creating a greater interest among the men who will be breeders to-morrow. In fact not a few of those who are successful in the work at this time can trace their start back to the influences of the Cattle Congress. The Thirteenth Event which closed October 1st drew a crowd numbering about 100,000 and the large days were when Holsteins were in the ring. One day the gates showed over thirty thousand admissions which is quite a little party. It was a Holstein day.

Naturally in a show of this kind all the breeders will be represented. Entries—not counting the Test Association Grade Herds or the Calf Club Groups—numbered a little over 650 and of these 229 were the dependable black and white cattle. The next largest showing was made by Guernseys with 120 head.

Grades were shown for the first time this year by the Test Association, with the idea of fostering dairy cattle improvement and the calf club entries were large and created a great deal of interest. The youngsters had their stock in with all the sophistication of the experienced show man but they could not conceal the tremor of excitement when the ribbons were tied. The contest stirred the ringside also. In the regular show Holstein entries were made by 77 exhibitors from Iowa, Wisconsin, Minnesota and North Dakota. The larger number came from Iowa though many of these brought only part of a herd. Wisconsin ranked second with twenty-eight herds represented.

The prize money including what was paid by the Association totaled $3,300. All these things are interesting but the one fact that is supremely encouraging is the enthusiasm that such a showing awakens. There are thousands of practical farmers who were just about ready to give up the cow because the profits were negligible but who tried once more with a few Holsteins and who are now prosperous and progressive dairy farmers and they trace the beginning of their prosperity to the Dairy Cattle Congress.

In the aged Bull Class—Schroeder of Minnesota won with Sir Hengerveld Pietertje Ormsby sired by Sir Pietertje Ormsby Mercedes 22d. Second money went to Corwin Farms on King Korndyke Sadie Vale Pietertje, a splendid bull with individuality in every line. He did not have quite the size of the Minnesota Enery, but either he or the third prize winner, Walcowis Ollie Hijlaard, shown by Cusack & O'Hara of Wisconsin, would be plenty good enough for the most discriminating breeder. Mr. Schroeder's bull was later made Senior and Grand Champion.

In the two-year-old class the honors went to a son of Sir Violet Ormsby shown by the State of Iowa. He is in the herd at the Hospital for the Insane at Independence. He was good enough to get the Championships at Iowa State Fair earlier in the season. Second in the same class went to H. H. Schroedermeier & Son of Iowa with Elmowa Friend Homsetead, a wonderfully well-developed young bull. Mr. Schroedermeier is one of the successful, prosperous smaller breeders that dot the land. He has not enjoyed such a great glare of limelight but he is building consistently and he is fortunate in that last half of the firm name—"And Son."

The Junior bull was picked from the class under eighteen months. He was Dodge County Homestead Boy, a son of Sir Pietertje Ormsby Korndyke shown by William Lohuis of Wisconsin.

A little amusement was created by the full-aged-cow class when Professor Kildee gave the first place to a cow entered by Yapp & Shaver of Illinois after the catalog was made. It was commented that Professor Yapp was willing to come to Iowa and judge Jerseys but he showed good judgment by entering Holsteins.

The first prize four-year-old, Westview De Kol Walker, was shown by Baird Bros. of Wisconsin. The class was an exceptionally hard one to place. All were high-class cows but some, as would be natural in a large class, were not shown to the best advantage. Show

Ring success depends upon three things—the individual, the show men and the preparation for the ring. Too often the importance of the last two is overlooked. But not with the Baird string. They had all their points worked out in fine shape. Their cow was the Senior and Grand Champion and she was the only one of the four champions that did not carry Ormsby breeding.

In the class under eighteen months there were thirty-eight entries which will give an idea of the task the Judge faced with 10,000 people expectantly watching him.

Professor H. H. Kildee was assisted by Mr. Barker, both are from Ames. Awards in full follow:

Aged Bull Class:—1st, Sir Hengerveld Pietertje Ormsby, H. W. Schroeder, Owatonna, Minnesota; 2d, King Korndyke Sadie Vale Pietertje, Corwin Farms, Rock Valley, Iowa; 3d, Walcowis Ollie Hijlaard, Cusack & O'Hara, Darien, Wisconsin; 4th, Daisy Johanna 22d, Klussendorf Bros., Waukesha, Wis.; 5th, North Star Parthenia Sir Beets, L. V. Garvens, Waukesha, Wis.; 6th, Parthenia Sir Beets, L. V. Garvens; 7th, Sir Calamo Wayne, Gafke & Simons, Jefferson, Wis.; 8th, Colantha Wayne Ormsby, Independence State Hospital, Independence, Iowa

Bulls, Three years and under four:—1st, King Ormsby Piebe Mercedes, Hargrove & Arnold, Norwalk, Iowa; 2d, entry of Yapp & Shaver, Urbana, Ill.; 3d, Sir Johanna Pauline Ormsby, Keyes & Manning, Richland Center, Wisconsin; 4th, M. M. Wayne Oak Bess Burke, Arthur Hamann, Lake Mills, Wis.; 5th, Iowana Star Fayne, Iowana Farms, Davenport, Iowa; 6th, Sir Pontiac Colantha Bismarck, J. D. Bacon, Grand Forks, N. D.; 7th, Iowana Waldorf Lad, Independence State Hospital.

Bull, two years and under three:—1st, Cherokee Cornucopia, Independence State Hospital; 2d, Elmowa Friend Homestead, H. H Schroedermeier & Son & Maurer, Waverly, Iowa; 3d, Acme Tomah Jalmar De Kol, A. F. Gafke, Jefferson, Wis.; 4th, King Pietertje Ormsby Piebe Tidy, Hargrove & Arnold, Norwalk, Iowa; 5th, Mankato Ruby Marathon Ormsby, Marlow & Randall, Mankato, Minn.; 6th, Iowana Coronis Fryslan, Iowana Farms.

Bull eighteen months, under two years:—1st, King Pietertje Ormsby Piebe Jewel, Hargrove & Arnold; 2d, Sir Pietertje Chloe Ormsby, H. W. Schroeder; 3d, Prince Denver Creamelle, Jefferson County Asylum, Jefferson, Wis.; 4th, Sir Pietertje Ormsby Janzes, T. C. & J. H. Hanson, Oelwein, Iowa; 5th, King Hengerveld Veeman Aaggie, W. C. Wharton & Daughter, Rose Hill, Iowa; 6th, Iowana Echo Star, Iowana Farms; 7th, Oak Dale Spring De Kol 16th, E. J. Erickson, Cambridge, Iowa.

Bull one year, under eighteen months:—1st, Dodge County Homestead Boy, William Lohuiis, Oostburg, Wis.; 2nd, Burke Mercedes Star, Iowana Farms; 3d, King Pietertje Ormsby Piebe 29th, Hargrove & Arnold; 4th, Sir Star Superior Segis, Minnesota Holstein Co., Austin, Minn.; 5th.

Bull Calf under one year, bred by exhibitor:—1st, Wapsie Sir Roseland Belle, Wapsimoot Farm, Camanche, Iowa; 2d, Sir Rochel Oak Boon, Spring Brook Farm, Burnett, Wis.; 3d, King Banostine Ormsby Piebe, Hargrove & Arnold; 4th, Entry of Everson Ferry, Lake Mills, Wis.; 5th, Sir Tekstra Paul Champion, J. D. Bacon; 6th, King Netherland Fayne Easle, Klussendorf Bros.; 7th, King Piebe 6th, Hargrove & Arnold; 8th, Entry of John T. Cunningham, Waterloo, Iowa.

Aged Cow:—1st, Entry of Yapp & Sharer; 2d, Princess De Kol Lyons Hengerveld, L. V. Garvens; 3d, Lady Johanna Aaggie Fayne, Iowana Farms; 4th, Doetje Nellie Segis, Klussendorf Bros.; 5th, Iowana Fayne Jessie, Iowana Farms; 6th, Dairy Lass Concordia, Orville L. Hamer, Waterloo, Iowa; 7th, Piebe Laura Veeman Artis, Minnesota Holstein Co.; 8th, Ruby Karen Mercedes, Marlow & Randall.

Cow four years, under five:—1st, Westview De Kol Walker, Baird Bros., Waukesha, Wis.; 2d, Iowana Fayne Star, Iowana Farms; 3d, Aaggie Westview Pontiac, J. D. Hetts, Fort Atkinson, Wis.; 4th, Floss Pontiac Walker, Baird Bros.; Far Oaks Miss Homestead Rue, Minnesota Holstein Co.; 6th, Heile Pietertje Piebe, Hargrove & Arnold; 7th, Marietal Bairdland Princess, Baird Bros.; 8th, Walker De Spofford, Baird Bros.

Cow three years, under four:—1st, Mankato Floa Ormsby Mercedes, Marlow & Randall; 2d, Far Oaks Inka Homestead, Minnesota Holstein Co.; 3d, Goldie Soldene Netherland; 4th, O. E. Mullen, Watertown, Wis.; 4th, Iowana Star Pauline, Iowana Farms; 5th, Miss Ormsby Jewel, Hargrove & Arnold; 6th, Garvendale Princess Segis Beets, L. V. Garvens; 7th, Juliana Fannie Belle, J. D. Hetts, Fort Atkinson, Wis.; 8th, Star Segis Pontiac Superior, Minnesota Holstein Co.

Heifer two years, under three:—1st, Mankato Segis Ormsby Bess, Marlow & Randall; 2d, Sunny Lady 3d, Hargrove & Arnold; 3d, Pietertje Ormsby Mercedes Queen, Stewart Reid, Oconomowoc, Wis.; 4th, Princess Piebe Ormsby Della, Klussendorf Bros.; 5th, Pelagie Wayne Homestead, Minnesota Holstein Co.; 6th, Ormsby Piebe Pietertje, H. W. Schroeder; 7th, Lilac Hedge Pontiac Colantha, J. D. Bacon; 8th, Lady Ormsby Glen Pietertje, H. W. Schroeder.

Heifer eighteen months, under two years:—1st, Madam Artis Wayne Denver, Jefferson County Asylum; 2d, Corwin King Segis Pontiac Mable Ormsby, Corwin Farms; 3d, Corwin Colantha Florence, Corwin Farms; 4th, Nellie Queen Elba, Norris Farm & Camp, Waukesha, Wis.; 5th, Corwin Beauty Fobes Ormsby, Sorwin Farms; 6th, Koroba Segis Easle, Klussendorf Bros.; 7th, Bacon Colantha Bismarck, J. D. Bacon; 8th, Iowana Fayne Dorothy 3d, Iowana Farms.

Senior Heifer:—1st, Dorothy Ormsby Piebe, Hargrove & Arnold; 2d, Pet Ormsby Rue Pietertje, H. W. Schroeder; 3d, Mankato O. K. L. Blanche, Marlow & Arnold; 4th, Elizabeth Pietertje Ormsby, C. W. Symons, Edgar, Wis.; 5th, Iowana Homestead Stella, Iowana Farms; 6th, Iowana Fayne Jessie 3d, Iowana Farms; 7th, Milford Homestead Burke, Milford Meadow Stock Farm; 8th, Iowana Farms Hope, Iowana Farms.

Junior Heifer:—1st, Star Segis Homestead, Minnesota Holstein Co.; 2d, Netherland Queen Piebe, James C. Jensen, Waterloo, Iowa; 3d, Iowana Ona Fayne Prima Donna, Iowana Farms; 4th, Lilac Hedge Bismarck Lass, J. D. Bacon.

Cow having official yearly record begun at five years or over:—1st, Lady Johanna Aaggie Fayne, Iowana Farms; 2d, Doetje Nellie Segis, Klussendorf Bros.; 3d, Ruby Karen Mercedes, Marlow & Randall.

Cow having official record begun under the age of five years:—1st, Mankato Floa Ormsby Mercedes, Marlow & Randall; 2d, Iowana Fayne Star, Iowana Farms; 3d, Far Oaks Inka Homestead, Minnesota Holstein Co.

Exhibitors Herd:—1st, Hargrove & Arnold; 2d, Klussendorf Bros.; 3d, Marlow & Randall; 4th, L. V. Garvens; 5th, Iowana Farms; 6th, Minnesota Holstein Co.

Breeders' Young Herd:—1st, Hargrove & Arnold; 2d, Jefferson County Asylum; 3d, Minnesota Holstein Co.; 4th, Iowana Farms; 5th, Klussendorf Bros.; 6th, Marlow & Randall; 7th, J. D. Bacon; 8th, L. V. Garvens.

Get of Sire:—1st, Get of Sir Johanna Fayne, Iowana Farms; 2d, Get of Sir Westview Pontiac Walker, Baird Bros.; 3d, Get of King Pietertje Ormsby Piebe, Hargrove & Arnold; 4th, Get of Sir Pietertje Ormsby Mercedes, 4th, Marlow & Randall; 5th, Get of Dutchland Creamelle Denver Prince Jefferson County Asylum; 6th, Get of Sir Pietertje Omsby Mercedes 14th; Corwin Farms; 7th, Get of King Pietertje Ormsby Piebe, Hargrove & Arnold; 8th, Get of Piebe Laura Ollie Homestead King, Minnesota Holstein Co.

Produce of Dam:—1st, Produce of Chloe Pietertje Ormsby, H. C. Schroeder; 2d, Produce of Forum Princess 2d, Baird Bros.; 3d, Produce of Star Watson Iowana Farms.

Dairy herd:—1st, Iowana Farms; 2d, Baird Bros.; 3d, Marlow & Randall; 4th, Minnesota Holstein Co,; 5th, L. V. Garvens.

Senior and Grand Champion male:—Sir Hengerveld Pietertje Ormsby.

Junior Champion male:—Dodge County Homestead Boy.

Senior and Grand Champion Female:—Westview De Kol Walker.

Junior Champion Female:—Dorothy Ormsby Piebe.

Holland Calls Cattle Breeding Congress

THE Government of the Netherlands, which is the official title of the Kingdom of Holland, has taken the initiative in convening a World Congress on the question of cattle breeding. This Congress is under the patronage of Her Majesty, the Queen of the Netherlands. The official announcement says it must be considered a matter of great importance that the scientific currents that have developed in the various countries should run concurrently, in order that the views can be compared and tested and that there should be an exchange of ideas. Stock raising in many countries is one of the most important sources of revenue so that it is not to be wondered at that Governments take an interest in the development of the cattle breeding and stock raising, sometimes to the extent of subsidizing these industries. In all civilized countries there are stock raising specialists engaged either in organizing or research. The purpose of this congress is to bring these specialists together. The Dutch Government's proposals for such a Congress have been favorably received in many countries, nearly all of which have sent messages of acceptance and promises of coöperation.

The International Congress on cattle breeding, which will be held from August 29 till September 4, 1923, at The Hague, consists of four sections.

The first section, Heredity and Feeding, will investigate:

(a) What new views regarding the doctrine of heredity must be considered as being of significance for cattle breeding?

(b) What are the newer views regarding the science of feeding?

In both these spheres important researches and discoveries have been made during recent years in the studies of heredity, Mendelism, etc., and the influence of vitamines in food stuffs.

The second section, Registration, will deal with the following:

(a) What particulars should be given in a pedigree register and in what manner must these particulars be collected, in order that satisfactory guarantees are obtained concerning their accuracy?

(b) How should the milk yield and butter production be checked? Are international regulations possible?

The third section, Government intervention and the efforts of Associations, comprises the question of:

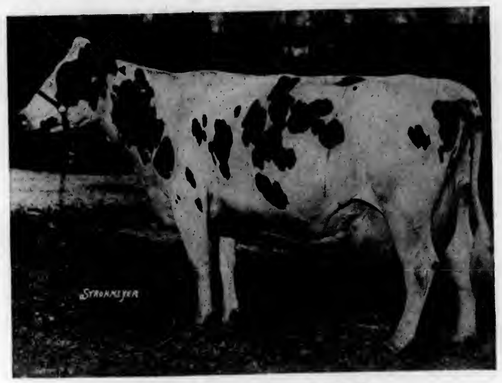
(a) How can Authorities, otherwise than by veterinary measures, assist in promoting the breeding of cattle?

(b) In what way can Associations, having for their object the improvement of the stock of cattle, make a practical use of the particulars furnished by science and registration?

The fourth section, Economics, will occupy itself with the following points:

(a) What characteristics ought cattle to possess in order to be satisfactory under certain circumstances?

(b) How can tuberculosis among cattle be combated in a practical manner and what is the experience in regard to this in the various countries?



It is not expected that there will be any study of tuberculosis in itself, but rather of the manner in which, without serious injury to cattle breeding, tuberculosis can be combated.

An endeavor will be made to get reports from the greatest authorities in each country on the subjects discussed and to give plenty of time for the preparation of adequate reports.

Excursions will be made to the principal breeding centers in Holland and it is to be hoped and expected that the exchange of views by specialists of the various countries will lead to a great advance in scientific and public knowledge.

White Susie of Bell Farm

ONE of the best cows in Pennsylvania, from the point of individuality and producing capacity, is Susie Abbekerk Colantha, the famous White Susie of Bell Farm. Susie had the honor of winning third prize at the 1919 National Dairy Show, and but

SUSIE ABBEKERK COLANTHA

35.12 lb. butter and 737.1 lb. milk in seven days. One of the good matrons in the Bell Herd, Coraopolis, Pa.

for an accident which happened shortly before showing, she might have won higher honors.

Susie is a granddaughter of Colantha Johanna Lad, being sired by Dutchland Colantha Sir Abbekerk. She has an official record of 35.12 lb. butter and 737.1 lb. milk made in seven days, and produced 109.6 lb. milk in one day, and 3,010.8 lb. in 30 days. In 154 days she produced 660.93 lb. butter, 15,174.6 lb. milk. She has a Canadian record of 31.27 lb. butter and 608.8 lb. milk made in a week, and a year record made as a junior two-year-old of 627.5 lb. butter and 15,389 lb. milk.

John A. Bell, Jr., purchased this cow in 1919 for $7,500, and in the Third Brentwood Sale sold her son to the Lathrop Estate for $2,000.

Don't Break Your Contracts

THE following is a clipping from the Editorial page of the *Montana Farmer* and will be of interest to members of the Dairyman's League and other marketing Associations which have contracts with its members for marketing farm products.

"The decision of the Supreme Court of Kansas in granting an injunction to the Kansas Wheat Growers' Association against one of the members of the association to prevent him from selling his wheat in violation of the association's marketing agreement is of considerable interest in Montana because the marketing agreement involved in the Kansas case is similar to the one used by the Montana Wheat Growers' Association.

"One of the members of the Kansas Association tried to sell his wheat without turning it over to the association. This was in direct violation of his contract with the association so that organization applied to the district court in Sedgwick County for a temporary restraining order and an injunction. The district court granted a temporary restraining order but refused to grant an injunction. The case was then appealed to the Supreme Court where the injunction was granted and the farmer was restrained from selling his wheat outside of the association. We understand that similar decisions have been returned by the courts of Oregon and Washington in test cases that have been taken to court by the Oregon and Washington Wheat Growers' Associations.

"The Montana Wheat Growers' Association has not found it necessary to take the Montana contract to court because it has experienced little difficulty in having its members carry out the marketing agreement. Interest in the marketing arrangement of the Montana Association seems to be growing very rapidly as indicated by the increase in membership from 1,500 last year to more than 4,200 this fall, announced by the association a short time ago. Adequate financing arrangements have enabled the association to pay a large advance on wheat consigned to the pool by the members so far this season."

"I had a little balance in the bank, but I became engaged two months ago and now—" "Oh, love makes the world go round." "Yes, but I didn't think it would go so fast that it would make me lose my balance.

If you are going to forgive and forget, don't forget to do your forgiving first.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Oct. 7-14—Minnesota State Fair Grounds, National Dairy Show.
Oct. 10—Dallas, Tex.—Texas Holstein-Friesian Breeders' Association Meeting and Banquet.
Oct. 17—Bell Farm, Coraopolis, Pa., Third Annual Field Day.
Oct. 24—Deysher Farm, Reading, Pa., Lancaster County Breeders' Auto Run and Picnic.
Oct. 28—West Chester, Pa., Field Day and Banquet.
Nov. 23—Belvidere, N. J.—Annual Meeting Warren County Association.

SOUTHWESTERN IDAHO HOLSTEIN BREEDERS' TOUR

By F. R. Cammack, Extension Field Dairyman

Breeders of southwestern Idaho, interested in Holstein-Friesian cattle, visited the prominent herds in their section of the state. This tour was in two divisions, each consuming one day with an interval between.

On the first day a caravan of twenty cars started from the Shambaugh-Johnson Farm, where a splendid herd of purebred Holsteins was found, the females coming principally from the Intermountain Institute at Weiser. In coöperation with Hermann Weick, they are using a son of the famous King Segis 10th for a herdsire. The Hilltop Breeding Farm was the next stop. Mr. Weick, the proprietor of this firm, is an advocate of club work and has been the leader of a very successful calf club in his community. He built up his present herd of seventeen females from one foundation cow which he purchased eight years ago. They are now on official test and are making some creditable yearly records. The senior herdsire is a grandson of Matador Segis Walker, and the junior herdsire is a son of King Segis 10th. Mr. Weick's herd, as well as the Shambaugh-Johnson herd, will be shown at the State Fair this year.

The Intermountain herd was next visited. Here good, cold Holstein milk was served and was enjoyed by the visitors.

Breeders of Southwestern Idaho looking over a few of the good ones in the Intermountain Institute Holstein Herd, Weiser, Idaho.

The institute has the largest herd of registered Holsteins in Idaho. The herdsire, Segis Walker Hartog, a son of King Segis 10th, is a proven sire, inasmuch as he has a number of daughters who have produced from four to seven hundred pounds of butter fat as two- and three-year-olds, the best being Mabel Mercena Hartog, with a seven-hundred-pound fat record. They are now on official test and bid fair to beat the records made heretofore. A number of bulls from this herd have been used in Idaho bull associations. This herd has been shown at the State Fair for a number of years and has taken championships a number of times. E. R. Evans is herdsman in charge.

A basket luncheon was eaten at the Oregon Trail Park, Weiser. Ice cream was furnished by the Fayette Coöperative Creamery, and lemonade by the Washington County Farm Bureau, and were much enjoyed. Brief addresses were made by a number of the breeders, including President Thomas Killen, Secretary R. H. Musser, William Messersmith, Mat Resendes, Ada County Testing Supervisor, and F. R. Cammack.

The caravan wended its way to the home of R. T. Davis, near Weiser. This splendid herd is on official test and is making some very fine records. Mr. Davis is president of the Weiser-Payette Cow Testing Association and of the Weiser Dairymen's Marketing Association.

From the Davis herd the excursionists drove to the Boomer Holstein herd at Payette. This is one of the pioneer herds of the section, and the Carnation Farms have made a number of good records from cows purchased from this herd. The former herdsire was a son of King Segis 10th. The present herd bull is a son of Judge Segis, purchased at the 1920 Pacific International Consignment Sale. His dam has a year record of over 1,100 lb. butter. This herd has won many prizes at the State Fair.

The last stop of the first day was made at the herd of Aloys Schuler, New Plymouth. This herd is on official test, making exceptionally good records. The foundation stock is from the Boomer herd. Charles Pritzel is herdsman, but will take up cow testing association work after the herd is shown at the State Fair this fall.

The eighty enthusiastic Holstein dairymen who attended the first day's excursion felt well repaid for the time spent and felt that they had gained considerable information by the visits to the Holstein herds named.

On the second day the excursion started from the Nampa Coöperative Creamery, the first stop being made at the J. H. Lupton farm. Here a good herd has been started and will be officially tested later. The herd bull came from the Boomer farm.

C. S. and R. H. Musser have their herd on official test, and will complete a seven-hundred-pound fat record this year. Their former herdsire was a son of King Segis 10th. The Mussers intend to show again this year at the State Fair.

The next stop was at the C. D. Pipher Farm, where a good foundation herd, largely of Boomer stock, has been started. This herd, as well as that of a neighbor, J. A. Black, where the caravan also stopped, will be put on test in the near future. The herdsire, which they are using coöperatively, came from the Intermountain Institute.

The C. Oliason herd, near Meridian, which was next visited, has for herdsire a son of Queen De Kol Bonheur Pontiac. This cow has a year record of over 1,200 lb. butter. Mr. Oliason was very fortunate in obtaining this bull at a moderate price before his dam made her record. Oliason is in the Ada County Cow Testing Association and has some purebreds, purchased from F. O. Johnson, which he will place on official test later.

F. O. Johnson has for herdsire King Segis Concordia, a son of King Segis 10th. He also owns Viola Shadeland, with a record of 691 lb. butter fat, made under Mr. Johnson's supervision. No testing is now being done in the herd but will be later this fall. Mr. Johnson is a former president of the Holstein organization of Boise Valley.

At the home of Thomas Killen a basket dinner was enjoyed by the hundred twenty-five present. Mr. Killen has a son of King Segis 10th. His herd is on official test and this year will make several records of over six hundred pounds butter fat.

Following dinner a meeting was called by the president of the Southwestern Idaho Holstein-Friesian Association, at which time the constitution and by-laws as revised by the committee, were adopted. Short talks were made by several breeders: Nat Resendes, testing supervisor for Boise Valley, and F. R. Cammack, who emphasized the official testing, bull associations, and the general interest developing in Holsteins throughout the state. The breeders present were urged to show their cattle at the State Fair. For the benefit of some of the high school students, a judging demonstration was given by F. R. Cammack, using Mr. Killen's cows.

The caravan of cars wended its way through Boise, attracting considerable attention, the banners on the cars reading: *"Holsteins—Best for Idaho."* The next stop was made at the Albert Record Farm, near Eagle. Mr. Record has King Segis 10th breeding stock as the foundation for his herd. He is a member of the Ada County Cow Testing Association. At the Chris Lillegard Farm, which was visited next, a son of Segis Walker Pietertje Lad is the herdsire. Mr. Lillegard sold his grade cows recently and has purchased a foundation herd of purebreds. He is a director of the Cow Testing Association and plans on starting official testing later.

At the G. L. Entwistle Farm a double grandson of King Segis 10th is the herdsire (owned by the University of Idaho and leased to Mr. Entwistle.) He has a number of purebreds in addition to some high-grade cows. The bull is an outstandingly good individual. Albert Baer, where the next stop was made, has a son of the Boomer herd bull and a foundation herd of purebreds. He sold his grade cows last fall and received considerably higher prices for them than the average of the community because of their cow testing association records.

Wm. Messersmith's farm, the next place visited, is the home of a son of Segis Walker Pietertje Lad, formerly used by Mr. Boomer. Mr. Messersmith is president of the Ada County Cow Testing Association. Some of his foundation herd of purebred females came from an importation from Washington and others from the Avalon Farm, at Kuna. This herd will soon be put on official test. The average August production was 44.5 lb. butter fat for the sixteen cows, the highest in the Ada County Association.

A stop was made at the Regan & Neal Farm. Their herdsire came from the Avalon herd, and their cows, which are grades, are enrolled in the local test association. The final stop was at the G. H. Douglas & Son Farm. They have a good foundation herd of females and plan later to official test them. Orville Douglas, the junior member of the firm, has done considerable official testing for the University of Idaho and is a graduate of the University short course.

The members feel well repaid for the time spent on the tour and plan to meet as often as possible during the winter months, feeling that they get inspiration and encouragement by closer coöperation. They plan to make southwestern Idaho famous for high quality Holsteins.

GOOD AUXILIARY WORK

The ladies of Barron County, Wis., have an organization which is termed Black and White Auxiliary of the Barron Holstein Breeders' Club.

It was decided to have a Holstein products booth at the Barron County Fair, and the ladies at first planned to supply simply milk to direct patrons, but desirous of demonstrating how healthful and delicious a beverage milk properly served could be, arrangements were made for supplying bottled milk to the other concession booths, so that Holstein milk was on sale at many places throughout the grounds, and in all, more than 100 gallons of Holstein milk and buttermilk were disposed of during the recent fair.

The committee in charge consisted of Mrs. Ed. Beckwith, chairman; Mrs. Fred J. Krahenbuhl, and Mrs. Ellsworth McKinny.

BRATTLEBORO BUSINESS

Nine applications for membership were received at the office of the Secretary during the week ending September 16.

There were 2,104 certificates of registry issued, of which 1,583 were female and 521 were male; 1,341 certificates of transfer were written, 913 female and 428 male, during the same period.

Twenty-two applications for membership were received for the week ending September 23.

In the same week, 1,758 certificates of registry were issued, 1,328 female and 430 male; 1,277 certificates of transfer were written, of which 863 were female and 414 were male.

The herd prefixes reserved during the two weeks' period are:

Ashton, E. C. Ashworth, Eaton, Ohio.
Auburn Summit, George W. Hicks, Auburn, N. Y.
Burgview, Samuel J. Little, Farmersburg, Iowa.
Colcrest, George H. Colvin, Dalton, Pa.
Conestoga, George G. Sauder, East Earl, Pa.
Derrygrove, Norman J. Baker, West Grove, Pa.
Elmrose, H. D. Bardwell, Auburn, N. Y.
Everite, L. A. Grade, Granton, Wis.
Gables, R. H. Ferguson, Adrian, Mich.
Halkum, O. B. Hall & L. C. Kumlein, Milton, Wis.
Ivoca, Dr. C. A. Jones, Wapato, Wash.
Liechtydale, Fred R. Liechty, Verona, N. Y.
Miamiside, P. H. Flynn & Son, Xenia, Ohio.
Money Milk, Glenn Benedict, Hillside, Mich.
Narragansett, The Narragansett Bull Association, Bristol, R. I.
Nedan, R. J. Neville, Rapelje, Mont.
Old Sioux, F. F. Shamla, Glencoe, Minn.
Pingel, William J. Pingel, Bowler, Wis.
Roseside, Edson Messenger, Vassar, Mich.
Thaxter, Leverett P. Thaxter, Machias, Me.

WAUKESHA PICNIC

The annual picnic of the Waukesha County Holstein Breeders' Association held at the Norris farm camps, August 24th, is said to be the greatest outing the organization has ever held, it being estimated that 5,000 people were in attendance.

This association now has more than 800 members. Fred J. Southcott is president; Fred Klussendorf, vice-president and W. L. Baird, secretary. The speakers emphasized the marketing of cattle and products and the Association is attempting to market both purebred Holsteins and their products. The speakers were W. A. Dunlop, of Milwaukee, who touched on advertising and its relation to Holstein breeders; Theo. Schroeder, superintendent of the Norris farm camps who explained the idea and methods of the camps where unfortunate, homeless and delinquent boys are given opportunity for development, physically, mentallly and morally.

Mr. W. L. Leith, of Columbus, Wis., talked on organization. John A. Craig, of Janesville, talked on marketing milk and S. A. Baird discussed the marketing of purebred Holstein products.

In the cattle-judging contest W. E. Koker and Joseph McLay, boys from the Morris farm, won first and second places with Roy Eble third.

FOR A CENTRAL TESTING PLANT

The Holstein breeders in Dodge County, Minn., are thinking of a coöperative testing plant similar to the one at Dixon, Illinois. The principal testing will be for the 305- and 365-day divisions. The plan is being advocated by C. L. McNelly, the county agent of Dodge County, who said:

"We advocate this plan for the reason that many of our breeders have exceptionally good prospects, but are not in the position and have not had the experience required to give the cows a chance of making good yearly records.

"We believe also the cost can be greatly reduced where the maximum that can be handled by one tester are in the same barn as where a man tests but one or two cows, the cost would be practically as much as if six head were being run at the same time."

EXHIBITS BY CLUBS

The Barron County Holstein Breeders' Association exhibited 92 animals at the Barron County Fair, Rice Lake, Wis. These were divided into herds owned by the clubs at Almena, Dallas, Chetek, Cameron, Brill, Barron, Hillsdale, Cumberland and Rice Lake. The Cumberland club was given first place, the Barron club second place and the Dallas club third place. The Cumberland Bull Club won the grand championship on their animal Sir Bess. The junior male championship went to the herd of Fred J. Krahenbuhl. Meisegeier and Oldeen had the champion cow and Huset Brothers the junior champion heifer.

The notable work of the Black and White Auxiliary is mentioned in another part of the paper.

WASHINGTON ISLAND

Washington Island celebrated its first annual picnic and get together day, August 29th, under the auspices of the Island

Holstein Breeders' Association. The sports included races of various kinds, a baseball game, movies and vaudeville acts. The principal speaker was Professor Ullsperger, of the Wisconsin College of Agriculture, who addressed the assemblage on the value of community enterprise.

The net receipts were a little over $200.00 which was added to the treasury of the Holstein Breeders' Association.

IN CAPE COUNTY, MISSOURI

The Cape County Holstein-Friesian Association elected an executive committee on August 20th, meeting at Cape Girardeau, Mo. The officers are Louis Blattner, president; Al Schonhoff, vice-president and A. J. Lawrence, treasurer. The meeting was enthusiastic and well attended.

It is intended to make Cape County a Holstein center of sufficient importance to induce buyers to come here and purchase Holstein cattle in carload lots. Holstein owners in Cape County suffered loss because of declining prices during the period of price deflation but they are congratulating themselves upon their steady source of profitable income as compared with those who are not fortunate enough to own Holsteins. The Cape County Holstein owners feel that they are building the industry upon a solid foundation and invite the dairymen and farmers of their county to study carefully the advisibility of adding Holstein cattle to their operations as a means of securing a steady and profitable income.

ILLINOIS FARMERS' TOUR

The annual farm management tour of the Woodford County, Ill., Farm Bureau was held Thursday, September 14th. No less than 65 cars took the 70-mile trip visiting seven farms and the Minonk experiment plot. The party included agricultural experts from the University of Illinois, local farm advisors and the vocational agricultural classes from the Eureka, Metamora and Roanoke High Schools with farmers and dairymen from seven different counties. The Holstein farm visited was that of Amos Neuhauser who has 33 head of purebred Holsteins most of which he has raised from calves. He has several cows that are milking 60 lb. a day or more and during 1921 reported that he cleared $2,324 from dairy products alone selling these in the Peoria market. Poultry and Hog farms were visited. Dinner was had at the park in El Paso, the Minonk plots conducted by the University of Illinois attracted considerable attention. Here soy bean experiments are conducted which promise to be of great benefit.

SHOW ROMANCE AT SKAGIT FAIR

There is an interesting story connected with Skagit Korndyke Vale Pietertje No. 278335, the senior and grand champion Holstein bull at the recent Skagit County Fair. This bull was born April 9, 1917, the property of Lee Bros., Mt. Vernon, Washington, and at six months of age was sold to the owner of a grade herd, where he remained until a short time ago. He developed an ugly temper, and on February 22d of this year, he was sold to a buyer for a Washington packing company. He had been loaded into a cattle car for shipment along with a number of other animals picked up by the buyer, when one of the Lee Brothers looked him over, and recognizing his great show possibilities, repurchased him. The veteran Washington Holstein breeder, Wm. Bishop, happened along soon after, took a great fancy to the bull, and purchased him from the Lees, with the result that Skagit Korndyke Vale Pietertje started on his show career by defeating the Lee Bros.' herdsire, Skagit Wayne Sadie Vale, in the aged bull class at the Skagit County Fair, and the same owners' junior champion bull for the grand championship.

Skagit Korndyke Vale Pietertje is by Sir Hartog Korndyke, from Inka Vale Pietertje 2d, a cow with a seven-day butter record of 25.02 lb. She was sold by Lee Bros. to Governor Hart, in July, 1921, when the governor was buying animals for the state. She is now in the herd of the Northern State Hospital, at Sedro-Woolley. A calf from her sired by the Lee Bros.' bull, Skagit Wayne Sadie Vale, was third in a class of nineteen heifers at the Skagit Fair, and was one of the first prize "get of sire."

The Holsteins at the Skagit Fair were judged by George S. Bulkley. The awards were as follows:

Bull, three years or over: Wm. Bishop, Chimacum, first on Skagit Korndyke Vale Pietertje; Lee Bros., Mt. Vernon, second on Skagit Wayne Sadie Vale; Youngquist Bros., Mt. Vernon, third on Vernway Segis Fayne.

Bull, two years and under three: Lockhart and Sons, Mt. Vernon, first on Butter Fayne De Kol.

Bull, senior yearling: Lee Bros., first on Skagit Zarilda Mech. Newman; Lee Bros., second on Skagit Chief Korn. De Kol; Youngquist Bros., third on Vernway Segis Korndyke.

Bull, junior yearling: R. E. Waugh, Sedro-Woolley, first on Mt. Vernon Judge Segis; Youngquist Bros., second on unnamed calf.

Bull, senior calf: Lawson & Sons, Blanchard, first on unnamed; Youngquist Bros., second on Vernway Pontiac Segis Fobes.

Bull, junior calf: Youngquist Bros., first on Vernway Pontiac Segis Mercedes; Hegg & Son, Stanwood, second on Tyee Sir Heske Ormsby; Lee Bros., third on unnamed.

Cow, four years or over: Lee Bros., first on Duchess Nena Mechtilda; Youngquist Bros., second on Bessie Fobes Tritomia; Lawson & Son, third.

Cow three years or under four: R. E. Waugh, first on Mt. Vernon Segis Margie; Youngquist Bros., second on Princess Fayne Johanna.

Heifer, two years old: Gallacher & Sons, Mt. Vernon, first on Lady Sarcastic Fayne; Gallacher & Sons, second on Artasia Highland Fayne; Lee Bros., third on Skagit Cornucopia Mechtilda.

Heifer, senior yearling: Lockhart & Sons, first on Daisy Veeman Cornucopia; Hegg & Sons, second on Tyee Hiske Fayne Joliana; Youngquist Bros., third on Vernway Pontiac Segis Butter.

Heifer, junior yearling: Youngquist Bros., first on Vernway Pontiac Segis Johanna; Hegg & Son, second on Tyee Fayne Joliana.

Heifer, senior calf: Lee Bros., first on unnamed; Youngquist Bros., second on Vernway Pontiac Segis Colantha; Lawson & Sons, third, unnamed.

Heifer, junior calf: Hegg & Son, first on Tyee Cornucopia Ormsby; Lawson & Son, second on unnamed; Youngquist Bros., third on Vernway Pontiac Segis Pearl.

Senior herd: Lee Bros., first; Youngquist Bros., second.

Junior herd: Lee Bros., first; Youngquist Bros., second.

Junior champion bull: Lee Bros., Skagit Zarilda Mechtilda Newman.

Senior and grand champion: Wm. Bishop, Skagit Korndyke Vale Pietertje.

Junior champion cow: Lockhart & Sons, Daisy Veeman Cornucopia.

Senior and grand champion: Lee Bros., Duchess Nena Mechtilda.

SHOWED DAD THE WAY

Because his eight-year-old son, Herman, wanted to join the Wood County Calf Club three years ago, Dr. W. W. Mannhardt, of Custar, Ohio, has become the owner of one of the finest herds of Holstein-Friesian cattle in the state. The lad evidently is a natural judge, for he picked out as his calf, Netherland Pietertje G. Paul Beets, a daughter of De Kol Paul Beets De Kol. In her first lactation period this heifer made a 21-lb. seven-day butter record. Recently her udder measured six feet and eight inches.

Dr. Mannhardt now has 40 head of Holstein-Friesian cattle. Not a member of his herd has produced less than 11,000 lb. milk in a year, and records range up to 16,000 lb., with a very satisfactory butter fat test. The pride of the herd is King Sadie Vale Codyk, a half brother to the Ohio State Fair grand champion.

TOOK BOTH CHAMPIONSHIPS

Both championships at the recent county fair held at Ardmore, Okla., were won by the herd of O. L. Ward, on his senior yearling bull and aged cow. The first prizes for aged herd went to Mr. Ward, with J. C. Bostwick, second. The other group prizes all went to Bostwick. Mr. T. W. Bennett, E. J. Hogan, Alton Trice and Ramsey & Willingham also exhibited and won a number of prizes.

LAKE COUNTY SPECIAL PREMIUMS

The special premiums for Holsteins at the Lake County Fair were divided between Frank Fowler, of Lake Villa, and Buffalo Creek Farm, Arlington Heights. Fowler took the $50 Lilly Cup, donated by the Lake County Board of Supervisors, for grand champion bull of all breeds, and the cup donated by W. I. Osborn, of Area, Illinois, for the best Holstein bull at least three years old. The first cup must be won two years and the Osborne cup three years to become the absolute property of the winner.

The $25 cup given by the First National Bank of Libertyville, Ill., for the best Holstein heifer under two years old; the $25 cup donated by the same bank for Breeder's Young Herd and the special merchandise prizes for yearling heifer, heifer calf and junior bull calf, were all won by the Buffalo Creek Farm of Arlington Heights.

The $25 cup donated by Yore Bros., of Libertyville, for the highest butter record made during the past year by a Lake County cow either in official or in cow testing association work, went to the Hawthorne Farm at Libertyville. J. K. Dering, of Lake Villa, was awarded the $25 cup provided by W. A. Brewerton, of Libertyville, for the best dairy calf fitted and shown by a boy or girl under 18 years old.

DISTINGUISHED SPEAKERS

Among the speakers at the Greater Lynn Fair, held the week of September 11th-16th, was Senator Henry Cabot Lodge,, the Hon. Frank D. Allen, president of the Massachusetts Senate, and Mayor Harland A. McPhetres.

The cattle judging was done by County Agricultural Agent Tillotson, of Middlesex County. Mr. James C. Poor, of the River View Farm, North Andover, Mass., won six firsts and four seconds on Holsteins. This herd is headed by Idlewood King Walker, a 2,000-lb. bull. The Sorosis Farm won two first and four seconds on Holsteins, two firsts and one second on Guernseys, and sixteen firsts and fourteen seconds on sheep, besides a silver cup for the best exhibit in the sheep and swine department.

NATIONAL DAIRY SHOW

One of the exhibits that will be seen at the coming National Dairy Show will be examples of how animals sired by purebred sires outsell the offspring of scrub, grade or crossbred sires. Investigations by the United States Department of Agriculture show that they do to the extent of nearly 50%.

The Department is also authority for the statement that purebred livestock in general has about 40% greater earning power than scrub stock, apart from its breeding or sale value, the improvement being most noticeable in dairy cattle probably because of the ease of measuring production.

SPLIT CHAMPIONSHIPS AT SHEBOYGAN

The championships at the Sheboygan County Fair, held at Sheboygan, Wis., the week of September 8th, were divided among four different herds. J. B. Cain won the senior championship on his aged bull, and Wm. Lohuis won the junior male championship on a yearling. The senior championship cow came from the herd of R. C. Stolper, and the junior champion was a senior heifer calf shown by Edgar Born, The prize for mature herd went to J. B. Cain, that for young herd to D. W. Huenink and the calf herd prize was won by the R. C. Stolper exhibit.

WIN PRODUCTION CONTEST

The butter fat contest at the Manitowoc Fair was won by a Holstein cow owned by John Konop, of Francis Creek, Wis. She produced 114.5 lb. milk and 3.43 lb. butterfat in five milkings, three on the first day and two on the second. The test closed at noon on the second day. A Guernsey was second with 65.5 lb. milk and 3.07 lb. butter fat and a Holstein owned by Charles Konop, of Kellnersville was third with 64 lb. milk and 2.49 lb. butter fat.

EASTERN STATES EXPOSITION

The Holstein exhibits at the Eastern States Exposition were of a high order and were judged by W. S. Moscrip. Some idea of the quality can be gained by the fact that Harriette of Grayfields, the grand champion cow at the New York State Fair was unable to gain a place higher than seventh in the open classes and Pearl Asiatic, winner of many show ring prizes was third in the three-year-old class. Mt. Hermon Aaggie Creamelle, the twelve-year-old bull owned by the Mt. Hermon School, who for five successive years has been senior and grand champion, although winning in the aged bull class, was beaten as senior champion by King Grand Reliance from the Eastman Hill Stock Farm, Lowell, Maine. Miss Gladice Butter Boy from the Mount Hermon School added to her list of triumphs by taking the senior and grand championships although she had serious competition from the junior yearling heifer, Maartje Johanna Sadie Vale of the Gardner Hall, Jr., Company herd. Nutmeg Colantha Eveline upheld the honor of the Peasley herd by capturing first for heifer calf.

There was a big attendance and the arena seats around the judging ring was kept well filled. The awards were:

Aged bulls:—1st, Mt. Hermon Aaggie Creamelle, Mt. Hermon School; 2d, Graves Korndyke, Lombella Bros., Westfield; 3d, Ormsby Segis Lad, Rancocas Stock Farm, Jobstown, N. J.; 4th, King Korndyke Fannie Veeman, Gardiner Hall, Jr., Co., South Willington, Conn.; 5th, County Paul Ladoga Posch, C. P. Farrand, Washington, Conn.; 6th, King Jess Homestead De Kol, John M. Kelly, Harrington Park, N. J.; 7th, King Valdessa Finderne, American Thread Co., Milo, Maine.

Bulls, two years old and under three:—1st, King Grand Reliance, Eastman Hill Stock Farm, Lovell, Me.; 2d, Mt. Hermon Sir Colantha Robert, Shell Crest Farm, Holliston; 3d, Spring Farm King 37th, Amos D. Bridges Sons, Inc., Hazardville, Conn.; 4th, Mt. Hermon Archibald, Mt. Hermon School; 5th, North Star General Champion, Grayfield Farms, Greenwich, N. Y.; 6th, Prince Pontiac Sylvia, Dr. John M. Allen, St. Johnsbury, Vt.; 7th, Bridgeport Sir Ormsby Korndyke, Bridgeport City Farm, Bridgeport, Conn.

Bull one year and under two:—1st, Forsgate Mable Ormsby Pete, E. Willis, Roadstown, N. J.; 2d, Tranquility King Abbekerk, S. R. Harris, Lambertville, N. J.; 3d, Chief Pontiac Segis Ormsby, Grayfield Farms; 4th, King Bloomingdale Alcartra, Wyben Stock Farm, Westfield; 5th, Haycote King Model, Julia W. Hayes, New Milford, Conn.; 6th, Mt. Hermon Sir Colantha Gladice, Mount Hermon School; 7th, College Shepard, University of Maine, Orono, Maine.

Bull calf under one year:—1st, King Allen Ormsby Colantha, Gardiner Hall, Jr., Co.; 2d, Gardiner Hall, Jr., Co. entry; 3d, Nutmeg Walker Colantha, Frederick M. Peasley, Cheshire, Conn.; 4th, Hengerveld Segis Prospect, Bridgeport City Farms; 5th, Shell Crest Robert Alcartra, Shell Crest Farm; 6th, Highlawn King Ormsby Cornucopia, Frank P. Knowles; 7th, Clothilde Pontiac Ben, Forsgate Farms, Jamesburg, N. J.; 8th, Shell Crest Robert Mata, Shell Crest Farm.

Aged cows:—1st, Miss Gladice Butter Boy, Mt. Hermon School; 2d, Beth of Amherst 3d, Massachusetts Agricultural College; 3d, Pearl Korndyke Naid, Bridgeport City Farm; 4th, Lady Netherland Maggie Pietertje 4th, J. M. Kelley; 5th, Mt. Hermon Gladice Colantha, Mt. Hermon School; 6th, Maggie Ormsby Butter Girl, Amos D. Bridges Sons, Inc.; 7th, Harriette of Grayfields, Grayfields Farms; 8th, Cedardale Betsy De Kol, Rancocas Stock Farm.

Cows four years, under five:—1st, Rose Hall Withorn, Grayfield Farms; 2d, Mt. Hermon Gladice Fayne, Mt. Hermon School; 3d, Gretna Walker Inka, Bridgeport City Farm; 4th, Canary Fobes Netherland Elgin, John M. Kelley; 5th, Concordia Fayne Pietertje, Massachusetts Agricultural College.

Cow three years, under four:—1st, Forsgate Model Clothilde, Forsgate Farms; 2d, Agawam Colantha Segis, Gardiner Hall, Jr., Co.; 3d, Pearl Asiatic, Frank P. Knowles; 4th, Quoddy Belle Shepherd, University of Maine; 5th, First Lady of Earl Crest H. B. Ayers, Westerly, R. I.; 6th, Mt.

Hermon Anna Walker, Mt. Hermon School; 7th, Lucky Strike of Grayfields, Grayfield Farms.

Heifer, two years and under three in milk:—1st, Highlawn Rosewood, Frank P. Knowles; 2d, Mt. Hermon Milly Fayne, Mt. Hermon School; 3d, Highlawn Sylvia, Connecticut Agricultural College; 4th, Phyllis Shephard Johanna, University of Maine; 5th, Willow Hill Piebe, H. B. Ayers; 6th, Harriette of Grayfields 2d, Grayfield Farms; 7th, Eastman Alcarta Ruth De Kol, Eastman Hill Stock Farm; 8th, Ferry Farm Hollyhock, Bridgeport Farms.

Heifer two years under three, dry:—1st, Forsgate Segis Ruth, Forsgate Farms; 2d, Beth Colantha Witkop, Massachusetts Agricultural College; 3d, K. S. P. Alcartra Fairmont, Dr. John M. Allen; 4th, Prilly Adirondack Dairy Maid, Rancocas Stock Farm; 5th, Eastman Alcartra Mollie De Kol, Eastman Stock Farm; 6th, Nutmeg Colantha Price, F. M. Peasley; 7th, Daisy Pontiac Konigen Segis, H. B. Ayres; 8th, Segis Pontiac De Kol Johanna, John M. Kelley.

PEARL KORNDYKE MAID

Winner of second prize at the Eastern States Exposition, Springfield, Mass., for cows producing 600 or more pounds butter fat in a year. Third prize in open class. Owned by Bridgeport City Farms.

Senior heifer:—1st, Lady Gerana Hengerveld, Amos D. Bridge's Sons, Inc.; 2d, Wallum Pearl Ormsby Netherland, Arthur D. Files, Ludlow; 3d, Longley's Netherland Prescott, John F. Longley Sons, Inc., Detroit, Mich.; 4th, Highlawn Carrie, Frank P. Knowles; 5th, Lady Thyrsa Walker Segis, Grayfield Farms; 6th, Mt. Hermon Colantha Favorite, Mt. Hermon School; 7th, Mt. Hermon Daisy Rupert, Mt. Hermon School; 8th, Polly Sadie Vale, Gardiner Hall, Jr., Co.

Junior heifer:—1st, Maartje Johanna Sadie Vale, Gardiner Hall, Jr., Co.; 2d, Mildred Shepard, C. L. Pike, Lubec, Me.; 3d, Mt. Hermon Gladice Pauline, Mt. Hermon School; 4th, Highlawn Carrie F. P. Knowles; 5th, Princess Valdessa Pet, Grayfield Farms; 6th, Forsgate Gale Marion, Forsgate Farms; 7th, College Pontiac Shepard, University of Maine; 8th, Lady Pontiac Segis Konigen 2d, H. B. Ayres.

Heifer calf:—1st, Nutmeg Colantha Eveline, F. M. Peasley; 2d, A. O. C. Olive, Gardiner Hall, Jr., Co.; 3d, Apple and Pietertje Colantha, Grayfield Farms; 4th, A. O. C. Mollie, Gardiner Hall Co.; 5th, Blossom Fayne Rupert, Massachusetts Agricultural College; 6th, A. O. C. Laura, Gardiner Hall, Jr., Co.; 7th, Highlawn Pearl Pietje, F. P. Knowles; 8th, Sagadahoc Star Korndyke, Sagadahoc Farms, South Portland, Me.

Cow which has produced 600 lb. or more of butter fat in tests begun at age of five years or over:—Beth of Amherst 3d, Massachusetts Agricultural College; 2d, Pearl Korndyke Maid, Bridgeport City Farm; 3d, Mt. Hermon Gladice Colantha, Mt. Hermon School; 4th, De Kol Vivian Colantha 2d, Bridgeport City Farm; 5th, Shuiling Maid 2d, Massachusetts Agricultural College; 6th, Concordia Pietertje, Massachusetts Agricultural College.

Senior and Grand Champion Bull:—King Grand Reliance, Eastman Hill Stock Farm.

Junior and Reserve Champion Bull:—Forsgate Mable Ormsby Pete, E. Willis.

Cow that has produced 400 lb. butter fat in a year in tests begun at ages between two and five years:—1st, Forsgate Model Clothilde, Forsgate Farms; 2d, Mt. Hermon Colantha Princess, Mt. Hermon School; 3d, Mt. Hermon Gladice Fayne, Mt. Hermon School; 4th, Concordia Woodcrest Fayne, Massachusetts Agricultural College; 5th, Concordia Fayne Pietertje, Massachusetts Agricultural College.

Graded herd:—1st, Mt. Hermon School; 2d, Gardiner Hall, Jr.; 3d, Grayfield Farms; 4th, Bridgeport City Farms; 5th, Dr. John M. Allen.

Young herd:—Gardiner Hall, Jr.; 2d, Forsgate Farms; 3d, F. P. Knowles; 4th, Mt. Hermon School.

AN ACCREDITED HERD DISPERSAL

The accredited herd of D. M. Bartron will be dispersed on the May Apple Stock Farm, four miles north of Tunkhannock, Penna., on Thursday, October 12th. This good herd, which has a reputation for quality that is far more than local, consists of thirty-four head. The animals are well grown, of large size and possess individuality of a high order. The herdsire, King Pietje Aaggie Pontiac, is a son of King Pontiac Alcartra Pietje, who is by the noted Century sire, King Segis Pontiac Alcartra and from the former World Champion four-year-old Fairmont Zerma Segis Pietje 35.61 lb. butter in a week. The dam of this bull has a seven-day butter record of 31.76 lb., her dam 25.31 lb., her dam 31.05 lb. and her dam is the former World's Champion Aaggie Cornucopia Pauline 34.32 lb. butter in seven days, the first animal under full age to make over 30 lb. butter in a week and the champion of her class for seven years. The daughters of this bull have been winning premiums in calf club competitions and at fairs and he himself is an extra good individual. Fifteen of his daughters will be in this sale, five two-year-olds that have been bred and 11 calves ranging from 5 to 12 months old. The dams of these young animals have cow testing association records and have produced from 1,800 lb. to 2,874 lb. milk in 30 days with a high test, in fact the whole herd at the local shipping station has averaged 3.8% butter fat for the past three years.

The May Apple herd is without a doubt one of the best in northern Pennsylvania, a district noted for its milking Holsteins, a territory where owners have depended more upon the returns from the sale of milk than they have from the proceeds of surplus stock.

Mr. Bartron, the owner of the May Apple Stock Farm intends to care for visitors and possible buyers in approved farmer style. As the farm is four miles from Tunkhannock, conveyances will meet the trains and carry visitors to the farm where dinner will be served. It is not necessary to pay cash for stock purchased. Six months' time is offered when proper security is given. This opportunity to obtain stock from an accredited herd is in every way desirable and one of which advantage should be taken by those interested in Holsteins in New York, Pennsylvania and the surrounding states.

Shows, Fairs and Expositions

Oct. 9-14—Meridan, Miss., Mississippi-Alabama Fair.
Oct. 9-15—Little Rock, Arkansas State Fair.
Oct. 10-14—Hagerstown, Md., Hagerstown Fair.
Oct. 10-15—Riverside, Cal., Southern California Fair.
Oct. 12-21—Atlanta, Georgia, Southeastern Fair Association.
Oct. 12-21—Raleigh, North Carolina State Fair.
Oct. 16-21—Jackson, Miss., Mississippi State Fair.
Oct. 19-29—Shreveport, Louisianna State Fair.
Oct. 23-27—Columbia, South Carolina State Fair.
Oct. 26-Nov. 4—Macon, Georgia State Fair.
Oct. 28-Nov. 2—Spokane, Wash., Western Royal Live Stock Show.
Oct. 30-Nov. 4—Savannah, Ga., Savannah Tri-State Exposition.
Nov. 4-11—Portland, Ore., Pacific International Live Stock Exposition.
Nov. 11-18—Kansas City, Mo., American Royal Live Stock Show.
Nov. 17-25—Jacksonville, Florida State Fair and Exposition.
Nov. 9-19—Houston, Texas., Houston Fair.
Nov. 18-25—Kansas City, Mo., American Royal Live Stock Show.
Dec. 2-9—Chicago, Ill., International Live Stock Show.
Jan. 13-20, 1923—Denver, Col., National Western Stock Show.

The Extravagance of Cheap Feed

By George Leslie

THE idea that a ration made up at the lowest cost per pound is a cheap ration is responsible for many low-producing cows and unprofitable dairies. With the present low prices for oats, corn, barley and whaet, herds are getting as their grain ration corn and oats, with silage and alfalfa hay in numerous sections of the country, and are (due mainly to the feeding value of the alfalfa) producing enough to delude their owners into thinking tha tthe monthly milk check is as high as they can expect.

Under this supposedly economical feeding, hundrads of registered and high-grade cows are milking about half the amount they could give if fed a better ration, even though it costs more money, both when dry and in milk.

For instance: Cottonseed hulls at $5 a ton are a good example as compared with cottonseed meal at $40. In the meal at $40 a pound of protein costs 5.3c, while in the hulls at $5 it costs 83c. Again because on many farms timothy grows easily, it is fed dairy cows because the owners consider it cheaper than alfalfa bought in the market. The August 19th average of twelve markets is $21.70 per ton for timothy hay, while the average in the five main markets for No. 1 alfalfa is $25.40. However, the protein in the cheaper timothy—that is cheaper in dollars—is 39c per pound, while in the higher priced alfalfa it is 11½c per pound. In feeding value—the real measure of any feed—one pound of alfalfa hay goes as far as 3¾ lb. timothy.

The cottonseed meal is considerably over 100% more nutritious than the hull. True, the hull is bulky and has an advantage in that respect, fed with other things; but corn fodder is quite as good or possibly better for bulk, and is available on most farms, and has 2½% protein besidse.

The United States Department made an exhaustive study of the records of ninety-six cow testing associations, nearly 42,000 cows; and brought out the fact that cows "having high average production of milk and butterfat averaged *high in income above feed cost* regardless of breed, age, weight, date of freshening and geographical location."

For instance: 724 cows producing an average of 4,605 lb. milk made for their owners $59.58 over feed cost, while 181 cows averaging 10,354 lb. milk, made over cost of feed $156.51, although the price paid for the milk was 11c *less* per 100 lb. That is, the second group with 2¼ times the milk made practically $97 more money, or 175% more than the poorer producers.

The total feed cost for the cows that produced 4,605 lb. milk was $56.94, and for those that produced 10,354 lb. the cost was $94.04. This shows that for $37.10 more spent in feed the cows made 5,749 lb. more milk; the higher producing cows giving 100 lb. milk for 91c while the poorer fed cows cost $1.24 for the same amount of milk.

The cows from whose production the government had these figures complied were farmers' cattle, and the farmers who owned them show by their own herds the extravagance of poor feeding.

A Good Point Often Overlooked

THE letter by the veteran importer and breeder, George E. Brown, appearing in this issue, calls attention to a strong point of the Holstein-Friesian breed that is generally overlooked by breed advocates, especially in the great dairy sections. Yet, it is a point that is of great importance to the dairyman-farmer in the West and the Southwest and in districts where the stock owner practices diversified farming and turns off a few steers or fat animals every year.

Early in 1919, the Kansas State Breeders' Association passed a resolution asking the Holstein-Friesian Association of America "to appropriate sufficient funds to make up a prize list for purebred Holstein steers to be shown at the American Royal and the International Livestock Exposition in the season of 1920, the object of this being to show the farmer of the Southwest what can be done in the way of beef production with the Holstein; and by the slaughtering of these steers, to show the quality of beef that can be made from cattle of the breed."

But, at that time and at the annual meeting of the Association held the following June, the suggestion was overlooked, despite the fact that the transfer fee was, under the pretext of extension work, raised at that time from twenty-five cents to one dollar per animal. In 1922, although the annual meeting was held in Kansas City, right in the great Southwestern territory, the beef-making ability of the Holstein breed was not mentioned either in the meeting itself or in the educational meetings and lectures held in connection.

When the black and white cow was first imported into the country and her blood kept pure, the early breeders strongly stressed the dual purpose qualities of the breed and in their description of types, classified the animals as beef and milk form, milk and beef form, milk form and beef form.

To-day, too many of our breeders value their cattle according to their ability to make records under forced feed and skillful feeding—overlooking the fact that unless the animals in a dairyman's herd return a profit above the cost of feed and care, said dairyman would have to go out of business.

The value of the Holstein cow and the reason for the success of the breed in this country is the ability of the cows to return a profit under the conditions prevalent in the great mass of American dairy farms. And when we breeders individually as dairymen or collectively as an association lose sight of this fact we are on the wrong trail and must retrace out footsteps or else we will experience periodical times of price deflation and readjustment, with consequent unsettling of business and hardship for those who do not have adequate financial reserves to fall back upon.

Her Father—"Young man, would you take my daughter away from me? You don't know a father's feelings at such a time. I must suppress them."

Her Suitor—"Oh, that's all right. If you want to give three cheers, go ahead.'

Keep your advice to yourself and your friends will live to thank you for it.

Cow Testing Association Reports

CALIFORNIA COW TESTING ASSOCIATIONS

By Noel Negley

Reports from the twenty-three cow testing associations in California show the old associations in Los Angeles, Humboldt and Riverside Counties, take the honors for high milk and fat production. Through weeding out the low producers, better feed and care for those that remain, and the use of good purebred bulls, they have climbed to the top in milk and fat production and profits.

Delhi—the new land settlement colony, is a marked exception. This association has small herds of carefully selected stock and has had the services of Dairy Specialist Castle in getting started in the right way. It has only seventeen members with 115 cows tested, but they averaged 1,044 lb. of milk containing 39.8 lb. of fat, and thus led the state in fat production. Excepting one grade Jersey and one grade Guernsey, all the cows are grade or registered Holsteins.

Riverside is second with 530 cows averaging 37.6 lb. fat, and Ferndale third, with 1,527 cows tested which averaged 36.3 lb. fat.

In milk production Delhi is first with 115 cows averaging 1,044 lb. per cow; Los Angeles is second, with 3,791 cows averaging 936 lb. per cow, and Riverside third, with 530 cows averaging 892 lb. per cow.

In proportion of cows producing over 40 lb. of fat during the month, Delhi with 115 cows tested has 56, almost one-half; Ferndale, No. 2, with 1,527, has 567, more than one-third, and Los Angeles, with 3,791 tested, has 1,217, almost a third, that passed the 40-lb. fat mark.

The highest producing individual is Pauline Ophelia, a purebred Holstein owned by Fred Hartsook, of Lankershim, which produced 2,160 lb. of milk containing 123.1 lb. of fat. The highest producing grade is No. 369, a Holstein owned by the Los Angeles County Farm, which produced 2,170 lb. of milk containing 104.2 lb. fat.

Mais Brothers, of Long Beach, has the highest producing grade herd, over fifteen cows. This herd of twenty-seven grade Holsteins averaged 1,411 lb. of milk containing 52.3 lb. of fat per cow. Fred Hartsook, of Lankershim, has the highest purebred herd. His eighty-two registered Holsteins averaged 1,433 lb. of milk containing 51.6 lb. of fat.

Judging from the presence of so many scrub bulls in California one would infer that enough "exits" had not been provided for them. Each Association should see that every scrub bull has an opportunity to "pass out" of this life during the year.

Only two of the twenty-three associations in California reported their herds free from scrub bulls, Riverside County Association, with twenty-two members, and Delhi, with seventeen members, are scrub bull-proof.

One association with seventy-five members reports twenty-nine herds headed by scrub or grade bulls, and another with forty-two members reports that sixteen of them still use scrub or grade bulls and are breeding down instead of up. Other associations report, 2, 3, 6, 7, 9, etc., herds still using scrub or grade herd headers. "Charity begins at home," likewise in each association, "Better breeding begins at home." The replacing of inferior sires with good purebred sires is an important phase of cow testing association work and is usually of more benefit to the members than all of the rest of the work combined.

During July the verdict of " guilty of unprofitable production" was rendered on eighty-six cows, and they were sold to the butcher. The Sonoma-Marin County Association sold eighteen; Inyo County, eight; Kern County, seven; Arcata, twenty-one, and Ferndale No. 2 sold thirty-two.

A. L. Kelley, of Ferndale No. 2, gives some interesting data on the production of cows that received grain and those which did not during July:

848 cows receiving grain produced ..... 39.3 lb. of fat

679 cows not receiving grain produced ..... 31.9 lb. of fat

Increase of ..... 7.4 lb. of fat

This increase of 7.4 lb. of fat per cow at 43c amounts to $3.18. The four pounds of grain fed daily to these cows cost 2¼c per pound, or $2.79 for the month, leaving a profit of 39c per cow. This does not represent the entire profit resulting from feeding, for the cows that are grain fed are in much better condition for profitable production at next freshening.

TESTING IN THE WESTERN STATES

The August Letter issued by the Western office of the Dairy Division, United States Department of Agriculture, says that in the eight states under the jurisdiction of the office, there are 38 testing associations in which are enrolled 26,320 cows. During the month 5,939 animals exceeded 40 lb. of butter fat. Oregon led for production with an average of 34.8 lb. fat for 3,605 cows, but was closely pressed by Washington with an average of 34.45 lb. for 2,124 cows. California with 16,904 cows enrolled, averages 31.8 lb. fat, and the 487 cows of New Mexico, average 30.47 lb. fat. Colorado, Idaho, Arizona and Nevada follow in the order named.

The registered Holstein herd of 23 milkers owned by Whowell & Polley, of Johnstown, Colo., has the highest average of any herd in the Western states with 1,704 lb. milk and 55.6 lb. fat. The grade Holstein herd of 27 cows, owned by Maris Brothers, of Long Beach, Cal., is second with an average of 1,411 lb. milk and 52.3 lb. fat. The Association leading for average production is that operating in the Delhi County, Cal. This association has only 115 cows, but no less than 56 of these made over 40 lb. fat, and the average for the entire number is 1,044 lb. milk and 39.77 lb. fat.

OWNS THE LEADING TWO

Thirty-two cows in the Cambria-Somerset Testing Association produced better than 40 lb. fat, and thirty-nine produced more than 1,000 lb. milk for the month of August. A purebred Holstein heads the list of honor cows with a credit of 1,826 lb. milk, 60.3 lb. fat. She is owned by L. E. Heisel, of Elton, Pa. Second on the honor roll is another purebred Holstein owned by Mr. Heisel, which produced 1,327 lb. milk, 56.9 lb. butter fat. Two other cows in the Heisel herd produced more than 40 lb. butter fat.

Polled Holsteins

combine all the virtues and good points of the greatest breed of dairy cattle on earth with the desirable characteristic of "Hornlessness."

Why cut or burn off horns when they can be bred off by using a "hornless" sire?"

Place a Polled Holstein Bull at the head of your herd. Prices and Quality are both right.

GEORGE E. STEVENSON
727 Connell Building, Scranton, Pa.

MISSOURI TESTING

The list of Missouri honor cows for the month of July is headed by Fobes America Homestead, owned by S. C. Lindsey, Carthage. This heifer is credited with 2,392.8 lb. milk, 75.135 lb. fat. Her dam, Fobes Homestead Rauwerd, of the same herd, is credited with 1,714.4 lb. milk, 64.292 lb. butter fat, and stands in fourth position in the list. Second on the list is Lewismonte Sally Wayne, owned by Geo. Burrell, with 2,049.5 lb. milk, 65.662 lb. butter fat. Jersey cows are in third and fifth positions, with Aaltje Salo Susie De Kol, of the Bellefontaine Farms, sixth, with 1,719.1 lb. milk, 63.624 lb. fat. A Guernsey is next, then follows the University of Missouri cow, Campus Lady Hengerveld Uno, with 1,782.3 lb. milk, 63.45 lb. fat.

It will be seen that Holstein cows held first, second, fourth and sixth places, and six of the leading ten are black and white milkers.

During August 210 cows were tested in thirty-six Missouri herds, Jerseys largely predominating, there being 144 of this breed against 45 Holsteins and 17 Guernseys.

THE STATE CHAMPION

A registered Holstein belonging to Engle and Son, Abilene, was the leader for butter fat production among the cows in the different testing associations of Kansas, according to the last report issued by C. R. Gearhart, extension dairyman in charge of testing association work. This cow produced 76.3 lb. fat in the thirty days. A cow owned by Stevens & Parodee, of the Oswego Testing Association, was second with 69.4 lb. butter fat; a Holstein belonging to H. H. Mosher, Ft. Scott, was the leader for milk production with 2,467 lb., an average of more than 82 lb. a day for thirty days. The herd of ten purebred Holsteins owned by H. Hatesohl, of Greenleaf, led for high herd average in the state for both fat and milk production with 1,369 lb. milk, 45.4 lb. fat. Mr. Hatesohl is a Holstein enthusiast and headed a committee which purchased ninety-three head of Holsteins which were imported into the Linn community in Washington County, last May. He holds the office of chairman of the Holstein breeders in the Washington County Livestock Improvement Association.

IN ALL ILLINOIS

The five highest producers in the Illinois Testing Associations during the month of August were black and white cows, number 2 being a grade Holstein owned by Frank Widmayer, of the Kane County No. 3 Association; the other four purebred Holsteins from the Rock River Farms at Byron. The leader produced 2,182 lb. milk and 82.9 lb. fat. Mr. Widmayer's grade made 2,269 lb. milk and 79.4 lb. fat; No. 3 made 2,564 lb. milk and 76.9 lb. fat; No. 4 had 2,750 lb. milk and 74.5 lb. fat, and No. 5 made 2,099 lb. milk and 73.5 lb. fat. A grade Guernsey was in sixth position, another Rock River cow was seventh, a Widmayer cow eighth, a purebred Holstein owned by E. E. Bain, of DuPage County, ninth, and a grade Holstein owned by David Bleakley, of Joe Daviess County, tenth. The first five cows each produced above 73 lb. fat, and the entire ten above 63 lb.

Nineteen Associations reported their leading cow. In five the leaders were purebred Holsteins, and in six others were grade Holsteins; one was a purebred Guernsey, one a grade Guernsey, and the other six were grade Jerseys.

The Widmayer herd consists of 37 purebred and grade Holsteins, and averaged 1,232 lb. milk and 39.4 lb. fat, leading the second Kane County No. 3 Association, being beaten by a herd of 21 grade Holsteins owned by the Girls' Training School, with an average of 1,137 lb. milk and 39.8 lb. fat.

CULLING THEM OUT

The report of M. L. Gorow, tester of the Stanislaus Association, was left out of the July News Letter of the Dairy Division office in charge of Western testing. In the Stanislaus Association there are 1,255 cows on test averaging 684 lb. of milk containing 27 lb. of fat, and 141 cows produced over 40 lb. of fat. The high cow of the Association was Pleasant View Johanna Aaggie, a registered Holstein, owned by E. W. Looney, of Salida. She produced 104 lb. of fat and 3,027 lb. of milk, putting this cow in second place for last month.

For this month, Mr. Gorow reports that two more testing units are now in operation in his county, making a total of four. Mr. H. B. Tucker, graduate from Purdue University, has just taken charge of one unit, while Mr. H. L. Mead will be in charge of the other unit. This Association now has 3,700 cows on test. They are shipping two carloads of cull cows this month.

LIVE WIRE DAIRYMEN

Three cow testing associations were organized in Jackson County, Iowa, since July 1st, by the Jackson County Farm Bureau. Walter C. Rasmussen is tester for the East Jackson Testing Association. Forty-six per cent of the members have silos; sixty-nine per cent have cooling tanks; and thirty-six per cent have purebred sires. There were 237 cows tested and produced an average of 612 lb. milk, 24.2 lb. butter fat. High cow for the month was a grade Holstein, owned by H. B. Wylie, with a production of 1,378 lb. milk, 53.7 lb. butter fat.

FIRST THREE IN SAME HERD

The cows in the Newport County, Mass., Testing Association were led for production in the month of August by a Holstein owned by Alden Smith which gave 1,755 lb. of 3.5% milk equivalent to 61.42 lb. butter fat. Members of the Smith herd took second and third places with 1,692 lb. milk and 59.22 lb. butter fat and 1,587 lb. milk and 57.13 lb. butter fat.

NEBRASKA TESTING

The agricultural college cow, Varsity Derby Sultana, owned by the Nebraska State University led the honor roll of cows tested during August in Nebraska with a production of 5.665 lb. butter fat in the two days test. This being her fifth lactation month.

Clothilde Topsy King, owned by the North Platte Substation of the college, led the senior four-year-olds with 4.429 lb. butter fat. She was closely followed by Hopes Daisy Cornucopia 2d, owned by the Woodlawn Dairy of Lincoln with 4.331 lb. butter fat. Varsity Derby Gelta, of the college herd, made 4.197 lb. butter fat in the eleventh test month. She is a junior four-year-old. The senior three-year-olds were led by Fay Huntress, of the F. M. Blakeslee herd with 4.393 lb. fat. The Union College junior three-year-old U. College Bess DeKol Alcartra led her class with a production of 3.716 lb. butterfat. Dame Pontiac Konigen, of the Woodlawn Dairy herd, was the first senior two-year-old with 3.726 lb. butterfat and the class of junior two-year-olds were led by S. K. S. A. Korndyke Elsie, of the Union College herd, with 3.370 lb. fat. Jean Gerben Lyons and Star Cornucopia DeKol Segis her stable mates were second and third in the same class.

DO YOU NEED
HOLSTEINS?

Northern Pennsylvania is the home of large, healthy, heavy-milking herds whose product is shipped to New York City. Good authorities claim that the average production of its dairy cows are not exceeded in any other territory in the entire United States while individuality is of the best.

I know this district and its animals and can fill your requirements at a reasonable price.

D. B. YORK
Brookside Stock Farm, Troy, Pa.

AUGUST IN NEBRASKA

August was a severe month for the cows of Scotts Bluff County, Nebraska, reports Carl Ryberg, of the Cow Testing Association. Only twenty-one of the 313 cows tested during the month exceeded 40 lb. fat and only 9 produced over 50 lb.

Sam Barton's herd of eighteen registered Holsteins again ranks first in production, averaging 1,148 lb milk, 36.9 fat.

M. L. Kiesel's herd of 7 grade and purebred Holsteins ranks second with 35.5 lb. fat, and J. W. Moore's mixed Holstein herd ranks third with 32.9 pounds of fat.

The individual honor for highest production for the month goes to Mable, a registered Holstein belonging to Mr. Barton. Her production for the month was 2,145 lb. milk and 63.0 lb. fat.

The second highest producing cow was Katie, a registered Holstein, belonging to Mr. Kiesel, which produced 1,801 lb. milk and 57.6 lb. fat.

The average fat production of the 313 cows tested was 22.6 lb. fat, which is the lowest since the first month last October. This shows that during late summer production is at the lowest ebb, and, due to dry, hot weather, flies and short grass, it is the best time of the year to have cows go dry. Cows freshening in the fall and early winter produce more milk for the year than cows freshening in the spring that must drop in production during hot weather.

SOUTH FRANKLIN COUNTY

There were 21 herds tested during September in the South Franklin County, Penna., Cow Testing Association. The leader for the month is Bess, a grade Holstein owned by W. F. Barkdoll with 1,350 lb. milk and 47.3 lb. butterfat. Her average test was 3.5%. Second and third were grade Holsteins owned by E. S. Grim, Nell making 46.2 lb. fat from 1,320 lb. milk, and Star producing 45.5 fat from 1,259 lb. milk. It is an interesting coincidence that all three of the leaders average 3.5% fat in their tests. The ten leading cows include three registered Holsteins, four grade Holsteins, two grade Guernseys and a purebred Guernsey. Two new members, H. E. Izer and J. Brady Smith joined the Association, the tester of which is R. S. Heisey.

IN SUSQUEHANNA

The milkers in the Montrose-Great Bend Cow Testing Association consist of about 60% purebred Holsteins. This Association operates in Susquehanna County, Penna., and W. B. Jones is the tester in charge. During July and August, 26 herds were tested. In July there were 214 cows in milk and in August 286. Each month 13 cows exceeded 40 lb. fat. In July four exceeded 50 lb. and in August there were two above this mark. In the first month 30 animals exceeded 1,000 lb. milk and 11 exceeded 1,200 lb. while in August 23 cows made more than 1,000 lb. milk in the month and 13 did better than 1,200 lb.

Of the ten highest cows in July seven were registered Holsteins and two were Holsteins and one was a grade Guernsey. In August eight of the ten highest cows were registered Holsteins and two were grade Holsteins. One of these grades led the association with 59.4 lb. of fat and did this remarkable work on two milkings per day and on pasture. She was second highest in July with 54.1 lb. fat.

WISCONSIN'S CHAMPION ASSOCIATION

The Allenton-Kohlsville Testing Association completed its third year of work last March and has the highest record of any cow testing association in Wisconsin. The average is 10,188 lb. milk and 358.6 lb. butterfat a lead of 33.5 lb. butter fat above the Cedar Grove Association of Sheboygan County which until now has been in the lead.

The third year of operation shows a gain of 1,103 lb. milk and 42.5 lb. butter fat over the second year and of 2,006 lb. milk and 72.5 lb. fat over the first year. The Association's average test for the three years was 3.5%.

All the herds in this Association are Holstein and four have all registered animals, practically all the herds are headed by a registered sire. Other things not generally found in an Association are a cow which gave over 100 lb. milk a day, a cow that produced over 100 lb. butter fat in a month and a two-year-old with over 70 lb. butter fat in a month. All farms, with the exception of four, have names. Thirty-five cows were sold for beef and 52 for dairying of which a number went to Mexico and California. No dairy substitutes are used on the farms of its members. Twenty-seven of the 28 members have an automobile, seven have tractors and four have milking machines.

The highest herd in the Association averaged 13,553 lb. milk and 479.3 lb. butterfat and was owned by Jake Martin. The three next highest herds were 13,814 lb. milk 444.9 lb. butterfat, owned by William Pamperin; 13,086 lb. milk, 440.5 lb. butterfat, owned by Charles Roecker; and 12,957 pounds milk, 437. lb. butter fat, owned by C. F. Rosenthal.

TESTING IN WISCONSIN

Forty-two cows of the Dale-Hortonville Cow Testing Association each produced more than 40 lb. butter fat during the 30 days ending September 1st. Of this number 34 were grade Holsteins, one was a purebred Holstein, two were grade Guernseys and three grade and two purebred Jerseys.

A seven-year-old grade Holstein owned by Milford Bottrell was high cow for butterfat, producing 65.8 lb. from 1,497 lb. milk, her test being 4.4%. An eight-year-old grade Holstein, owned by Otto Meyer led for milk production with 1,531 lbs. but only made 50.5 lb. fat.

During the 31 days of August 401 cows in 28 herds were tested in the Taylor-Hixton Association. The high cow for the month is the registered Holstein Leona Yeslet Korndyke with 1,847 lb. milk and 60.9 lb. butter fat. Second is a grade Holstein owned by Charles Jesse with 1,274 lb. milk and 53.5 lb. fat. Five different herds averaged over 1,000 lb. butterfat a day for every cow in the herd. Charles Vincent purchased five purebred Holsteins, some have A. R. O. records and all are from record dams.

A registered Holstein owned by Mrs. B. Motl led the Marshfield Association for the month of July with a production of 63.9 lb. butter fat and 1,938 lb. milk. Mrs. Motl's herd also took first place for high average, her twelve registered and grade Holsteins having averaged 38.5 lb. fat. Registered cows in the honor list were owned by C. F. Schroeder, Albert Schifferl, Anton Sternwies, Jack Heinzen and J. R. Esser.

A grade Holstein owned by Louis T. Williams, of Clinton, led the Clinton Testing Association for the month of August and the William's herd took the herd honors, reports tester H. E. Miller. The cow produced 1,426 lb. milk and 55.6 lb. butterfat and the 10 cow dairy averaged 954 lb. milk and 35. 7. lb. butter fat. A purebred Holstein owned by Mrs. James Menzies, of the Aberferdy Farm, Janesville, Wis., produced more milk, making 1,706 lb., but its butter fat total was only 51.2 lb. There are 374 cows and 25 herds in the Association of which 20 cows each produced more than 40 lb. fat, while two herds, these of William's and P. E. Offerdale & Sons, averaged

OF COURSE YOU KNOW

of the great records back of my senior sire, the grandly bred

Plum Farm Spring Copia

how that his dam produced 32.73 lb. butter in 7 days averaging 98 lb. milk a day, and that his four nearest dams, all above 30 lb. averaged 35.31 lb. butter and 628.75 lb. milk in 7 day official work.

The sires back of him are also outstanding. They include Spring Farm Pontiac Cornucopia, sire of 30 lb. heifers; Sir Korndyke Cornucopia, four above 30 lb.; King of the Pontiacs, the only double century sire; Pontiac Korndyke (twice); Hengerveld De Kol, the first century sire and the century sire, Aaggie Cornucopia Johanna Lad.

My cows are bred to produce and they pay their way right along. That is why we can offer you good ones at reasonable prices.

A. W. DOWNTON

Starrucca, Penna.

more than a pound of fat a day for the entire month. Nearly all the honor cows are black and white.

A purebred Holstein owned by Oscar Witte won the high honors for August in the Mishicot Testing Association with a record of 1,542 lb. milk and 61.6 lb. butter fat. Thirty-four of the 425 cows tested exceeded 40 lb. during the month, with Charles Kornely's herd in first place with an average milk production of 963.2 lb. and 34 lb. butter fat.

The Cherokee-Marathon Cow Testing Association has been reorganized and officers elected. E. A. Brehm is president, L. Sachse, vice-president, and L. Schommer, secretary and treasurer. H. R. Kops will continue as tester.

The annual report of Mr. Kops indicates a splendid quality of animals owned by the members of the Association and warrants continuation of the work. The high cow in the Association was a five-year-old Holstein weighing about 1,300 lb., and owned by Walter Wurthman, of Hillandale Farms. She carried twin calves 153 days of the testing year, was not grained on pasture and produced 516.3 lb. fat, 13,722 lb. milk and made $131.98 profit. Her grain mixture contained gluten, oats, barley, bran, oil meal and cotton seed meal. These were interchanged so as to make a mixture carrying about 14% protein and she received a pound of grain for about every four pounds milk. Her roughage was timothy hay, oats, straw, alfalfa and corn silage. Mr. Wurthman owned the second, third, sixth, and eighth cows in the Association. Four of his animals made over 400 lbs. fat. His herd of eleven grade Holsteins averaged 10,345 lb. milk and 357.4 lb. fat. This splendid record was not achieved by accident as a purebred bull has headed the herd for the past 15 years and private tests have been made of the milk taken once a month and tested either at the local cheese factory or at home. Ed. Brehm had four cows in the honor list, two of which produced over 400 lbs. fat and H. Rein had a cow that made 354.2 lb. fat. The entire ten high cows were grade Holsteins.

During the month ending August 15th, 419 cows in 37 herds were tested in the Comstolk Association which operates in Barron County. Forty-six cows produced over 40 lb. butter fat and seven over 50 lb.

The high cow for the year is Sophia, a purebred Holstein owned by Silas Catlan. During the eight Association months she has produced 326.8 lb. fat. A grade Guernsey is second with 322.2 lb. fat. Howard Organ has three purebred Holsteins averaging 1,311.5 lb. milk and 43.86 lb. butter fat during August. Fifteen herds averaged over a pound of fat a day for each member. The official tester is V. S. Gerber.

The report of the Viroqua Association for August shows that 445 cows were tested, of which 23 produced 40 lb. or more of butter fat. The books show that the production cost is lower for those who supplement their pasture feeding with a grain ration and the production is considerably higher.

The registered and grade Holstein herd of Cornelius Sebion holds the high herd average with 838 lb. milk and 33 lb. butter fat with an average test of 4%.

During the month of August 118 cows in the Oconomowoc Association each produced over 30 lb. butter fat and 42 exceeded 40 lb. fat. In all, 529 cows were tested. The highest producer in a purebred Holstein belonging to Henry Peterson, she producing 1,596 lb. milk and 63.8 lb. butter fat. The high herd is that of H. E. Dickenson, with an average of 1,100 lb. milk and 44 lb. butter fat.

The August report of the Wrightstown-Greenleaf Association shows that a nine-year-old purebred Holstein, owned by Boehike Brothers, of Little Rapids, led with a production of 1,581 lb. milk and 68 lb. butter fat, her milk testing 4.3%. Second to her is a grade Holstein owned by Neil Qautsoe with 1,479 lb. milk and 62.1 lb. fat and an average test of 4.2%. Of the 480 cows tested 34 produced above 40 lb. butter fat. All the herds in this Association are tuberculin tested.

A registered ten-year-old Holstein with 57.3 lb. butter fat and 1,686 lb. milk carried off first honors in the Pulaski Association last month. She was owned by John Malczewski, of Pulaski.

No less than 472 cows were tested during August in the Shirley-Denmark Association of which 82 produced over 40 lb. butter fat and the entire number averaged 29.4 lb. fat. There were 123 cows which were fed grain and their average was 37.1 lb. fat while the remaining 349 which did not receive grain averaged only 26.7 lb. fat.

The high herd consisted of 11 purebred and grade Holsteins owned by Henry Benecke, of Denmark. They averaged 1,384 lb. milk and 46.2 lb. fat. They were fed an average ration of six pounds grain a day. For the months of June and July, Mr. Benecke's herd led all herds in the Wisconsin Cow Testing Associations for average production.

The high cow was a grade Holstein owned by Arch Gilcrece, of Denmark, she making 1,488 lb. milk and 75.9 lb. fat. There were 14 herds which averaged over 30 lb. fat. Seven of these were fed grain and not one of the remaining 12 herds which did not average 30 lb. fat were fed grain.

RIGHT IN FRONT

The leading cow in the Holmen, Wisconsin, Testing Association for the month of July is a registered Holstein owned by Clarence Holter, with 1,247 lb. milk, testing 4.6%, and making 57.3 lb. butter fat.

"Stop, Look, Listen," is not safe. You stop, take a look, marry her—and then you listen.

WISHED HE HAD STARTED BEFORE

S. Christensen, of the Washoe County, Nev., Association, reports that E. Plumb, one of his Association members, after testing six months and having weeded out 50 per cent of his cows, says: "I wish that I had started testing 20 years ago. I certainly would be much better off than I am now." Claud Lima just purchased a registered bull calf from H. L. Long, of Fallon, the well-known Nevada breeder of registered Holsteins.

BONES IS CHAMPION GRADE

The grade champion producer at the Minnesota State Fair is a cow called "Bones" owned by E. D. Oliver, of Amboy, Minn. In a year she produced 22,367.2 lb. milk carrying 950 lb. butter. She was milked three times a day for ten months and twice daily during the remainder of the lactation period.

"Bones" was shown in the cow testing association exhibits. Wm. S. Moscrip said she was the true aristocrat of the state's greatest livestock show and also the holder of the world's record for a grade cow.

HOUSING THE AMERICAN ROYAL

The American Royal Livestock Show is to have a permanent home at the Kansas City Stockyards. The new building will be completed early in October, in plenty of time before the 1922 show which opens November 18th for the twenty-fifth event.

The arena building proper is 425 feet long and 220 feet wide, with two floors, the arena being on top of these two floors. The livestock annex is 200 feet long and 260 feet wide, and two stories high. The principal exposition building is 625 feet long, part 220 and part 260 feet wide, with a total floor space of over six acres. The oval-shaped arena on the second floor of the principal building is 225 feet long and 125 feet wide, one of the largest indoor arenas in the world. A 12½-foot promenade runs around the arena, and back of this are the box seats, elevated to four feet above the arena floor.

Nov. 16—Columbus, Ohio, Ohio Holstein Breeders' District Sale, Ohio Holstein-Friesiah Association, Mgrs.
May 2, 1923—Clintonville, Spring Consignment Sale.

OHIO VALLEY BREEDERS' SALE

The Ohio Valley Holstein-Friesian Breeders' Association plan to hold their first annual sale on the state fair grounds at Wheeling, West Virginia, October 19th, at which time 52 head of registered Holsteins will be offered to the highest bidder.

With a view to establish a sale and a reputation that will bring buyers from a long distance, the breeders obtained the services of E. J. Perry, the dairy specialist of the West Virginia University Extension Division, and they had Mr. Perry select and approve the cattle for the sale which includes the tops from ten different herds.

An indication of the quality of this sale is the fact that the offerings include Bridess De Kol Wayne Hengerveld, the grand champion cow at the recent West Virginia State Fair. There will be a number of other prize winners in the sale which calls for 19 cows fresh and soon to freshen as well as bred heifers and young stock. Daughters of Pontiac Aaggie Korndyke, the famous Ohio long distance sire, are also scheduled as well as granddaughters of this bull, of Korndyke Fayne Butter Boy and of the century sires, King Pontiac Champion, Sir Veeman Hengerveld and Colantha Johanna Lad, bulls whose descendants have made large records and are noted for production and high class individuality.

There will be a few males in the sale, eight bull calves and a two-year-old son of Sir Veeman Hengerveld from a daughter of King Korndyke Sadie Vale, a combination of blood lines that stands with the best. Every animal offered for sale is guaranteed a breeder and the animals are offered tuberculin tested and sold with a 60-day re-test guarantee. Catalogs can be obtained now from the sale manager, Colonel T. H. McColloch, at Wheeling, W. Va.

KINGSTHORPE FARMS DISPERSAL

By E. M. Hastings

A total of $5,019.50 for the forty registered Holsteins comprising Frederick A. King's herd which was sold in public auction at Kingsthorpe Farms on September 26th, means an average of just a little over $125 per animal, and while this may not seem high in comparison with other notable sale averages, it appears creditable when it is understood that practically half of the herd consisted of calves and young bulls. Well-known breeders who were present expressed the opinion that the more desirable animals sold remarkably well, considering present business conditions. Prospective buyers were present from Pennsylvania and Michigan and the most of the New England States were represented among the two hundred or more spectators in attendance, but while some of these out-of-state visitors helped with substantial bids, the animals were all sold to Massachusetts buyers—possibly because shipping costs stood in the way of buying for distant points at the prices realized. The sale arrangements were fully up to the Kingsthorpe standard and in the carefully built pavilion, located next to the hospitable porch of the stone summer house with a wide expanse of lawn stretching across to the colonial residence of the owner—a building that dates back to 1706—the sale was staged amid ideal surroundings. The youngsters of the herd were not in condition to sell to good advantage, having been allowed to "rough it" out of doors with results that were reflected in the low prices at which they were struck off. The older animals were in fine working order and presented a very attractive exhibit. The herd was remarkable in respect to the health of its members, not a single reacting animal ever having been known on the farm. The herd was fully accredited. This achievement in connection with the very fair records made at Kingsthorpe Farms under every-day working conditions and the degree of show quality attained in the herd as indicated by important prize-winnings at the fairs point to Mr. King as one of New England's constructive breeders, one who has wrought conscientiously and who has obtained results that were worth while.

The Kingsthorpe Sale, in my judgment, affords evidence of a demand in New England for healthy animals combining size and individual quality with known producing ability; and for such animals I believe the New England purchaser is willing to pay a fair price.

W. G. Crandall, Homer, N. Y., did the selling with the writer in charge as Director of the sale. Following is a list of the principal transactions:

Animal	*Purchaser*	*Price*
Agawan Margaret, 3 yrs,	D. A. Walker, Northboro	$400.00
Graylawn Hengerveld De Kol, 5 yrs.,	Le Roy S. Putnam, Rutland	365.00
L. P. Patty Alcartra, 4 yrs.,	John Tuck, Auburn	300.00
Dorfland Doris Johanna Segis, 6 yrs.,	Producers' Dairy Co., Brockton	285.00
Graylawn Johanna Korndyke, 2 yrs.,	Wm. F. Deens, E. Longmeadow	225.00
Jessie Arona Korndyke, 3 yrs.,	R. A. Rice, Southbridge	190.00
Queen Lilioukalani, 10 yrs.,	Fred Young, Boylston	180.00
Beauty Allamuchy Tricksey, 5 yrs.,	McLean Hospital, Waverly	175.00
Hengerveld Cornucopia Ondinus, 3 yrs.,	F. C. Stark, Boylston	175.00
Kingsthorpe Barnum Fayne (Male), 1 yr.,	Geo. W. Hodgman, Concord	175.00
Kingsthorpe Johanna Segis, 1 yr.,	Jas. P. Tratnor, Auburn	175.00
Graylawn Dummerston Mercedes, 5 yrs.,	F. C. Stark, Boylston	170.00
Graylawn Pontiac, 4 yrs.,	F. C. Stark, Boylston	150.00
Kingsthorpe Margaret Alcartra, 1 yr.,	Geo. W. Hodgman, Concord	145.00

SUSQUEHANNA BREEDERS' SALE

By W. Hugh Jones

The sale of the Susquehanna County Holstein Breeders was considered successful. The local dairymen were busy filling silos which kept many of them away and probably unfavorably influenced prices. The fact that all animals were from accredited herds and herds under federal supervision was a great advantage.

Individually the animals met a very high standard.

The sale was absolutely free from by-bidding, the consignors taking what they got and saying nothing. Before the sale everyone of the consignors signed an agreement as follows:

"We hereby pledge ourselves that we will not bid on any animals consigned by ourselves to this sale or have other representatives bid for us in any way whatsoever."

They all loyally abided by this agreement. The management considers the sale was absolutely straight and clean and quite a number present remarked that it was the cleanest sale they had ever known without any exception.

While the New York State Holstein-Friesian Association is now advertising the sale of cattle from herds that are accredited and under federal supervision, Susquehanna County, Penna., has accomplished the same very successfully and it is not without reason to expect that the time is not far away when all sales held will be from herds under federal supervision.

How many states, let alone counties, can at the present time hold consignment sales of cattle of so high a standard of individuality and from herds under Federal Supervision?

The supreme object of the management of the sale was to deserve the confidence of the buying public. This sale will go far towards advancing Susquehanna County in its reputation for good cattle and honest methods. Buyers will now be on the lookout for the sales which will follow, it is hoped, in a regular series.

The highest price was $425, which was obtained for K. P. A. P. Prilly, a heifer nearly two years old consigned by the Lathrop Estate. She was a daughter of King Pontiac Alcartra Pietje and her dam was a 22 lb. three-year-old of the Prilly strain. The Central Poor District of Luzerne County were her purchasers and they obtained a number of other good ones in the sale. Meadowside La Polka Spring Farm, a daughter of King Tweede Spring Farm, consigned by H. R. Decker, was struck off for $365 to R. B. Williams, of Lynn. Her heifer calf, born September 2d, went to Robert Winship, of Waverly, for $105, so that this cow and her 13-day-old daughter totaled $470. The Central Poor District paid $360 for Korndyke Craige Hill De Kol, a two-year-old heifer of superior individuality consigned by F. E. Mack. She was second as a senior yearling at the 1921 Susquehanna County Fair. The Central Poor District took Lady Fobes Koningen for $355. She was fresh and was a real good two-year-old from a 28-lb. four-year-old granddaughter of Pontiac Korndyke. E. D. Ellsworth consigned her. Four other animals exceeded $350, and seven others reached $300 or more. The auctioneer was Col. Geo. Baxter, with Wood in the box.

Animals bringing $150 or more with names and addresses of purchasers are:

	Consigned by H. S. Brown, Thompson, Pa.	
4	Countess Pontiac De Kol, 6 yrs., St. Michael's Industrial School, Whites Ferry, Pa.	$275
5	Tromp Dijkstra Walker, 6 yrs., Edwin Zimmerman, Lehighton, Pa.	180
6	Gibson Copia Korndyke De Kol, 9 yrs., Lloyd Fancher, Montrose	150
7	Erma Walker Pietje, 3 yrs., Central Poor District, Retreat, Pa.	200
8	Netherland Copia, 7 yrs., Edwin Zimmerman	160
9	Alcartra Johanna Pietje Maid, 5 yrs., Central Poor District	350
	Consigned by H. D. and T. J. Brown, So. Montrose, Pa.	
11	Rosalind Clothilde, 9 yrs., Edwin Zimmerman	150
12	Highland Tobe Peggy Segis, 4 yrs., Edwin Zimmerman	275
	Consigned by H. R. Decker, So. Montrose, Pa.	
13	Meadowside La Polka Spring Farm, 4 yrs., R. B. Williams, Lynn	365

(Continued on page 670.)

BENNETT BACK FROM EUROPE

Eugene B. Bennett, well-known Pennsylvania Holstein breeder, recently returned from a trip to England and Holland. In each country he looked over noted cattle breeding establishments and met prominent owners of his favorite breed.

The Syracuse Fair was right after Mr. Bennett's return and, the opportunity to contrast the breed in three different countries was too great a temptation to resist, so Mr. Bennett was in evidence on judging day and intentedly followed Bob Hæger's placings.

Mr. Bennett, who now resides at New Haven, Conn., was president of the Pennsylvania Federation of Holstein-Friesian Clubs at the time that body and its friends entertained the Philadelphia meeting of the Holstein-Friesian Association of America.

THE NEBRASKA BULL ASSOCIATION

A coöperative Holstein-Friesian bull Association is being formed at Kearney, Nebraska. Luther L. Burt, of Gibbon, is president and James Haug, of Shelton, secretary.

The indications are that there will be at least three breeding blocks and possibly four and the herds represented will include nearly 200 Holstein females. The dams of the bulls are to have year records of at least a thousand pounds of butter at full age or the equivalent.

Patience is a virtue, but there are others.

THE FRED W. ZWILLING DISPERSAL

In the Fred W. Zwilling dispersal sale which was held at the farm of the owner, at Lancaster, Erie County, N. Y., September 23d, the herd of nineteen animals, of which five were calves and four were yearlings, brought a total of $2,905.00, or an average of nearly $153.00 per head. The offerings were in good condition—just as might have been expected because Mr. Zwilling is known to be a cattleman of more than ordinary ability. Considerable local interest was manifested in the sale, as was indicated by the very fair attendance. Glenn R. Mead, of East Aurora, served as auctioneer in his usual efficient manner and E. M. Hastings directed the sale. Mr. Zwilling's herd was on the accredited plan and the cattle were sold subject to a 60-day health guaranty.

Following is a list of the principal sales with names of purchasers and prices paid:

Bernice Korndyke Rag Apple De Kol, 5 yrs., Erie County Farm, Wende, N. Y.	$350.00
Bernice De Kol Rag Apple Korndyke, 4 yrs., Erie County Farm, Wende, N. Y.	250.00
Beauty Burke De Kol, 9 yrs., Darcy & Drosendahl, E. Aurora, N. Y.	225.00
Aaggie Spofford Rag Apple, 4 yrs., H. C. Fischer, E. Aurora, N. Y.	225.00
Empress De Kol Burke Pontiac, 2 yrs., H. C. Fischer, E. Aurora, N. Y.	225.00

Lady Hengerveld Segis, 9 yrs., Wm. Pohl, Lancaster, N. Y.	150.00
Bernice Korndyke Burke De Kol, 1 yr., Harry Yates, Orchard Park, N. Y.	140.00
Aaggie Spofford Burke, 1 yr., Harry Yates, Orchard Park, N. Y.	140.00

HOLSTEINS—DUAL PURPOSE ANIMALS

By George Brown

The question of a dual purpose cow is being discussed in leading stock papers. Some men claim that such a cow cannot be. Others, that there is a strain of Shorthorns that are profitable dual purpose cows.

I have always claimed that well-bred Holsteins are ideal dual purpose cattle; profitable for the ordinary farmer and dairyman for beef as well as milk.

When I brought the first of the breed to the Middle West in 1873, the strongest argument I used was: "They are the most profitable milk producers, will yield in proportion to the way they are fed and cared for, and when dry, will fatten quickly and afford a profit for beef."

The first man to become interested was a prominent dairyman in De Kalb County, Illinois, by name of Severy. He became very enthusiastic and made even stronger claims for their beef qualities than I did. One of his neighbors, who was breeding Shorthorns, became a little jealous and went to Mr. Severy, saying: "You are making such great claims for the beef qualities of Holsteins, I would would like to test them by feeding one of your calves alongside of my Shorthorns." Severy said, "All right, go and pick one and I'll give it to you." He did so, and the next spring the man came back, saying: "Severy, I don't think I had a fair sample of your calves, for that calf beat my Shorthorns on the same feed. I would like to try again." "Very well," said Severy, "pick another." The following spring he came back reporting the same result.

I made the first exhibit of Holsteins at fairs in the Middle West. At St. Louis, the managers came to me and asked which I preferred as judges, Jersey or Shorthorn men. I said I did not care which, if they would take into account their *dual* qualities.

I had many chances, while making my annual trips to Holland, to realize the feeding qualities of Holsteins. One year I saw the fifth lot of cows that had fattened that season on one pasture, on their way to Deptford market, in England. I also had a chance to learn the quality of Holstein beef, for none other could be had at the hotels and eating houses. I never ate better anywhere.

During the time that I was importing and breeding Holsteins I had but one occasion to sell one for beef. This was an imported heifer four years old; I had never tried to fatten her properly, for I had hoped she would breed. I sold her to a local butcher, requesting him to keep a careful account of the good meat and offal He did so, and reported that she equaled his best Shorthorns.

Grade Holstein steers have won prizes at the Chicago International. A few years ago a lot were sold at top price from an Ohio farm, to go to England for Christmas beef.

I have always contended that the Holstein Association was making a mistake in neglecting to arrange for beef classes for Holstein steers and dry cows at our leading stock shows and so force Shorthorn and Hereford breeders to quit referring to them as the "soup bone breed."

My claim is in the interest of the ordinary dairyman, not that of breeders, who stuff and cram their cows, milking them three or four times a day to force them to give the last drop of milk possible. I call these breeders one-idea men. Their cows, I admit, are of little value for beef when their milking ability is exhausted.

I noticed a piece in the Breeder and Dairyman, August 22d, page 486, that those who think Holsteins are unprofitable for beef should read.

BABY ALARM CLOCK

One day young aunty was left in charge of the small apartment and the two children.

"I'm going into the kitchen to prepare baby's milk, Bobby," she said importantly; "you be sure to call me when he wakes up."

"Oh, you'll hear him for yourself," flung Bobby; "that kid turns himself on the minute he wakes up—he's his own alarm clock!"

Herd Established Sixteen Years

JONES SOLD A GOOD ONE

At the Susquehanna County Fair, held at Montrose, Penna., B. F. Jones & Son exhibited the four cows they had consigned to the Susquehanna County Holstein Breeders' Sale. One of the quartet was Segis Tobe Korndyke, a daughter of Tobe Rag Apple Korndyke, a former herdsire. Her dam was a 25-lb. granddaughter of Pietertje Hengerveld Segis. She won first prize in the aged cow class and took the senior and grand championships as well. In the sale she brought $305, being struck off to that sterling Holstein breeder, Robert Winship, of Waverly, Penna. Tobe was heavy with calf by Woodmont Echo Sylvia Champion, the first prize three-year-old bull at the 1922 New York State Fair who was the son of Butter Boy Empress, the grand champion cow at Syracuse last year.

GAY'S MILLS, WISCONSIN

At the fair at Gay's Mills, Wis., the Garvey & Johnson herd and the herd of George Brown divided most of the honors, Brown taking the junior, senior and grandchampionships for females, while Garvey & Johnson won the three male championships. Other prize winners were Frank Dull, John Campbell, William Raynor and Florence Withea. The latter young lady won first on her senior heifer calf in the junior class and then repeated in the open class. James Ingham won first place with his junior calf in the Boys' and Girls' division.

NOT EVER

Rastus (to Sambo in an undertone)—"I ain't the man I uster wuz. Time wuz when I could whip the ol' woman in a fair, stan' up fight."

The old woman (overhearing)—"You's a black liar, Rastus Johnsing. Time wuzn't, time ain't, an' time ain't going to wuz."

BradCoHolingenKorndyke

is my junior herd sire

He is by King Holingen Fayne Valdessa who was by King Valdessa from the world champion Finderne Holingen Fayne, 37.34 lb. butter in 7 days, 1,395.06 lb. butter in a year as a junior three-year-old,

His dam, a daughter of King Model, produced 22.52 lb. butter in 7 days, 90.88 lb. butter in 30 days and 873.18 lb. butter, 18,324.9 lb. milk in a year, calving at 26 months. Her dam produced 947.72 lb. butter in a year as a two-year-old, and 1,050 lb. butter in a year as a six-year-old, and was by King of the Pontiacs from a 27.86 lb. cow that averaged 81.2 lb. milk a day.

A son of this bull from a daughter of

KING PONTIAC ALCARTRA WAYNE

would make a splendid herdsire. Let me price one to you.

HARRY C. GATES

Canton Penna.

Buy your bull from an Accredited Herd

SUCCESSFUL MINNESOTA DAIRYMAN

In 1910 J. C. Campbell, of Hopkins, Minn., quit school. His mother had taken his grandfather's farm over in 1904 and it had been run on a plan of buying cows on the market, feeding them heavily, milking them until they began to go dry and then, when they were fit, shipping them for beef and buying fresh ones with the proceeds. Mr. Campbell hated the variegated milkers and induced his mother to go with him to Northfield, where they invested $1,000 in twelve grade Holsteins and a purebred Holstein bull.

The experiment was not a decided success. While the herd became black and white the milk supply did not materially increase. A second sire was purchased, who was something more than a painter and his offspring increased the average milk production of the Campbell farm. In 1917, the Campbells joined the South Hennepin Cow Testing Association, which at that time had twenty-six members. The Association figures show that the thirty-one cows milked at the Campbell farm last year averaged 8,399 lb. milk which was sold directly to restaurant consumers. One of the cows made 9,646 lb. milk, 367.3 lb. butter fat in 1920.

Since intensive dairying has been practiced on the farm the cow value and the cow production has multiplied and the farm land has been enriched. Mr. Campbell believes the fertility of the soil has been doubled. Recently three purebred Holsteins have been added but, with the exception of these, the herd is descended from the grades bought in 1910. The present herd sire is Sir Beets Homestead Hartog, champion at the last Hennepin County Fair.

THE STEVENSON DISPERSAL

The news that George E. Stevenson, who last year was first vice-president of the Holstein-Friesian Association of America, intends to disperse his high-class herd will come as a surprise to his many friends. The day set is November 8th, at which time sixty head of registered Holsteins from a herd under State and Federal supervision will be offered at public sale.

Until the great war, the Stevenson herd ranked as one of the greatest in the country from a record making standpoint and the story of his noted Keystone Beauty Plum Johanna, the high-record member of the Stevenson herd is familiar to all Holstein enthusiasts. This famous cow, after making a very large record as a three-year-old came back as a four-year-old and in strictly official test produced over 25,000 lb. milk, 1,294 lb. butter in a year which was world's record in the class at the time of making and still is the largest record ever made by a senior four-year-old in a year of strict official test.

Many of the members of the herd now to be sold are descendants of Keystone Beauty Plum Johanna. Some of these have made year milk records as two-year-olds ranking from 12,000 to 16,000 lb.

The Stevenson herd has also been noted for its high average test. In the month of August twenty-one of the animals in test averaged 3.76% butter fat. The desirable character of hornlessness is predominant in the Stevenson herd and bulls from the Origin Farm have gone to distant states at very satisfactory prices. In this connection we might mention that the late Peter Small, regarded by many as one of the greatest Holstein breeders and developers instrumental in developing the black and white breed, headed his famous herd with a Stevenson bull and this animal still stands at the head of the splendid herd of cattle owned by the Ona company, one of Ohio's leading herds.

CORNUCOPIA PLUM JOHANNA

1056.79 lb. butter in a year. This cow, and her five A. R. S. O. daughters have long time records averaging 18,723.1 lb. milk, 918.35 lb.

Two real good records recently completed in the Stevenson herd again drew attention to Cornucopia Plum Johanna, a cow that died last year when sixteen years old. Besides being the dam of Keystone Beauty Plum Johanna the former world's champion four-year-old she has four other good daughters and this cow and her five daughters with long time records show an average for the six of 18,723.1 lb. milk, 918.35 lb. butter. The average fat percentage was 4% and shows a remarkably even testing family as the lowest test is 3.8% and the highest 4.24%.

One sign of winter is when the frost is on the pumpkin and the shock is in the corn price.

MISSISSIPPI MAKES PROGRESS IN DAIRY PRODUCTION

The rapid progress dairying is making in the southern states repeatedly calls apparently in vain for the attention of those in charge of the extension work of the Holstein-Friesian Association of America. An example of the business activities of the dairymen of the south is seen in Mississippi and our authority is no less than the United States Department of Agriculture.

Mississippi farmers in the ten years from 1912 to 1922 have made marked progress in meeting the local demand for market milk and cream. Census figures covering part of the period show an increase in production from 1,966,097 gallons of market milk in 1909, valued at $429,816 to 4,093,806 gallons of milk in 1919, valued at $1,434,457. The amount of raw cream sold in the same period increased from 35,582 gallons in 1909, valued at $28,039 to 394,583 gallons valued at $594,359, while butter fat sold increased from 9,344 pounds in 1909, valued at $2,666 to 1,864,593 pounds in 1919, valued at $984,789. This substantial showing in meeting the local demand for market milk and cream has been the result of systematic effort on the part of Mississippi dairymen assisted by extension workers coöperatively employed by the Mississippi Agricultural and Mechanical College and the Department of Agriculture.

In the spring of 1912 when organized work to this end was begun, there were less than a half dozen farmers reported shipping whole milk to the New Orleans market. These few were practically all spring and summer shippers. As a result of a survey made by extension workers at that time, it developed that most of the market milk and cream used was being shipped in from Illinois and Indiana. There was not a successful creamery in operation in Mississippi. The few farmers with milking cows around the towns were found to be feeding mainly cotton seed hulls and cotton seed meal. They had not been encouraged to grow, harvest, and store feeds for winter use. Only 12 silos were found in southern Mississippi at that time.

As a result of extension work, 15 were erected during the summer of 1912, and in 1913, 63 silos were built.

There was a small percentage of purebred dairy sires in use and only a few small herds of registered dairy animals. During 1913 a creamery at Brookhaven, which had failed in 1910, was opened again for business. Another one was opened at Macon in the same year. During 1914 two other creameries were started.

In contrast with these conditions there are now, ten years later, 7,500 farmers engaged in commercial dairying in Mississippi and 24 creameries are in successful operation. The one creamery operating in 1912 paid approximately $4,000 to farmers for cream that year. During 1921, Mississippi creameries made approximately five million pounds of butter, paying farmers around $3,000,000 for butter fat. Approximately $400,000 worth of market milk was shipped to the New Orleans and Memphis markets.

The average productiveness of the commercial herds has increased from an average of 120 pounds to approximately 175 pounds of butter fat annually. There are now 54 high class purebred bulls owned in eleven bull associations and a large number of individually owned bulls which will influence future production in a marked way. A lage number of purebred herds of splendid quality are now owned in the State. Home grown feeds are quite generally produced and a large percentage of dairy farmers are feeding balanced rations.

Mississippi dairy farmers credit dairy cows with having had much to do with improving the farming outlook. Their ability to purchase essential equipment and conveniences for the farm and farm home and to give their children better educational opportunities, they assert, is due in a large measure to the steady income they have had from their dairy herds.

IN SOUTHWEST TENNESSEE

The Whitehaven Fair, one of the greatest in Southern Tennessee, had a good show of both Jerseys and Holsteins. The chief black-and-white attraction was Daisy Vaughn De Kol, a cow that has produced in official test 82.3 lb. milk in a day. She has taken five blue ribbons and the grand championship at the Tri-State Fair. Her stablemate, Sir Ollie Vaughn De Kol, who weighs 2,350 lb. at five years old, also won first honors and he has taken four championships and four blue ribbons at the Tri-State Fair. They were owned by E. F. Perry, of Nonconnah, Tenn., who had 25 of his 75 federally accredited herd on exhibition.

HANSON BOUGHT RIGHT

Some twelve years ago a Minnesota dairyman named Hanson purchased a purebred heifer at Clarissa for $65. She was exhibited at the recent Todd County Fair and was labeled as the first cow in Todd County to produce 110½ lb. milk a day. In five months and 14 days she had produced 16,333 lb. milk and 493.4 lb. butter fat. in 1921, according to the tester of the local association, her product was valued at $209.68 and her feed cost was only $50.66.

BUSY AT NEW DOUGLASS

Despite the fact that New Douglass, Ill., has only been a Holstein breeding center for a few years, it has achieved considerable fame and buyers are coming from a long distance to purchase Holstein stock. The recent shipment of cattle to Guanajuato, Mexico, has already been mentioned and during the last week in September a buyer was at New Douglass loading and shipping 28 cows which were to be exported to Cuba.

The local banker, Charles A. Prange, took the lead in making New Douglass a Hostein territory and it was through his efforts that the civic authorities and the local business men backed the dairy movement until it grew so large that it attracted the attention of the state authorities and enlisted their coöperation. Writing under date of September 27th, Mr. Prange says, "While this business is welcome and appreciated, still it seems a shame to see these cattle leaving this section where they could continue to advance the breed."

THE ALLENTOWN FAIR

The Allentown Fair has generally attracted Holstein herds from long distances, owing to the generous premiums paid in past years. This year was an exception. The herd of P. G. Lichtenwalner won six firsts, eight seconds and five thirds while Franklin J. Clauser, of Zionsville, took four firsts, one second and two thirds. Davis Brothers, of Seven Valleys, won three firsts, three seconds and five thirds, while the herd from the Central Poor District, Luzerne County, took nine firsts and five seconds. Livestock exhibits were heavy and the fair is outgrowing its present quarters.

CALLS FOR MEN

More calls for men trained in dairying have been received by the college of agriculture at the State College of Washington than could be filled from the list of graduates, indicating that the dairy industry offers certain opportunity for the young man who will prepare himself. —*The Pacific Dairy Review.*

Its wasted effort, you can never win an argument with a taxi driver or telephone operator.

U-cop-co Special Steam Bone Mineral Meal insures plenty of minerals for a heavy milk production and makes better breeding stock.

FEED YOUR COWS

Many dairy cows are now in thin flesh after subsisting for several months chiefly on dry, scanty pasturage. The cows which are to freshen this autumn or early winter will be more profitable milk producers if their condition is improved by liberal feeding. The surplus flesh added now will be used to good advantage after the cow freshens by increasing the milk flow as well as benefiting her health and vigor. Liberal feeding before freshening is usually very profitable.

For rapid gains in weight, a grain mixture consisting of 200 pounds ground corn and 100 pounds of either ground oats or wheat bran may be used.—*Illinois News Letter.*

A BIT TOO SHORT

Pat: "Mike, your trousers are way too short, why don't you have your wife fix them for you?"

Mike: "Oh yes, my wife did cut them off twice, but they are still too short,"

AT REDUCED RATES

Sploshkins wanted to sell his horse, so he prevailed on the local dealer to come and see the animal.

"That's a good horse, Mr. Taylor," Sploshkins said to the dealer. "It cost me five hundred dollars, but you shall have it for fifty dollars."

The dealer gasped.

"That's rather a big reduction, Mr. Sploshkins, isn't it?"

"Well," the vendor admitted, "the fact is it bolted one day and killed my poor wife, and now I've got no further use for it!"

POOR FELLOW

Pity the little centipede,
Who has a hundred toes,
And often has to wonder which
Is just the one that froze.
And sometimes when he freezes all,
It is some job, I ween,
To massage each and every toe
With soothing vaseline.

The easiest way to disperse a crowd is to pass the hat.

BOSTON LANGUAGE

It was evening. A stranger approached the motorist.

"Sir," said he, "your beacon has ceased to function."

"Sir?"

"Your illuminator, I say, is shrouded in unmitigated oblivion."

"But, really I don't quite—"

"The effulgence of your irradiator has evanesced."

"My dear fellow, I—"

"The transversal ether oscillations in your incandescenser have been discontinued."

Just then a boy shouted:

"Hi, mister, your lamp's gorn out."—*Boston Post.*

BESSIE SCORES

Mother—Bessie, the next time you hurt that kitty I'll do the same to you. If you slap it, I'll slap you. If you pinch it, I'll pinch you.

Bessie (after a moment's thought)—I'll pull it's tail.—*Boston Transcript.*

DAIRYMEN'S LEAGUE OCTOBER MILK PRICES

The Board of Directors of the Dairymen's League Coöperative Association held their regular meeting in New York City, September 20th-21st, and after a careful study of market conditions set the October price for fluid milk. This is the same as the September price, with the exception of the price to be asked for milk in class 3A, which is used in the manufacture of evaporated and sweetened condensed milk, and so comes in competition with milk from the Middle West. In order to meet the prices asked there, the League directors have reduced the price of milk in this class from 55 cents a hundred over the butter price to 47 cents a hundred. The prices for October will be as follows:

Class 1. Milk sold in fluid form, $2.90 per hundred pounds.

Class 2. Milk sold for use chiefly in the making of cream and ice cream, $2.00.

Class 3A. Milk sold for the manufacture of canned milk, 47 cents per hundred pounds over the price to be determined for milk for butter in October.

Class 3B. Milk for the manufacture of fancy hard cheeses, 40 cents per hundred pounds over the price to be determined for milk for butter in October.

Class 4. Milk for butter and cheese to be determined in the usual manner by the average wholesale prices of these products in the New York City market during October.

MAY BE TRUE

Ashes to ashes,
Dust to dust,
If the autos don't kill you
The railroads must.

"How dare you! Father said he would kill the first man who kissed me!"

He (coolly)—How interesting! And did he?

COMING BACK

A little more than two years ago, the older animals in the Milky Way herd were purchased for the Pabst Stock Farm, Mr. A. E. Smith retaining some of the younger ones. A few animals of related lines of breeding have been purchased by Mr. Smith, and already there are 43 head of females in the Milky Way herd, showing how a herd increases under reasonably favorable circumstances.

When the Milky Way herd was in its prime, a number of very large records were made in it. The best known of these was by the two half sister senior three-year-olds, Lady Aaggie Echo Hengerveld and Aurora Fobes Fayne De Kol 3d. Each of these heifers produced over 31 lb. butter in seven days' official test, and continued for the year. Lady Aaggie produced 1,200.70 lb. butter from over 28,000 lb. milk, and Aurora is credited with 1,131.90 lb. butter from 26,563.1 lb. milk.

SOUTHERN FAIR TO FEATURE DAIRYING

At the Mississippi-Alabama Fair, to be held at Meridian, Miss., October 9 to 14, 1922, special emphasis will be given to the dairy industry, which is making such rapid strides in Alabama and Mississippi.

In addition to the usual premiums offered for dairy cattle, a liberal premium list has been provided for an exhibit of dairy products—butter, cheese, milk, cream, etc.

A special feature will be a milk production contest, premiums being offered both for the largest production of milk and the largest production of butter fat.

"Why was the stenographer discharged?"

"She was caught kissing the boss."

"'Sfunny. Shouldn't think he'd can her for that."

"Mebbe not, but it was his wife that caught her."

BONE MEAL DOES NOT CARRY DISEASE

A few feeders have had disease enter their herds when they were feeding a bone meal. It is possible for bone meal, especially raw bone meal, to carry disease germs. There is no possible chance for special steam bone meal to carry disease germs. This is the only kind of bone meal that should be fed a valuable dairy herd.

Special steam bone meal is made especially for feeding purposes and is clean and pure enough for human use. It is made only from clean, fresh bones and is really a by-product of the manufacturer of gelatin. The bones are subjected to live steam under pressure and then the mineral is dissolved out of the bone and afterwards precipitated again so that there is no chance of any disease germs being in the finished product. Feed only special steam bone meal and there will be no chance for bringing disease into your herd by this route.

P. V. Ewing.

KEEP THE MILKERS CLEAN

To get the best milk from a cow it stands to reason she must be healthy and clean, and to be healthy she must have her skin kept clean and open. If the cow has access to a straw stack she will curry herself fairly well, but if she has not, then she should be curried. The currying or brushing should be done about 30 minutes before milking time; then, just before the milking is done, the udder and flank should be wiped with a damp cloth. This will remove any dust that might be there after the currying is done. Milking should be done in a covered pail. These suggestions, if followed out, will result in milk with a relatively low amount of germ life. Cool the milk at once after it is drawn and there will be no trouble about getting good milk, whether it goes to the creamery, cheese factory, is shipped or sold at retail.

Do You Know That Dress Designers Earn from $50 to $150 a Week?

Do you know there Is a Constantly Increasing Demand for Good Dressmakers?

Be Independent. Learn Dressmaking and Designing From the Women's College of Arts and Sciences **SPECIAL SHORT TERM COURSE.**

Study right in your own home, any time that is convenient. There is No other course like this **SPECIAL COURSE** in the World.

"After my third lesson I made a blouse for myself, and two for a neighbor," *writes Mrs. D——.*

"I have made the price of my course sewing for friends and I am only working on my fifth lesson," *writes Mrs. M.——.*

"All my girl friends envy me the pretty dresses I have made." This is from a girl of sixteen years after she had four lessons.

"I have not had time to do any sewing for myself since starting the Women's College Course. My friends and neighbors keep me so busy, and I have had to refuse a lot of work," *writes Mrs. C——.*

HOW I PAID THE MORTGAGE

"We had bad luck that year. Crops ruined by long-continued drought, and not enough eggs or milk to sell at a profit, and a big payment due on the mortgage in a few months. Just when it seemed we would have to give up our farm and home, a friend showed me an advertisement of the Dressmaking Courses of the Women's College, and told me if I would take up a course she could get me plenty of sewing. I wrote for information, and was so impressed with the wonderful advantages offered that I borrowed the money to pay for their Special Course. I never thought it possible that one could learn so quickly and thoroughly by correspondence. After the third lesson I was able to make waists for my neighbors, after the fourth I could make skirts and simple house-dresses. I learned such good style and up-to-date methods that I had more orders than I could take care of. In six months I had made enough to pay off the remainder of the mortgage, and get us on our feet again."

This is only one of many such experiences. We are getting hundreds of such letters every week.

This course is so low-priced that any woman, no matter how limited her means, can afford to take it. Do not let this opportunity slip by.

THE SPRINGDALE HERD

Built up during the past sixteen years on a basis of profitable production and re-production

Present Herd Sire

WOODMONT ECHO SYLVIA CHAMPION

His sire, Sir Pietje Echo Sylvia, is by Champion Echo Sylvia Pontiac and is therefore a brother to Eco-Sylv Belle, 31.15 lb. as a junior two year old, the present World Champion in her class.

His dam, Butter Boy Empress, made 30.27 lb. butter in seven days, has milked 100 lb. in a day and was first prize aged cow, first in the A. R. O. class and Grand Champion at the 1921 New York State Fair. Judge Haeger says she is one of the three best cows shown last year.

Most of our young animals are by

KING TWEEDE SPRING FARM

His sire is Spring Farm King, full brother to the former World Champion and first 44 lb. cow; regarded as one of the best young sires of the breed.

His dam, Dressie Lady Pontiac, has a record of 30.04 lb. butter, 614.8 lb. milk made in seven days and is full sister to the 33.98 lb. cow Dressie Princess Pontiac. Their sire is Spring Farm King Pontiac. Daughters of KING TWEEDE SPRING FARM now in test are making a splendid showing under real dairy conditions.

Our older cows are daughters of

TOBE RAG APPLE KORNDYKE

Son of Christmas Tobe, 2d, 31.66 lb. butter in seven days and former World Champion ten year old. She is also the dam of Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in thirty days as a senior four year old, both being World Records when made. She in turn is dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days, also as a four year old. Here is large production, generation after generation.

Animals from this herd will make good anywhere

The Breed in Holland

By Eugene B. Bennett

IN Holland, I went to the Province of Friesland and the town of Leeuwarden, the center of the purebred dairy cattle breeding country. My visit was very short so anything I say may be superficial, nevertheless I intend to chronicle the things that impressed me as being matters in which we can profitably copy the Holland breeders.

The cattle are called Friesians and not Holsteins, and are bred for individuality, not for records. They are many record cows in Holland, but they have not been bred for records as we have bred them.

I first visited the secretary's office and there I saw that the Herd Book contained not merely the name and number of each animal and the names and numbers of its sire and dam, but a table showing how each animal would score on a scale of points, with the measurements of various parts of its body. Measurements of the females are taken when they are at least two years and ten months old and have freshened once. Bulls are measured when they are about thirteen months old. This prevents the registration of any poor individual. In the case of bulls, after the particulars of entry, a

A rear end view of part of the Wassenaar herd, showing the type and uniformity for which Friesland breeders strive.

list of all its daughters who are daughters of superior individuals is given. The Herd Book contains a record of not only the amount of milk the cow has produced in the year of the entry, but also the average butterfat test.

The Friesch Rundvee Stamboek or Friesian Cattle Herd Book Association was founded in 1879 and now has 3,500 members. This society conducts the herd book and is very active. Besides attending to the registration and transferring of animals it partially superintends the records and, with the Association of Coöperative Dairy Factories, was instrumental in the starting of a sanitary service for cattle in Friesland, of which we will say more later.

Records are supervised or "controlled" during the whole lactation period (the maximum being 330 days). Certified inspectors and samplers sample and test the milk at intervals of not more than fifteen days. Animals

Interior of stable at the establishment of J. N. Wassenaar, Jelsum, Province of Friesland, Holland.

that produce an insufficient quality of milk or milk with a low percentage of fat are usually slaughtered. Records are made under normal conditions, the cows being milked twice daily. In the summer the cattle are kept in the meadow day and night and do not get any other food but grass. In winter, the usual fodder is hay supplemented with a small allowance of oil-cake or linseed-meal.

A study of the records of many years show that the average production per lactation period is about 1,000 gallons of milk with an average of 3.30 per cent butterfat. These are only averages. In 326 days, the Friesian cow, Lutsche 2d, produced 2,269 gallons of milk with an average fat percentage of 3.38%, and there are a number of herds where the milk averages 3.75% and higher.

The Sanitary Service aims to control tuberculosis, abortion, sterility, foot and mouth disease and kindred troubles. The herds are periodically inspected; the erection of new stables and the care of old ones is supervised; the sanitary committee here works with the building board of the Friesland Agricultural Society. The inspectors also look into the purity of the water

supply. The director of the Hygenic Control Service is also the advisor of the milk testing station. The Hygenic Service guarantees the quality of the milk from the farms and the testing stations see that the milk is delivered in a good condition to the consumer. Buttermilk and skimmilk returned to the farms is pasteurized before delivery. The milk is tested not only for quality but the sediment is microscopically examined for any indications of disease, human or bovine.

The herd book is entirely public and so information can be obtained not only on the registration of the animal but also of the production of its ancestors and near relatives and also the health of the various herds.

GERARD
A former herd sire of the Wassenaar Herd, a good type of Holland sire.

In the province of Friesland there are approximately 820,000 acres of which more than two-thirds are in grass. In the northern and northwestern part, the soil is clay; in the southeastern part it is more or less fertile sandy ground; while in the central and southwestern parts the land consists partly of clay and partly of low fen, this being used almost exclusively as pasture. In Friesland there are 119,100 cows, a few of the herds being red and white but practically all are black and white cows. Some of the milk is consumed locally but about 90% goes into the manufacture of cheese and butter, much of which is exported. During the year 1920 the Friesland Coöperative Association for the export of dairy products exported 24,000,000 lb. cheese and 15,468,500 kilograms butter, a kilogram being equal to 2.204 lb.

In the province there are 120 dairy factories of which about ninety are operated by coöperative associations. There is no milk surplus. Cheese is a common breakfast dish and the quality is excellent. Friesland warrants the quality, fat-percentage and the purity of its butter and cheese. The brands of cheese are Gouda, Edam, Cheddar, Cheshire and Friesian clovecheese. The butter made is tested weekly, special attention is given to the fat percentage, taste and smell. A diploma is given to factories which during the whole year have sent weekly samples of butter coming up to a fixed standard. In 1904, only one diploma was awarded but the number has gradually increased until there were forty-five in 1919. Butter must not contain more than 15.5 per cent water and all butter, before delivery, must bear a government stamp.

I visited the Wassenaar Bros. who have a herd of Friesian cattle on their farm near Leeuwarden. Their cattle are animals of perfect individuality. They have some excellent records in their herd, but their cattle have been bred strictly for individuality and not for records. The group picture shows the uniformity of the back-line and the square rumps of some of the members of this herd.

A Dutch farm barn is not the model of sanitation that some of our sanitary milk barns are; nevertheless it is excellent as to arrangement and cleanliness. The photograph of the stable interior of one of the dairy barns belonging to J. S. Wassenaar, of Jelsum, near Leeuwarden shows the stall arrangements, the gutters and tail fasteners. These two photos show the excellent individuality possessed by the animals in the Wassenaar herds. This is also shown by the photograph of the great Friesian sire, Gerard No. 6808 F. R. S. The present head of the Wassenaar herd is Neco, whose dam has a record of 6,000 kilos, or 13,224 lb. milk in 300 days with a butterfat average of 3.87%. One of the notable strains in the Wassenaar herd is the Setska family and we show a picture of some members of this family taken right in the field. Setska 2d, the oldest cow in the family has a record of 5,000.5 kilos or 11,021.1 lb. milk in 300 days with an average butterfat test of 3.06%.

The city of Leeuwarden has a population of around 25,000, practically all of which are engaged in the manufacture of cheese or allied industries. The cover illustration of this issue shows a picture of a Leeuwarden cheese factory operative with a typical shipment of cheese which he has taken to the canal bank to load on a canal boat.

As to what we could learn from the Dutch, I would say in brief; to test only for year record; to breed

A few individuals of the Setska family, one of the good strains in the Wassenaar herds.

strictly for individuality; to have some system of registration that would bar cattle that are not good individuals. The Dutch breeders have done much through their herd book and through their cheese factories to sweep out tuberculosis. They deserve much credit for their action in this respect.

In our own United States, we hear, year after year, complaints of the overwhelming surplus of milk. There is just one cure for this evil—a greater production and consumption of butter and cheese. If this were done, our yearly complaint of the great surplus of milk would cease. With one more statement I shall close this article. No one in this country would think of keeping a bull on a rope. All the largest and best bred bulls in Holland are kept upon ropes, and a bull is a bull wherever he is, and I never heard of anyone in Holland having trouble with a bull. As for cows, heifers and fair-sized calves, they are simply turned out into the fields, and only shut in by ditches, and save for a year ago last summer, which was a dry year, nobody had any trouble from cows wandering away.

A congress of cattlemen interested in purebred dairy cattle is to be held in Holland in 1923. It is to be hoped that some one representing the Holstein-Friesian Association of America will be present at this Congress.

A Call for Initiative

OUR newsy, up-to-date contemporary, *The Breeders' Gazette,* in its issue of October 12th, carries an article by Walter L. Miller of the *Gazette* staff telling how the milk produced by the Brooklandwood herd is marketed on the farm at Lutherville, Md. A story telling how this well known Maryland dairy establishment cut out the middleman and reaches the consumer appeared in the May 8th issue of the BREEDER AND DAIRYMAN. At the time our article was written a bar and refreshment parlor was being built on the farm to accommodate the patrons. The *Gazette* article tells that the bar is 54 feet in length and is built in characteristic soda fountain style. The milk is drawn direct from the cooling system and sold either in drinking cups at the bar or in bottles to be carried home.

During 1921 the sale for milk and milk drinks was $33,499.88, and the *Gazette* says the figures for 1922 will reflect a steady increase in patronage. The record day on the farm brought in $789.

The article itself simply brings up-to-date the BREEDER AND DAIRYMAN article that appeared in the May 8th issue. Our purpose in calling attention to it now was partly to give credit to a paper which brings before its thousands of subscribers an instance of business enterprise and initiative shown by a great breeding establishment, and partly to give our own subscribers an opportunity to read the introduction to the *Gazette* article with its comprehensive view of the producing and marketing questions that confront the milk producer. We have been told by the agricultural leaders of the past, by those in authority in state and national affairs, to produce, produce, produce, while the market end of the business has been largely overlooked, with the result that the farmer has come to feel that he is being used only as a means to make cheaper living for the rest of the population and to increase the wealth of the country while little attention is paid to whether or not he betters his own conditions. Mr. Miller's introduction is as follows:

"Dairy economists recognize the present over-production of milk. * * * The exigencies of the situation render some concerted action on the part of producers imperative, or else the individual must seek the solution of his own troubles.

"Except for the fact that there is now, and will continue to exist, a great inequality in returns for milk produced, dependent fundamentally on the location of the producer and the quality of the product, there are other forces and principles which can be brought to the aid of dairymen. One is the elimination of the non-profit-paying cow, which is contributing to the present surplus at a heavy feed bill to her owner. She is gradually and surely disappearing through the natural law of economics, hastened by the work of cow testing associations.

"Another idea which is capable of accomplishing much in this business is the application of personal initiative. A greater number of producers must lift themselves out of the 'whirlpool' that is allowing them only competitive butterfat prices for their milk, and seek an outlet which pays a premium, that is, a certain profit, or a return commensurate with the incessant work and attention which successful dairying exacts.

"The recommendations here made need not entail any hardships on the consuming public. In fact, if some widespread and concerted action could be taken to increase the use of wholesome milk in the dietary of the American people, instead of the injurious 'soft' drinks which are sold on a prodigious scale as refreshments, a distinct service would be rendered to our citizenry. A few cents per capita per day would not only greatly stimulate the production of high-qualitied milk, but would bring the consumer greater food value for his money than can be purchased in any other line of food necessities.

"In the field of dairying as an industry, any procedure or influence which tends to increase the public's appreciation of good milk may well be termed constructive. Here is where enters personal initiative. Granting that the most fundamental influence is the production of milk of high quality, both as regards butterfat content and purity, in order to render the production of this grade profitable in more localities, the public must be brought to an appreciation of food value and quality. While many city homes want this better article, it is not at all times and in all places available, as milk of this character forms only a small percentage in comparison with that which daily is distributed, yet, on the other hand, too few customers really know and understand what good milk is. Personal initiative on the part of the producer is often the force which brings about this greater appreciation among users.

"The present great output of dairy products in this country is the natural result of an agricultural slogan which was phrased when improved methods of farming were first attempted: 'To make two blades of grass grow where but one grew before.' Now the dairy industry must adopt similar tactics in bringing about the consumption of two quarts of milk where but one quart is being consumed now. Milk must take its deserved place in the dietary of the American people. Milk drinking as a daily habit at soda fountains and

other places should be popularized through some sort of campaign that would impress upon the public the nutritive value of good milk.

"The use of this personal initiative should begin with the preservation of the identity of milk from a given dairy. Good milk produced from healthy cows should, so far as is possible, retain the farm name and the name of the breed which has produced it. There is not a breed but can lay claim to some legitimate superiority of its milk. Many localities furnish examples of added returns from the sale of good milk which has not lost its identity. Various procedures give some suggestions as to how it is possible for a percentage of producers, at any rate, to enjoy a return for their labors above that which has been coming to them in a competitive butterfat market."

The Duties of County Agents

SECRETARY of Agriculture Henry C. Wallace has issued a statement regarding the duties of County Agents and similar workers financially supported by the funds of the Federal Government, that will have an important bearing upon the activities of such agents. Some ruling along this line has been expected by those who have considered the activities of county agents among the farmers in connection with the fact that the funds for federal support of such agents are derived from taxation of all the people. County agents have been managing coöperative associations, acting as managers of public sales and in several ways engaging in merchantile transactions, which has called down upon their heads the wrath of established tradesmen and tradesmen's associations.

The secretary points out that "extension workers are public teachers paid with money largely raised from all of the people by taxation and are charged with giving instruction and practical demonstrations in agriculture and home economics. Their work covers the entire rural field, which includes economic production, economic marketing, and the development of better home, community and social conditions.

As they are public teachers it is not a part of the official duties of extension agents to perform for individual farmers or for organizations the actual operations of production, marketing, or the various activities necessary to the proper conduct of business or social organizations. They may not properly act as organizers for farmers' associations; conduct membership campaigns; solicit membership, edit organization publications; manage coöperative business enterprises; engage in commercial activities; act as financial or business agents, nor take part in any of the work of farmers' organizations, or of an individual farmer, which is outside of their duties as defined by the law and by the approved projects governing their work. They are expected, however, to make available to organizations such information as will be helpful to them and contribute to the success of their work."

The various federal laws contemplate that the extension agent will act "with farmers' organizations willing to coöperate in the work with which the coöperative extension agent is charged. It is the duty of the extension agent to render such assistance whenever possible in his teaching capacity to any agricultural organizations desiring it. Furthermore, the work of these extension agents can be the most effective where it is carried on with organized groups of rural people. It is entirely proper for any agricultural organization desiring to coöperate financially in the work of the extension agents to contribute funds for the support of such work, and these funds may be accepted legally by the extension service of the agricultural colleges and by the Federal Government for work on approved projects.

In short, it is the business of the extension agent to coöperate with all agricultural organizations which desire to coöperate on approved projects. If more than one organization exists in a county he must coöperate with all fairly and impartially in the educational work in which they are mutually interested.

The Department of Agriculture must necessarily consider in its administration of Federal coöperation extension funds the laws which have been passed by the various State legislatures in accepting these Federal funds and under which agreements have been made with those States for conducting this work. If special provisions relating to the methods of coöperation with agricultural organizations or other agencies are contained in the State laws, which do not conflict with the Federal laws, it is clearly the duty of the secretary of agriculture to accept such provisions in a coöperative project."

When a county agent engages in business activities, no matter how praiseworthy his conduct and successful the enterprise, he is bound to get in wrong with some one and when he, like a preacher or any other teacher, mixes in business he is bound to make enemies. In some sections of the country there is so much feeling that protests have been made to Washington and even farmers' organizations have asked their counties to withdraw support of the county agents. From the start there has been opposition on behalf of some that do business with the farmers.

The ruling of the Secretary of Agriculture will, in many ways, be a relief to the agents themselves. They may advise how to conduct business and coöperative enterprises but they may not manage them. Farmers' and breeders' associations and transactions should be managed by the members themselves who are in every way qualified to manage such matters and expert advice from Washington can easily be obtained if needed and desired.

It won't cost you much to try our Classified Advertising columns. They will help you move your surplus stock at a very low cost.

A Classified Advertisement costs but little and tells many about the animals you wish to sell.

Cheerfulness and good will make labor light.

Origin Farms Polled Holstein Herd to be Dispersed

I PURCHASED my first purebred Holstein in January, 1911, a naturally hornless purebred bull, at the Mid-Winter Sale in Syracuse. Prior to that time I had been breeding grade Holsteins. By examination of the Herd-Books, I discovered that the Holstein-Friesian Association of America, by resolution of its Board of Officers in 1887 recognized the polled trait as an legitimate trait of purebreds, as can be found in their minutes in Volume 3, Bulls, Page 28. By correspondence with the Secretary of the North Holland Association, I found that polled or hornless black and white cattle had been shown at Amsterdam in 1886. Following my first purchase, I advertised in the *Holstein-Friesian Register* for information concerning naturally hornless purebred Holsteins and located about 40 head, most of which I purchased in the summer of 1912. Since that time we have developed the animals bought and born of their progeny until at the breaking out of the war our herd led all others in the State of Pennsylvania in high record long distance animals. We developed the world's record strictly official cow under full age, Keystone Beauty Plum Johanna, and she still holds that record. She is also the only cow of any breed to have two consecutive records made under full age that average 24,000 lb. of 4% milk. Her son, Napol Sir Keystone Beauty, after several examinations, was purchased by Peter Small to head the Ona Herd in Ohio, and he still headed the Ona Herd at the time of Peter Small's death in August 1921. Cattle of our breeding have splendid back lines, practically no slopers, and uniform square udders with four well-placed teats, and larger and better fore teats than are usually found on Holsteins. There have been no culls to date, and none that could not make good qualifying records under proper conditions. Our Cornucopia Plum Johanna family were at the time of their development the world's record group, consisting of a dam and two daughters, full sisters, to have each made over 1,050 lb. butter a year. Cornucopia was never tested until she was 9 years of age, when she made a 25-lb. seven-day record and 1,056 lb. butter in a year, with a 4.24% fat test. Five of her daughters have been developed to date, four under full age, that average for the six, including the dam, 18,723 lb. milk, 918.35 lb. butter. With the limited opportunities for developing these animals, I believe the performance to be the most remarkable for any dam and daughter of the breed. The last three records were made by unskilled milkers with the milking machines and could we have given all of her daughters the opportunity we gave Keystone Plum Johanna and Keystone Beauty Plum Johanna, I have no doubt we would have made a world's record for the family well above 20,000 lb. of 4% milk a year.

GEO. E. STEVENSON

I regret very much that I am now compelled to dispose of this remarkable herd of cattle at public auction to the highest bidder on November 8th at the farm. Not a cull will be sold and not an imperfect animal, unless accidents happen between now and the date of sale. Most of the animals offered are under five years of age. Most of them are sired by the bull out of our world's record family, whose dams have each made 1,050 lb. butter or better in a year. There will be twenty daughters of Napol Sir Keystone Beauty, whose dam has a 33-lb. seven-day record, and 1,294.7 lb. in 365 days, strictly official record. Twenty daughters of a son of Keystone Plum Johanna with 29.34 lb. in seven days, 1,052 lb. in 365 days, and whose five nearest dams average 20,000 lb. of 4% milk a year. One bull offered in the sale is absolutely dominant in the hornless trait, that is, all of his calves, whether from horned or polled cows are naturally hornless, and he is a double grandson of our world's record four-year-old.

NAPOL SIR KEYSTONE BEAUTY

I am convinced that by selecting from this herd of cattle and breeding together certain animals, a strain can be produced that will be of uniformly excellent type and that will average close to 20,000 lb. of 4% milk each per year. GEO. E. STEVENSON.

Clarks Summit, Pa.

Donovan tried to get a job in England and an Englishman to whom he applied for the position of chauffeur asked him a lot of questions. "Were you ever in Berlin, Paris—London?" asked the Englishman Donovan had to answer "no" every time. "You certainly don't know much," remarked the Englishman after every answer of "no" from Donovan. Finally he finished his examination. "Are you through now?" asked Donovan. "I am," said the Englishman. "Did you ever have the delirium tremens?" asked Donovan. "No, indeed, I never did," said the Englishman. "You never saw much, did you?" said Donovan.

World's Dairy Congress Program

DURING the National Dairy Show the president of the World's Dairy Congress Association, H. E. Van Norman, outlined the program for the coming World's Dairy Congress although he did not state just where this event was to be staged. It is expected that the East will have the honor of entertaining the distinguished visitors interested in the many phases of the dairy industry and that the National Dairy Show will be held in connection, leaving its present Minnesota home.

The suggested program is quite extensive and covers a wide range of subjects.

It is interesting to compare the program for the American event with that of the Cattle Breeding Congress which will be held at The Hague, Holland, the week of August 29th to September 4, 1923, convened by the Government of the original home of the Holstein cow. This was outlined on page 656 of the October 8th issue of THE BREEDER AND DAIRYMAN.

The Van Norman program is listed under four heads, as follows:

RESEARCH AND EDUCATION

The role of inorganic salts in the nutrition of the dairy cow.

Efficiency of the cow as a converter of roughage into human food.

The type of cow making the largest production.

Physical, chemical and biological criteria for judging dry milk.

Types of containers and vehicles for transportation of products.

Cause and control of contagious abortion.

College and graduate courses in dairying.

Utilization of by-products.

INDUSTRY AND ECONOMICS

The education of the producer as to the value of a better product as a means of increasing sales.

The essential factors in obtaining high production.

The utilization of dairy wastes.

The use of dry milk in ice cream, etc.

Coöperative associations.

The standardization of dairy equipment.

International influences affecting the price changes of various dairy products.

REGULATION AND CONTROL

Where shall the line be drawn between national, provincial and municipal inspection?

What methods of regulation have been most successful?

What principles underlie the development of a code of sanitary laws?

The definition of pasteurization by law.

International nomenclature for cheese brands.

Methods of grading milk for manufacturing purposes.

The control of foot and mouth disease.

Methods of eradicating tuberculosis.

NATIONAL HEALTH

Nutritive value of milk.

Nutritive value of dry milk.

Relative nutritive values of pasteurized and raw milk.

The menance of the traffic in vegetable oils.

The use of milk powders in public health work.

How shall we teach the public the value of milk?

The Accuracy of Testing Association Records

A FREQUENT subject of discussion among breeders of purebred cattle is to what degree cow testing association records and advanced registry records agree. The annual report of the Snoqualmie Valley, Washington, Cow Testing Association contains a letter from Mr. H. C. Stimson, proprietor of the Hollywood Farms, concerning the accuracy of cow testing association records. The letter reads as follows:

"It may be of interest to you to know that the cow tester's records are within three per cent of the actual records. His costs of feed throughout the year is very accurate, as you know we weigh every feeding for each cow and weigh and test out milk regularly for all the cows, which gives an excellent check against the cow testing association records. If anyone is skeptical as to the accuracy of his production costs, this information might be of value to you. The tester's records are sometimes over ours and sometimes under ours, and the average works out very accurately for the year's work. With the cows on official test we also get a very good chance to compare the records of the tester with the actual records, and there is almost no variation. In this case the tester takes but one sample of one day's milking, whereas the official tester takes a sample of each milking covering the entire month, and the total fat for the month seldom varies as much as two per cent, and in such cases only as when a cow becomes sick at or near the time that the tester is testing for the month."

Along this line the western office of the Dairy Division of the United States Department of Agriculture quotes Helmer Rabild, at one time in charge of dairy farming investigations for the United States Dairy division:

"Through the kindness of Professor T. L. Haecker, access was had to the records kept of the production of the herd at the Minnesota State Experiment Station, St. Paul, Minn., where weights and Babcock tests of every milking of each cow in the herd have been recorded for nearly twenty years. The accuracy of the method used by the cow testing associations was determined by comparing the yields as estimated by them, with the actual yields as determined by weighing and testing each milking. The maximum variation by the cow testing association method was not over 5.1 per cent for any one year. For the average year it was found to be about 3 per cent variation. In the method used by the cow testing association the total difference for a nine-year period is in no case over 2 per cent from the actual yield."

A two per cent variation would make a difference of only twelve pounds of butterfat on a 600 lb. year record and of twenty pounds on a thousand pound fat record. For all practical purposes, cow testing association records are as good a medium to ascertain the actual earning capacity of a producer as any that ever have been devised.

Butter and Oleo Production and Consumption

BY P. F. BROOKENS

U. S. Department of Agriculture.

THE production of butter in the United States during 1921 amounted to 1,704,938,000 lb., of which amount 1,054,938,000 lb. were produced in creameries and 650,000,000 lb. on the farm. This represents an increase of 10.5% over 1920 during which year the production amounted to 1,543,577,000 lb. There was also an increase in the amount of butter consumed in the United States during 1921, the consumption for that year having amounted to 1,725,772,651 lb. as compared with 1,554,000,000 lb. during 1920, an increase of 11.1%. The difference of 20,834,561 lb. between production and consumption was made up of imports and removals from cold storage.

The imports of butter into the United States during 1921 amounted to only 18,558,388 lb. as against 37,454,172 lb. during 1920, a decrease of 50.5%. Exports, however, decreased by 54.2%, having amounted to only 8,014,737 lb. in 1921 as against 17,487,735 in 1920, so that the excess of imports over exports in 1921 amounted to only 10,543,651 lb. as against 19,966,437 lb. in 1920.

While the production of butter in the United States during 1921 increased by 10.5% the production of oleomargarine decreased by 43% having amounted to 211,840,000 lb. in 1921 as compared with 370,730,000 in 1920. The price of butter also decreased, the average price of 92 score creamery butter at New York during the year having amounted to 43 cents per lb. as compared with 61 cents per lb. in 1920. The stimulus to increased butter production in the United States during the past year is attributed to the material increase in the general purchasing power of butter in terms of other commodities since the fall of 1920. Statistics show that while the number of milk cows on farms increased from 23,594,000 on January 1, 1921, to 24,028,000 in January 1, 1922, the number of cattle other than milk cows declined during the same period from 41,993,000 to 41,324,000 head.

Agricultural College Courses

THE Ohio State University has adopted a scheme that may change the college year at many of our great agricultural colleges. Beginning this fall, the school year at Columbus will be divided into four quarters or terms as follows:

Autumn quarter, October 2d to December 22d.

Winter quarter, January 3d to March 23d.

Spring quarter, March 26th to June 8th.

Summer quarter, June 18th to September 1st.

Twelve terms or quarters will be needed to equal the traditional four years of eight semesters. It is planned to repeat the courses frequently so that a student can graduate by completing any twelve quarters, says Dean Alfred Vivian who is largely responsible for the change. A student who can attend school the year around can complete the full course in three years of eleven months each, instead of the usual four years of approximately nine months each. A scholar who is needed at home during the spring or harvest seasons can attend to the farm work at that time of year and still graduate in four years, or he can stay home the whole of the growing season and graduate in six years, as long as he completes the required 190 hours of college studies. A high class student gifted with robust health and a strong constitution can with zeal and application, complete his studies and earn his college degree quicker under the proposed plan because, if his work as a freshman is of high caliber, he will be permitted to carry extra work if he so desires, the university authorities believing it is better to make a gifted student work hard than it is to let him stay back with the average of his class and run the risk of acquiring lazy habits.

Dean Vivian says that studies made in Ohio and New York show that the agricultural college graduates on the farm have three times as much labor income as those who have no agricultural school education. So that a college course pays for the man who stays on the farm as well as the one who goes into teaching, research, or the many forms of business founded upon agriculture.

The Ohio State University has made a brave attempt to better fit college courses to the needs of the great mass of farm boys. The experiment will be watched with great interest by all interested in farming and its allied trades as well as by educators the world over.

Watching the Law Makers

THE Colorado Holstein-Friesian Association is actively opposing the anti-vivisection bill which is before the Colorado Legislature. In a speech at Colorado Springs, September 20th, Fred C. Waddell, Secretary of the State Association, is reported as saying:

"Animal experimentation has not only been a wonderful boom to the livestock grower, but it has also been the means of discovering preventives and cures for a good many human ills. The passage of this bill would injure the livestock industry in the state because it would stop all research into animal disease, eliminate the possibility of finding any new vaccines or serums for the prevention or treatment of diseases, make it practically impossible to discover the cause of any disease, remove the possibility of discovering whether any plant is poisonous or not, practically close the Colorado experiment station so far as research into animal diseases is concerned and prevent veterinarians to improve their surgical skill.

"It would prevent further nutritional experiments on vitamines which have done much to prevent and cure such diseases as scurvy, pelagra and beri-beri. No experiments of any kind could be conducted with animals as subjects, regardless of how much good might result from such investigation."

Mother—"What on earth is the matter, darling?"

Little Girl (crying)—"An old wasp come and sit on my forehead and pushed."

Buyers everywhere read over the classified advertisements. Why not list the stock you have to sell. The cost is low, the results are sure and certain.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

October 22, 1922

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Our Appreciation

WITH the announcement of Origin Farm Herd Dispersal, we wish to call the attention of our readers to the fact that the five calves that have adorned our cover page since our second issue, are photographs of animals from this herd.

These calves show the excellent conformation and uniformity in type that is characteristic of the Origin Farm breeding.

Keeping Things Under Cover

THE Chamber of Commerce of Washington, D. C., under date of October 5th, invited the Holstein-Friesian Association of America to hold its annual meeting in that city next year. For many reasons the Capital City would be a desirable meeting place and, except for Association political reasons, has more to recommend it than the already designated city of Cleveland.

It is located nearer the great South, the most promising field for true extension work to popularize the Holstein breed and make its merits known to farmers who are now getting along with scrub cattle. The Holstein cow is a scarce article in our Southern States but she has made good wherever she has gone, and there are a few good southern herds of purebred black and white cattle that are making money for their owners. There is no better field in which to advocate the use of purebred Holstein-Friesians sires on native cattle, yet the present heads of the extension department of the Holstein-Friesian Association of America spend their time and energies in those states where the Holstein breed is the strongest, where the breeders of Holstein-Friesian cattle are most numerous, and where many of the country newspapers hardly ever let a week pass without publishing one or more articles telling of the advantages of the breed or of records black-and-white cows are making either in official test or cow testing association work.

Our extension heads tell of the work they are *going* to do; why don't they *do* something. The department has been in existence at Chicago for a couple of years. The report submitted last June told of nothing accomplished. We understand that a *confidential* report was given to the Board of Directors; confidential so that the representatives of other breeds and fieldmen of the other breed associations, could not find out in what way and manner the extension department of the Holstein-Friesian Association of America was spreading the Holstein-Friesian gospel and spending the funds of the Holstein-Friesian Association.

They certainly succeeded in covering things up, if they had anything to cover up, for we must confess that as far as helping the breed or the owners of purebred Holstein-Friesian cattle, we do not know of anything worth while being done, and, although others profess to be satisfied with the way the department is handled, we have as yet been unable to find anyone who could tell what *was* being done other than attending well-advertised auction sales or meetings of owners of purebred Holsteins, generally of state associations, where practically every man present had a herd of all registered cattle. To slightly change scripture, the present extension department heads "Come not to call sinners but the righteous to repentance."

No! No! Washington, you may call and call loudly but your call cannot be answered until political debts are paid, until you can guarantee that your district will purchase at public sale, record animals at fancy prices regardless whether the buyers can ever make their purchases pay back the original cost at the pail and in future offspring.

The control of the present Directorate is in hands accustomed to handle politics; so political considerations will be allowed to govern regardless of the welfare of the breed and the Association or the wishes of the large majority of its membership.

Milking the Membership to Feed the Gang

FOR the past three or four years those conversant with Holstein-Friesian Association affairs have known that Association matters were being conducted in a very loose, illegal and autocratic manner.

Mr. W. M. Matteson, a former president of the Association and for many years chairman of the Executive Committee and Council for the Association; Albert L. Brockway, for many years a director and chairman of the Finance Committee, and H. A. Moyer, a prominent breeder and director of the Association, as far back as the year 1919, stated *Under Oath* that they believed that the action taken at Philadelphia in June of that year when the Board of Directors was increased from six to sixteen in number was illegal.

In May, 1920, a judge of the Supreme Court plainly told the Association Officers and Directors and Lawyers, that they had not complied with the Law in their efforts to increase the Board of Directors from nine to sixteen, and that "at no time had the Association been legally entitled to more than six directors."

As far back as the year 1918 the Attorney for the Association at that time told the Officers and Directors that they had no legal right to hold a meeting outside the State of New York *Because* the Association was organized under the Laws of N. Y. State and was of course bound to obey the Law of the State which created it an Association.

Away back in 1911 the Attorney General for the State of New York wrote an opinion in which he plainly stated that the Association could not legally hold a meeting outside of the state of New York.

The best proof possible that this was the Law, and that no legal meeting of the Association could be held outside the State of New York is to be found in the fact that O. U. Kellogg, who is at present the paid Attorney of the Association by the assistance of "silver-tea service" Senator Lusk and with the probable further assistance of Governor Miller, a former paid Attorney for the Holstein-Friesian Association (to the extent of $5,000 cash) passed a bill through the Legislature amending the member-corporation law providing that under certain conditions membership corporations might go outside the state to hold their meetings.

And now when a member fearlessly demands that the right arm of the law shall reach out and protect the members, the funds of the Association and the $300,000 reserve fund from the possible claims that may arise as a result of these illegal acts, we find the funds of the Association, the money that belongs to and that has been taken from the pockets of the membership being wasted and unnecessarily expended in lawyers' fees, court fees and paid propaganda simply to bolster the pride of personal opinion and protect an illegal Board of Directors from the possible consequences of any illegal acts.

In the name of common sense if this good old Association of ours has made a mistake why don't we look it square in the face and correct it? The plain everyday breeders who are members of this Association have brains enough to so manage its affairs that it will not be necessary to spend thousands and thousands of dollars to pay lawyers, judges, senators, governors and court fees. All it requires is plain, common horse sense, coupled with genuine old-fashioned honesty —that's all.

A Special Meeting of the Association called by One Hundred Members held within the State of New York, proper notice and a ratification resolution could have stopped all this wildeyed ridiculous expenditure of money, put our Association on a sound legal footing, and *Stopped The Danger* that this ceaseless, senseless litigation is bringing to the Association, the membership and the industry.

Of course, to do this would mean an end to all litigation. Of course, doing this would stop the fat lawyers' fees and legal expenses. Of course, to do this would be to admit that somebody had blundered and it would put an end to special meetings, big expense accounts, and special privileges paid for by the membership.

But, *Failure To Do This Very Thing* leaves the action of those who insist upon plunging the Association into further senseless, useless, costly litigation open to the fairminded, honest criticism of every member who earns his bread by the sweat of his brow, and stamps their conduct with the black mark of suspicion.

Further exploitations and expenditure of Association funds on senseless lawsuits, we believe may be justly looked upon as a betrayal of the trust which the membership gives to its officers and fairly construed as a dark lantern determination to provide pap for political purposes.

We believe there should go out from every Holstein fireside in this country such a protest against the autocratic action of our present Board of Directors, officers and legal representatives as would show them that the plain, everyday breeders and dairymen who are members of the Association are aroused as never before. We believe that a *Halt* should be demanded, and that a refusal upon the part of those now in charge of Association affairs to respect the wishes of the membership should meet with such action as would show these autocratic gentlemen that there is a "God in Israel and he still lives."

Barney's Resignation Demanded

THE following appeared under the above heading in *The Evening Gazette*, of Cedar Rapids, Iowa, under date of Saturday, January 8, 1921:

"While it was engaged in a publicity campaign to speed up action by the city council in connection with the need of pure milk in Cedar Rapids, *The Evening Gazette* took occasion to remark that better coöperation between the departments of the dairy and food commissioner and the state veterinarian at Des Moines was an essential to the eradication of tuberculosis in Iowa's livestock.

Dairy and Food Commissioner, W. B. Barney, instead of commending the effort to clarify the milk situation here, and the milk itself, wrote a letter to the editor of *The Gazette* bitterly arraigning him for his attitude. That letter served to convince *The Gazette* that the wrong man was in the office of dairy and food commissioner. Casual investigation disclosed a surprising condition, an astonishing livestock record behind Commissioner Barney, who owns a Holstein farm near Hampton.

The Gazette charged that tubercular cattle had been sold from the Barney herds. Barney threatened a libel suit. That is Barney's policy, one of bluff. With him it substitutes for efficiency. His hirelings are everywhere in Iowa, collecting fees, exacting petty licenses, enforcing those sections of the dairy and sanitary laws it pleases them to enforce, and ignoring violations that do not happen to interest them.

Barney's commission is composed largely of a bunch of political barnacles and some good men. A former state executive who speaks authoritatively says that the dairy and food commission is the rankest of all the commissions and bureaus at the state house.

Newspapers in every part of the state, some of them edited by former legislators, have noted *The Gazette's* campaign and have unanimously agreed that the dairy

and food commission offers a wonderful target for the beginning of the clean-up that is needed at the capitol. The article published on this page to-day is regarded by *The Gazette* as exemplary of the whole attitude and demeanor of W. B. Barney.

And the story is not half told.

The Evening Gazette demands the resignation of Commissioner Barney, or if that is not forthcoming, it demands his dismissal."

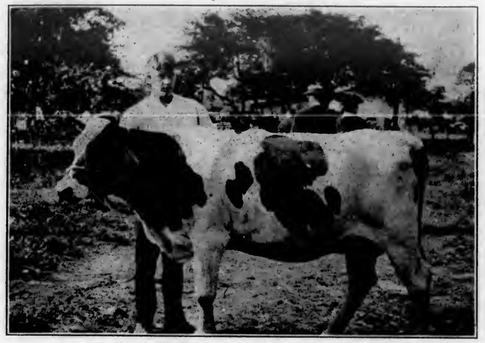
Why should a man who was forced out of the position as Food and Dairy Commissioner of the State of Iowa under such circumstances, be employed to represent the greatest breed of dairy cattle and the greatest breed Association in the world?

What possible justification can there be for discharging a man like Professor Wm. M. Rider as head of the Extension Department of the Holstein-Friesian Association of America, a man specially trained for this work and put Mr. Barney in the same place at $2,000 a year more salary?

Why should a man of the Barney type be employed unless it is a reward for something he has done for those who are assuming to manage the Association's affairs?

It surely would look to the unbiased mind as though our Associations' officers were ready to reward dishonesty and trickery and we do not believe the members will stand for it. Surely the members will not approve of such action and we believe it is our duty to call the attention of this matter squarely to the directors, officers and members and demand why, as we have stated before, a man who was forced out of the position of Food and Dairy Commissioner of the state of Iowa under such circumstances should be employed as a representative of this great Association and great breed of cattle.

Donovan got a job on the police force and one day on his beat he gave an awful beating to a colored man. When the colored man got out of the hospital he was hauled into police court. He said that he was clearing the snow from the sidewalk in front of his home and was singing when Donovan came along and walloped him. "He didn't hit you for merely singing?" asked the magistrate. "I did that and I'll do it again, too," said Donovan. "What was he singing?" asked the magistrate. "He was singing 'Ireland Must Be Heaven for My Mother Came from There,'" said Donovan.



Junior Department

Paul Led the Way for Dad

In June 23, 1917, Paul Searing, of Mercer County, Pa., then 11 years old, purchased through the Grove City Calf Club an eight months' old Holstein-Friesian heifer, Silverine Urmagelsche De Kol No. 359729 for $90. At the Pennsylvania Farm Products Show held in January, 1922, he exhibited this cow, then five years old, two of her daughters, a son and two granddaughters. At that time the cow and her offspring in this exhibit were valued at $11,425.

This was the first purebred animal on the Searing Farm but the success of the innovation caused Paul's father to change from scrubs to purebreds and to-day there are no scrubs on the Searing establishment. At the head of the herd, which was valued nearly a year ago at just under $6,000, is King Bride Fayne De Kol whose dam has a 305 day record of 19,475.5 lb. milk and 970 lb. butter. Animals from the Searing herd were exhibited at the recent Grove City Show and won a number of prizes. Our illustration shows Paul posing one of the prize winners.

Paul Searing with a ribbon winning heifer of the Searing herd in the 1922 Grove City Stock Show.

Dairy Calf Contest at Waterloo

Five counties of Iowa were represented in the Dairy Calf Contest at the Dairy Cattle Congress. When the judges awarded the ribbons September 27th Fayette, Dubuque, Linn, Blackhawk and Polk counties were represented. Besides the regular classes there was a Black Hawk County exhibit with 10 prize winners. Fayette County was first with a group of five calves. Dubuque was second and Linn third. The other Holstein awards were as follows:

Yearling Heifer: First, Joseph Luchsinger, Dubuque, on Mercedes Anna De Kol; second, Loretta Quale, Dubuque, on Mercedes Anna De Kol Homestead; third, Richard Hanson, Olewein, on Lady Katie Wildare; fourth, Everette Sherman, Jesup, on Beaver Valley Banostine Dellia; fifth, Mary Powers, Dubuque, on Aaggie Rijaneta; sixth, Fay Lecler, Central City, on Juliana Myrtle De Kol; seventh, Carl Headlee, Springville, on Jewel Bessie Ormsby Fytji; eighth, Rita Powers, Dubuque, on Lady Tamarac Homestead Pontiac; ninth, Donald Sage, Waterloo, on Lady Segis Beets Buffalo; tenth, Wallace Mills, Coggon on Miller Aaggie Cleveland Pontiac.

Calves: First, May Gilley, Maynard, on Queen Pontiac Aaggie Segis; second, Howard Watt, Randalia, on Betsy Woodcrest; third, Richard Hanson, Oelwein, on Fobes Wildare Flossie; fourth, Rex Pieplow, Aurora, on unnamed; fifth, Louis Barnes, Fayette, on Betty Pontiac De Kol; sixth, D. Stewart, Mayfard, on Sadie McVale Aaggie, seventh, Rex Pieplow on unnamed; eighth, Burlin Hamer, Waterloo, on unnamed.

Group of five calves from club: First, Fayette County; second, Dubuque County; third, Linn County; fourth, Black Hawk County; fifth, Black Hawk County.

The Fayette County team won the team contest with a total of 1,022 points, the Black Hawk team was second with 1,011 points, and Linn County was third, with 1,006 points. J. Hunt, of Fayette County, was high with 392 points out of a possible 450. John Wells, of Black Hawk County was second with 386, and Telford Hamer also of Black Hawk County was third with 363. These three were chosen as the team to take the trip to the National Dairy Show with L. Emmons of Linn County as alternate.

Junior Prizes at Pacific International

A total of $3,525 in prize money, trip expense and maintenance is offered to the club boys and girls of the northwest who attend the Pacific International Livestock Exposition this year. This includes a $25 prize scholarship at the State Agricultural College, offered by O. H. Plummer and several others provided by western farm paper publishers.

The club section is in charge of H. C. Seymour, state club leader of Oregon who plans on 300 boy and girl club members to be present. There will be a judging contest for the boys and a canning contest for the girls and exhibits of beef and dairy cattle, swine, sheep and goats.

The generous donors of scholarships at the Agricultural College are enabling the boys and girls to gain practical knowledge which thoroughly prepares them for that basic, all essential and most dignified calling, the tilling of the soil.

For a Year Only

The members of the Columbia County Holstein-Friesian Association are about to organize a Holstein calf club in Columbia County, Wis., and aim to enlist the services of every teacher in the country schools.

The age of the entrant is between 10 and 18 and work must be carried on for the full club year. The County Association will arrange for the calves and the banks of Columbia County will, if requested, lend the money to buy the calves. The purchase price will include insurance for the full value of the animal to safeguard against death or accident. It is planned to hold a public sale and show at the end of a year at which time the animals will be offered to public auction.

Enjoyed State Fair Trip

Edwin Butters, of Branch County, Michigan, was one of the youngsters who attended the Michigan State Fair because he was a winner in the local boy and girl stock judgment contest. In the *Coldwater Republican,* young Mr. Butters gives the following account of the trip:

"Wednesday, September 6th, at 1:30 p. m., fifteen boys and girls, representing the various clubs of Branch County, left to attend the State fair at Detroit. We went by bus to Marshall, taking the train from there and arriving at the fair grounds about 8 o'clock.

"Tents were provided for the boys, and the girls, while Miss Osborn stayed at the club house.

"Thursday morning our time was spent watching the 'general live stock' judging team. All judging was done at the coliseum, a building arranged for judging and show purposes. The space under the seats was used to exhibit the 'club animals,' calves, sheep and pigs.

"In the afternoon the 'dairy boys' went through the horse, cattle, poultry and dairy buildings. In the dairy building was an exhibit that attracted a good deal of attention, butter moulded to represent a boy with a wheelbarrow.

"In the evening the crowd was at the coliseum to see the stock parade, acrobats, auto-polo and performing horses.

"Friday forenoon the 'dairy team' judged the dairy breeds—Jersey, Guernsey, Holstein and Ayrshire,—four cows of each breed being judged.

"In the afternoon the report of the contest was given out at the coliseum, Jackson County being first.

"In the evening, the program at the coliseum was about the same as the night before, with the addition of a girls' milking contest, ten girls taking part. Amount of milk, time taken to milk, and how dry the cow was milked were some of the points of the contest. A little girl about ten years old won third place and received a good deal of applause.

"Saturday morning we visited the Zoo and then went on a sight-seeing trip around the city of Detroit, going by the Ford auto plant through Belle Isle and several other places of interest. About 3 p. m. we took the train for home, tired, but happy and well pleased with our trip made possible by the fair association."

Walked Twenty Miles With Heifer

If you were twenty miles from a fair ground, would you put a halter on your heifer and lead it to the fair grounds and exhibit her there? Alden Flygare of Dunnell, Minn., a boy 13 years old walked the 20 miles from Dunnell to Fairmont to enter his purebred Holstein heifer at the county fair.

The animal is a real good one and last year exhibited at this fair, won first prize and at the International Dairy Show at St. Paul last winter competing against the state, won 9th prize.

"Look here," yelled the man in the next flat, pounding on the wall, "I can't sleep with that kid squalling like that! If you don't make him stop, I will!"

"Go to it!" called the parent of the noisy infant. "You'll be as welcome as flowers in spring."

The Pennsylvania Federation

THE Executive Committee of the Pennsylvania Federation of Holstein-Friesian Clubs will have a meeting at West Chester, Pa., October 28th, at the time of the West Chester Field Day. Several things of importance come up for consideration. Arrangements are to be made for the annual meeting of the Federation at Harrisburg, next January and the program will be mapped out. President Lowden has regretted his inability to attend the 1922 meeting and has promised to come next January and speak to the Pennsylvania breeders if possible.

At the meeting last January the question came up of allowing the members of local clubs to qualify for voting at the annual meeting of the Federation when the annual meeting of their local club is held after January 1st. The present rule of the Federation permits members of local clubs or their representatives to vote, only if the member of the local club is paid up the January first before the Federation meets. It is suggested that members of the local clubs who pay their full club dues at the time of their own annual meeting may qualify for voting at the meeting of the Federation which is held around the last of January at the time of the Pennsylvania Farm Products Show.

A start has already been made to present the Pennsylvania State College with a number of representative Holstein females and it is the opinion of the directors that more interest should be created along this line.

The anticipated action of the extension committee of the National Association in regard to extension work as far as it may affect Pennsylvania State club work, is another subject for discussion.

Pool Price for September Milk $2.00

THE pool price for September milk, as announced by the Dairymen's League Co-Operative Association, is $2.00 per hundred lb. This is the base price for milk testing three per cent butterfat in the 201-210 mile freight zone. The price to each dairyman will, of course, vary according to butterfat and also according to his freight distance from market.

The price of $2.00 is the price to the farmer after the cost of administration, advertising and other expenses has been deducted. A loan to the Association of fifteen cents a hundred lb. is made on the certificate of indebtedness plan, for the purpose of taking care of additional marketing facilities as occasion requires.

The September price is exactly $.245 more than League dairymen received for August milk, and $.38 more per hundred than for July. Checks covering payment for September milk will be mailed to the farmers on October twenty-fifth.

"How are the incubators getting along?" asked a friend of his neighbor who had recently bought some.

"Why, all right, I suppose: but although I have had them for two weeks now, not one of the four has laid an egg yet."

Have you tried our Classified Advertising columns? If you have anything to sell it will pay you to do so.

Monthly Comparison of Association Business

The business report of the National Association issued from the Secretary's office under date of September 30th shows no material difference from the report of a month ago. The certificate earnings average about the same as the earnings of the past five months. Due to the increase in transfer fees there was about $6,150 more received during September of this year than in the corresponding month of last year. Last month's total is some over $4,000 less than the corresponding month of 1920.

There is very little difference in the number of registration certificates and number of transfer certificates issued a year ago and now, but there is no gain. Transfer earnings show a material increase due to the fact that the fees are three times the amount charged a year ago but the receipts are not three times as much, the figures being $11,273.50 for September, 1922, and $4,830.75 for September, 1921.

The experience of the breeders show an increased dairy activity commencing with the fall fairs around September 1st, so it is only right to expect that the October business report will indicate more of a gain.

During the past month there were 83 membership applications against 80 a year ago and 176 in 1920. General business conditions are reflected here. The lesson to be drawn, if there is any, is rather from the earnings and the number of transfer certificates issued. As yet there is no evidence of any better business conditions due to the so-called extension work paid for by the increased transfer fees.

Pietertje Fayne Johanna Makes Year Record

ON September 10th, Pietertje Fayne Johanna completed her year record making 23,151.3 lb. milk and 1,118.32 lb. butter, with an average per cent of fat of 3.87. We consider this a very creditable record under the circumstances. She started off poorly and on account of being obliged to change herdsmen she had three different men in charge of her during the test, the last change being made about two months before she completed her test. This change just at this time together with the extreme heat caused her to fall off in her production more than she naturally would have done.

In making this very nice year record at the age of eight and one-half years, she has proven her ability as a consistent producer, having made at the age of two and one-half years, 483.4 lb. milk, 27.25 lb. butter; in seven days, at the age of four years she made 510 lb. milk, 34.54 lb. butter; at the age of five years she made 640.1 lb. milk, 32.26 lb. butter in seven days and 2,632.3 lb. milk, 133.22 lb. butter in thirty days. Her full sister, Segis Fayne Pietertje, has a year record of 19,419.9 lb. milk, 1,039.45 lb. butter at five years. Her half sister, Segis Hengerveld Fayne Johanna, recently completed a year record of 20,216.1 lb. milk, 1,129.38 lb. butter as a nine year old. Another half-sister, Segis Fayne Rag Apple as a senior four-year-old, made a record of 21,990.4 lb. milk, 1,054.94 lb. butter. This gives their dam, Segis Fayne Johanna, four daughters with year records of over 1,000 lb. butter.

Pietertje Fayne Johanna has three crosses of the blood that produced the world's champion milk producer, Segis Pietertje Prospect. She is the dam of our junior herdsire, Bloomingdale King Fayne, his sire being King Pontiac Hengerveld Fayne, a son of Segis Hengerveld Fayne Johanna, making his two nearest dams average 1,123.84 lb. butter in 365 days.

Pietertje Fayne Johanna was bred to our senior herdsire, King Model, on March 5, 1922.

Bloomingdale Farms, Somerville, N. J.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Oct. 24—Deysher Farm, Reading, Pa., Lancaster County Breeders' Auto Run and Picnic.
Oct. 28—West Chester, Pa., Field Day and Banquet.
Nov. 23—Belvidere, N. J.—Annual Meeting Warren County Association.

GET THE MONEY, BOYS

The board of directors of the Wisconsin State Association at a meeting held in Madison September, 8th assessed breeders of the state $2 per member per year, this assessment to be collected by the county association. It is necessary to raise this money to enable the state association to obtain its proportion of the 50c per transfer which is set aside by the national association for the support of the organized state associations.

DELEGATED TO BUY

The Holstein Cow Club composed of boys and young men of the St. Onge district, South Dakota, have sent one of their members, Felix Cardinal, into Minnesota and Wisconsin to select a carload of purebred Holsteins. Mr. Cardinal attended the Brookings Agricultural College and also the Minnesota Agricultural College and so his friends feel he is well qualified to make the selection. When he returns it is expected that each member of the club will have at least one purebred Holstein.

LANCASTER BREEDERS' FIELD DAY

The Lancaster County Holstein-Friesian Breeders' Association are looking forward to a big time at the Deysher Farm, Reading, Pa., on October 24th, when the Association plans to attend in a body, the members being the guests of Mr. Deysher on this occasion. The Deysher herd from the standpoint of individuality, breeding and production, is not surpassed in Southeastern Pennsylvania, while its owner is a general favorite with cattlemen everywhere. The Lancaster County Association is composed of a bunch of livewires,—all around good fellows,—and you will be welcome and have a good time if you can attend their meeting at the Berks Farm on October 24th.

HEAR GOOD ADDRESSES

The Holstein breeders of Western Massachusetts met at the farm of T. J. Dewey, at Westfield, on October 5th. Representatives of the State Department of Agriculture and the Hampden County Improvement League gave addresses while a judging demonstration was given by C. L. Blackman, the New England Holstein Field Secretary. Addresses were also given by F. B. Carroll on "What the Cow Testing Associations Have Done for the Dairy Industry in Berkshire County"; O. M. Camburn on "The Dairy Outlook in New England"; J. H. Putnam, R. A. Paine and J. H. Bodwell on "Dairy Outlook in Franklin, Hampshire and Hampden Counties."

MAHONING COUNTY ASSOCIATION

The Mahoning County Holstein-Friesian Club held its monthly meeting at Youngstown, Ohio, Monday, September 25th. The members reported an improvement in their herds and aim to have a real high class county herd exhibit next year. The members were greatly gratified at the show herd which was selected by the Ohio Holstein-Friesian Association. At the Tennessee State Fair the herd took 13 of the 17 blue ribbons and seven second prizes winning 46% of the prize money offered.

Members of the Mahoning Club pay into the treasury 5% commission in all private sales they make, the money to go toward the advertising campaign this club is staging.

EASTERN NEW YORK BREEDERS MEET

The members of the Eastern New York Holstein-Friesian Breeders' Association combined business and pleasure by staging a clambake in connection with their annual meeting held Sept. 30th. They were the guests of H. D. Fraleigh at his home at Upper Red Hook. More than a hundred were present.

After the feast the meeting was called to order and the reports of the secretary and treasurer read and approved. Edward J. Chaffee of Wassaic was re-elected president, G. S. V. Andrews was elected vice-president, and Messrs Warner, Halliday, Hoag, Young Fraleigh and Schmid were elected directors. H. H. Benson of Wassaic was chosen as the organization delegate to the advisory committee of the state association.

CALIFORNIA ASSOCIATION ELECTS OFFICERS

The California Holstein-Friesian Association held its annual meeting during the State Fair Week and elected W. J. Higdon of Tulare as president, Fred Hartsook first vice-president, E. M. Brown as second vice-president and C. L. Hughes secretary-treasurer. The latter reported that the finances of the association were in excellent shape and that there was a balance of $5,567.35 in the treasury. The following fifteen were elected to serve as directors for the coming year: Fred Hartsook, Lankershim; Kenneth W. Abbott, Los Angeles; R. A. Condee, Chino; Wm. R. Harrison, Hondo; W. J. Higdon, Tulare; Frank M. Helm, Fresno; F. L. Hogue, Modesto; J. M. Campbell, Escalon; Fred W. Kiesel, Sacramento; F. L. Morris, Woodland; DeLancey Lewis, San Jose; E. Swift Train, San Francisco; J. W. Snodgrass, Hueneme; E. N. Brown, Palo Alto, and H. V. Bridgford, Patterson.

HEAR GOOD TALKS

The members of the Wheeler, Wisconsin, Holstein Breeders Club, with their families and friends held a picnic September 23d, in the grove near the local creamery.

The principal speaker were John Imrie of Roberth, William Millar, Jr., president of the Dunn County Holstein Breeders' Association and Principal D. P. Hughes.

Mr. Hughes told of the points to consider in selecting a foundation cow, urged the dairymen to keep more good cows and to discard the boarders. He recommended the growing of more corn, clover and alfalfa and the liberal application of lime.

President Millar spoke of the local clubs, the county association and their relation to the state and national associations.

The principal address was by John Imrie one of Wisconsin's veteran farm institute conductors. He spoke on the value of the purebred sire in improving the herd.

CHESTER COUNTY FIELD DAY

The Holstein-Friesian Breeders' Association of Chester County was organized June 1, 1912, with twelve charter members of whom six are to-day members in good standing and actively engaged in breeding. There are over 60 members at the present time. The constantly increasing interest in the breeding of Black and White cattle is significant when we consider this organization, which has flourished from the start, was organized in the midst of a section long devoted to the breeding and importation of other cattle. It has outlived many local organizations in neighboring counties and to-day its membership is increasing more than ever. Gradually as interest of the members in breeding became more intense they eliminated the grade cows and bought better bulls and kept

only purebred Holsteins. The dairymen in general in this "market milk section" realizing the larger production and the cheaper production of the Holsteins, used purebred bulls in their herds and now Black and White cattle predominate on the farms of this section.

Through the influence of this Association is due the excellent premiums at the Chester County Fair. The Holstein breeders annually give silver cups and in other ways have brought out an exhibit of Holsteins larger than all other breeds for several years.

The climax of Holstein activities will occur on October 28th at West Chester, when there will be a Holstein Field Day, Show and Banquet. The general committee of this event is composed of F. C. Brinton, Jr., as chairman; Wm. Vandergrif, Boys' Clubs and Publicity; C. J. Garrett, Cattle Show; E. P. Allinson, Field Day; F. A. Keen, Banquet; M. L. Jones, Mens' judging; Thomas Clements, Alfred Fassitt, Furman Gyger, and W. E. Gorman.

Judging from the plans outlined and the speakers engaged it will be the greatest event in the dairy line Chester County has ever had.

CHAS. J. GARRETT.

IDAHO ASSOCIATION FORMED

The Holstein Breeders of Southern Idaho formed a permanent organization at a meeting in the Chamber of Commerce Rooms, Boise, September 29th. The name of the organization is the Idaho Holstein-Friesian Breeders' Association. H. A. Padgham of Gooding was selected president and R. K. Musser of Boise, secretary. Thomas Killen of Boise, is the vice-president, while the board of directors is composed of William Parkhurst, Richfield; Herman White, Notus; E. R. Evans, Weiser; Carl Johnson, Idaho Falls; F. W. Hastings, Wendell and F. W. Atkinson, Moscow.

The meeting was presided over by William G. Messersmith of Boise. Sixteen Holstein breeders were present at the meeting while others were represented by proxies.

BRATTLEBORO BUSINESS

Twenty-seven applications for membership were received at the office of the Secretary during the week ending September 30th.

There were 1,651 certificates of registry issued in the same week, 1,237 of them being female and 414 male; 1,076 certificates of transfer were written, 714 of them being female and 362 being male.

Twenty-eight membership applications were received for the week ending October 7th.

During the same period, 2,366 certificates of registry were issued, 1,757 female and 609 male; 1,334 certificates of transfer were written, 885 female and 449 male.

The herd prefixes reserved during the two weeks period are:

Balsam Grove, William Hoitink, Oostburg, Wis.
Broadlea, Theodore J. Bradley, Boston, Mass.
Chickawa, H. M. Herrick, Fredericksburg, Iowa.
Chestnut Wood, W. V. Sohn, Harmony, Pa.
Dalecrest, H. W. Dale, Lockport, N. Y.
Domestic, Catharina Inniger, Berne, Ind.
Echo Lane, Mark A. Knight, Rockwood, Mich.
Gila, Miller Cattle Co., Phœnix, Ariz.
Gordondale, Joseph Gordon & Sons, Mineral Point, Wis.
Hofstetter, J. H. Hofstetter, Lewistown, Mont.
Indian Opening, Seward H. Babcock, Solsville, N. Y.
Keesus, John Fieldhack, Merton, Wis.
Lone Lane, William Kurtz, Grand Blanc, Mich.
Maple Wanna, Elbert G. Tew, Woodhull, N. Y.
Maplex, H. M. Bailey, Farmington, Maine.
Ongley, Merle W. Ongley, Centerville, Pa.
Peatland, Earl R. Anderson, Aldrich, Minn.
Paulynne, Lynne L. Merritt, Quakertown, Pa.
Pleasant Meadow, Emery P. Nelson, Oregon, Wis.
Royal Grove, John C. Wilson, Franklin, Ohio.
Sideview, Christ Hatz, Glencoe, Minn.
Silversol, Albert Sollars, Yorktown, Ind.
Violet Bend, Robert McAllister, Parnassus, Pa.

Shows, Fairs and Expositions

Oct. 19-29—Shreveport, Louisianna State Fair.
Oct. 23-27—Columbia, South Carolina State Fair.
Oct. 26-Nov. 4—Macon, Georgia State Fair.
Oct. 28-Nov. 2—Spokane, Wash., Western Royal Live Stock Show.
Oct. 30-Nov. 4—Savannah, Ga., Savannah Tri-State Exposition.
Nov. 4-11—Portland, Ore., Pacific International Live Stock Exposition.
Nov. 11-18—Kansas City, Mo., American Royal Live Stock Show.
Nov. 17-25—Jacksonville, Florida State Fair and Exposition
Nov. 9-19—Houston, Texas., Houston Fair.
Nov. 18-25—Kansas City, Mo., American Royal Live Stock Show.
Dec. 2-9—Chicago, Ill., International Live Stock Show.
Jan. 13-20, 1023—Denver, Col., National Western Stock Show.
Feb. 1-10—Tampa, Fla., South Florida Fair.

THE HOLSTEIN SHOW AT WEST CHESTER

By B. F. JONES

The Chester County Fair was held at West Chester, Pa., the week of August 29. Exhibitors of Holsteins were: M. L. Jones, Westtown; C. J. Garrett, West Chester; F. C. Brinton, Jr., West Chester; Marshall Strode, West Chester; H. E. Jones, Jr., West Chester.

In the bull classes the young bull King Ormsby Accrue Segis, by Wintherthur King Ormsby Accrue, deserves special mention, being of good conformation with plenty of dairy indications. He was somewhat inclined to arch his back at times, though a skilful showman could have easily covered that defect. If he can hold his present form and substance as he develops we predict a great future for him. He was exhibited by Chas. J. Garrett.

In the cow classes, no sensational show cows were brought out but they were a good substantial lot and were a credit to the exhibit.

M. L. Jones showed the two-year-old heifer, Westtown Eva Pauline. She was a real sensation, though perhaps a little over-fleshed. She was very sweet and refined with ample Holstein character, level as a straight edge on top, her quarters standing out square under her and had a wonderful sprung rib and a deep body. Her udder was very promising and her veining though difficult to follow on account of her flesh, we pronounced extremely good.

The same remarks would apply to Mr. Jones, senior yearling Westtown Aaggie Colantha, save that she had a slight nick forward of the tail-head that detracted somewhat from her general symmetrical appearance. She was in about prime show condition as far as flesh was concerned but had little to spare in winning the Championship over Westtown Eva Pauline.

As a general proposition, the Holstein breeders of Chester County are to be highly complimented on the collection of cattle exhibited. There were many animals of more than ordinary merit and it is doubtful if many counties could come up to the standard displayed. A noticeable characteristic was the spirit shown by the breeders in supporting the exhibition.

WINNERS AT THE VIRGINIA STATE FAIR

By W. L. KIRBY

Tuesday, October 3d, was "red letter" day for the Holstein breeders at Virginia State Fair. Ninety-three head of high-class Holsteins were exhibited. The quality of the Holstein exhibits have never been equaled at the Virginia Fair, and as the judge remarked, the two-year-old classes were as good as he had seen lately at any fair or Holstein show.

Seward Stock Farm, Petersburg, Virginia, had the largest number of exhibits and took the largest number of prizes.

Central Poor District, Luzerne County, Wilkes-Barre, Pa., had a most creditable exhibit, which showed type and uniformity throughout. This was the only herd exhibited from outside of the state of Virginia, which demonstrates the type and uniformity of Old Dominion Holsteins.

Prof. T. E. Elder was the judge and his decisions were well received. The writer heard complimentary remarks relative to his decisions, not only from the exhibitors, but the onlookers at the ringside.

In the class for bulls three years old and over, Seward Stock Farm won first place with King Pietertje Pontiac Alcartra; J. W. Albert, Culpeper, Virginia, second, with Meadow Farm Farmers Boy, and E. G. Schmidt, Richmond, Virginia, third, with King Pontiac Janzen Artis.

Colantha Sir Aaggie Hartog Lad, owned by Seward Stock Farm, had no trouble in winning first place in the class for bulls two years old and under. He is an outstanding individual and was made senior champion.

The senior bull calf was won by H. L. Butler & Son, Culpeper, Virginia. This bull was later made junior and grand champion. This young animal showed quality throughout.

Among the twelve entries in the aged cow contest, Zora Pauline De Kol Hartog, a daughter of Meadow Holm Burton Hartog, easily won first. This cow is owned by Seward Stock Farm, Petersburg, Va.

Her half sister, another daughter of Meadow Holm Burton Hartog, won first place in the two-year-old and under three class. R. N. Pemberton, Richmond, Va., won second place with Champion Dreda Abbekerk. Seward Stock Farm won third place with Delicious Ormsby. Central Poor District, Luzerne County, Wilkes-Barre, Pa., won fourth place with Carnation Matador Abbekerk.

In the senior yearling contest, Central Poor District won first and second place; Dunlop Bros., Petersburg, Va., third, and Seward Stock Farm, fourth.

The junior yearling contest proved to be a sensation. When the judge lined up all the animals a calf club member, Gertrude Drinker, Richmond, Va., was placed first, with Henrico Duchess May Echo. A calf club member of Woodstock won second place, with Golden Beauty Lass.

The get of sire competition was unusually interesting. Seward Stock Farm, with daughters of Meadow Holm Burton Hartog, easily won first, one of these having been placed at the head of the aged cow contest and cows two years old and under three. X. Beck, Richmond, Va., won second place with four young heifers, daughters of V. P. I. Buckeye Caltha De Kol. These animals showed individuality, type and milking qualities throughout. It further demonstrated that V. P. I. breeding was telling in the show ring, since not only this class showed much type, but the grand champion bull owned by H. L. Butler & Son, was a descendant of their blood lines.

The competition for the best county herd was very close, and after the judge had spent some time looking them over and adding up their winnings in open competition he finally placed Henrico County first, and Culpeper second.

The details with placings follow:

Bull, three years old and over: 1st, King Pietertje Pontiac Alcartra, No. 209873, Seward Stock Farm, Petersburg, Va.; 2d, Meadow Farm Farmers' Boy, No. 293625, J. W. Albert, Culpeper, Va.; 3d, King Pontiac Janzen Artis, No. 261269, E. G. Schmidt, Richmond, Va.

Bull, two years old and under three: 1st, Colantha Sir Aaggie Hartog Lad, No. 320827, Seward Stock Farm; 2d, Hillside Pontiac Elsie, No. 311297, Central Poor District, Luzerne County, Wilkes-Barre, Pa.

Senior yearling bull: 1st., Elko Pet Pontiac, No. ——, E. G. Schmidt.

Junior yearling bull: 1st, Ellerslie Pietertje Korndyke, No. 348625, Dunlop Bros., Petersburg, Va.; 2d, Hillside Pontiac Korndyke, No. 344071, Central Poor District.

Senior bull calf (six entries): 1st, Finella Sleepy Eye Pontiac Dykstra, No. ——, H. L. Butler & Sons, Culpeper, Va.; 2d, bull calf, Dunlop Bros.; 3d, King Ætna Pietertje, No. 37641, J. B. Lee, Fredericksburg, Va.; 4th, Makenshot Colantha Lad, No. 370471, Seward Stock Farm.

Cow, three years old and older (twelve entries): 1st, Zora Pauline De Kol Hartog, No. 560820, Seward Stock Farm; 2d, Prilly Aaggie Pontiac Lass, No. 510572, Central Poor District; 3d, Prilly Aaggie Pontiac, No. 271879, Central Poor District; 4th, Clothilde Ladoga Hengerveld, No. 287278, R. N. Pemberton, Richmond, Va.

Two years old and under three (ten entries): 1st, Beauty De Kol Mutual Hartog, No. 598603, Seward Stock Farm; 2d, Champion Dreda Abbekerk, No. 561862, R. N. Pemberton; 3d, Delicious Ormsby, No. 583134, Seward Stock Farm; 4th, Carnation Matador Abbekerk, No. 600316, Central Poor District.

Senior yearling (nine entries): 1st, K. P. A. P. Prilly, No. 737108, Central Poor District; 2d, Hillside Pontiac Lilly, No. 699944, Central Poor District; 3d, Ellersie Aaggie Alcartra, No. 766130, Dunlop Bros.; 4th, Hubbards Colantha Beets Producer, No. 706551, Seward Stock Farm.

Junior yearling (ten entries): 1st, Henrico Duchess May Echo, No. 686012, Gertrude Drinker, Richmond, Va.; 2d, Golden Beauty Lass, No. 680267, B. A. Warriner, Woodstock, Va.; 3d, Echo Sylvia Gertrude Korndyke, No. 653833, Seward Stock Farm; 4th, Virginia Korndyke Sadie Alice, No. 670148, B. A. Warriner.

Senior heifer calf (seventeen entries): 1st, Retreat Katherine, No. 732014, Central Poor District; 2d, Retreat Segis Prospect, No. 732881, Ceneral Poor District; 3d, Ellersie Snowball Pontiac, No. 766131, Dunlop Bros.; 4th, heifer calf, B. A. Warriner.

Exhibitor's herd: 1st and 3d, Seward Stock Farm; 2d, Central Poor District, Luzerne County, Wilkes-Barre, Pa.

Breeders' young herd: 1st, Dunlop Bros.; 2d, Seward Stock Farm.

Get of sire: 1st, Seward Stock Farm; 2d, X. Beck, Richmond, Va.; 3d, Central Poor District; 4th, Dunlop Bros.

Produce of cow: 1st, Seward Stock Farm; 2d, H. W. Gills, Richmond, Va.

Senior champion bull: Colantha Sir Aaggie Hartog Lad, No. 320827, Seward Stock Farm.

Junior champion bull: Finella Sleepy Eye Pontiac Dykstra, H. L. Butler & Sons.

Senior champion cow: Zora Pauline De Kol Hartog, No. 560820, Seward Stock Farm.

Junior champion cow: K. P. A. P. Prilly, No. 737108, Central Poor District.

Grand champion bull: H. L. Butler & Son.

Grand champion cow: Zora Pauline De Kol Hartog, No. 560820, Seward Stock Farm.

Best county herd: W. L. Kirby, Henrico County, Richmond, Va.; B. P. Williams, Culpeper County, Culpeper, Va.

TENNESSEE TRI-STATE FAIR

The Tri-State Fair was held at Memphis, Tenn., September 23d-30th. Four states sent their representatives to battle for the Holstein-Friesian awards which were handed out by W. S. Moscrip, of Lake Elmo, Minnesota. The exhibitors were James F. Stokes, Temple, Texas; Elmer Frazier, Milldetown, Ind.; King L. Banks, Wynne, Arkansas; H. L. Davis, Germantown, Tenn.; and West Tennessee Normal School.

Mr. Frazier won a large proportion of the prizes, taking first in three of the five bull classes, and a majority of firsts for females. The awards are as follows:

Bull, three years: 1st, Stokes, Prince of Emden; 2d, West Tennessee Normal, Butler King De Kol Lyons; 3d, Stokes, King Vale Mercedes of Hawthorne.

Bull, two years: 1st, Frazier, Illini Tarton Pride; 2d, West Tennessee Normal, De Kol Chisca; 3d, Stokes, King Jewel Johanna Clyde.

Yearling bull: 1st, Frazier, Merrygold King Tritomia Bo Peep; 2d, Banks, Winfoking Maggrath Ormsby; 3d, Stokes, Cherry Hill's Johanna Burke.

Senior bull calf: 1st, Frazier, Christmas Tritomia; 2d, Frazier, Merrygold Pontiac Illini; 3d, Stokes, Modest Prilly's Prime Pontiac; 4th, Banks; 5th, Banks.

Junior bull calf: 1st, West Tennessee Normal; 2d, Frazier, Merrygold Patrick Pride; 3d, Banks; 4th, Banks; 5th, Stokes; 6th, West Tennessee Normal.

Cow, four years or over: 1st, Frazier, Adelaide Tritomia Prilly; 2d, West Tennesssee Normal, Ethel Segis Fayne Nudine; 3d, Banks, Canary Fobes Tatty De Kol; 4th, West Tennessee Normal, Nell Woodcrest Nezi; 5th, Stokes, Cherry Hill Johanna Caroline; 6th, West Tennessee Normal, Pipsey Houwtje De Kol 2d.

Cow, three years, under four: 1st, Frazier, Merrygold Pontiac Jewel Korndyke; 2d, Banks, Alcartra Fobes Tidy; 3d, West Tennessee Normal, Rosedale Beauty Segis; 4th, West Tennessee Normal, Lady Korndyke Lyons De Kol; 5th, Davis, Jennie Pet Pontiac.

Heifer, two years, under three: 1st, Banks, Chickasaw Tatty Fobes; 2d, Frazier, Merrygold Belle Snowflake Bo Peep; 3d, West Tennessee Normal, Korndyke Queen Nezi; 4th, Banks, Aaggie Ormsby; 5th, Stokes, Modest Prilly's Pontiac Best.

Senior yearling heifer: 1st., Frazier, Merrygold Snowflake's Peep; 2d, Stokes, Prilly Korndyke of Sunny Wild; 3d, Banks, Winfoking Ormsby Korndyke.

Junior yearling heifer: 1st, Frazier, Pauline Peep; 2d, Banks, Winfoking Tatty Wayne; 3d, Banks, Aaggie Rag Apple.

BIG CATTLE EXHIBIT AT YORK

When R. E. Haeger received the invitation to judge cattle at the Sixty-ninth Annual Fair at York, Pa., he might have thought that he was going to pick up some easy money but he must have changed his mind when he got on the York Fair grounds for there were no less than 763 head of cattle for Bob to look over. This number alone was more than was seen out this year at some state fairs but when it comes to breeds there were, besides grades, at least one and generally two or three herds of the folowing thirteen breeds of cattle:

Galloway	Aberdeen-Angus
Hereford	Shorthorn
Dutch-Belted	Holstein
French-Canadian	Guernsey
Jersey	Ayrshire
Brown Swiss	Red Polls
Devons	

Mr. Haeger tackled the job and a talk with the showmen of the different breeds indicated that he gave general satisfaction.

The Guernsey and Devon exhibits were of real high quality and the exhibit of Guernsey grade cows was outstanding. With the exception of one Ohio herd the cattle were all owned within a short distance of York.

There were about 75 Holsteins exhibited, H. E. Robertson having thirty-three head. The Robertson herd took a majority of the prizes, winning first in the yearling bull class on King Piebe of York 3d, and first in the aged cow class and the female championship on Dimeta Burke De Spofford whose picture was shown on page 621 of the September 22d issue of the BREEDER AND DAIRYMAN, she being second prize aged cow at the Maryland State Fair. Mr. Haeger said that the Robertson herd was in better show condition than it was at Timonium and indicated that much care and fitting had been bestowed upon them during the intervening time. The first prize in the aged bull class and the male championship was won by King Pietertje Buttercup 2d, owned by Davis Brothers of Seven Valleys, Pa. This bull was grand champion at the Allentown Pa. Fair, and is a real nice individual very straight on the back and good over the rump, weighing very close to 2,560 lb.

The York Fair is one of the largest in southern Pennsylvania and a representative of the BREEDER AND DAIRYMAN was informed by the superintendent of cattle that on two seperate days during the week of October 3d-6th there were 100,000 people in attendance. Although only a county fair, and paying comparatively small prizes, there were high class exhibits in all departments while the midway was much larger than the ones at Timonium or Syracuse this year.

THE INTERSTATE FAIR

Corwin Farms were the only exhibitors at the Inter-State Fair at Sioux City, Iowa. King Korndyke Sadie Vale Pietertje was made senior and grand champion and the junior champion was Corwin Wimple De Kol Ormsby. The junior champion female was Corwin Colantha Florence Ormsby a senior yearling and the senior champion female was Susie Colantha Pontiac Berta, who was first in the aged cow class.

THE HOLSTEIN SHOW AT ALLENTOWN

By B. F. Jones

There was a very good show of Holstein cattle at the Allentown Fair, held at Allentown, Pa., September 18-22, 1922. Many of the animals were well fitted for exhibition but some of the exhibitors still have something to learn along that line.

In the aged bull class, Davis Brothers of Seven Valleys, Pa., were easy winners on their King Pietertje Buttercup 2d. This bull has ample scale, tipping the beam at around 2,400 pounds. He is fairly level on top with well sprung rib and quarters, his limbs and feet set quarely under him. He is lacking somewhat in breed, character, and refinement, but has plenty of quality and dairy indications. The same exhibitors also exhibited an excellent yearling bull, although he was in rather thin condition.

In the aged cow class, the Central Poor District of Retreat, Pa., won first place with Prilly Aaggie Pontioc, a cow of strong parts and in prime show condition. She was not so sweet and refined or so level on top as was her daughter, Prilly Aaggie Pontiac Lass, a daughter of Mr. Deysher's great bull, King Tweede Spring Farm. This heifer was an easy first in the three-year-old class and finally went through to the grand championship for females. Besides being a level-topped, square-quartered, deep-bodied heifer, with great substance and quality, she swings a huge udder that comes near perfection in conformation and texture.

In the two-year-old class, the winner was Korndyke Craig Hill De Kol, also exhibited by the Central Poor District. She is a very sweet heifer of good bodily conformation but slightly down in the loin, and her udder, while of strong attachment, was badly quartered and not quite level on the bottom.

In the senior yearling class, Central Poor District exhibited two very strong heifers, Hillside Pontiac Lilly and K. P. A. P. Prilly. The former was approaching close to the two-year-old mark and was in prime show ring condition, being on the eve of freshening, and was awarded the blue. The latter was heifer of strong individuality, level topped and smooth, but was a little light in the barrel and too lacking in real substance to compete successfully with her burly antagonist.

In the senior calf class, Retreat Abbekerk, a large well developed daughter of Woodmont Echo Sylvia Champion, was exhibited by Central Poor District, and was not only first in her class but was a strong contender for grand champion female. She was broad and round as a barrel with properly developed quarters and carried extreme depth of rib both fore and aft. She was a calf that would be a strong competitor in any show ring.

In the junior calf class, the same exhibitors again won first place with Retreat Segis Prospect, a beautiful daughter of Carnation Segis Prospect, that was possibly a little over fitted, her flesh on ribs and about the tail-head being considerably bunched. They also were second in the class with Retreat Catherine, a beautiful calf but less symmetrical in conformation.

MET HER WATERLOO

A heifer calf, owned by thirteen-year-old Marcella Keefe, won second place in the open class at the Minnesota State Fair, defeating forty-four other heifers. Then she was hurried back to her home, Rochester, to appear in the Rochester Loan and Trust Company calf club competition. The trip did not agree with her and she was defeated by the senior heifer calf owned by Percy Engel of Stewartville, who won the grand championship of the show. The prizes thus won include a silver loving cup for the grand championship, a gold medal presented by the Rochester Loan and Trust Company, $11 in cash presented by the Olmstead County Agricultural Association and the Rochester Clearing House Association and a free service to Dutchland Creamelle Colantha Lad, first prize bull at the 1921 National Dairy Show. This service is donated by Dr. Christopher Graham. The judge was C. L. McNally, Dodge County agent.

THE KANSAS STATE FAIR

The Kansas State Fair at Hutchinson brought together a number of good herds both from within and without the state. A. J. King came with his string that had swept the boards at the Missouri State Fair but he found stiff competition especially from the Iowa herd of H. O. Larsen which made such a fine showing at Topeka. The Larsen bull, Sir Rag Apple Posch, met defeat from Canary Oak Fobes Homestead 2d, owned by Fred McMurray and this bull was later made senior grand champion. Two years ago this bull was about to be slaughtered but on account of the cow testing association records his daughters were making he was kept in service. King showed the famous old Hæger show cow, Prilly Clothilde De Kol, now thirteen years old and she was third in the aged cow class. It is reported that this cow has won more money in the show ring than any other Holstein show cow with the exception of Minerva Beets. Larsen's junior bull, Forum Ormsby Superior and his junior champion female, Marjorie Plum De Kol were both extra good and won the other championships.

The herd from Union College, Nebraska, and the George Young herd from Manhattan, exhibited some real good animals. W. R. Crow of Hutchinson, A. M. Davis of Hutchinson and C. C. Kagarice of Darlow, Kansas, also won prizes,

MARJORIE PLUM DE KOL
First prize senior heifer calf and junior champion female at Kansas State Fair, Hutchinson. Owned by H. O. Larsen, Dike, Iowa.

Crow winning the Kansas special for Calf herd. The judge was Prof. H. W. Cave, of Manhattan, Kansas.

The detailed awards are:

Bull four years and over: 1st, Fred McMurray, Darlow on Canary Oak Fobes Homestead 2d; 2d, H. O. Larsen on Sir Rag Apple Posch.

Bull three years and over: Geo. Young, Manhattan, on K. S. Korndyke Homestead Segis; 2d, Union College on King Pontiac Champion Polkadot; 3d, W. R. Crow on Herbert Oak Fayne Alcartra Lockhart.

Bull two years and under three: Larsen on Rex Clothilde Aaggie Forum.

Senior yearling bull: 1st, Union College on College King Cornucopia De Kol and 3d, on College King Netherland; 2d, Crow on King Mutual De Kol Hengerveld; 4th, A. J. King, Kansas City, Mo., on King's Sylvia Carnation.

Senior bull calf: 1st, Larsen on Forum Ormsby Superior; 2d and 3d, King on King Segis Longfield Homestead and Imperial Clothilde Prilly; 4th, Union College on Sir Pietje Ormsby Florence Segis.

Aged cow: 1st, Young on Ulad Henry Colanthus; 2d, Larsen on Forum Diamond Homestead; 3d, King on Prilly Clothilde De Kol; 4th, Union College on Union College Anna De Kol Walker 2d.

Cow three years and under four: Young on Lady Lockhart Colantha De Kol; 2d, King on Princess Longfield Homestead.

Heifer, two years and under three: 1st and 2d, Larsen on Forum Pontiac Queen and Forum Masterpiece; 3d and 4th, King on Dula Vista Echo Sylvia Eli Ormsby and Avon Pontiac Inka Sylvia.

Senior yearling heifer: 1st, Young on Lady Volga Johanna; 2d, Larsen on Forum Hulda Mead; 3d, Union College on C. K. S. Mary Pietertje Segis; 4th, King on Carnation Sylvia Clothilde Emma.

Junior yearling heifer: 1st, Union College on C. K. S. Abbekerk Alcartra; 2d and 3d, King on Charlevoix Marburg De Kol; and Winterthur Ormsby Clarinda; Larsen on Maxie Plum De Kol.

Senior heifer calf: 1st, Larsen on Majorie Plum De Kol; 2d and 4th, Union College on Piebe Wonder Ormsby Segis

CANARY OAKS FOBES HOMESTEAD 2D
First prize aged bull, senior and grand champion at the State Fair, Hutchinson, Kansas. Owned by Fred. E. McMurray, Darlow, Kansas.

Pietertje and Abbie Korndyke Segis Alcartra; 3d, King on Lady Superba.

Senior and Grand Champion Bull: McMurray on Canary Oak Fobes Homestead 2d.

Junior champion bull: Larsen on Forum Ormsby Superior.

FORUM PONTIAC QUEEN
First prize two-year-old senior and grand champion at Hutchinson, first prize two-year-old both at Topeka and Oklahoma City. Owned by H. O. Larsen, Dike, Iowa.

Senior and grand champion female: Larsen on Forum Pontiac Queen.

Junior champion female: Larsen on Marjorie Plum De Kol.

Get of Sire: 1st, Young; 2d, Union College; 3d, Larsen; 4th, Crow.

Aged herd: 1st and 2d, Larsen; 3d, Union College; 4th, Crow.

Young herd: 1st, Union College.

Calf herd: 1st, Larsen; 2d and 4th, King; 3d, Union College.

Produce of cow: 1st, Young; 2d, Larsen; 3d, Union College; 4th, Crow.

THE OKLAHOMA STATE FAIR

Holsteins were greatly in evidence at the Oklahoma State Fair which was staged at Oklahoma City, Sept. 23d to 30th. The great black-and-white cow has been coming rapidly into the state during the past year and you can find small herds now where a purebred Holstein had never been seen two and three years ago. Fifteen herds exhibited, showing 104 head and the quality was good both from inside and out of the state. The fair visitors seemed greatly interested in the breed and the dairy barns were well filled nearly all the week.

FORUM DIAMOND HOMESTEAD
First in aged class, senior and grand champion at the Oklahoma State Fair. Owned by H. O. Larsen, Dike, Iowa.

The herd of H. O. Larsen of Dike, Iowa, took the three female championships and the senior male championship. The junior and grand champion bull was Colantha Beets De Kol Johanna of the Carter County Holstein herd, Ardmore, Okla. Larsen also won in the aged herd group, the get of sire and the produce of cow.

FORUM HULDA MEAD
First senior yearling and junior champion at Oklahoma State Fair. Owned by H. O. Larsen, Dike, Iowa.

The detailed award list follows:

Exhibitors—Carter County Holstein Herd, Ardmore; E. R. Chastain, Tuttle; W. M. Eckroat, Jones; E. L. & R. R. Haines, Weatherford; A. J. King, Kansas City, Mo.; D. F. Krause & Sons, Dustin; H. O. Larsen, Dike, Ia.; Charles R. Shirey, Arapaho; Ed. Thomas, Oklahoma City; Union College, College View, Neb.; John F. Vaughn, Stillwater; Jas. Wadley, Oklahoma City; Bermuda Lawn Farm, Tulsa; H. M. Dowler, Blackwell; C. C. Childers, Enid.

Judge—J. W. Ridgeway, Fort Worth, Texas.

Bulls—Aged: 2 shown; 1, Larsen an Sir Rag Apple Posch; 2, Shirey on Prince Johanna Bonheur. Three-year olds: 3 shown; 1, Carter County H herd on Stripling Farm Hinkman Pontiac; 2, Haines on DeKol Sadie Vale Walker; 3, Union College on King Pontiac Champion Polkadot. Two-year-olds: 5 shown; 1, Larsen on Rex Clothilde Aaggie Forum; 2, Chastain on Okla. Pontiac Segis Prince; 3, Thomas on Duke Wallace Artis Pontiac; 4, Bermuda Lawn Farm on Prince Veeman Pietje; 5, Eckroat on Baylor Bronx DeKol. Senior yearlings: 4 shown; 1, Carter County H. herd on Colantha Beets DeKol Johanna; 2, Union College on College King Netherland; 3, Watkins on Artis Masterpiece; 4, Vaughn on Sir Pietertje Ormsby Forbes 9th. Junior yearlings: 7 shown; 1, Union College on College King Cornucopia DeKol; 2, King on King Sylvia Carnation; 3, Dowler on King Ormsby Pontiac Butterfly; 4 and 5, Carter County H. herd on King Segis Ardmore and DeKol Woodcraft Pontiac Glenwood; 6, Haines on Judge Pietertje Cornucopia Paul. Senior calves: 10 shown; 1, Larsen on Forum Ormsby Superior; 2 and 3, King on Imperial Clothilde Prilly and King Segis Longfield Homestead; 4 and 5, Union College on King Netherland Segis Alcartra and Sir Pietje Ormsby Florence Segis.

Cows—Aged: 10 shown; 1, Larsen on Forum Diamond Homestead; 2, Bermuda Lawn on Pauline Red Oak Pontiac; 3, Union College on Miss Sarah Netherland DeKol; 4 and 5, Carter County H. herd on Changeling Pontiac Cynthia and Darlyne Johanna Beets; 6, King on Prilly Clothilde. Three-year-olds: 7 shown; 1, Shirey on Wayne Ormsby Korndyke; 2, Carter County H. herd on Changeling Peg Ruby Wayne; 3, Wadley on Louise Mercedes DeKol; 4, Krause & Sons on Rose Beauty; 5, Haines on Laura Korndyke Sanata; 6,

COLANTHA BEETS DE KOL JOHANNA
First prize senior yearling bull, junior and grand champion at the Oklahoma State Fair. Owned by H. O. Larsen, Dike, Iowa.

King on Princess Longfield Homestead. Two-year-olds: 11 shown; 1, Larsen on Forum Pontiac Queen; 2 and 4, King on Avon Pontiac Inka Sylvia and Dula Vista Echo Sylvia Eli Ormsby; 3, Union College on CKSA Beets Alcartra; 5, Bermuda Lawn on Miss Artis DeKol Veeman; 6, Haines on Segis Pontiac Fashion Girl. Senior yearlings: 5 shown; 1, Larsen on Forum Hulda Mead; 2, Union College on CKSA Mary Pietertje Segis; 3, King on Carnation Sylvia Clothilde Emma; 4, Eckroat on Hazel Korndyke Pontiac DeKol; 5, Shirey on Primrose Parthenea Korndyke. Junior yearlings: 8 shown; 1, Larsen on Maxie Plum DeKol; 2, 3 and 5, King on Charlevoix Marburg DeKol, Winterthur Ormsby and Winterthur Ormsby Clarinda; 4 and 6, Union College on CKSA Abbekerk Alcartra and CKSA Chippewa DeKol. Senior calves: 14 shown; 1, Union College on Abbie Korndyke Segis Alcartra; 2, Larsen on Majorie Plum DeKol; 3 and 4, King on May Echo Sylvia Alcartra and Imperial Queen Victoria; 5, Bermuda Lawn on Bonnie Lea Gypsy.

Junior and Grand Champion Bull—Carter County Holstein Herd on Colantha Beets DeKol Johanna.

Senior Champion Bull—Larsen on Sir Rag Apple Posch.

Senior and Grand Champion Cow—Larsen on Forum Diamond Homestead.

Junior Champion Cow—Larsen on Forum Hulda Mead.

Groups—Aged herd: 5 shown; 1 and 3, Larsen; 2, Union College; 4, Watkins; 5, Carter County Holstein Herd. Yearling herds: 2 shown; 1, Union College; 2, Watkins. Calf herds: 4 shown; 1, Larsen; 2, D. F. Krause & Sons; 3, Union College; 4, Haines. Get of Sire: 6 shown; 1, Larsen; 2, Union College; 3, Haines; 4, Bermuda Lawn. Produce of Cow: 4 shown; 1, Larsen; 2 and 3, Union College; 4, Bermuda Lawn.

Cow Testing Association Reports

THE COST OF PRODUCING MILK

The figures on the cost of producing milk in Cumberland County, Pa. Testing Association during the Association year from July, 1920 to July, 1921 has been compiled by the Dairy Extension office of State College from the records of the association. There were twenty-one herds with an average of 14.9 cows per herd. The average cost of milk per 100 pounds was $3.48; the average cost per quart was 7.4 cents; butterfat cost 90 cents per pound with skim milk credited, at 40 cents a hundredweight; the average amount each cow produced was 8,300 lb. milk, 285.1 lb. butterfat. In calculating the following factors and values were used: Heifers entering the herds during the year were charged at $95 each. About half of the herds are being maintained by the purchase of cows, while the other half are raising their own heifers, as shown by the fact that forty-four heifers entered the herds during the year and twenty-five cows were purchased.

Pasture was charged at $2 to $3 per month per cow depending on the number of cows an acre would support. Man labor was charged at 30 cents per hour and horse labor at 20 cents per hour. Straw was charged at $11 per ton, which represents farm price in the community during the year.

No percentage rate of depreciation was charged to cows, since the inventory was taken at the beginning and end of the year which follows for any increase or decrease in value. Depreciation on buildings and equipment was figured in the same manner.

A credit of $5 was allowed for each living calf at three days of age. Three cows and forty-one calves died during the year. There were 270 calves, both living and dead, produced, which leaves 13.25 cows that produced no calf either because they were not bred or failed to breed.

Breeding fees were determined by figuring the cost of keeping the bull, except where no bull was owned they were charged at the actual cost to the farmer.

Five per cent interest was charged on the average value of the bull and charges were made for insurance at 25 cents per year, 125 hours of labor at 30 cents per hour, one ton of straw at $11, feed at $72.31, and allowing a credit of $20 for manure.

STARTING WELL IN MICHIGAN

As a result of the action taken by the Board of Supervisors of Calhoun County, Michigan, a tester, Percy J. Parkyn was engaged to test the cows of the county and he has submitted reports of the work he did in July and August. During July he tested 249 cows of which ten produced over 40 lb. butterfat. The high cow was a grade Holstein owned by Holt and Chapin, she making 1,256 lb. milk, 56.52 lb. fat. Second to her was a grade Holstein owned by Geo. E. Lutz with 1,488 lb. milk, 50.59 lb. fat. A grade Jersey was third with 50.49 lb. fat and a registered Holstein owned by L. J. Ranger was fourth with 1,094 lb. milk, 45.95 lb. fat.

During August 243 cows were tested in 25 herds. Trixy, the grade Holstein of the Holt and Chapin herd again led with 46.91 lb. fat and 1,466 lb. milk. The Ranger herd of grade Jerseys, Shorthorns and Holsteins was high with the average of 790.6 lb. milk, 35.12 lb. butterfat. The testing work is under the supervision of the county farm bureau.

REAL PROGRESS IN ILLINOIS

The cow testing association operating in Knox-Warren Counties, Ill., closed its year in July. The report shows that all the members are using purebred bulls, nine having been purchased during the year. Eighty-five per cent of the herds in the association have been tested for tuberculosis and applications have been made to test the remainder.

During the year 107 "boarder" and reacting cows were sold. This raised the yearly production per cow from 6,953 lb. milk, **343.1 lb. butter in 1921,** to 7,493 lb. milk, 383.5 lb. butter in 1922. The average cost of feed this year amounted to $67.04 as compared to $88.46 last year. Thirteen cows in the association produced more than 500 lb. butter during the year.

The highest individual milk producing cow in the Association was a purebred Holstein owned by E. H. Kirkpatrick, Roseville. She made 17,240 lb. milk, 631 lb. butter. In March, Mr. Kirkpatrick's cow was the highest cow in the state associations, making 2,800 lb. milk, 110.5 lb. butter. The highest producing herd of the year was ten head of purebred Holsteins owned by Lina S. Crane of Fairview Farm, their average production being 12,064 lb. milk, 442. 8 lb. butter. His was the first accredited herd in the association. We call this real dairy progress. C. M. Long.

A COLORADO BEAUTY

Only 113 cows were tested in the Boulder, Colorado, Association during the month of July. These were in ten herds. The average production was 855 lb. milk, 30.4 lb. fat. Twenty cows made 40 lb. butterfat or more. The high cow was Beauty, a Holstein owned by C. A. Rossiter. She produced 1,944 lb. milk, 77.8 lb. fat. The twelve-cow dairy owned by C. C. Clingman of Boulder averaged 790 lb. milk, 40.9 lb. fat. The tester of this association is Frank Lieberam.

BLACK AND WHITE COWS SHINE

In the East Jackson, Iowa, Association, the average for all cows tested during August was 612 lb. milk, 24.2 lb. butterfat. This is the first report of the Association. The tester is Walter C. Rasmussen.

The high cow was a grade Holstein, owned by H. Wylie with 1,378 lb. milk, 53.7 lb. butterfat. The leading eight cows averaged 1,091 lb. milk, 44.2 lb. fat. These consisted of one purebred and five grade Holsteins, a grade Shorthorn, a purebred Jersey. The Association contains 237 cows and 36% of the members are using purebred sires.

FIRST IN ALL IOWA

The Davenport Testing Association which operates around Scott, Clinton and Muscatine Counties ranked first among the nineteen Iowa Cow Testing Associations during August. The average butterfat production is 29.1 lb. and the average milk production is 704 lb.

Polk County was second with an average of 27.2 lb. butterfat, 711 lb. milk; Dallas County was third with an average of 26.6 lb. butterfat and a milk production of 747 lb.

The high cow in the association is a purebred Holstein owned by Wapsimoor Farms, Camanche, she producing 59.6 lb. butterfat, 1,655 lb. milk. The high herd record is an average of 40.1 lb. butterfat for twenty head of Holsteins owned by P. W. Westbrook.

Catalog Service

THAT SAVES

You will save TIME, MONEY and WORRY by letting the Wisconsin Live Stock Advertising Company prepare your sale catalogs.

You may make your selection from numerous catalog styles ranging in price from $1.50 per animal and upwards depending upon the catalog you select.

Your catalog in our hands means that it will be given prompt, efficient attention; that it will be edited by the best pedigree experts from the most complete files; and that it will be delivered when promised.

Your interest in getting the most for your money directs that you place your catalog job with the Wisconsin Live Stock Advertising Co. Send for samples and prices.

P.S.—Our quotations include free publicity service which may include some valuable suggestions you have not thought of. Our Motto is SERVICE.

TESTING UNCOVERED A CRACKERJACK AT ALLENCREST

The Allencrest Farms, Alden, New York, is the home of Adeline Hengerveld De Kol 2d, whose phenomenal performances during July in the Alden-Akron Dairy Improvement Association has attracted considerable attention. Manager Donald F. Graves traded a grade cow for this animal and after he got her home did not pay any particular attention to her; in fact, tried to sell her several times at practically a grade price but as she did not bear the indications of a very great producer, she remained in the Allencrest herd. She was put into an upper barn with a lot of dry stock and until the time she freshened, she did not receive any grain so was not in shape to be put on official test. She dropped a bull calf by a grandson of Spring Farm King and while the calf was a good individual they intended to veal him. The cow tester came to make the July test on the herd and on the first day Adeline produced 96.4 lb. milk, and on the second day, 101.8 lb. As the milk had not been weighed they did not know just what the cow was doing until the tester did the weighing.

The production for the two days was so far ahead of anything that had been done in the testing association that Mr. Graves asked C. C. Spaulding, who is in charge of the East Aurora Dairy Improvement Association to come to Allencrest and verify the report of Mr. A. E. Mowers, the local tester. The first day Mr. Spaulding was at the farm Adeline milked 118 lb. Later in the month the official supervisor from Cornell University made the official test on the Allencrest cows making semi-official records and Adeline was put in test. The first day she made 124.5 lb. milk and the second day 132.8 lb. It was impossible to secure a man from the University to make a seven-day record at that time so it is intended to put her in shape at her next freshening and then demonstrate what she really can do. In the thirty days she produced 112.3 lb. fat and 3,705.3 lb. milk, an average of 123.5 lb. milk a day, which is certainly a wonderful record to be made in a hot summer month.

Needless to say, Adeline Hengerveld De Kol 2d heads the July list of New York cows enrolled in the Dairy Improvement Associations. She is not for sale at a grade price or at any other price and her son will probably be a future herdsire at Allencrest.

HOLSTEINS HOLSTEINS

FOR SALE

Ten Registered Holstein Cows ranging from two years to eight years of age. These cows are bred to

Andover, N. Y.

HOLSTEINS HOLSTEINS

PAID FOR HER COMPANY

At a picnic held by the Intercounty Dairy Improvement Association, at Spencer, N. Y., on August 12th, the tester, Harold Radley, read some of his deductions from the nine months' work of the Association. The 13 best cows averaged 8,444.4 lb. milk and 357.7 lb. fat, while the 13 poorest cows averaged 2,484.7 lb. milk and 88.3 lb. fat. The average production of all cows in the 27 herds of the Association was for the nine months, 6,336.1 lb. milk and 210 lb. fat. The average income above cost and feed for all the cows in the Association was $52.25. The best cow in the Association returned a profit above feed cost of $128, but the poorest cow made a *loss* of $26.03, which it cost her owner just for the pleasure of her company. Comment is superfluous.

BLOOMING PRAIRIE

During the month of August, 329 cows were tested in the Blooming Prairie, Minn., Association and seven made over 40 lb. butterfat. Paulson Bros. grade Holstein herd led in average production and also contained the high cow. This animal made 53 lb. butterfat during the month and the herd of fifteen animals averaged 868 lb. milk, 33.8 lb. butterfat with an average test of 3.09%. The eight Holsteins of O. C. Jolson & Sons produced an average of 861 lb. milk, 29.9 lb. butterfat and the ten-cow dairy owned by Thomas Cartin averaged 850 lb. milk, 29.2 lb. fat.

TURBETT HAD GOOD HERD

Harry E. Schneiter, tester for the Worth County, Iowa, Testing Association reported that during the month ending September 15th, he tested 371 cows and that 112 of the number enrolled were dry. The average production was 482.2 lb. milk and the average butterfat production was 18.32 lb. The three high cows are owned by O. J. Turbett of Northwood. The first making 1,574 lb. milk, 56.7 lb. butterfat, while the other two made 46.1 and 41.5 lb. respectively. The Turbett herd of eighteen cows averaged 30.19 lb. fat. They were fed on alfalfa pasturage supplemented by grain.

Don't wait for three or four neighbors to come along and look at that calf you wish to sell. Send us a Classified Adv. and we will tell ten thousand buyers about it.

THE WYOMING COUNTY ASSOCIATION

Prilly Christine Pietertje 2d, owned by R. S. Wilson was the high cow in fat production during September in the Wyoming Cow Testing Association. She produced 1,377 lb. milk, 60.6 lb. fat.

The high cow in milk production was Craige Hill Isadore Hengerveld, with 1,671 lb. milk, 46.8 lb. fat. She is owned by C. D. June, N. Mehoopany, Pa. Mr. June's herd averaged 918.5 lb. milk, 31.68 lb. butterfat for the month with four cows yet to freshen.

Twenty-four cows produced more than 40 lb. fat and five more than 50 lb.; while thirty-six produced better than 1,000 lb. milk, and fifteen better than 1,200 lb. Eight unprofitable cows were disposed of during the month.

The high herd average for milk production for the year was held by the herd of Holsteins owned by Charles Ace of Tunkhannock, Pa. This herd averaged 12,173.05 lb. milk, 397.45 lb. fat. The high average for fat production was held by the herd of black and whites owned by F. W. Riker of Factoryville. This herd averaged 11,242.8 lb. milk, 400.1 lb. fat for the year. D. M. Dartron of Tunkhannock, owned the high cow for the year. This cow, a four-year-old Holstein, Pearl Ormsby Pontiac De Kol, produced 1,377 lb. milk, 60.6 lb. fat.

R. G. Sloat, *tester.*

BIG SOUTH CAROLINA RECORD

The outstanding record of the dairy cows officially tested in South Carolina during August was 92.1 lb. butterfat and 2,403.4 lb. milk, made by the registered Holstein Arcady Segis Atia 2d, owned by V. M. Montgomery, Spartanburg. The second high cow was Colantha Walker 2d, owned by J. T. Willard also of Spartanburg. Her production was 65.9 lb. butterfat and 1,942.2 lb. milk.

There were 104 cows on test during August, fifty of which made the honor roll by producing 40 or more lb. of butterfat. Of these animals 27 were Holsteins and 23 were Guernseys. The average production of the Holsteins on the honor roll was 52.1 lb.

Owners of Holsteins on test during the month were V. M. Montgomery; J. T. Willard, Spartanburg; St. J. A. Lawton, Charleston; and the Clemson Agricultural College, Clemson, S. C.

BURLINGTON COUNTY, NEW JERSEY

During the month of September, 281 cows, representing sixteen herds were tested in the Burlington County, New Jersey, Association. Twenty-two of this number exceeded 40 lb. or more of butterfat and one was better than 60 lb. The high herd averaged 35.7 lb. butterfat, 933 lb. milk. This herd was owned by J. Hillman Croshaw of Wrightstown. During the month a purebred Holstein, Bloomfield Fair Oaks, owned by A. R. Jackson, produced 59.9 lb. fat, 1,998 lb. milk

WESTERN TESTING RESULTS

The September report issued by the Western office of the Dairy Division of the United States Department of Agriculture shows that the cows in the state of Washington averaged high during the previous month. There were 2,437 cows in the seven associations that averaged 31.62 lb. fat. Practically one-fifth exceeded 40 lb. In the 16 California Associations there were 18,047 cows enrolled with an average production of 31.01 lb. fat. There are four associations in both Oregon and Idaho, but as might be expected, the Oregon associations are much the larger, there being 3,357 cows in this state against 990 in the Idaho associations. The average production was 30.78 lb. fat in Oregon and 29.27 lb. in Idaho. Four hundred and eighty-eight cows in the New Mexico association averaged 28.95 lb. fat, and 558 in the Arizona association averaged 27.1 lb. fat, while the 1,065 Colorado cows averaged 26.16 lb. In the 38 associations of the seven Western states reporting there were 26,942 cows, of which 4,563 exceeded 40 lb. fat during the month.

The high record cow was a registered Holstein owned by the Los Angeles County Farm of Hondo, Cal. She produced 2,814 lb. milk and 121 lb. fat during the calendar month. The high record herd is also in Los Angeles County and consists of 17 registered Holsteins owned by Agee Brothers, of Riverside, Cal. This herd averaged 1,525 lb. milk and 54.2 lb. fat. In the Los Angeles County Association there are enrolled 3,920 cows, of which no less than 1,175 exceeded 40 lb. fat during the month, certainly a remarkable showing.

THE VOLANT ASSOCIATION

The Volant Cow Testing Association operates in part of Lawrence County, Pa., under the auspices of the Lawrence County Farm Bureau, and the tester is Paul J. Stonebraker. During September he tested twenty-six herds containing 254 cows. No more than thirty-seven cows produced over 40 lb. fat and twelve over 50 lb., while fourteen exceeded 1,200 lb. milk.

The Association leader was a grade Shorthorn, with 61.1 lb. fat. Second was a three-year-old Holstein owned by D. B. Reynolds, with 58.9 lb. fat, while her milk production of 1,509 lb. was the third highest reported. A member of the Reynolds herd led for milk with 1,589 lb., while another cow in the Reynolds herd was in fourth place for fat production with 58.2 lb.

WESTFIELD, PENNSYLVANIA

During the month of September, twenty-six herds containing 256 cows, were tested by Gordon J. Rice, in the Westfield Testing Association, which operates in part of Lawrence County, Pa. One cow made over 60 lb. fat, and six others above 40 lb., while ten cows exceeded 1,000 lb. milk, and one made 1,203 lb. She was a four-year-old Holstein owned by H. B. Chambers.

The leader for fat production was a grade Holstein owned by W. H. McCullough, with 62.1 lb. fat; second was a Jersey with 49.5 lb., and a Jersey was in third place, while in fourth position was a grade four-year-old Holstein, owned by H. A. Freed, with 42.6 lb. fat from 1,152 lb. milk.

MISSOURI'S FIRST THOUSAND-POUND COW

The first Missouri cow to produce over 800 lb. fat or a thousand pounds of butter in a year, is Fobes Homestead Rauwerd, a senior four-year-old owned by S. C. Lindsey, of Carthage. She produced 21,683.6 lb. milk, 815.51 lb. fat, or 1,019.39 lb. butter as a senior four-year-old, and becomes the Missouri State Holstein Champion for all ages as well as for her class. The previous champion was Fairview Korndyke Mata, formerly a member of the Cabana herd, who produced 20,212.7 lb. milk, 989.96 lb. butter and surpassed the noted cow, Pontiac Lady Josephine, of the University of Missouri herd, with her 23,503.4 lb. milk and 960.69 lb. butter.

In the senior four-year-old class Fobes Homestead Rauwerd displaces Carlotta Josephine Galaxy with 20,510.1 lb. milk and 875.58 lb. butter. She is the first and only thousand-pound cow in Missouri whose record was made in the state. She will be remembered as winning first place in the cow race at the Missouri Centennial and State Fair, 1921, by producing in thirteen and one-half days 756.3 lb. milk and 28.28 lb. fat.

For some reason the reports of the breaking of the Missouri state record as sent to the press omitted the record of Fairview Korndyke Mata, who is now owned by the Suburban Home Company of Ashbury, Mo., and made her record in their herd. You will find it officially reported in Bulletin 19 of Reported Tests of Holstein-Friesian Cows under date of May 6, 1922.

Now, was it an accident that this record was overlooked?

WISCONSIN LEADERS

The September News Letter of the Wisconsin Cow Testing Association tells of the August results. The state leader is a registered Ayrshire in the Northeast Dodge County Association, with 93.4 lb. fat. A purebred Holstein, owned by J. C. Smith, in the Dodgeville Association, is second with 85.4 lb. fat, and a grade Holstein, owned by W. E. Uren, in the Mineral Point Association, is third with 81.9 lb. fat. J. C. Smith had fourteen grade and purebred Holsteins that averaged 1,287 lb. milk, 50.7 lb. fat, and this is really the high herd, although D. W. Neerhof, of the Cedar Grove Association, had two registered Holsteins that averaged during the month 1,563 lb. milk, 52.2 lb. fat.

A classified advertisement reaches the man who has the money to buy just what you have to sell.

DAIRY IMPROVEMENT IN NEW YORK STATE

The September monthly news letter of the supervisor of the New York State Dairy Improvement Associations tells the leaders of fourteen associations for August and three for July. It is interesting to note that by far the largest production is recorded for two of the July tests. The highest record is that of Adeline Hengerveld De Kol 2d, of the Allencrest Farm, Alden, New York, and is 112.3 lb. fat, 3,705.3 lb. milk, an average of 123.5 lb. milk in a day. In this issue will be found a more complete account of this cow's great performance. The second association leader is a grade Holstein, Aaggie, owned by Sam Barber, Scottsburg, New York, with 99.3 lb. fat, 2,421.1 lb. milk. In the list of leaders the third place is taken by a registered Holstein, owned by Luther Carrier, she making 1,435.3 lb. milk, 68.8 lb. fat during August. This is the highest August record reported. Another great Holstein in the Barber herd produced, in July, 79.1 lb. fat, 1,531 lb. milk. A grade Holstein owned by F. Culbertson & Sons, Dansville, made 75 lb. fat, 1,705 lb. milk, and a four-year-old grade Holstein, owned by J. C. Cooley, Groveland, made 71 lb. fat, 1,410.5 lb. milk. These are all July records.

During the month of July, the records were kept for 8,496 cows, of which 629 made the honor roll. Of this number 33 produced between 60 and 70 lb. butterfat, three between 70 and 80 lb. butterfat, and two above 90 lb.

IN FAR AWAY IDAHO

The best record among the 167 cows enrolled in the Pioneer Cow Testing Association during the month of August was Beauty, a registered Holstein, owned by L. J. Tenckinck of Twin Falls, Idaho. She produced 73.4 lb. butterfat, 2,040 lb. milk, reports the official tester, A. H. Koster. The thirteen-cow dairy of Emery Foltz also of Twin Falls averaged 859.8 lb. milk, 36.17 lb. fat.

Twenty-seven or 16% of the cows tested produced 40 or more lb. butterfat during the month; twenty-two produced between 40 and 50 lb.; four produced between 50 and 60 lb.; and only one produced more than 70 lb. The average production was 731.8 lb. milk, 29.96 lb. butterfat.

CANADIAN TEST WORK

The Canadian report of the official records accepted during the two months from August 1st to September 30th is headed by De Kol Plus Segis Dixie with a record of 855.6 lb. milk, 39.57 lb. butter in a week. It will be remembered that this cow established the world's strictly official record for milk and butter in 365 days in her previous lactation period and she is again on strictly official year test and running ahead of her showing of last year. She is owned by D. Raymond, Vaudreuil, Quebec. The only other thirty-pound record reported in this class is that of Tidy Abbekerk Korndyke, owned by Laidlaw Bros., Aylmer, Ontario, with 659.2 lb. milk, 30.29 lb. butter.

A record of 30.73 lb. butter and 585.8 lb. milk for Ethel Pauline Korndyke heads the senior four-year-old class. She is owned by Wm. Pullin, Woodstock, Ontario. There is nothing remarkable in the younger classes. The Colony Farm of Essondale, B. C., owns all three of the leading junior two-year-olds and the leader is Colony Effie Ormsby with 422.9 lb. milk, 21.62 lb. butter in a week and 3.433 lb. milk, 170.48 lb. butter in sixty days.

Two year records of over 1,000 lb. butter are reported for aged cows, three others above 900 lb. and four above 800 lb. The list is headed by Weedie Mercedes Mechthilde with 24,467 lb. milk, 1,132.5 lb. butter. She is owned by E. G. Stevenson of Amherstburg, Ontario. The second cow is Tilly Evergreen De Kol, owned by W. J. L. Hepburn, Virden, Manitoba, with 26,014 lb. milk, 1,050 lb. butter. She is a granddaughter of Canada's first 26,000 lb. cow, Evergreen March.

The fine record of 863.75 lb. butter, 17,469 lb. milk is reported for the three-year-old S. C. P. Nora Carroll, owned by J. M. Steves, Steveston, B. C. Rosa Helene Spofford, owned by B. R. Leavens, Bloomfield, Ontario, heads the two-year-olds with 22,842 lb. milk, 936.25 lb. butter. Representatives of the Colony Farm herd had second and third places with very large records.

The leading record in the 305-day division is that of Elcho Queen Aaggie, owned by W. C. Houch, Chippawa, Ont., with 16,532 lb. milk, 712.5 lb. butter.

The leading four-year-old is Willowbanks Mundella Walker with 14,204 lb. milk, 583.75 lb. butter. She is owned by the veteran Quebec breeder, P. J. Salley of Lachine Rapids, Quebec. Pat Salley also owns the leader of the two-year-olds, Dora Fayne Posch 2d, with 14,235 lb. milk, 637.5 lb. butter.

BLAIR COUNTY HOLSTEIN ASSOCIATION

S. F. ZOOK, Sec'y
Curryville Penna.

GOOD YEAR WORK AROUND LOGANVILLE

During the year ending October 1, 1922, no less than 425 cows were tested in the Loganville, Wis. Association. Of this number 308 finished a years work. The average milk production was 7,819 lb., the average amount of fat produced 278.1 lb. The average value of product was $115.60 and the average return above feed cost was $74.52.

Six herds in this Association are now on the Federal Accredited list. Other items of interest are the facts that seven members of the Association use milking machines in their herds, seventeen have water systems in the barn, sixteen have electric light and power while balanced rations are fed by fifteen. There are no scrub bulls in the herds of this Association and every member uses butter on the table, no oleomargarine is consumed. The champion cow of the Association for the year was a registered Holstein, Queen Pontiac of Roseland, a three-year-old ownd by F. C. Kruse and Sons. She produced 16,418 lb. milk averaging 4.14%. She made 679.8 lb. butterfat or 849.7 lb. butter. The value of her product was $285.02 which minus her feed cost of $126.71, left the tidy sum of $165.64 to her owner for his work.

The high herd was composed of 15 registered Holsteins owned by F. C. Kruse and Sons. This herd had an average production of 11,277 lb. milk and 407.9 lb. butterfat. The average value of their product was $173.83 and the average profit over feed cost was $104.88. The official tester of the Loganville Association is R. J. Miesbauer of Reedsville to whom we are indebted for the above interesting report.

SHIPPED TO NEW ORLEANS

A registered Holstein bull has been purchased by A. L. Dupre of New Orleans from William Schmidt's Sons, Empire Stock Farm, St. Peter, Minn. The price is said to be $550. The bull is a son of Sir Veeman Vale Hengerveld and Ourvilla Colantha Ella a cow with a 1,200 lb. year butter record.

Bulls from the Schmidt herd have headed many of the herds in Nicollet County, there being eight of their bulls heading herds in the New Sweden Cow Testing Association. This is the eighth state to which they have shipped bulls for herdsires.

ROUNDS IN NEW POSITION

Leland B. Rounds, who for nearly five years was with the Holstein-Friesian Register Company, is now with Burlingame, Hutchins and King of New York City, a firm specializing in farm management.

This firm now has about twenty-five farms which they look after. The principals devote all their time to overseeing; the purchasing, accounting details, cattle registration, etc., are handled from the New York office.

Mr. Rounds has had long experience in the cattle business. When a boy he lived on the farm of Henry Stevens and Son, Lacona, N. Y., his father having charge of the barn, and his knowledge of the cattle and their pedigrees was remarkable for one so young. After school days and working for some time in the pedigree offices of the Hastings Company and the Liverpool Sale and Pedigree Company, Mr. Rounds went to Brattleboro where he had complete charge of the pedigree office. He has written articles for several of the breed papers and occasionally has appeared at sales as pedigree man. After leaving the Register, he was in charge of the office work of the Ashby Stock Farms, Ashby, Mass.

His many friends among the Holstein fraternity will wish him success in his present position.

WASHINGTON DAIRY NOTES

An exhibit from two dairy clubs, consisting of five Holstein heifers and five Jersey bulls, was shown by the boys and girls clubs of Lewis County at the Southwest Washington Fair.

There were 200 people in attendance on demonstration day, when the members of the Naselle Calf Club of Pacific County exhibited their calves and held their judging contest. A local bank gave prizes totaling $50 and one of the local papers donated a silver cup to the winner.

County Agent E. E. Hupp, of Pend Oreille county reports the exchange of two purebred Holstein sires.

The Walla Walla Cooperative Bull Association has purchased another yearling which will be stationed at Dixie. The animal comes from the herd of Chester L. Mulkey, of McMinnville, Oregon, and has a record of 757 pounds of butterfat from his sire's side and 736 pounds from his dam's side.

A judging dairy tour was held in the vicinity of Yakima, Mabton and Grandview to help the boys and girls dairy club members. Three breeds, Holsteins, Guernseys and Jerseys were judged. County Club Agent E. C. Scott and Don G. Magruder, of the State College, arranged the tour.

Education is the enlargement of the mind, the expansion of the soul and the strengthening and sweetening of human sympathy.

HEISEY HAS GOOD BULL

Elsa Netherland Royal Odessa 2d is a show cow and a real profit producer. Elsa was enrolled in a Chester County, Pa., Cow Testing Association several years ago and averaged more than a ton of milk per month for five months. Her present owner, R. S. Heisey of Bachmansville, Pa., was the official tester in charge when she produced 23 lb. butter in seven days as a three-year-old, and later he fed and milked her four times daily for a semi-official year record; when she produced more than 2,000 lb. milk.

She has dropped seven heifer calves, no twins, while her last calf is a grandson of Ormsby Korndyke Lad, one of America's great producing sires. Ormsby Prince Korndyke Lad, the sire of this calf is from Shady Maple Carlotta Princess, who has a seven-day record of 32.44 lb. butter and 632.4 lb. milk. In 354 days she produced 1,099.4 lb. butter and 22,668.6 lb. milk.

Mr. Heisey liked this cow when he saw her and thought she was even better than her official record indicated. He now has in her son, one of the best year record bulls in the southern counties of Pennsylvania.

"MEAD'S THE MAN!"

I have pardonable pride in passing along that little line of appreciation uttered by many clients for whom I have conducted sales. A satisfied customer is the best advertisement.

THE STEELE COUNTY QUALITY SALE

The thirty-one purebreds sold at the Steele County, Minn., Holstein Breeders' quality sale, September 21, brought $4,770, an average of just under $154. A number of the animals were small calves which, of course, brought down the average. The top price of this sale was $400, which was obtained for Elmira Korndyke De Kol, a five-year-old, consigned by Sloan Bros., Ellendale. She has a small official record and was purchased by F. C. Cardinal, of St. Onge, South Dakota. Beaver Oaks Betsy Ormsby, consigned by Arthur Johnson, went to G. A. Bardel of Proctor for $305. Jerry C. Jensen, of Albert Lea, bought the highest priced bull for $225. He was Ormsby Sensation 12th, a two-year-old son of the well-known sire, Ormsby Sensation.

Animals bringing $200 or more with names and addresses of their purchasers are:

Consigned by Taylor & Christgau, Owatonna, Minn.
Vale Pietertje Korndyke, F. C. Cardinal, St. Onge, S. D. $280
Consigned by Guy Adams, Owatonna.
Beauty Glenn Johanna, John Lynard, Owatonna 250
Consigned by Arthur Johnson, New Richland.
Lorna Beatrice Pontiac, Neilson & Winship, Owatonna 275
Beaver Oaks Betsy Ormsby, G. A. Bardel, Proctor 305
Beaver Oaks Prilly Champion, J. C. Jensen, Albert Lea 225
Consigned by Sloan Bros., Ellendale.
Ormsby Sensation Inka Johanna, Jay Kasper, Medford 215
Elmira Korndye De Kol, F. C. Cardinal 400
Consigned by Elmer F. Johnson.
Ormsby Sensation 12th, J. C. Jensen, Albert Lea 225

THE STEVENSON SALE

In the sale of the Geo. E. Stevenson herd, Origin Farms, Clarks Summit, Pa., on November 8, 1922, at the farm which is ten miles north of Scranton, Pa., on the line of the D. L. & W. R. R., and the Northern Electric or Scranton & Binghamton Street Railway, about one and a half miles from the Clarks Summit Station on each road, there will be sold a two-year-old daughter, now in semi-official test, of the world's record senior four-year-old in strictly official test, 25,787 lb. milk, 1,294.7 lb. butter in a year. This cow is also the only cow of any breed to have two consecutive records that average over 24,000 lb. milk a year, 1,203 lb. butter, both made under full age. One of her sisters by the same dam is to be sold and has just completed a ten-months' semi-official record, freshening within the requisite time, of nearly 14,000 lb. milk, testing 4.2% as a senior four-year old. A double granddaughter of this world's record cow, who as a junior two-year-old, made 12,503 lb. milk testing 3.7%, and dropped her second calf twenty days less than a year from the date of the birth of her first. She has now made better than a qualifying record as a junior three-year-old in long time work.

Thirty of the animals to be sold will either be in milk or soon due to freshen. Some of these are bred to a bull whose five nearest dams average 20,000 lb. of 4% milk in a year. In the sale are a number of yearlings and calves sired by this bull. They are wonderfully uniform in type and have straight back lines, well developed and usually well balanced udders for heifers. About twenty of the animals either have semi-official records or are now in test and their records will be continued to the date of sale, so that a purchaser can continue the test if he so desires, although most of the animals will have, by sale day, large enough records so that they will qualify for the advanced registry although the tests have considerable time yet to run.

There are no old animals in the Stevenson herd. Many of them are two, three and four-year-old heifers. The herd is under State and Federal supervision and the owner says is tuberculosis and abortion free. This is a wonderful opportunity to secure a foundation herd of purebred registered Holsteins. The reputation of the owner as a breeder of hornless Holsteins is world wide, and this is an opportunity to secure animals of his breeding and development, many of which are naturally hornless.

THE MIDDLETOWN SALE

The fall sale of the New York Holstein-Friesian Association was held October 3rd and 4th at Middletown, New York. The 127 head averaged slightly less than $160, the total being $19,360. There were a number of young animals consigned which sold low and brought down the average. A number of the buyers came from a distance. Albert Winter, of Mahwah, New Jersey, took nine head; J. C. Stafford, Petersburg, Va., took eight; Beaver Dam Stock Farm purchased nine head; M. C. Havens, Dover, N. J., and H. S. Russel each purchased eight head, while Ira Fitzgerald purchased six. The heaviest buyer was W. E. Bruyn, Wallkill, N. Y., who purchased fourteen head and took the top priced cow, Gert Korndyke Veeman 2d. She was consigned by W. D. Robens, Poland, N. Y.

The animals were examined for physical defects before entry in the ring by Dr. D. O'Laughlin. The pedigrees were read by R. A. Backus, of Mexico, New York, while the auctioneers were Geo. W. Baxter and W. J. Crandall.

Animals bringing $200 or more with names and addresses of their purchasers are:

DISPERSAL SALE OF THE MAY APPLE HERD

The dispersal sale of the May Apple Stock Farm herd, owned by D. M. Bartron, Tunkhannock, Pa., was held Thursday, October 12, 1922. Almost perfect weather featured the day and a large number of buyers were present, attracted by the reputation of the herd for good health and production. Mr. Bartron had proved these features by cow testing association records and by putting his herd in the Accredited List.

The herdsire, King Pietje Aaggie Pontiac, No. 267,266, sold for $460. He was a large bull with an exceptionally good middle and had magnificent shoulders and chest. His dam is the near 32 lb. cow, Aaggie Cornucopia Pauline Girl 2d.

(Continued on page 706.)

BOUGHT THREE GOOD ONES

The herd at the County Infirmary, Ironwood, Mich., has been increased by three good Holstein cows purchased by C. E. Johnson from Louis Sorenson at Larsen, Wis. One of these animals, Caroline Johanna Homestead, is a daughter of a cow with an 800 lb. butter record made from nearly 19,000 lb. milk. Caroline herself has a nice official record and as a junior two-year-old made 15,496 lb. milk and 726 lb. butter in a year. Her average test was 3.72%. When Caroline was a calf she was shown at the Wisconsin State Fair and won 3d place in competition with more than 70 others exhibited at that time. Princess Bess Ormsby is another of the animals and she has a record of 332.6 lb. milk and 14.9 lb. butter made in seven days, freshening at two years and 13 days old. The third member of the purchase is Maggie Daw Segis Pontiac and she has a seven-day record of 20.44 lb. butter and 539 lb. milk made as a five-year-old.

BULLY FOR THE BANK

J. R. Dawson, dairy specialist of the Pennsylvania State College recently closed a deal on behalf of the Butler County National Bank, Butler, Penna., with the Winterthur Farms, Winterthur, Del., for the fine young bull, Winterthur King Ormsby Daldee. The sire of this bull is King of the Ormsbys. The dam has a year record of 965 lb. butter. This young bull will be kept on the C. A. Powell farm at Renfrew and will be used only on cows from herds that are under Federal supervision for tuberculosis eradication. The bank is doing a great work for the dairy community.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 705.)

His sire is King Pontiac Alcartra Pietje, by King Segis Pontiac Alcartra, from the former world's champion four-year-old, Fairmont Zerma Segis Pietje.

Well developed family lines gave opportunity to study the possibilities in purebreds, and proved just what any ordinary farmer can do by starting in with foundation animals and using good sense in regard to the health of the herd and the use of good sires. None of the animals sold had official records of their own.

An investment of $300 in the cow Drosky DeKol Mechthilde, No. 217330, brought Mr. Bartron a total of $685 in his sale, the cow herself bringing $280 at the age of eight years.

A notable example of increase in value on a small investment is shown in Mercedes Heeringa 2d, No. 118256. Mr. Bartron bought this cow in 1916, she being a ten-year-old cow at that time. Her official record made at the age of 5 years was 20.78 lb butter and 575.4 lb. milk, while her dam had 23.78 lb. butter and 576.2 lb. milk. It is interesting to note that the sire of the dam was Mercedes Julip's Pietertje Paul, one of the best sires of his day, and the sire of the cow herself was Aaggie Cornucopia Pauline Count, a great son of the former world's record cow, Aaggie Cornucopia Pauline.

The cow herself was not in the sale. Four of her daughters brought the total of $1,715. Five granddaughters brought $1,235, three of them being calves and yearlings; two great-granddaughters, one a calf and one a yearling, brought $350; and two young bulls brought $55 each. This figures a total of $3,210 for this cow's thirteen descendants, which lacked only $687 of being half the total of the entire sale of 34 head. This value all accumulated in the short space of six years since the purchase of the old cow in 1916.

Considering the fact that the herd was not exceptionally well fitted, and that none of the animals had made official records, prices were considered very satisfactory.

Thirty-four animals were sold for $7,795, or an average of a little more than $229.

The animals bringing $200 or more with names and addresses of their purchasers follow:

	Purchased by Joe Robinson, Tunkhannock, Pa.	
1	King Pietje Aaggie Pontiac, 4 yrs.	$460
	Purchased by Joseph J. Jermyn, Scranton, Pa.	
2	Lady Heeringa Alcartra, 7 yrs.	510
8	Heeringa Alcartra Hartje, 4 yrs.	400
11	Pearl Ormsby Pontiac De Kol, 6 yrs.	500
13	Plum Ormsby Mechthilde, 7 yrs.	200
14	Hulda Pontiac Hartje, 3 yrs.	205
	Purchased by Dr. E. Hogg, Wilkes-Barre, Pa.	
3	Mercedes Heeringa Korndkye, 12 yrs.	450
5	Mercedes Pontiac Heeringa, 4 yrs.	400
9	Drosky De Kol Mechthilde, 8 yrs.	280
18	Mayapple Mechthilde Pontiac, 1 yr.	250
20	Mayapple Aaggie Pontiac, 1 yr.	200

CORNUCOPIA PLUM JOHANNA (center)

1,056.78 lb. butter in a year, with her two daughters, Keystone Plum Johanna on the right, who made 1,052.96 lb. butter in a year; Keystone Beauty Plum Johanna on the left, who made 1,294.71 lb. butter in a year.

THOUSAND-POUND COWS

By C. M. Long

We speak of 1,000-pound cows rather glibly these days and do not realize how scarce they really are.

In the first place, let us be sure we understand what is meant by a 1,000-pound cow. It is a cow that has produced 1,000 pounds of 80 per cent butter or 800 pounds butterfat in 365 consecutive days. This means an average production of about 2 1-5 pounds for every day of the year. This record must have been checked up once a month by a representative of the agricultural college He and the milker and the owner must make affidavit as to the correctness of their respective reports. Usually a different man makes the test each month, at least the same man does not make the test two consecutive months. The college representative or tester weighs and tests the milk for eight consecutive milkings and the milker weighs every milking.

The first of these records was made in 1908. Since that time there has been a total of only 621 in all the United States and Canada. To date Ohio has the greatest number, a total of 78. Next in order is Minnesota with 77, and so on down the list, 31 states and Canada being represented. Some cows in this list have produced more than 1,000 pounds in a year. Some cows have repeated the performance one or more times. In fact, 38 have made 1,000 pounds or more twice, seven three times and two four times. The most records by any one breeder were made by A. W. Morris & Sons. They have made 24 1,000-pound records on 19 different cows. Thus we see that very few breeders can claim a 1,000-pound cow, and of those who can but few have more than one.

Of the 621 cows that have made this high record I doubt if more than 300 are living to-day.—*Drovers Journal.*

PRODUCER'S PLANT SAVES LOSSES

At the annual meeting of the Maryland and Virginia Milk Producers' Association, Manager O. A. Jamison, reported that 314,290 gallons of sweet milk; 32,-252¾ gallons of sweet cream; 21,290½ gallons of sour milk, and 4,379 gallons of sour cream were handled at Washington during the past year. This product came from 1,936 shippers and was sold in the form of milk, cream, skim milk, cottage cheese and butter. Milk and cream that otherwise would have to be returned were manufactured into butter in Washington, which saved the shippers over $1,000 in return freight alone in addition to the price that was received for the product.

There were 250 members present at the meeting. President Dallas Berry briefly reviewed the work of the Association during the past year and announced that over 80% of the milk coming into Washington is signed under the pooling contract.

Mr. C. W. Holman, executive secretary of the National Milk Producers Federation of which the Maryland and Virginia Milk Producers' Association is a member, told of the accomplishments of that organization throughout the United States. They had influenced national legislation in a number of ways that benefited the dairyman. The federation has never lost a fight which it started in the interest of the milk producer.

Prof. Gamble of the Dairy Department of the University of Maryland spoke on coöperation and urged loyalty to the association and its officers.

The President and Secretary-Treasurer of the Maryland State Dairyman's Association spoke on the advantages of coöperation as did R. S. Hynson, chairman of the reorganization committee.

At the director's meeting held immediately after the annual meeting, the following minimum prices for milk and cream were recommended for seven months, beginning October 1, 1922.

Fat content per cent.	*Price per gal. Cents*
3.5	29.0
3.6	29.4
3.7	29.8
3.8	30.2
3.9	30.6

4.7	33.8
4.8	34.2
4.9	34.6
5.0	35.0

and 4/10 of one cent for each 1/10 per cent. variation in butterfat; $1.40 for 20% cream with 6 cents for each one per cent. variation in butterfat.

WHITE SUPREMACY

They were a couple of ex-doughboys, but had been out of the army so long that they had forgotten the discomforts of hiking and fighting and freezing and starving and all the rest of it, and remembered only the good times and the free-for-all existence. Civilian life had become so monotonous that they decided something had to be done about it.

"Let's beat it for China," suggested one. "There's a good war goin' on and there ought to be some excitement, because they got three armies."

"No," objected the other. "Let's go to Ireland. They got one army there per capita."

KIND CONDUCTOR

Lady passenger, after spying a drunken man on the seat near her: "Do you allow drunks on this car?"

Kind conductor to the lady: "Just be seated, I don't think any one will notice you!"

PICKING WINNERS

About three years ago, at the Marks dispersal sale, Thomas J. Owens of the Firloch Stock Farm, Kirkland, Wash., purchased three yearling heifers and he obtained good ones. All three of these animals have made long-time records and all three are outstanding.

One of the trio is Pietertje Mutual Fobes who, on September 11th of this year, completed a 305-day record of 24,190.6 lb. milk and 1,023.8 lb. butter as a junior four-year-old. She is due to calve within fourteen months of the time of her previous freshening. She will be continued on test for the year and, if all goes well, will be credited with records for both ten months and twelve months, under the recent ruling on this point by the National Association's Board of Directors. It will be remembered that this great heifer, as a junior three-year-old, produced 21,368 lb. milk and 820 lb. butter in 305 days.

Another member was Sunnyside De Kol Blence, who as a yearling, made 28 lb. butter in seven days and is about to finish a year record of something over a thousand pounds.

The third heifer was Gerben Bracelet Bessie, the holder of the world's milk record for junior three-year-olds in the ten months division with 23,477 lb. Her butter production at the same time was 792 lb.

It is very evident that Mr. Owens knows how to pick good ones and it is also evident that he knows how to handle the good ones after he has picked them.

EXTENDING TRADE IN OKLAHOMA

The merchants of Alva, Oklahoma, are staging a Trade Extension Campaign, and, as an aid to buying, the Chamber of Commerce is giving as prizes a registered Holstein cow, valued at $250, a purebred Holstein heifer valued at $75 and a cash prize of $50. The three prizes will be locked to a post in the public square by separate locks. There are two keys to each lock, one of which has been mixed with thousands of other keys. Each purchaser of one dollar's worth of merchandise receives a key from the seller and at the close of the campaign, the purchasers are to bring their keys and try to unfasten the locks, *And, If They Can,* get the prize. This is certainly something different from the stereotyped dollar day of the East.

Laugh, and the world laughs with you.
If you know this, why should you grieve?
Laugh, and the world laughs with you,
Though it sometimes laughs in its sleeve.

Mrs. Brown—"I hear the vicar thinks your daughter has a real genius for reciting, Mrs. Smith."

Mrs. Smith—"Yes; all she wants, he says to me, is a course of electrocution, just to finish her off like."—*London Opinion.*

Can Spare a
Breeder's Herd
of young cows, FIFTEEN animals, two to four years old, everyone with a semi-official record or now running on test.
This is the first Accredited herd in the state and NO abortion.
A few nice bull calves, 1 mo. to 9 mo. by our KING WALDORF SYLVIA, a double grandson of May Echo Sylvia. His pedigree shows lots of World Record backing and several 40 lb. crosses. His 10 nearest dams average 37.32 lb. and his 30 nearest dams average 30 lb. A lot of well known cows are bred to him. The value of this strain is increasing.
Scudder Farms,
Trenton, N. J. Route No. 6

PENNSYLVANIA SHOW BULL

One of the real good show bulls of Pennsylvania is King Pietertje Buttercup 2d, No. 186063, who was grand champion at the York County Fair, 1922. This bull has won championships at a number of good fairs and away back in 1919, when he was only three years old, was the grand champion at Allentown, Pa., and at the Maryland State Fair held at Timonium.

King, who was born March 13, 1916, now weighs 2,500 lb. He is a grandson of Beauty Pietertje Butter King, Jr., and of Count Segis Korndyke. He heads the herd of forty head of purebred Holsteins, owned by the Davis Bros. of Seven Valleys, Pa. This is a good dairy herd which is being built up along the right lines. An indication of the quality and persistency of the Davis animals is the instance of one of the cows, tested 100 days after freshening, that made 22 lb. butter in seven days and milked 82.2 lb. milk in a day.

NEVADA BUYING

A shipment of 112 purebred Holsteins were purchased by dairymen of Nevada from Jefferson County, Wis. Thirty-seven head went around Winnemucca the other 75 being distributed among ranchers of the Lovelock valley. The shipment took 11 days with a one-day delay. The local banks advanced money for those purchasers who wished to invest in this stock, which at this time is very practicable, creating a market for the alfalfa hay of this section which is under an embargo for weevil.

This importation of purebred dairy stock is part of the program outlined by the State Farm Bureau Association at Reno at which time the goal was set for 40,000 dairy cows a year for the state. Some of the animals will be placed on exhibition at the County Fair.

GOOD ONES AT MILLBRAE

Millbrae Dairy won the senior and grand championships for males at the Glenn County (Calif.) Fair, and also the senior, junior and grand championships for females. The junior champion bull was owned by Roy Glenn Saxton, and this animal was reserve grand champion. Millbrae Dairy took every first in the female classes. Other owners of prize winners are: J. L. Fulton, J. N. Cook, Edrie V. Conoly, W. L. Smith, J. N. Alvares, B. J. Bills, Niles Fisk, and Rodger Weidemier.

RANK EXTRAVAGANCE

It was on an ocean voyage. The insurance agent, unwilling to lose a chance of canvassing so many prospects who could not possibly get far away, turned loose a flood of eloquence on a Scotchman.

"Surely," he said, "you see the advantage of taking out a policy if for nothing except to cover your burial expenses."

"Wait till we get to land, mon," retorted the wily Scot. "I micht be lost at sea."

PRODUCING COLLEGE MATRON

Juma Longfield Sarcastic, one of the good Holstein cows in the dairy herd of the University of Illinois, is 15 years and 9 months old and according to a statement originating at the University, she has produced 109,977 lb. milk and 4,633.8 lb. butter. Juma is generally known as "Old 110" because she carries that ear tag. During her first official test at the age of six years, she produced 13,285 lb. milk and 564.8 lb. butter in 365 days. Up to ten years of age she averaged 9,000 lb. of milk and 482.5 lb. butter per year, and with the exception of the one year on test, she was milked only twice a day and kept under ordinary herd conditions.

As well as being a faithful producer at the pail, Old 110 is the mother of a large number of calves whose type and production have proven to be of exceptional merit. Her second heifer calf, Jume Longfield Homestead, was kept in the herd and beginning at the age of four years and nine months she produced 24,655 lb. milk and 1,035 lb. butter in 365 days this record making her the first cow in the State of Illinois to produce 1,000 lb. of butter in one year. At the age of eight years, she was sold in the 1921 sale of the Illinois-Holstein-Friesian Breeders Association for $1,500.

WINS STUDENT JUDGING CONTEST

The student judging contest at the San Joaquin County Fair at Stockton, California, was won by Donald Locke, of the Lodi High School, who also won the cup donated by the Holstein breeders of the county for the student making the highest score in the Holstein classes. Holstein and Jersey cattle and Berkshire, Duroc and Poland China hogs formed the animals the students had to place. The banner for the team making the highest score judging all kinds of cattle, was won by the Manteca school, while the banner for hog judging went to the Lodi school team. The superjudge of the contest was Professor C. W. Rubel, of the University of California.

FROM WISCONSIN TO IOWA

H. J. Rensink, of Sheldon, Ia., in company with Peter Martenhorst, of Sioux Falls, S. D., spent a week visiting herds in the vicinity of Jefferson, Ft. Atkinson and Madison, Wis., and saw some fifty herds and over 2,000 head of Holsteins. They each purchased a carload of grade Holstein heifers which will be passed along to dairymen in the vicinity of their homes.

ALL BLACK AND WHITE

The settlers of the Delhi Colony in Southern California now own 211 grade cows, 48 grade heifers, 32 purebred cows, 13 purebred heifers, and 10 bull calves, and all black and whites. A very creditable Holstein exhibit was made by the local association at the Delhi Fair.

A CHANGE OF EDITORS

Mr. E. R. Eastman, who has been editor of the Dairymen's League News since March, 1918, resigns to become editor-in-chief of the well known eastern farm weekly, The American Agriculturist.

During Mr. Eastman's occupation of the editorial chair, the Dairymen's League News has grown from a monthly publication to a weekly with a circulation of over 100,000. His place is taken by Dewey J. Carter, who for some time has been Mr. Eastman's assistant. Mr. Carter is a farm boy and during most of his life has been closely connected with farming. He was secretary of the Herkimer County Farm Bureau and has had newspaper experience in New York City and Binghamton. Both these gentlemen will have the best wishes of thousands of friends in their broader fields of editorial activity.

YUMPIN' YIMINY!

Ole Olesen had been working as an engine wiper and his boss, a thrifty man, had been coaching him for promotion to fireman with such advice as:

"Now, Ole, don't waste a drop of oil—that costs money. And don't waste the waste, either—that's getting expensive, too.

With these facts of economy pounded thoroughly into his head Ole went up to be questioned on his eligibility as fireman. The last query propounded was:

"Suppose you are on your engine, on a single track. You go around a curve and see rushing toward you an express. What would you do?"

To which Ole replied:

"I grab the dam' oil can; I grab the dam' waste—and I yump!"

Barr: "Did you say he is a bosom friend?"

Carr: 'More than that; he's a hip friend."

HE FOLLOWED HIS ORDERS

"Never state as a fact anything you are not certain about," the great editor warned the new reporter," or you will get us into libel suits. In such cases use the words, "alleged," "claimed," "reputed" "rumored" and so on."

And then this paragraph appeared in the society notes of the paper:

It is rumored that a card party was given yesterday by a number of reputed ladies. Mrs. Smith gossip says, was hostess. It is alleged that the guests, with the exception of Mrs. Bellinger, who says she hails from Leavitt's Junction, were all from here. Mrs. Smith claims to be the wife of Archibald Smith, the so-called "Honest Man" trading on Key Street."

And when the editor had read the report a whirling mass claiming to be the reporter was projected through the window and struck the street with a dull thud.

"Two darkies engaged in a horse trade. After the sale was made one darky had the other darky's horse for which he parted with $30.00. A few days later the buyer of the horse came across the other darky and complained bitterly of being robbed. "Why, Rastus, that horse aint no good at all. He can't see. He's blind."

"What makes you think he's blind, Sam?"

"Why the other day I turned him out in the field and he run into the fence, then he stumbled over a great big rock and then he ran plumb into a tree."

"Aw, go long, nigger, that horse aint blind. He just don't give a dam."

OBLIGING

Mr. Newlywed—"Did you sew the button on my overcoat, dear?"

Mrs. Newlywed—"No, darling; I couldn't find the button, so I sewed up the buttonhole."

DO YOU NEED
HOLSTEINS?

Northern Pennsylvania is the home of large, healthy, heavy-milking herds whose product is shipped to New York City. Good authorities claim that the average production of its dairy cows are not exceeded in any other territory in the entire United States while individuality is of the best.

I know this district and its animals and can fill your requirements at a reasonable price.

D. B. YORK
Brookside Stock Farm, Troy, Pa.

FUNNY HOW THINGS GROW

Three men, an Irishman, a Swede and a Hebrew, were brought to court. The Hebrew was arrested for stealing a cow: the Swede for stealing a horse, and the Irishman for stealing a wagon.

"Well," said the judge, turning to the Hebrew, "where did you get the cow?"

"I've had it since it was a calf," was the reply.

"Where did you get the horse?" he asked the Swede.

"I've had it since it was a colt," replied the Swede.

"And, Patrick, where did you get the wagon?"

"Oh, your Honor, I've had it since it was a wheelbarrow."

Statement of the ownership, management, etc., required by the Act of Congress of August 24, 1912, of THE HOLSTEIN BREEDER AND DAIRYMAN, published weekly at Harrisburg, Pennsylvania, for Oct. 1, 1922.

STATE OF PENNSYLVANIA, COUNTY OF DAUPHIN.

Before me, a Notary Public in and for the state and county aforesaid, personally appeared HOWARD C. REYNOLDS, who, having been duly sworn according to law, deposes and says that he is the business manager of THE HOLSTEIN BREEDER AND DAIRYMAN, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, (and if a daily paper, the circulation) etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse side of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:

Publisher, THE BREEDER AND DAIRYMAN PUBLISHING CO., Harrisburg, Pa.

Editor, Not any.

Managing Editor, HOWARD C. REYNOLDS, Harrisburg, Pa.

Business Manager, HOWARD C. REYNOLDS, Harrisburg, Pa.

2. That the owners are: (Give names and addresses of individual owners; or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock).

E. E. SOUTHWORTH, Clarks Summit, Pa.
MARK T. MILNER, Harrisburg, Pa.
EUGENE B. BENNETT, New Haven, Connecticut.
HOWARD C. REYNOLDS, Harrisburg, Pa.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) There are no bonds, mortgages, or other securities outstanding against THE BREEDER AND DAIRYMAN PUBLISHING COMPANY.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear on the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona-fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest direct or indirect in the said stock, bonds or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is.....(This information is required from daily publications only.)

THE ALTERNATIVE

A colored man named Sam had worked for his boss about five years and in that time he had just about run things. His good friend Ben said to him one day:

"Now Sam, you have worked up there and made your boss rich. You ought to ask for more money, or else you quit. You just go up there and tell him: 'Look here, boss, you pay me more or else.'"

Sam tried his friend's advice while sweeping the next morning. He began, "Say, boss, you'll have to gib me mo' money fo' dis job.'

"Well, Sam, I'll see about it," replied the boss.

"See about nothin' you pay mo' or else."

"Pay more or else? Else what?" The boss's eyes flashed, and his tone was sharp.

Sam's eyes blinked as he detected his boss's anger, and in a soft voice he replied, "Else I wuck for the same money."

A FOOL AND HIS MONEY

The Salvation Army lass had approached a group of young sports standing on a corner and one of them, as she held out her tambourine, took a nickel from his pocket and said, freshly.

"If I give you this nickel, will you say a prayer for me this evening when your pretty head touches the pillow?"

"I'll say it now," she replied, and as he dropped in his nickel she lifted her face and said—

"O Lord, make this young man's heart as soft as his head."

A GRANDSON OF
King Segis Pontiac Konigen
FOR $100

Sire's four nearest dams average 31.38 lb. butter in seven days. Calf born March 27, 1922, well grown, individuality right. Send for pedigree and photo. Can spare a few heifer calves at $100 each.

"Holstein Breeder and Dairyman"

The paper read by the men who milk cows for a living. They are looking for cows to milk this fall and winter.

Merryall Farm Raises Good Ones

Cows that not only produce but transmit their producing capacity to their descendants, generation after generation.

The Great State College Cow

LILITH GEM KOLKLUFF

a former member of this herd, produced as a six-year-old, 22,247.1 lb. milk, 851.1 lb. butter in a year and averaged over 20,000 lb. milk, 775 lb. butter for four years.

Her daughter, DE KOL KLASSJE LILITH, produced 749.95 lb. butter in a year.

KLASSJE has a daughter, MERRYALL LILITH HENGERVELD, that made 4,300 lb. milk, 175 lb. butter in 60 days and is going strong in the year test and she, too, has a daughter that, calving at 1 year, 7 months, 20 days old, made a year record of over TWELVE THOUSAND pounds milk and nearly FIVE HUNDRED POUNDS BUTTER.

FOUR GENERATIONS of producing females show the value of Merryall cattle.

Come and see the good ones in this herd, which is headed by KING SYLVIA JOHANNA PONTIAC a brother to Carnation King Sylvia.

Do You Know That Dress Designers Earn from $50 to $150 a Week?

Do you know there Is a Constantly Increasing Demand for Good Dressmakers?
Be Independent. Learn Dressmaking and Designing From the Women's College of Arts and Sciences **SPECIAL SHORT TERM COURSE.**
Study right in your own home, any time that is convenient. There is No other course like this **SPECIAL COURSE** in the World.
"After my third lesson I made a blouse for myself, and two for a neighbor," *writes Mrs. D——.*
"I have made the price of my course sewing for friends and I am only working on my fifth lesson," *writes Mrs. M.——.*
"All my girl friends envy me the pretty dresses I have made." This is from a girl of sixteen years after she had four lessons.
"I have not had time to do any sewing for myself since starting the Women's College Course. My friends and neighbors keep me so busy, and I have had to refuse a lot of work," *writes Mrs. C——.*

HOW I PAID THE MORTGAGE

"We had bad luck that year. Crops ruined by long-continued drought, and not enough eggs or milk to sell at a profit, and a big payment due on the mortgage in a few months. Just when it seemed we would have to give up our farm and home, a friend showed me an advertisement of the Dressmaking Courses of the Women's College, and told me if I would take up a course she could get me plenty of sewing. I wrote for information, and was so impressed with the wonderful advantages offered that I borrowed the money to pay for their Special Course. I never thought it possible that one could learn so quickly and thoroughly by correspondence. After the third lesson I was able to make waists for my neighbors, after the fourth I could make skirts and simple house-dresses. I learned such good style and up-to-date methods that I had more orders than I could take care of. In six months I had made enough to pay off the remainder of the mortgage, and get us on our feet again."
This is only one of many such experiences. We are getting hundreds of such letters every week.
This course is so low-priced that any woman, no matter how limited her means, can afford to take it. Do not let this opportunity slip by.

THE SPRINGDALE HERD

Built up during the past sixteen years on a basis of profitable production and re-production

Present Herd Sire

WOODMONT ECHO SYLVIA CHAMPION

His sire, Sir Pietje Echo Sylvia, is by Champion Echo Sylvia Pontiac and is therefore a brother to Eco-Sylv Belle, 31.15 lb. as a junior two year old, the present World Champion in her class.
His dam, Butter Boy Empress, made 30.27 lb. butter in seven days, has milked 100 lb. in a day and was first prize aged cow, first in the A. R. O. class and Grand Champion at the 1921 New York State Fair. Judge Haeger says she is one of the three best cows shown last year.

Most of our young animals are by

KING TWEEDE SPRING FARM

His sire is Spring Farm King, full brother to the former World Champion and first 44 lb. cow; regarded as one of the best young sires of the breed.
His dam, Dressie Lady Pontiac, has a record of 30.04 lb. butter, 614.8 lb. milk made in seven days and is full sister to the 33.98 lb. cow Dressie Princess Pontiac. Their sire is Spring Farm King Pontiac. Daughters of KING TWEEDE SPRING FARM now in test are making a splendid showing under real dairy conditions.

Our older cows are daughters of

TOBE RAG APPLE KORNDYKE

Son of Christmas Tobe, 2d, 31.66 lb. butter in seven days and former World Champion ten year old. She is also the dam of Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in thirty days as a senior four year old, both being World Records when made. She in turn is dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days, also as a four year old. Here is large production, generation after generation.

Animals from this herd will make good anywhere

VOL. I HARRISBURG, PA., NOVEMBER 8, 1922 No. 21

Kolrain Marion Finderne—Milk Machine

KOLRAIN MARION FINDERNE No. 317396, one of the greatest cows the world has ever known, on October 26th completed a year record of 35,559.7 lb. milk and 1,278.58 lb. butter. This is the highest yearly milk record made east of the Rocky Mountains and second highest in the world. This cow is owned at the Loeb Farms, Charlevoix, Mich. She is a large animal, weighing 1,680 lb., is very handsome, as the cover illustration of this issue shows, is nearly all white and is sired by Finderne Pride Fayne, the well-known son of the former world's champion for year butter production, Finderne Pride Johanna Rue. The dam of this cow is Kolrain Eleanor Pontiac Korndyke who closed a year record early this year of 26,995.4 lb. milk and 1,143.75 lb. butter as a seven-year-old.

Kolrain Marion Finderne was born September 16, 1915 and made her record as a six-year-old. This is her second full year on test, her previous record, made as a senior four-year-old, being 28,851.8 lb. milk and 1,036.31 lb. butter. During the 365 days of this second test, she produced more than 100 lb. milk on each of 178 different days and during her test, no less than 15 state supervisors officiated.

The Loeb Farms is owned by Mr. and Mrs. A. H. Loeb, who are endeavoring to develop in northern Michigan, a practical, permanent, high class breeding and farming establishment.

Early in 1917, Mr. Loeb, vice-president of Sears, Roebuck and Co., saw the possibilities that northern Michigan offered for dairying. During his trips to Charlevoix, he had familiarized himself with stump land and cut over tracts. He secured a tract of 1,600 acres, picturesquely located on the shore of Pine Lake, three miles south of Charlevoix and started to build a model farm, breeding general farm animals but specializing in Holstein-Friesian cattle, Belgian horses and Duroc-Jersey hogs.

When the farm was first started, the outlook was not at all promising. The soil was rough with many stones and not naturally fertile. Fields were gradually cleared of stone which was used in the construction of all the buildings, the stumps were blasted and the sod was broken. The soil varies and includes clay, muck, sandy loam and sand, but even the lightest soil of the 750 acres under cultivation is now producing heavily, due to careful and heavy fertilization.

In the year 1918, five female Holsteins, closely related, were purchased together with a son of the great Sir Pietertje Ormsby Mercedes. One of the female quintet was Kolrain Marion Finderne, the present champion for milk production east of the Rockies and the second highest record milker in the world. In two consecutive years of official test, this cow has produced 64,191.5 lb. milk and 2,314.88 lb. butter, a showing that is surpassed by only one other animal.

The Loebs are interesting themselves in community affairs and do not treat their great breeding establishment as a fad or as a place to simply spend their vacations. It is the owner's desire to bring up the section as an agricultural community and neighboring farmers are encouraged to start with registered stock. Holstein cattle do well in this section. The winters are long and there is usually considerable snow, but the air is dry. Corn, rye, buckwheat, alfalfa, timothy, clover, all root crops, apples, pears, cherries, plums, berries and garden truck grow well in this vicinity. Stock does well and develops splendidly. As evidence the Loeb Farms sent out a show exhibit this fall and at the Ohio State fair at Columbus, the Michigan State Fair at Detroit and at Grand Rapids, Bay City and Saginaw, Mich., the Loeb Farm exhibit won $2,500 in cash and 275 ribbons on Holstein cattle, Belgian horses and Duroc-Jersey hogs.

As a senior four-year-old, Kolrain Marion Finderne produced 662.6 lb. milk and 22.19 lb. butter in seven days and 2,571.6 lb. milk and 89.54 lb. butter in 30 days. It will be seen that she averaged more than 85 lb. milk a day for the month. Her record completed last year of 28,851.8 lb. milk stood in third position in the senior four-year-old class, while her butter record of 1,036.31 lb. stood in tenth place.

Kolrain Marion Finderne was bred by Edgar F. Copeland of Colerain, Mass., but was developed in the Loeb herd. Her sire, Finderne Pride Fayne, has a number of other splendid record daughters, while her dam, Kolrain Eleanor Pontiac Korndyke, besides making a great record herself, is by Pontiac Lunde Korndyke Prince, a son of Pontiac Korndyke and Pontiac Lunde Korndyke, one of the greatest cows of her day, both as a show animal and as a producer. It is not an accident that Kolrain Marion Finderne has the capacity to produce, she inherits the right from both sides of her pedigree. Through her sire she is a granddaughter of Finderne Pride Johanna Rue, who, when she made her former world record of 1,470.58 lb. butter, produced 28,403.7 lb. milk in the year and is the dam of Finderne Pride Johanna Korndyke who in turn sired Kiatta Pontiac Pride, the present world champion junior four-year-old for milk production with 31,491.6 lb. milk in a year.

Pedigree experts will immediately sharpen their pencils and get busy figuring. Marion's performance makes possible some great averages. The year milk records of this cow and her dam average 31,167.55 lb. and we do not recall any other dam and daughter of which this can be said. The records of Marion, her dam and her sire's dam average 30,246.2 lb. and there is no other similar three-animal combination of which this is true.

Kolrain Marion Finderne commenced her record at the age of six years, one month and eight days. She averaged 100 lb. milk a day for more than ten months, and produced 100 lb. or more of milk a day, 178 different days or practically half the days in the test year. Six consecutive months, December, 1921 to May, 1922 inclusive, she averaged 100 lb. milk a day for each month and during the entire year averaged 96.8 lb. milk a day, a truly marvelous performance which shows the possibilities of the highest type of Holstein cow when combined with plenty of good feed and skillful care and handling. Her production, month by month, is shown below:

Month	*Days*	*Test*	*Lb. Milk*	*Lb. Butter*
Oct.	5	3.25	385.0	15.64
Nov.	30	3.25	2,675.0	108.67
Dec.	31	2.91	3,299.2	120.02

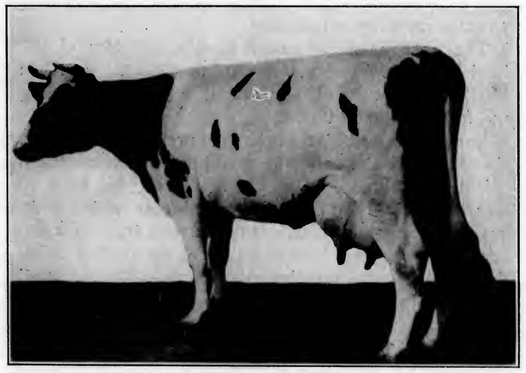
Aug.	31	2.836	2,775.4	98.40
Sept.	30	3.104	2,540.8	98.59
Oct.	26	3.035	1,990.4	75.52
Total	365		35,339.7	1,278.58



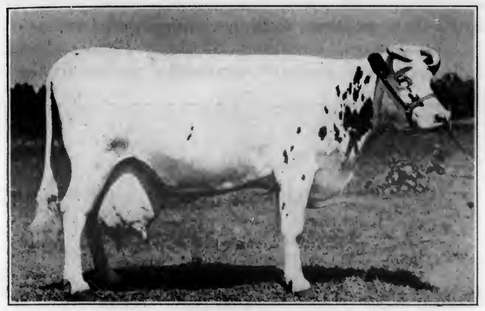
The Only Two Cows With Four Thousand-Pound Year Record Daughters

THE ability to produce milk and butterfat at a profit over the cost of care and feed is one of the great reasons for the existence of purebred dairy cattle. Another of the reasons is the ability to transmit producing capacity to offspring and descendants. One of the milestones in the Advanced Register work of the dairy breeds has been the production of a thousand pound of butter in a year. Cows have produced this amount whose pedigrees did not show a thousand pound ancestor and cows who have made a thousand pounds of butter in a year do not have daughters which have equalled the performance of their dam. There are a number of cows with two daughters that have made a thousand pound year butter record, a less number with three, but there are only two cows that have four daughters which have each made a thousand or more pound of butter in a year and these two cows themselves never had the opportunity to make year records. Both these great transmitting dams are well known. One is the Ohio matron, Aaggie Cornucopia Paul 2d. The other is Segis Fayne Johanna.

The histories of these cows and their daughters are quite dissimilar. One was purchased for a low price and she and her daughters were developed in one herd and the daughters made their year records in that herd. The other cow had made a name for herself before she was purchased at what was then a good figure. Her four daughters made their year records in four different herds, two in New York State and two in New Jersey.

The first cow to have four daughters that each produced 1,000 lb. butter in a year was Aaggie Cornucopia Paul 2d. She was bred in New York state and away back in 1910 when only a ten-month's-old heifer was purchased by E. E. Ellett & Sons of Beloit, Ohio. She was a daughter of Nye Cold Brook Butter King, while her dam was a good record daughter of Aaggie Cornucopia Johanna Lad, Jr., famous as a show bull and as a sire of show stock. In the Ellett herd she made good both as a producer, and as the founder of a good producing family. Her own records include 100.7 lb. milk in a day, 674.4 lb. milk and 28.60 lb. butter in seven days, and 2,765 lb. milk and 112.80 lb. butter in thirty days averaging better than 92 lb. milk a day for a month and producing 680 lb. in seven consecutive days.

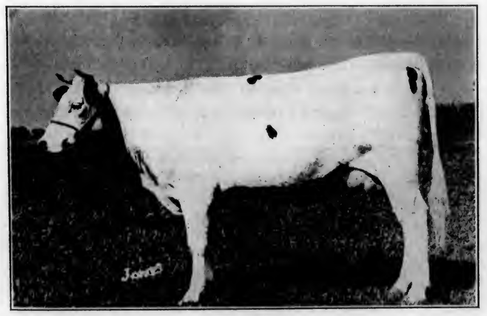
The eldest daughter of this cow is Aaggie Cornucopia Colantha. She has a number of short time official records and produced 116.5 lb. milk in one



AAGGIE CORNUCOPIA PAUL 2d
One of the two cows with four daughters each with thousand lb. year butter records. The foundation cow of the Sunnyside Herd, Beloit, Ohio, E. E. Ellett & Son, Proprietors.

day, 799.2 lb. milk in a week. She made a seven-day butter record of 33.23 lb. butter from 747.2 lb. milk in seven days and 134.39 lb. butter and 3,331.5 lb. milk in 30 days. Her year record is 25,986.4 lb. milk and 1,136.51 lb. butter.

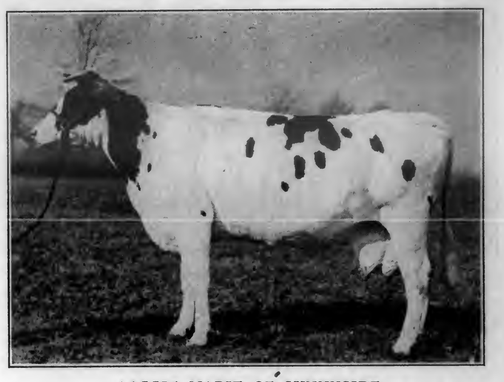
The second daughter of this great cow is Aaggie Cornucopia of Sunnyside and she too, has a number of great records. As an eight-year-old she made 105.7 lb. milk in a day and 702.1 lb. milk, 31.87 lb. butter in a week. Her year record is 25,127.5 lb. milk and 1,093.46 lb. butter.



Aaggie Marie of Sunnyside, another daughter of Aaggie Cornucopia Paul 2d, produced 111.8 lb. milk in 24 hours. In seven days she made a record of 30.53 lb. butter, 769.4 lb. milk and in 365 days she made 23,745.1 lb. milk and 1,101.33 lb. butter. A long list of remarkable records is credited to Aaggie Queen of Sunnyside but her year record was made as a senior

AAGGIE CORNUCOPIA COLANTHA
25,986.4 lb. milk, 1,136.51 lb. butter in a year. Daughter of Aaggie Cornucopia Paul 2d.

three-year-old and is 25,384.8 lb. milk and 1,067.31 lb. butter. As a five -year-old cow she produced 702.5 lb. milk and 33.81 lb. butter in a week, her best day's milk production being 102.7 lb.



Segis Fayne Johanna was bred and born in the Bloomingdale Herd, Somerville, N. J., then the property of the late A. A. Cortelyou, one of the greatest

AAGGIE QUEEN OF SUNNYSIDE
25,384.8 lb. milk, 1,067.31 lb. butter in a year as a three-year-old. Daughter of Aaggie Cornucopia Paul 2d.

cattlemen who ever sat in the Directorate of the Holstein-Friesian Association of America. Her sire was King Fayne Segis, a son of King Segis and Grace Fayne 2d's Homestead a cow that made world's records for seven and thirty-day butter production as a four-year-old and then as a six-year-old produced 35.55 lb. butter in seven days making a world's record at the time and becoming the second cow of the breed to average five lb. butter a day for seven consecutive days. The dam of Segis Fayne Johanna, Vikina Johanna, was considered quite a cow and was by Johanna Rue 3d's Lad whose daughters and descendants have made remarkable records both in short time and long time tests. In the Cortelyou Herd, the first time she is credited with an official record, Segis Fayne Johanna, calving at three years three months and seven days old, made 30.66 lb. butter and 455.6 lb. milk in a week and she had this record at the time she was purchased at public auction by Oliver Cabana, Jr., proprietor of the Pine Grove Farms where her subsequent records were made.

Segis Fayne Johanna had dropped in the Bloomingdale Herd, two daughters, Pietertje Fayne Johanna and Segis Hengerveld Fayne Johanna. She was carrying calf by Beauty Walker Pietertje Prince at the time she was sold and in the Pine Grove herd a short time after she was purchased, she dropped Segis Fayne

AAGGIE MARIE OF SUNNYSIDE
23,743.1 lb. milk, 1,101.33 lb. butter in a year. Daughter of Aaggie Cornucopia Paul 2d.

Pietertje. These three daughters were bred at Bloomingdale.

Segis Fayne Pietertje was the first daughter of this cow to complete a year record. Calving at five years, nine months and 17 days old, she produced 19,419.9 lb. milk and 1,039.45 lb. butter. Her average test was

AAGGIE CORNUCOPIA OF SUNNYSIDE
25,127.5 lb. milk, 1,093.46 lb. butter in a year. Daughter of Aaggie Cornucopia Paul 2d.

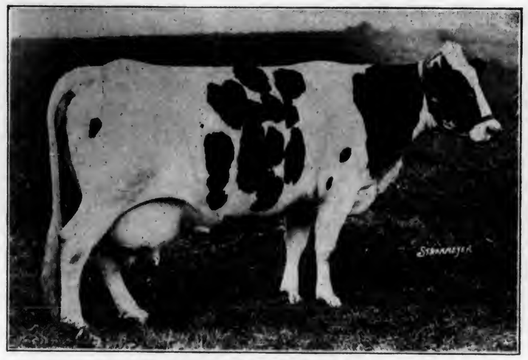
4.28%. The prize list of Volume 32 of the Advanced Register Year Book shows that this cow won the 43d prize for butterfat production and stood in 53d position in the aged cow class. She was owned by Oliver Cabana, Jr.

In the Pine Grove Herd, Segis Fayne Johanna dropped a heifer by Rag Apple Korndyke 8th which was in due time named Segis Fayne Rag Apple. This animal freshened at four years nine months and 29

days old and in year work produced 1,054.94 lb. butter and 21,990.4 lb. milk, her average test being 3.84%. The reported Tests Bulletin shows her to be the property of W. S. Tozier & Son, Johnsonburg, N. Y., and the prize list of last year which will appear in Volume 33 of the Blue Book shows that she stood in 9th position in the senior four-year-old class for butterfat production and 21st position for milk production, winning the 7th prize for butterfat and 15th for milk.

SEGIS FAYNE JOHANNA
One of the two cows with four daughters each with thousand pound year butter records.

Segis Hengerveld Fayne Johanna, freshening at nine years one month and eight days old, was started on long time test and made in the year 1,129.38 lb. butter and 20,216.1 lb. milk her average test being 4.47%. Bulletin No. 3 of the Reported Tests of Holstein-Friesian Cows issued under date of August 30, 1922, gives as her owners, Gobel Farms, Annandale, N. J. This cow was sired by Woodcrest Nig De Kol, one of the many good sons of old Hengerveld De Kol, the first century sire.



SEGIS FAYNE PIETERTJE
19,419.9 lb. milk, 1,039.45 lb. butter in a year. Daughter of Segis Fayne Johanna. Owned by Oliver Cabana, Jr., Buffalo, N. Y.

The latest daughter of the old cow to complete a year record is Pietertje Fayne Johanna and she is owned by the Bloomingdale Farms, Somerville, N. J., and lives on the farm where she was born. She was sired by Beauty Walker Pietertje Prince and is a full sister to Segis Fayne Pietertje. She commenced her record when she was between 8½ and 9 years old and produced 1,118.32 lb. butter and 23,151.3 lb. milk in the 365 days of her long time test.

A comparison of the records made by the members of these two great families show that the daughters of the Ohio cow are the heaviest milkers and the daughters of Segis Fayne Johanna are the richest testers. The Aaggie's exceed for milk production, the four averaging better than 25,000 lb. in their year work while three of them have each produced over 25,000 lb. One of the daughters of Segis Fayne Johanna falls below the 20,000 lb. mark, the figures for Segis Fayne Pietertje being 19,419.9 lb. In butter production the two families are nearly equal. Aaggie Cornucopia Colantha, one of the Aaggie cows, has the highest butter record but it is less than eight pounds ahead of that of Segis Hengerveld Fayne Johanna. Two cows in each family exceed eleven hundred pounds butter in a year. Segis Hengerveld Johanna and her half-sister, Pietertje Fayne Johanna have year butter records that exceed any two of the Aaggie sisters. The average for the two groups of four sisters are not very far apart; the Ohio cows have the advantage of 14.13 lb. their figures being 1,099.65 lb. against 1,085.52 lb. for the Segis Fayne Johanna quartet.

SEGIS HENGERVELD FAYNE JOHANNA
20,216.1 lb. milk, 1,129.38 lb. butter in a year. Daughter of Segis Fayne Johanna. Owned by Gobel Farms, Annandale, N. J.

PIETERTJE FAYNE JOHANNA
23,151.3 lb. milk, 1,118.32 lb. butter in a year. Daughter of Segis Fayne Johanna. Owned by Bloomingdale Farms, Somerville, N. J.

From the age standpoint, the Aaggie's have the best of it, one of them being tested as a three-year-old while the youngest one of the Segis family commenced her test as a senior four-year-old. Aaggie Cornucopia Paul 2d has six daughters that have made year records and has at least one daughter in milk that is a promising candidate for a thousand pound year record. While we are not positive on the point, we believe that Segis Fayne Johanna has one daughter that has never yet been officially tested so that it is possible that one of these two great transmitting Holstein matrons may be the first cow to have five daughters cross the thousand lb. mark in long time work.

For purposes of comparison, we are listing the daughters of these two great cows and their milk and butter records in the following table:

Daughters of Aaggie Cornucopia Paul 2d.

	Lb. Milk	*Lb. Butter*
Aaggie Cornucopia Colantha	25,986.4	1,136.51
Aaggie Queen of Sunnyside, 3½ yr.	25,384.8	1,067.31
Aaggie Marie of Sunnyside	23,743.1	1,101.33
Aaggie Cornucopia of Sunnyside	25,127.5	1,093.46
Total	10,024.15	4,398.61
Average	25,060.4	1,099.65

Daughters of Segis Fayne Johanna

	Lb. Milk	*Lb. Butter*
Segis Hengerveld Fayne Johanna	20,216.1	1,129.38
Pietertje Fayne Johanna	23,151.3	1,118.32
Segis Fayne Pietertje	19,419.9	1,039.45
Segis Fayne Rag Apple 4½ yr.	21,990.4	1,054.94
Total	84,777.7	4,342.09
Average	21,194.4	1,085.52

Aiming for Thirty Thousand Pounds in England

THE British Friesian cow Brookside Colantha has increased her record to 27,270 lb. milk in 299 days. The previous high record of England was made by a Shorthorn cow which produced 2,614 gallons or 26,140 lb. milk in 365 days. When Brookside Colantha reached these figures she was giving 80 lb. milk a day and the British Friesian breeders' are hoping that she may be their first 30,000 lb. cow, or as they term it, "three-thousand-galloner." (An Imperial gallon weighs 10 lb.)

Brookside Colantha is an eight-year-old cow and has had five calves. In a previous lactation period, as told by Eugene B. Bennett in the leading article of the October 8th issue of the BREEDER AND DAIRYMAN, this cow produced 23,682½ lb. milk in a year and during her lifetime she has produced over 92,500 lb. milk or fifty times her own weight.

It is interesting to note that this cow would not be eligible for registration in the American or Canadian Holstein-Friesian Herdbooks as she is dun-colored instead of being black and white. Students of breed history are well aware that when the breed was first imported to this country there were dun-colored cows in Holland and that cows having dun markings were imported into this country, but their progeny have either bred black and white or have been discarded.

Brookside Colantha was born March, 1915. Her sire was Hedges Recorder and her dam was named Melford number eight, a cow that was said to closely resemble the former world's champion cow Colantha 4th's Johanna and this was the reason that the name of Brookside Colantha was given to the calf that has now become the British champion.

Her present owner purchased her in October, 1918, and she freshened in the Hache herd December 7th of that year. In that lactation period she gave 16,440 lb. milk in 364 days. After calving again she produced 23,680 lb. milk in a year and during the year was exhibited at two shows winning first prize in the milking test at the Sussex Show, and first prize for the best dairy cow of any dairy breed at the Tunbridge Wells Show. She freshened for her fifth lactation period on November 18, 1921. After calving she was milked three times a day until December, when, as she was producing over 90 lb. a day she was milked four times in 24 hours. On several occasions she has given over 110 lb. milk in a day and her best day is 119½ lb. which at the time was the highest one-day production ever recorded for a British cow. During January, she averaged 112 lb. a day and she averaged 100 lb. for the first 120 days of her present lactation period. Her picture shows that she is a large cow with lots of constitution and she carries considerable flesh. Her average daily milk production throughout her milking life so far, is about 55 lb., the figures are official for each of her lactation periods and are as follows:

1st calf, 10,690 lb. milk in 297 days.
2d calf, 14,490 lb. milk in 361 days.
3d calf, 16,440 lb. milk in 364 days.
4th calf, 23,690 lb. milk in 365 days.
5th calf, 27,270 lb. milk in 299 days.

Total, 92,570 lb. milk in 1,686 days.

Dairy House Plans Free

A DAIRY house is an essential on a Holstein farm but it is often a problem to the farmer to know just what kind of a house to build and how to make it convenient and adequate at a low cost. The United States Department of Agriculture in its newly-prepared Farmers Bulletin No. 1214 tells of a number of different styles of dairy house and shows illustrations. These houses may be built of stone, brick, concrete, cement blocks, or wood. One of the best materials is concrete or tile, with an asbestos or slate roof. This is neat and sanitary. While the initial cost is higher than with some other materials, the expense of painting is saved; and, as the building is fireproof, durable, and will require very few repairs, it may be the cheapest in the long run.

Most of the bulletin is devoted to plans and drawings. The plans are simple and clear, and blue prints for their construction may be obtained from the department at Washington, D. C.

The Breed in Britain

THE Breed is making great progress in Britain. Although the British Friesian Society has been established only ten years it now has more than two thousand members and is growing rapidly.

In 1919 there was only one British cow that had produced 20,000 lb. milk in a year. To-day there are 57, four of which have made over 25,000 lb. Two of the 57 are unregistered Dairy Shorthorns, one is a Red Poll, another an Ayrshire and the other 53 are Friesians, three of which have exceeded the 20,000 lb. mark in two different lactation periods.

The present British champion, Brookside Colantha, is expected to reach the 30,000 lb. mark and to become the first British 30,000 lb. cow. The previous champion for year milk production was a Dairy Shorthorn, unregistered, we believe, which produced 26,140 lb. milk in 365 days. One British cow, Eastfield Blackberry, produced 12434 lb. milk in twenty-four hours and she too, is now in year test.

Plans for progress are being formulated. There is a strong probability that a rule will be made that will require a bull to score a certain number of points on a breed scale of points before he will be registered.

Futurities are already in operation and the first judging on these will be some time in 1924. These futurities are separate for males and females and are called "Derby" and "Oaks", corresponding to the great English horse races of these names. There are two classes in each event, one for animals born during the first six months of 1923 and the other for animals born the latter half. The two female winners show against each other and the males the same, but one sex does not compete with the other. The prizes are cash sums, championships alone are worth $500. Entries are made soon after birth and the first entry fee is sent along at that time, a second fee is required by April 30, 1924 and no fees are returnable. Should any animal entered be sold, the opportunity to win passes to the purchaser except that only members of the British Friesian Cattle Society are eligible to receive prizes.

Dairymen's League November Prices

THE directors of the Dairyman's League Co-öperative Association in session at Utica, N. Y. recommended the following producers' prices for November per 100 lb. of 3% milk at the 201-210-mile zone.

Class 1—Fluid milk for city consumption, $2.90 (same as October.)

Class 2—Milk manufactured into cream and ice cream, $2.25, an increase of 25 cents over October.

Class 3-A—Milk manufactured into canned milk, 47 cents over the average market quotations for butter for the current month.

Class 3-B—Milk for the manufacture of fancy cheese, 40 cents above the average market quotations for November butter.

Class 4—Milk for butter and cheese, price to be based on the average prices of these products in the New York City wholesale markets for November.

This schedule calls for 25 cents more per hundred lb. for November milk going into class 2 than the October price for milk of this class.

The board of directors recommended a change in the allowance that has hithertofore been made to dealers to cover the cost of making butter and cheese. In accordance with these recommendations, the allowance for making butter will be reduced from 5 cents to 4 cents per lb. and for making cheese from 4 cents to 3 cents per lb. This means that dealers will pay the association approximately 4 cents more per 100 lb. for milk that goes into butter and about 10 cents more per 100 lb. for milk that is made into cheese.

To Study Milk Marketing Problems

THE annual meeting of the National Milk Producers Federation will be held at Springfield, Mass., November 9th-10th and is an event that is of great interest and importance to owners of cows. The National Federation is made up of over twenty associations of organized dairymen, covering practically every state east of the Mississippi as well as California, Washington, Oregon, Minnesota and Louisiana. The largest member of the Federation is the Dairymen's League Coöperative Association. This is a delegate convention but every member of the Dairymen's League Coöperative Association and the New England Milk Producers' Association is especially invited.

The first day of the meeting will be given up to addresses on the innumerable problems surrounding the marketing of milk, such as transportation, freight rates, rural credit, farm problems at home and abroad, future activities of milk marketing organizations, modern means of increasing the consumption of dairy products, methods of marketing milk in the vicinity of great cities, relations between prices of milk and prices of milk by-products, and national legislation affecting the dairy industry.

Discussion of pooling problems will be the main feature of the second day. Most milk marketing associations are based on some variation of the pooling plan. This is an arrangement whereby the returns from the sale of milk—which vary according to whether the milk is sold in fluid form or for manufacturing purposes—are pooled and the average price resulting after expenses of operation are deducted is returned to members.

The majority of the speakers will be men connected officially with the various milk associations. Among the outside speakers will be Mayor Edwin F. Leonard of Springfield, F. W. Fenn of National Automobile Chamber of Commerce, Honorable Herbert Myrick of Springfield, E. S. Brigham, Commissioner of Agriculture of Vermont, Honorable Henry Morgenthau, former Ambassador to Turkey, ex-Governor Robert P. Bass of New Hampshire, E. R. Eastman, editor of the *American Agriculturist,* E. B. Heaton of the American Farm Bureau Federation, and G. C. Seavey, editor of the *New England Homestead.*

It won't cost you much to try our Classified Advertising columns. They will help you move your surplus stock at a very low cost.

Order Your New Blue Book Now

THE thirty-third volume of the Blue Book, or to give it its official title, the Advanced Register Year Book, will soon be ready for distribution. The testing year it covers was only eleven month's yet the book is somewhat larger than last year's volume. Superintendent Malcolm H. Gardner is sending breeders whose names are on file in his office an invitation to subscribe for the book for the set price of $2 per copy. All Holstein breeders need the Blue Book to learn of the records that have been made by animals related to stock they own or by representatives of strains of breeding which they are desirous to introduce into the herd.

The thirty-third Volume of the Blue Book will contain nearly 1,400 pages full of condensed information covering advanced registry of Holstein-Friesian cattle. It has been described as one of the most wonderful and complete reference books that ever has been published. Besides the entries of the year of both cows and bulls, which, with the rules for advanced registration takes up the first 300 pages or so, there will be found the usual list of sires and dams arranged alphabetically with tested daughters listed beneath, and all the other lists, inclusive of the prize lists of the year, that make up this valuable book. In addition to the other lists that give so much information there will be found in the 33d volume a new list of cows themselves producing above 600 lb. fat with their immediate descendants on the female side credited with above 600 lb. fat.

Mr. Gardner reports that it is still possible to obtain all previous volumes with the exception of the 24th and the price is $2 per copy although a number of the books cost the association twice that amount. Beginning with November 1st, the Association will pay $2.50 for copies of the 24th Volume in good condition, using such copies as are bought in for filling out sets for such breeders as desire full sets. Volume 24 was the first of the set and was sold for only $1 a copy so it is possible to make a nice profit on the investment.

Better write to-day to Superintendent Gardner asking him to reserve you a copy of the 33d Volume and if you send along the $2 your book will be mailed direct from the bindery instead of being shipped to the Advanced Registry Office and mailed to you from there.

National Production and Consumption of Dairy Products

THE new Handbook of Dairy Statistics, issued by the United States Department of Agriculture, is full of information of interest to producers and users of dairy products. The comparative tables of national production and consumption of dairy products are bound to be studied by dieticians as well as by those engaged in marketing the products of the dairy, particulary at this time when the tariff is one of the main subjects of discussion in the daily papers.

The United States is one of the largest milk, butter and cheese producing nations in the world, although it is not one of the largest exporting countries in any one of these three products nor are Americans great eaters of dairy products.

Sweden, which has only one-eighteenth of our population, and only one-fourteenth of our cows, used 69 gallons of whole milk per capita; and Denmark, with about three-fourths as many cows, uses 68 gallons; while the United States uses only 43 gallons.

Not all countries use so much as Sweden and Denmark. Of 11 countries whose per capita consumption of whole milk is given in the Handbook, the United States comes exactly in the middle, with five higher and five lower, Sweden and Denmark being at the top of the list. The lowest is Italy, with a consumption of only 4 gallons of whole milk per capita a year; and next comes Great Britain with 22 gallons, or about half as much as our own country.

Italy is about the middle of the list of cheese users; and comes next to Argentina, which is lowest on the list of butter users. The United States holds tenth place among 13 nations in the per capita consumption of cheese, and fifth place among 13 in butter. Canada stands at the head of the list on butter, each person in that country using 27 lb. a year, while in the United States each person uses about 15 lb. Switzerland heads the list on cheese, using 26 lb.; the Netherlands, 13; Denmark, 12; and the United States, 4 lb.

Denmark and Sweden, which head the list of whole milk users, both make dairying one of their main lines of business, and have one cow for every three or four persons. The Swedes put most of their product into their own mouths, while the Danes, being only half as numerous, have a good deal to sell to other people. The Americans have seven or eight times as many cows as the Swedes and Danes together, but fewer in proportion to the population. In proportion to the number of people, we use a smaller quantity of milk and its products than a number of other nations.

Donovan went to England and was traveling in a compartment of a first-class train, smoking his pipe, when an Englishman, who was a fellow passenger, informed him that it was against the rules of the road for a passenger to smoke. "Do you own the road?" asked Donovan. "No, but I know the rules," said the Englishman. Then he complained to the conductor and Donovan had to quit smoking. "Now I'll complain on this fellow; he is traveling first class on a second-class ticket," said Donovan, and the Englishman was ejected. At the end of the trip the conductor asked Donovan how he knew that the Englishman had a second-class ticket. "Because it's the same color as my own," said Donovan.

"Willie you must stop using such dreadful language," said his mother. "Where in the world did you learn it?"

"Why, mother," replied the boy, "Shakespeare uses it."

"Well, then," said the mother, "don't play with him."

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

November 8, 1922

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Make the Farm Home Attractive

BEAUTY is generally a costly article. The beautiful horse, the cow that is able to go into the show ring and win the champion prize, the animal of any species that is of superior type commands fancy figures. Remarkable prices are paid for diamonds and gems of high quality because they are attractive. This rule extends to things in our social and business life.

There is one way whereby those living on farms can enjoy beauty at a low cost and that is by making the farm surroundings attractive. The planting of shade trees and ornamental shrubbery costs but little and the space they occupy is an infinitesimal portion of the farm. Flowers, on account of their beauty, are a source of delight to nearly all women and repay, many times over, their first cost and the care bestowed upon them. Painted buildings last longer than unpainted ones and are much more attractive if good taste is shown in the selection of colors. A combination of trees, shrubbery, flowers and painted buildings together with a well-kept lawn renders the farm house and its surroundings a delight to the eye. The joy of living in such a home is greater because of its beauty, while, should it become necessary to dispose of the establishment, it will sell quicker and at a higher price because of its pleasing appearance.

Trees, flowers and a little orchard, all well cared for, will add to the selling value of any farm, but that should be the last of considerations to the farmer who has no desire to sell. The profit and pleasure to the owner and his family will more than compensate for the small money outlay and the little labor required. Should it be necessary to rent, these things will help any land owner secure a more satisfactory tenant. It takes intelligence to farm properly and as a rule the man who recognizes the value of things of beauty and has a desire to give his family pleasant home surroundings, will make a better tenant.

Whether the owner intends to live on the farm, or whether he intends to sell or rent, making the farm house surroundings attractive will help. When visitors pass, compliments on the appearance of the farm home are always appreciated, and there is no cheaper and easier way to invite and earn them than to make the farm home restful and attractive. "A thing of beauty is a joy forever."

Davidson Not a Director

MR. WILLIAM G. DAVIDSON, of Brentwood Farms, Abington, Pa., in a conversation at the Chester County, Pa., Holstein Field Day, held October 28th, disclosed the fact that he had declined to accept the directorship of the Holstein-Friesian Association of America, to which position he was elected at the recent annual meeting held at Kansas City, June 7th.

Mr. Davidson is one of the newer members of the Association, having joined in 1918. His first real big venture in the Holstein industry was at the Moyer National Sale at Philadelphia, in June, 1919, where he purchased the heifer Tilly Alcartra 2d, for $11,200, the second highest price paid for a female in that great sale. Mr. Davidson has since acquired a national reputation in his attempts to place the public sale business on a high standard and by his efforts put forth in the three National Brentwood Sales, he has won the admiration of Holstein enthusiasts from the Atlantic to the Pacific.

Mr. Davidson is a shrewd, active business man and in coming to his decision not to accept a directorship in the Holstein Friesian Association he probably has given the matter careful consideration from all angles.

He no doubt took into consideration the fact that both the number of directors and the method of election was legally questioned and being tried out in the courts, so did not wish to jeopardize his own interests by becoming a member of the board. He made no mention of this, however, but stated that he was very busy and did not feel that he could take on the additional responsibility.

Time Will Tell

ELSEWHERE in this issue we are publishing a story of Segis Fayne Johanna and Aaggie Cornucopia Paul 2d, who are the only two cows of the Holstein Breed, or of any breed, that have four daughters each credited with a production of over one thousand pounds butter in a year.

One significant fact about one of these cows and her four one-thousand-pound daughters, is that the Good Old Holstein Cow goes on producing and reproducing regardless of any reflection that may have been cast upon her by Unscrupulous Testers, Politicians or Publicity Men employed by the Holstein-Friesian Association. Circulation of scandal may shake the public confidence in the breed, affect prices and cause confusion in general, but you cannot keep a good cow down. The natural transmitting qualities of this great breed go on undisturbed.

The very fact that Segis Fayne Johanna has four daughters that each have made over one thousand pounds butter in a year under conditions where the integrity of the records is unquestioned and also the fact that all but two of the many world's records made at Pine Grove Farms have been surpassed by other cows of the breed, clearly demonstrates that the Holstein cow is able to produce all she has been given credit of producing and regardless of any reflection that has been cast upon her she comes out of the cloud with her reputation clean and undefiled.

Segis Fayne Johanna has proven through her four one-thousand-pound daughters that she is an honor to the Holstein Breed. Time is a great factor in ironing out and clarifying difficulties. Hats off to the good old Holstein cow and condemnation to those who would defile her reputation.

What the Home Folks Think

WHAT the Home Folks think about Mr. W. B. Barney, director of Extension of the Holstein-Friesian Association, his ability and integrity, is brought out by an article appearing in the *Evening Gazette,* Cedar Rapids, Iowa, published under date of December 1, 1921, less than a year ago.

"Marked by a final display of the political finesse with which his entire regime has been replete the term of W. B. Barney, Iowa's dairy and food commissioner, comes to a close two years in advance of the legal date for its expiration." * * * * * * * "The removal of S. O. Van De Bogart, Barney's political henchman in the city of Des Moines, of Dairy Inspector Phil Pray, of Cedar Rapids, and the reported automatic retirement of Dr. O. P. Thompson, Barney's brother-in-law and a state dairy inspector for many years, against all of whom evidence of incompetency was produced by *The Gazette,* gives sufficient indication of the sweeping nature of the cleanup.

"The campaign against Barney has had a state wide effect. Milk conditions in every city have been improved. Hundreds of thousands of gallons more of tuberculin tested milk is being sold every day than was sold prior to the bringing of these charges and *The Gazette's* expose of the manner in which human beings were being infected with tuberculosis from tubercular cattle.

"Iowa babies now have a better chance. Pure milk may be obtained for them. In a dozen cities and several towns ordinances have been passed prohibiting the sale of any milk that does not come from tuberculin tested cows or has been pasteurized. The fight was more than worth while."

The above would indicate that the Directors of the Holstein-Friesian Association made a very poor selection in choosing Mr. Barney to represent the Extension Department at $6,000 per year and expenses.

CLUB ACTIVITIES

GREEN LAKE CLUB MEETING

The annual meeting of the Green Lake County Holstein Association held at Green Lake, September 29th had an attendance of 65 which was the largest ever recorded in the history of the Association.

President Kutchin gave a brief address. He said that breeders' clubs are to be organized in all Holstein centers in the county and these clubs acting together will constitute the county Association. Anyone who belongs to one of these breed clubs will automatically become a member of the County Association. The membership fees were set at $2 per year.

County Agent, James Lacey, urged cleaning up tuberculosis and showed several new methods of advertising and promoting breed Associations. Reid Murray, secretary of the Wisconsin Livestock Breeders' Association spoke on the future of the Holstein breed and said that Wisconsin will never lack a market for her surplus dairy cattle. Western buyers are coming to Wisconsin daily for grade and purebred stuff. He advocated auction sales of purebred and grade dairy cows as a means of establishing price levels.

BRATTLEBORO BUSINESS

Twenty-three applications for membership were received at the office of the secretary during the week ending October 14th. During the same period, 2,612 certificates of registry were issued, 1,983 female and 629 male; 1,526 certificates of transfer were written, 1,045 female and 481 male.

Twenty-seven applications for membership were received for the week ending October 21st. There were 1,578 certificates of registry issued for the same period, of which 1,203 were female, 375 were male; 1,225 certificates of transfer were written of which 881 were female and 344 were male.

The herd prefixes reserved during the two weeks period are:

Alsuma, Ross Grosshart, M.D., Tulsa, Okla.
Amity, Clarence R. Newton, Rockfall, Conn.
Belle Knoll, Frank Leech, Round Prairie, Minn.
Bloemveldt, Estate of John Clancy, Baryties, Mo.
Cedar Bend, E. P. Kinney, Okemos, Mich.
Comme-hah, Stoddart Brothers, White Bear Lake, Minn.
Glenrest, Raymond V. O. DuBois, Forest Glen, N. Y.
Huper, J. P. Hungerford, Columbus, Mont.
Kingholm, L. C. King, Kinsman, Ohio.
La Ladera, John H. Fairbank, San Luis Obispo, Cal.
Little Harbor, Dr. F. E. Reynolds, Chicago, Ill.
Maplewin, Garfield Porter, Wauseon, Ohio.
Oakton, Chas. T. Lukens, Roanoke, Va.
Penfield, Ira M. Starr, Wellington, Ohio.
Plum Island, W. F. Meyer, Donnelly, Minn.
Poinsett, R. J. Rowley, Creenville, S. C.
Sunset View, William Benning, Kingsley, Pa.
Villa Ridge, Wilbur F. Coe, Quincy, Ill.
Walnut Lawn, Oar E. Trace, New Paris, Ohio.
Wrightacres, C. J. & C. S. Wright, Williston, Vt.

Mr. Meant-To has a comrade,
And his name is Didn't-Do;
Have you ever chanced to meet them?
Did they ever call on you?
These two fellows live together
In the house of Never-Win.
And I'm told that it is haunted
By the ghost of Might-Have-Been.
—*American Coöperative Journal.*

The great banker lay on his deathbed. Many friends gathered about his bed. The attending physician whispered, "I fear he is nearing the Great Divide."

"Tell them not to divide till I get there," whispered the dying man.

THE BELL FARM FIELD DAY

The Third Annual Field Day of the Allegheny Breeders' held October 17th on the Bell Farm, Corapolis, Pa., was an event enjoyed by all who participated. Some 1,600 were present. The morning was rather cold with a chilly wind but the sun broke through at intervals and the afternoon was warm and pleasant.

OHN M. THOMAS

President of Pennsylvania State College who is successfully campaigning the agricultural organizations to rally to the support of the state institution.

The first event was the placing and scoring of four dairy cows, the prize being a bull calf donated by John A. Bell, Jr. The Honorable Fred Rasmussen, Pennsylvania State Secretary of Agriculture, had previously placed and scored the animals. The prize was won by Clifford Fisher with a score of 95 who placed the animals correctly and came nearest to Secretary Rasmussen's scoring. After the contest, Mr. Rasmussen explained the reasons for his placing and talked in detail on the points of the animals.

A generous lunch, donated by Bell Farm was served in the roomy tent, while a large orchestra rendered classical and popular music which was enjoyed by all.

Some of the prominent families in the Bell Farm herd were paraded through the tent during lunch. Seven daughters of King Valdessa Pontiac, several of which had made state records, showed that Bell Farm aimed to combine production and individuality. Bell Farm Retainer, a son of Echo King Sylvia with his dam K. P. Mabel Segis Korndyke showed the type Bell Farm is aiming for. This young bull was just over a year old and was much admired. Susie Abbekerk Colantha the famous "White Susie," her son Bell Farm King Sylvia and her daughters, Susie Abbekerk Colantha Girl and Susie Colantha Champion, formed another group that would attract attention anywhere in the world. Manager Paul B. Misner, who told the names and performances of the animals announced that Susie completed a year's record of 1,113 lb. butter and 28,351 lb. milk on May 16, 1922 and on May 23d, produced 72 lb. milk in a day. "Black Susie" a sister of this great cow was shown and it was announced that she had produced 102 lb. milk in a day from three quarters.

Mr. John A. Bell, Jr., on behalf of the Allegheny County Breeders', welcomed the visitors and introduced Dr. John M. Thomas the president of Pennsylvania State College. Dr. Thomas said livestock was the backbone of agriculture. Without livestock there was no prosperous agriculture and without prosperous agriculture there was no progress or prosperity in the country. The period of readjustment from war conditions had been hard upon farmers as prices of manufactured goods remained approximately high while farm products were away low and the two were out of balance.

He told his hearers to have no doubt as to the permanence of agriculture. Over 40% of the raw material used by the United States was produced on the farms. One-half of the gross tonnage of freight hauled by the railroads was produced on the farms. A steady and continuous farm market was fundamental for United States prosperity. Progress is spiral, like the threads of a screw and is not a steady climb. Farmers should keep faith and optimism although present days were not all sunny.

No soil was inexhaustable although pioneers sometimes thought it was. All soil needs livestock to keep up fertility. The dairy cow is a continuous worker, the only vacation she takes is for the purpose of reproducing her kind. The Holstein-Friesian breed predominates in Pennsylvania and is usually found on prosperous looking farms. The speaker said that there should be coöperation between farmers and other classes of businessmen. He stressed the word "others" claiming that the farmer was already a businessman. He cited the coöperation between the Grove City bankers and farmers, said a farmer should learn the value of credit and like other classes of businessmen, make use of credit to extend and improve his business.

The main theme of Dr. Thomas' address was Pennsylvania State College and its needs. He said that there were more people living on the farms of Pennsylvania than there were in all New England, plus Nebraska, yet there was only one state college for Pennsylvania against at least six in New England. At the present time there were 3,500 students attending Penn State of which more than 300 were girls. He disagreed with some educators who were stating that too many students went to college. He believed that more should go to college but if the path was made too hard it was the poor boy who stayed away, not the son of rich parents whose father was probably a college man.

The duties of a state agricultural institution, besides instruction, consists of scientific experiment and research. Science could be likened to a river, it went on or it died. If there was no progress in any industry, that was a dead industry.

Dr. Thomas made a plea for more money for buildings and maintenance at State College, said that at least $800,000 a year was needed for these purposes while at present only $200,000 was devoted against $2,000,000 in the neighboring state of Ohio. He urged a real estate tax of one-half of one mill, the funds derived from such to be used for the building up and support of the state agricultural college.

Pennsylvania's favorite Secretary of Agriculture, the Hon. Fred M. Rasmussen, spoke a few words on the recent National Dairy Show. He said that to attain success it was necessary for the livestock breeder to have the ideal animal of his breed in mind. He said that Mr. John A. Bell, Jr., evidently had, for before the judging at the National Dairy Show, he had purchased two animals, one a three-year-old bull and one a bull calf and that after the judging, found that the bull was awarded first in his class while the bull calf not only won in his class but also was the junior champion.

Pennsylvania is a great dairy state, ranking third in the total value of dairy products. The census of 1919 showed that the Keystone state produced $1,000,000,000 worth of dairy products and that the value of the cattle in the state was $106,000,000. Natural conditions were largely responsible for this. Twenty-three per cent of the farm land of the state was in pasture and 20% devoted to the growing of hay and forage, a total of 43% against a total of 44% for all other crops.

Nearness to market develops the dairy business and Pennsylvania was ideally located. There was lots of work in the dairy business but this gives employment the year round and also one of the reasons for its permanence. The average Pennsylvania farm contains 87 acres and the product of the dairy had the most value of all food produced.

It was impossible to survive in the dairy business to-day with the same kind of cows we had 15 years ago. Other businesses scrapped their machinery as improvements came along and it was necessary for the dairy farmer to follow their example. The speaker urged his hearers to get the type of animal they desired in mind and then to breed to that type. He said that the number of cows on an average Pennsylvania farm was less than five and so to obtain a good sire it was necessary to purchase the bull on the community basis and he commended the work along this line done at Grove City. When he was a boy he learned to milk at his home and he weighed the milk produced and this was considered a part of the routine work and when he came to this country he was surprised to find that this was considered extra work in the dairies. Should cities, factories and mining drive out agriculture in Pennsylvania, the dairy cow would be the last to leave. There are 855, 855 dairy cows in the state of which only 5.3% are purebreds. There are approximately 3,000 Ayrshires, 9,000 Guernseys, 11,000 Jerseys and 48,000 Holsteins showing the opportunities there are in the purebred business. In Pennsylvania, only one farm in ten had a purebred bull and there are 179,000 farms in the state which showed that there is over 150,000 farms without a purebred bull. The average production of a Pennsylvania cow was only 4,000 lb. Contrast this with the production of animals in the Bell and other great Holstein herds.

Mr. Bell introduced Mr. F. R. Babcock, owner of the Chestnut Hill Farms and treasurer of the Allegheny Holstein-Friesian Association, who presented to Dr. Thomas the purebred Holstein heifer, Hazel Langden Sylvia, a granddaughter of May Echo Sylvia which was donated to the College by the Allegheny County Breeders in appreciation of the work State College is doing. In accepting the present, Dr. Thomas voiced his sincere and hearty thanks and invited his audience to visit the State College and see its great dairy barns.

A sale of 11 animals from the Bell herd was next staged. Manager Misner explained the pedigrees and called attention to the good points of the animals while Col. Geo. Baxter did the auctioneering. After the sale the audience looked over the barns in the Bell Farm and admired the splendid herd.

Answers to Correspondents

No, Chickie, we don't consider it a wonderful thing that a travelling magician can turn white paper to red paper. Years ago, we were accustomed, night and morning, to turn a whole lot of cows to pasture.

We cannot agree with you, Amelia. Our idea of a girl who marries for money is that she isn't worth it.

Joe: We are undecided on the question as to whether the United States should acquire any more territory but we know a number of men who believe that our coast line is three miles too far inland.

Our idea of real love at first sight, Francis, is that of a doctor who married a girl he ushered into the world some twenty years before.

Pollykins, we think you should not smoke. Smoking may not hurt you but it sets a bad example for your brothers.

We agree with you, Johhny, that discretion is usually the better part of valor but sometimes a man puts up a good fight because he is too scared to run.

We too, have a great reverence for old age, James, but it does not extend to eating cold storage eggs.

Our language is called the "Mother Tongue" Mary, because father don't get much chance to use it in the house.

The happiest day of our life, as well as of the lives of many folks we know, Susie, is To-morrow.

The door of success opens to a number of keys, Ralph, but the trouble is that some fellows never are able to locate the keyhole.

When a girl asks you if you ever loved another girl, Jack, she wants you to lie to her and make her happy.

Sam: We think it is right to love our enemies but we would find the task much easier if they would only keep away from us.

Shows, Fairs and Expositions

Nov. 4-11—Portland, Ore., Pacific International Live Stock Exposition.
Nov. 17-25—Jacksonville, Florida State Fair and Exposition.
Nov. 9-19—Houston, Texas., Houston Fair.
Nov. 18-25—Kansas City, Mo., American Royal Live Stock Show.
Dec. 2-9—Chicago, Ill., International Live Stock Show.
Jan. 13-20, 1923—Denver, Col., National Western Stock Show.
Feb. 1-10—Tampa, Fla., South Florida Fair.

THE BROCKTON FAIR

The attendance at the Brockton Fair, October 3rd to 7th, was fully up to past events. Many visitors were present from surrounding states, while the Massachusetts people turned out in crowds. As usual the seats around the cattle rings were crowded while the judging was going on. Many of those in attendance came from the cities, yet they showed more interest in the cattle judging than can be found at some of the great fairs located in strictly agricultural sections.

The Holsteins were placed by Ward W. Stevens, Liverpool, New York, who is a familiar figure at Brockton, having judged there several years. The big winner was Frank P. Knowles, of Auburn, Mass., whose animals won nineteen ribbons. In addition his well-known show heifer, Pearl Asiastic, won the twenty-four hour milk and butter test,

THYRSA COLANTHA PONTIAC
1st prize aged cow, and senior champion at the Brockton Fair. Owned by A. F. Barker, Brockton and West Bridgewater, Mass.

producing 2.04 lb. butter and 51.60 lb. milk, her average test being 3.2%. Ayrshires were second and third with 1.71 lb. and 1.65 lb. respectively. Mr. Knowles carried off the special $50 prize for the best Massachusetts herd. Albert F. Barker, of Brockton and West Bridgewater, showed fifteen head and won the second highest number of prizes. Henry Bartlett, of West Bridgewater, showed a number of good ones and won his share of the prizes, carrying off the bronze medal of the Massachusetts Department of Agriculture for the best cow owned and bred in the state. Pearl Asiatic won in the class for three-year-olds, but was defeated for senior championship by Thyrsa Colantha Pontiac, who in turn went down to defeat for grand champion to Aaggie Princess Almira, a stablemate of Pearl Asiatic. The senior male champion was Pequitside Sadie Vale Pietje shown by Billings Bros., of Kingston. He was a real nice bull but was however beaten for grand champion by the bull calf, Highlawn King Ormsby Cornucopia, of the Knowles herd. Knowles was awarded the premier championship ribbon for exhibitor winning the most money in the open classes. The special prize of $50 for the herdsman handling the herd winning the most money went to Henry Brandt, who handled the Knowles cattle. Second prize of $25 went to Allen Schoolcraft, who handled the Barker cattle, while the third prize of $15 went to Henry W. Bartlett, who handled his own herd. The detailed awards follow:

Bulls, two years and under three: Billings Bros., Kingston, Mass., on Pequitside Sadie Vale Pietje.

Bulls, one year and under two: First, Albert F. Barker, Brockton, Mass., on Bridgewater King Pontiac Alexa; second, Henry Bartlett, West Bridgewater, Mass., on Colantha King Butterfly.

Senior bull calves: First, Frank P. Knowles, Auburn, Mass., on Highlawn King Ormsby Cornucopia; second, Albert F. Barker, on Bridgewater Pontiac Creamelle.

Junior bull calves: First, Albert F. Barker, on Bridgewater Alexa Pontiac.

Cows, four years and over: First, Albert F. Barker, on Thyrsa Colantha Pontiac; second, Frank P. Knowles, on Dirigo Azubal Christina; third, Albert F. Barker, on Alexantha Hengerveld Segis Beets; fourth, Henry Bartlett, on Colantha Aaggie Butterfly Queen.

Cows, three years and under four: First and second, Frank P. Knowles, on Pearl Asiatic, and Ormsby Countess; third, Albert F. Barker, on Stoughton Alice Creamelle; fourth, Frank P. Knowles, on Dirigo Cornucopia.

Cows, two years and under three: First, Frank P. Knowles, on Highlawn Rosewood; second, Albert F. Barker, on Bridgewater Alexa Segis Korndyke; third and fourth, Henry Bartlett, on Ruth Barna Fayne and Hengerveld Lucy Aaggie.

Heifers, eighteen months and under: First, Frank P. Knowles, on Highlawn Margo; second and third, Henry Bartlett, on Lady Aaggie Colantha Fayne and Aaggie Lee Mercedes Fayne.

Heifers, one year and under: First and second, Frank P. Knowles, on Aaggie Princess Almira and Highlawn Carrie; third, Henry Bartlett, on Aaggie Colantha Lass Pontiac; fourth, Albert F. Barker, on K. O. I. Velma Lockhart.

Senior heifer calf: First Frank P. Knowles, on Highlawn Pearl Pietje; second, Albert F. Barker, on Bridgewater Burke Sadie Vale; third, Henry Bartlett on Lady Pietje Colantha; fourth, F. P. Knowles, on Highlawn Viralda.

Junior heifer calf: First, Henry Bartlett, on Colantha Abby Pontiac; second and fourth, Albert F. Barker, on Bridgewater Alexantha Pietje and Bridgewater Belle Jewel Pontiac; third, Frank P. Knowles, on Highlawn Blanche.

Exhibitors herd: First, Knowles; second, Barker; third, Bartlett.

Young herd: First, Frank P. Knowles; second, Henry Bartlett; third, Albert F. Barker.

Dairy herd: First, Frank P. Knowles; second, Albert F. Barker.

Get of sire: First and third, Frank P. Knowles; second, Henry Bartlett; fourth, Albert F. Barker.

Produce of cow: First, Albert F. Barker; second, Frank P. Knowles, third, Henry Bartlett.

Senior champion, male: Billings Bros., on Pequitside Sadie Vale Pietje.

Junior and grand champion, male: F. P. Knowles, on Highlawn King Ormsby Cornucopia.

Senior champion, female: Albert F. Barker, on Thyrsa Colantha Pontiac.

Junior and grand champion, female: F. P. Knowles, on Aaggie Princess Almira.

Premier championship: First, Knowles; second, Barker; third, Bartlett.

Best cow bred and owned in Mass.: Henry Bartlett.

Best Mass. herd: F. P. Knowles.

IDAHO STATE FAIR

The Holstein showing at the Idaho State Fair which was held at Boise the early part of the month was good considering the fact that the last legislature made no appropriation for this year's fair, the result being that there was very little money for premiums, advertising and labor. Sixty-two Holstein-Friesians were shown by twelve different exhibitors. The grand champion female was Silvia Mercedes Segis Walker, of the Herman Weick herd of Notus, while the male champion was his aged bull Lapwai Segis Walker. The junior champion male was Sir Segis Lyons Walker, shown by Alays Schuler of New Plymouth, while the junior champion female was the senior yearling Colantha Lou Segis Quoque, owned by Thos. J. Killin of Boise, who owned the first three animals in the senior yearling heifer class. The group prizes were well distributed; Weick took the herd prize, Musser & Musser the young herd and calf herd, while Killin took first in the set of sire and produce of cow classes. Following is the list of exhibitors and the detailed awards:

Exhibitors: Herman Weick, Notus; Musser & Musser, Nampa; Alays Schuler, New Plymouth; Marvel Brown, Idaho Falls; Johnson & Shambaugh, Notus; Rulon Newman, Idaho Falls; Thomas J. Killin, Boise; Marvin Pound, Weiser; Albert Smith, Weiser; Clyde Smith, Weiser; Charles Spaeth, Notus; Lavelle Barton, Weiser.

Bulls: Aged bull—1 and 2, Weick, on Lapwai Segis Walker (senior and grand champion) and Beauty Segis Pietertje Prince; 3, Musser & Musser, on Prince McKinley Pontiac Koniagin, Senior yearling—1, Schuler on Colantha Alba Bonheur; 2, Brown, on uncatalogued. Senior calf—1, Schuler, on Sir Segis Lyons Walker (junior champion); 2 and 4, Johnson and Stambaugh, on Tony and Tim; 3, Musser & Musser, on Prince Segis Pietertje. Junior calf—1, Johnson & Stambaugh, on Earl Segis Soldene; 2, Weick, on uncatalogued.

Females: Aged cow—1, Weick, on Silvia Mercedes Segis Walker (senior and grand champion); 2, Musser & Musser, on Apple Blossom Butter Girl; 3, Schuler, on Boomer Topsy Veeman Segis; 4, Killin, on Quoque Aaggie Inka Colantha. Two-year-olds—1, Weick, on Tootie Lapwai Segis Walker; 2, 3 and 4, Musser & Musser, on Lelia Echo Doede, Lady Rose Buffalo, Duke Doede and Queen Jewel Doede. Senior yearling—1, 2 and 3, Killin, on Colantha Lou Segis Quoque (junior champion), Princess Zora Quoque Segis and Aaggie Billie Burke Lena Segis; 4, Schuler on Edna Lyons Segis. Junior yearling—1 and 2, Musser & Musser, on Rose Segis Doede and Pearl Segis Pietertje Prince; 3, Johnson & Stambaugh, on Pauline Florence Walker; 4, Clyde Smith, on Artes Johanna Alba. Senior calf—1 and 3, Killin, on Princess Ruth Quoque Segis and Segis Aaggie Princess Reta; 2, Spaeth, on Korndyke Doede Segis Walker, 4, Johnson & Shambaugh, on Iva Colantha Walker Hartog. Junior calf—1, Johnson & Shambaugh, on Lady Princess De Kol; 2, Musser & Musser, on Daisy McKinley Pontiac; 3, Weick, on unnamed.

Graded herd—1, Weick; 2, Musser & Musser. Young herd—1, Musser & Musser. Calf herd—1, Musser & Musser; 2, Weick. Get of sire—1, Killin; 2, Weick. Produce of cow—1, Killin; 2, Musser & Musser.

DELAWARE STATE FAIR

The University of Delaware made a big showing at the Delaware State Fair this year. Their Holstein herdsire won first place in the aged bull class and carried off the senior and grand championships, defeating the Winterthur Farm entries. The University exhibits emphasized the extension work that institution is doing among the farmers and dairymen of the state and also showed of the experiments carried on in the agricultural laboratories to combat disease.

In the competition for Holstein heifers owned by members of boys' and girls' clubs, the prize winners in the class for heifers between 24 and 36 months were: Robert Connell, Newark, first; Herman Conner, Jr., Newark, second; Crawford Sheldon, Glasgow, third; Gordon Armstrong, Mt. Pleasant, fourth. Heifers 18 to 24 months old: Jack Dayett, Cooch, first; Raymond Connell, Newark, second. Jack Dayett won first for heifer under a year old and Robert Connell was second. The Connell two-year-old was grand champion of the junior show and was placed first in the open class with seven other entries. The Herman Conner heifer was third in the same class while Jack Dayett's young heifer won third prize in the senior heifer calf class.

The prizes in the open Holstein classes went to the following:

Bull, 3 years or over, University of Delaware, first; Winterthur Farms, second.

Bull, Senior Yearling, Lewis Levinson, first.

Bull, Senior Calf, Winterthur Farms, first; J. I. Dayett, second.

Bull, Junior Calf, Winterthur Farms, first; Winterthur Farms, second.

Cow, 3 years or over, Winterthur Farms, first; Winterthur Farms, second.

Cow, 2 years and under 3, R. R. Connell, first; Winterthur Farms, second.

Heifer, Senior Yearling, Winterthur Farms, first; Winterthur Farms, second.

Heifer, Junior Yearling, Winterthur Farms, first; University of Delaware, second.

Heifer Senior Calf, Winterthur Farms, first; University of Delaware, second.

Heifer, Junior Calf, J. I. Dayett, first; Winterthur Farms second.

Aged Herd, to consist of 1 bull, 2 years old or over and 4 females, 2 years old or over, Winterthur Farms, first; J. I. Dayett, second.

Young Herd, bred by the exhibitor, to consist of 1 bull under 2 years, 2 heifers, 1 year and under two, and 2 heifers under 1 year, Winterthur Farms, first; Winterthur Farms, second.

Get of Sire, 4 animals, either sex, Winterthur Farms, first; Winterthur Farms, second.

Senior Champion Bull, University of Delaware, first.
Junior Champion Bull, Winterthur Farms, second.
Senior Champion Female, Winterthur Farms, first.
Junior Champion Female, Winterthur Farms, first.
Grand Champion Male, University of Delaware.
Grand Champion Female, Winterthur Farms, first.

TENNESSEE TRI-STATE FAIR

Part of the awards at the Tennessee Tri-State Fair which was held at Memphis, September 23d-30th was given in the October 22d issue of the BREEDER AND DAIRYMAN on page 696. The exhibitors were James F. Stokes, Temple, Texas; Elmer Frazier, Middletown, Ind.; King L. Banks, Wynne, Ark.; H. L. Davis, Germantown, Tenn.; and the West Tennessee Normal School. The judge was W. S. Moscrip. The other awards were as follows:

Heifer calf: 1st, James F. Stokes, Miss Colantha Korndyke of Sunnywild; 2d, Elmer Frazier, Tayne Pride; 3d, James F. Stokes, Johanna Prilly of Sunnywild; 4th, James F. Stokes, Modest Prilly of Sunnywild; 5th, King L. Banks; 6th, King L. Banks.

Senior and grand champion bull: J. F. Stokes, Prince of Emden 209726.

Junior champion bull: Elmer Frazier.
Senior champion cow: Elmer Frazier.
Junior champion heifer: Elmer Frazier.
Grand champion female: Elmer Frazier.
Graded herd: 1st, Elmer Frazier; 2d, J. F. Stokes.
Young herd: 1st, Elmer Frazier; 2d, King L. Banks.
Calf herd: 1st, Elmer Frazier; 2d, J. F. Stokes; 3d, King L. Banks; 4th, King L. Banks.
Get of sire: 1st, Elmer Frazier; 2d, King L. Banks; 3d, Elmer Frazier; 4th, J. F. Stokes; 5th, King L. Banks.
Produce of cow: 1st, Elmer Frazier; 2d, Elmer Frazier; 3d, King L. Banks; 4th, James F. Stokes; 5th, King L. Banks.

OKLAHOMA FREE STATE FAIR

The Seventh Annual Oklahoma Free State Fair was held at Muskogee, October 2d-9th and was favored with ideal weather. There was a record attendance both of city people and also from the rural districts. The barns were well filled. The exhibits of sheep broke all records, there being nearly 500 head on exhibition. The exhibits of the United States Department of Agriculture attracted a great deal of attention and were distinctly educational.

The Indian exhibit was a center of interest and it is claimed that the exhibit of the four great civilized tribes, Choctaws, Chickasaws, Cherokee and Creek was the best in fair history.

The Holstein classes were as a rule, fairly well-filled. Herds from Iowa, Oklahoma and Nebraska fought out the battles. The quality of the exhibits is shown by the fact that the junior and grand champion bull at Oklahoma City could only get second here while the cow that won second prize at Oklahoma City did not get in the money. The judge was C. T. Graves of Liberty, Mo. Union College had a good exhibit and carried off the female championships, their aged cow, Miss Sarah Netherland De Kol being especially good. The Larsen herd of Dike, Iowa, continued its victorious career,

taking the male championships, the aged herd and the breeders' calf herd.

The exhibitors were: Carter County Holstein Herd, Ardmore, Okla., M. A. Watkins, Tulsa, Okla., J. F. Robinson, Miami, Okla., Union College, College View, Neb., H. C. Larsen, Dike, Iowa, N. C. Dreisbach, Muskogee, Okla., George Abdo, Tulsa, Okla., C. E. Kayser, Bartlesville, Okla.

Bulls—Aged: 2 shown; 1, Larsen on Sir Rag Apple Posch; 2, Abdo on Governor De Kol Pontiac. Three-Year-Olds: 2 shown; 1, Carter County Holstein Herd on Stripling Farm

MISS SARAH NETHERLAND DE KOL
First prize aged cow, senior and grand champion female, both at the Oklahoma Free State Fair at Muskogee and at the Texas State Fair, at Dallas. Also winner of A. R. O. class at latter fair. Owned by Union College, College View, Nebraska.

Hinkman Pontiac; 2, Union College on King Pontiac Polka Dot Champion. Two-Year-Olds: 3 shown; 1, Larsen on Rex Clothilde Aaggie Forum; 2, Watkins on Prince Veeman Pietje; 3, Kayser on King Valdessa Pontiac Lincoln. Senior Yearlings: 2 shown; 1, Watkins on Artis Masterpiece; 2, Carter County Holstein Herd on Colantha Beets De Kol Johanna. Junior Yearlings: 4 shown; 1, Union College on College King Cornucopia De Kol; 2 and 3, Carter County Holstein Herd on De Kol Woodcraft Pontiac Glenn and King

C. K. S. A. ABBEKERK ALCARTRA
First prize junior yearling, and winner of junior championship at the Oklahoma Free State Fair at Muskogee. Owned by Union College, College View, Neb.

Segis Ardmore; 4, Kayser on Prairie Mound Sir Pontiac. Senior Calves: 10 shown; 1, Larsen on Forum Ormsby Superior; 2 and 4, Union College on Sir Peter Ormsby Floren Segis and King Netherland Alcartra.

Cows—Aged: 10 shown; 1 and 3. Union College on Miss Sarah Netherland De Kol and Union College Arma De Kol Walker; 2 and 4, Larsen on Forum Diamond Homestead and Owanda Gerben Barber. Three-Year-Olds: 5 shown; 1, Carter County Holstein Herd on Changeling Peg Ruby Wayne; 2, Kayser on Prairie Mound Queen De Kol; 3 and 4, Abdo on Hartog Veeman Aaggie and De Kol Vola Veeman. Two-Year-Olds: 7 shown, 1, 2 and 3, Union College on Forum Pontiac Queen, Forum Maud Masterpiece and C. E. S. A. Beets Alcartra; 4, Watkins on Miss Artie De Kol Veeman. Senior Yearlings: 4 shown; 1, Union College on C. K. S. A. Mary Segis Pietretje; 2, Larsen on Forum Hulda Meade; 3, Kayser on Prairie Mound Hilda De Kol; 4, Abdo on Aaggie Pontiac Hartog Model. Junior Yearlings: 7 shown; 1 and 4, Union College on C. K. S. A. Abbekerk Alcartra and C. K. S. A. Chippewa De Kol; 2, Larsen on Maxie Plum De Kol; 3, Carter County Holstein Herd on Lyons Ormsby Pontiac. Senior Calves: 13 shown; 1, Watkins on Bonnie Lee Gypsy; 2, Dreisbach on Matador Fayneboy De Kol Beauty; 3, Carter County Holstein Herd on May Pansy Burke Pontiac; 4, Union College on Piebe Wonder Ormsby Segis Pietje.

Championships—Senior and grand champion bull: Larsen on Rex Clothilde Aaggie Forum. Junior champion bull: Larsen on Forum Ormsby Superior. Senior and grand champion cow: Union College on Miss Sarah Netherland De Kol. Junior champion cow: Union College on C. K. S. A. Abbekerk Alcartra.

Groups—Aged herd: 7 shown; 1, Larsen; 2, Union College. Yearling herd: 4 shown; 1, Watkins; 2, Union College. Breeders' calf herd: 6 shown; 1, Larsen; 2, Union College. Get of sire: 6 shown; 1, Union College; 2, Larsen. Produce of cow: 6 shown; 1, Union College; 2, Larsen.

MONTANA STATE FAIR

One of the greatest attractions at the Montana State Fair held at Helena, September 26-30th was the champion producer of the state, Grace Koningen, of the Montana State College. She is a daughter of Nora Koningen, one of the four original cows of the state college herd. A short time ago, she broke all Montana State records for milk and butter production by making 29,647 lb. milk, 1,164.2 lb. butter in a year. Grace added to her laurels by capturing first prize in the aged cow class as well as the senior and grand championships. Montana State College carried off a goodly share of the prizes winning the junior championship for female, first for produce of cow, calf herd, graded herd, and the male senior and grand championships, together with a number of other prizes. The detailed awards are:

Bulls, two years and under—1st, Montana State College Bozeman, on Ondine Aaggie Lad; 2d, J. T. Hart & Sons, Power, on H. F. Netherland Korndyke; 3d, J. T. Hart & Sons on H. F. Korndyke Segis 2d.

Bull, three years or over—1st, Montana State College on Aaggie Ondine Grahamholm Lad; 2d, R. T. Ringling, Sulphur Springs, on O. K. Tash.

Senior yearling bull—David Lea & Son, Stevensville, on Tritomia Reginald Pietertje.

Junior yearling bull—David Lea & Son on Valentine Pietertje Ormsby; 2d, R. T. Ringling.

Senior bull calf—David Lea & Son, on Valentine Pietertje Ormsby; 2d, J. T. Hart & Sons on H. F. Netherland Korndyke; 3d, R. T. Ringling.

Junior bull calf—1st, Montana State College on Ondine Aaggie Lad; 2d, David Lea & Son on Sir Ormsby Skylark Johanna; 3d, J. T. Hart & Sons on King 2d.

Junior champion—David Lea & Son on Valentine Pietertje Ormsby.

Senior and Grand Champion—Montana State College on Aaggie Ondine Grahamholm Lad.

Cow, four years and over—1st, Montana State College on Grace Koningen; 2d, J. T. Hart & Son on Cornucopia Grahamholm; 3d, Montana State College on Koningen Steinsor.

Cow, three years and under four—1st and 2d, David Lea & Son on Agate Pearl Cascade Fayne; and De Kol Princess Colantha Johanna.

Heifer, two years and under—1st, Montana State College on Ida Johanna Edith; 2d, J. T. Hart & Sons on H. F. Segis; 2d, 3d, Montana State College on Bess Koningen; 4th, J. T. Hart on H. F. Beauty Korndyke.

Cow, two years and under three—1st, David Lea & Son on Lady Cascade Tuebia Lilith; 2d, Montana State College on Lady Virginia.

Senior yearling heifer—1st, Montana State College on Duchess De Kol Reinschje; 2d, David Lea & Son on Noxie Johanna Pauline Champion.

Junior yearling heifer—1st, J. T. Hart & Son, on H. F. Elsie Segis 2d; 2d, Montana State College on Lady Mirian.

Junior heifer calf—1st, Montana State College on Ida Johanna Edith; 2d, J. T. Hart & Son on H. F. Hazel Korndyke; 3d, David Lea & Son on Pietertje Princess Colantha.

Graded herd—1st, Montana State College.

Young herd—1st, Montana State College.

Senior heifer calf—1st, Montana State College on Bess Koningen; 2d, J. T. Hart & Son on H. F. Beauty Korndyke; 3d, David Lea & Son on Princess Pietertje Lucy.

Calf herd—1st, Montana State College; 2d, David Lea & Son; 3d, J. T. Hart & Sons.

Get of sire—1st, David Lea & Son; 2d, Montana State College; 3d, David Lea & Son.

Produce of cow—1st, Montana State College; 2d, David Lea & Son; 3d, J. T. Hart & Sons.

Senior and Grand Champion—Montana State College on Grace Koningen.

Junior Champion—Montana State College on Ida Johanna Edith.

ARKANSAS STATE FAIR

The Arkansas State Fair brought together a number of good herds from both in and out of the state. The herds of A. J. King and Elmer Frazier, from Missouri and Indiana met again with the Carter County herd from Oklahoma and these three show herds met stiff competition, particularly from the herd coming from the University of Arkansas. Colantha Beets De Kol Johanna won the junior and grand championships for Oklahoma, Frazier took the others, but the University herd won two firsts for individual females, won produce of cow and took second in several other classes.

COLANTHA BEETS DE KOL JOHANNA
First prize yearling, junior and grand champion bull at the Oklahoma and Arkansas State Fairs. Owned by the Carter County Holstein Herd, Ardmore, Oklahoma.

Aged bull—1st, H. Kruse, Struttgart on Valdiva King of Rock.

Bull, three years old—1st, Carter County Holstein Herd, Ardmore, Okla., on Stripling Farm Hinkman Pontiac.

Bull, two years old—1st, Elmer Frazier, Middletown, Ind., on Illini Tritomia Pride; 2d, University of Arkansas on Colantha Johanna Jennie Beets; 3d, M. A. Watkins, Tulsa, Okla., on Prince Veeman Pietje.

Bull, one year old—1st, Carter County on Colantha Beets De Kol Johanna; 2d, M. A. Watkins on Artis Masterpiece; 3d, A. J. King, Kansas City, Mo., on King Sylvia Carnation; 4th, Frazier on Merrygold King Indiana Bopeep; 5th, King L. Banks, Wynne, Ark., on Winfoking Maggrath Ormsby; 6th, Carter County on King Segis Ardmore.

Senior bull calf—1st, King on King Segis Longfield Homestead; 2d and 3d, Frazier on Merrygold Pontiac Illini and Christmas Tritomia; 4th and 5th, Watkins on Bob De Kol and Pietje Veeman De Kol; 6th, University of Arkansas on Colantha Joe Beets.

Senior champion bull—Frazier on Illini Tritomia Pride.

Junior and Grand Champion Bull—Carter County on Colantha Beets De Kol Johanna.

Aged cow—1st, Frazier on Adelaide Tritomia Prilly; 2d, Watkins, on Pauline Red Oak Pontiac; 3d, King on Prilly Clothilde De Kol; 4th, King on Fannie Belle Pauline De Kol; 5th, Carter County on Darlyne Johanna Beets; 6th, Kruse on Thyrsa College Maid.

Cow three years—1st, University of Arkansas on Arkansas Johanna Snowball; 2d, Frazier; 3d, Carter County on Changeling Peg Roly Wayne; 4th, Banks on Alcartra Fobes Tidy; 5th, King on Princess Longfield Homestead.

Heifer, two years old—1st, King on Avon Pontiac Inka Sylvia; 2d, University of Arkansas on Arkansas Colantha Jennie Ormsby; 3d, Frazier on Merrygold Snowflake Pontiac Bo Peep; 4th, King on Dulcevista Echo Sylvia Ormsby Elim; 5th, Banks on Chickasaw Tatty Fobes; 6th, Watkins on Miss Artis De Kol Veeman.

Heifer, Senior yearling—1st, University of Arkansas on Arkansas Colantha Jennie Lady; 2d, Frazier; 3d, King on Carnation Sylvia Clothilde Emma; 4th, University of Arkansas on Arkansas Colantha Jennie Lass; 5th, King on Winfoking Ormsby Korndyke; 6th, Kruse on Gelsche Colantha Korndyke.

Junior yearling—1st, Frazier; 2d, 3d, and 4th, King; 5th, Carter County; 6th, Watkins.

Senior heifer calf—1st, Frazier on Merrygold Fayne Pride; 2d, Watkins on Bonnie Lea Gypsy; 4th and 5th, King; 6th, University of Arkansas.

Senior and Grand Champion female—Frazier on Adelaide Tritomia Prilly.

Junior champion female—Frazier on Merrygold Fayne Pride.

Graded herd—1st, Frazier; 2d, University of Arkansas; 3d, Carter County; 4th, Watkins; 5th, Kruse.

Yearling herd—1st, King; 2d, Watkins; 3d, Banks; 4th, Kruse.

Calf herd—1st, King; 2d, Frazier; 3d, Kruse; 4th and 5th, Banks.

Get of sire—1st and 2d, Frazier; 3d, University of Arkansas; 4th, Watkins; 5th and 7th, Banks; 6th, Kruse.

Produce of cow—1st, University of Arkansas; 2d and 3d, Frazier; 4th, Watkins; 5th, Banks; 6th, Carter County Holstein Herd.

WESTERN WASHINGTON FAIR

The twenty-third annual Western Washington Fair was held at Puyallup. Rain has interfered with previous events but the Fair management had prepared for bad weather and had covered passageways between the barns. While there were occasional showers, they did not interfere with the program.

The "Better Babies" contest is one of the features of this Fair and there were around 600 babies on exhibition.

There were only three exhibitors of Holsteins, the herd from the Western State Hospital at Ft. Steilacoom, the Carnation Stock Farms and Robert Tresch of Puyallup, who only showed one animal. All of the young animals in the Carnation herd of 17 head were sired by Matador Segis Walker, and the grand champion bull was his full brother, Segis Walker Matador. The State Hospital herd gave the Carnation herd a battle all the way and it was thought that they would carry off the grand female championship . However, the judge awarded the purple ribbon to Hazelwood Aaggie Hartog.

THE THREE-COUNTY FAIR

The grand champion Holstein bull at the Three-County agricultural fair held at Northampton, Mass., was the six-year-old, Graves Korndyke, bred by J. S. Graves of Williamsburg and owned by Sombellow Brothers of Westfield. This was his third victory here and he won second place at the Eastern States Exposition.

The prize parade was one of the features of this fair. As the animals passed the grandstand, their pedigrees and the

names of their owners, together with particulars of the prizes they had won, were announced by A. F. MacDougall of the Massachusetts Agricultural College.

THE NATIONAL DAIRY SHOW

The report of the National Dairy Exposition was inadvertently left out of our October 22d issue. It was, in many ways, a great show. The machinery exhibits were on an extensive scale and the exhibits of the Federal Department of Agriculture were comprehensive and educational. The Better Sire-Better Stock campaign is being waged with unremitting vigor and the management of all the dairy breed associations are urged to coöperate.

The attendance at this year's event was, we believe, much larger than that of last year but fell far below that at the show at Springfield, Mass. The best day there were not more than 12,500 present, there should be three times that number at a National Show if it is truly National. There were 298 Holsteins, but five states and the Province of Ontario constituted their homes, scarcely what you would expect at a National Show. It really was a Central West exposition but the Canadian bunch gave the others a stiff battle for only three of the Canadian animals failed to win a ribbon and they furnished the female champion in the four year old, Aaggie Sylvia, a grand young cow owned by McGhee Brothers of Beechville; and the junior male champion in the bull calf, Sir Romeo Mildred Colantha bred and shown by Haley & Lee of Springford. John B. Irwin furnished the grand champion male in Dutchland Aaggie Tidy Prince 2d and the junior female champion was Dorothy Ormsby Piebe, the beautiful junior yearling which has been winning so consistently for Hargrove & Arnold, of Norwalk, Iowa.

The quality was high, there was no question about that, and many claim that the four-year-old class brought together the finest bunch of females ever seen in a Holstein judging ring. Before the show the general favorite was the Wisconsin champion, Westview De Kol Walker but there was scarcely a dissenting voice when the judges, W. S. Moscrip and Professor H. H. Kildee, awarded the blue to the lady from Canada, who later, defeated the Iowa yearling for the grand championship.

Teams from twenty states competed in the college students' judging contest. North Dakota won the all-breed competition, with Oregon second and Iowa third. In Holstein judging, Indiana was first, West Virginia second and New York (Cornell) third. The best judge of all the breeds was Oliver K. Beals of the Oregon Agricultural College while R. W. Rupel of Illinois made the highest score judging Holsteins.

Twenty-six boys and one girl contested in the junior competition, and the girl, Elizabeth Wellerton of the Ohio team, was the best judge of all breeds. The Maryland team was first, Ohio second, South Dakota third, Nebraska fourth and Connecticut fifth. The best Holstein judge was Harold Heath of the Michigan team.

The grade cow exhibit attracted much attention, the Wisconsin champion Aaggie and the Minnesota champion "Bones" being the stars of the occasion.

Of social activities there were a full calendar. President Lowden was greatly in evidence and made several speeches. He gave a stirring call for all dairy breed associations to unite in a fight against scrubs, especially the scrub bull, the most expensive sire in the world. The banquet to the juniors was greatly enjoyed both by the young guests and their "chaperons."

The placings in the classes were as follows:

Aegd Bulls.—1st, John B. Irwin, Minneapolis, Minn., on Dutchland Aaggie Tidy in Prince 2d; 2d, J. M. Hackney, St. Paul, Minn., on Sir Johanna Bess Segis; 3d, H. W. Schroeder, Owatonna, Minn., on Sir Hengerveld Pietertje Ormsby; 4th, Cusack & O'Hara, Darien, Wis., on Walcowis Ollie Hijlaard; 5th, Corwin Farms, Rock Valley, Iowa, on King Korndyke Sadie Vale Pietertje; 6th and 7th, L. V. Garvens, Waukesha, Wis., on North Star Parthenea Sir Beets and Parthenea Sir Beets; 8th, Cumberland Holstein Bull Club, Cumberland, Wis., on Sir Bess Ormsby Mercedes; 9th, Gafke & Simons, Jefferson, Wis., on Sir Calamo Wayne; 10th, M. L. Haley, Springfield, Ont., on Rooker Canary Wayne.

Bulls, three years and under four.—1st, Victor Lohmann, Lake Elmo, Minn., on Elmo View Tidy Hengerveld Aaggie; 2d, Hargrove & Arnold, Norwalk, on King Ormsby Piebe Mercedes; 3d, Shade and Yapp, Urbana, Ill., on Shadford Segis Hartog; 4th, Manning & Keys, Richland Center, Wis., on Sir Johanna Pauline Ormsby; 5th, Irwin, on Sir Ormsby Burke Champion; 6th, Arthur Hamann, Lake Mills, Wis., on M. M. Wayne Oak Bess Burke; 7th, Ramsey County Home, North St. Paul, Minn., on Sir Pontiac Segis Ormsby.

Bulls, two years and under three.—1st, Independence State Hospital, Independence, Iowa on Cherokee Cornucopia; 2d, James Rettie Norwich, Ont., on Pontiac Abbekerk Dewdrop; 3d, E. E. Bain, Downer's Grove, Ill., on King Lavere Homestead; 4th, Wm. Nesbitt & Son, Hopkins, Minn., on Champion Korndyke Magali; 5th, A. H. Bruce, Northfield, Minn., on Sir Walker Segis Hengerveld; 6th, Marlow & Randall, and E. A. Barthelemy, Mankato, Minn., on Mankato Ruby Marathon Ormsby; 7th, A. F. Gafke, Jefferson, Wis., on Acme Tomah Jalmar De Kol; 8th, Irwin on King Hengerveld Korndyke Eureka.

Senior Yearlings.—1st, Irwin on Duke Pietertje Korndyke Ormsby 15th; 2d, Hackney on Sir Homestead Pontiac Beets; 3d, Hargrove & Arnold on King Pietertje Ormsby Piebe Jewel; 4th, Hackney on Sir Ollie Pontiac Segis; 5th, Jefferson County Asylum, Jefferson, Wis., on Prince Denver Creamelle; 6th, H. W. Schroeder on Sir Pietertje Chloe Ormsby; 7th, Iowana Farms, Davenport, Iowa, on Iowana Echo Star; 8th, Kemptville Agricultural College, Kemptville, Ont., on Kemptville Agr. School Dandy Rauwerd; 9th, Dr. H. P. Fischer, Shakopee, Minn., on Dukes Mixture; 10th, St. Olaf Farms, Northfield, Minn., on St. Olaf Ormsby Sensation.

Junior Yearlings.—1st, William Lohius, Oostburg, Wis., on Dodge County Homestead Boy; 2d, Iowana Farms, on Burke Mercedes Star; 3d, Fred Albrecht, Watertown, Wis., on Walcowis Ollie Ormsby Hengerveld; 4th, Hargrove & Arnold on King Pietertje Ormsby Piebe; 5th, Hilliker Bros., Norwich, Ont., on Korndyke Echo Butter Boy; 6th, Shade and Yapp, on Buster Ormsby Pietertje; 7th, A. A. Fuller & Sons, Hartland, Wis., on Nockdair Canary Walker Paul; 8th, Garvens on Nockdair Canary Daisy Paul; 9th, J. D. Bacon, Grand Forks, N. D. on Lilac Hedge Pontiac Mooie; 10th, Chas. Van Der Schaaf, Sparta, Wis., on Sir Colantha Hertog Fayne.

Bull Calves.—1st, Haley & Lee, Springfield, Ont., on Sir Romeo Mildred Colantha; 2d, Wapsimoor Farm, Camanche, Iowa on Wapsie Sir Roseland Belle; 3d, Osterkamp Bros., Almena, Wis., on Ostland King Superba Segis Ormsby; 4th, A. F. Randolph, Canton, Ill., on Whitehurst Colantha Artis Lad; 5th, Ramsey County Home on Sir Pontiac Segis Ormsby 18th; 6th, U. L. Lashbrook, Northfield, Minn., on Sir Walker De Kol Homestead; 7th, Irwin on King Korndyke Colantha Clothilde; 8th, Hargrove and Arnold on King Banostine Ormsby Piebe; 9th, Dodge County Spring Brook Farm Co. on Sir Rachel Oak Boon; 10th, Ramsey County Home on Sir Pontiac Segis Ormsby 17th.

Aged Cows.—1st, Echoland Farm, White Bear, Minn., on Nina May Pietertje Korndyke; 2d, Shade & Yapp on Queen Pearl Artis; 3d, John LeJeune, Rice Lake, Wis., on Pride Nesbit De Kol Jewell; 4th, Iowana Farms on Lady Johanna Aaggie Fayne; 5th, Minnesota Holstein Company, Austin, Minn., on Piebe Laura Veeman Artis; 6th, Aitken Bros., Waukesha, Wis., on Amanda Koroba Segis; 7th, W. G. Marshall, Whitewater, Wis., on Johanna Sarcastic Ormsby 4th; 8th, Marlow & Randall on Ruby Karen Mercedes; 9th, Ramsey County Home on Elmira Hengerveld De Kol; 10th, Iowana Farms on Edenwold Aaggie Bess.

Four-year-olds.—1st, McGhee Bros., Beachville, Ont., on Aaggie Sylvia; 2d, Baird Bros., on Westview De Kol Walker; 3d, Fred Hilliker, Burgessville, Ont., on Butter Baroness Korndyke; 4th, Hetts, on Aaggie Westview Pontiac; 5th, Ramsey County Farm on Beauty Madrigal Butter Maid 2d; 6th, A. J. Lashbrook, on Aaggie Pontiac Heilo Maid; 7th, Irwin, on Miss Ormsby Johanna Maid; 8th, Irwin on Miss Korndyke Ormsby Calamity; 9th, Lashbrook on Kappijne Pontiac Bess; 10th, St. Olaf College Farms on Lady Josephine Oak De Kol.

Three-year-olds.—1st, Echoland Farms on Bess Fayne Maid; 2d, Minnesota Holstein Co., on Far Oaks Inka Homestead; 3d, Marlow & Randall, on Mankato Floa Ormsby Mercedes; 4th, Irwin, on Queen Korndyke Helena Burke; 5th, Haley & Lee, on Aaggie De Kol Sylvia; 6th, Hackney, on Miss Ormsby Hengerveeld Ragapple; 7th, S. S. Thorpe, Minneapolis, Minn., on Star Colantha Abbekerk; 8th, Clarinda State Hospital, Clarinda, Ia., on Beaver Oaks Prilly Mercedes; 9th, J. D. Hetts, Ft. Atkinson, Wis., on Juliana Fannie Belle; 10th, St. Olaf College Farms, on Ravens Wood Bess Ormsby.

Two-year-olds.—1st, Jefferson County Asylum on Charity Canary Denver; 2d, Irwin on Pietertje De Mar Ormsby; 3d, Wm. M. Cummings, Ottawa, Ont., on Leota Correct Change; 4th, John Nesbitt, Hopkins, Minn., on Peggy Colantha Ormsby; 5th, Chas. Van Der Schaaf on Queen Johanna of Enterprise; 6th, Irwin on Miss Ormsby Korndyke Johanna Rue; 7th, Jefferson County Asylum on Clothilde Wayne Denver; 8th, Marlow & Randall on Mankato Segis Ormsby Bess; 9th, Irwin on Star Pietertje Ormsby Mercedes; 10th, Irwin on Corner Lawn Pauline Colantha.

Senior Yearlings.—1st, Jefferson County Asylum on Princess Beauty Creamelle; 2d, Hackney on Princess Abbekerk Ormsby Piebe; 3d, 4th and 5th, Corwin Farms, on Corwin Colantha Florence Ormsby; Corwin K. S. P. Mabel Ormsby, and Corwin Beauty Fobes Ormsby; 6th, Joe McLay, Mukwonago, Wis., on Nellie Queen Elba; 7th, Jefferson County Asylum, Mutual Canary Creamelle; 8th, L. V. Garvens, on Nockdair Superba Fayne Lyons; 9th, McGhee Bros. on Frances Mercena; 10th, Hackney on Hendricka Piebe Ormsby.

Junior Yearlings.—1st, Hargrove & Arnold on Dorothy Ormsby Piebe; 2d, Hulet, on Pauline C. Ladoga; 3d, H. H. Schroeder, on Pet Ormsby Rue Pietertje; 4th, Milford Meadow Stock Farm, Lake Mills, Wis., on Milford Homestead Burke Aaggie; 5th, Hackney on Piebe Segis Pontiac Fayne; 6th, M. L. Haley on Marion Korndyke Hartog; 7th and 8th, Iowana Farms on Iowana Homestead Stella, and Iowana Farms Hope; 9th, Lashbrook on Lashbrook Colantha Segis; 10th, S. S. Thorpe on Star Segis Pontiac Abbekerk.

Heifer Calves.—1st, Minn. Holstein Co. on Star Segis Homestead; 2d, Jefferson Co. Asylum on Inka Creamelle Lyons; 3d, James C. Jensen, Waterloo, Ia., on Netherland Queen Piebe; 4th, Geo. H. Elwell on Snowflake Piebe Alice; 5th, Haley & Lee on Mary Abeekerk Susie; 6th, C. M. Beveridge, Lake Mills, Wis., on Lucile Ormsby Butter Maid; 7th, Hargrove & Arnold on Triune Ormsby Rose; 8th, Garvens on Garvendale Jessie Johanna Prize; 9th, James Rettie, Norwich, Ont., on Belle Abbekerk Dewdrop 4th; 10th, Jefferson County Asylum on Flora Creamelle Denver.

Yearly Record Cows, Senior Division.—1st, Echoland Farms, on Nina May Pietertje Korndyke; 2d, Iowana Farms on Lady Johanna Aaggie Fayne; 3d, Ramsey County Farm, on Elmira Hengerveld De Kol; 4th and 5th, Aitken Brothers on Doetje Nellie and Amanda Koroba Segis; 6th, Minn. Holstein Co. on Piebe Laura Veeman Artis; 7th, Ramsey Co. Farm on Opal Hartog Pontiac; 8th, Irwin on K. S. P. Andire; 9th, Aitken Brothers on Hilda Korndyke Segis; 10th, Irwin on Miss Johanna Maid Ormsby.

Yearly Record Cows, Junior Division.—1st, Marlow & Randall on Mankato Floa Ormsby Mercedes; 2d, Echoland Farms on Bess Fayne Maid; 3d, Dr. H. P. Fischer on Princess Aaggie Polkadot De Kol; 4th and 5th, Ramsey Co. Home on Beauty Madrigal Butter Maid 2d; 5th and Piebe Korndyke Changeling 2d; 6th, Minn. Holstein Co., on Far Oakes Inka Homestead; 7th, Irwin on Queen Korndyke Helena Burke; 8th, Jefferson County Asylum on Charity Canary Denver; 9th, Minn. Holstein Co. on Star Segis Pontiac Superior; 10th, Marlow & Randall on De Kol Korndyke Ormsby 2d.

A. R. Cow with Two Progeny.—1st, Marlow & Randall on Ruby Karen Mercedes; 2d, Irwin on Miss Korndyke Johanna Rye; 3d, Dr. H. P. Fischer on Princess Aaggie Polkadot De Kol; 4th, Marlow & Randall on De Kol Korndyke Ormsby 2d; 5th, Lashbrook on Kappijne Pontiac Bess.

Get of Sire.—1st, Minn. Holstein Co. on get of Piebe Laura Ollie Homestead King; 2d Baird Brothers on get of Sir Westview Pontiac Walker; 3d, McGhee Brothers on get of Prince Mercena Sylvius; 4th, Hackney on get of Piebe Laura Ollie Homestead King; 5th, Hargrove & Arnold on get of King Pietertje Ormsby Piebe; 6th, Jefferson Co. Asylum on get of Dutchland Creamelle Denver Prince; 7th, Aitken Brothers on get of Terracelawn Hengerveld Segis; 8th, Corwin Farms on get of Sir Pietertje Ormsby Mercedes 14th; 9th, Hargrove & Arnold on get of King Pietertje Ormsby Piebe; 10th, Lashbrook on get of Sir Walker Segis Homestead.

Produce of Cow.—1st, Aitken Brothers on produce of Doetje Nellie Concordia; 2d, Schroeder on produce of Chloe Pietertje Ormsby; 3d, Jas. Rettie on produce of Belle Abbekerk Dewdrop; 4th, Hackney on produce of Beauty Beets Ollie Homestead; 5th, Bacon, on produce of Lilac Hedge Fay Colantha Bismarck; 6th, Jefferson County Asylum on produce of Princess Beauty Wayne; 7th, Irwin on produce of Aaggie Johanna Rue; 8th, Garvens on produce of Princess De Kol Segis; 9th, Jefferson County Asylum on produce of Clothilde Wayne Hengerveld; 10th, Lashbrook on produce of Heilo Kappijne Bess.

Exhibitors' Herd—1st, Irwin; 2d, Hargrove & Arnold; 3d, Garvens; 4th, Marlow & Randall; 5th, Ramsey Co. Home; 6th, Lashbrook.

Young Herd.—1st, Hargrove & Arnold; 2d, Jefferson Co. Asylum; 3d, Hackney; 4th, Iowana Farms; 5th, Garvens; 6th, Geo. H. Elwell; 7th, Irwin; 8th, Marlow & Randall.

Dairy Herd.—1st, Irwin; 2d, Baird Brothers; 3d, Minnesota Holstein Co.; 4th, Ramsey Co. Home; 5th, Marlow & Randall.

Sire and Five Daughters.—Terrace Lawn Hengerveld Segis, Aitken Brothers.

State Herds—1st, Minnesota; 2d, Ontario; 3d, Wisconsin; 4th, Iowa; 5th, Ill.

Senior Champion Bull.—John B. Irwin on Dutchland Aaggie Tidy Prince 2d.

Junior Champion.—Haley & Lee on Sir Romeo Mildred Colantha.

Senior and Grand Champion Cow.—McGhee Brothers on Aaggie Sylvia.

Junior Champion.—Hargrove & Arnold on Dorothy Ormsby Piebe.

Premier Exhibitors' Banner.—John B. Irwin.

Echo King Sylvia Trophy.—Dr. H. B. Fischer.

GRANT COUNTY SALE

The second annual consignment sale of the Grant County Holstein-Friesian Association held at Lancaster, Wisconsin, Oct. 12th, was well attended. The forty-one animals averaged $135; the top price was $237.50 received for Beulah Van Beers De Kol, consigned from the Blaine Farm at Boscobel and was purchased by Joe Novinsky. Two other animals from the Governor's farm brought $187.50 and $170 respectively.

The heaviest single buyer was E. A. Peters of Sharon, who purchased six animals for $832.50. Frank A. Nieder of Cassville and R. A. Wieland of Lancaster, also bought good ones. The auctioneer was P. A. Bishop of Platteville, Wis.

GEORGIA STATE FAIR

The herd of H. D. Jordan, of Ridge Springs, South Carolina, swept the board at the Georgia State Fair held at Atlanta. In default of other entries all the group prizes went to the Jordan herd. Jordan won all four of the championships, the junior champion being Sir Pauline Aaggie Korndyke Lad and the senior and grand champion being the aged bull, Sir Urmagel Posch. The junior champion female was the senior heifer calf, Dorothy Beets Posch while the senior and grand champion was Ormsby Model Fayne 2d, the first prize aged cow.

CLOSED WITH A SALE

The fair at Fountain Valley, Colorado, closed with a Holstein "Sales Day" program and this drew a big crowd. Prices ruled low, the highest price being $200 for Berea Nola Pietertje Hartog, consigned by the Spencer Penrose Ranch and purchased by E. H. Rosenberg of Denver.

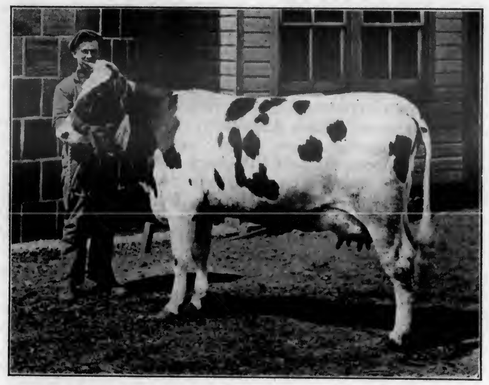
A Classified Advertisement costs but little and tells many about the animals you wish to sell.

LANCASTER BREEDERS' VISIT DEYSHER FARM

The members of the Lancaster County Breeders' Association, their wives and friends to the number of 150 held their first Field Day, October 24th, on the Berks Farm, Reading, Pa., the visitors being the guests of the proprietor, Abner S. Deysher.

After enjoying the generous lunch provided by Mr. Deysher, topped off with Holstein ice cream, the party lined up for a photograph and was then called to order by John H. Shirk, of Lancaster, president of the Lancaster County Breeders' Association. Mr. Shirk announced that the association which was started on May 27th with about a dozen members, had grown until there were fifty-eight active members and three applications awaiting the action of the executive committee at their next meeting. He requested the members to urge their neighbors to join the county association, suggested that local associations should be formed in all the cattle counties of the state and that these organizations should participate in the meeting of the state organization to be held at Harrisburg, in January. He said that Pennsylvania Holstein breeders should be interested in seeing that Pennsylvania got her due share of the increased transfer fee they were now paying to the national association. Fifty cents of each transfer fee was to be returned to the state of origin provided that the state association was organized and actively functioning. Mr. Shirk suggested that a vote of thanks be given Mr. Deysher for his hospitality. This was moved and seconded. There were a few cattle men from Berks County present and at the conclusion of Mr. Shirk's remarks they also extended a vote of thanks to Mr. Deysher.

CLARK E. BERRY
Manager of the Deysher Dairy, Berks Farm, Reading, Pa.



President Shirk called upon Dr. H. W. Turner of the Pennsylvania Livestock Sanitary Board. Dr. Turner, who is well-known to cattlemen of the state, explained some of the work of the State Sanitary Board particularly as it related to cattle. He said there were two distinct lines of work, the prevention of disease and the control of disease and that both of these lines were vital to the dairy industry. He urged the cattle owners to get better acquainted with and to coöperate with the Livestock Sanitary Board. Pennsylvania was the pioneer state in disease prevention work and had the largest and in some respects the best veterinary department of any state in the Union. Dr. Turner is an entertaining talker, who does not make a set speech but chats with his audience as though he was one of them. He was kept busy answering questions for a good part of the rest of the afternoon.

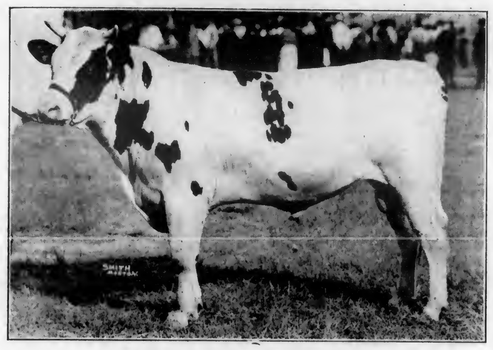
Abner S. Deysher and Carnation Matador Pontiac.

Mr. Deysher expressed his pleasure at being the host of so many of the Lancaster County Holstein men, their wives and families. He said that he had been away some time, had not been home a week and so was unable to make as extensive preparations for their entertainment as he desired but that this was only the first of a number of annual events and next year he hoped everyone would be present and he promised them a more extensive program and speakers of national reputation.

G. H. Truckell, associate editor of the BREEDER AND DAIRYMAN, said a few words on some of the troubles of the Holstein business. There was nothing wrong with the Holstein cow so that, if there was any trouble, it was with the men in the business. The chief trouble was that there was not enough buyers. Until the period of deflation and falling prices came, speculators were accustomed to obtain credit from the banks, purchase cattle and sell them on time. When the period of tight money came, the banks refused to extend credit and called for the payment of notes while the speculators', customers, owing to the lower prices received for farm products were in turn unable to meet their notes, the result being that

Eco-Sylv Mechthilde of the Deysher herd. 80 lb. milk in a day, 531.2 lb. milk in seven days, 2,224 lb. milk in thirty days, as a yearling. State champion for milk production.

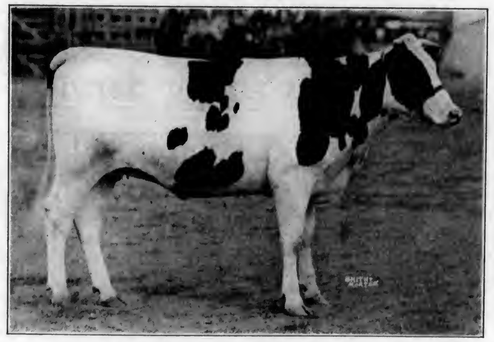
the speculators were practically out of business. A second class of buyers was the monied men who had been successful in other lines of business and bought Holsteins for their home farms or for a place on which they could spend their week ends and vacations. Owing to the world-wide depression of business these men were having troubles of their own but with better times this class of buyers would again be in the market. Dairymen who made their living from the products of the dairy were still buying when they needed cattle.



Mr. Floyd S. Bucher, Lancaster County Agent, said he was glad to see so many people from his county and invited the breeders' of Berks County to join the Lancaster County Holstein Breeders' Association until such time as they had an organization of their own. He urged the breeders to test their herds under the state and federal accredited plan. His remarks were seconded by Mr. Adams, Berks County Agent, who said, however, that while he had no objection to the men from Berks County joining the Lancaster Association he hoped the time would soon come when they would have an association in Berks County.

Two of the busiest men present were Clark F. Berry, the herdsman of Berks Farm, who was kept busy answering questions about feed, care, etc., and explaining the records and merits of his charges, and H. Elvin Herr, secretary of the Lancaster Association, who was mainly responsible for the arrangements of the day.

The chief centers of interest were King Tweede Spring Farm, the herdsire, Carnation Matador Pontiac the 1922 grand champion at the Brentwood show and her son, "Jake" sired by a son of Segis Pietertje Prospect. This bull calf is a strong, deep, handsome fellow and will be kept as a junior herdsire. He will weigh at least 500 lb. and is within a few days of being six-months-old. It was told that he gained 84 lb. in 21 days, an average of 4 lb. a day for three weeks. A cow that Mr. Deysher took special pleasure in showing to his visitors was Amsdale June Colantha, a daughter of Dutchland Sir Hengerveld Colantha and Clothilde Crescent Butter Girl. He purchased this cow for $175 in February, 1919, and had paid no particular attention to her. She freshened in mid-July this year and some six weeks after freshening was put in official test and produced 512 lb. milk, 27.43 lb. butter in seven days and 2,039 lb. milk, 100.55 lb. butter in thirty days, her average test being 3.9% for the month. Mr. Deysher said that anyone wanting her now would have to pay considerably more than $175 for this seven-year-old.



OZARK STOCK SHOW

The Fourth Annual Ozark Stock Show, held at Springfield, Missouri, was attended by great crowds and the Holstein show was one of the chief centers of attraction, although only ninety head were exhibited this year while there were

bull was the aged bull Beauty Pontiac Beets and the senior and grand champion female was the cow Lady Homestead Madrigal, both owned by the Whitaker Farms of Walnut Grove, Missouri.

The awards are:

Junior yearling heifer—1st, 2d, and 4th, A. J. King on Charlevoix Marbury De Kol; Winterthur Ormsby Celle and Winterthur Ormsby Claudina; 3d, Okino on Martha Canary Fobes De Kol; 5th, Whitaker Farms on Josephine Walker Content; 6th and 7th, Daily on Daily Farms Colombo Beauty and Daily Farms Jewel Alcartra.

Senior heifer calf—1st, 2d, and 3d, King on May Echo Sylvia Alcartra; Blackstone Nancy Korndyke and Imperial Queen Victoria; 5th, Whitaker Farms on Content Salome; 4th, 6th and 8th, Daily on Daily Farms Aurora Mabel, Daily Farms Colantha Daisy and Daily Farms Norine Lilly; 7th, McQueen on unnamed entry.

Junior heifer calf—1st, King on Lady Superba Pabst; 2d, and 4th, Biggs on unnamed entries; 3d and 8th, Okino on Flora Johanna De Kol and Okino Korndyke Lass; 5th and 7th, McQueen on unnamed entries; 6th, Daily on unnamed entry.

Junior champion female—King on Charlevoix Marbury De Kol.

Senior and Grand Champion Female—Whitaker Farms on Lady Homestead Madrigal.

Graded herd—1st, Whitaker Farms; 2d, Okino.

Breeders' Young Herd—1st and 2d, Daily.

Breeders' calf herd—1st, King; 2d and 3d, Daily.

Get of Sire—1st, Okino; 2d, 4th, 8th, Daily; 5th, Rookwood; 6th, Whitaker Farm; 7th, McQueen.

Produce of Dam—1st, Okino; 2d, 3d, 5th, Daily; 3d, and 6th, Whitaker Farms.

MT. HOREB HARVEST FESTIVAL

A number of good Holsteins were exhibited at the Harvest Festival held at Mt. Horeb, Wisconsin, the last week in September. Nine heifer calves were shown, the winner being owned by Walter Hodel of Verona. This animal won a

LUNCH AT GRANDMA'S

number of awards at the recent Dane county fair, winning the grand championship of the club classes, showing against 36 junior and senior calves, second in th special Dane county class and third in the open class.

The first prize cow was Elvira Segis Houwtje, owned by George Lukken of Mt. Horeb. She had a record, made as a four-year-old in the Barneveld Cow testing association of 11,367 lb. milk and 368 lb. butterfat and was milked twice a day while in test. She is not considered the best of the 21 purebred animals on the Lukken farm of 67 acres, but was shown because she combines both type and production.

WE BEG YOUR PARDON

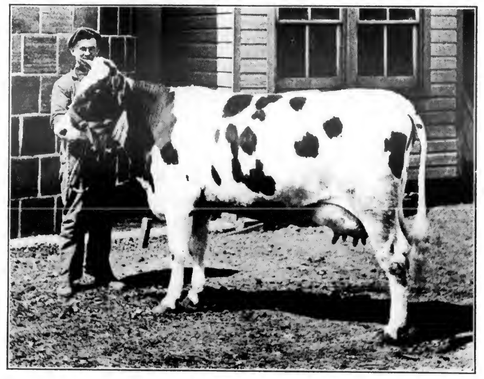
We owe apologies to our readers and to the Carter County Holstein Herd of Ardmore, Oklahoma for saying, on page 699 of the October 22d issue, that Colantha Beets De Kol Johanna, the first prize junior yearling bull, junior and grand champion at the Oklahoma State Fair was owned by H. O. Larsen of Dike, Iowa. He belongs to the Carter County Holstein Herd and we did not discover our mistake until the report came that he duplicated his victories at Oklahoma City by repeating at Little Rock and taking the junior and grand championships of the Arkansas State Fair. In the report of that event you will find a reproduction of the animal and the correct ownership credited.

LANCASTER BREEDERS' VISIT DEYSHER FARM

The members of the Lancaster County Breeders' Association, their wives and friends to the number of 150 held their first Field Day, October 24th, on the Berks Farm, Reading, Pa., the visitors being the guests of the proprietor, Abner S. Deysher.

After enjoying the generous lunch provided by Mr. Deysher, topped off with Holstein ice cream, the party lined up for a photograph and was then called to order by John H. Shirk, of Lancaster, president of the Lancaster County Breeders' Association. Mr. Shirk announced that the association which was started on May 27th with about a dozen members, had grown until there were fifty-eight active members and three applications awaiting the action of the executive committee at their next meeting. He requested the members to urge their neighbors to join the county association, suggested that local associations should be formed in all the cattle counties of the state and that these organizations should participate in the meeting of the state organization to be held at Harrisburg, in January. He said that Pennsylvania Holstein breeders should be interested in seeing that Pennsylvania got her due share of the increased transfer fee they were now paying to the national association. Fifty cents of each transfer fee was to be returned to the state of origin provided that the state association was organized and actively functioning. Mr. Shirk suggested that a vote of thanks be given Mr. Deysher for his hospitality. This was moved and seconded. There were a few cattle men from Berks County present and at the conclusion of Mr. Shirk's remarks they also extended a vote of thanks to Mr. Deysher.

CLARK E. BERRY
Manager of the Deysher Dairy, Berks Farm, Reading, Pa.



President Shirk called upon Dr. H. W. Turner of the Pennsylvania Livestock Sanitary Board. Dr. Turner, who is well-known to cattlemen of the state, explained some of the work of the State Sanitary Board particularly as it related to cattle. He said there were two distinct lines of work, the prevention of disease and the control of disease and that both of these lines were vital to the dairy industry. He urged the cattle owners to get better acquainted with and to coöperate with the Livestock Sanitary Board. Pennsylvania was the pioneer state in disease prevention work and had the largest and in some respects the best veterinary department of any state in the Union. Dr. Turner is an entertaining talker, who does not make a set speech but chats with his audience as though he was one of them. He was kept busy answering questions for a good part of the rest of the afternoon.

Abner S. Deysher and Carnation Matador Pontiac.

Mr. Deysher expressed his pleasure at being the host of so many of the Lancaster County Holstein men, their wives and families. He said that he had been away some time, had not been home a week and so was unable to make as extensive preparations for their entertainment as he desired but that this was only the first of a number of annual events and next year he hoped everyone would be present and he promised them a more extensive program and speakers of national reputation.

G. H. Truckell, associate editor of the BREEDER AND DAIRYMAN, said a few words on some of the troubles of the Holstein business. There was nothing wrong with the Holstein cow so that, if there was any trouble, it was with the men in the business. The chief trouble was that there was not enough buyers. Until the period of deflation and falling prices came, speculators were accustomed to obtain credit from the banks, purchase cattle and sell them on time. When the period of tight money came, the banks refused to extend credit and called for the payment of notes while the speculators', customers, owing to the lower prices received for farm products were in turn unable to meet their notes, the result being that

INTENTIONAL SECOND EXPOSURE

Cow Testing Association Reports

STANISLAUS COUNTY TESTING

During the month of September there was considerable culling in the herds of the four units of the Stanislaus County, Cal., Cow Testing Association. In the Patterson-Newman and the Crows Landing units, the two testers, Mr. Mead and Mr. Tucker, were unable to give definite figures as to the number of cows culled, but stated that there was approximately sixty cows that were disposed of to the butchers. One man disposed of eight head; and in so doing, he raised his butterfat average approximately eight lb. per cow over what it had been the previous month. Instances of this kind show the value of this work, and also demonstrate the improvement that is being made toward increasing herd production, and that many of the men are taking advantage as they should of records which their cows show.

Some dairymen have been filling their silos and expect to have an increase of milk flow from the feeding of silage; others plan to feed cut pumpkins and squash. Three new herds were added to the association during the past month while two herds not in the association are semi-officially testing some of their cows. With the present price of butterfat and the present prices of feeds the dairymen who are operating on an economical and progressive basis should be making a good profit. Already there seems to be an inclination on the part of many of the ranchers to go back into the dairy business to a certain extent; and the dairy cow is one that gives an income no matter whether it rains, frosts, or whether there is a drought, provided she has the proper kind of feed. One dairyman has been experimenting with a commercial concentrate feed; and he reports that his cows have increased in their milk flow from four to eight lb. a day per cow, and that his test is remaining approximately the same. During the previous month, it was very evident from the reports that the men who are feeding concentrates to their cows are obtaining much better results than the men who are only feeding alfalfa hay or pasture and their cows were holding up much better on their milk flow.

During the month 3,188 cows were tested of which 288 made over 40 lb. fat; the average amount of milk produced was 723 lb. and the average butterfat 27.2 lb. The high cow is a registered Holstein owned by F. L. Hogue with 90.3 lb. fat, 2,383 lb. milk. Registered Holsteins owned by E. W. Looney were second and third with 80.4 lb. fat, 1,962 lb. milk and 78.2 lb. fat, 2,340 lb. milk respectively. A grade Holstein owned by Gonzalves & Co. is fourth, with 78.7 lb. fat, 1,230 lb. milk and a registered Holstein owned by Kaiser Bros. is fifth, with 78 lb. fat, 1,565 lb. milk. Grade Jerseys occupy the three next places and a registered Holstein of the Looney herd was ninth with a grade Holstein owned by C. L. Morse, tenth.

The Six Brothers' Dairy has 21 registered Holstein cows in milk. They averaged 32.9 lb. fat and 937 lb. milk. Six members of this herd made over 40 lb. butterfat in the month. Thirteen registered Holsteins in the E. W. Looney herd averaged 45.8 lb. fat, 1,273 lb. milk and 12 registered Holsteins owned by J. A. Pelanda averaged 33.5 lb. fat, 973 lb. milk. There were seven Looney cows and four Pelanda cows on the honor roll. The chief testing supervisor is M. L. Gorow.

HOLSTEINS MAKE GOOD SHOWING

During September 752 cows were tested in the Kern County, California, Testing Association by Alex. Rosseau. The average milk production was 729.3 lb. and the average fat, 27.7 lb. No less than 121 cows made over 40 lb. fat in the month. The leader was a cow of mixed breeding, named Beauty, owned by H. D. Grundt, of Wasco, with 1,915 lb. milk, 58.5 lb. fat. Dawn Anneida, a registered Holstein owned by A. R. Buttles, of Wasco, produced 1,887 lb. milk, 56.6 lb. fat while a grade Holstein owned by W. S. Rainboldt, of Kern Delta, was third with 1,515 lb. milk, 56.1 lb. fat.

Thirty-one cows of mixed breeding in the Grundt herd produced an average of 854.6 lb. milk, 38.5 lb. fat while the Holstein herd of Joe Altringer, of Wasco, averaged 828 lb. milk, 33.5 lb. fat.

HOLSTEIN COMMUNITY

During September, 106 cows were on test in the Delhi, California, Cow Testing Association. They averaged 41.2 lb. butterfat and 1,078.8 lb. milk. There were 49 cows that produced more than 40 lb. in the month. The highest has a record of 79.8 lb., the second, 77.2 lb. and the third, 75.3. Of the cows tested 84 were grade Holsteins and the other 22 were registered Holsteins, all of which are tuberculin tested. The Delhi cows are tuberculin tested every six months and reactors are weeded out at once.

THE WESTERN LEADER

Helm Dodo Mead, a five-year-old Holstein on the Helm Farms, Corcoran, California, became the leading producer in the state of California during September, by producing 130 lb. butterfat, 2,200 lb. milk. This is the sixth consecutive month that animals from the Helm herd have made the highest record not only in California but also west of Salt Lake City.

WISCONSIN TESTING

The best cow in the Cataract Testing Association as reported by Anthony Sousek, the official tester, is a purebred Holstein owned by W. H. Hanchett, with a milk production of 1,190 lb. and a fat production of 59.5 lb. The grade Holstein herd owned by J. W. Leberich stands second in herd average with 844 lb. milk and 34.3 lb. fat.

There were 344 cows tested during September in the Delavan-Geneva Testing Association. Of these, four each produced more than 40 lb. butterfat. The high cow was a registered Holstein a two-year-old owned by the Walcowis Farms at Lake Geneva. She made 1,410 lb. milk and 86 lb. butterfat.

The Walcowis Farms had three other animals in the honor list, two each making over 57 lb. butterfat and the one 47 lb. The 31 head of grade and registered Holsteins in this herd averaged 848.5 lb. milk and 31.7 lb. butterfat. The second high herd consists of grade Holsteins owned by Leon Flitcroft, they averaging 757.9 lb. milk and 27.3 lb. butterfat. The Association year ends in October and it will be reorganized to begin again in November. The tester is Joseph Senneff and the secretary is F. S. Thomas of Delavan.

The high cow in the Garfield-Alden Testing Association for the past year was a grade Holstein owned by Ernst Nelson and Sons, she making 515.1 lb. fat and 14,319 lb. milk, her average test being 3.6%. The Nelson herd consisting of 16 registered and grade Holsteins, ranked highest for herd production with an average of 11,268 lb. milk and 383.6 lb. fat and an average test of 3.42%. Twenty-six herds were enrolled in this Association and the average was 6,687 lb. milk and 262 lb. fat while the average test was 3.93%.

Catalog Service

THAT SAVES

You will save TIME, MONEY and WORRY by letting the Wisconsin Live Stock Advertising Company prepare your sale catalogs.

You may make your selection from numerous catalog styles ranging in price from $1.50 per animal and upwards depending upon the catalog you select.

Your catalog in our hands means that it will be given prompt, efficient attention; that it will be edited by the best pedigree experts from the most complete files; and that it will be delivered when promised.

Your interest in getting the most for your money directs that you place your catalog job with the Wisconsin Live Stock Advertising Co. Send for samples and prices.

During September, 384 cows were tested in the Eau Claire Cow Testing Association No. 3. The high record cow was a grade Holstein owned by Robert Ray with 65.08 lb. fat. Two purebreds from the Ray herd made 47.35 lb. and 39.5 lb. fat respectively. A grade Jersey was second while in third place was a grade Holstein with 54.68 lb. fat owned by Fred Mittelstadt. She led for milk production with 1,519 lb. Purebred Holsteins owned by Theo Mathiew stood second and third for milk and ranked towards the top for fat production. The Mittelstadt herd of purebred and grade Holsteins stood first for milk production with an average of 1,105.6 lb. and their fat average was 37.74 lb. The Robert Ray herd of purebred and grade Holsteins stood second for fat production with an average of 36.14 lb. being just beaten by a grade Jersey herd that averaged 36.15 lb.

During the month of September black and white cows led 49 Wisconsin testing associations. Twenty-nine of these were grades and twenty were purebred animals. There were twenty-nine Guernsey leaders of which twenty-three were grades. One leader was a registered Brown Swiss, one a purebred and one a grade Ayrshire, two were natives while seven were Jerseys, only one of which was a purebred.

The leader for production was a grade Holstein, owned by Mrs. A. Jochmann of the Ellington Association with 101.1 lb. fat. The second, also a grade Holstein with 82.2 lb. fat, was owned by Wm. Warner of the Richfield Association. The leading herd consisted of eleven registered and grade Holsteins owned by Harry Benecke with an average of 1,292 lb. milk and 49.2 lb. fat.

A five-year-old grade Holstein cow, owned by Frank Van Vonderen of West De Pere, led in the Wrightstown-Greenleaf Testing Association for September, by producing 1,643 lb. milk, 75.6 lb. fat. The cow, Colantha, owned by Neil Quatsoe of West De Pere, was shown at the Northeastern Wisconsin Fair. She had returned a net profit of more than $190 to her owner for a period of slightly less than ten months. This is a correction of the first report of the Association in which the returns were given as only $119.

HARRY C. REYNOLDS

SCRANTON, PA.

Herd under the Accredited Plan

AROUND AURORA, ILLINOIS

The average production of the cows in the Kane County Association No. 3 was 760 lb. milk, 25.8 lb. fat, the figures a year ago were 719 lb. milk, 23.3 lb. fat. The thirty-six high grade Holsteins owned by Frank Widmayer led the association with an average of 1,153 lb. milk, 36.9 lb. fat. This herd furnished the first, second, fourth and fifth highest producing individuals.

The herd owned by the State Training School for Girls was second with a herd average of 974 lb. milk, 34.1 lb. fat. One of the animals in this herd is making a great record, has already produced 13,000 lb. milk in this lactation period and at the present time is milking about forty lb. milk a day.

The herd of Oscar Engstrom was third with an average production of 1,038 lb. milk, 31.1 lb. butterfat. Fourth was the purebred Holstein herd of C. E. Barnes of Aurora with an average of 918 lb. milk, 30.3 lb. fat. Mr. Barnes recently purchased a young bull from the Mooseheart herd. He is from a heifer sired by a Colantha bull and from the best cow that ever stood in the Mooseheart dairy. The seventy purebred Holsteins of the Fitchome Farms averaged 857 lb. milk, 28.3 lb. fat.

SOMERSET COUNTY

Glen Falls, tester for the Somerset County, Pennsylvania Testing Association reports that during September, 26 herds containing 294 cows were tested. Of these 21 cows produced more than 40 lb. fat, 5 more than 50 lb. while 12 exceeded 1,200 lb. milk.

The leading producer was a registered Holstein, Neva, owned by Albert W. Young, she making 1,782 lb. milk, 57 lb. fat. A grade Holstein, in the same herd, produced 1,578 lb. milk, and stood second for butterfat with 55.2 lb. Cows in the Young herd stood fourth, fifth, and seventh. A Jersey was third, a grade Shorthorn sixth, a grade Holstein owned by the Somerset County Home was eighth and a grade Holstein owned by H. P. Saylor was ninth.

CUMBERLAND COUNTY

The October report of the Cumberland County, Pa., Testing Association compiled by A. A. Raudabaugh, shows that during the past month the ten high cows exceeded the ten highest reported for any other month during the past two years. The leader for butterfat production was a grade Holstein owned by Wm. Nailor of North Middleton Township she making 57.3 lb. butterfat from 1,338 lb. milk. The highest milk record was 1,668 lb. made by a Holstein owned by A. P. Louden, also of North Middleton Township, she producing 55 lb. fat. Seven of the ten leaders were Holsteins and the owners are G. W. Strock, Mechanicsburg; Wm. S. Wert, Shiremanstown; W. I. Sheaffer, Penn Township; and I. V. Otto, Boiling Springs. The Louden herd of ten cows averaged 1,239 lb. milk, 41.1 lb. fat.

A GREAT COLLEGE HERD

Forty-eight cows in the Nebraska University herd produced 270,415 lb. milk and 11,314 lb. butterfat during the first six months of 1922, a daily average of 31.1 lb. milk and 3.1 lb. butterfat. The herd contains a number of famous animals. The great old cow, Katy Gerben is again in year test and is soon expected to make a new world's record for a 19-year-old cow. The herd champion La Verna Lincoln recently completed a 305-day record of 27,726 lb. milk and 794 lb. butterfat while Varsity Gerben Gelta will make almost as great a record. The herd is headed by Count Ormsby Segis Pontiac a son of King Segis Pontiac Count from a daughter of Sir Pietertje Ormsby Mercedes while the junior sire is King Segis Gerben Ormsby Lincoln a grandson of Katy Gerben and the great sire King Segis.

TESTING THREE GENERATIONS

The third animal in the Greenfield Holstein herd to complete a year test is Paula Pontiac Fayne, No. 533811 who freshened as a senior two year old and produced 669.4 lb. butter, 16,699.7 lb. milk in a year. Her dam, Paula Kola Pontiac Clothilde is just starting a ten months' test while her granddam is expected to freshen in January and will be put on long time test as soon as possible. The herd is owned by E. C. Greenfield & Son, of Indianola, Iowa.

BUILDING ANOTHER HERD

In a recent fire at Springside Farm, owned by the Department of Charities of New Haven, Conn., thirty cows were burned. They have been partly replaced by the purchase of fifteen Holsteins by Superintendent James P. Manning. No additional animals will be purchased but heifers will be raised until the original herd number is restored. The new hay and cow barns are about completed and will soon be handed over to the city by the contractor.

CRYSTAL FARM HERD

The Crystal Farm herd of Holsteins was founded 1912 by Chas. J. Garrett of West Chester, Pa. The first bull purchased was Prince Hengerveld Segis Pietertje. This bull was used for four years and produced some very good cows, ten of which were developed and given A. R. O. records at Crystal Farm. The grade cattle were gradually sold off until the herd was made up entirely of pure-bred Holsteins. Daisy Korndyke De Kol Burke, a member of this herd, was awarded the first silver cup donated by the County Holstein Breeders' Association for the best butter record made by a member of the Association for the years 1914-15.

The next sire used at Crystal Farm was Winterthur Johanna Prilly Segis No. 206498, purchased in partnership with F. C. Brinton, Jr., the present treasurer of the Pennsylvania Federation of Holstein-Friesian Clubs. This bull, now five years old, is still in service as senior sire at Crystal Farm. He is probably the best known bull in Chester County, being a consistent blue-ribbon winner at county fairs, twice winning grand championship. He sired many show animals. One of his daughters was made grand champion female at West Chester in 1920. He now has seven A. R. O. daughters, and his get are scattered throughout the county and into several states.

The junior sire, King Ormsby Accrue Segis, is starting out well to keep up the good work of this herd being made grand champion bull at the Chester County Fair this year at the age of eleven months.

When the Farm Bureau started cow testing associations in Chester County, Crystal Farm herd was entered in the West Chester Testing Association, and in the first year Crystal Farm herd made the largest average yearly production of any herd of any breed in the Association, averaging over 10,000 lb. milk per cow. The accredited herd plan was taken up and at this time Crystal Farm herd is on the list of State and Federal accredited herds.

BUSINESS CO-OPERATION

The Chamber of Commerce of Dixon, Illinois, offered a prize of ten dollars cash to the milker at the Illinois State Holstein-Friesian Testing Plant who kept his stall and cows in the best condition during the month of August. This prize was won by Harold T. Burdick, formerly of Barron, Wisconsin. C. J. Tracy was second, and Alvin McAllister was third. There were eight in the contest.

Each week A. R. Oxman, Secretary of the Chamber of Commerce, designated a business man whose duty it was to go out and score each stall, using a score card provided for that purpose. The businessmen of Dixon take a great interest in the testing plant and make a point of showing the establishment to out-of-town visitors.

YANKTON STATE HOSPITAL HERD

The taxpayers of South Dakota have reasons to be proud of the Holstein herd owned by the Yankton State Hospital. Representative exhibits of this herd have been seen at some of the fairs this fall, and have carried off a number of prizes. The exhibited herd consists of thirteen head, four males and nine females. It was headed by King Pietertje Ormsby Fobes who won the senior and grand championship at the Tri-State Fair held at Aberdeen. The junior herdsire, King Colantha Ormsby Bessie 11th won first in his class at both Aberdeen and at the South Dakota State Fair at Huron. Last year he won two firsts and junior championship. In the female class, Yankton Beryl won first in her class at both fairs and at Huron won the senior and grand championship, defeating the cow that won senior and grand championship at Aberdeen.

Yankton Mayme Ure Gerben was first in the aged cow class at both fairs. At Huron she defeated Leda Cornucopia 2d, who for two successive years has been grand champion. At the same fair Yankton Gladys Rue Pontiac won first in the senior heifer class, defeating the heifer from the Corwin herd that won first place in the Iowa and Nebraska State Fairs. In the senior bull calf class Yankton Hazelhurst Rue was first defeating the Corwin entry that had won at both the Iowa and Nebraska Fairs. The first prize yearling heifer at Aberdeen was Yankton Pontiac De Kol Maid while the hospital representatives carried off first prize in the aged herd class. They won six championships, seventeen firsts, fifteen seconds, twelve thirds, and three fourths, at the two great fairs and in three exhibitions own 33 ribbons ,while the prize money amounted to more than the exhibiting expenses. The State Hospital herd is under the care of S. E. Jones, who predicts that next year the State Hospital will have on even better show herd than it did this year.

THE CHANGE AND THE WEATHER

She: "Would it be better if we didn't go out for supper, I think it's going to rain."

He: "Yes, I think so, too, I can tell the change in my pocket."

A CRACKERJACK RECORD

Beauty Van Pelt Johanna, a registered Holstein, owned by Lewis Pape, Dubuque, Iowa, has just finished her record of better than 15,000 lb. milk, 581.3 lb. butterfat. During the time of making this record she was milked twice a day.

"One step won't take you very far,
You've got to keep on walking;
One word don't tell folks who you are,
You've got to keep on talking.
One inch won't make you very tall,
You've got to keep on growing;
One little ad won't do it all,
You've got to keep them going."

PRIZES AT BLOOMINGDALE

The Bloomingdale Herd showed a few head at a three-day fair held at Far Hills, New Jersey, for the benefit of the Somerset Hills Visiting Nurse Association. The Somerset County Holstein Breeders' Association also exhibited. Bloomingdale won the senior and grand championships for females with Loira Pontiac Beets and the junior championship with Bloomingdale Segis Fayne. J. I. Stryker, of Millstone, had the senior and grand champion bull, Sir Model Alcartra Fayne and the Somerset Breeders' Association had the first prize aged herd. The fair is reported as being the most successful ever held, not only in financial returns but also in the interest shown in the exhibits. The famous Jersey breeders, W. R. Spann & Sons exhibited and took five of the six championships in that breed. Fifty-seven Guernseys were shown.

GREAT WORK AT DIXON

Sonoma Johanna Champion, owned by Sexauer and Son of Belvidere, Ill., is making a great record at the Dixon Testing Plant and those in charge are counting on her reaching 1,100 lb. or 1,150 lb. of butter in her year test. She averaged 100 lb. milk a day for three months.

When the testing plant started operations there were only six cows in the state that had made year records of a thousand pounds of butter. There are now fifty-nine milkers being tested at Dixon and barring accidents, it is believed that at least sixteen have a fine chance of exceeding the thousand pound mark before their year is up.

OHIO PRODUCER AND SHOW COW

Century Queen Korndyke was the champion cow at the Mahoning County Fair and is also a real producer as a recent report from the Ohio State University shows that Century Queen Korndyke led the 11,500 cows enrolled in the 37 cow testing associations of Ohio during July by producing 2,629 lb. milk and 80 lb. of butter fat. Queen is owned by C. E. Bowman & Sons, of Berlin Center.

The second cow on the list is Babe, a great Holstein on the P. J. Fay farm in Huron County with 1,798 lb. milk and 76 lb. of butter fat.

U-COP-CO SPECIAL STEAM BONE FINERL MEAL — FOR — CATTLE

"Greatest Feed Known to Correct Mineral Deficiencies"

U-Cop-Co Special Steam Bone Mineral Meal: A specially prepared product for the dairy cow, high in Calcium and Phosphorous content. Increases milk flow where yield is limited by inadequate mineral supply, insures longer production period; helps produce better calves; helps prevent and correct abortion; improves health and general condition of breeding stock. **Order direct from this ad today.** Price in 125 lb. sacks F. DRINK MILK, DON'T EAT COWS

Phone again! Can't they give a fellow time to eat? Hel-O! My day is full; sorry I cannot help you thresh tomorrow. Must help refill silo at Barneys in the morning. Before that I take apples to mill for cider, so Mattie and Granny Mathews, that kind old soul, can boil apple butter; but first I must milk 12 cows, Mattie just cannot help out the next few days,—yes, cleaning house,—told her at noon—wish we could live in a tent until the fall work is done, then I would have time to help with that cleaning. You bet, the youngsters were noisy about that lecture on milk for tomorrow night at their school. We'll all be there,—yes, the tester will demonstrate. Bill (the herdsman) says this week we'll grab a few extra hours at the beginning of the day. He has Big Ben set for 3:30 in the morning. Yes, too much work, and extra farm help almost a thing of the past. Mattie agreed to have breakfast at 5 o'clock, Bill will be at the village with the truck to finish that car of fertilizer; at eight he goes after that discing job with the Fordson on high. He will do the chores at noon, yes, a lot of extra work getting those cattle and hogs looking good enough to beat the others—you know. Hel-O! Yes, fine.

The crate is ready and at 2:30 p. m. Bill will slide that $1,200 calf off the truck onto the train to start it on that thousand-mile ride. You know, I sold that little boy too soon, just read yesterday that his full brother, a year older, sold for $2,800 since their granddam (Oh! I can't speak her name), a real Holstein, milked 802.4 lb. milk, testing 3.7% in a week. Well, you know the yearly record of my cow, the mother.

I must pick apples as soon as we finish silo-filling at Barneys. Car is in now. Yes, I have a few pickers for this week but we must load before five-thirty Thursday afternoon, and that day I truck them to the car, for Bill washed his flivver and will drive 100 miles to the State Fair. Dad said, "He farmed the old home place and never even had time to go to the county fair, just six miles by wagon, and now the hired man goes 100 miles away." I said that is all right, I am going to pay Bill's way to the National Dairy Show next year, he likes to see and milk Holsteins that produce 75 to 100 pounds of milk daily. Say, but dad got sore. Ha! ha! You know that little red cow that weighed 840 lb., the one he raised and talked about? Bill calls those kind ice cream cows, for they carry their udders in the shade. When she was fresh she milked two and one-half gallons daily, and made almost 9 pounds of butter in a week. Yes, I often wonder why people grow such runts of cows, they must milk two to sell enough milk to buy feed for one. Say, they are worse than tomatoes; you know I don't like them, but even tomatoes hang around only a few months, then lay down and die. Some say scrub cows are only good for the sausage factory. You know old Mike, across the valley? Well, he will tell you better, he says they are better living than dead; indeed, he and Bill almost had a fight on that issue. You know I half believe the old gent is right. The last years Mike was railroading he carried his meals all the time and ate bologna freely. Oh! how that poor, steady, old engineer was crippled with what he calls "rumetiz."

Politicians talk about saving the good old U. S. A. They better pick up a new slogan, folks are sick of the term "graft." Some day, someone will be smart enough to advocate, "For your stomach's sake, drink a pint of milk daily, but do not eat cow."

Waynesboro, Pa. R. S. Heisey (*Tester*).

KELLEY AND THE BULL

John M. Kelley, vice-president of the Holstein-Friesian Association of America, is speaking at fairs in the Central West on advertising dairy products and incidentally is getting himself and his herd considerable advertising.

An exhibit from the Kelley herd was seen at the Minnesota State Fair, headed by the herd bull, King Jess Homestead De Kol. The animal became a little excited in the show ring and the spectators scattered. His owner is quoted as telling that "King is so mean that every time he bellows a hired man gets scared and quits," and that "he has to be thrown every few days to take some of the meanness out of him." We have a suspicion that Kelley was "throwing a little bull" about that time.

NOT GUILTY

Mickey Flannigan came home one day sniffling.

"Ye got licked!" exclaimed his mother, with conviction.

"Naw, I didn't neither, maw," Mickey retorted. "But the doctor was at our school to-day tryin' to find out if there was anything the matter with any of us, an' he says I got ad'noids."

"Ad'noids? What's them?" Mrs. Flannigan demanded.

"They're things in our head, maw, what has to be took out," said Mickey in a doleful tone.

"He's a liar," Mrs. Flannigan cried hotly, "an' it's me that isn't afraid to tell 'im so. I fine-comb your head iv'ry Sattaday night, an' it's never a ad'noid kin I find."

WEATHER AND THE FAT TEST

T. W. Gullickson of the Minnesota Division of Dairy Husbandry has been studying the effect of atmospheric conditions upon milk production at the University Farm.

He studied the production records of 553 advanced registry Holstein cows kept by the University; 764 lactation periods of advanced registry Holsteins of other breeders in the state; 125 Register of Merit Jersey records made in Minnesota; and lactation periods of 1,318 advanced registry Guernseys in various sections of the United States. Then he studied detailed reports of daily weather conditions during each period as given in the records of the weather bureau.

By careful comparison of daily milk records with daily weather statistics he found that when the temperature goes up, the fat content goes down, so that on hot days the fat test is lower than on cool days. Humidity or the moisture in the air showed a slight effect, causing a lowered fat test when high. But each alone had a comparatively small effect until combined when a decided difference resulted from high humidity and high temperature, characteristic of June, July and August weather.

Averages of the whole lot of 2,760 cows showed a low temperature—low humidity combination to give a fat test of 4.490 per cent; a high temperature—low humidity combination, 4.409; low temperature—high humidity, 4.437; high temperature—high humidity, 4,298.

There was very little change during the winter months because cows are protected from outside weather influences during that season.

FARNERHOLM SHOWING

Maud Canary Jewel Fayne, No. 655867, owned by John Farner, of Colfax, Wis., had been advertising her herd by winning honors at the fairs this fall. She was the first prize cow and champion female at the Dunn County Fair held at Menomonie, and won the highest honors at the local community fair early in September. She was purchased for Mr. Farner by M. O. Fruvog, of the Bank of Colfax, early in the year 1921, and comes from a family of show ring winners. This is the first time that any member of the Farnerholm herd has ever been shown outside of the local community fairs and its owner is gratified at his success. A son of this cow won third prize in the calf class, and the Farnerholm herdsire was third in the aged class.

FLYING BLACKBERRIES

He sat at the lunch counter of the small town restaurant. He finished his sandwich and the glass of milk. Then pointing to a pie back of the counter, he said:

"I'll have a slice of that blackberry pie."

"'Tain't blackberry," said the waitress. And then, as she "shooed" the flies with a wave of her arm: "It's custard."

IN HARDIN COUNTY, IOWA

The boys and girls of Hardin County, Iowa, are going to have a purebred Holstein Heifer Club this fall if present plans go through. The club will be under the supervision of County Agent, M. E. Olson. Two plans are under consideration, one is that the boys get springers, the other that they start with young calves.

During September 304 cows were tested in the Hardin County Association. Six cows exceeded 50 lb. butterfat and 27 gave more than 40 lb. The Holstein herd of Roy N. Finster, of Eldora, headed the list with an average of 41.5 lb. butterfat. The herd of Mrs. Fannie Emeny, also of Eldora, was second with 38.4 lb. fat. The Holstein herd of W. F. McCord, of Iowa Falls, was third with an average of 35 lb. butterfat and had the highest cow for the month, she producing 1,923 lb. milk and 86.5 lb. butterfat.

HARD ON PENNSYLVANIA COWS

The crop report issued by the Bureau of Statistics, Pennsylvania Department of Agriculture says that the unusual drought affected late maturing crops adversely but none so severely as pasture which on October 1st was rated at 71% normal throughout the state. The average condition in the northern tier counties was 85%, in the southern tier counties 66%, in the counties bordering the Delaware River 86% and the counties bordering on Ohio 75%. The pasturage was so short that in many places it was necessary for the farmers to put their cattle on winter rations and livestock will not go into winter quarters in as good condition as in recent years. The pasturage a year ago was rated at 93% of normal and two years ago as 101%.

June 4—Mentor, Ohio, Pinery Farms, Annual Sale.

WATERTOWN SALE CALLED OFF

The sale scheduled to be held at Watertown, November 17th, under the auspices of the New York Holstein-Friesian Association has been called off. The breeders of northern New York do not at the present time have a surplus of cattle that are in the right period of lactation and in good condition as regards to flesh, reports Secretary E. R. Zimmer.

PENNINGTON COUNTY SALE

The Holstein sale of the Pennington County Breeders' Association was held at the fair grounds, Thief River Falls, Minn., October 2d, and was a success although it was the first sale conducted under the auspices of the local corporation. Thirty-five animals, grades and purebreds brought nearly $4,000. The sum of $2,587 was obtained for 18 purebreds, 8 heifers, 6 bulls, and 4 cows. The seventeen grades brought $850, an average of $50 per head. The highest price was $300 which Hans Anton of Thief River Falls paid for a purebred cow while Waldie Christensen also of Thief River Falls gave $250 for one of the heifers.

THE BELL FARM SALE

The animals sold in the auction at the Bell Farm, Coraopolis, Pa., October 17th, during the Field Day of the Allegheny County Breeders, report of which is given in another column, brought for the eleven head.

The purchasers and the prices were as follows:

Dutchland Königen Cornucopia, 4 yrs., F. H. McDowell, Grove City, Pa.	$300
Bell Farm Patricia, 3 yrs., Senator Flynn	500
Bell Farm Princess, 8 mo., M. J. Agan, Cheswick, Pa.	225
Bell Farm Terra, 1yr., E. G. Bowles, Grove City, Pa.	225
King Retta Bonheur, 5 mo., J. H. Silvis, Greensburg, Pa.	145
Bell Farm Kayewood Bonheur, 3 mo., J. L. Vogel, Leesburg, Pa.	70
King Bonheur Finderne, 3 mo., A. W. Malivey	90
King Wachusett Bonheur, J. O. Seever, Freeport	75
King Mabel Pontiac Sylvia, 6 mo., Engel Bros., Cannonsburg, Pa.	400
Joe Oak Colantha Fobes, 8 mo., W. H. Glass, Balinger	170
Bell Farm Martha, 1 yr., F. B. Chapin	205

THE BRISTOL DISPERSAL

The F. J. Bristol & Sons herd was sold at public auction at Fond du Lac, Wis., on October 9th. Fifty-five head of cattle brought $6,995. The top price was $285, obtained for King Model Parsons, a 31-lb. bull and one of the herdsires. He was purchased by Fred Titel of Plymouth. The auctioneers were Kelly, Mack and Pohlman.

Animals bringing $200 or more with names and addresses of their purchasers are:

King Model Parsons, Fred Titel, Plymouth	$285
Uneeda Korndyke Jeanette, C. L. Finder & Son, Van Dyne	200
Uneeda Korndyke Jessica, W. I. Goodland, Racine	240
Uneeda Korndyke Jessica, W. I. Undercliff Farms	240
Uneeda Korndyke Karo, T. R. McGrath, Green Bay	200
Uneeda Korndyke Joan, W. I. W. Goodland	250
Adventure Lass 2d, E. Sein, Soldiers' Grove	255

WEST MICHIGAN BREEDERS' SALE

The number of young cattle in the sale of the West Michigan Holstein Breeders' Association held at Grand Rapids, on October 18th, was largely responsible for the low average which was $113.05 for sixty-seven head, a total of $7,675. The sale was held in the main building of the West Virginia State Fair Association and was well attended. The top price, $350, was received for two animals, the yearling bull King Joh Hengerveld and the six-months-old calf, Bull Run Nudine. Martin Leach of Greenville purchased the youngster while the older animal went to A. D. Miller of Woodland.

Animals bringing $200 or more with names and addresses of their purchasers are:

Consigned by H. E. Rising, Woodland, Mich.	
Josie De Kol Segis, 5 yrs., H. A. Frick, Kent City	$275
Jemima Hengerveld Beets De Kol, 3 yrs., E. A. Rasmussen, Sheridan	205
King Joh Hengerveld, 1 yr., A. D. Miller, Woodland	350
Consigned by Harold Barnum, Woodland.	
Vonette Colantha Korndyke, 2 yrs., T. J. Blanchard, Cedar Spring	230
Consigned by James B. Garnett, Elm Hall.	
Goldmine Korndyke Fayne, 3 yrs., E. P. Whitney, Grand Rapids	260
Consigned by L. J. Mathews, Hastings.	
Albert De Kol Shadeland, 2 yrs., M. L. Fritz, Nunica	250
Consigned by M. Ossenwarde, Ada.	
Bull Run Nudine, 6 mo., Martin Leach, Greenville	350

MARINETTE ASYLUM SALE

There was a small crowd at the sale held at the Marinette County Asylum. Peshtigo, Wis., August 10th. The cows sold fairly well but there was very little demand for young stock. The highest price was $310 which was paid by Frank Fancette, of Peshtigo for the four-year-old Pietertje Walker Lyons, a daughter of Judge Walker Lyons who was by King Lyons from Isabella Walker a daughter of King Walker Segis and the 30-lb. cow, Isabelle Hengerveld. The auctioneer was R. E. Haeger and R. M. Smith, superintendent of the Asylum was sales manager.

Fourteen animals were sold for $2,265, the twelve females averaging exactly $180 and the bull calves bringing $65 and $40 respectively.

Names of the animals sold with prices paid and the names and addresses of their purchasers are:

Johanna Segis Hengerveld Walker, 3 yrs., Carl Wedin, Ingallston, Mich.	$175
Kitty Segis Excell Lyons, 3 yrs., Frank Fancette, Peshtigo, Wis.	250
Agnes Segis Johanna Excell, 6 yrs., Frank Fancette	250
Maudaline Rigtje Careme, 5 yrs., Dr. J. R. Minahan, Green Bay, Wis.	80
Ruth Kappijne Segis Walker, 4 yrs., Frank Fancette	235
Clearland Bessie De Kol, Frank Fancette	170
Florence Segis Hengerveld, 10 yrs., C. C. Marcusen, Denmark, Wis.	215
Pietertje Walker Lyons, 4 yrs., Frank Fancette	310
Penopa Johanna Cornucopia, 2 yrs., Augustine Bros., Pound, Wis.	110
Miss Segis Walker Lyons 2d, 2 yrs., Carl Wedin	150
Pietertje Walker Segis Lyons, 2 yrs., F. Marcusen, Denmark, Wis.	150
Agnes Segis Lyons, 1 yr., Dr. J. R. Minahan	65
Joh Lyons Segis Clothilde, 5 mo., John Alswager, Peshtigo, Wis.	65
Joh Segis King Hengerveld, 4 mo., Aug. Kriedeman, Peshtigo, Wis.	40

CHESTNUT HILL SALE

The Chestnut Hill Farm Sale was held at the home farm at Gibsonia, Pa. on October 18th. This was a surplus sale as there were more cattle than there was housing room in the barns. There were fifty-one animals sold for $7,645; twenty-one of these were bulls which averaged $117.14 and thirty were females with an average of $172.83.

The top price was $475 obtained for Dulcevista Abbekerk Mayo Ormsby, a nice showy bull, nearly three years old, from Pansy Mayo Ormsby 31.4 lb. butter, 601.7 lb. milk in seven days. This bull had been used as a junior herdsire, and was purchased by Chas. W. Huff of Pittsburgh.. J. G. Kerrick of Towanda, paid $450 for a ten month's old son of Sir Echo Sylvia Johanna and the 31.23 lb. cow, Frenesta Creole Pontiac, Pennsylvania state champion senior four-year-old for seven- and thirty-day milk production. The top price for females was $305 which H. M. Ryder of Wilkinsburg, paid for Dulcevista Keyes Korndyke, a four-year-old granddaughter of Spring Farm King Pontiac 6th from a 20-lb. granddaughter of Pontiac Korndyke. J. E. Reed of Pittsburgh paid $300 for the three-year-old Roycroft Colantha Echo and also for the eight-year-old Maple Grove Helena 2d. Alex. Martin also of Pittsburgh paid $300 for the two-year-old heifer, Dulcevista Sylvia Cornucopia a daughter of the senior herdsire Sir Echo Sylvia Johanna.

The principal buyers were Mr. Kerrick and Mr. Reed, the former taking a number of good young bulls and heifers while the latter purchased some of the best females in the sale.

George W. Baxter, of Elmira, New York, was the auctioneer and the pedigrees were explained by John W. Quivey, of Houston, Pa., a veteran breeder who said that it would be thirty years this coming November since he purchased his first purebred Holstein.

Animals bringing $200 or more with names and addresses of their purchasers are:

MINERALS MORE IMPORTANT IN WINTER FEEDING

After the cows get off pasture and are fed in the barn it is all the more important that they be supplied with extra minerals. Pasture crops and feeds contain more minerals than grain feeds. It takes a lot of minerals to make milk and especially are a lot more required where the cow is also carrying a calf.

Cows have been developed to produce milk in large quantities and this capacity is developed so strongly in many individuals that they will rob their own bodies of minerals to supply the minerals needed for milk production and for reproduction. No properly fed cows will ever have to draw minerals from their own bones to supply the minerals necessary for milk production and for other physiological activities.

Nothing has been found superior to special steam bone meal for supplying extra minerals needed by dairy cows. This is a special bone meal made purposely for live stock feeding. The mineral elements are all available and there is no chance of this bone meal being the cause of bringing disease into the herd. It has been successfully fed now for a number of years.—*P. V. Ewing.*

ANOTHER WORLD RECORD

Two splendid records have recently been completed in the herd owned by LeGrand Gleim of Arlington, Iowa. Wildare Pontiac La Belle Pride No. 341220, a daughter of Pledge De Kol Butter Boy 5th and Wildare Pontiac La Belle completed a year record as a five-year-old with 933.3 lb. butter, 22,440.2 lb. milk. The grand old cow, Byrd Aaggie made 1,076.94 lb. butter, 22,098.6 lb. milk in her year and she was nearly twelve years old when she started this record. She is a daughter of Aaggie Hengerveld Sir Longfield and of the famous Aaggie Perfection 2d, the first cow in the world to produce 1,000 lb. butter in a year as a twelve-year-old. As far as we know the world championship for age can be claimed for Byrd Aaggie and her dam for we do not recall any other instance of a mother and daughter each making 1,000 lb. butter in a year each cow being above eleven years old at the time of starting the record. Both animals were bred in the Gleim herd and are backed by animals whose names are associated with that well-known establisnment.

FIRST TODD COUNTY BREEDERS' SALE

The first Annual Guaranteed Consignment Sale under the auspices of the Todd County Holstein Breeders' Association was held on the Fair Grounds, Long Prairie, Minn. and was well attended. Forty-one animals brought $5,775, an average of $140.85. Prices were not at all high but the sale was considered successful by the management.

The top price was $355 obtained for Roxie Segis Success, a daughter of King Segis De Kol Beets, consigned by P. J. Nelson of Clarissa, Minn. Her purchaser was Ola Larson of Burtrum, Minn., who also paid $350 for Fannie Cherry De Kol Pontiac, also consigned from the Nelson herd.

Animals bringing $150 or more with names and addresses of their purchasers are:

	Consigned by Pete Daily, Long Prairie, Minn.

PREFER INDIVIDUALITY TO RECORDS

A partial disregard for test records and appreciation of individuality was shown by the veteran Oregon breeder, Max Arp of Eugene and by Robert F. Warren of Forest Grove, an ex-1921 Oregon Agricultural College student, at the W. Martin dispersal sale held near Forest Grove, Oregon, September 15th. These two men were jointly responsible for the top prices being higher than has been known in the northwest for several years.

Both men bid on Aaggie Colantha Gerben, the junior herdsire and on Lady Sumas Valley Tobe Pontiac, a four-year-old daughter of Chimacum Spring Farm King Pontiac from a 22,000 lb. year record daughter of Sir Korndyke Pietertje Hartog. The heifer had an 18-lb. seven-day record made as a two-year-old but she was a show cow while Aaggie Colantha Gerben was not only a show bull but had calves that demonstrated that he was transmitting these show qualities although he had very little record backing.

The result was that Arp paid $1,000 for the bull and Warren $830 for the cow and then he bought a son of this cow, born last October, sired by Aaggie Colantha Gerben for $305.

Buyers were present from Chehalis, Wash.; from the Williamette valley; and from other parts of the state but Arp was the heaviest purchaser buying four head for $1,960 while Warren paid $1,540 for three. The average of the sale was $290 for twenty head; fifteen females averaged $270 and five bulls brought $309 each. There was almost no demand for defective cows or very young bull calves, while the six-year-old senior herdsire, Hollywood King Pontiac Fayne, with a record on every dam in his pedigree went for $60 to W. H. Hathorn of Laurel, Washington.

Animals bringing $200 or more with names and addresses of their purchasers are:

Colusa Belle Korndyke, 7 yrs., Max Arp	285
Jantilna Colantha Johanna, 9 yrs., Robert Warren, Forest Grove	$405
Aaggie Colantha Gerben, 2 yrs., Max Arp, Eugene	1,000
Model Ann Beets, 6 yrs., Max Arp	400
Bessie De Kol Wapato Burke, 5 yrs., J. P. Vandecoevering, Forest Grove	210
Hollywood Segis Sita De Kol, 4 yrs., Chas. M. Scott, Hillsboro	355
Lady Sumas Valley Tobe Pontiac, 4 yrs., Robert F. Warren	830
Heifer, 1 yr., F. R. Beals, Tillamook	300
Colantha Carlotta Hengerveld, 8 mo., F. R. Beals	300
Princess Pontiac Laurel, 4 yrs., Max Arp	275
Bull calf, 1 yr., Robert F. Warren	305

BELL PICKS THE WINNERS

A transaction likely to be of considerable importance to the Holstein industry was negotiated at the time of the National Dairy Exposition when the Bell Farm purchased, previous to the day of judging and unknown to anyone aside from the parties involved, two young bulls that were later placed first in their respective classes, one of them becoming the junior champion male of the show. The fact that the animals have been sold did not become generally known until the bull classes had all been judged.

The older of the two bulls is Elmo View Tidy Aaggie Hengerveld a name which we understand will be changed. He headed a class of bulls, many of which had been winners during the past show season. He is a paternal brother to Dutchland Aaggie Tidy Prince 2d the grand champion of this year's show, while his dam, who has a record of 1,030 lb. butter made in 334 days, is a sister to Nina May Pietertje Korndyke, the winner of the aged cow class. He is a grandson of the famous old show bull, Aaggie Cornucopia Johanna Lad and one of his graddams is Tidy Pauline De Kol whose son sired Susie Abbekerk Colantha, the famous "White Susie" of Bell Farm.

The younger bull, Sir Romeo Mildred Colantha, is just a ten-month's-old calf. His sire, Sir Romeo Fayne, is a prize winner and a son of "White Susie" while his dam Mildred Colantha, is a 29 lb. show cow and was sired by a ⅞ brother to "White Susie."

The purchase of these bulls was not made until Mr. Bell had made a very careful search for animals strong in the characteristics that he wanted, in his efforts to breed better cattle. The animals carry blood lines already represented at Bell Farm and at the same time allow of an outcross in breeding. At the present time practically 90% of the herd are descendants of Mabel Segis Korndyke and two of her grandsons, Echo King Sylvia and King Mabel Segis Korndyke, are now in use in the herd. Their daughters are being crossed with Bell Farm King Sylvia, a son of "White Susie." The new purchases will enable the work started in the Bell Herd to be carried on to an even greater degree of intensification and excellence.

With the three-year-old bull Mr. Bell purchased two of his daughters, high-class individuals which it is understood, are a fair example of his get.

During this show the announcement was made that Echoland Farm, owned by Dr. Boeckmann has purchased a ⅞ brother of the three-year-old bull. The dam of this bull is Nina May Korndyke Pietertje, the first prize cow in the aged class. Nina was shown as the property of Echoland Farm.

A GRANDSON OF
King Segis Pontiac Konigen
FOR $100

Sire's four nearest dams average 31.38 lb. butter in seven days. Calf born March 27, 1922, well grown, individuality right. Send for pedigree and photo. Can spare a few heifer calves at $100 each.

Albert F. Kilts, Fort Plain, N. Y., R. D. 6

DO YOU NEED
HOLSTEINS?

Northern Pennsylvania is the home of large, healthy, heavy-milking herds whose product is shipped to New York City. Good authorities claim that the average production of its dairy cows are not exceeded in any other territory in the entire United States while individuality is of the best.

I know this district and its animals and can fill your requirements at a reasonable price.

D. B. YORK
Brookside Stock Farm, Troy, Pa.

CAME FROM OUTSIDE

L. H. Brown, of Waupun, Wis., took some of his good Holsteins to the Calumet County Fair and got his share of the prizes, his fifteen head winning seven firsts, three seconds, and two fourths. His bull, Bluebird Polkadot Butterboy, was grand champion.

OHIO VALLEY BREEDERS' SALE

Cool weather unfavorably influenced the attendance at the Ohio Valley Holstein Breeders' Association First Consignment Sale which was held on the State Fair Grounds at Wheeling, West Virginia, October 19th. The prices were not at all high. As was expected the top price was obtained for Bridess De Kol Wayne Hengerveld, the champion cow of the 1922 West Virginia State Fair. She was consigned by W. G. McClain & Sons, Bellaire, Ohio, and was struck off for $490 to H. S. Sands. The bid of $460 made by Edward Wagner, of Wheeling, obtained Maplecrest De Kol Beauty, a daughter of Pontiac Aaggie Korndyke from a 21-lb. three-year-old daughter of Friend Hengerveld De Kol Butter Boy. F. W. Dorsey of West Alexander, Pa., purchased a number of good ones and bid on quite a number of the others. The auctioneer and sales manager was Colonel T. H. McColloch, and the buyers were from Ohio, Pennsylvania and West Virginia.

The forty-four animals brought $7,045, an average of $160.11. As this was a sale of animals tuberculin tested and sold subject to a 60-day retest, the price cannot be considered at all high.

The animals bringing $200 or more with names and addresses of their purchasers are:

Consigned by Homeview Farms, Short Creek, W. Va.

HARDY SALE HAS BIG AVERAGE

The handsome average of $478.33 was made by the thirty-nine animals sold in the Hardy sale at Brockville, Ontario. The total price was $18,655. The sale was favored by the presence of R. Frizell of Penrith, New South Wales, who purchased five animals including Eco-Sylv Belle, the former junior two-year-old champion and the first animal of her age to make 31 lb. butter in a week. Mr. Frizell paid $1,000 for her and reached $500 on two other animals. Mr. John Harvey of Frelighsburg, Ont., took nine back to his province, being the largest individual buyer. The world champion two-year-old for butter production, Echo Sylvia Laura, consigned by Wallace Wright of Brockville, was purchased by Mr. Harvey for $1,350. New York, Pennsylvania and Michigan, as well as Quebec and Ontario, were represented among the buyers. The auctioneers were Kelly and Haeger with S. T. Wood as pedigree man.

Animals bringing $200 or more with names and addresses of their purchasers are:

Eco-Sylv Rauwerd, Flock Brewing Co.	$600
Burnside Korndyke Riverdale, R. Frizell, Penrith, N. S. W.	500

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 743.)

ANOTHER BIG CALIFORNIA SALE AVERAGE

The well-known herd of Carl Ray was dispersed on the Raynora Ranch, Lankershim, California, September 28th. The animals were in good shape and condition, thirty-one had A. R. O. records, five above 30 lb. and three were heifers not yet in milk. The price realized was $14,900 for thirty-six head, an average of $413.88.

The top price was $1,600 which Fred Hartsook of Lankershim bid for Victoria Brunaro Johanna, a cow with a record of 31.26 lb. butter from 625 lb. milk. She was in semi-official test and in ninety-two days produced 304 lb. butter from 9,144 lb. milk. Two days before the sale she gave 120 lb. milk in a day. She is a daughter of Karel Vale Cornucopia while her dam is an untested daughter of Canary Johanna Victoria, the 1911 California State Fair Grand Champion.

Four figures were reached for another animal, Rosamaines Bonita Ormsby, a three-year-old, D. L. Wright & Son of Pasadena paying $1,000 for her. She has a seven-day butter record of 32.36 lb. made as a junior three-year-old, is a daughter of King Pontiac Netherland Segis 3d and is from Stanislaus Princess Cleopatra, a twice 30-lb. cow. She too, was on semi-official test and in 122 days had produced 319 lb. butter and 7,896 lb. milk.

The sale was conducted by the California Breeders' Sale and Pedigree Company with C. L. Hughes as sale manager.

The animals bringing $200 or more with names and addresses of their purchasers and the prices paid are as follows:

Purchased by Fred Hartsook, Lankershim, Cal.

GOVERNOR HART AND HOLSTEINS

In the state of Washington, they are telling that Governor L. T. Hart and State Treasurer C. L. Babcock traveled ninety miles just to see the state owned herd shown at the Washington State Fair. The Governor had a great deal to do with the selection of the Steilacoom herd and is deeply gratified over the splendid showing the representatives of this herd have made at the fairs this fall.

At Yakima, the second prize heifer in the junior yearling class was Steilacoom Bonnie Ormsby Lass. Steilacoom Bonnie Ormsby Hengerveld and Steilacoom Blossom Zanke Mercedes were first and second in the senior heifer calf class and Steilacoom Jewel Pontiac Korndyke won first in the junior heifer calf class. The State Hospital had the first prize calf herd, third prize produce of cow and second prize young herd, competing with such great breeding establishments as that of Wm. Bishop, the State College of Washington and Carnation Stock Farms. The judge was Prof. Geo. E. Morton, Chief of the Animal Husbandry Department of the Colorado State College.

DECEIVERS EVER

"All men are liars," said the pretty girl, and burst into tears.

"But, my dear," said her friend, you mustn't be such a cynic. There are exceptions."

"Oh, very likely," said the pretty girl, "but all the really nice men are liars."

SHIPPED AND SOLD

A carload of Holsteins were shipped from the state of Washington to the Rhoades Sale Pavilion at Hynes, Cal., and when sold averaged $174.25. They were all tuberculin tested and sold subject to a 60-day retest.

STATE RECORD MADE IN GLEIM HERD

Another great record is reported from the Gleim herd, Lady Nicolo Pontiac as an eight-year-old completing a ten month's record of 847.24 lb. butter from 20,782.5 lb. milk. We believe this is the state record for ten month's butter production, the previous record holder being Johanna Rue Hengerveld with 838.08 lb. butter.

The year records of Wildare Pontiac LaBelle Pride, 933.3 lb. butter and Byrd Aaggie of 1,076.94 lb. butter have already been reported. These two cows each exceeded 22,000 lb. milk in the year while Lady crowds 21,000 lb. in ten months. The new champion, although not born in the Gleim herd, is of breeding long associated with that name as her sire, King Segis Pontiac Nicolo, was bred by Harry W. Gleim who owns the new champion, and her dam, Lady Belle Hengerveld is a maternal sister to Wildare Pontiac LaBelle, the dam of Wildare Pontiac LaBelle Pride. All three of these records were made in the herd of LeGrand Gleim, Arlington, Iowa.

AIMS TO REPEAT

Fobes Homestead Rauwerd, the champion cow of Missouri made a record of 21,683.6 lb. milk, 1,019.39 lb. butter in a year, as a four-year-old and was the first Missouri cow to make 1,000 lb. butter in a year. During July the last month of her years work, she gave 1,714.4 lb. milk, 64.29 lb. butter. She freshened again on the 23d of September and it is the intention to give her a seven-day record and then again run her for a year. The first day, she was in official test she produced 86 lb. milk, 3½ lb. butterfat. She has a daughter Fobes America Homestead that is on year test at the present time as a two-year-old and is making a great showing. These two animals are owned by S. C. Lindsey, Morgan Heights, Carthage, Missouri.

Plum Farm Spring Copia

Is Siring Dandy Individuals

You know the cows in my herd are producers and that my herd sire is backed by big producing strains and is from a 32.73 lb. cow that averaged 98 lb. milk a day.

A son or daughter of this bull would be a valuable addition to your own good herd.

CONNECTICUT MILK RECORD BROKEN

Beaver Dam Sarah, No. 456385, of the City of Bridgeport herd, has made a new Connecticut milk record by producing 20,838.9 lb. milk in a year as a junior three-year-old. She is a daughter of Sir Prilly Segis, and her dam is Shady Maple King Pontiac Sarah, who has a seven-day official record of 23.65 lb. butter, 416.8 lb. milk made as a four-year-old. Sarah displaces Braeside Amarilla Colantha, of the Gardiner Hall, Jr., herd with 16,939.6 lb. milk, or a gain of nearly 4,000 lb. This is not Sarah's first bid for fame, for soon after freshening as a junior three-year-old she produced 611 lb. milk in seven days, which is the Connecticut record for her class in that division.

As most of our readers know, the City of Bridgeport herd is owned by the Department of Public Charities of Bridgeport, Conn., and is under the superintendency of Angus P. Thorne, who is president of the Connecticut Holstein Breeders' Association.

FIRST HEIFER A CHAMPION

The first heifer calf born on the Murphy farm, Door County, Wis., was named Adair Queen Korndyke, and she by producing 20,957.3 lb. milk and 1,041.1 lb. butter in a year recently became the champion of her native state in the senior two-year-old class. She displaces Wisconsin Pride 3d, of the Erickson herd, with 1,059 lb. butter.

The Erickson herd recently lost the championship in the junior four-year-old class, Aaggie Mercedes Piebe, with 1,008.54 lb. butter, being surpassed by Hengerveld Pontiac Grace, of the Murphy herd, with 23,888.1 lb. milk and 1,068.5 lb. butter. This animal was purchased when a calf and has been developed at the Murphy farms, which are owned by Frank E. and E. N. Murphy, of Green Bay.

CLEANING UP RIGHT

Fred Hartsook, of Lankershim, California, made a new record for the California State Fair when he exhibited his purebred Holsteins in the competition open to dairy cows of all breeds. He showed ten cows of which seven had year records of a thousand pounds or more of butter. In the county cow testing exhibit, open to the state, he entered four cows, and took the first four places, competing against all dairy breeds. In the five-cows-in-milk-class, the Hartsook entries carried off first and second places, which is said to be the first instance of this kind at any high-class fair either in the United States or Canada.

The Hartsook winnings consisted of 17 first out of the 23 classes entered. The cash winnings is better than $1,000, and is 40% more than was ever paid to one Holstein exhibitor in California State Fair history. Yet the competition was "red hot" and there were nineteen head more shown this year than ever before.

SUGGESTED GRAIN RATIONS

In the September news letter of the New York State Dairy Improvement Associations the following grain mixtures are suggested for fall and winter feeding:

With low grade hay and corn silage:

400 lb. wheat bran.
200 " ground oats.
200 " hominy.
600 " gluten feed.
400 " cottonseed meal.
200 " oil meal.

A somewhat simpler mixture having about the same amount of protein with less variety would be:

500 lb. bran.
500 " hominy.
500 " gluten feed.
500 " cottonseed meal.

With good mixed hay containing at least one-half clover a mixture of 50% high protein and 50% low protein feeds would be in order. We suggest:

500 lb. bran.
300 " hominy.
200 " ground oats.
500 " gluten feed.
300 " cottonseed meal.
200 " oil meal.

With straight clover or straight alfalfa hay, the amount of high protein feeds in the mixture can be reduced to 40%. Under these circumstances we would suggest:

600 lb. bran.
200 " ground oats.
400 " hominy.
400 " gluten feed.
200 " cottonseed meal.
200 " oil meal.

Oats, hominy, bran and gluten are likely to be the cheapest feeds this fall. Some combination of these four feeds with a little oil meal and cottonseed is the best on which the mixture to be used should be built.

IRWIN ANIMALS FOR JAPAN

Three more animals from the herd of John B. Irwin of Minneapolis, Minn., are on their way to Japan and will be added to the herd at the Government experiment station, Toyohiramachi, Saporo.

Kiyosmi Ichikawa, director of the station with a representative of the Japanese exporting firm of Nosawa & Co. of New York City selected the animals and took a yearling bull, a two-year-old heifer and a heifer calf, which will be shipped by way of Seattle.

The bull is King Korndyke Colantha Clothilde, a prize winner at the Minnesota State Fair. The heifer calf is Miss Ormsby Johanna Maid 2d, and is backed by five generations of Irwin breeding. The heifer, Pietertje De Mar Ormsby was the first prize two-year-old at the recent Minnesota State Fair and has been bred to King Colantha Ormsby Bess.

Some five years ago Mr. Irwin sold a carload of stock for shipment to Japan and these animals did so well in the country of their adoption that they have been instrumental in making a number of other sales and bringing many visitors from that far distant country.

GOOD FOR THE BOYS

The George Junior Republic herd had an exhibit at the California State Fair this year and, despite hot competition and the greatest turnout of Holsteins ever seen at Sacramento, took one championship, one first, three third, and three fifth places. The boys of the Republic cared for the animals while at the fair under the supervision of R. A. Condee, the farm and dairy advisor. The Republic exhibit will be shown at the Los Angeles County Fair, the Riverside Fair, and the Chino Community Fair the first week of November. Last year the Republic exhibit carried off 90% of the prizes offered for Holsteins at the State Fair, but it met more and stiffer competition this year.

The paper read by the men who milk cows for a living. They are looking for cows to milk this fall and winter.

Merryall Farm Raises Good Ones

Cows that not only produce but transmit their producing capacity to their descendants, generation after generation.

The Great State College Cow

LILITH GEM KOLKLUFF

a former member of this herd, produced as a six-year-old, 22,247.1 lb. milk, 851.1 lb. butter in a year and averaged over 20,000 lb. milk, 775 lb. butter for four years.

Her daughter, DE KOL KLASSJE LILITH, produced 749.95 lb. butter in a year.

KLASSJE has a daughter, MERRYALL LILITH HENGERVELD, that made 4,300 lb. milk, 175 lb. butter in 60 days and is going strong in the year test and she, too, has a daughter that, calving at 1 year, 7 months, 20 days old, made a year record of over TWELVE THOUSAND pounds milk and nearly FIVE HUNDRED POUNDS BUTTER.

FOUR GENERATIONS of producing females show the value of Merryall cattle.

Come and see the good ones in this herd, which is headed by KING SYLVIA JOHANNA PONTIAC a brother to Carnation King Sylvia.

ASK FOR POTASH

The present conditions in the business of the farmer and in the fertilizer industry call for serious thought. Both are going through a readjustment period, with its hardships and doubts.

The farmer may well ask whether he is using the most profitable fertilizer. The fertilizer salesman may well inquire whether he is selling the kind that will do the farmer the most good, and lead to larger sales in the future.

During the war America could not get Potash, and the use of acid phosphate increased. Central Europe could not get phosphates, and the use of Potash Salts increased. Today plenty of Potash can be had at less than pre-war prices. Now is the right time to restore the balance by using more Potash in the fertilizer formulas than the average amount used before, 5 to 10 per cent.

Crops take from the soil very much more Potash than phosphoric acid. On any soil where Potash has been profitable it is not unreasonable now to use at least as much Potash as phosphoric acid. Ask the fertilizer agent for prices on this kind of goods, and rebuild your soil while Potash is cheap.

Recently it has been shown that a lack of available magnesia causes serious injury to important crops on some soils. German Kainit and Manure Salts furnish this soluble magnesia without extra cost.

Science + Training + Work = Success

The Story of a Boy and a Herd in Grant County, Wisconsin

By J. H. Lewis

GRANT County is situated in the south central part of the driftless area, in the midst of the best agricultural and dairy region of the State of Wisconsin. As this region has not been glaciated, there is an absence of the lakes and swamps that are characteristic of most of the state. The surface is not too rolling for successful agriculture but is sufficiently broken to make the region picturesque. The surface rock is Galena limestone, hence the soil is deep and very fertile. The popular proverb that a "lime country is rich country" is in accord with scientific facts. An examination of the rainfall map of Wisconsin reveals the fact that while the rainfall of the state as a whole is about thirty-two inches that of Grant County averages thirty-six inches, an important fact from a dairying standpoint. It is generally conceded that the dairy industries of Grant County, both in breeds of cattle and equipment, are second to none.

Lawrence Tracy at the age of 21. Graduate of the Normal Agricultural School, Platteville, Wis.

The University of Wisconsin realized that an agricultural school should perform a great service in Grant County, and an agricultural school was established in connection with the State Normal School at Platteville in the very heart of this rich dairy section. The faculty is made up of experts in their special lines of instruction and the young men who graduate from this Department have become educators in other schools or have made dairying their calling in life, not without signal and gratifying success.

The wonderful change worked in the type of the herds is patent to the people of this section of the state. Only a few years ago the mongrel cow reared her lowly head above the blue grass prairies and farms, but the transition from scrub to purebred has been so rapid and widespread that it affords one of the most cogent lessons in the progress and prosperity of a great people. There are now three types of dairy cows predominating in this section, Holstein, Guernsey and Jersey, in the order named.

Holstein breeders and dairymen have formed an organization known as the Grant County Holstein Association. There are about forty breeders in the membership at present and more than one hundred purebred Holstein dairy farms in the county.

Last January, the Grant County Holstein Association held its annual meeting during the Short Course held at the Normal Agricultural School. The honored guest and chief speaker at the banquet held in connection with this meeting was Lieutenant-Governor Comings, himself a dairy farmer and owner of a fine herd of purebred Holstein-Friesians. In his speech, he struck the high keynote when he declared,—"The Holstein cow is the superior of all known breeds of purebred milk cows, in that she is sturdier, more easily kept and cared for, and consumes more roughage, to the advantage of the dairy farmer, with more benefit to herself and her flow than any other type of cow."

SUNNYSIDE BEAUTY JOHANNA

100.6 lb. milk in a day, 621.2 lb. milk, 26.97 lb. butter in seven days as a senior four-year-old. One of the stars of the Tracy herd.

The proof of the speaker's conclusion is found in the rapidly accumulating herds of purebred Holstein-Friesian cattle found in Grant County.

It may be news to many of the readers of the BREEDER AND DAIRYMAN that both the Governor and

Lieutenant-Governor of Wisconsin are breeders of registered Holsteins. Governor Blaine is the John J. Blaine of the Austin-Blaine Farm Company of Boscobel, Grant County. On this farm they have a Federally accredited herd of thirty-seven purebred females and they expect to do considerable official testing this season. The first test work in this herd was completed last March, at which time a junior four-year-old made 22.3 lb. butter and 540 lb. milk in a week and a six-year-old made an official seven-day record of 27 lb. butter and over 600 lb. milk.

The senior sire of the Austin-Blaine herd is Westkoto Sir Hester Cornucopia No. 210437. His three nearest dams have seven-day records that average 35.7 lb. butter. His dam made 25 lb. butter in seven days,

BAIRDLAND SEGIS SIR PRIZE
A bull whose daughters make good in short and long time tests. Senior sire of the Tracy herd.

823 lb. in a year, as a three-year-old. Both granddams of this bull were World's record cows, one making 46 lb. butter in a week and the other making 35 lb. butter, 817 lb. milk in seven days, World's record at the time for combined milk and butter. A half interest in this bull was recently sold to H. P. Rice & Son.

The junior sire is Matador Bonerges Echo No. 348731. He is a grandson of Matador Segis Walker and is from a daughter of Avon Pontiac Echo with a record of 29 lb. butter in a week, 810 lb. in a year, as a three-year-old. The fourteen nearest dams of this bull have seven-day butter records averaging 28 lb. But this is really foreign to our story.

The Normal Agricultural College has had a great deal to do with the building of the dairy industry in Grant County. Its students have gone out on the farms and made good. Lawrence E. Tracy, a former student, fresh from school, demonstrated the value of training and education received there by his operations on the Purity Dairy Farm, near the city of Platteville, where he and his father built up a notable Holstein herd. The senior Tracy confessed the chief credit belonged to his son. We mention a few of the animals that have been developed in this herd.

Artis May Arminda De Kol as a five-year-old, made 544.2 lb. milk, 25.3 lb. butter in seven days. Purity Etta Segis, a full sister made 433.3 lb. milk, 18.58 lb. butter as a two-year-old. Another full sister is Purity Jennie Segis, 432.9 lb. milk, 19.54 lb. butter in a week as a two-year-old. Yet another full sister is Laura Esther, one of the favorites at Purity Farm. As a junior four-year-old she made in official test 599.2 lb. milk, 28.2 lb. butter in seven days. She has a 305-day record of 15,740.5 lb. milk, 651.3 lb. butter. She has two tested daughters, Purity Lottie Segis and Purity Cinderella Segis. At the age of 25 months, Lottie made 392.1 lb. milk, 18 lb. butter in a week and as a junior three-year-old increased this to 530 lb. milk, 22.7 lb. butter. At the age of 26 months, Cinderella completed an official seven-day butter record of 453.7 lb. milk, 22.7 lb. butter.

On the Purity Dairy Farm, time and distance are measured from Sunnyside Beauty Johanna. As a three-year-old this fine cow made a seven-day record of 472.5 lb. milk, 18.7 lb. butter. According to the boy the cow was off feed and refused to eat anything but a little alfalfa hay while this test was being made. At the next freshening period as a four-year-old, she made 621.2 lb. milk, 26.97 lb. butter on seven-day official test. Her highest day was 100.6 lb. Sunnyside Beauty Johanna is all her name implies, a cow of wonderful type weighing 1,800 lb. Her calves are very handsome, inheriting the individuality of their dam.

Canary Netherland Pietertje produced 98 lb. milk in a day as a mature cow and has made a seven-day record of 622.8 lb. milk, 23.85 lb. butter.

The senior sire of the Purity Farm is Bairdland Segis Sir Prize, a bull that weighs 2,250 lb. and is considered one of the greatest bulls in the state. This bull has 43 A. R. O. daughters, their records reaching 31 lb. butter and 800 lb. milk in a week and over 20,000 lb. milk and 1,000 lb. butter in a year. This bull is a grandson of King Segis and his full sister has a year

PURITY LOTTIE SEGIS
530 lb. milk, 22.7 lb. butter in seven days as a junior three-year-old. Daughter of the senior herdsire and dam of the junior herdsire at Purity Dairy Farm.

record of 20,000 lb. milk, 1,000 lb. butter. His "get" won premier honors at the Waterloo Dairy Cattle Congress in 1916. One of his grandsons was junior and grand champion at the 1918 Wisconsin State Fair.

The junior sire is Purity Ormsby Fobes I Wonder, and is a son of Sir Bess Ormsby Fobes of the famous Hollyhock Farm at Dousman, whose dam is the great Wisconsin Fobes, with 1,153 lb. butter in a year whose daughters include Wisconsin Fobes 5th, 29 lb. butter in seven days as a first calf two-year-old and former Wisconsin State champion of her class.

The Tracy junior herdsire is a grandson of Sir Pietertje Ormsby Mercedes 37th, whose daughters are making championship records and whose progeny are noted for individuality as well as producing powers.

The dam of the Tracy junior herdsire is Purity Lottie Segis mentioned above, a daughter of the senior herdsire and of Laura Esther. We may mention that when Laura Esther made her ten-months' record of nearly 16,000 lb. milk, and over 650 lb. butter she finished eleventh for milk and eighteenth for butter among all the junior four-year-olds tested during the season 1919-1920. Here is where young Tracy broke into the Hall of Holstein Cattle Fame with his herd.

At the 1920 Badger Fair at Platteville, Lawrence exhibited his herd and captured $116 in cash prizes out of a possible $132, winning nearly all the ribbons and this was before out-of-state judges so that it is evident that the Tracy herd beauties talked for themselves.

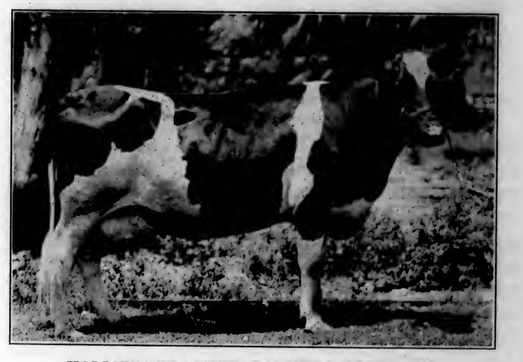
Lawrence Tracy lays particular stress upon the value of the education and training received in the agricultural department of the Normal School hard by. His endorsement of what it can and will do for the young man seeking a gainful occupation is the best recommendation the school can ask in building up its attendance.

There are other boys in Grant County whose care and management are building up wonderful Holstein herds. Clarence Kuehl, a seventeen-year-old boy of Hazel Green, a Grant County village where a cow testing association operates, produced a Holstein cow called Canary which, last June made 2,650 lb. milk, 102.3 lb. butter on thirty-day official test. In six months she has produced 9,318. lb. milk, 373 lb. butterfat in test association work. Arthur Zenz, the official tester, claims Canary is the top cow of Grant County and so far there have been no disputants.

What Tracy and Kuehl have done, others are now doing and more will do, for here is a vocation which makes for profit, good citizenship, and a peaceful and happy existence.

Considering the remarkable progress made in developing Holstein herds in Grant County in the past five years, what might not be predicted for the next five years, since those who have undertaken the breeding of Holsteins are now fairly established?

Wisconsin is making marvelous strides in developing its dairy industry, but more eminent still is the program followed by its educational forces in training men how to handle farm and dairy undertakings intelligently.



Hollywood Lilith Palmyra Abbekerk Comes Clean

THE famous Hollywood Lilith Palmyra Abbekerk, has qualified in the 305 days class by calving on October 21, 1922 or just 13½ months from her previous freshening. This freshening ratifies her senior four-year-old record of 22,245.1 lb. milk, 982.97 lb. butter in ten months, a record all the more remarkable because of having been made following the birth of twin calves. Her figures for milk and for butter have been exceeded only by one other heifer in her class since the institution of the rule which requires a second calving within fourteen months from the start of the previous lactation period. The only cow exceeding Lilith is Silda Creamelle Johanna with 23,062.21 lb. milk, 1,007.30 lb. butter in the ten months, and she is a New Hampshire heifer so that Lilith is the Pacific Coast champion of her class.

On November 8th, Lilith was again in official test in the herd of the Los Angeles County Farm, Hondo, Cal., and had already completed seven days with a butter production of over 35 lb. She is now milking at the rate of 120 lb. per day and is expected to increase her butter record.

The new seven-day record makes the second time that Hollywood Lilith Palmyra Abbekerk has crossed the 30-lb. mark for as a senior four-year-old she made 30.44 lb. butter, 685.7 lb. milk in seven days. Her dam, Hollywood Abbekerk Korndyke, has a seven-day record of 506.9 lb. milk, 30.01 lb. butter and she is a daughter of Pietertje Korndyke Abbekerk with a record of 713 lb. milk, 35.38 lb. butter.

Her young son by King Korndyke Pontiac Mead will be retained for junior herdsire at the County Farm. His seven nearest dams average over 1,000 lb. butter in yearly test including 4 records made in heifer form and his dam's record in 305 days only. In seven-day test the seven nearest dams average 31.71 lb. butter. He combines the blood lines of the greatest producers in Holstein history, being particularly strong in his heritage from King Segis, Pontiac Korndyke, Hengerveld De Kol and the famous California foundation cow, De Kol of Valley Mead.

HOLLYWOOD LILITH PALMYRA ABBEKERK
22,245.1 lb. milk, 982.97 lb. butter in ten months as a senior four-year-old, following the birth of twin calves. Again in test with a 35-lb. seven-day butter record to her credit.

The County Farm herd is founded upon the blood of De Kol of Valley Mead, the active herdsires including her son, a son of her highest record daughter and a son of her highest record four-year-old granddaughter. Her descendants now include a score with records averaging nearly 1,000 lb. butter and 20,000 lb. milk.

Queen Carlotta De Kol Becomes New York State Champion

QUEEN CARLOTTA DE KOL, owned by Brock and Jenks of Genoa, New York has finished her year test. Her milk record falls short of the hoped for 35,000 lb. milk but she did make 34,430.3 lb., the largest record ever reported for a New York State cow, and the second highest record made east of the Rocky Mountains being only surpassed in this territory by Kolrain Marion Finderne, whose great performances was reported in our November 8th issue.

Queen Carlotta De Kol made her record under the care of Floyd Dietzer. She is a cow of good individuality but the most striking thing about her is her wonderful milk vein development. Besides the usual vein on each side she has a central vein and has at least sixteen different milk wells.

During her test, Queen Carlotta De Kol was kept in an ordinary box stall which, however was screened and was equipped with an electric fan. In addition,

QUEEN CARLOTTA DE KOL
34,430.3 lb. milk, 1,265.52 lb. butter in a year. Owned by Brock & Jenks, Genoa, New York. Shown with her caretaker and milker, Floyd Dietzer.

she was allowed the run of a small orchard between the midnight and early morning milkings. Superintendent Gardner's announcement of her record follows:

"I am pleased to announce that the Holstein-Friesian cow Queen Carlotta De Kol 311674 has just closed a long-time test, and is credited with 34,430.3 lb. milk containing 1,012.42 lb. fat in 365 days. She freshened at the age of 6 years, 6 months, 28 days. Her sire is Joe Gelsche Carlotta Clothilde 2d 98961; her dam is Juna Price De Kol 20034. She was bred by G. F. Ervay, Alpine, N. Y., and is now owned by Brock and Jenks, Genoa, N. Y. At the age of 3 years, 10 months, 1 day she is credited with 660.8 lb. milk containing 20.219 lb. fat, and in fourteen days with 1,325.8 lb. milk, containing 38.529 lb. fat. Next, at the age of 4 years, 11 months, 14 days she is credited with 656.9 lb. milk containing 24.196 lb. fat, and in thirty days with 2,898.6 lb. milk containing 98.587 lb. fat. For the lactation period just closed her best seven days' official production is 783.2 lb. milk containing 22.69 lb. fat; while in thirty days she is credited with 3,087.4 lb. milk containing 97.455 lb. fat. During this test in addition to a 31-day strictly official period she had 11 other test periods, including retests. Eleven different supervisors were employed in the conduct of the test. Her 365-day production of 1,012.42 lb. fat, equivalent to 1,265.52 lb. butter on the 80 per cent basis, gives her 45th place among cows producing above 1,000 lb. fat, she being the 54th cow to gain the high honor of producing more than 1,000 lb. in 365 days."

Queen Carlotta De Kol is the 29th Holstein-Friesian cow to exceed 30,000 lb. milk in a year test. This great total has been reached twice by three different cows, Tilly Alcartra, Zarilda Clothilde 3d De Kol and Adirondac Wietske Dairy Maid. In addition the British Friesian cow, Brookside Colantha now on test, has exceeded the 30,000 lb. mark. This opens up an interesting subject. Two of the Canadian cows, Jemima Johanna of Riverside and De Kol Plus Segis Dixie are not registered in the American Holstein-Friesian herd book while practically none of the American cows are registered in the Canadian book yet it is possible to register all these cows in both books. If it were possible to export the American and Canadian 30,000-lb. cows to Great Britain they could be registered in the British Friesian herd book. The British Champion, Brookside Colantha, has, in addition to the regular black and white markings, a dun-colored patch which would debar her from registration in the American or Canadian books yet her purity of blood is considered above reproach by her British owners. Any of her offspring of the recognized black and white coloring and sired by a bull registered in the British Friesian or Netherland herd books, would be eligible to registry in either the American or Canadian herd books, the way we interpret the rules.

The list of cows making 30,000 lb. or more milk in a year follows:

Segis Pietertje Prospect	37,381.4
Kolrain Marion Finderne	35,339.5
Queen Carlotta De Kol	34,430.3
Adirondac Wietske Dairy Maid, 9 yrs.	34,401.9
Adirondac Wietske Dairy Maid, 7 yrs.	31,899.8
Tilly Alcartra, 9 yrs.	33,425.3
Tilly Alcartra, 5 yrs.	30,451.4
Zarilda Clothilde 3d De Kol, 8 yrs.	38,153.6
Zarilda Clothilde 3d De Kol, 6 yrs.	30,427.0
De Kol Plus Segis Dixie	32,668.0
Maud Netherland Wayne De Kol 2d	32,631.9
Kolrain Finderne Bess	32,563.1
Stanhope Belle Johanna	32,453.8
Princess Aaggie Polkadot De Kol, 4½ yrs.	31,600.7
Lutscke Vale Cornucopia	31,246.9
Queen De Kol Bonheur Pontiac	31,144.4
Winnie Korndyke Cornucopia De Kol	31,034.2
Beauty Beets Walker Segis	30,814.0

O. K. L. Andire Posch	30,097.4
Lindale Bonnie Pauline	30,024.1
Cascade Fleta Johanna, 4 yrs.	30,012.2

Cull the Bull Calf Crop

AN article under this caption appearing in the *Virginia Extension News* is so full of common sense and good advice to owners of purebreds that we are reproducing it in its entirety. The selling, for breeding purposes, of purebreds of inferior quality cannot be too strongly condemned and in many cases, is responsible for the erroneous views regarding the profitability of purebreds held by some of our rural population. The article itself mentions only bulls but the message conveyed applies to females as well, perhaps even more strongly, because the temptation to keep inferior females is even greater than to raise and sell males of similar quality. The true mission of the purebred animal is to improve—to increase the average production—and when the purebred animal is, because of intrinsic inferiority, unable to do this work, it is a failure.

While prices are down is the ideal time to cull and cull closely. The inventory loss is not so great as in busier and better times. A concerted effort to cull out the poorer animals by all owners of purebreds would have two great results; first, the remaining cattle, the seed for future crops, would be of higher quality and so worth more; and second, the supply would be smaller while the demand would be increased, which, as everyone knows, would result in higher prices.

The name of the writer was not given so we are unable to give the proper credit, but the article is as follows:

"Bulls produced in purebred herds can be divided roughly into three classes: first, breeders' bulls or bulls good enough in type, individuality and breeding to warrant their use in purebred herds; second, farmers' bulls or bulls lacking in some respect the qualities possessed by those in the first class but of sufficiently good individuality to be used in the improvement of grade and scrub stock; and third, the "misfits" or "scrubs" of the purebreds, bulls of such inferior individuality as to be unfit even for use on grade or scrub females.

Not in every herd are bulls produced that should go to be used on purebred females and for this class there is usually a ready demand. The main part of the bull crop each year and in practically all herds consists of "farmers'" bulls, and it is indeed a good herd in which at least a few "misfits" or bulls of the third class are not found in the calf crop. It is with the last but often unrecognized class that this article has to deal.

Since breeders must look to farmers to take the major part of their bull crop each year, it is the farmer trade that needs most to be cultivated. From the breeders' standpoint this can be done probably in no more effective way than by selling farmers only bulls that will make good—make good to such an extent that no doubt will be left in the farmers' mind or in the minds of his neighbors as to the superiority of a purebred bull over a scrub or grade. In this breeders have a responsibility for they rather than farmer buyers should be able to recognize bulls unfit for breeding purposes and not offer them for sale.

Some breeders are lax in this respect using as an alibi that even their most inferior purebreds are better than scrubs being used. This may be true but a breeder who sells a farmer a miserable inferior type of purebred bull but little if any better than the scrub he went to replace injures his reputation as a breeder, does his breed an injustice and harms the purebred industry. It is far better to cull out and steer such bulls as they show up. This can usually be done by the time they are six or eight months old and as steers they serve their purpose best."

The Cover Illustration

OUR cover illustration this issue shows three generations of well-bred Holstein-Friesian cattle in the noted Loeb herd. Two of these animals have already proven that they possess producing capacity of very high order and there is little doubt that the younger one will also do so when she reaches milking age. The cow furthest from the reader is Kolrain Eleanor Pontiac Korndyke, a cow with a year record of 26,995.4 lb. milk, 1,143.75 lb. butter as a seven-year-old. The center animal is her daughter, Kolrain Marion Finderne, the heroine of our leading story in the November 8th issue and has, as announced by Mr. Gardner, a year record of 1,278.56 lb. butter, 35,339.5 lb. milk. The young heifer is her daughter, Charlevoix Ormsby Finderne, sired by Sir Pietertje Ormsby Mercedes 40th. The picture indicates that the true aim of the Holstein breeder has been achieved, that is, the combination of superb individuality with tremendous capacity for production.

Under date of November 6th Superintendent Gardner sent out from Delavan the preliminary report of the tremendous record made by Kolrain Marion Finderne, which is herewith reproduced.

"I am pleased to announce that the Holstein-Friesian cow Kolraine Marion Finderne No. 317396 has just closed a long-time test, and is credited with 35,339.5 lb. milk containing 1,022.85 lb. fat in 365 days. She freshened at the age of 6 years, 1 month, 8 days. Her sire is Finderne Pride Fayne No. 84452; her dam is Kolrain Eleanor Pontiac Korndyke No. 233245. She was bred by E. F. Copeland, Colerain, Mass., and is now owned by Loeb Farms, Charlevoix, Mich. She has been developed wholly by Loeb Farms; being tested for the first time as a junior three-year-old, and showing 10.675 lb. fat with the test begun 98 days from freshening. She was next tested as a senior four-year-old; being credited with 662.6 lb. milk containing 17.749 lb. fat in seven days and 2,571.6 lb. milk containing 71.629 lb. fat in thirty days. Being continued in test during the year, she showed a production of 28,851.8 lb. milk containing 829.05 lb. fat. For the lactation period just closed, her best seven days' official production is 764.7 lb. milk containing 22.522 lb. fat; while in 30 days she is credited with

3,206.6 lb. milk containing 92.962 lb. fat; in 60 days, with 5,939.6 lb. milk containing 180.277 lb. fat; and in 90 days, 8,977.7 lb. milk containing 262.147 lb. fat. During this lactation period she was on strictly official test during the first 105 days and the last 142 days of her test. Her other test periods consisted of a twenty-day test, a seven- and a two-day test. Twelve supervisors were employed in the conduct of the test, and 275 days were strictly official. Her 365-day fat production of 1,022.85 lb. equivalent to 1,278.56 lb. butter on the 80 per cent basis, gives her 34th place among cows producing above 1,000 lb. fat, she being the 53rd cow to gain the high honor of producing more than 1,000 lb. milk in 365 days.

One of Champion Sisters

LADY HOMESTEAD MADRIGAL, owned by J. S. Whitaker, Walnut Grove, Missouri, won the first prize in the aged cow class at the recent Ozark Stock Show, held at Springfield, Mo., and was also awarded the senior and grand championships. She is a daughter of Clothilde Blanche Rauwerd King and Fobes Homestead Madrigal 2d. She was born December 11, 1915, and is a full sister to Fobes Homestead Rauwerd, the cow that made 21,683.6 lb. milk, 1,019.39 lb. butter in a year as a four-year-old and who recently became the Missouri State Champion. These two cows were born exactly thirteen months apart and were

LADY HOMESTEAD MADRIGAL
First prize in aged cow class and senior and grand champion at the Ozark Stock Show, Springfield, Mo. Owned by J. S. Whitaker, Walnut Grove, Mo.

bred by the late W. H. Phelps, of Carthage, Mo. The Whitaker Farm has been showing at many of the principal fairs in Missouri and Kansas this year and have won quite a number of blue and purple ribbons. At the Ozark show they had the first prize herd as well as the female champion. One member of their herd is Westside Adeline Queen which they purchased at the Kansas City National Sale, an animal that made 724.6 lb. milk in seven days as a four-year-old and holds the New York State Championship for milk production in that class. She is a daughter of King Pontiac Hilldale, who was by King of the Pontiacs from the 29.93 lb. cow, Hilldale Lorie Korndyke.

The only way to have a good friend is to be one.

Hard to Kill

NOTHING is quite so hard to get rid of as the man who acquires the art of holding office at public expense. Some men take office to serve; others to be served. Of the latter stripe is W. B. Barney, who was kicked out as state dairy and food commissioner when *The Gazette* took the trouble to prove his inefficiency and his shady cattle deals. Barney is a professional politician of pronounced type. He wasn't idle long.

The salary of the dairy and food commissioner is less than four thousand a year. Barney has been given a position as head of the extension department of the Holstein-Friesian Association of America at a salary of six thousand a year. It is encouraging to find that the HOLSTEIN BREEDER AND DAIRYMAN, an eastern publication, is kicking Barney consistently in the spot made sore by *The Gazette*. The Iowan's record at the state house is being revived, for national consumption this time. It is charged that the affairs of the association which has given Barney his berth are conducted for the benefit of everybody but the members. When Barney was appointed to his present job he was given two thousand a year more than was paid his predecessor.

A man who lost a state job because it was proved that his firm sold tubercular cattle whose milk was furnished to helpless babies is a noble selection as head of the extension department of a cattlemen's association.—*The Evening Gazette.*

Cedar Rapids, Iowa., Thursday, October 26, 1922.

The Dairy-Minded Man

IN successfully managing a dairy herd, the man is the first essential. No matter how favorable conditions may be or how good the markets, the man must at heart be a "dairy-minded man" or the profits will not be what they should.

The right kind of cows are indispensable and the proper kinds of feed are a necessity; but both would fail to bring the desired returns if the man behind them failed to give the proper care and management. Cows of quality must be fed milk-producing feeds in sufficient quantity. A stingy woman is a poor cook, and a stingy man is a poor dairyman.

The "dairy-minded man" learns how to *know* his cows—their likes and dislikes, their needs and what is hurtful to them. A cow that gives a large quantity of milk is often notional and has petty whims about the way she wants her feed arranged and the way she is milked. An increase in yield is often secured by humoring these whims.

The "dairy-minded man" loves his cows. He makes pets of them and thereby increases his pleasure in caring for them and increases his bank account at the same time. He strives to give them the care of a mother and furnishes them shelter in winter, shade in summer, water and salt at all times. He does everything necessary to make them comfortable. The dairyman that does all of these things is a "dairy-minded man" and you will know him by his success in the dairy business.—*U. S. Dairy Division, Western Office.*

Lime and Phosphorus Vital Dairy Essentials

ALTHOUGH lime and phosphorus are found in relatively small quantities in feeds, they have a great deal to do with milk production and with building the body of the unborn calf. If the cow does not have enough of these two elements in her ration she will draw upon the supply in her body for a time and so weaken herself and this is particularly true of heavy producers. Therefore, says the United States Department of Agriculture, it is a good practice to feed cows well when they are running low in milk yield and when they are dry, so that they may store up these elements as well as others in their bodies for use when the large demand is made.

The common view is that dry cows need only enough feed for maintenance, but experiments carried on by the department show that this is not true. The cow is a milk-manufacturing plant, and, like many factories, she must have a reserve supply of materials to draw on when heavy demands are made. A cow that has been well fed when dry and has stored up this reserve is able to produce more on full feed than a cow that was given only a maintenance of ration during that resting period. In this way a cow can utilize her capacity the year round although she may not be giving milk all the time.

In keeping up the necessary lime and phosphorus supply it is well to keep in mind the fact that certain feeds are richer than others in these elements. The feeds which contain the most lime are the legume hays, which include cowpea, alfalfa, soy bean, the clovers, and some others. Of those mentioned cowpea hay contains the most lime and the others are named here in the order of their richness in lime. The lime content of hay depends to a great extent on its quality. Leafy alfalfa hay contains more lime than coarse, stemmy, hay, and the same is probably true of other hays.

The common dairy feeds that contain the most phosphorus are wheat bran, cottonseed meal, standard wheat middlings, and linseed meal, in the order given. Less common feeds that are high in phosphorus are, in order, sesame oil cake, rice polish, buckwheat middlings, rice bran, sunflower-seed cake, rapeseed cake, buckwheat bran, and malt sprouts.

No grain or other concentrate contains anywhere near so much lime as the legume hays; and no kind of roughage contains phosphorus in quantities comparable to those found in the concentrates mentioned above. Grass hays, corn silage, and corn products, with the possible exception of those made from the germs, are low in both lime and phosphorus.

Yeast Proves Failure as Cattle Food

VITAMINES are a subject of discussion wherever dieticians and owners of livestock confer. The opinions voiced are as diverse as the personalities of the talkers. A number of experiments that will be quoted for a long time to come have been conducted at the Minnesota Experiment station at the University Farms where yeast was fed to calves and to cows in milk with no appreciable effect on the growth of the young animals or on the milk production of the cows. The official conclusion of the investigators is that the rations fed to cows and calves contain an ample supply of Vitamine B. which is carried in yeast.

The experiments were suggested by the strong claims made for the use of yeast in the human diet. One of the country's largest yeast companies paid all expenses of and furnished all the yeast necessary for the feeding experiments with dairy animals. Forty-two calves were used in four experiments and tests were made with eight cows in milk. The trials were carried on for more than a year under the immediate direction of Dr. C. H. Eckles, chief of the Minnesota dairy division, and Dr. L. S. Palmer, biochemist.

Results in every case were negative in character. Yeast was added to the rations of newly dropped calves and denied in the rations fed a second similar group, or "check" group, of dairy calves. The effect of yeast was tried out in this way in the ordinary ration, in a typical ration under good conditions, in what might be called a poor ration, and in a ration—including whole milk—generally fed to promising purebred stock.

Experiments paralleling those on the cattle were carried out by using rats as subjects. These experiments showed among other things, says Dr. Palmer, that no advantage is to be derived from feeding animals a larger amount of vitamin B than is necessary for their normal development.

Peru Wants Holsteins

THE Secretary of the Holstein-Friesian Association of America is in receipt of a letter from Consul-General Higginson, representing the Peruvian government. This letter says that the Peruvian government intends to promote purebred cattle breeding throughout the Republic and advises owners of registered dairy cattle to communicate with the Minister in charge. The letter is herewith reproduced:

Mr. F L. Houghton, secretary,
The Holstein-Friesian Association of America,
Brattleboro, Vermont.

Dear Sir:

I have been informed by the Minister of Fomento of the Peruvian Government that he is desirous of communicating with American cattle breeders and associations. The Government has resolved on an expansive policy to promote this Industry throughout the Republic and it may be of interest to some of your members to correspond with the Minister. He may be addressed as follows: Senor Ministro de Fomento,
Lima, Peru.

May I hope that you will see fit to distribute this information to your members.

Yours very truly,
Eduardo Higginson,
Consul General De Peru.

New York, October 26, 1922.

You never can tell. A man may be straight as a string, but even a string gets balled up.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

November 22, 1922

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

The World's Dairy Congress and the National Dairy Show

THE HOLSTEIN BREEDER AND DAIRYMAN is in receipt of a number of communications regarding the location of the next National Dairy Show. Philadelphia, Washington, Baltimore and Springfield, Mass., are the principal cities nominated but a well-known Wilkes-Barre dairyman who for twenty years or more has been closely associated with Holstein interests, advocates Syracuse, New York, using the State Fair buildings.

The present management of the National Dairy Show and those who are responsible for the organization of the World's Dairy Congress are talking of holding these two events consecutive weeks in some eastern city, but whether for advertising purposes or else because they really have not decided on the place, no city has yet been definitely selected according to the inspired reports emanating from the respective publicity offices.

In considering the location it must not be forgotten that the World's Dairy Congress is an international affair and that exhibits are invited and expected from foreign countries. With the exception of Canada, practically every country that sends exhibits will have to ship their goods at least 3,000 miles and many of them a greater distance. Just how much of an exhibition the World's Dairy Congress management plans to hold has not yet been told, but if the affair is to be truly international, the convenience of foreign exhibitors will have to be given consideration and, if the city selected is too far inland, much will be added to the already heavy shipping expense which will in turn, militate against the number of exhibits and the success of the exposition.

The attendance at the National Dairy Show when the event was held at Springfield, Mass., far exceeded the attendance when the event was staged in the West. It is no wonder that the management is gazing eastward when considering the location of the 1923 show. The interest and support promised will prove the deciding point. Put in your nominations and tell why, also plan to make the event greater by either exhibiting or attending.

"Pennsylvania Stands Firm"

AT a meeting of the Executive Committee of the Pennsylvania Federation of Holstein-Friesian Clubs held at Harrisburg on November 15th it was voted that Pennsylvania's share of the increased Transfer Fee be left with the National Association to be used towards employing a Field Representative to work in Pennsylvania and adjoining states. The sentiment of the Executive Committee was decidedly against the employing of a paid state secretary to promote "Sales and National Politics."

The action of the Executive Committee of the Federation confirmed the action taken by the members at the Annual Meeting in January 1920 when the Association went on record as not being in favor of putting on a "whirlwind campaign" with a view of collecting funds to employ a man to look after the buying and selling interest of the breeders in the state as outlined by President Aitken in a letter which was read before the vote was taken.

THE HOLSTEIN BREEDER AND DAIRYMAN cannot commend too highly the action taken by the Executive Committee of the Pennsylvania Federation of Holstein-Friesian Clubs. We believe that their decision is a wise one and that their example should and will be followed by other state organizations. We have always advocated and still believe that the Holstein industry and the Holstein-Friesian Association's interests woud be best served if its Extension efforts were confined to disseminating information to the dairy public with reference to the superior merits of the Holstein cow as a producer of milk and dairy products and acquainting the public generally with the superior quality of Holstein milk as human food.

Splitting Fifty-fifty

THE slogan "50% of The Consumer's Dollar" is a great favorite with milk producers of the central west and has been adopted by the Chicago Milk Producers Coöperative Marketing Organization, which is partly backed by the American Farm Bureau Federation.

The more one considers the matter, whether he be a producer of dairy products or whether he is a city dweller and so only a consumer, the more it seems that the man who is responsible for milk production, should have for his share at least half the price that the consumer has to pay.

The expenses of bottling, shipping and distributing milk are heavy. The distributor has to pay a lot for bottles and breakage but his investment in his business is generally much below the investment of a single farmer in cows, barns and other buildings. General observation has shown that the small dealer does not make any great amount of money outside of a bare living, although the dairyman points to the large plants erected by the great milk dealing corporations and claims that these are built with funds derived from the profits of the business.

A producer's price at the point of consumption and a fundamental minimum base in determining the producer's price are principles greatly to be desired. It certainly seems that some rule should be worked out.

The producers delivering milk to Beloit, Wis., are getting $2.30 per hundred lb. for fluid milk while bottled milk is being retailed to the consumer at 10 cents per quart. The producers get paid approximately 5 cents per quart or one-half the ultimate price. But in many places the retail price is higher while the price the farmer receives is even lower.

THE HOLSTEIN BREEDER AND DAIRYMAN is interested in the dairymen receiving a fair price for their product, one that will enable the farmer to give his family the same comforts enjoyed by the men in the city who work in either office or factory, and to have some surplus left so that he can give them the schooling necessary to enable them to hold their own in the community. What are the views of our readers on the basic plan of splitting the retail price fifty-fifty and how can this be accomplished? Write us your ideas on this important subject.

Reynolds Repudiated by the People

Overwhelmingly Defeated for State Senator in Ohio

JAMES A. REYNOLDS, Director of the Holstein-Friesian Association, was defeated at the polls, November 7th, in his home town in the city of Cleveland, Ohio, in his effort to be re-elected to the office of State Senator.

If Reynold's record in the law-making branch of the Ohio legislature has been of the same type and character as the one he has made while acting as a Director of the Holstein-Friesian Association and Chairman of the Executive Committee, we can quite readily understand why the people wanted to make a change, and why they made it.

We have several times called the attention of the members of the Holstein-Friesian Association to Mr. Reynold's record as a director and as chairman of the Executive Committee. It may be described briefly as a meteoric flash from obscurity as a herdsman and farm manager at Daisy Hill Farms, Chagrin Falls, Ohio, into the limelight of prominence as an officer of the Holstein-Friesian Association.

As we recall the record, James A. Reynolds was not elected to membership in the Association, until the year 1918.

In one short year thereafter—and the reason, of course, is very plain to those who understand the dark corner methods of politics—Reynolds was made a director of the Association and chosen to the high office of Chairman of the Executive Committee.

While the membership have been regularly and we might say constantly "fed-up" on the most nauseating kind of "bunk" through the columns of a certain journal that prefers to represent the politicians instead of the men who milk their own cows, telling of Reynold's "wonderful ability and great usefulness in the Association," it is fact, susceptible of the most positive proof that his tenure of the office as a Director of the Association has been marked by the biggest expenditures ever known in the history of the Association, by gross extravagances, by-law violations, and the milking of the Association treasury to the tune of about $10,000.00 for "salary, expenses, furniture, etc." and all of this in the short space of three and one-half years.

During this same period of time, and through his manipulation of affairs as Chairman of the Executive Committee, a certain law firm in the city of Cleveland, with which Reynolds is closely associated has milked the Association to the tune of another $10,000.00 or thereabouts for "legal services," which in our judgment, the Association would have been better off without.

During the trial of an action brought by Paul T. Brady against the Association and now on appeal to a higher court, an affidavit was read into the record in which one Charles E. Cole, swears that he was promised a reward of $6,000.00 for making his so-called "confession," at Chicago, in August 1919, and intimating very strongly that Mr. Reynolds was a party to the transaction. So far, as we know, this charge has not been denied.

In the campaign which preceded the special meeting at St. Paul in October 1921, James A. Reynolds, a "paid officer" of the Association, openly solicited proxies and voted them in violation of the by-laws and for the disfranchising of every member of the Holstein-Friesian Association and depriving them of their rights to vote in person or by proxy as provided by the constitution and by-laws.

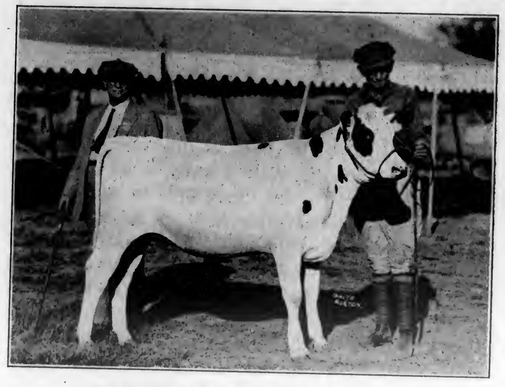
Again in June 1919, within forty-eight hours after being elected a member of the Board of Directors, a salary of $12,000.00 per year, was voted to D. D. Aitken, President of the Association which we are advised was another violation of the by-laws, and Aitken was the first and only President the Association has ever had during the thirty-seven years of its existence who has drawn a dollar from the Association treasury for services as President.

The BREEDER AND DAIRYMAN has in its possession copies of a large number of vouchers upon which it is shown that Mr. Reynolds has from time to time, drawn large sums of money from the Association treasury for "expenses" which he will surely be called upon to explain unless the power of political control is able to throttle and prevent an honest investigation of Association finances.

While we have no desire to add to the humiliation of Reynolds resulting from his complete repudiation by his home people, we firmly believe that a full and thorough investigation of Reynold's activities in connection with the Holstein-Friesian Association of

America would result in an equally prompt and positive repudiation by the membership generally.

As we read the account of Reynold's defeat at the polls it seemed almost as though the people of Cleveland had been reading the BREEDER AND DAIRYMAN and had come to the conclusion that as long as "Jimmy" has such a soft snap feeding at the treasury trough of the Association out of fees paid by the plain breeders and dairymen, it was high time to call a halt and pass along the glory of political preferment to worthier hands.



Jimmie Overlooks Something

WITH the election over and the announcement of James A. Reynolds defeat for reëlection to a seat in the Ohio Senate, why not a delegate system in Cuyahoga County?

With a delegate system such as he was instrumental in installing in the Holstein-Friesian Association by means of soliciting and voting proxies in direct violation to the Constitution and by-laws, and by resorting to a nominating committee, another method of defeating the wishes of the majority, he would be assured of retaining a seat in the Ohio Senate for life.

The Kind Standish Likes

ONE of the most striking animals shown at the Texas State Fair was Flowerdale Echo Queen Segis, owned by the Flowerdale Farms, of Dallas. There were thirty-three animals shown in the senior heifer class and this little beauty was placed at the head by the well known Holstein judge, W. H. Standish, of Lyons, Ohio. Mr. Standish for several years has been judging at many of the great fairs of the southern states. Last year he made a judging

REORGANIZED HOLSTEIN-FRIESIAN EXTENSION DEPARTMENT
Politicians Retreat

The Holstein Business

A STUDY of the business being done in the office of the Holstein-Friesian Association of America indicates that the raising of the transfer fee is acting as a boomerang and, instead of being a stimulant is a depressant. At least, 7,000 transfer certificates would have been issued by the Secretary's office in the month of October had the customary fall expansion so confidently looked for became a fact. Instead of this, there was a gain of less than 500 over the September business while a year ago, at a time when business was admittedly in the depths, the monthly gain was more than 2,100.

But the financial statement is even more alarming. The transfer fee was increased from 50c to $1.50 at the Kansas City meeting. The strong argument used before and through the meeting to obtain support for the increase of the transfer fee was that fifty cents on each transfer should be returned to the state from which the animal was sold. In fact, we doubt if, in the meeting itself, resolutions to increase the transfer fee could have been carried without this proviso which united the state organizations with paid secretaries solidly behind the movement. The earning from the registrations, transfers, and duplicates for October 1922 amounted to $28,416.75. The figures for the corresponding month of last year was $25,825.00 so that the receipts this year are only $2,591.75 over the receipts of October 1921, and this with a transfer fee of $1.50 for this year against 50c which was in effect at this time last year. Now if 50c on each of the 5,733 transfers is returned to the state from which the animal is sold, the sum so returned will amount to $2,866.50 or more than the increase in receipts over the receipts of last October. In other words, instead of being ahead as it should be with 50c additional on each transfer going into its own treasury, the association's net income is $274.75 less.

It begins to look as though the raising of the Transfer fee at the Kansas City meeting was an error and a mistake as instead of booming the Holstein industry it is acting like a clog on its progress.

The motto of The Holstein-Friesian Association should be "We render the greatest service to the largest number, at the least possible expense."

Pennsylvania and the Transfer Refund

THE Executive Committee of the Pennsylvania Federation of Holstein-Friesian Clubs met at Harrisburg, November 15th, with a representative of the Extension Service of the Holstein-Friesian Association of America. The subject of discussion was the disposal of the amount coming to Pennsylvania as the state's share of the fifty cents transfer refund. On November 1st, about $800 had accumulated in the five months since the Kansas City meeting and it is estimated that in the course of the year from June, 1922 to June, 1923, the amount would be approximately $4,000.

Two plans were suggested: first, to turn the funds over to the Pennsylvania Federation to be used in extension work; second, that Pennsylvania turn back her share to the National Association to help defray the salary and expenses of an extension expert who should work in Pennsylvania and those adjoining states that are willing to be placed in the same district and which would also turn their portion of the transfer fund into the treasury of the National Association. This second suggestion met with unanimous approval and a resolution was voted accordingly.

A plan was submitted for advertising the merits of Holstein milk in the form of signboards thirty-two feet wide to be placed along the much-traveled highways of the state at distances of not less than thirty miles apart. The drawings were attractive and the scheme met with approval.

Present at the meeting were: John A. Bell, Jr., president; W. Hugh Jones, secretary; Frederick C. Brinton, treasurer; C. E. Bennett, Wellsboro and Dr. L. M. Thompson, South Montrose.

President Lowden spoke the same afternoon before the Pennsylvania State Chamber of Commerce on the reforms instituted in the Illinois State Government while he was Governor of that state. The Holstein breeders adjourned their meeting and listened to his speech which was full of information and suggestions.

Cow Comfort

THE season of the year is approaching when, in many sections of the country, cows will be kept in the stables at night and at least part of the day. Under such conditions, comfort and healthful surroundings for dairy cattle are exceedingly important. The chief items entering into comfort and healthfulness are light, air-space, ventilation, bedding, and sufficient room.

There should be at least four square feet of window glass for each stall or stanchion in the stable. Windows should be well distributed so that all parts of the stable are lighted. At least 500 cubic feet of air-space are necessary for each animal, so that every one may secure an adequate supply of air. In very cold climates more than 800 cubic feet of air per cow is liable to result in a cold stable, but under ordinary conditions the air-space may be as high as 1,000 cubic feet per animal.

Of course sufficient air-space alone is not enough. The air must be changed frequently so that fresh air is available. This should be done without causing drafts of cold air on the cows, or unduly lowering the temperature of the stable. In cold regions, a system of intake and outlet flues is necessary to accomplish proper ventilation. In warmer places, fresh air may be admitted through windows hinged at the bottom and tipping inward. Any successful ventilating system must admit fresh air in a manner that will not chill the cow, and provide a means of removing foul air.

Cows should be plentifully supplied with clean bedding, for both comfort and cleanliness. Animals should not be kept in crowded quarters, for the same reasons. Comfort, light and fresh air are enemies of animal distress and disease and promote the efficiency and economy of milk production.

Some people are so greedy that they actually want to take both sides of an argument.

Junior Department

Our Trip to St. Paul

We started from Mansfield, Pa., Wednesday afternoon, October 4th for Elmira, N. Y. We arrived at Elmira the same day and looked around the city until Mr. Barnhart arrived from State College and took us to supper at the New York Restaurant. After supper Mr. Barnhart and Prof. Ives went to the Lackawanna Station to get our tickets. We boys spent the evening at the Majestic Theatre.

We stayed over night at the Rathburn Hotel and got up at 3:30 Thursday morning, ate breakfast at the Imperial Lunch Room and took a taxi for the Lackawanna Station. We started from Elmira at 4:15 and changed cars at Buffalo, taking a train on the Michigan Central. We crossed the Niagara River near the Falls into Canada.

My first experience eating on the train was from Buffalo to Chicago; the dinner being about 40 miles long.

We arrived in Chicago at 9:45, which was about 2 hours and 30 minutes late, leaving us 17 minutes to get connections.

From there to St. Paul we rode on the Yellow Buzzer, or the Chicago, Milwaukee and St. Paul. Had a view of Lake Michigan while going through Chicago, but it was nearly dark. We crossed the Mississippi River at La Crosse and ate breakfast while going up the Mississippi. We saw a few fish nets and fishermen on the river.

We arrived at St. Paul about 11:30 and took a street car for the Farm School, where we registered and took dinner. After dinner we took our baggage and went to the Boys' and Girls' Camp which was on the park and also where we were to stay during our trip.

Saturday, we arose at 6:00 o'clock, ate breakfast and went to the Stock Pavilion where we were to judge the cattle that day. We had 15 minutes to place the cattle and 15 minutes to write reasons in. We judged Jerseys, Holsteins, Ayrshires and Guernsey cows and bulls. We were through at 2:00 o'clock, had dinner and went to the football game at the University between the Universities of Minnesota and North Dakota.

Saturday night we went to bed early and slept late the next morning. When we did get up we went to Minneapolis and took a street car to Minnehaha Falls and looked around, seeing some herds of deer and moose. We took a street car to Fort Snelling and looked around there a little and saw a ball game between two companies from Fort Snelling. We then went to St. Paul and visited the Catholic Cathedral which is one of the finest cathedrals in the world. We also went to the state capitol at St. Paul. We took a street car back to the park and Lee and I took a walk to the Curtis North West landing field and looked over the aëroplanes.

The next day we looked around the park, went to Healthland and saw the steam locomotive which was hauling the children around the room, also a little farm and an electric train which was there for the amusement of the little children.

We saw some very fine demonstrations given by the different states, such as testing of milk, mixing dairy rations, fitting and showing of the dairy animal and mixing of milk drinks.

Tuesday we watched the judging of the different herds of cattle and went to the Holstein banquet at noon, each Holstein man taking a boy or girl with him. Mr. Lee and I went with Mr. Marlow of Minnesota.

The evenings were spent at the cattle pavilion where entertainments were held every night. Some interesting performances were; mule polo, push ball, polo on kiddy carts, track meet, broncho riding, roping etc.

We also saw the fine exhibit of machinery in Machinery Hall having the latest inventions in machinery that are needed in the production of dairy products.

There was a very fine exhibit of cattle, there being about 1,000 head at the show. The Pennsylvania herd of Ayrshires won 8 firsts, 1 second and 1 third, also second on the bull.

There was a large number of calf club members there with their different breeds of calves, all trying to make their calf look the best for the judging. We also saw the very fine exhibit of poultry at the Poultry Pavilion.

Friday, after waiting for the outcome of the demonstrating teams, we took a street car for St. Paul, had supper at the Miller Cafeteria and went to the station to secure our tickets for the trip home. The Michigan judging and demonstrating teams and also the Wisconsin demonstrating team went on the same train. We started from St. Paul at 8:30 and had a good time until midnight, the porter having to chase us out. The Wisconsin team got off at Milwaukee about 6:00 o'clock in the morning. We arrived in Chicago about 8:00 o'clock and had breakfast at the Y. M. C. A. Hotel. After breakfast we took an elevated car for the Stock Yards. We also went through Swift's Packing House. At first we went into the killing department. A few hogs are driven into a little pen and a man stands there with a chain, it is put around the hind leg of the hog and then hooked on a short chain which is on a large revolving wheel. The hogs go around the wheel and run off on an overhead track. After going a short distance they are stopped and a man stands on a platform, when he sticks one hog he pulls a chain and another comes along and he sticks him. From there they go to a scalding tub where they are scalded and then they are scraped by machinery. After scraping they are run through some blow torches where the few remaining hairs are burned off. A man then washes them and another scrapes it off with a knife. From there they are run back across the floor where each man takes a cut at the hog and it passes on to the next one where he takes a cut. They are weighed on a pair of automatic scales. One man makes one cut with a knife and he takes off the hams, hitting the joint every time. From there they are taken where another man cuts off the shoulder, the shoulders going down a chute and the sides down another. The ribs are then taken out and the sides are cut up into bacon and taken to cure. The hams are smoked for 36 hours. After being smoked they are inspected and those that are not right are taken to the fertilizer department.

We went through the cooling department, the temperature being about 36 to 38 degrees Fahrenheit, which was cooled by the ammonia process. From there we went into the department where they made oleo. Oleo is made from fat, oils, butter and cream. This is churned and after churning it is mixed with salt, it then goes down through a chute and runs through a square hole which packs it together. When it comes out it is cut into pounds by a rotating wheel which has paddles on it. These are arranged that each cut makes a pound. It is then wrapped and packed for shipment.

From Swift's we went to Libby's canning factory and saw the process of canning meats. They make their own cans and we saw how it was done. A man takes a piece of tin and holds it in a machine where it is cut to pieces, these pieces are the sides of the can, they run through another machine, where they are bent into the desired shape and are soldered together, then the bottom is put on and fastened by another machine.

The Vienna sausages are put into cans by employees. One woman which we saw filled about 9,000 cans in one day, or 8 hours, getting a pay of seven cents per hundred. The cans are filled and the cover fastened on, leaving a small hole in the top. Then the can passes into a machine where the air is sucked out and the hole is soldered shut. We then went to the Swift's Office and had dinner at the Swift cafeteria. After dinner we went to the Marshall Field Museum. There we saw all kinds of animals from a mouse to an elephant, also, the different kinds of clothing worn by all the tribes and by the people centuries ago, also, all the implements which were used in war in the prehistoric times and a lot of other interesting things. From there we walked around the Loop and went back to the Y. M. C. A., where we said good by to the teams from Michigan, for they left at 5:20. We ate supper at the Y. M. C. A. Hotel and strolled around the town until train time, then to the depot to get our tickets for home. We had a glimpse of Niagara Falls while going on the train, but it being early we couldn't see much but fog.

We changed cars at Buffalo and from there we rode on the D. L. & W., the Delay, Linger and Wait. We saw a few steamers on the Niagara River and some barges. We arrived in Elmira about 1:15 and went to the Erie Station to check our baggage. From there we walked over town and had dinner at the New York Restaurant. Then we walked around town until train time and went to the depot for our tickets.

We started from Elmira on the Erie at 4:05. We arrived at Mansfield about 7:15 and went to the Davis Restaurant for supper, from there we went home and enjoyed a peaceful night's rest. HORACE O'DELL.

Mansfield, Pa.

You never can tell. Many a man with money to burn has an innate dread of fire.

The Boy Winners at St. Paul

Maryland Dairy Circles are elated over the Maryland boys' team capturing first prize in the junior dairy cattle judging contest at the National Dairy Show as this is the second time within a year that Maryland Agricultural club boys have won a livestock judging contest of national scope and importance. Last October, Maryland boys carried off the National Livestock Judging contest at the Southeastern Fair at Atlanta, Georgia, and so won a trip to Europe. Livestock judging work for boys enrolled in Maryland clubs was begun only two years ago but a team from that state competed and took fourth position at the 1920 National Dairy Show and was fifth in 1921.

The 1922 Maryland team was composed of Hubert Snodgrass, 17 years old, Richard N. Wills and Charles Fendall Cushing, each 16. They all came from Harford County and were winners of the dairy cattle judging contest at Maryland State Fair at Timonium, last September. They were trained by County Agent, B. B. Derrick, Assistant County Agent G. R. Stuntz, the well-known Guernsey breeder Louis McLane Merryman, and specialists of the University of Maryland Extension service.

The Maryland team scored 2,920.4 points, Ohio was second with 2,898.9 points; South Dakota was third with 2,819.9 points. There were fifteen teams in the contest. Young Cushing led the team by winning fourth place on all breeds, fourth place on Ayrshires and second place on Holsteins. Snodgrass was first in Ayrshire judging and Wills scored fourth on judging Holsteins.

The team was accompanied by P. W. Chichester, assistant State boys' club agent, and B. B. Derrick, county agent of Harford County. The expenses of the team to St. Paul this year were paid by contributions from livestock breeders throughout the state.

Pennsylvania's Junior Judging Team

The junior judging team that represented Pennsylvania at the recent National Dairy Exposition were three boys of the Mansfield Vocational School, Mansfield, Tioga County. They were selected last June, at the Junior Farmers' Week judging contest held at State College. They are Lee Smith, Horace O'Dell and

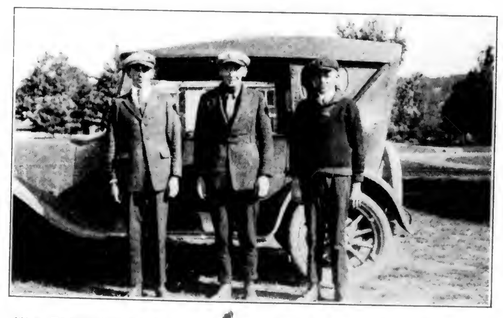
Last October, Maryland boys carried off the National Livestock Judging contest at the Southeastern Fair at Atlanta, Georgia, and so won a trip to Europe. Livestock judging work for boys enrolled in Maryland clubs was begun only two years ago but a team from that state competed and took fourth position at the 1920 National Dairy Show and was fifth in 1921.



The 1922 Maryland team was composed of Hubert Snodgrass, 17 years old, Richard N. Wills and Charles Fendall Cushing, each 16. They all came from Harford County and were winners of the dairy cattle judging contest at Maryland State Fair at Timonium, last September. They were trained by County Agent, B. B. Derrick, Assistant County Agent G. R. Stuntz, the well-known Guernsey breeder Louis McLane Merryman, and specialists of the University of Maryland Extension service.

The Maryland team scored 2,920.4 points, Ohio was second with 2,898.9 points; South Dakota was third with 2,819.9 points. There were fifteen teams in the contest. Young Cushing led the team by winning fourth place on all breeds, fourth place on Ayrshires and second place on Holsteins. Snodgrass was first in Ayrshire judging and Wills scored fourth on judging Holsteins.

The team was accompanied by P. W. Chichester, assistant State boys' club agent, and B. B. Derrick, county agent of Harford County. The expenses of the team to St. Paul this year were paid by contributions from livestock breeders throughout the state.

Pennsylvania's Junior Judging Team

The junior judging team that represented Pennsylvania at the recent National Dairy Exposition were three boys of the Mansfield Vocational School, Mansfield, Tioga County. They were selected last June, at the Junior Farmers' Week judging contest held at State College. They are Lee Smith, Horace O'Dell and

The Pennsylvania Junior Judging Team at the National Dairy Show. Reading from left to right: Lee Smith, Horace O'Dell and Wm. Wyles of the Mansfield, Pa. Vocational School.

INTENTIONAL SECOND EXPOSURE

Wm. Wyles all of Mansfield, Pa. The trip was made under the supervision of their principal, Professor Ives and of A. S. Barnhart Assistant Leader of the Pennsylvania State Club work.

Horace wrote out a story of the trip which will be published in full in the HOLSTEIN BREEDER AND DAIRYMAN in the Junior Department.

Letters to the Editor

The Holstein Breeder and Dairyman,
Harrisburg, Pa.
Gentlemen:

I am writing you this letter just to let you know how your wonderful magazine has reached me. One day as I was at the Chaddock & Co. Packing House getting some sweat boxes I saw your magazine. I picked it up and read it and so found it very interesting. Here is a dollar for two years' subscription.

Truly yours,
California.

P. S. This is the first time I have had a chance to write you.

The Holstein Breeder and Dairyman,
Harrisburg, Pa.
Gentlemen:

I am enclosing herewith money order for One Dollar for subscription to your paper for two years as per your notice on page number 544, August 22d issue of the THE HOLSTEIN BREEDER AND DAIRYMAN.

The above mentioned copy is the only one of your paper that I have had the pleasure of seeing, however, I think it well worth the price of subscription fee which you charge. I am with you absolutely in your Policy with regard to the extravagance and mismanagement now being practiced in the affairs of the Holstein-Friesian Association of America. And will give you any support that I am able to render you in regard to this matter.

In your issue of August 22, 1922, your first article in regards to the bull owned jointly by Mr. Montgomery of this city and Mr. Jordan of Ridge Springs, S. C., will say that we all here in the South certainly appreciate this write-up which you have given us. I say Us, because I have a Son of "Polly Posch's Son" of whom I am duly proud and am looking forward to great things from him. We here in the South have been backward in dairying up to now, however, with such animals as we have in the South at the present we hope to come to the forefront.

Trusting that you will give the first mentioned matter your immediate attention, I beg to remain

Very truly yours,
South Carolina Breeder.

November 7, 1922.

THE BREEDER AND DAIRYMAN,
Harrisburg, Pa.
Gentlemen:

I have been reading your paper and am interested in the campaign you are waging against extravagance and I am particularly interested in the work your cartoonist is doing. While your cartoonist does not seem to lack ideas, I am going to make this suggestion which I believe could be carried out to good advantage.

The idea which I have in mind could be labelled, "Holstein-Friesian Association Rummage Sale." Have Mr. Houghton or Mr. Gardner or some other faithful servant represented as an auctioneer and sell the unnecessary help, furniture and equipment that have fastened themselves upon the Association. Included in the rummage sale could be ten surplus and unnecessary directors, one delegate system only slightly used, one second-hand $12,000 president, a quantity of rules and regulations for holding cow swapping events, several publicity men, (some bad, others worse) one extension officer fully equipped located at Chicago, sixteen second hand whirlwind campaigns, a number of "has-been" politicians, three law suits, one professional lobbyist whose reputation is not so good but who has had lots of experience, a quantity of second hand, badly worn state sale organizations with a few second hand managers thrown in, a quantity of used office furniture including easy chairs located at various places in the United States, to be sold. As Is. The above goods are to be sold without the usual 60 day guarantee.

If the above idea is any good to you, use it.

Very respectfully yours,
California Breeder.

P. S. Wanted—An experienced dairyman and Holstein cattle owner, to serve as director of the Holstein-Friesian Association of America, living in and representing the Pacific Coast States. A man who is honest and intelligent, has never dabbled in state or national politics or conducted a state or national Cow Swapping event or participated therein.

November 10, 1922.

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.
Gentlemen:

Inclosed find one dollar ($1.00) for two years subscription to your paper. We surely do enjoy reading the DAIRYMAN and would like to have it come regularly.

I have been a subscriber to the *Holsten-Friesian Register* for years. I never took much fancy to the *World* because I did not like their policies. It always seemed to me to be favoring the "big fellows."

I admire Mr. Houghton and Mr. Gardner very much and cannot imagine how our Association could have weathered the crazy and extravagant schemes that have been tried out at the membership's expense during the last two or three years, had it not been for these faithful servants looking after the breeders' interests.

I am enclosing photograph taken of our herd by my son at the time we were filling the silo. We think we have a pretty nice lot of cattle. Very respectfully yours,

THE RIDGE FARM HERD

The Ridge Farm herd soon to be dispersed was founded on two animals, the bull Johanna Korndyke and the cow Celosia Beauty De Kol. The bull was purchased March 26, 1906 and the cow very soon after. These two had a daughter, Carrie Clothilde Krondyke, the first cow tested in the herd who produced 93 lb. milk in a day. She has five A. R. O. daughters including a 25 lb. three-year-old; a near 25 lb. cow that made 24,000 lb. milk in a year; and a 23.16 lb. four-year-old who has a daughter still in the herd, sired by Tidy Abbekerk Prince.

Other sires used in the herd later on were Hillside Gold Standard Pietje, a grandson of the famous imported cow, Pietje 22d; Hengerveld De Kol Tromp, a grandson of Hengerveld De Kol from a daughter of Earl Korndyke De Kol; Lilith Pauline De Kol's Son; Rag Apple Korndyke Mercedes and the present herdsire Champion Segis Rag Apple Burke; who is by a thirty-pound son of King Segis Champion and is from Belle Segis Champion, the 37-lb. senior four-year-old daughter of King Segis Champion. His dam is a 24 lb. two-year-old daughter of Rag Apple Korndyke Mercedes and Meadowside Helena De Kol Burke 3d, a three times 30 lb. cow. A story of this cow appeared in the May 22d issue of the HOLSTEIN BREEDER AND DAIRYMAN. Her daughter, dam of Champion Segis Rag Apple Burke, met with an accident and died before freshening again but having milked dam and daughter, I am qualified to state that they were the greatest pair from one of the greatest families I have ever handled.

During the past year, "The Potentate" has been used in the herd to some extent and many of the animals are now bred to him. This bull is a son of Cornucopia Korndyke Pontiac and is from Leafy Veeman De Kol, 40.10 lb. whose dam Leafy Dawn De Kol, made 43.19 lb. butter in a week. The three nearest dams of "The Potentate" have seven day official butter records averaging 38.83 lb.

On March 13, 1920, H. G. Lake on account of ill health dispersed his herd, forty-six head bringing a price of $19,745, an average of $429.24, which is a record for the county. Being a natural born cow man, Mr. Lake by degrees re-established his herd, now numbering 40 head by buying a few of his

former breeding and several of similar lines of breeding as well as a few of other families. Last November, Mr. Lake had the misfortune to lose his wife and helpmate whose untimely death left him with two daughters and a son to educate. This prompted him to acquire a farm implement business in town and to offer the Ridge Farm, which consists of 110 acres ideally equipped favorably situated and under an intense state of cultivation, for sale.

Included in the present herd are five daughters of Rag Apple Korndyke Mercedes, two of which are full sisters, one having 20 lb. as a two-year-old, 23 as a three-year-old, and 28 lb. as a four-year-old and producing 100 lb. milk in a day. She has a daughter by "The Potentate," now a year old and she is again due right away by this great bull. The other sister made a 21 lb. seven day butter record as a three-year-old.

Another member of the herd is Emma Dot De Kol who, taken right off pasture made a seven-day record of 27.90 lb. butter, 622.1 lb. milk and she is due again about sale time by a 30 lb son of Finderne Pride Johanna Korndyke, himself a great sire and brother to the sire of the famous Kolrain cows. In the herd are two granddaughters of 30 lb. cows,

MEADOWSIDE HELENA DE KOL BURKE 3d.
Thirty-four and ninety-three hundredths lb. butter in 7 days. Three records, all above 30 lb. that average 32.34 lb. Granddam of Champion Segis Rag Apple Burke one of the Ridge Farm herdsires.

one of which is the famous De Kol Plum Copia a cow that has twice made 30 lb. butter in seven days; also a daughter of Woodmont Echo Sylvia Champion, first prize three-year-old bull at the 1922 New York State Fair while his dam was first prize cow and grand champion female at that great fair in 1921; the calf's dam is a 21 lb. two-year-old daughter of a 35 lb. three-year-old. Several members of the herd are bred in lines descended from the great oldtime sire, De Kol Burke and from Tobe Rag Apple Korndyke, a son of Christmas Tobe 2d, 31.66 lb.

The sale includes ten head from the Lakecrest herd owned by S. W. Lake, this being an entire dispersal of the cattle from his Village Farm. These animals include a daughter of Tobe Rag Apple Korndyke and two of her daughters, one being a 20 lb. two-year-old daughter of King Tweede Spring Farm; a daughter of Tobe Rag Apple Korndyke from a 23 lb. daughter of King Segis Hengerveld De Kol Burke, a bull who has two daughters with seven-day records above 32 lb; a daughter of King Pontiac Contest, who is by King of the Pontiacs and several other good ones.

I am well acquainted with the stock and have no hesitation in recommending these animals to the attention of readers of the BREEDER AND DAIRYMAN. The herd has been tuberculin tested and will be sold with retest privilege. I am sure Mr. Lake will do all he can to insure the comfort of his visitors and the writer, who expects to be on hand at that time, will be pleased to answer questions as far as I am able.

L. B. LAMB.

Milk. the national drink. Get the habit.

THANKSGIVING TIME

When the frost is on the punkin and the fodder's in the shock,
And you hear the kyouck and gobble of the strutten' turkey-cock,
And the clackin of the guineys, and the cluckin' of the hens,
And the rooster's hallylooyer as he tiptoes on the fence;
O, it's then's the time a feller is a-feelin' at his best,
With the risin' sun to greet him from a night of peaceful rest,
As he leaves the house bare-headed, and goes out to feed the stock,
When the frost is on the punkin and the fodder's in the shock,

They's something kindo' harty-like about the atmusfere
When the heat of summer's over and the coolin' fall is here—
Of course we miss the flowers, and the blossums on the trees,
And the mumble of the humming birds and buzzin' of the bees;
But the air's so appetizin'; and the landscape through the haze
Of a crisp and sunny morning of the airly autumn days
Is a pictur' that no painter has the colorin' to mock—
When the frost is on the punkin and the fodder's in the shock,

The husky, rusty russel of the tossels of the corn,
And the raspin' of the tangled leaves, as golden as the morn;
The stubble in the furries—kindo' lonesome-like, but still
A-preachin' sermons to us of the barns they growed to fill;
The strawstack in the medder, and the reaper in the shed;
The hosses in theyr stalls below—the clover overhead!—
O, it sets my hart a-clickin' like the tickin' of a clock,
When the frost is on the punkin and the fodder's in the shock,

Then your apples all is gethered, and the ones a feller keeps
Is poured around the celler-floor in red and yellow heaps;
And your cider makin's over, and your wimmern-folks is through
With their mince and apple butter, and theyr souse and sausage, too!—
I don't know how to tell it—but ef sich a thing could be
As the angels wantin' boardin' and they'd called around on *me*—
I'd want to 'commodate 'em—all the whole-indurin' flock—
When the frost is on the punkin and the fodder's in the shock!

—*James Whitcomb Riley.*

HOW THE INDUSTRY GREW

Away back in 1882 the first half-blood Holsteins appeared on the fairgrounds at Washington County, Wisconsin; this year, forty years afterwards, fully ninety per cent of the cattle in the county are black and white.

In a write-up of the 1882 event the *West Bend Democrat*, in a truly prophetic spirit, said the following: "This year for the first time appeared a large number of calves of half Holstein blood from good native or graded cows. Although this was only the first mixture of the Holstein stock, the calves looked fully three-quarters Holstein. They were remarkable for their large size, fine form, strength and color, and were admired by all lovers of fine stock. One of these calves at four months old weighed 365 lb., another when dropped weighed 107 lb. and when two weeks old weighed 159 lb. As high as $35 was paid on the fair grounds for several of these spring calves. The Holstein stock is destined to have a run of popular favor in this section and it will ere many years bring about an immense improvement among our cattle as it well deserves. Their yield of milk is large and rich, and they are also excellent beef cattle."

In the same article, as could be expected, appeared a paragraph that supplemented the above. It read:

"Messrs. Fred W. and Charles A. Schrœder of the town of West Bend made perhaps the largest number of entries in the aggregate of cattle (Holstein), horses, sheep, swine and farm produce and carried away 15 first prizes and 4 second prizes."

This was a year after the late Fred W. Schrœder had introduced the first purebred Holstein-Friesian bull into the county, which also was one of the two or three first bulls of that strain brought to Wisconsin.

CLUB ACTIVITIES

BRATTLEBORO BUSINESS

Twenty-nine applications for membership were received at the office of the Secretary during the week ending October 28th. There were 1,591 certificates of registry issued of which 1,214 were female and 377 were male; 1,638 certificates of transfer were written, 1,245 female and 393 male.

For the week ending November 4th, twenty-seven applications for membership were received at the office of the Secretary. A total of 1,763 certificates of registry were issued of which 1,289 were female 474 were male; 1,580 certificates of transfer were written, 1,111 female and 469 male.

The herd prefixes reserved during the two weeks' period are:

Alcatraz, O. E. Bartling, Portland, Ind.
Allanstorm, G. Alfred Storms, Winterton, N. Y.
Beech Hill, Henry J. Mann, Plymouth, N. H.
Brookshade, Robert S. Cotton, Morenci, Mich.
Carland, S. J. Carlson, Turtlepoint, Pa.
Clement, Mrs. Winifred Clement, Pittsford, Mich.
Coteau, Will Banks & Son, Lynd, Minn.
Dacre, W. H. Daker, Ryan, Iowa.
Daisy Fields, Lynn Bradford, Sparta, Mich.
Fairy Green, S. W. Bail, Washington, Pa.
Hardscrabble, Robert Griffith, Fair Haven, Vt.
Indillbred, W. Bradley Thompson, Collinsville, Conn.
Nestle Brook, E. Frank Branon, Fairfield, Vt.
Newob, F. S. Bowen, Bellefonte, Pa.
Octorono, W. E. Pritchard & Sons, Lucas, Ohio.
Pageson, R. L. Page & Son, Edgerton, Wis.
Palomar, Frank Guttenberd, Jr., Jefferson, Wis.
Podice Slough, Lorenz Lorenzen, Arlington, Wash.
Rhineland, Herman J. Bassuener, Plymouth, Wis.
Ripley, J. W. Beauchamp, Doniphan, Mo.
Rowdale, Walter G. Rowe, Wolcottville, Ind.
Three Maples, George T. Rose, Spartansburg, Pa.
Stoneacres, William B. Hatch, Ypsilanti, Mich.
Wildale, Dr. O. M. Deems, Springfield, Mass.

ILLINOIS ASSOCIATION RE-ELECTS FOX

At the annual meeting of the Illinois Holstein Association held recently at Dixon, George A. Fox of Sycamore was re-elected president for the fifth term and the following vice-presidents were chosen: first, William Fitch, Aurora; second, William G. Allyn, manager of Rock River Farms at Byron; third, Harry Wood, Delavan; fourth, Prof. W. W. Yapp, Urbana, and fifth, Judge Lindley of Greenville. The secretary-treasurer is elected by the Executive Board and will be named at a later session.

The principal address was made by W. J. Dougan, a practical dairyman, of Beloit, Wisconsin. He talked on the untouched possibilities of the purebred business and on cow testing associations, said the dairy cattle traffic must be put on a sound dignified basis and told of his own experiences with herdsires. Wm. H. Allyn, manager of Rock River Farms talked on the National Dairy Show. Field Secretary R. M. Long and Secretary-Treasurer R. N. Thompson made their official reports. The Whiteside County Calf Club team, the champions of the National Dairy Show gave a demonstration which was enjoyed by the seventy-five present. It was decided to continue the program of the past year which included the organization of calf clubs and assisting the extension department of the college at Urbana in promoting cow testing associations and bull rings; to foster the work of eradication of tuberculosis and other diseases; to promote the testing plant and its work.

The officers have under consideration a program of work especially adapted to the needs of the southern sections of the state, districts where the Holstein breed is little known and where there apparently is a fertile field for expansion.

TEXAS CLUB ELECT OFFICERS

At the annual banquet of the Texas Holstein Breeders' Club held at the Oriental Hotel at Dallas, October 10th, John T. Orr of Dallas was toastmaster. Addresses were made by the well-known Holstein judge W. Standish, Lyons, Ohio; C. M. Evans, of Texas A. & M. College; C. O. Moser, Dallas; and W. A. Cocke of San Antonio. A proposal is on foot to co-öperatively market the livestock of the members of the association.

The officers elected for the following year are:

C. O. Moser, president; J. T. Johnson, Farmer's Branch, vice-president; W. A. Cocke, San Antonio, second vice-president; Otis Brown, Irving, secretary-treasurer; directors were: C. H. Harris, Fort Worth; S. R. Howe, Fort Worth; Mrs. Hubb Diggs, Fort Worth; C. M. Evans; A. E. Flowers, Dallas; T. F. McKamey Richardson and R. E. Hildebrand, San Antonio.

BREEDERS STAGE JUDGING CONTEST

The members of the Franklin and Hampshire County Holstein Club had an outing, October 21st at the home of E. Thornton Clark. President Elder of the Mt. Hermon Boys' School was in charge. Some fifty were present from three Massachusetts counties. There was two judging contests, the prizes in the first one going to J. H. Cady and Gus Lombella of Westfield, and Rev. C. H. Smith of Granby, and in the second contest to E. L. Bartlett of Montague, Roy K. Lambson of Westfield and C. R. Tower of Williamsburg. Mr. Clark has a splendid herd of Holstein grades and received many compliments on their appearance and producing capacity. The stock judge was C. S. Blackman field secretary of the New England Holstein Association and County Agent R. A. Payne was master of ceremonies.

GARVEY GETTING POSTED

F. A. Garvey, president of the Crawford County, Wisconsin Holstein Breeders Association, with County Agent M. L. Wright, recently toured Crawford County in an attempt to visit all the purebred Holstein herds therein. He reports that many of the boys and girls were busily engaged in caring for young animals which they afterwards showed at the fall fairs. Many of the grade Holstein herds were headed by high class purebred bulls, animals of superior type and record backing and he is elated over the purebred herds he found. Mr. Garvey found his job was a much bigger one than he had anticipated but he now has a much better idea of the Holstein industry in his home county and predicts that Crawford County Holsteins will be heard from in the near future.

GREENVILLE BREEDERS' DEMONSTRATION

The Greenville Holstein-Friesian Club held a picnic and judging demonstration on the farm of A. L. Moats, near Greenville, Pa., October 4th, with about a hundred present. The demonstration was given by J. R. Dawson of the State College Dairy Extension Department. He talked on type and conformation, breeding and feeding, using animals of the Moats herd to illustrate his points. His audience gave him strict attention and afterwards held an open and free discussion of his subjects.

LOOKING THEM OVER

Fifteen members of the New Jersey Holstein-Friesian Association recently made a tour of some of the Connecticut breeding establishments and on November 1st looked over the City of Bridgeport herd. This herd is owned by the Department of Charities of the City of Bridgeport and is under the care of Angus P. Thorne, president of the Connecticut Holstein-Friesian Association.

CHESTER COUNTY BREEDERS' FIELD DAY

The Chester County Holstein-Friesian Breeders' Association held their Field Day, October 28th, at E. Page Allinson's Town's End Farm, West Chester, Pa. The Chester County Breeders had prepared an extensive educational program and it is a pity that more owners of cattle did not attend, as the weather was glorious. There were several rival attractions in the neighborhood, a football game, a sale and one or two other events so that there was quite a number that were there for a time but did not stay all day.

The first event on the program was a junior judging contest in which twenty-nine boys and three girls participated. Prof. A. A. Borland of the Dairy Department of Pennsylvania State College, gave a lecture on judging, telling the contestants what they should look for and then they were set to work on two rings consisting of aged cows and yearling heifers. They had to place the animals and then give their reasons, the placing counting 60% and the reasons 40%.

After the junior contest a men's judging contest was staged, the subjects being three cows, not the same as the juniors placed, and three bulls around a year old. After the judging, Mr. Borland gave his reasons for his placing and there was an animated discussion on the various points of the animals. As each one had points in which they excelled the others in the ring, this event was distinctly educational. The results of the judging competitions were not announced until the banquet in the evening.

The afternoon program consisted of a cattle show. Two very handsome cups were offered for the champion cow and the champion bull, while Mr. and Mrs. E. Page Allinson donated a handsome sterling silver paper weight in the form of a cow for the best exhibit from any one herd. There were eight cows in milk, three years old and over. Frank M. Keen was first, M. L. Jones second and Town's End Farm third.

Seven dry dairy cows were shown and all were good. M. L. Jones took first, Town's End Farm second and third. Three two-year-old's in milk were next, M. L. Jones had first and second and Howard E. Jones had third. Only two dry two-year-old's were exhibited both from the M. L. Jones herd.

Six yearlings were brought out. The animal entered in the name of M. L. Jones was first, Mrs. M. L. Jones was second, and Russell Jones third, and M. L. Jones, Jr., fourth. There were five heifer calves and all nice ones. Animals entered by M. L. Jones were first and second and one owned by Russell Jones third. The animal placed first was one Mr. Jones was presenting to State College and the ringside accused Prof. Borland of knowing this fact, which he vigorously and laughingly denied.

Three bulls above a year old were led into the ring and all three were nice. First prize went to King Ormsby Accrue Segis, a son of Winterthur King Ormsby Accrue, shown by Chas. J. Garrett; a yearling from the M. L. Jones herd was second and a three-year-old from the Town's End Farm third.

Four bulls under a year old were led out. An easy winner was Frank M. Keen's bull. This ten-month's-old bull was sired by a son of Susie Abbekerk Colantha, the noted "White Susie" of Bell Farm. The dam was Bell Farm Bakker, a daughter of King Valdessa Pontiac, who is closing a long time record which will be surpassed only by the junior two-year-old class champion. The top line of this bull is remarkable and his handling quality is of the best. M. L. Jones was second and Howard Jones third.

Three herds were shown. M. L. Jones took first and second and Frank Keen third. Produce of cow went to M. L. Jones. There were three fine "gets of sire," four animals in each set, from the Jones herd, all were by King Fairview Aaggie Colantha, a grandson of Colantha Johanna Lad. Prof. A. A. Borland placed the animals while Chas. J. Garrett was announcer and handed out the ribbons.

After the show there was a meeting of the Chester County Holstein-Friesian Association on the Allinson porch. President E. B. Watson told what the Field Day Committee had aimed to do to entertain the visitors and called upon a number for a few words. Among those were John Shirk, president of the Lancaster County Breeders' Association; W. Hugh Jones, secretary of the Pennsylvania Federation of Holstein-Friesian Clubs; H. D. Allenbach, president of the Interstate Milk Producers' Association; the county agent of Montgomery County and J. Russell Danks, secretary of the Delaware Holstein-Friesian Association and manager of Winterthur Farms. The relation of local clubs to the state federation was the principal subject of discussion. Members of local associations were urged to pay their dues promptly so that the secretary could remit to the secretary of the State Association before January 1st and so enable the local associations to be represented at the meeting of the State Federation at the time of the Farm Products Show at Harrisburg.

Exactly two hundred sat down to a splendid little banquet at the New Century Club that evening. E. B. Walton introduced as toastmaster, Mrs. E. Page Allinson, the mistress of Town's End Farm. She responded in a few well-chosen words and read a short poem entitled "My Holstein, 'Tis of Thee." She called upon John A. Bell, Jr., president of the Pennsylvania Federation of Holstein-Friesian Clubs. Mr. Bell complimented the Chester County Breeders' on the splendid animals shown during the day and touched on the National Dairy Show which he said, from the point of numbers of animals and quality was better than that of previous years. He was particularly struck by the sign exhibited by the national association "We are for the advancement of the Holstein cow but not to the detriment of any other breed." He commended this friendly spirit which he noticed prevailed among those present as he saw several owners of other breeds sitting at the tables.

F. C. Brinton, Jr., treasurer of the Pennsylvania Federation and vice-president of the Chester County Association presented the prizes and cups won during the day. Four prizes were given for the junior judging, the first being a heifer calf, donated by the Keen Syndicate which consists of E. Page Allinson, F. C. Brinton and Frank Keen. Second prize was a heifer calf given by Marshall L. Jones. An interesting feature was that the highest scorer was Ann Barclay, a miss of apparently fifteen years, of Lyndell, while the second score was made by her younger brother, Joseph, about a year and a half younger. Third prize, a wrist watch, went to Clyde Machery and the special prize of another watch for the girl making the highest score was given to Alice Lee, the committee having previously ruled that, in the event of a girl winning one of the animals the special prize should go to the girl with the next highest score. The handsome cup for the champion female went to M. L. Jones, on his yearling heifer, Westtown Belle Beauty Colantha, the companion cup went to C. J. Garrett on his bull King Ormsby Accrue Segis. The men's prize of a son of King of the Ormsbys from a year record daughter of Johanna King Segis was donated by Winterthur Farms. The contest resulted in a triple tie by Dr. Price, J. A. Bell, Jr., and Albert P. Fassitt. Mr. Bell was not eligible for the prize because he was not a member of the local association; Dr. Price was ineligible because he did not own a herd so the bull was given to Mr. Fassitt. Mrs. Allinson's special prize went, of course, to M. L. Jones whose animals were of high quality and in real show condition.

Prof. A. A. Borland being duly called upon said, that Pennsylvania ranked seventh in the Union in point of cow population but that her cows were good because she ranked fourth in production. Pennsylvania ranked third in point of annual value of dairy products production and also third for consumption of market milk. The Keystone State stands second for production of farm butter being exceeded only by Texas and she was supreme in the production of ice cream. He complimented the breeders on the splendid Field Day show.

Mr. Borland touched on the work of Penn State said that there were 34 graduates in dairying last June, all with good positions before graduation and more could have been placed if there had been more graduates. He was pleased to report that a number of the graduates went back to their farm homes. He gave credit for the scholarship given each year by Mr. P. M. Sharpless of West Chester, for girls studying dairying and said that in the two instances where the scholarship had been awarded the prize was of great value to the winner.

J. Russell Danks of Winterthur Farms, spoke a few words of appreciation of the show and of the spirit shown by the

exhibitors and members. Wm. Vandergift, extension representative of Chester County, said that Chester County ranked third in the state for dairy cattle, first in amount of milk produced, first in value of milk produced and first in value of dairy cows. The average production in the cow testing associations in the state was 5,000 lb. while the average production of Chester County milkers in the test association was 6,500 lb.. Mr. P. M. Sharpless, president of the Sharpless Separator Company, and a Jersey breeder himself, spoke a few words and then the Hon. F. C. Rasmussen, State Secretary of Agriculture was called upon. Mr. Rasmussen gave some interesting figures regarding the value and production of agricultural products in Pennsylvania. He said the state needed more purebred cattle and more breeders of purebred cattle. Only 5.3% of the cattle in the state were purebreds. Beginners should stress health of the animals as well as type and should start with animals that are tuberculin tested and if possible, from accredited herds. Farmers and cattlemen should take greater interest in legislation for the welfare of the industry and for the good of themselves. He touched on the work of the boys and girls as shown during the day and of coöperation of the bankers with the farmers, said that business men advanced their enterprizes on borrowed capital and the farmer and dairyman should learn to do the same. He paid tribute to Dr. Thomas, who, he said, friends of agriculture in the state were beginning to believe was the man to make Penn State College the institution it should be representing the importance of the state and of state agriculture.

The program was interrupted at this time to present a handsome birthday cake to H. E. Robertson of Roberston Farm whose birthday it happened to be. In responding Mr. Roberston said that Mr. and Mrs. Allinson and Mr. and Mrs. Brinton visited the Robertson Farm some two month's ago and invited him to attend their field day but said he would probably forget the date. He said he would attend and would not forget the date for it was his birthday but he was surprised to learn that they had remembered it. He thanked them for the present and congratulated the Chester County Association and its members on the improvement of the quality of cattle shown over its exhibits of last year. He commended the junior competition and its handling, especially the fact that Prof. Borland told why the animals were placed where they were.

Frank A. Keen on behalf of the Chester County Association presented the two-year-old heifer, Willowna Luella No. 678930, to President Thomas, the animal to be added to the State College herd. Then he presented Westtown Aaggie Colantha on behalf of M. L. Jones, and Korndyke Valdessa Markwell on behalf of Hugh More, and as a token of presentation he handed the registry and transfer papers of each animal to Dr. Thomas. The animals were on exhibition during the field day.

President Thomas made a brief speech of acceptance in which he said that we could not have too many creators of industry as masters of man. The changes of agriculture in the years since the Civil War were greater than all the changes in all the years from the time of Abraham to the time of the breaking out of the Civil War. Secondary education had made a tremendous progress in the last 100 years. The first high schools in the United States was built in 1825 while now one is completed every working day. To successfully compete in industry especially to become leaders, a high degree of education was needed. The secondary schools did a great deal to bridge the gap while everything possible should be done to enable students who wished to go to college and obtain a higher education so that in time, they could become leaders in their respective industries and in the world.

MCLEOD BREEDERS' BANQUET

McLeod County Holstein Breeders' Association held its second annual banquet at Glencoe, October 24th with about 200 in attendance. They had a good time and heard some splendid talks on cattle breeding and the dairy business.

Steer a middle course. The man who has no friends may be envied by the man who has too many.

MEETING OF THE EXECUTIVE COMMITTEE OF THE PENNSYLVANIA FEDERATION OF HOLSTEIN-FRIESIAN CLUBS

A meeting of the Executive Committee of the Pennsylvania Federation of Holstein-Friesian Clubs was held at the Field Day of the Chester County Holstein-Friesian Association, at Town's End Farm, owned by E. Page Allinson, at West Chester, October, 28th.

As the attendance was less than a quorum, no business could be done except that necessary to arrange for the holding of the next annual meeting at Harrisburg. The program was arranged as follows: Banquet in honor of Governor Frank O. Lowden, President of the National Association, to be held Wednesday evening, January 24, 1923; the annual business meeting and election of officers, Thursday morning, January 25th. The meeting will be in connection with the State Farm Products Show which will be in full swing during that week.

It was decided to recommend that members having paid their dues by the time of the annual meeting of their local club and delegates representing such members, be allowed to vote, even though their local meeting is held after January 1st.

The members present thought it would be well for the secretary to write all local secretaries and presidents urging support of the movement to endow empty stanchions at the State College with purebred cows.

The expected report of the final action of the Extension Committee of the National Association in regard to the method to be followed in returning the portion of the transfer fees belonging to the states, had not been received. Opinion was undivided that this money should be used carefully and made to return the greatest possible benefit to the breeders.

Present at the meeting were: John A. Bell, Jr., president; W. Hugh Jones, secretary and F. C. Brinton, Jr., treasurer.

W. Hugh Jones, *Secretary.*

Shows, Fairs and Expositions

Nov. 18-25—Kansas City, Mo., American Royal Live Stock Show.

Dec. 2-9—Chicago, Ill., International Live Stock Show.
Jan. 13-20, 1023—Denver, Col., National Western Stock Show.
Feb. 1-10—Tampa, Fla., South Florida Fair.

CALIFORNIA NATIONAL LIVESTOCK SHOW

The Second Annual California National Livestock Show was held in San Francisco. The weather was favorable during the entire week which was a good thing as the cattle was housed in tents. There were fine exhibits of horses and beef cattle but a small exhibit of dairy cattle. The judge was Prof. Wilson of the University of Minnesota. There were only three exhibitors of Holsteins including the Bridgford Co., Patterson, and the Milbræ Dairy Company of San Mateo County. This company has been breeding Holsteins for over a quarter of a century yet it is the first time it has exhibited although the herd consists of well over 200 animals. They carried off both grand championships, the female winner being Milbræ Pontiac Sarcastic Lad, a daughter of the senior champion bull, King Pontiac Muso Netherland. Bridgford took both of the junior championships. The awards were:

Bulls, 3 years and over—King Pontiac Musa Netherland, Millbræ Dairy, first.

Bulls, 2 years and under 3—Sir Ormsby Korndyke Fern, Frank Bresclanini, Petaluma, first.

Junior yearling bull—King Pontiac Salteria Prilly, Bridgford, first.

Senior bull calf—King Prilly Pontiac Echo, Bridgford, first; Napstahog Sir Ormsby Raphaella, Bresclanini, third; Millbræ, Therese Korndyke, Millbræ, second.

Junior bull calf—Millbræ Pontiac Olive Korndyke, Millbræ Dairy, first; King Pontiac Princess Prilly, Bridgford, second.

Cows, 4 years and over—Thelma of Millbræ, first; Netherland of Millbræ, second; Sleepy Barrilos Pontiac, third.

Cows, 3 years and under 4—Gladys King Pontiac, first; Barrilos King Pontiac, second; both owned by Millbræ Dairy.

Cows, 2 years and under 3—Millbræ Pontiac Sarcastic Maid, Millbræ Dairy, first.

Senior yearling heifers—Millbræ Rag Apple Esteves, Millbræ Dairy, first.

Junior yearling heifer—Millbræ Ormsby Queen, Millbræ Dairy, first.

Senior heifer calf—Abbekerk Adirondac Maid Prilly, Bridgford, first; Millbræ Antoinette Pontiac, Millbræ Dairy, second; unnamed heifer, Bridgford, third.

Junior heifer calf—Millbræ Babonia Pontiac, Millbræ Dairy, first; Princess Echo Segis Prilly, Bridgford, second; Mercedes Inka Hengerveld Prilly, Bridgford, third.

Champions—Senior and grand champion bull, King Pontiac Musa Netherland, Millbræ Dairy; junior champion bull, King Pontiac Salteria Prilly, Bridgford; senior and grand champion cow, Millbræ Pontiac Sarcastic Maid, Millbræ Dairy; junior champion cow, Abbekerk Adirondac Maid Prilly, Bridgford.

Ager herd—Millbræ Dairy, first.

Young herd—Millbræ Dairy, first.

Calf herd—Bridgford Holstein Company, first; Millbræ Dairy, second.

Get of sire—Millbræ Dairy on King Pontiac Musa Netherland, first and third; Bridgford Holstein Company on King Segis Alcartra Prilly, second.

Produce of dam—Bridgford Holstein on Princess Pontiac Salteria of Vina, first; Millbræ Dairy on Sleepy Barrilos of Millbræ, second.

Five cows in milk—Millbræ Dairy.

Monthly Comparison of Association Business

The monthly comparison sheet issued from the office of the Secretary of the Holstein-Friesian Association of America indicates that the October business failed to show the customary seasonal expansion. Transfer certificates to the number of 5,733 were issued against 7,662 last year and 9,488 in the corresponding month of 1920. The figures for September were 5,072; a year ago the number was 5,531 so that the proportionate number of transfers for October should have been a little over 7,000 allowing for the customary fall increase in business. The figures are certainly disappointing and rather unexpected, as it seemed evident that prices throughout the country were slightly on the up-grade with a corresponding increase in sales activity, public and private.

The transfer earnings column shows a gain of over $6,700 due, of course, to the increased tranfer fee which was put in operation right after the Kansas City meeting.

Registrations show a gain over September but a decrease of more than 2,000 from the corresponding month of last year. There are 123 membership applications for October, 1922, as against 131 last year. The earnings from the registrations, transfers and duplicates show a gain over September of $3,643.25, and exceed the receipts of the corresponding month of 1921 by only $2,591.75, although the transfer fee is now $1.50 against a charge of fifty cents a year ago.

The Lancaster County Breeders and their friends at the Berks Farm, Reading, Pa., October 24th. Mr. Abner S. Deysher and his prize calf, "Jake" the son of Carnation Matador Pontiac in the foreground.

exhibitors and members. Wm. Vandergift, extension representative of Chester County, said that Chester County ranked third in the state for dairy cattle, first in amount of milk produced, first in value of milk produced and first in value of dairy cows. The average production in the cow testing associations in the state was 5,000 lb. while the average production of Chester County milkers in the test association was 6,500 lb.. Mr. P. M. Sharpless, president of the Sharpless Separator Company, and a Jersey breeder himself, spoke a few words and then the Hon. F. C. Rasmussen, State Secretary of Agriculture was called upon. Mr. Rasmussen gave some interesting figures regarding the value and production of agricultural products in Pennsylvania. He said the state needed more purebred cattle and more breeders of purebred cattle. Only 5.3% of the cattle in the state were purebreds. Beginners should stress health of the animals as well as type and should start with animals that are tuberculin tested and if possible, from accredited herds. Farmers and cattlemen should take greater interest in legislation for the welfare of the industry and for the good of themselves. He touched on the work of the boys and girls as shown during the day and of coöperation of the bankers with the farmers, said that business men advanced their enterprizes on borrowed capital and the farmer and dairyman should learn to do the same. He paid tribute to Dr. Thomas, who, he said, friends of agriculture in the state were beginning to believe was the man to make Penn State College the institution it should be representing the importance of the state and of state agriculture.

The program was interrupted at this time to present a handsome birthday cake to H. E. Robertson of Roberston Farm whose birthday it happened to be. In responding Mr. Roberston said that Mr. and Mrs. Allinson and Mr. and Mrs. Brinton visited the Robertson Farm some two month's ago and invited him to attend their field day but said he would probably forget the date. He said he would attend and would not forget the date for it was his birthday but he was surprised to learn that they had remembered it. He thanked them for the present and congratulated the Chester County Association and its members on the improvement of the quality of cattle shown over its exhibits of last year. He commended the junior competition and its handling, especially the fact that Prof. Borland told why the animals were placed where they were.

Frank A. Keen on behalf of the Chester County Association presented the two-year-old heifer, Willowna Luella No. 678930, to President Thomas, the animal to be added to the State College herd. Then he presented Westtown Aaggie Colantha on behalf of M. L. Jones, and Korndyke Valdessa Markwell on behalf of Hugh More, and as a token of presentation he handed the registry and transfer papers of each animal to Dr. Thomas. The animals were on exhibition during the field day.

President Thomas made a brief speech of acceptance in which he said that we could not have too many creators of industry as masters of man. The changes of agriculture in the years since the Civil War were greater than all the changes in all the years from the time of Abraham to the time of the breaking out of the Civil War. Secondary education had made a tremendous progress in the last 100 years. The first high schools in the United States was built in 1825 while now one is completed every working day. To successfully compete in industry especially to become leaders, a high degree of education was needed. The secondary schools did a great deal to bridge the gap while everything possible should be done to enable students who wished to go to college and obtain a higher education so that in time, they could become leaders in their respective industries and in the world.

MCLEOD BREEDERS' BANQUET

McLeod County Holstein Breeders' Association held its second annual banquet at Glencoe, October 24th with about 200 in attendance. They had a good time and heard some splendid talks on cattle breeding and the dairy business.

Steer a middle course. The man who has no friends may be envied by the man who has too many.

MEETING OF THE EXECUTIVE COMMITTEE OF THE PENNSYLVANIA FEDERATION OF HOLSTEIN-FRIESIAN CLUBS

A meeting of the Executive Committee of the Pennsylvania Federation of Holstein-Friesian Clubs was held at the Field Day of the Chester County Holstein-Friesian Association, at Town's End Farm, owned by E. Page Allinson, at West Chester, October, 28th.

As the attendance was less than a quorum, no business could be done except that necessary to arrange for the holding of the next annual meeting at Harrisburg. The program was arranged as follows: Banquet in honor of Governor Frank O. Lowden, President of the National Association, to be held Wednesday evening, January 24, 1923; the annual business meeting and election of officers, Thursday morning, January 25th. The meeting will be in connection with the State Farm Products Show which will be in full swing during that week.

It was decided to recommend that members having paid their dues by the time of the annual meeting of their local club and delegates representing such members, be allowed to vote, even though their local meeting is held after January 1st.

The members present thought it would be well for the secretary to write all local secretaries and presidents urging support of the movement to endow empty stanchions at the State College with purebred cows.

The expected report of the final action of the Extension Committee of the National Association in regard to the method to be followed in returning the portion of the transfer fees belonging to the states, had not been received. Opinion was undivided that this money should be used carefully and made to return the greatest possible benefit to the breeders.

Present at the meeting were: John A. Bell, Jr., president; W. Hugh Jones, secretary and F. C. Brinton, Jr., treasurer.

W. Hugh Jones, *Secretary.*

Shows, Fairs and Expositions

Nov. 18-25—Kansas City, Mo., American Royal Live Stock Show.

Dec. 2-9—Chicago, Ill., International Live Stock Show.
Jan. 13-20, 1923—Denver, Col., National Western Stock Show.

CALIFORNIA NATIONAL LIVESTOCK SHOW

The Second Annual California National Livestock Show was held in San Francisco. The weather was favorable during the entire week which was a good thing as the cattle was housed in tents. There were fine exhibits of horses and beef cattle but a small exhibit of dairy cattle. The judge was Prof. Wilson of the University of Minnesota. There were only three exhibitors of Holsteins including the Bridgford Co., Patterson, and the Milbræ Dairy Company of San Mateo County. This company has been breeding Holsteins for over a quarter of a century yet it is the first time it has exhibited although the herd consists of well over 200 animals. They carried off both grand championships, the female winner being Milbræ Pontiac Sarcastic Lad, a daughter of the senior champion bull, King Pontiac Muso Netherland. Bridgford took both of the junior championships. The awards were:

Bulls, 3 years and over—King Pontiac Musa Netherland, Millbræ Dairy, first.

Bulls, 2 years and under 3—Sir Ormsby Korndyke Fern, Frank Bresclanini, Petaluma, first.

Junior yearling bull—King Pontiac Salteria Prilly, Bridgford, first.

Senior bull calf—King Prilly Pontiac Echo, Bridgford, first; Napstahog Sir Ormsby Raphaella, Bresclanini, third; Millbræ, Therese Korndyke, Millbræ, second.

Junior bull calf—Millbræ Pontiac Olive Korndyke, Millbræ Dairy, first; King Pontiac Princess Prilly, Bridgford, second.

Cows, 4 years and over—Thelma of Millbræ, first; Netherland of Millbræ, second; Sleepy Barrilos Pontiac, third.

Cows, 3 years and under 4—Gladys King Pontiac, first; Barrilos King Pontiac, second; both owned by Millbræ Dairy.

Cows, 2 years and under 3—Millbræ Pontiac Sarcastic Maid, Millbræ Dairy, first.

Senior yearling heifers—Millbræ Rag Apple Esteves, Millbræ Dairy, first.

Junior yearling heifer—Millbræ Ormsby Queen, Millbræ Dairy, first.

Senior heifer calf—Abbekerk Adirondac Maid Prilly, Bridgford, first; Millbræ Antoinette Pontiac, Millbræ Dairy, second; unnamed heifer, Bridgford, third.

Junior heifer calf—Millbræ Babonia Pontiac, Millbræ Dairy, first; Princess Echo Segis Prilly, Bridgford, second; Mercedes Inka Hengerveld Prilly, Bridgford, third.

Champions—Senior and grand champion bull, King Pontiac Musa Netherland, Millbræ Dairy; junior champion bull, King Pontiac Salteria Prilly, Bridgford; senior and grand champion cow, Millbræ Pontiac Sarcastic Maid, Millbræ Dairy; junior champion cow, Abbekerk Adirondac Maid Prilly, Bridgford.

Ager herd—Millbræ Dairy, first.

Young herd—Millbræ Dairy, first.

Calf herd—Bridgford Holstein Company, first; Millbræ Dairy, second.

Get of sire—Millbræ Dairy on King Pontiac Musa Netherland, first and third; Bridgford Holstein Company on King Segis Alcartra Prilly, second.

Produce of dam—Bridgford Holstein on Princess Pontiac Salteria of Vina, first; Millbræ Dairy on Sleepy Barrilos of Millbræ, second.

Five cows in milk—Millbræ Dairy.

Monthly Comparison of Association Business

The monthly comparison sheet issued from the office of the Secretary of the Holstein-Friesian Association of America indicates that the October business failed to show the customary seasonal expansion. Transfer certificates to the number of 5,733 were issued against 7,662 last year and 9,488 in the corresponding month of 1920. The figures for September were 5,072; a year ago the number was 5,531 so that the proportionate number of transfers for October should have been a little over 7,000 allowing for the customary fall increase in business. The figures are certainly disappointing and rather unexpected, as it seemed evident that prices throughout the country were slightly on the up-grade with a corresponding increase in sales activity, public and private.

The transfer earnings column shows a gain of over $6,700 due, of course, to the increased tranfer fee which was put in operation right after the Kansas City meeting.

Registrations show a gain over September but a decrease of more than 2,000 from the corresponding month of last year. There are 123 membership applications for October, 1922, as against 131 last year. The earnings from the registrations, transfers and duplicates show a gain over September of $3,643.25, and exceed the receipts of the corresponding month of 1921 by only $2,591.75, although the transfer fee is now $1.50 against a charge of fifty cents a year ago.

INTENTIONAL SECOND EXPOSURE

Cow Testing Association Reports

NEW YORK STATE DAIRY IMPROVEMENT ASSOCIATIONS

The October news letter of G. W. Tailby, Jr., supervisor of the Dairy Improvement Associations, of New York, gave the results of the August testing. The champion cow is the registered Holstein, Adeline Hengerveld De Kol 2d, owned by the Aldencrest Farm, Alden, New York, and enrolled in the Erie County Association. As already reported in the BREEDER AND DAIRYMAN, she produced 115.8 lb. fat, 3,512 lb. milk in the month. A grade Holstein owned by Sam Barber, Scottsburg, was second with 101.3 lb. fat, 2,356 lb. milk. A purebred Holstein owned by Doty and Seaman, Geneseo, is third with 88.6 lb. fat, 1,736.8 lb. milk. Grade Jerseys are fourth and fifth. As said before the leader is from Erie County but the next four are all from Livingston County. The records of 9,637 cows were kept during the month of which 528 or 5.5% made the honor roll. Of these twenty-five produced between 60 and 70 lb. fat; two between 70 and 80 and two over 100 lb.

The September leaders of a majority of the associations are reported and the black and white breed have a monopoly of the leading positions, all being filled with either grade or purebred Holsteins with the exception of one Ayrshire and two Jerseys. The highest cow reported is a Holstein-Friesian owned by Robt. Cornel and enrolled in the Allegany Association with 1,725 lb. milk, 86.3 lb. fat.

KENTUCKY TESTING

During September, 126 Jerseys, 30 Holsteins and one Guernsey were tested in Kentucky of which 17 Jerseys, 4 Holsteins and the Guernsey attained the honor roll by producing more than 3 lb. butterfat during the two days that they were tested. The high cow was Rhoda Overton Segis, owned by the Kentucky Holstein Farm at Bardstown. She produced 108.7 lb. milk, 4.209 lb. butterfat in two days. Her stablemate, Oakwood Segis De Kol Johanna was second with 110 lb. milk, 3.9 lb. fat.

BARTON IN FRONT AGAIN

The high herd in the Scotts Bluff, Nebraska, Cow Testing Association is the registered herd of Sam Barton & Sons, which consists of seventeen head that averaged to produce 920 lb. milk, 30.5 lb. butterfat. A Jersey herd was second with 29.2 lb. fat.

The highest producing cow during September was a grade Holstein owned by Lee Everett with 1,707 lb. milk, 54.6 lb. fat. An Everett cow was second with 49.4 lb. fat.

There were 289 cows tested and only seventeen produced over 40 lb. fat in the month, the cause is the natural decrease in production as the majority of cows are nearing the end of their lactation period, dry pasture, and the lack of succulent feed. This is the twelfth month of the Association which will be carried on the coming year. The tester is C. M. Rydberg, who will issue a report on the past year's work.

SOUTH FRANKLIN ASSOCIATION

The usual predominance of the black and white breed in the South Franklin, Pennsylvania, Testing Association had a set-back in October. The first two positions were held by Guernseys, a grade being first and a purebred second. However, six of the leading ten cows were black and white, one owned by W. L. Young, being a purebred while the other five were grades. Tenth position was held by a registered Ayrshire. The tester of this Association is R. S. Heisey, who had twenty-two herds in his jurisdiction. Fourteen cows produced over 1,200 lb. milk, and thirty-five more than 1,000 lb. while four exceeded 50 lb. butterfat.

LITTLEPORT, IOWA

During the month of September, 319 cows were tested in the Littleport, Iowa, Testing Association with an average production of 525 lb. milk, 19.91 lb. butterfat. The leader was Blossom, the three-year-old grade Holstein in the herd of G. H. Meyer of Littleport with 1,329 lb. milk, 49.2 lb. fat. The high herd is owned by J. L. Cords of Elkader, his Holsteins averaging 1,131 lb. milk, 34.13 lb. fat.

Residents from Clayton County who attended the Waterloo Dairy Congress felt proud when they saw the map hung up in the Iowa Cow Testing Exhibit, showing Clayton County in the lead with seven associations, followed by two counties with three each.

WALTER JUNGE, *Tester.*

HOLSTEINS LEAD IN IOWA

The Holstein herd of Roy N. Finster of Eldora headed the Harding County, Iowa Testing Association during September with an average of 41.5 lb. fat. The high cow was owned by W. D. McCord, Iowa Falls, with 1,923 lb. milk, 86.5 lb. butterfat. Next was a Holstein owned by Geo. Nolte of Iowa Falls.

During the month 304 cows were tested with an average production of 600 lb. milk, 23.15 lb. butterfat. There were six cows that made over 50 lb. butterfat; 27 made over 40 lb. It is planned to start a boys' purebred Holstein calf club this fall. Eleven boys have already enrolled and more are expected.

THE SAME OLD STORY

The high cow in the Livingston County, Missouri Testing Association for September is a grade Holstein owned by Roy Fender with 56.5 lb. butterfat. Cows from the same herd stand second with 53.3 lb.; fourth with 49.8 lb.; and tenth with 44.9 lb. The six animals of this herd averaged 46.2 lb. butterfat for the month.

A dairyman in this association some time ago used the Jersey bull, Eminent's Dairy Boy. He was in the herd two years and was then shipped to market, leaving behind twenty-two heifers. The daughters of this bull are big producers, one leading the association during June with 61.77 lb. fat. Another daughter of this bull owned by an Avalon dairyman led the association in July with 58 lb. fat. In each instance, stablemates sired by this bull made over 40 lb. fat in the month. After the Livingston County Testing Association started it became evident to Mr. J. W. Dickson, the owner that he had had a good sire so he started to try to buy back the daughters but failed to get them all, the owners refusing to even set a price on them.

IN MISSOURI

The two best cows in the Lafayette-Saline Cow Testing Association for the month of August were Holsteins owned by Joe Schmidt with 1,303.6 lb. milk, 57.4 lb. fat and 1,335.1 lb. milk, 50.7 lb. fat. In third position was a Holstein from the Confederate Home with 1,288.9 lb. milk, and exactly 49 lb. fat. The leading herd was that of Joe Schmidt with eight Holsteins that averaged 1,181.1 lb. milk, 43.1 lb. fat.

Animals from this herd will make good anywhere.

This association has completed its first year and re-organized for another. John Bruns of Concordia has been elected president; E. H. Walkenhorst of Concordia, secretary-treasurer.

Last year the average for the association was 6,092 lb. milk, 254.7 lb. butterfat. The average profit above feed cost was $76.16 and the average return for each dollar feed cost was $2.83.

The highest producing cow was owned by Jos. Schmidt of Waverly. She was a registered Holstein with 11,256 lb. milk, 417.1 lb. fat, giving a profit above feed cost of $213.18. Five other herds averaged more than 300 lb. butterfat per cow.

When the association was organized only one member was weighing the milk daily, now, only two members do not; a bull association has been formed with three bulls in service whose dams average over 900 lb. butter in a year.

VOLANT ASSOCIATION

The high herd in the Volant Cow Testing Association operating in Lawrence County, Pa., consisted of purebred Holsteins owned by McMillin & Son with an average of 1,116 lb. milk, 40.2 lb. butterfat. The Jersey herd of B. F. Moose made a good showing furnishing the leader with 64.7 lb. fat. D. B. Reynolds had a three-year-old Holstein that produced 1,302 lb. milk, 53.4 lb. fat while one of the McMillin cows produced 1,511 lb. milk, 51.4 lb. fat.

During the month of October the tester, Paul Stonebraker supervised the testing of twenty-six herds containing 258 animals. Of this number thirty produced over 40 lb. butter and eight exceeded 50 lb. while 28 made over 1,000 lb. milk and 9 over 1,200 lb.

The Pierce county Holstein breeders' conducted a tour to the Carnation Stock Farms which was attended by 53 dairymen.

VIRGINIA TESTING

During the month of August, 4,927 cows were tested in 199 herds enrolled in the twelve cow testing associations in Virginia. Of this number 248 produced 40 or more lb. butterfat in the month. The highest producer was a purebred Holstein owned by H. L. Butler & Sons and was enrolled in the Culpeper Association. She produced 2,318 lb. milk, 74.2 lb. fat. The Butler herd of thirteen purebred Holsteins stands second in the state for herd average with an average production of 1,081.6 lb. milk, 40.7 lb. fat. The Spottsylvania-Stafford Association had 383 cows tested and had the highest average for fat production with an average of 29.97 lb. and stands third for average milk production with 619.1 lb. Fairfax No. 1 stands second for fat production with an average of 27.10 lb. and is high for milk with a 702.5 lb. average for 587 cows.

The Virginia Advanced Registry Honor Roll is headed by the Virginia Polytechnic Institute cow, V. P. I. Veeman Korndyke De Kol with a production of 140 lb. milk, 4.96 lb. fat in the two days' test. Second, is Netherland Soldene Vale De Kol with 122.6 lb. milk, 4.88 lb. fat. She is owned by F. S. Walker. The high milk producer however, is Duanna Walker 2d, owned by Butler & Sons with 147.3 lb. milk and 4.49 lb. fat.

IN THE LEBANON VALLEY

The Lebanon Valley, Pennsylvania, Cow Testing Association has completed a years' work and the tester, Walter Yoder has submitted his report on the 400 cows which composed the twenty-six herds in the Association.

The leading herd consisted of purebred Holsteins, owned by Jonathan Bickel of Mt. Aetna, their average was 10,225.8 lb. milk for seven days and 385.1 lb. butterfat, the average test being 3.75%. He also had the two high cows for butterfat, the highest being S. V. Hengerveld with a production of 460.1 lb. butterfat from 11,949.3 lb. milk. Second to her was Miss Pauline Hartog Korndyke with 451.6 lb. fat from 12,731.1 lb. milk. The biggest milk producer was a grade Holstein owned by Herbert Seibert of Winterville, with 12,761.9 lb. milk, 429.9 lb. butterfat.

MULVANE BREEDERS' MEET

A meeting of the Mulvane Holstein Breeders' Club was held in the city hall at Mulvane, Kansas, October 7th. The officers elected for the ensuing year are: Mark Abilgaard, president; Fred Bradfield, vice-president; Geo. B. Appleman, B. R. Gosney and Cal Goodin, directors.

Sam. G. Campbell was reappointed secretary and Geo. Y. Blair sales secretary. The duties of the latter is to look after and assist buyers who come looking for good milk stock.

The address of the day was given by Dr. Bowersox of Wichita, a federal inspector, who talked on T. B. Eradication.

DOUGLAS HERD TO MOVE

Colorado breeders are interested in the announcement that the Douglas herd will be moved from Rush to the Shirley Green Farm near Denver. The Shirley Green Farm is one of the best equipped dairy ranches anywhere around Denver and is close to Fort Logan. It was formerly the home of a large Hereford herd and has the barns and equipment for a first rate breeding establishment.

Mrs. Douglas is an ex-president of the Colorado Holstein Association and has a splendid herd of cattle. Her favorites are the black and white Holsteins while Mr. Douglas gives more attention to the beef cattle on their large ranch.

Mr. and Mrs. Douglas formerly lived in New York state and some fourteen years ago made their home on the Sanborn Meadows ranch near Rush. They had six range cows and one Holstein and when the Holstein outmilked the six range animals it is really there and then that the Douglas's decided that dairy animals and purebred Holsteins paid the best. At the present time the Douglas herd consists of 110 animals, a number of which have made state records for milk and butterfat production. We understand that the Douglas herd is the only Colorado herd to have more than two 1,000 lb. cows it having three, two of them heifers. A number of the younger animals in the herd are daughters of Johan Duchess De Kol Lad, formerly owned by M. E. Penrose. This bull was a sire of marked excellence and his daughters have tremendous producing capacity.

BONES IS WELCOMED

When "Bones" the grade Holstein sold at the National Dairy show by Earl W. Oliver of Amboy, Minn., to E. W. Gilbertson of Devils Lake, reached her new home she was welcomed by a large gathering of interested dairymen and others who wanted to see the Minnesota grade champion. The celebration called attention to the importance of dairying and of having the best possible cows in the dairies.

JAPANESE GET SHOW HEIFER

A good heifer goes to Japan in Pietertje De Mar Ormsby, the second prize two-year-old at the National Dairy Show. John B. Irwin bought her from August Block & Sons of Hassan Valley, Minn., and sold her to representatives of the Japanese government. She is a daughter of King Wren Korndyke Ormsby and Jessie Fobes Pietertje De Mar and was first in her class and reserve champion at the 1922 Minnesota State Fair.

NOVEMBER IS TERRIBLE

"The hills and fields lie nude,
"The groves and parks unfrocked;
"Bare are the limbs of the shameless trees,
"No wonder the corn is shocked!"

HIGH SCHOOL JUDGING CONTEST

The Rocky Comfort high school judging team won first place in the third stock judging contest open to high schools of south Missouri and north Arkansas. Eleven teams competed, five members in each team. The winners scored 1,654 points out of a possible 2,100. The contest was held at the Ozark Stock Show and was under the auspices of the Southwest Teacher's College.

The gold medal given by the college was won by Earl Howerton of the Monett team who made the highest individual score with 547 points out of a possible 700. The silver medal went to Elmer Luther of the Nevada team and the bronze medal to Herschel Gorman of the Willard team. The West Plains team won the banner for the best Holstein judging with a score of 292 out of a possible 300 points.

SALE OF JENNINGSHURST

Cattlemen in Bradford and Luzerne Counties, Pa., are taking a lot of interest in the purchase of the Jenningshurst Stock Farm, located near Towanda, Pa. by County Agents "Dave" Sloan and H. N. Cobb. Jenningshurst consists of 887 acres and is one of the show places of northern Pennsylvania. For years it was the home of Rag Apple Korndyke, son of Pontiac Rag Apple, the second animal under full age to make a thirty-lb. seven-day butter record in official test and the Jennings herd was one of the best Holstein herds in the state.

Messrs. Sloan and Cobb have a wide circle of acquaintance and their many friends will wish them unqualified success in the big enterprise.

AN INTERPRISING BANK

The Sioux Falls Savings Bank is keeping up the good work, part of which has been told in former issues of the BREEDER AND DAIRYMAN. They are expecting 46 head more of purebred Holsteins which will be sold to the farmers of Minnehaha County on easy payments and eighteen months' time. Two carloads were recently ordered by the Bank and shipped to Dimock to be sold on the same plan. The dairy department of the bank is in charge of F. W. Shafer whose idea it is to help the farmers to build up producing purebred herds without the expenditure of large sums of money. He believes that South Dakota is destined to become a wonderful dairy state.

BACHHUBER TESTING

Strickland Farm Pontiac Maid, a junior four-year-old in the herd of Ben Bachhuber of Elkhorn, Wis., made 35.67 lb. butter from 501.1 lb. milk in seven days beween October 19th and 25th although the weather at that time was not at all favorable to the making of large records. As a junior three-year-old she produced 22.86 lb. butter in a week from 476.5 lb. milk.

SUCCESS WITH TWO BREEDS

The ability to properly handle a dairy cow is inherent in a natural dairyman, and such a man is successful with cattle of any breed.

Nearly two years ago, Wallace Sheard, then twenty-eight years old, started dairying with two cows at Junction City, Kansas, and now he is one of the leading dairymen in his district, owns a state champion registered Jersey and several high-record Holsteins.

One of the members of his herd is the registered Jersey Golden Maid Gamboge's Nora, who last year produced 12,333 lb. milk containing 730 lb. fat in cow test association work, the highest record ever made in a Kansas Testing Association. The books of the Association show that her production for 357 days was valued at $844.86. She is the first gold medal Jersey cow in the state and broke the record when a little more than four years old, so that she holds the state record in two classes, beating the previous record holder by 80.67 lb. fat. To get into the gold medal class she was required to produce 610 lb. butter fat during the testing period and carry a calf 240 days. She beat the butter fat requirement by more than 120 lb.

Mr. Sheard was born in eastern Pennsylvania, and his father kept a herd of Holsteins and shipped milk to New York City. When Wallace was twenty-one years he started West, staying a year in Illinois, and then getting a job as herdsman for a well-known Holstein breeder at Abilene, Kansas. He worked for two years there and then was two years in the Marines during the World War. Early in 1920 he went back to his Abilene position, and in December of the same year started at his present location. There were only two Jerseys when he took over the farm, but twelve others were soon added, two of which are expected to get silver medals this year from the American Jersey Cattle Club for their production work.

Following his purchase of the Jerseys, Mr. Sheard purchased eight Holsteins from his former employers. The Jerseys are not the only high producing cows in the herd, as one of the Holsteins last year made 574 lb. butter fat in less than eleven months, while another produced 482.08 lb. in ten and one-half months.

The herd is enrolled in the local cow testing association, and last year led the association practically every month. The year's average was 456.09 lb. fat, the milk average was 8,921 lb. The barns are kept spotlessly clean; the milk produced is sold at retail in Junction City.

SIR COLANTHA PRILLY BOOMING

Sir Colantha Prilly, the herdsire at the Western State Hospital at Steilacoom, Washington, has another 30-lb. daughter. Mercedes Prilly of Donnybrook has just finished a seven-day test with 32.96 lb. butter to her credit. As a yearling, this heifer made 15.96 lb. butter in seven days. She is now six years old.

WASHINGTON HOLSTEIN NOTES

BY LINCOLN R. LOUNSBURY

At a recent Holstein sale held at Elma, eight farmers purchased 14 purebred animals, including one purebred sire, for $1,815. County agent Robert Cowan reports that five of these dairymen bought their first purebred females.

The Holstein club of Skagit county is planning to organize a bull association in a number of the districts of the county during the winter.

A new class in dairying was introduced at the Tolt community Fair this year. Only cows that had finished a year in the Cow Testing Association were eligible. The scoring was done on the basis of individual production, individual conformation, and net profit per cow on the herd from which the cow came. County agent A. B. Nystrom of King county reported that this class was the most popular at the fair. There were exhibits from four herds in the class and a prize of $50 was divided among them.

ANOTHER WISCONSIN RECORD

What was said to be the oldest married couple in Wisconsin, was recently parted by death when James Bell of Abrams, Oconto County, died at the age of 105. He is survived by his widow who is 103 years old. Less than a year ago the Bells were burned out of the home they had occupied half a century. The couple have been married 86 years.

GOOD COUNTY SHOW HERD

The Adams County Holstein show herd had a successful season. The young herd, composed of animals from the herds of John Zentner, Ray Walker, H. R. Burgdorff, Ellery Cummings and W. J. Osborn, went through the season undefeated. Mr. Osborn's two-year-old bull and junior herdsire, won first wherever shown.

At the Marquette County Fair held at Westfield, this bull took the championship, defeating the prize winning bulls of the other classes in which Adams County animals were ineligible to compete.

At Friendship the Adams County herd took six blue ribbons and got red on aged herd. The young herd and calf herd won first prizes while the Osborn bull, Pinehurst Piebe Sir Ormsby Segis was senior and grand champion. Mr. John Zentner's senior yearling bull, Pabst Creator Achilles the junior champion male while a senior yearling heifer owned by Ray Walker was the junior champion female. With the exception of two bulls, all the stock was bred and raised by their owners and the bulls were purchased when calves. The exhibit was managed by C. J. Osborn, secretary of the Adams County, Wisconsin, Holstein-Friesian Club.

THERE ARE NO THOROUGHBRED CATTLE

The name "Thoroughbred" although quite often applied to purebred animals, is really misused except when used as the name of the breed of running horses eligible to registration in the General Stud Book of England, the American Stud Book or affiliated stud books for running or Thoroughbred horses in other countries. Some dictionaries say otherwise but the editor of a dictionary is not always right and in his definition records the generally accepted meanings of words and for that reason there is some confusion for a time when a word is taking on a new meaning or gradually losing its old significance. Purebred and Thoroughbred are not synonymous terms although many otherwise well informed parties use them as if they were.

In the booklet, "Better Sires—Better Stock" published by the United States Department of Agriculture, terms relating to the character of breeding of farm animals are carefully defined according to the best usage among scientists and breeders. A purebred animal is defined as "one of pure breeding representing a definite, recognized breed and both of whose parents were purebred animals of the same breed. To be considered purebred, livestock must be either registered, eligible to registration, or (in the absence of public registry for that class) have such lineage that its pure breeding can be definitely proved. To be of good type and quality, the animal must be healthy, vigorous, and a creditable specimen of its breed.

HOLSTEIN ASSOCIATION
Curryville S. F. ZOOK, Sec'y Penna.

FROM PEDDLER TO DAIRYMAN

A number of years ago a Swiss ice cream peddler of South St. Louis, decided the city was not the best place to rear his family, so he came to Silica, Mo., and bought a farm of 79 acres and a few cows. To-day the father and his sons own farms in three counties.

Seventeen years ago B. A. Peterin, one of the sons, rented a farm of 160 acres for $100 for the year. The farm was not considered to be very much good and was practically wild land. The next year his father purchased the land and told his son to work on it and improve it. To-day there is a good set of buildings on the place, water is pumped into the house and barns, there are two silos, one of wood and one of concrete. The older Mr. Peterin did not believe in silos but took a trip to Europe and when he came back his son had built the silo and the cows were being fed from its contents. After he saw what the cows were milking, he decided to build another silo.

From the start, a purebred Holstein bull has headed the herd, with the result that the present dairy is so good that people come from long distances to purchase heifers when they are for sale.

BOLL WEEVIL HELPS DAIRYING

Representing the Dodge County Holstein Breeders' Association, Francis Darcey of Watertown, Wis., assisted E. L. Martlet of Athens, Ga., to secure two carloads of fine grade Holsteins which were shipped from Juneau, October 9th. Mr. Martlet is head of the Georiga State Agricultural College and reports that the cotton growers of Georgia were hard hit this year by the boll weevil destroying one-half the cotton crop. Georgia is not at present a dairy state but should be, as four crops of alfalfa can be raised annually and there is every reason to believe that the farmers will turn more to livestock instead of depending solely upon growing cotton.

PAID FOR THEMSELVES IN A YEAR

About a year ago, Emil Mattson of Milnor, N. D., purchased 10 head of grade Holstein cows from a carload shipped in by County Agent Greenwood. These cows cost him an average price of $83 per head at Milnor and he reports that they paid for themselves in the year. He sold two calves from these cows to his son, Albert Mattson who is a member of the Black and White Calf Club of Sargent County and the boy exhibited two calves at the County Fair and won first place with one of them.

There is a movement on foot to start a cow testing association in this section of the county and also in the neighboring Rutland community where a community tuberculosis campaign has just been staged and only one reactor found out of approximately 250 head tested.

SMALL AND GOOD

A real good California herd, small in size but high in quality, is owned by E. G. Stinson of Orange. At the recent Orange county fair the herdsire Prince Alcartra Walker Segis, was the grand champion male and a six-year-old cow, Beauty Creamelle Butter Girl, was the grand champion female. Mr. Stinson bought this cow and two of her daughters last July from W. G. Clark, Hanford. She has had four calves, all heifers, and Mr. Stinson was one of the happiest men in the county when she recently presented him with a heifer calf. One of her daughters, Beauty Creamelle Juliana, was the first prize two-year-old. This is the first time that Beauty Creamelle Butter Girl has ever been shown.

A PUREBRED COMMUNITY

Eight farmers in the Chestnut Grove community of Daviess County, Kentucky, have organized a purebred Holstein club. They intend to keep purebred cows only and to develop their section into a dairy community. One of the members, John W. Pool, owns a six-months'-old bull which came from the herd of the Kentucky Agricultural Experiment Station at Lexington and he will be used as a community sire. The members of the club intend to specialize in the sale of cream, and to feed their skim milk to purebred hogs. They already have purebred flocks of poultry.

NOT A THREAT

Joe Jones was always dissatisfied with his surroundings but he imagined he was the one who was instrumental for the success of the herd around which he worked. He told the rest of the boys that he would threaten to leave and so bring the boss to time.

"What did the boss say about your threat to leave," he was asked on being seen coming from the farm office.

"He didn't take it as a threat," Joe replied, "he seemed to take it as a favor."

LIVESTOCK AND ITS VALUE

Speaking before the convention of the American Veterinary Medical Association September 1st, Dr. John R. Mohler, Chief of the Bureau of Animal Industry, said that the domestic animal population of the United States on the first of this year numbered approximately 183,000,000, or one and two-thirds as much as the human population.

Dr. Mohler placed the value of this live stock at $5,000,000,000, or more than the combined value of all cotton goods, flour and other grist mill products produced in this country. This development has been secured despite storms, drought, incomplete knowledge concerning disease and the principles of breeding, feeding, sanitation and the care of animals, he said. The losses from disease, parasitic troubles, accidents and neglects amount to more than $200,000,000 annually.

RAISES GOOD ONES

Rudolph Kohlhase, of Bertha Township, Todd County, Minn., has a small herd of purebred Holsteins but they are good ones. He has three cows, bred and raised by himself that each have exceeded 500 lb. of butter fat in a year. Rockasone Duchess Alice as a two-year-old produced 12,905.4 lb. milk, 546.87 lb. butter fat. Polly Corona Korndyke 2d, also a two-year-old, produced 14,569.1 lb. milk and 519.41 lb. fat and Rockasone Bussy, who was under two years old at time of freshening, is credited with 12,782.8 lb. milk and 529.15 lb. fat.

A few years ago such records on heifers would attract lots of attention, to-day we give them little more than a passing glance but it takes good animals, a good caretaker and plenty of good feed to do the trick, just the same.

STEVENSON SALE AVERAGES $200

The George E. Stevenson & Sons sale took place at the Origin Farm on November 8th. This was not a complete dispersal but Mr. Stevenson only has a few animals left, having reduced his stock to a "one-man herd." The animals sold included a number of very young bulls and heifer calves, some of which were not catalogued. In all, seventy-five animals averaged $199.47, the total being $14,960. The auctioneer was George W. Baxter with E. M. Hastings as Sales director while the Hastings Company prepared the catalogs.

Buyers came from two states, New Jersey and Pennsylvania. Eight different animals brought $400 or more. The top price was $1,000 for Napol Keystone Beauty Application, a two-year-old daughter of the famous Stevenson world champion, Keystone Beauty Plum Johanna. This heifer, a beautiful individual, was herself making a fine record in long-time test. She was purchased by J. B. Whitlock, Pittston, Pa., who also purchased Napol Lane Tritomia for $610, Napol Daisy Keystone for $400, and several other good ones. J. J. Jermyn of Scranton paid $610 for Cornucopia Plum Johanna 2d, a six-year-old, with a ten-months' record of 731 lb. butter, a daughter of the great transmitting cow Cornucopia Plum Johanna, herself with 1,000 lb. year record. Louis Gross, South Bethlehem, took Korndyke Wynola Lyons, a twenty-lb. junior four-year-old for $335; Arlep Hillside 2d, a granddaughter of King Pontiac Alcartra Pietje for $400; Napol Violet Johanna Beauty, a granddaughter of Keystone Beauty Plum Johanna for $600; Napol Violet Keystone Beauty, a granddaughter of the same cow for $400 and several others at approximately the same figure.

Henry Hilbers of Hackensack, New Jersey, was another one who got a number of good ones and he paid $430 for Napol Meg Johanna Keystone, a granddaughter of Keystone Beauty Plum Johanna. J. C. Sharpe Blairstown, N. J., was another liberal bidder. Dr. Chas. H. Tilton of Scranton, paid $300 apiece for the twin heifers, Napol Korndyke Beauty 2d and Napol Korndyke Beauty, 3d, daughters of Napol Sir Keystone Beauty.

Animals bringing $150 or more with names and addresses of their purchasers are:

1	Korndyke Wynola Lyons, 6 yrs., Louis Gross, South Bethlehem, Pa.	$335
3	Dijkstra Lyons Madrigal, 6 yrs., Henry Hilbers, Hackensack, N. J.	300
5	Napol Courtland Johanna Beauty 2d, 1 yr., Henry Hilbers	340

62	Napol Captain Violet, 7 mo., D. S. Stone, Scranton	165

HOWELL SALES COMPANY'S NINTH

The Howell Sales Company held their Ninth annual event on October 19th, disposing of 88 head for $12,775 an average of $145.50. The buyers were all from Michigan with the exception of W. C. Voegtlen of Lebanon, N. J., who took a number of good young things. Mack was auctioneer and Wood the pedigree man.

The top price was $400 which J. R. Crouse of Howell, bid for the proven sire King Segis Lyons Butter Boy, a son of Rosie Mercedes Butter Boy, 31.06 lb. butter in seven days, 965 lb. butter and over twenty thousand lb. milk in a year. H. W. Norton bid $350 on Ona Hengerveld Lad, a yearling son of King Ona Champion and the 30.28 lb. cow Johan Perfection Belle. Both bulls were consigned by Wm. I. Griffin of Howell. Three other animals reached or exceeded $300, the Michigan Reformatory taking one. A number of animals were purchased for the Reformatory and some for the Michigan State Prison.

Animals bringing $150 or more with names and addresses of their purchasers are:

GIVE THE WIFE A SELF-STARTER

There was a man who owned an auto with a self-starter, and has a tractor to plow his fields. And he had electric lights in his barn.

His cows were milked by machinery. A windmill furnished them with plenty of "Volstead's Favorite."

He had a riding cultivator, and a disc plow: and he fired the hired man who left them out in the weather.

He had money in the bank, was a pillar of the church and was the boss politician in his neck of the woods.

In other words, this man was the "Whole Cheese."

But his wife did all the cooking, and the washing, and made clothes for the kids, and fed the chickens and gathered the eggs for friend husband to sell.

She carried water from the well to the kitchen, and lost five pounds each day sweating over a wood fire (said wood for said fire being out and gathered by said wife).

She stole a few hours from her work to make over the dress she wore when she became the slave of the Whole Cheese.

She did not go to prayer-meeting with the Cheese because she had to clean up the kitchen. She did not go to the village on Saturday because she had to clean up the house. She did not go to church because she was cleaned out by long hours and short pay.

And some folks said it was too bad the Whole Cheese was tied to such a ball and chain.

Moral: The hand that rocks the cradle deserves a self-starter.—*A. C. Brown in the Florida Agricultural News Service.*

BULL STAFFS AND PENS

Comparing the herd bull to a tiger, the United States Department of Agriculture calls attention to the peril of the apparently "gentle bull" turning on his attendant. No man trusts a tiger until it is dead and no bull should be trusted but should have a ring in its nose and should be led with a staff.

One great cattleman was so impressed with the ever present danger of the herdsire that he secured plans for the best obtainable bull staff, and being a manufacturer, had this staff made in quantities and now nearly every first-class Holstein herdbull is led by a staff so brought into the market. Who can tell how many lives have been saved and injuries averted by the use of the King Segis staff? Owners of other breeds have followed the example of their Holstein brothers with the result of added safety to themselves and their helpers.

The Department suggests that a pen be built so that handling would be scarcely if ever necessary. Plans for constructing *Safe* bull pens may be obtained from the Department of Agriculture, Washington, D. C. It is also suggested that in every cattle barn this notice be posted, "Don't trust the bull."

FORM COUNTY ORGANIZATION

A dozen Holstein breeders met October 25th at the Lafayette County Courthouse, Darlington, Wisconsin, and formed the Lafayette County Holstein Association. They will attempt to raise the membership to 100 by December 2d when the first annual meeting will be held, officers elected and a constitution adopted.

Pine Lodge Lottie Calamity, O. B. Lee, Blue Mounds		155

Consigned by Fred Wittwer, Madison.

Waubesa Beach Maybelle, 3 yrs., Carl Rettenmund, Riley		200

FULTON COUNTY, OHIO

The Fulton County Association sale realized $12,200. The highest price was $405 for a bull calf, sired by Pride of the Ormsbys, consigned by Strong & Egnew. His purchasers were a syndicate composed of Ora Kraut, Garfield Porter, C. Porter and Osa Eldridge.

A two-year-old daughter of Pride of the Ormsbys consigned by D. Wyse was purchased for $310 by Grisier and Robinson of Wauseon, Ohio. The Seton Hill College of Greensboro, Pa., purchased eleven head.

CLARK COUNTY BREEDERS' SALE

The sale of the Clark County Holstein Breeders' Association held October 25th at Neillsville, Wis., resulted in an average of $146.53, the total being $9,065 for the 62 head consigned. Seventeen animals exceeded $200.

The top price was $330 which A. W. Hales of Granton paid for Twin Locust Mary Ormsby, consigned by John Wuethrich. The auctioneer was W. H. Krause assisted by R. M. Horswill with Arthur Imig as pedigree man. County Agent Knipfel and John Wuethrich had charge of the arrangements. Everything worked smoothly and the event was considered a real success.

Animals bringing $150 or more with names and addresses of their purchasers are:

Consigned by John Wuethrich, Greenwood.

WALWORTH COUNTY BREEDERS' SALE

The Walworth County Holstein Breeders' Sale held October 30th at the Walworth County Fair Grounds was well attended with practically every seat in the stock pavilion occupied when the sale started.

Prices ruled fair considering general business conditions. The sale totaled $9,200 for practically 70 head of all ages. The top price was $350 for Miss Ormsby Laura Beets, consigned by Walcowis Farms and purchased by C. E. Warford & Son of Virgil, Ill. The auctioneers were Mack, Eells, and Wiswell with John G. Voss in the box.

ROCK COUNTY SALE

The semi-annual sale of the Rock County Holstein-Friesian Breeders' Association was held October 31st, in the new $8,000 sale pavilion at the County Fair

(Continued on page 780.)

DOROTHY HAS SUCCESSFUL TRIP

Hargrove & Arnold are probably the first breeders who ever made a tour of the "big circuit" with a show herd consisting entirely of sons and daughters of one bull. The star of this year's exhibit was the great yearling, Dorothy Ormsby Piebe, who was never defeated in her class and has won six junior championships and two grand championships. From Louisville, Kentucky, to St. Paul, Minnesota, is quite a stretch of territory to travel and the judges who passed on her were some of the most noted experts on black and white placings.

OKLAHOMAN GETS ORDER

C. E. Burgtorf of Custer City, Okla., has a call from South America for a number of purebred Holstein-Friesians bulls to be shipped right away. This is said to be the first South American order ever received by an Oklahoma Holstein breeder.

"A man allus acts like a sheep-killin' dog when he asks fer credit, but a woman'll be wearin silk stockin's and smile her purtiest when she charges a sack o' corn meal," said Elmer Moots, o' th' Cash Grocery, t'-day. ABE MARTIN.

FREE A copy of our new booklet on **"The Management of a Public Sale"**, new edition just off press. Get your copy to-day. It contains many good suggestions.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 779.)

Grounds, Janesville, Wis. Sixty-eight animals, old and young, averaged $115.15. The top price was $500 for Houwtje Korndyke Vale, a five-year-old bull consigned by J. W. Goldthorpe of Janesville. He was a handsome fellow and the bidding was brisk on him. The largest single buyer was C. E. Webster, Long Siding, Minn., and he bid on the bull but the animal went to a company consisting of H. B. Paul, E. P. Coon, B. R. Rood, R. V. Hurley and Louis French, all of Janesville. Senor Manuel Campuzano of Mexico City bought two animals in the sale and bid on a number of others.

Animals bringing $150 or more with names and addresses of their purchasers are:

A COLORADO FAIR FEATURE

The first annual El Paso County Holstein Sale, which was held October 5th, was one of the chief events of the Fountain Valley Free Community Fair. Twenty-one registered Holsteins, fourteen females and seven bulls were sold by the auctioneer Col. Buchanan.

The top price was $210 for Berea Nola Pietertje Hartog, consigned from the Spencer Penrose ranch and purchased by E. H. Rosenberg. W. A. Godding, mayor of Fountain took a couple of good individuals, one from the Modern Woodmen Sanatorium herd and the other from the herd of Myron Stratton. M. E. Penrose bought six females. The sale was managed by Fred C. Waddell, Pueblo, secretary of the Colorado Holstein Association.

PORTER COUNTY SALE

The annual sale of the Holstein-Friesian Breeders' Association of Porter County, Ind., held October 17th, was well attended. The prices paid for the 43 head ranged from $70 to $500 and in each instance was for a small male calf. A son of Jennie Segis De Kol Burke was the highest priced animal.

The highest price for a female was $350 paid for Indiana June Alcartra, consigned by Morgan Bros. of Chesterton. The average of this sale was $162; only six animals brought less than $100 and ten went above $200.

NELSON BROTHERS' SALE

The Nelson Brothers' held their sale at Stromsburg, Neb., October 18th, and had a crowd from all parts of the state and a few from outside the state. Bidding was lively and prices showed an upward tendency. The females in the sale including heifers and calves, averaged over $200, the top price being $370 for a four-year-old.

The Nelson Brothers had a well-bred herd and the reputation brought the buyers, as dairying in Nebraska, especially in the western portion of the state, is decidedly gaining in favor.

CORY DISPERSAL

The herd of E. F. Cory and Sons of Belleville, Kansas, was dispersed October 18th. The 58 animals averaged $100.50, the milkers averaging $117. The top price for a female was $185 while the herd bull went for $175. About half the herd was sold to parties residing in the neighborhood. There was a good attendance and much interest was taken in the offerings.

AT ST. JOSEPH, MISSOURI

Most of the animals sold October 16th at the Stockyards Sale, St. Joseph, Missouri, stayed in Missouri. The principal consignors were: Frank Buzard, St. Joseph; A. J. King, and Hiram Norcross of Kansas City. The top price was $250. Fifty-five animals were sold for $6,503.50 an average of $118.24.

GOOD ADVERTISING

C. J. Spencer of Jackson, Michigan, got some real good advertising when he induced the management of a Jackson bank to place one of his young bulls on display in its main banking room. It was a son of Model King Segis Glista and was a well-grown, handsomely marked, six-months-old calf. The bank is endeavoring to show its present and prospective patrons the benefits of pure-bred stock and the advantages of having a well-bred sire at the head of a dairy herd.

DAIRYMEN'S LEAGUE PRICE FOR OCTOBER MILK

The Dairymen's League Coöperative Association announces that the base pool price to be paid to dairymen throughout its territory for milk produced during the month of October will be $2.21 per 100 lb. for milk testing 3% butter fat in the 201-210 mile freight zone out of New York City.

This price of $2.21 per 100 lb. is the price to farmers after the cost of administration, advertising, insurance and other expenses have been deducted. For the month of October this amounts to six cents, showing a marked decrease in the cost of administration below the cost in August and September.

In addition 20 cents per 100 pounds is taken as a loan for the Association on the certificate of indebtedness plan and will be used for the purpose of taking care of additional marketing facilities. . The October price is exactly 21 cents per 100 pounds more than League farmers received for the September milk, and 45½ cents more than for August. This increase is due partly, of course, to seasonal conditions in the milk market, but a more important factor is a better movement of milk into the fluid market through the League's own operations.

COMING CLEAN

Machuset Veeman Fayne, a three-year-old, owned by W. S. Brown of Central Village, Connecticut, produced 4,922.1 lb. milk in 94 days from June 28th to October 1st. During that time she, with the rest of her herd were tuberculin tested by state veterinarians and passed a clean test.

HER RECORD SOLD HER

At a sale at Forrest Mills, Ia., September 7th, a grade Holstein cow sold for $241.00. She had a very large cow testing association record which had considerable to do with her price.

BERKS FARM BULLS IN DEMAND.

Berks Farm reports an insistent demand for sons of their great herd bull, King Tweede Spring Farm. The individuality of this high class sire is transmitted to his offspring and his daughters are making splendid records. He has twelve in the A. R. O. list. Ten of these tested as junior two-year-olds averaged over 20 lb. in a week while a three-year-old daughter has made 595 lb. milk, 26¾ lb. butter in seven day official test. It is well known that King Spring Tweede Spring Farm is a son of Spring Farm King and of the 30 lb. cow Dressie Lady Pontiac, a daughter of Spring Farm King Pontiac, so that this bull traces to King of the Pontiacs through two of the best of his many good sons.

One son of this bull, Berks Ormsby Posch went to M. H. Bennetch of Richland, Pa. His dam is the famous show cow, Hazelwood Ormsby Posch 2d, a cow that has given 106 lb. milk in a day and made 716.1 lb. milk in a week. She has a long list of splendid milk and butter records and her records as a show cow are even more remarkable. She was exhibited in 1912 as a junior heifer calf and among her triumphs was the winning of the junior championship, both at the Dairy Cattle Congress and the National Dairy Show, In 1915, she won first prize at the Washington, Idaho and Oregon State Fairs and was second at the great Panama-Pacific Exposition. In 1919, she took second prize at the Pacific International and in 1920 she took first in her class every place she was shown and was grand champion at the Southwest Washington Fair, the Washington and Oregon State Fairs, and was placed first in the aged cow class in the Pacific International.

Berks Ormsby Pontiac, another son of King Tweede Spring Farm went to Albert S. Sarig of Bowers, Pa., while still another went to Howard B. Deysher of Mertztown, Pa. The Sarig bull is from Magadora Ormsby, a 19.78 lb. three-year-old whose dam was a twenty-pound three-year-old and whose sire was the famous Sir Pietertje Ormsby Mercedes 37th, whose daughters have made wonderful records in both short and long time test and whose offspring have won high honors in the leading show rings of the country. The Berks cattle are under the care of Clark F. Berry who has had a long experience in the Holstein business. The herd is under state and federal supervision and contains a number of famous animals for Mr. Deysher has always tried to buy the best with the result that his herd is a strong advertisement for the breed.

SATISFIED

Since the Eighteenth Amendment went into effect, there are three classes of people who are satisfied with conditions—those who never had a drink and never wanted one, those who still have a little, and those who have a little Still.

The Great State College Cow

LILITH GEM KOLKLUFF

a former member of this herd, produced as a six-year-old, 22,247.1 lb. milk, 851.1 lb. butter in a year and averaged over 20,000 lb. milk, 775 lb. butter for four years.

Her daughter, DE KOL KLASSJE LILITH, produced 749.95 lb. butter in a year.

KLASSJE has a daughter, MERRYALL LILITH HENGERVELD, that made 4,300 lb. milk, 175 lb. butter in 60 days and is going strong in the year test and she, too, has a daughter that, calving at 1 year, 7 months, 20 days old, made a year record of over TWELVE THOUSAND pounds milk and nearly FIVE HUNDRED POUNDS BUTTER.

FOUR GENERATIONS of producing females show the value of Merryall cattle.

Come and see the good ones in this herd, which is headed by KING SYLVIA JOHANNA PONTIAC a brother to Carnation King Sylvia.

COWS AND HEIFERS
Now Milking

FRESH AND SOON
TO BE FRESH

Animals with records from 16 lb. at two years to 28 lb. at four years old and milking as high as 100.6 lb. a day. Several 20 lb. two-year-olds. A number have large cow-testing-association records.

Daughters of such sires as ***Rag Apple Korndyke Mercedes*** whose daughters are proving such a sensation; ***King Pontiac Contest;*** the 37 lb. sire ***Grand Champion Segis 2d;*** the proven sires ***Meadowside King Korndyke*** and ***King Fayne Segis Webb;*** and ***Woodmont Echo Sylvia Champion,*** 1st. prize three-year-old at Syracuse.

Cows Bred to ***The Potentate,*** the highest record bull in Pennsylvania; ***Champion Segis Rag Apple; King De Kol Burke Korndyke*** and ***Lockhart Finderne Pride De Kol.***

Granddaughters of ***King of the Pontiacs*** and ***Lilith Pauline De Kol's son.***

A Daughter of a 35 lb. cow that sold for $3,250.00.

All cattle have passed a ***Clean Federal Test*** and are offered subject to 60-day retest.

COL. GEO. W. BAXTER, Auctioneer **S T WOOD in the Box**

Come and select real foundation stock from one of the best collections of Holsteins in Northeastern Pennsylvania.

The Holstein Breeder and Dairyman

HARRISBURG, PENNSYLVANIA, DECEMBER 8, 1922

Published in the Interest of Breeders and Dairymen Everywhere

Part of the Holstein herd at the Marinette County Asylum, Peshtigo, Wisconsin. The cattle are strong in the blood of King Segis. Animals from this herd are owned by many farmers in Marinette and adjoining counties.

Entered as second-class matter April 8, 1922, at the post office at Harrisburg, Pennsylvania, under the Act of March 3, 1879.

Get Started Right—

That's One-Half of Success!

IT IS NOT WHAT YOU PAY,
BUT WHAT YOU GET THAT COUNTS

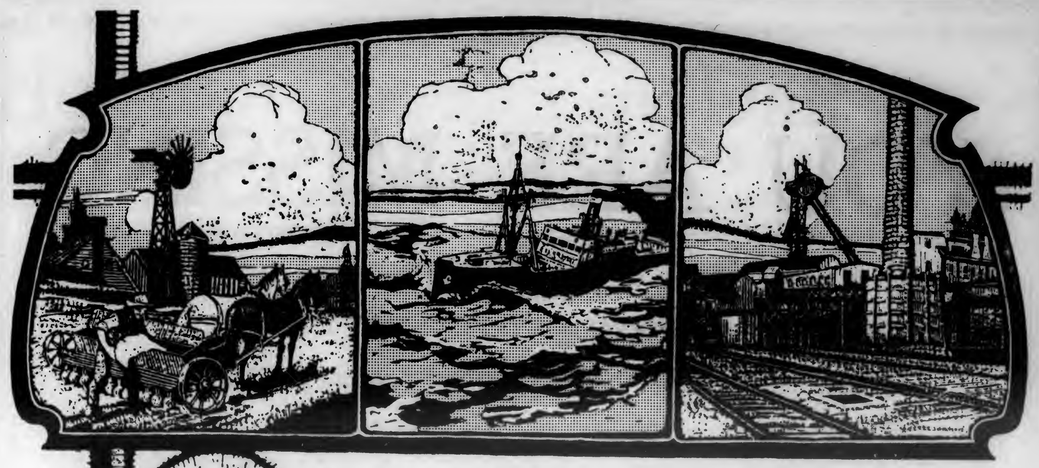
JUST A FEW GOOD BULLS LEFT

This is one of them:---

A son of KING TWEEDE SPRING FARM who is by Spring Farm King, one of the best sons of King Of The Pontiacs from Dressie Lady Pontiac with 30.04 lb. of butter and 614.8 lb. of milk in 7 days.

The dam of this bull, Creamelle Adroit Korndyke, has a 7-day record of 21.86 lb. of butter and 522.2 lb. of milk. He is a nice individual, rather dark in color but well grown. Born March 1, 1922.

Another is:---



A son of KING TWEEDE SPRING FARM and Madolyn Pontiac with 16.45 lb. of butter and 444.7 lb. of milk in 7 days as a heifer. This fellow is nicely marked and a fine individual. Born March 31, 1922.

Both of these bulls are priced right, you can afford to own one of them. Consider one of them now. DON'T WAIT.

Berks Farm is situated 8 miles from Reading on the Reading and Adamstown Trolley road. Cars stop on farm. Long distance telephone.

ASK FOR POTASH

The present conditions in the business of the farmer and in the fertilizer industry call for serious thought. Both are going through a readjustment period, with its hardships and doubts.

The farmer may well ask whether he is using the most profitable fertilizer. The fertilizer salesman may well inquire whether he is selling the kind that will do the farmer the most good, and lead to larger sales in the future.

During the war America could not get Potash, and the use of acid phosphate increased. Central Europe could not get phosphates, and the use of Potash Salts increased. Today plenty of Potash can be had at less than pre-war prices. Now is the right time to restore the balance by using more Potash in the fertilizer formulas than the average amount used before, 5 to 10 per cent.

Crops take from the soil very much more Potash than phosphoric acid. On any soil where Potash has been profitable it is not unreasonable now to use at least as much Potash as phosphoric acid. Ask the fertilizer agent for prices on this kind of goods, and rebuild your soil while Potash is cheap.

Recently it has been shown that a lack of available magnesia causes serious injury to important crops on some soils. German Kainit and Manure Salts furnish this soluble magnesia without extra cost.

Developing the Dairy Industry in South Dakota

How a Progressive Bank is Building Business

THE banks of South Dakota are doing a great work in introducing high-class dairy cows into their territory. When crops are good and prices are up there is considerable money made in grain growing, but all seasons are not favorable and a poor crop practically means a loss of the whole season's work. Expenses go on just the same whether the grain-field yields are light or heavy or there are no crops at all. As many of the farms are only partially improved and the owners are gradually paying for their properties, considerable money has been advanced by the banks of South Dakota on farm securities. When there is a crop failure, partial or complete, there is no money to pay the interest on the loans, to say nothing of the principal.

Within the past few years at banker's conventions, particularly in the great grain growing states which we easterners generally consider as the west, business conditions in the respective territories have been compared, and several bankers have gone so far as to compile statistics. Bankers from dairy communities as a rule report growing deposits and a satisfactory financial condition of their clients, while bank statements from non-dairy communities vary materially from time to time. The steady earnings of the dairy cow, week by week and year by year amounts to an income for her owner that, over a term of years, materially surpasses the income of the grain growing farmer. "Bossy," as long as she has food and care, is capable of bringing in steady returns. If a frost strikes the grain and renders it unsalable, she is able to consume and make use of a good share of it and so prevent the spoiled crop from being a total loss. It is no wonder the banks are advising their patrons to get away from the "one-crop" idea, to keep more livestock and especially to keep at least a few cows.

One of the leaders in this work is the Sioux Falls Savings Bank. This financial institution is located at Sioux Falls, South Dakota, and has a capital and surplus of $350,000. The President is F. H. Johnson, who keeps in close touch with farm conditions. They have a dairy extension department of which the manager is F. W. Schafer. This bank, which was established in 1886, is a member of the Federal System and has its deposits guaranteed, being under the state guarantee law. It is the largest bank in the state and it evidently aims to maintain that high position.

The Sioux Falls Savings Bank is building up the dairy industry, extending its clientage and increasing its business, by advancing the money to place high-grade dairy cows and purebred sires upon the farms of South Dakota, giving the farmers 18 months in which to pay for the animals. Repayment is spread over the time of the indebtedness. On the 10th of each month the farmers have to pay one-half of the money his animals have earned him, towards cancelling his indebtedness. In this grain growing section this has a very different meaning from what it would mean in the East where many of the dairymen have substantial grain bills to meet each month. Very little grain is bought as home-raised grains are fed and in many instances flax seed is raised of which the screenings and poorer qualities may be ground and fed to cattle. Consequently the returns from the dairy are practically net farm earnings.

The Sioux City Savings Bank states that they are just getting started in the cow business but they have placed 800 head of cows already on South Dakota farms through their correspondent banks of which they have about 200, and they have applications on hand for approximately 1,000 additional cattle. The bank advises its correspondent banks to secure applications only from farmers whom they know to have barns good enough for housing their cattle and to be good caretakers. They recommend the purchase of at least 10 grade cows or heifers and the heading of the herd by a purebred registered bull. The correspondent bank is not permitted to charge the borrower more than 8% interest. The Sioux Falls Savings Bank will rediscount the borrower's notes at 6% but requires the correspondent bank to furnish them from time to time with reports on the progress made by the individual borrower as well as on general conditions in the borrowers territory. Instructions for care and feeding of the animals are furnished and the purchaser is impressed with the necessity of following them.

The borrower fills out a form telling some personal history, the size of his farm, how far it is from town, if he has a silo, the distance to a creamery, if he has any scrub cows, and if so, if he will dispose of them, how many acres of alfalfa or clover there are on the farm with particulars about his cattle barn and water supply. The intending borrower is required to furnish this to the correspondent bank and from the information gained the Sioux Falls financial institu-

tion knows how much money to advance for the purchase of stock *and then sees that the right kind of stock is purchased.*

DE KOL KORNDYKE ORMSBY 2d
1,014 lb. butter, 23,370 lb. milk in a year as a junior four-year-old. The model cow of the Sioux Falls Holstein Farms, Sioux Falls, South Dakota.

A capacious dairy barn is just being completed on the Sioux Falls Holstein Farms which is the property of the bank. This is expected to be ready for use around the first of December and it is intended to make the opening a gala affair, with speakers of national reputation present. "Aaggie" with records of 20,932 lb. milk, 1,022 lb. butter in a year and 80,097 lb. milk, 4,002.25 lb. butter in five years, the champion grade cow of the world, fresh from her trips to the National Dairy Show and the Pacific International, will be one of the chief attractions and invitations will be sent far and wide over the state to bankers, business men, farmers and dairymen bidding them to be present on this occasion.

As a model of the dairy cow, "The Mother of Prosperity" as she is termed by the Sioux Falls Savings Bank, the Bank some time ago purchased De Kol Korndyke Ormsby 2d with a recently-completed record of 1,014 lb. butter, 23,370 lb. milk in a year as a junior four-year-old. She made a record of 19,940.3 lb. milk, 829.28 lb. butter in a year as a junior three-year-old. She is splendidly bred, being from a good record granddaughter of Sir Pietertje Ormsby Mercedes and of De Kol Alban Princess, a wonderful transmitting cow. The sire is Sir Pietertje Maid Ormsby, a son of Sir P. O. M. from Buffalo Maid, 30.38 lb. butter in seven days, 907.31 lb. butter in a year and full sister to the famous Pietertje Maid Ormsby.

While De Kol Korndyke Ormsby 2d has made splendid records and is backed by a wealth of good breeding, the type and conformation of the animal render her even more desirable as an example of what a dairy cow should be and she is expected to have a great deal of influence in improving and establishing the type of dairy cattle in the territory contiguous to Sioux Falls.

Silverdell—A Missouri Herd in the Making

ABOUT three miles southeast of Joplin, Mo., is the Freeman Silverdell Farm, owned by John W. & Paul W. Freeman. The location is in the heart of the Ozarks. Silver Creek runs through the south end of the farm which contains about 160 acres. As might be expected on a dairy farm, there are extensive alfalfa and clover fields.

Mr. Paul W. Freeman had ideas of his own when establishing the herd. He became acquainted with the purebred herds in his district and when any of the cows he especially liked, freshened, he went down and looked over the cow and her calf and if it was a heifer, secured it. These calves were raised and now, with the natural increase, the Freeman herd numbers 14 head all of which are straight-backed and of good type. There are five cows in milk at the present time of which two are four-year-olds and three are two-year-olds and these five animals were milking November 1st, around 250 lb. per day, while their average butterfat test was 4%. None of the cows have ever been officially tested. They are, their owner claims, "Diamonds in the rough." It is planned to have them ready and in good shape to test in the fall of 1923.

The senior sire is Sir Topsy Pontiac Segis No. 329101, a descendant through both his sire and dam of the great transmitting sires, King of the Pontiacs and Hengerveld De Kol. The junior sire is Freeman Silverdell Korndyke King No. 359651, a son of Sir Korndyke Imperial who has a long list of good record daughters and was by the great transmitting sire Pontiac Korndyke.

The Silverdell herd although small, is of real high quality. This year it was exhibited at the Cherokee

THE PRODUCERS AT SILVERDELL
Two are four-year-olds and three are two-year-olds and they are producing 250 lb. milk a day with an average test of 4% butterfat.

County Fair and the Southwest Missouri Fair and at these two events won five blue ribbons, six red ribbons and three white ribbons. At the Cherokee County Fair at Carthage, seven head were exhibited. The youngest was five months old and the eldest was two years old. Two group prizes were won, on young herd and get

of sire while the single entries won first, second and third places.

Just four of the calves, with one other animal went on to the Southwest Missouri Fair at Columbus. Here two first prizes and three seconds were won and despite lots of competition, Silverdell carried off first

Group of registered Holsteins at the Freeman Silverdell Farm, Joplin, Missouri.

prize for Young Herd. As one of the dams has milked over 100 lb. in a day, it can be seen that the Freeman's are building up a herd upon the sure foundation of combined type and production.

Mr. John W. Freeman is one of the leading business men of Joplin, while Paul W. devotes most of his time to the farm and herd. It is inspiring to find on the extreme edge of what we are generally pleased to consider as the Holstein frontier, a growing herd of such excellence. It is a living advertisement of the Holstein-Friesian breed. In laying the foundation of the herd producing capacity and breed conformation were alike

The first prize Young Herd at the Cherokee County Fair and the Southwest Missouri Fair. Owned by the Freeman Silverdell Farm.

considered and then the animals were given the best of care and feed as must have been done to enable them to win the prizes at such well-known competitive events. It is evident that we shall again hear of this herd and that the Freemans are to be commended for their enterprise, skill and judgment.

Pennsylvania Grand Champion

KING PIETERTJE, BUTTERCUP 2d, No.186-063 is a show bull of marked excellence. He weighs in the neighborhood of 2,500 lb. and, as his picture indicates, is very straight and deep. He is a big, rugged fellow with lots of vigor and constitution.

As a show bull King Pietertje Buttercup 2d has made

KING PIETERTJE BUTTERCUP 2d
Grand champion at the 1922 York Fair, and at the Allentown Fair. Owned by Davis Bros., Seven Valleys, Pa.

quite a record. He was exhibited in 1919 when only three years old and won first prize in his class and the senior and grand championships at the great fair at Allentown, Pa. From there he went to the state fair at Timonium, Maryland, and repeated his achievement, incidently defeating King Pontiac of Brooklandwood who has been grand champion at the fair for the last three years. In 1922, King Pietertje Buttercup was again shown, repeating his triumphs at Allentown. From there he went to York, Pa., where he was awarded the senior and grand championships by the well-known Illinois cattleman and judge, R. E. Haeger. King was born March 13, 1916. He is a grandson of Beauty Pietertje Butter King, Jr., and his dam was a daughter of Count Segis Korndyke. He is owned by Davis Bros. of Seven Valleys, Pa., who have a herd of forty head of purebred Holsteins building up on a foundation of individuality and producing capacity.

Consider the Bull

By George Leslie

HOW do you keep your herdsire? who is called by common consent "more than half the herd?"

Not in all herds is the service bull given the quarters, treatment and feed he merits. I recall a herd in an Atlantic Coast State which was made up of splendid Holsteins, some registered and some grades, a hundred head housed in well-kept modern barns fed for high production of certified milk, while the service bull, a handsome individual of extra good blood lines, was kept in a part of the big barn, under the ground level and had not been out of his stall in three years! In fact, I think it was five, but say the shorter time to be fair! Think of it! The stall was large, to be sure, probably four times the usual size, but of outdoor air or sunshine or exercise the bull was entirely deprived.

The owner of the farm, said he had been kept that way for a year and the men got afraid to handle him so they did not dare to take him out. In another part of the country I saw a good Guernsey bull kept in a stall so far back in the barn that he could not be seen without a lantern, and from the condition of the stall and his body he seemed to have had no care for days. Only a week or two ago I saw a Jersey bull of very well known blood lines sharing his stable with several Berkshire hogs, the building a good one, the stall of regulation size and his bedding clean, but the air saturated with the most abominable odor from the pigs and their feed.

None of these are good ways to house a herdsire. He well deserves a roomy, clean stall in a light place with sanitary surroundings. He also should be exercised. A wire across a corner of the barnyard, on which may run a pulley attached by a light strong chain to his nose ring makes a good exerciser of practical value in any sized herd and easy to set up. Fix it any way most convenient but exercise him, as he will retain his vigor and health much longer.

Water is just as necessary in his diet as in the milking cow's, and he should have a liberal supply, but none for at least two hours before being used on a cow.

Feed him, if he is in constant use in a fairly large herd, the same grain mixture you give your milking cows, allowing from four to eight lb. a day, according to his weight. If he puts on too much flesh, reduce his grain and cut down on silage. Ordinarily he may have from 5 lb. to 12 lb. of corn silage a day, according to his weight. Let him have all the hay he will clean up and, if you want his coat to shine, give him a little cane molasses on his hay twice a week.

Don't forget his salt brick either. If, without being in too high flesh the bull appears sluggish in service, cut out his grain mixture and give only whole oats and bran and some raw eggs—half a dozen or so.

A bull doing only light service should have from three lb. to five lb. of a mixture of equal parts of oats and good wheat bran with about ¼ lb. oil meal as a grain feed, plenty of hay and around two lb. to five lb. of silage.

Give your bull a chance to prove his worth by keeping him until his first daughters come into milk and so save yourself possible deep regrets. This goes, even for the bull whose individual make-up may not particularly please your eye in some way. The calf's dam may correct the fault he has in conformation and he may have the power of transmitting wonderful dairy ability, as many a breeder has learned to his lasting regret can be true.

Comfort, cleanliness, good feed for the herd bull mean growth, stamina, good healthy breeding condition and make big returns through the yearly crop of calves.

"Dat baby ob you's," said Mrs. Jackson, "am de puffect image ob his fathah."

"Yas," answered Mrs. Johnson, "he am a reg'lar carbon copy."

Whatever is popular deserves attention.

Selling Those Bull Calves

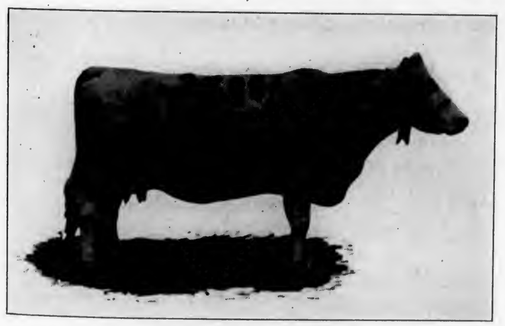
A Few Thoughts Gathered From Observations Among the Breeders.

M. H. KEENEY.

ARE you selling your good bull calves for breeding purposes, or do they go for veal? If you are not selling them whose fault is it—your bulls,—the business,—yourself—or someone else? Did you ever just sit down and think this bull business out? In most cases if a breeder will get right down to facts, his bulls are not selling because he, the breeder, is at fault. He has put forth practically no intelligent effort to sell them. No matter how much merit a commodity has it will not sell itself in any large amounts. The same is true of purebred bulls. We have thousands of good ones going to the slaughter every year. There is a market for many of these bulls if their breeders would use some real salesmanship methods to sell them. These good bulls can not talk. If they could talk they would put up the greatest lines of sales dope you ever heard and they have the goods to back up all their claims. Now, Mr. Breeder, since the bull cannot talk for himself, *You Must Talk For Him.* Further, you must find some one to talk to, some one who is a prospect to buy a bull. Now, every man who keeps grade cattle is a prospective buyer for an ordinary priced purebred bull. He may not realize it, but some day nearly every grade cattle owner will buy a purebred bull provided a breeder of purebreds put up arguments which convince this grade owner of the real merits of a purebred bull.

I know a Holstein Breeder in New Jersey who sells all his good bull calves, not for a big price, but at a fair price which the grade owner feels he can afford to pay. When a bull calf is born on this man's farm, he at once gets in his car and goes to see some man who needs a good bull or who ought to have one. He tells him about this bull calf, all about the production of the dam and granddams in a way that an ordinary farmer can understand. He tries to convince this man that he ought to buy this bull calf. Sometimes, he puts the calf in the car and takes it with him. If he fails to sell to the first man he tries another and another until the bull is sold. Every place he tries to sell the bull and fails he has sown some good seed and these men may buy a bull later on. I believe this example is a good one for every purebred breeder to follow. Don't wait for the man who wants or needs a bull to come to you. Go to him, tell him what you have, and sell him a bull, or at least make an attempt to sell him the idea of using a purebred bull. Think of any successful business enterprise. Do they wait for the buyer to hunt them up and ask for their goods! No!—emphatically no!—they go after the buyer. Why not do the same with our bulls? As I said before, *Bulls Cannot Talk—You Must Talk For Them!*

Probably, no other agricultural papers are as carefully read as the breed papers. Most of the subscribers not only read the news but they read and study the advertisements, also. When a man is in the market for a bull the first thing he does is to get the breed paper and look up the advertisements. There is no better way to talk for your bulls than to invest a few dollars in advertising. No one will ever know you have bulls for sale and you will make few sales unless you tell the world what you have and convince them of the merits of what you have to sell.



Barnesdell, A Name You Will Again Hear

A LITTLE over four years ago G. D. Barnes of Grove City, Pa., became convinced that scrub cows were not as profitable as purebred Holsteins. At that time he had six scrubs which he sold for $360. Then he purchased, through the Grove City National Bank, three purebred Holstein heifers, his investment being around $800. These animals were Howell Carey Fayne, No. 458862; Idlewild Korndyke De Vries No. 278807 and Sunshine Salina Beauty No. 474695. They were selected by R. R. Welch, the Grove City Dairy Fieldman who purchased them around Howell, Mich. These three heifers were bred to grandsons of King of the Pontiacs, owned by the Grove City Holstein-Friesian Bull Association, the first one of its kind organized in Pennsylvania.

BARNESDELL KING PONTIAC DE VRIES
A handsome young bull sold by G. D. Barnes, Grove City, Pa., to the State Tuberculosis Sanitarium of West Virginia. Picture taken at six months of age.

In four years the Barnes herd increased to fifteen females and during the past year semi-official testing has been conducted and some good records made. This herd was enrolled in the local cow testing association for two years, one year winning first position for both milk and fat production and the other year the highest position for milk and second for fat production. This year four head were sold for $1,200 to the State Reformatory at Huntingdon, Pa. Three of these were daughters and one a granddaughter of Idlewild Korndyke De Vries, these animals averaged around 2½ years old and two of them were on long-time test which was continued in the institution herd.

HOWELL CAREY FAYNE
Show cow and producer. She has a semi-official record made under farm conditions of 16,331 lb. milk, 723 lb. butter. Picture taken at Grove City Dairy Show where she won a number of ribbons. Owned by G. D. Barnes.

One of the Reformatory heifers is Hengerveld De Vries Lady, a daughter of Idlewild. She is making a good record. Her son, Barnesdell King Pontiac De Vries, was purchased by the State Tuberculosis Sanitarium of West Virginia and now heads their accredited herd. This calf is sired by King Pontiac Prescott Hilldale, a 30-lb. grandson of King of the Pontiacs.

The real pet of the Barnesdell herd is Howell Carey Fayne, who recently finished a semi-official record made under farm conditions of 16,331 lb. milk, 723 lb. butter. She is a cow weighing about 1,600 lb. is a real producer and a fine individual, and has won a number of ribbons at Grove City Dairy Shows. It is planned to make this cow the real foundation animal of the herd and in due time it will be composed entirely of her descendents.

At the 1922 meeting of the Pennsylvania Federation of Holstein-Friesian Clubs, Mr. Barnes was elected as director to represent his district. He is considered a real good judge of livestock and it is expected that his accredited herd of purebred Holstein-Friesian will take a high place in Pennsylvania Holstein History.

International Congress on Cattle Breeding

AN official invitation has been extended to the United States Government to send a representative to the International Congress on Cattle Breeding which will convene at The Hague, Holland, August 29th to September 4, 1923.

Acting Secretary C. W. Pugsley informs the BREEDER AND DAIRYMAN that it is expected that a delegate will be appointed but that it is too early yet to designate the one who will represent the Department of Agriculture. When the appointment of a delegate is made it is probable that public announcement will be made.

The general program and outline of the meeting indicate that important matters will come before the Congress and that, if the best authorities on these subjects present papers and take part in the discussions, the results will benefit all nations represented.

The subjects that are to come before the Congress are divided into four great sections: Heredity and feeding; Registration; Government Intervention and the Effort of Associations in Regulation; and Economics. A detailed schedule is given on page 656 of the BREEDER AND DAIRYMAN, October 8th, issue.

Dairymen's Friend Goes to the Senate

AT the recent election the voters of New York State elected Dr. Royal S. Copeland the Health Commissioner of New York City, to the United States Senate. During his present term of office as health commissioner Dr. Copeland has made many friends among the dairymen of New York State. He has been exact yet just in his interpretations of the laws and regulations governing the admission of milk in its various forms into New York City. He has gone to meetings of dairymen up-state and explained the necessity of such rules and regulations and has shown his

willingness to coöperate with the producer. It was at his suggestion that Geo. W. Slocum, president of the Dairymen's League appointed a committee to confer at regular intervals with the New York City Board of Health on matters pertaining with milk regulations. The committee consists of Director Geo. R. Fitts of McLean, the well-known Holstein breeder, John Arfmann of Middletown, and Production Superintendent R. E. Van Cise.

At one farmers' meeting, Dr. Copeland is quoted as saying: "If there is one among these 164 regulations that ought not to be there, you come and tell us so and give us a good reason and it will be taken out.....We have exactly the same interest in the production of milk as you have."

Dr. Copeland is not only a friend of dairymen but he is a great advocate of the use of milk and one of his statements is, "Milk comes nearest to being a perfect food. It contains the protein for growth and repair, the carbohydrates for energy, the lime for bones, the chemicals for special needs, and the vitamines for development."

Dr. Copeland can act as well as talk. He prohibited the sale of filled milk in New York City and in his election platform he said that if elected to the United States Senate, he would do all he could to prohibit its transportation in interstate commerce. The Doctor is more than a politician and office-holder. If you take up a newspaper or farm journal with a column of health hints under the name of Royal S. or R. S. Copeland you will know that you are reading some of the writings of the United States Senator-elect from New York State.

New York State Has New Butter Champion

POPULAR JEWESS DE KOL, one of the great cows in the herd at Wheatfield Farms, has just completed a record of 33,368.1 lb. milk and 1,399.93 lb. butter in 365 days. Earlier in the year THE HOLSTEIN BREEDER AND DAIRYMAN told that she was in test and was making a great record. During this lactation period she made a seven-day record of 801.2 lb. milk and 33.67 lb. butter. She is an exclusive New York State product, being bred, born and developed in the Empire State.

There has been quite a little interest taken in the Holstein circles of western New York in the race between Queen Carlotta De Kol and Popular Jewess De Kol. Carlotta, as reported in the November 22d issue of THE HOLSTEIN BREEDER AND DAIRYMAN, became the milk champion of New York State with 34,430.3 lb. milk. Now, Jewess becomes the butter champion with 1,399.93 lb. butter. The deposed champion is O. K. L. Pearl Tula with 1,366.70 lb. butter.

While Wheatfield Farms is a large breeding establishment owned by a wealthy man, it is well-known that the owner, Mr Jacob Dold, believes that unless a cow can pay her way in milk and fat production and return a handsome profit for her feed and care, she should have no place in any dairy herd and it is also well-known that Mr. Dold's ideas have been followed in establishing and building up the Wheatfield herd. On this account if no other, Wheatfield Farms and its owner are entitled to the congratulations of all true lovers of the Holstein breed.

We hope to have the pleasure of showing our readers a picture of this great cow in an early issue together with an account of what she was fed and how she was handled during her test.

Superintendent Gardner's announcement of the New York State Champion is as follows:

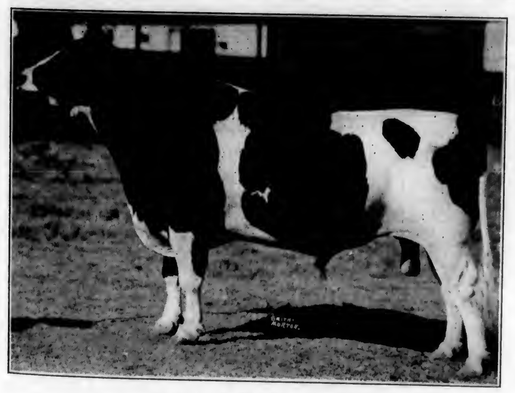
DELAVAN, WIS., Nov. 20, 1922.

To All Interested:

"I am pleased to announce that the Holstein-Friesian cow Popular Jewess De Kol No. 198322 has just closed a long-time test, and is credited with 33,368.1 lb. milk containing 1,119.95 lb. fat in 365 days, thus showing an average of 3.36 per cent in the milk. She freshened at the age of 8 years, 9 months, 19 days. Her sire is Popular Gem Pledge No. 91091; her dam is Popular Wandering Jewess Pledge No. 169963. She was bred by E. D. Gill, Morrisville, N. Y., and is now owned by Wheatfield Farms Association, Inc., La Salle, N. Y. Her best seven-days' official production during the test is 801.2 lb. milk containing 26.934 lb. fat, with test begun 36 days from freshening. Also during a test begun 6 days from freshening she is credited with 594 lb. milk containing 25.873 lb. fat. At the age of 2 years, 8 months, 20 days she is credited with 351 lb. milk containing 11.377 lb. fat; and at 4 years, 10 months, 9 days, with 459.5 lb. milk containing 16.358 lb. fat. Next, at the age of 6 years, 2 months, 25 days, she is credited with 541.6 lb. milk containing 17.003 lb. fat, and in thirty days with 2,274.8 lb. milk containing 70.916 lb. fat; and then, freshening at the age of 7 years, 6 months, 14 days she produced 479.5 lb. milk containing 17.477 lb. fat. During the test just finished in addition to two not less than seven-day strictly-official periods, she had 14 other test periods, of which three were retests. Thirteen different supervisors were employed in the conduct of the test. Her 365-day production of 1,119.95 lb. fat, equivalent to 1,399.93 lb. butter on the 80 per cent basis, gives her 6th place among cows producing above 1,000 lb. fat, she being the 55th cow to gain the high honor of producing more than 1,000 lb. in 365 days."

MALCOLM H. GARDNER, *Supt. A. R.*

Holstein Breeder in Federal Senate



THE Newberry case has occupied a leading position on the front pages of the daily papers ever since Ex-Senator Truman H. Newberry defeated Henry Ford in a Michigan election. Mr. Newberry's opponents alleged that money was used to procure the election to the extent of practical bribery. The United States Senate has devoted a large proportion of its time during the past four years to debates on this subject and has wasted much time that was needed for the business of the country. The Newberry issue was important in the recent Republican primaries, was one of the issues that helped defeat a number of Senators seeking reëlection and has been blamed for the defeat of several candidates in the recent election. When his colleague, Senator Townsend, was defeated in November, Mr. Newberry resigned his seat in the United States Senate and so ended the controversy.

In his place, the Governor of the State of Michigan appointed Mr. James Couzens who for a number of years has been mayor of Detroit. Mr. Couzens is a very wealthy man and was formerly treasurer of the Ford Motor Company. His rise in the business world and his accumulation of wealth has been very closely allied with the growth of the motor-car business.

Mr. Couzens has a good Holstein establishment near Pontiac, Mich., and became a member of the Holstein-Friesian Association in 1914. Some time previous, a representative acting for him purchased a number of high-priced animals from the firm of Stevens Brothers' Company. Among these were K. P. Marion and K. P. Mildred, twin daughters of King of the Pontiacs. Their dam was Pontiac De Kol, a daughter of the famous Hengerveld De Kol, and they were claimed to be the first daughters of King of the Pontiacs, sold by the Stevens Brothers' Company, who had, until that time, absolutely refused to put any price upon the untested daughters of their great sire.

Mr. Couzens is well-known to Holstein breeders, both of Michigan and other states, although he has never taken a prominent part in state or national Holstein organization politics. He has the reputation of being an up-to-date business man and financier, and an all-round good fellow. His mayoral administration has been acceptable to the citizens of Detroit who have reëlected him several times. We trust his tenure of a seat in the Federal Senate will be equally as satisfactory.

McCarthy approached the ticket agent at the big depot in St. Louis and asked the charges for carrying himself and a corpse to Chicago and back. "Oh, you mean yourself and corpse to Chicago and return fare for yourself?" said the agent. "No, I mean return for both meself and the corpse. You see the wife is dead and she has about eight relatives in Chicago and they'll be wanting to see her. If they come down here I'll have to pay their way, so I think I'll take the corpse to Chicago and let them look at her, and then bring her back to St. Louis for burial."

ECHO SYLVIA KING.
First prize aged bull and senior champion at 1922 Texas State Fair, owned by Holtex Dairies, Dallas, Texas.

Starting Right in the Showing Business

A GOOD little herd that is making quite a name for itself in Massachusetts for both production and individuality is that owned by Albert F. Barker. Mr. Barker who is a Brockton Attorney, has a farm at West Bridgewater and is greatly interested in his Holsteins. He determined to show other people his cattle this year and took representatives of the herd to the fair at Marshfield where his young cow, Thyrsa Colantha Pontiac defeated the cow that was grand champion last year at Marshfield and at Brockton. From there she went to Bridgewater and from thence to Brockton and each time won first in her class.

Thyrsa Colantha Pontiac as a three-year-old made over 25 lb. butter in seven-day official test, handled by men without experience. Although she was not continued on long-time test her milk was weighed and a record kept and she exceeded 20,000 lb. in the year without any forced feeding. The picture shown was taken just as she had won the senior female championship at

THYRSA COLANTHA PONTIAC
The first-prize aged cow at the Marshfield, Bridgewater and Brockton, Mass., fairs in 1922. Senior champion female and one of the winning "Produce of Dam" at Brockton. Owned by A. F. Barker, Brockton, Mass.

the Brockton fair which she did despite the fact that she had an attack of indigestion at the time caused by either the change of food or water. This makes her have a gaunt appearance. Mr. Barker's exhibit won a majority of the prizes at Marshfield and at Bridgewater and stood second at Brockton. The show herd varied from 12 to 15 head and at the three fairs won forty-nine ribbons including four championships and seventeen firsts, which is certainly not a bad start for a herd so young in the show business.

In the spring of 1921, Mr. Barker started to put all his milking herd in the Advanced Registry. Some of the animals were tested as two-year-olds, some as three-year-olds and some as four-year-olds, none as yet have been tested as full-aged cows. Records have been made ranging from 17 to 29 lb. and very few of these are under 20 lb. The first one tested at four-years made over 26 lb. butter in seven days; Thyrsa Colantha Pontiac made nearly 26 lb. as a three-year-old; three three-year-olds made records ranging from 21 to 23 lb. and one senior three-year-old made 28 lb. Mr. Barker says that he is trying to build up a herd that a man can afford to talk about a little later.

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

December 8, 1922

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Production With Reproduction

UNDER the above heading the *Pacific Dairy Review* calls attention to a problem which is in the minds of many owners of great herds, not only of Holsteins but also of other breeds. It is no secret among "those in the know" that a number of great record cows have never had a living calf after they closed a phenomenal test; others have only had one calf after completing such a record and then have ceased to reproduce their kind. Consequently, their influence upon the breed and upon dairying has been very little. It is possible that the *Review* writer has rather overstated the case but the opinion is gradually gaining ground that forcing a cow to make a phenomenal record may result in her becoming a non-breeder. The question naturaly arises, "Is it not time for breeders of Holstein-Friesians to overhaul and revise our present Advanced Registry System?"

The article from our western contemporary is as follows:

The increasing difficulty that dairymen and breeders are experiencing with sterility in cows is assuming serious proportions. That much, if not most, of this is due to the prevalence of contagious abortion, particularly in its after-effects, is no doubt true, but it is singular that the trouble is more serious in purebred herds and, it seems, in proportion to the extent to which cows are forced for big records. It is worth thinking seriously about that so many of our world's record cows have become sterile in the prime of life and these cows, to which we look so hopefully for their blood, often leave few offspring to perpetuate their greatness as producers at the pail.

Are we not making the mistake in forcing cows to make abnormal records at the expense of their reproductive powers? Milk secretion is a reproductive function. In nature there is such a thing as the law of compensation. If we strain one function we are likely to weaken another, and especially when such functions are closely related, as giving birth and producing milk. In proof of this let us take hens. In certain breeds the laying function has been so abnormally developed that the hens cease in the reproductive process with the laying of the eggs. They are non-setters. By this we understand that they are in a condition that fails to prepare their system for brooding. Other hens, or incubators, must be employed to hatch their young.

Go into almost any breeding herd where big records are the sole aim of the breeder and what do you find? A lot of non-breeding cows. They are a liability and a source of discouragement that finally leads the breeder to disperse his herd. We are convinced that this matter must have more consideration on the part of dairy cattle breeders. Judgment must be used. They should know and realize when a cow is milking up to the limit of her native capacity and her vitality. A cow with a native capacity to produce 600 lb. of fat in a year may by some means or another be forced up to 1,000 lb., but what becomes of the cow when she is forced to carry such an over-load? There is sure to be a break somewhere.

Immigration and the Farmer

THE next Congress will be urged to change the present immigration law which limits immigration in a single year to 3% of the foreign-born from any particular country now domiciled in the United States. Naturally the majority of our foreign-born population are against any restriction and the numerous foreign societies are unanimous to have the bars "let down." Those who oppose immigration say that the population of this country is now growing as fast as is advisable and that a large, non-English-speaking population is not desirable. Many so-called writers on this subject say that alien labor is needed on the farms. The Bureau of Immigration has made an analysis of the occupations of the immigrants received by the United States during the year 1921. No less than 42% are listed as having no occupation at all and only 3% are farmers. One has only to spend a few minutes in the crowded sections of the great industrial cities of the east to see the large proportion of men and women who speak little or no English; to see that the present population of the United States cities is far from being pure American. A very small proportion of those coming to this country in recent years ever reach the farms.

The Secretary of Agriculture on Farm Business Conditions

THE annual report of the Secretary of Agriculture is dated November 15th. Mr. Wallace has called the attention of the President to the present lack of balance between the prices of the things the farmer has to buy and the prices of the things he produces to sell. He states that for three years in succession the farmers of this country have produced more of some crops than could be sold at prices high enough to cover production costs.

Expressing farm product prices in terms of index numbers, the index for August, 1922, stood at 123, as compared with 122, for the year 1921. Roughly speaking, it was about the same in the Middle Western States, lower in the Northwest and from Ohio east, and higher in the Southern states, owing to the advance in the price of cotton.

But the index of wholesale prices of commodities other than farm products was 176 in August of this year as against 150 in August, 1921. In August and September of 1922, a given unit of farm products could be exchanged for only 64% as much of other commodities as the same unit would have purchased in the year 1913. There has been an improvement in farm prices however, during the fall months.

The Secretary blames the disproportion of prices to:

Overproduction of many farm crops.

High freight rates.

The maintenance of industrial wages at near war-time levels.

Economic depression and depreciated currency in European countries.

Interference with the efficient functioning of necessary industries.

Unreasonably high costs of distribution of some farm products.

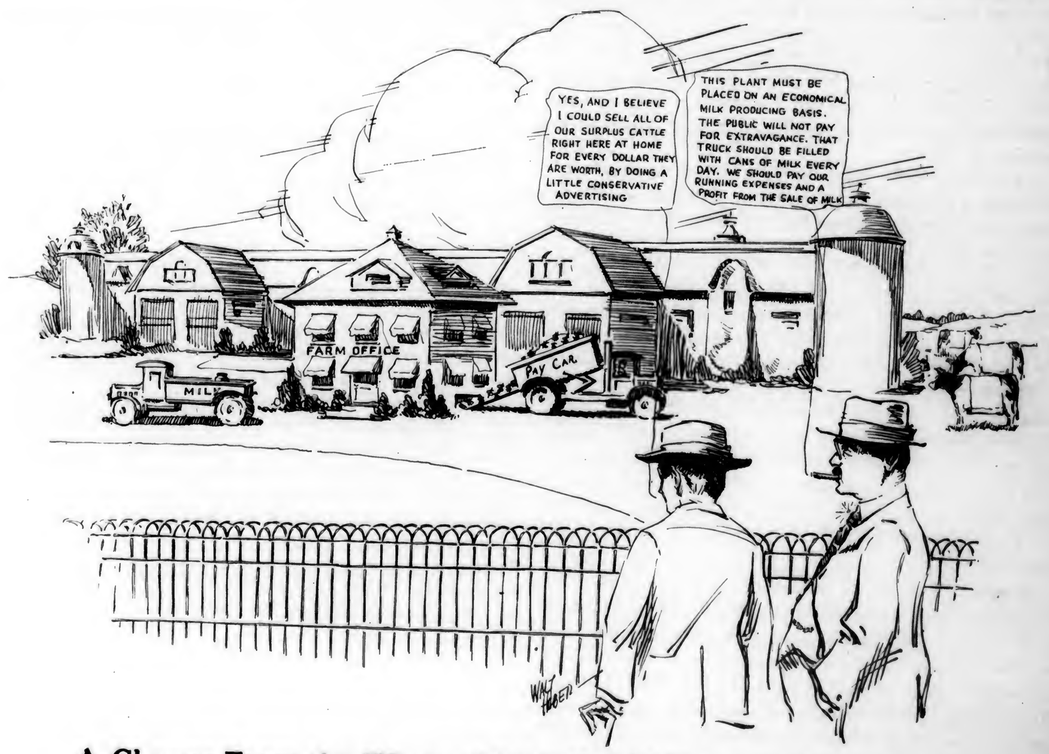
Secretary Wallace has reviewed most of the field very carefully and his report lacks the glowing descriptions appearing in reports of former years and reflects more truly the feeling among the great mass of farmers. We note, however, the omission of any discussion of the dairying business and regret that this great subject was overlooked. Otherwise, the report is full of information and is remarkably interesting. We shall have occasion to refer to it again in subsequent issues.

"But it must indeed be very hard to be poor," said the sympathetic caller.

"No, indeed, ma'am," said the penniless one. "It's the easiest thing in the world."

"Jimmie," said the teacher, "What is your greatest ambition?"

Jimmie considered briefly.



"I think," he said, "It is to wash Mother's ears."

She had just been vaccinated.

"Now, doctor," she asked, "will the spot show?"

"That, madam," answered the doctor, "depends upon you."

A man may have one wife too many without committing bigamy.

A Change From the Ways of "the World" to the Ways of the Breeder and Dairyman

Junior Department

A Michigan Boy at the National Dairy Show

Donald Kline of Grand Blanc Township, Mich., was one of the boy winners in the farm boy club contests conducted at the County Fairs of Michigan. The winners compete at the State Fair at Detroit for the prize of a trip to the National Dairy Show. Donald was one of the winners this year and took the trip and the following is his story as it appeared in the *Flint Journal.*

"Having won second prize in the junior judging of dairy cattle at the state fair and first in the preliminaries at East Lansing, I was entitled to judge the junior contest at the National Dairy Show in St. Paul, Minn.

Nevels Pearson, livestock club leader of Michigan, Keath Holden of Milford, Theodore Knopf of Blissfield and myself were on the judging team and Mr. Pearson was our coach. Verland Ransom of Charlotte and Theodore Knopf were on the fitting and showing demonstration team. With Henry Latson of Ann Arbor, made up the party.

We took the train at Lansing, October 5th. Our train was five minutes late when at Chicago, but we made connections. When we awoke the next morning we were in LaCross, Wis. From LaCross on our left, going northwest was a continual line of hills and bluffs that stood in sort of a foggy haze that morning. On our right was an upper branch of the Mississippi River which followed the railroad for quite a distance and then wandered away, returning in a short time as did the line of hills.

As we neared St. Paul the hills and river stood back for quite a distance from the train. The station in St. Paul is on high sandstone bluff and we took the elevator up to the street level.

The street car carried us to the exposition grounds. We arrived there about noon and ate dinner at the University cafeteria. The University of Minnesota adjoins the fair grounds. That afternoon we stayed at the Farm Boys' Camp and then visited the dairy show.

The next forenoon until one o'clock was spent in judging four classes of cows and four classes of bulls, Holstein, Guernsey, Jersey and Ayrshire breeds. Written reasons were given for the placings on the cows.

We had become acquainted with the Pennsylvania team while on the train and Sunday we went down to St. Paul and out to the Minnehaha Falls and game reservation.

Monday evening all the club members and their leaders attended a banquet at the Men's Union building in St. Paul. Mr. Buick, connected with the state department of club work of Minnesota was toastmaster. Responses were given by each of the state leaders. Mr. Bensen, a national leader in club work awarded the medals. Keath Holden, my teammate, won first in the Holstein class, Theodore Knopf won fifth in the Jersey class and I placed fifth among 42 contestants and was fifth in the Holstein class.

The National Dairy Show was held on the State Fair grounds which adjoins the University farm. Some authorities say it is the largest, best planned and equipped state fair grounds in the United States. There were 128 purebred, 17 club Jerseys; 116 purebred, 4 club Ayrshires; 163 purebred, 20 club Guernseys; 298 purebred, 50 club Holsteins; 121 purebred, 2 club Brown Swiss shown at the fair. In connection with the dairy show were 2,000 birds of all breeds in the National Poultry Show.

Most of the purebred cattle were housed on the ground floor of the cattle building. These equaled in value the $1,000,000 exhibit of dairy machinery on the main floor and mezzanine floor.

As many purebred dairy cattle were on exhibit at the National Dairy Show on one floor, as were in America before 1870.

Hugo Magill of Lima, Peru, was a foreign visitor and paid the American developed cattle high compliments. He said these cattle were highly prized in Peru for breeding.

The rest of the stay was spent in watching the official judging and enjoying the dairy show. Monday 20 agricultural college judging teams competed and Michigan ranked eighth.

Tuesday noon the Holstein Breeders Association gave a banquet to about 75 club members. Ex-Governor Lowden of Illinois and Judge Moscrip of Minnesota, a renowned Holstein judge and breeder, gave talks to the club members, Ex-Secretary of Agriculture E. T. Meredith of Des Moines, Iowa, also attended the show.

The Michigan demonstration team competed Wednesday and Thursday and won fourth place among 14 teams and had the second individual honors, Verland Ransom of Charlotte.

Friday night we left for Chicago accompanied by the Pennsylvania team. We visited Swift's packing plant and Libby's canning plant in the forenoon and were entertained at dinner by the Swift Co."

Building a Dairy Community Through the Boys

Forty boys in Hettinger County, N. D., will enter a Holstein heifer club, part of the 15-year program of the state extension department to develop a Holstein community on the 1,100 farms of the county. Max Morgan, dairy specialist of the North Dakota Agricultural College came to New England, North Dakota, November 8th, to complete the organization work and arrange the details. He will work with County Agent H. S. Bacheller, the boys and the bankers of the community.

Under the plan, 40 bred heifers will be brought to Hettinger County this year and distributed to 40 different boys. Each animal will be carefully selected and be a high quality purebred or grade Holstein purchased from members of a Cow Testing Association, so that the production records of the ancestors will be known. Next year, 40 more heifers will be brought in and distributed to 40 other boys and this will be continued for 15 years.

A dairy specialist will select and purchase the animals. Dr. Don McMahan of the College Veterinary Department with other college specialists will work with those who buy their cows, giving them all the aid possible. A definite program will be outlined for each year and these specialists will assist in barn construction, sanitation, the selection of purebred sires, the proper feeding methods, growing the right kind of feeds and in marketing and general farm problems.

Eight banks in Hettinger County have agreed to finance the plan to the extent of loaning from $1,000 to $2,500 each. Cow Testing Associations will be organized so that the animals can be tested and production records kept.

In the Johnson Country

There were 22 calves entered at the Dairy Calf Show for boys and girls at Scandia, Minn., October 21st. The animals were judged by Wm. Cushner, manager of the Echoland Farms, White Bear. The purebred Holstein winners were Russel Johnson 1st, Randolph Lindberg, 2d, Lowell Johnson 3d. Purebred and grade Holsteins, purebred and grade Guernseys and purebred and grade Shorthorns were shown. The prize of a purebred Holstein bull calf offered by the Wilcox Co. of White Bear, was awarded to Harold Johnson for his first-prize grade Holstein heifer.

Arthur Picked a Winner

Arthur Files of Wilbraham, Mass., won more than $100 in prizes, September 21st, at the Eastern States Exposition, Springfield, Mass., with his heifer calf, Walum Pearl Ormsby Netherland which he purchased last spring in a junior calf club project. In addition Arthur was second in the open class for Holstein yearlings. There were 12 entries in this class.

The heifer won first place in the state contest and in the Hampton County Calf Club Contest. She was purchased by Arthur from Ernest Singleton of Wallum Lake, R. I., at a sale at the Exposition grounds last spring.

A Real Boy's Camp

The Norris Farm Camp, near Mukwonago, Waukesha County, Wis., has 65 head of cattle and 65 boys. The farm contains 571 acres and are located along the highway leading from Janesville to Milwaukee. There is a good Holstein herd headed by Carnation Prince Elba who has a good record dam and a fine pedigree. The boys do practically all the work in the house as well as chores around the barn, poultry and pigs, and manage to have a good time in addition.

Speculative or Constructive?

The Columbia County Holstein-Friesian Calf Club was organized at Columbia, Wis., November 21st. Eighteen boys and girls were enrolled and it is anticipated that more will join.

The Association is fostered by the County Holstein Association and the County Banks have agreed to handle the notes for the purchase price of animals. The calves will be purchased by Elmer Hurelle, Columbia, and W. W. Bird, Cambria, and assembled at the barn of Dr. Kettlehorn at Columbia where the members will draw lots for their animals. The calves will be auctioned next fall after the show season.

Insurance to cover losses will be provided by a $5.00 deposit in addition to the price of each animal. The Farmers' and Merchants' Union Bank of Columbia will give a banquet to the members and their parents on distribution day.

Letters to the Editor

November 30, 1922.

Dear Editor:

A few years ago we were at war and a wonderful spirit swept the land. Pershing has said, "Germany must be licked; Germany can be licked; Germany will be licked." And the spirit we had, the courage we had, the fellowship of endeavor we all shared, craved for expression. We all know the war is over—but—we still crave for expression. Until the BREEDER AND DAIRYMAN was published that privilege was denied the small breeder.

It is nearly a year since your first copy was sent to me and you have grown from the gentle-voiced little neighbor to full magazine stature. You have grown in character. You have aimed always to fill your columns with sunshine that puts a smile in the day's work. You have smiled through dark days and fair. And why have you smiled? Because you have been a reflection of the loyalty and justice given to the men who breed purebred cattle.

Now we have the war of the Politician. Through your columns the small breeder has become acquainted with the methods employed by the whirlwind campaigners and the way they have juggled the funds. With an apology to Pershing, we will say: whirlwind campaign methods must be licked; can be licked, and will be licked. Missouri Breeder.

The Holstein Breeder and Dairyman,
Harrisburg, Pa.
Gentlemen:

I am glad that you give us some inside information of our Association. We know there was something wrong but the question was whom should we believe.

I am still a subscriber to the *Register* but have quit the *World* sometime ago. This part of the Country is not much of a dairy country, too much wheat raising and not enough feed. Holstein cattle are not adapted to giving milk shivering behind some straw stacks. Yours truly,

Kansas Breeder.

ROUGH ON THE DOCTOR

A friend of ours who is a M.D., was induced to take a boys' class in a Sunday school and in questioning his pupils on the day's lesson asked.

"What must we do to get to heaven?" he asked.

"We gotta die," replied a bright scholar.

"Of course," said the doctor. "But what must we do before that?"

"We must get sick and send for you," was the reply.

MORE MILK FOR PRISONERS

The population of the prison at Jackson, Mich, is steadily increasing and the state administrative board recently notified Warden Hulbert, granting his petition for an increased dairy herd. The present herd on the prison farm is being culled out and only the best producers will be retained. Fifty head of grades and 12 head of purebred Holsteins will be purchased.

You never can tell. Some people are good losers; others are not even good winners.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Dec. 18-21—State College, Pa., Farmers' Week.
Jan. 16—Syracuse, N. Y., New York State Holstein Breeders' Association.
Jan. 16-19, 1923—Trenton, N. J., New Jersey Farm Products Show.
Jan. 22-27—Harrisburg, Pa., Penna. Farm Products Show.
Jan. 24—Harrisburg, Pa., Penna. Breeders' Banquet.
Jan. 25—Harrisburg, Pa., Annual Meeting Penna. Federation of Holstein-Friesian Clubs.

FORM LOCAL HOLSTEIN CLUB

Dairymen around Kearney, Neb., formed a local Holstein-Friesian Association November 8th and they plan to do a lot of work to increase dairying and better dairy stock in the community. The annual dues were fixed at $1.00 per year. W. H. Swartsley of Riverdale was chosen as the first president of this organization, J. S. Clark of Ravenna was named secretary and W. K. Fisher of Riverdale was chosen vice president.

The board of directors consists of the president, vice president, and secretary, Thos. E. Bowlin of Elmcreek and Luther L. Burt of Gibbon.

REPRESENTATIVE COMMITTEE FORMED

Live Stock Exhibitors of the Arizona State Fair appointed a committee to perfect a permanent organization composed of purebred livestock men of the state, after a spirited discussion of ways and means for the betterment of conditions in the state purebred industry. Thirty-five breeders attended the meeting at which Charles E. Pickrell presided. Among the speakers were C. S. Brown, president of the Arizona State Farm Bureau Federation, Professor Everhard of the University of Arizona and Dr. W. C. Cook, manager of the State Federation. The committee chosen was Frank Reed Saunders, breeder of Dutch Belted and Holstein cattle as chairman; Al Sanford, representing purebred sheep breeders; Mr. Geare of Geare Brothers, representing purebred hog breeders and the dairy industry; Ray Cowdan, representing Hereford breeders; Alexander McMinn, representing Ayrshire breeders; Wm. Bradshow, representing Jersey breeders and S. C. Miller, representing Holstein breeders.

FOND DU LAC BREEDERS HAVE LIVE MEETING

The Fond du Lac County Holstein Breeders to the number of 250 met at Ripon, Wis., November 18th. Nearly 50 attended from the vicinity of Fond du Lac in a delegation headed by S. H. Bird, president of the County Holstein Breeders Association, Secretary Carl H. Brugger and E. F. Korrer.

President Bird traced the development of the Holstein industry in Wisconsin and in Fond du Lac County. He said that bankers and business men are seeing the importance of Wisconsin dairying. The foreign market for purebred Holsteins is growing all the time. The time is here when the farmer must look after his own business. He can remedy conditions through proper coöperation and organization. He must study salesmanship, and methods to put on the market a product that will sell, by directing all his efforts to make that product the very best. He concluded by urging the breeders to get behind the efforts for better cattle and elimination of tuberculosis in Fond du Lac County and he complimented Peter Hammen of Ripon, who was the oldest member of the Association, as being successful. Mr. Hammen had been in Association work 29 years, is the oldest member of the Association in the county, one of the pioneers in state work and he had been able to keep his boys on the farm to continue the work which he started. Mr. Hammen responded with a few well chosen words.

Dr. O. H. Eliason, state veterinarian, said that he hoped to see within a few years, tuberculosis entirely eradicated among Wisconsin cattle through the coöperation of every cow owner in the state. The speaker outlined some of the difficulties in the state encountered in its fight on tuberculosis. Funds have not been sufficient to carry on the work. This year $350,000 had been expended by the Department but there are yet debts of $300,000 and the Department was awaiting the next state appropriation to meet expenses. The larger packing houses when purchasing cattle for the block, are discriminating against districts where there is a large percentage of tuberculosis and from this angle farmers cannot help but see it pays to have disease-free animals. The dairy industry is the backbone of the state and it seems inconsistent that farmers in one county should spend $1,000,000 to build good roads while the state spent only $350,000 to eradicate tuberculosis.

The speaker urged farmers to send men to the legislature to protect their interests and express their wants. He explained briefly the legal steps to have the state test all the cattle in the county. If 60% of the farmers petition for a test the other 40% must submit to it under the law. The initial step must come from the county and not from the state.

H. C. Searles talked on the work of Cow Testing Associations in the county and pointed out the value in actual financial results to the members. He urged the farmers to not keep any cows not capable of producing 300 lbs. of butterfat in a year.

C. H. Brugger of Fond du Lac declared that the great remedy for the farmers troubles is in organization, but the the organizations would fail if individual farmers did not do their share.

Mr. F. Pohlman was chairman of the afternoon program and urged the Holstein breeders in the western half of the county to take a greater interest in the association.

BRATTLEBORO BUSINESS

During the week ending November 11th, thirty-seven applications for membership were received at the office of the secretary.

During the same period, 1,758 certificates of registry were issued, 1,289 were female and 469 were male; 1,610 certificates of transfer were written of which 1,155 were female and 455 were male.

During the week ending November 18th, twenty-seven applications for membership were received.

There were 2,183 certificates of registry issued, of which 1,645 were female and 538 were male; 1,839 certificates of transfer were written of which 1,343 were female and 496 were male.

Forty-seven applications for membership were received at the Secretary's office during the week ending November 25th. In the same time 2,607 certificates of registry were issued, 1,984 female, 623 male; 1,975 certificates of transfer were written 1,384 female and 591 male.

Herd prefixes reserved during the three-week's period are:
Ardenteenie A. R. Black & Sons, Lansing, Mich.
Brook Lane, Harry Marks, Alma, Wis.
Barkrest, M. J. Barker, Jr., Mantua, Ohio.
Cainland, F. F. Cain, Columbus, Ohio.
Chestnut Acres, N. H. Chestnut, Fenton, Mich.
Crescentdale, Dr. O. J. Powell, Ashland, Ohio.
Cressbrook, C. M. Powers, Kent, Ohio.
Dunndale, Wm. J. Dunn, Salemn, N. Y.
Drexel, Arthur R. Kemp, Dayton, Ohio.
Edgarstone, Henry Klapel, Edgar, Wis.
El Capitan, L. E. Dickover, Delhi, Cal.
Flowater, M. A. Sams, Coleman, Mich.
Higgins, Higgins Bros. & J. O. Howell, Petersburg, Ind.
Graceland, Franklin Strickland, Providence, R. I.
Illahee, Chas. W. Bennett, Ellensburg, Wash.
Knight Wood, C. B. Knight, Orwell, Ohio.
Lick Creek, H. F. Burgbacher, Byran, Ohio.
Mariverna, Marion R. Wilkinson, Dowagiac, Mich.
Myra Vista, Hubert Maas, Tilleda, Wis.
Orchard Front, Roy O. Poth, Brown City, Mich.

Peniscot, Thomas P. McCloskey, Sr., Braggadocio, Mich.
Pinto, Dr. R. R. Norwood, Mineral Wells, Texas.
Quilcene, Clyde B. Valentine, Seattle, Wash.
Rising Sun, J. T. Harding, Tunkhannock, Pa.
Rocky Point, Clarence Grimm, Highland, Wis.
Rolling Acres, H. B. Paul, Milton Junction, Wis.
St. Cloud, E. A. Barthelemy, St. Cloud, Minn.
Shady Locust, Chas. E. Figary, Norwich, N. Y.
Whitedale, Nels A. Peterson, Milaca, Minn.
Wisconsin Valley, Bower & Walton, Arena, Wis.
Y Run, Henry Jones, Ellsworth Station, Ohio.

FINANCE YOUNGSTERS' TRIP

The Holstein breeders' of Wood County to the number of 60 met at Marshfield, Wis., November 2d.

County Agent Peterson told of the trip to the National Dairy Show made by the boys' and girls' calf club members of Wood County. The youngsters won about $200 in prizes with their calves in St. Paul. The men announced that they would pay the expenses of the youngsters to the show.

The county board appropriated $1,000 to pay the expenses of a county agricultural exhibit at the Wisconsin State Fair, this to be in charge of the county agent. It is planned to get out printed circulars advertising Wood County "the heart of Wisconsin."

The activities and finances of the state association were among the subjects discussed.

DAIRY FARMERS GET TOGETHER

A group of dairy farmers from Gorham, Windham, Standish and Cumberland, Maine, gathered in the City Hall at Portland, on November 13th, and organized a cow testing association. Col. Chas. P. Nutter of South Portland was elected president of the association; Guy S. Wilson of Gorham, vice-president; and Alfred W. Doughty of Cumberland, secretary and treasurer.

Prof. C. L. Blackman of Springfield, Mass., field secretary of the New England States Holstein-Friesian Association, addressed the meeting on the benefits and functions of cow-testing associations and the work of dairy calf clubs. R. F. Talbot of Orono, dairy specialist, also talked on the subject of cow testing associations.

ORGANIZE BULL ASSOCIATION

A number of Holstein breeders at Clarissa, Minnesota, met last week and organized a Purebred Holstein bull association. The next week, P. J. Nelson and Oscar Gustafon of Clarissa, M. E. Gutches of Reynolds and Julius Ausen, county agent, will visit the Holstein farms in Wisconsin and Iowa and will purchase two sires. The requirements are that the dams must have year records of at least 1,000 lb. and that the animals must be good individuals and from cows of good type and conformation. There are no bulls of this quality at the present time in Todd County. Twelve Holstein owners signed up for the bull association.

IDAHO DOINGS

The Holstein breeders of Idaho are taking a great interest in the spread of the breed. Their recently formed state association has, as its ultimate aim, the promotion of the Holstein breed in the state; it contemplates in the near future a number of undertakings including a sale of Holstein bulls and females which is expected to attract buyers from distant parts of the state.

One of the most active men in promoting dairy interests in Idaho is F. R. Cammack, the State Extension Expert of the Idaho University. He recently judged the dairy cattle entries at the Burley and Rupert Fairs. At Rupert, H. C. Hausen, A. E. Ross, J. B. Redford, all of Rupert, with Clifford Thol', were the exhibitors and each won their share of the prizes. Mr. Tholl's entry was the grand champion bull while the grand champion female was Model Johanna Aeata, owned by H. C. Hausen.

The only exhibitor of Holsteins at the Filer Fair was W. T. Harding, of Buhl and his entries were awarded all the prizes. His champion cow was Square H. Homestead De Kol. The judge was R. H. Musser, a prominent Holstein breeder of the state, who awarded the prizes on all the dairy cattle.

The Holstein classes were well filled at the Southeastern Idaho Fair at Blackfoot. Here the judge was C. E. Johnson, proprietor of the Sunnyside Dairy, Idaho Falls.

The dairy cattle exhibited at the Jerome Fair was judged by Mr. J. E. Dorman of the U. S. Western Dairy Division which is located in Salt Lake City.

The University of Idaho had a very fine exhibit of Holsteins and Jerseys at the Idaho State Fair. These were not allowed to enter in the open class competition but were very much admired by those in attendance at the fair.

In quality and quantity the Holstein-Friesian exhibits at all Idaho fairs this year were of a very high order and they reflect the interest which is manifested in the development of this breed in Idaho.

YOU WILL HEAR MORE OF HIM

To attain the weight of 519 lb. on the day he is six months of age is quite a performance for any young bull and especially so when he is the first offspring of his dam. "Jake" as he is generally called, is the son of Carnation Matador Pontiac and those who attended the Brentwood sale of last spring will remember this heifer, the grand champion of the show, and also recall her purchase by Mr. Abner S. Deysher for $4,200, the second highest price paid for a female at that great auction.

At the time of her purchase, Carnation Matador Pontiac was with calf by Carnation Pietertje Colantha, the son of Segis Pietertje Prospect that topped the same sale. "Jake" therefore, is a grandson of the only cow that ever produced 37,000 lb. milk in a year. And in this connection, don't forget that *she* was the first-prize cow in the A. R. O. class at this year's Pacific International Livestock Exposition.

As Carnation Matador Pontiac is a daughter of Matador Segis Walker from Penfield Lady Pontiac, whose dam was a

The future herdsire of Berks Farm with his caretaker, Clark Berry. This bull is a son of the Brentwood grand champion and a grandson of Segis Pietertje Prospect.

31.96 lb. cow with 695.5 lb. milk in a week and whose sire was King Pontiac Maia, a son of King of the Pontiacs from one of the great daughters of Hengerveld De Kol, it can be seen very readily that in this handsome young fellow, Mr. Deysher has a bull whose pedigree combines wonderful producing strains. So pleased is he with the vigor and constitution of this young bull and with his symmetry and conformation that he is planning to keep him for the junior herdsire of Berks Farm.

The photograph from which our illustration was made was taken when the breeders of Lancaster County were the guests of Mr. Deysher and shows this fine animal then lacking a few days of being six months old, being held by his caretaker. Mr. Clark E. Berry, the efficient and capable herdsman at Berks Farm who is well and favorably known by a wide circle of Holstein fans.

THE CITIES ARE USING MORE MILK

There is a general increase of consumption of milk per capita in the United States and our citizens are appreciating more fully the food value of milk and its usefulness in the diet. Ten years ago about six-tenths of a pint of whole milk was consumed for every man, woman and child in the country but recent figures show that present consumption is seven-tenths, which is an increase of nearly 17%.

These figures were gathered by the Bureau of Animal Industry from health departments of 356 cities over the country with a combined population of over 32,000,000.

The New England States take .89 pints and lead for milk consumption with the Mountain States standing second with .76; while the Pacific division and the East North Central tie for third place with .74 pints. These four divisions lead for cream consumption but not in the same order; the Mountain States taking first place with .092 pints; the East North Central coming second with .056; the New England States dropping to third place with .045 pints or less than half the amount used in the Mountain States and the Pacific Coast States take .041. These figures are for milk and cream consumed as fluids but do not include milk and cream used for manufacturing products.

It is interesting to note the differences between the sections. It is quite possible that the figures for some of the southern groups are a trifle low, as they do not include milk from "family cows," which forms quite an item in many of the milder climates where pasturage is possible the greater part of the year. On the outskirts of smaller cities there are many people who have a cow of their own and supply milk to their neighbors.

A grouping of the cities by population shows that the large cities use more milk per capita than those having less than 50,000 population; with the one exception of towns of less than 5,000 people, which group has the greatest per capita consumption of all the city groups.

Location of cities	Per capita daily consumption		Gallons of milk sold for each gallon of cream
	Milk	Cream	
	Pints	*Pints*	*Gallons*
East South Central	0.47	0.032	14.7
South Atlantic	.50	.038	13.2
West South Central	.57	.024	23.8
Middle Atlantic	.68	.025	27.2
West North Central	.72	.034	21.2
Pacific	.74	.041	18.0
East North Central	.74	.056	13.2
Mountain	.76	.092	8.3
New England	.89	.045	19.8
Weighted Average .	.70	.040	17.5

BERKS FARM SELLS THREE MORE GOOD BULLS

The demand for Berks Farm bulls still keeps up. Sir Chimacum Lutscke Posch has been purchased by Roth Brothers, Shillington, Pa. This bull is sired by a son of Lutscke Vale Cornucopia, 789.7 lb. milk in seven days, 31,-246.9 lb. milk and 998.91 lb. butter in a year. She was the first cow to make over 31,000 lb. of milk in a year and so was at one time the world's champion for year milk production.

The dam of this young bull is Hazelwood Ormsby Posch 2d, a famous show cow that is also a wonderful producer as she has given 106 lb. milk in a day and made 716.1 lb. milk in a week. As a nine-year-old this cow produced 25.48 lb. butter in seven days. She has a number of good records and as a four-year-old produced 16,399 lb. milk and 666.66 lb. butter in 305 days. She has a wonderful show ring record, was exhibited first in 1912 as a junior heifer calf, when among her triumphs was the winning of the junior championships at the Dairy Cattle Congress and the National Dairy Show. In 1915, she won first prize at the Washington, Idaho and Oregon State Fairs and was second at the great Panama-Pacific Exposition. In 1919, she took second prize at the Pacific International and in 1920 she took first in her class every place she was shown and was grand champion at the Southwest Washington Fair, the Washington and Oregon State Fairs, and was placed first in the aged cow class in the Pacific International.

Another good bull that recently left Mr. Deysher's establishment was Berks Sylvia Tweede, a son of the senior sire, King Tweede Spring Farm and Eco-Sylv Mechthilde, the Pennsylvania State Champion yearling for seven and thirty day milk production. This baby cow produced 80 lb. milk in a day, 531.2 lb. milk in seven days and 2,224 lbs. in thirty days. Her sire is the famous Champion Echo Sylvia Pontiac and her dam as a three-year-old heifer produced 724 lb. milk in seven days and made over 30 lb. butter in a week. The St. Lawrence Dairy Co. of Reading, Pa., were the purchasers of this fine young fellow.

The third bull is De Kol Napol Courtland Meg a show animal, seven-eights white. His sire is a grandson of the state

SIR CHIMACUM LUTSCKE POSCH
His dam and sire's dam have seven-day official milk records averaging 752.9 lb. Owned by Roth Brothers, Shillington, Pa.

champion for year butter production, the famous Keystone Beauty Plum Johanna whose record of 25,787.5 lb. milk and 1,294.71 lb. butter in a year in strict official test has never been equalled in strictly official work by any other heifer in the senior four-year-old class. The dam of De Kol Napol Courtland Meg is Napol Tritomia De Kol a cow with a seven-day official record of 19.85 lb. butter and 425.5 lb. milk. Both her dam and granddam have very creditable long-time milk and butter records. The purchaser of this bull is David U. Wagner of Palmyra, Pa.

The Berks herd is one of high individuality and is a herd of producers. It is kept on a business basis, the milk being sold in the near-by city of Reading. This herd is periodically tuberculin tested and is under federal supervision. It is no wonder the breeders and dairymen of the Keystone State are securing bulls from Berks Farm to stand at the head of their own establishments.

DECEMBER PRICES ASKED BY DAIRYMEN'S LEAGUE

The Board of Directors of the Dairymen's League Co-operative Association at their meeting in New York City on November 22-23 recommended that Association milk be sold for the month of December as follows:

Class 1—Milk sold in fluid form for city distribution, $3.37 per hundred pounds.

Class 2—Milk used for manufacture of cream and ice cream, $2.90 per hundred pounds.

Class 3A—Milk manufactured into canned milk, 47 cents above the average market quotations for butter.

Class 3-B—Milk manufactured into fancy cheeses, 40 cents above the average market quotations for butter.

Class 4-A—Milk made into butter, prices to be based on the average price of butter in New York City wholesale markets during the month of December.

Class 4-B—Milk manufactured into American cheese, price based on the average market quotations for the month.

These are the base prices for milk testing three per cent butterfat at the 201-210-mile freight zone, with the usual differentials for freight and butterfat.

HOMESICK

By E. C. Hardy

I want to get out in the country agin'
  Where there'e cornfields an' past'ers an' trees,
An' I want to go down to the medder an' wade,
  In the clover clean up to my knees.
I've said it before, an' I'll say it agin'
  And I'll stick to it right up an' down,
There ain't any sense in yer tryin' to transplant
  An old hayseed like me into town.

I don't care a cent fer yer blame trolly cars,
  An' yer taxis jest give me a pain,
But I'd like to climb up on a big load of hay,
  And drive up from the meadow again.
An' I think electric lights are all right in their place,
  But I'd jest give a dollar, by darn
To light my old lantern agin' after dark
  An' go out an' do chores in the barn.

An' I want to go out in the orchard agin'
  An' sit under an old apple tree,
An' on Baldwins an' Pippins to jest gormandize
  Till I'm fed up as full as a flea.
I've nothin' 'gin salads, ragoos and sooflays,
  An' nothin' 'gin angel food cake.
But I'd like a boiled dinner with dumplins' and pie,
  An' doughnuts like Ann used to make.

An' I want to lean over the fence fer a spell
  An' chat with a neighbor, somehow,
I get so blame lonesome cooped up here in town,
  I could sit down an' talk with a cow,
I don't call it livin' jest houses in rows,
  An' the thundrin' noise of the street,
An' I want to get back into God's out of doors,
  With good green grass under my feet.

There's somthin' keeps pullin' and tuggin' my heart,
  An' my eyes get so dim I can't see,
There's a lump in my throat—I am jest an ald fool.
  But by jing it's the country fer me.
I'm sartin when Emily brought me to town
  That she didn't mean one bit of harm,
But I'm homesick fer neighbors and critters an' crops,
  An' I'm going straight back to the farm.

STUDENTS' CONTESTS AT PACIFIC INTERNATIONAL

The fifth dairy cattle judging contest for agricultural college students was held during the Pacific International Livestock Exposition. Six teams competed and ranked in the following order:

1. University of British Columbia.
2. Washington State College.
3. Oregon Agricultural College.
4. University of California.
5. University of Idaho.
6. Utah Agricultural College.

The scores were very close, only a few points separating the first and last teams. The boys judged four breeds, three classes in each. They gave evidence of skillful training and their written reasons for their placings were excellent.

The students receiving gold medals for judging all breeds were: First, Earl R. Cooley, Orgeon Agricultural College; second, Harold Steves, University of British Columbia; third, Otto J. Hill, Washington State College.

The high men on each breed, and who received silver medals were: Harold Bliss, Washington State College, Ayrshires; Jake Matter, University of Idaho, Guernseys; Ernest C. Hope, University of British Columbia, Jerseys; Ralph A. Malmsten, University of California, Holsteins.

Four teams were entered in the dairy products judging contest and ranked as follows:

1. University of Idaho.
2. University of California.
3. Washington State College.
4. Oregon Agricultural College.

There were only three points difference between the teams winning second and third places. Butter, cheese and milk were judged, using ten samples of each. The students receiving gold medals for judging all products were as follows: First, J. R. Robertson, University of Idaho; second, D. O. Lamb, Jr., University of California; third, C. W. Miller, Washington State College.

The following students received silver medals for being high men in each product: H. A. Messinger, Idaho, butter; R. A. Sylva, California, cheese; L. W. King, Washington, milk.

The medals for the two contests were presented by the Western Dairy Instructors' Association at their banquet following the contests. Many other valuable trophies were presented to the teams and to the individual members. The coaches of the dairy cattle judging team presented a very handsome silver mounted cane to Mr. J. E. Dorman of the United States Western Dairy Division who was superintendent of the dairy cattle judging contest.

Millionaire—(speaking to a body of students)—All my success, all my tremendous financial prestige, I owe to one thing alone—pluck, pluck, pluck.

Student—"But how are we to find the right people to pluck?"

A celebrated singer was in a motorcar accident one day. A paper, after recording the accident, added, "We are happy to state that he was able to appear the following evening in four pieces."

"One er dese safety razors," said Uncle Eben, "may be safer foh shavin', but it ain't no pertection at a rough party."

Cow Testing Association Reports

WISCONSIN TESTERS ELECT OFFICERS

The Wisconsin testers met at Madison, October 27th with E. L. Luther, superintendent of Wisconsin Farmer's Institutes, as chairman. Nander Nelson, president of the Wisconsin Tester's Association, spoke on the work that cow testers are doing and said that they had great influence for good on the dairy industry. Suggestions were made by M. H. Button, Agent for Washington County and H. M. Knipfel, of Clark County, as to how testers and county agents can coöperate.

Dr. J. S. Healy, State Veterinarian in charge of tuberculosis testing work in Wisconsin, addressed the testers on "Tuberculosis Eradication and Accreditation Work." R. T. Harris spoke of association testing as a stepping stone to official testing and said the two tests had done much to improve livestock. A. J. Cramer, State Supervisor of Associations, advised the testers to become well-posted in their work in order to give the best satisfaction. President Nander M. Nelson gave the annual address and suggested that economical feeding for profit was equally as important as feeding for high records. A. O. Collentine, of the State College of Agriculture, emphasized the importance of keeping complete records and said that there was not the demand for Wisconsin Livestock that there was a year ago.

Nander M. Nelson of the Farmington Testing Association, Fredonia, was re-elected president of the Wisconsin Tester's Association; Clarence Bragg, tester, Ft. Atkinson Testing Association, vice-president; F. R. Austin, tester, Avoca Testing Association was chosen secretary; and E. L. Marking, tester La-Crosse County Testing Association and Adolph Horning, tester, Tri-County Testing Association, Clark County, as directors.

WISCONSIN TESTING

The November *Monthly News Letter* sent to testers of Wisconsin Cow Testing Associations shows that during the month of October the Black and White breed maintained its proverbial leadership. Exactly 100 Associations report but in one instance the breeding of the leader is not given. The Holstein breed claims sixty-one out of the ninety-nine leaders whose breed is designated. Thirty-six are styled grade Holsteins, twenty-four registered Holsteins and one is just called Holstein, without any information whether she is registered or not. The Guernsey breed is the nearest competitor with twenty-six leaders, twenty-two of which are grades and four purebreds. There are two registered Shorthorns and one grade Shorthorn leader, four grade Jersey and three registered Jersey leaders, while two Associations are headed by grade Ayrshires.

The state leader is a grade Holstein owned by A. Jochmann of the Ellington Association with 98.9 lb. butterfat in the month. A registered Holstein owned by L. R. Shanger of the Leopolis-Tillida Association is second with 86.5 lb. fat and a registered Holstein owned by A. Hammom of the Horicon Association is third with 85.3 lb. fat. Three other leaders are above 80 lb. fat, two are registered Holsteins, the other a grade Guernsey.

Twelve different herds are reported as averaging over 40 lb. fat in the month. This does not mean that there were only twelve herds in the state that were above this mark as the report tells only of the leaders. A grade Jersey herd consisting of seven cows is in front with an average production of 1,140 lb. milk and 51.1 lb. fat. Seven of the twelve herds with a 40 lb. average are Black and White cattle, two consisting entirely of registered Holsteins, three of grade Holsteins while two contain both registered and grade Holstein-Friesians. No other Jersey herd is reported except the leader. There are two grade Guernsey herds, one registered Shorthorn and one herd consisting of grade and registered Guernseys.

PRILLY COW LEADS IN WEST VIRGINIA

The Cullpepper County Association finished its year with 501 cows completing the year's work. The leader was the registered Holstein, Prilly, owned by H. L. Butler and Sons with 18,001 lb. milk and 759 lb. fat. Caltha, owned by J. O. Sullivan was second with 15,701 lb. milk and 728.5 lb. fat.

There were six cows that exceeded 600 lb. butter and four cows over 15,000 lb. milk while no less than 38 cows exceeded 10,000 lb. The leader for herd average was H. L. Butler & Sons with a herd consisting of grade and registered Holsteins. The J. O. Sullivan herd was second and Mahoney Brothers third. These are all black and white cattle.

DIVIDE THE HONORS

There was a close contest in the Meeker County, Minn., Association for first position between the registered Holstein herd of Henry A. Olson and the mixed purebred and grade herd owned by Charles Nelson King. The Olson herd led for butterfat with an average of 387 lb. and were in second place for milk with 10,084 lb. for seven cows. The King dairy had the highest average production for milk 11,040 with an average of 382 lb. fat for nine cows. The highest producing cow is Rose Ormsby Changeling owned by Henry A. Olson. She made 582 lb. butterfat and gave a profit of nearly $200 above her feed cost.

STANISLAUS COUNTY TESTING

The October report of the Stanislaus County, California, Farm Bureau Dairy Department says that 3,146 cows were tested in the Stanislaus County Association during October. Of this number, 193 made over 40 lb. fat and the average of the entire association was 26.6 lb. fat, 706 lb. milk.

The Stanislaus County Association contains a number of large herds and reports the four highest herds in the county containing over 40 cows. These four consist of grade Holsteins and we are giving the figures as reported:

Owner	Number Cows	Number Over 40 lb.	Average Fat	Average Milk
Kaiser Bros.	60	18	34.7	1034
H. A. Kricke	84	14	31.14	937
Gonzalves & Co.	75	9	31.12	824
Alvernaz & Co.	61	6	30.1	775

The leading herd for the division containing between 15 and 40 cows is the seventeen registered Holsteins owned by E. W. Looney; eleven of these made over 40 lb. fat and the entire number averaged 48.3 lb. fat, 1,392 lb. milk. The twenty registered Holsteins of the Six Brothers dairy averaged 29.2 lb. fat, 994 lb. milk.

The two highest record cows in the county are in the Looney herd, one making 79.4 lb. fat, 1,987 lb. milk, and the other 78.6 lb. fat, 2,356 lb. milk. A grade Jersey comes next then follow five registered Holsteins, two of which belong to E. W. Looney, two to Six Brothers dairy and one owned by Kaiser Bros. which herd has a grade Holstein with 64.8 lb. fat, 1,662 lb. milk. She stands in ninth position.

MONAHAN HOLSTEINS IN FRONT

The Merrimack Valley Cow Testing Association operates in portions of Rockingham and Strafford County, N. H., and has recently completed a year's work. There were 185 cows that finished the year. Seven herds and three breeds were represented and the average was 6,674 lb. milk and 240.2 lb. fat. Twice-a-day milking was generally practiced. Among the leaders are three Holsteins from the herd of James Monahan of East Kingston. These three animals averaged 11,917 lb. milk and 422 lb. fat. They averaged to eat $113.35 worth of feed and produced an average of $415.40 worth of milk. A recent survey shows that purebred cows kept for utility purposes were capable of earning 47% more than grades and this without any allowance being made for the increased value of offspring.

HOLSTEINS SWEEP ILLINOIS ASSOCIATIONS

The Holstein breed during October made a clean sweep in the Cow Testing Associations of Illinois. The ten highest producers were black and white and nine of them were purebred Holsteins, five being owned by the Rock River Farms, Byron, Ill., the property of Mr. and Mrs. Medill McCormick. The leader made 2,341 lb. milk, 79.6 lb. fat, while her stablemate made 2,272 lb. milk, 79.5 lb. fat and another Rock River Farms cow made 2,167 lb. milk, 75.8 lb. fat. These cows took the first three places. We are reproducing this portion of the report in full:

Association	*Owner*	*Breed*	*Milk*	*Fat*
Ogle County	Rock River Farms	PBH	2341	79.6
Ogle	Rock River Farms	PBH	2272	79.5
Ogle	Rock River Farms	PBH	2167	75.8
Adams	Wilbur Coe	PBH	1891	75.6
Winnebago	Nicholson Bros.	GH	1512	72.6
Ogle	Rock River Farms	PBH	2175	71.7
Ogle	Rock River Farms	PBH	1925	69.3
Kane No. 2	M. Jones	PBH	2024	68.8
Kane No. 1	J. L. Campbell	PBH	1571	66.0
Stephenson	Paul Barrymore	PBH	1650	66.0

Eight of the ten highest producing herds in the state were purebred Holsteins. The leaders consisted of eight cows owned by Nevens Bros. of Winnebago, with an average of 1,216 lb. milk, 50.19 lb. butterfat.

Six of the ten highest leading herds consisted of purebred Holsteins; two consisted of grade Holsteins, one is purebred Guernsey and the other is grade Holsteins and Jerseys mixed. The Rock River Farms shows the remarkable average of 1,135 lb. milk, 40.1 lb. fat for ninety purebred Holsteins.

The highest producing Illinois cow is the best cow of the Rock River Farms herd already mentioned with 2,341 lb. milk, 79.6 lb. fat. Nineteen associations reported and of the leaders of these nineteen associations, ten are purebred Holsteins, four are grade Holsteins and five are grade Guernseys. The breed makes nearly as big a showing in leading herds; nine of them are purebred Holsteins, three are grade Holsteins and one purebred and grade Holsteins. One herd consists of grade Holsteins and Jerseys, one is a purebred Guernsey, two are purebred Jerseys and one is composed of both purebred and grade Jerseys. The Nevens herd reported above, is the highest producing herd in the state.

The tremendous average of the ninety purebred milkers in the Rock River Farms herd is a great advertisement for registered Holsteins. We do not know of any other purebred herd in the country of its size making anywhere near this showing in Cow Testing Association work. The thirty-nine head owned by Frank Widmayer of Kane County, consists of purebred and grade Holsteins and this herd averaged 1,127 lb. milk, 38.32 lb. fat.

Prof. C. S. Rhode reported that A. J. Nelson of McHenry County finished his first year of cow testing association work in October 1, 1922. By keeping purebred bulls at the head of his grades for the past several years, he has been able to breed up a herd of cattle that last year averaged 8,352 lb. milk and 316.6 lb. butterfat. Some of the dairymen in the county are now buying Mr. Nelson's grade heifer calves.

The fact that testing pays was demonstrated very nicely in Kane County last month. Eleven herds in the Association are being tested for the first year while twelve herds have been in the Association for more than a year. The average production of the cows in the eleven herds for the month was 649 lb. milk, 23.8 lb. butterfat, while the average production for the cows in the twelve herds that had been tested more than a year was 799 lb. milk, 28.4 lb. butterfat. The twelve herds returned $19.51 more above the feed cost per head for the month than did the eleven new herds in spite of the fact that the older herds averaged two cows less. This increased return amply pays for the trouble of building up a herd by staying in a cow testing association.

MONTESANO HOLSTEINS ARE GOOD ONES

During the month ending October 28th, the average production in the Grays Harbor County, Washington, Association was 791 lb. milk and 31.1 lb. butterfat for 226 cows. The 18 cow dairy of C. F. Brittain averaged 1,144 lb. milk and 39.5 lb. fat. The 16 Holsteins of John Pierce averaged 1,064 lb. milk and 34.9 lb. fat and the 53 cow dairy of R. H. Arland averaged 933 lb. milk and 33.9 lb. fat. These three dairymen live around Montesano. The 10 cow dairy of A. C. Hunt of Satsop averaged 679 lb. milk and 29.9 lb. butterfat, leading in the division for herds containing 15 cows or less.

Arland cows held the two leading positions for individual production with 1,814 lb. milk, 85.2 lb. fat and 1,702 lb. milk, 74.9 lb. fat.

HOLSTEIN MAKES GOOD SHOWING

The Tri-county West Virginia Association had 244 cows tested by C. M. Henry during October. Three made over 50 lb. fat and 24 over 40 lb. during the month. The leader was a registered Jersey with 54.48 lb. butterfat from 1,135 lb. milk. Second was a registered Holstein owned by W. G. McClain and Sons with 1,371 lb. milk and 52.8 lb. fat. This is a strong Jersey Association.

TESTING IN THE WESTERN STATES

The Testing Associations of Idaho lead the eight western states with an average of 32.15 lb. fat for 437 cows; Washington is second with 30.38 lb. fat average for 2,721 cows; California stands in third position with 29.76 lb. fat for 20,497 cows; Oregon with 29.59 lb. fat is fourth followed by Nevada with 28.65 lb. fat; Colorado and Arizona follow in the order named and the rear is brought up by Utah with 24.66 lb. fat for 527 cows.

There are forty-three associations in the eight states with 27,670 cows enrolled; of this number 4,410 made more than 40 lb. fat in the month.

The registered Holstein herd of Agee Bros., Rivera, California, led in the division containing more than fifteen cows. This twenty-three cow dairy averaged 1,548 lb. milk, 49.4 lb. fat. A grade Holstein herd of nineteen animals owned by A Clotier of Auburn, Wash., is second with 1,288 lb. milk and exactly 49 lb. fat. The registered Holstein herd of seventeen milkers, owned by E. W. Looney of Salida, California, is third with 1,392 lb. milk, 48.3 lb. fat while the well-known registered herd of Whowell & Polley of Johnstown, Colo., is fourth with 1,328 lb. milk, 46.5 lb. fat for twenty-three milkers.

In the division for herds containing fifteen cows or less, first position is held by five grade Holsteins, owned by E. E. Freeman of Modesto, Cal., with an average of 1,703 lb. milk, 59.7 lb. fat. Registered Holstein herds occupied the next four places. Ten cows, owned by F. F. Pellissier of Whittier, Cal., are in second position with an average of 1,657 lb. milk, 56.5 lb. fat; Musser & Musser of Nampa, Idaho, are third with an average of 1,445 lb. milk, 51.5 lb. fat.

The highest producer is a grade with mixed Jersey and Holstein blood, owned by Blowers, Inc., of Hanford, Cal., with the remarkable showing of 1,717 lb. milk, 134 lb. fat. A registered Holstein owned by C. R. Harvey of Pasadena, Cal., is second with 2,700 lb. milk, 99.9 lb. fat. Holsteins occupy the two next places, the one holding the third position being in Nevada and the fourth in Idaho.

A. C. Pfefferkorn reports that the man owning the high herd of cows in the Cheleno-Salmon Creek Association, Cal., has used purebred bulls for twelve years and has been a member of the association for five years. This is more proof that it is wise to use a purebred bull and belong to a cow testing association.

BREED MAKES GOOD SH WING

The La Grange, Wisconsin, Testing Association finished its first year on October 31st. There were 308 cows that completed the year and their average production was 6,958 lb. milk, 282.3 lb. butterfat. The average value of the milk produced was $117.23; the cost of roughage was $31.99; the cost of grain was $19.76, making a total of $61.75; and leaving a net profit above feed cost of $55.48 per cow.

Three cows produced more than 500 lb. butterfat in the year while eighteen produced more than 400 lb. A junior two-year-old Holstein, owned by L. H. Phelps, was the leader for the year, she having produced 12,511 lb. milk and 511.5 lb. butterfat. The cost of her feed was $84.21 and her profit above feed cost was $122.02. The second high cow, also a grade Holstein and owned by Mr. Phelps, produced 506.4 lb. butterfat, while third and fourth on the honor list were grade Holsteins from the herd of F. Ewing with 501.8 lb. and 459.3 lb. respectively.

Mr. Phelps had the high herd, his fourteen grade Holsteins produced 9,994 lb. milk, 384.7 lb. butterfat. Their profit over feed cost was $76.36. The grade Holstein herd of I. Fitzmorris was second with an average production of 8,479 lb. milk, 338.6 lb. butterfat. The profit made by this herd of ten cows was $67.45.

HOLSTEIN HEADED EACH

The high cow for October in the Madison Township Association, which operates in Franklin County, Ohio, was a grade Holstein, the property of the Franklin County Home with a production of 1,311 lb. milk and 70.8 lb. butterfat.

A Holstein owned by J. E. Baldwin of Hilliards, produced 2,176 lb. milk and 72.6 lb. butterfat in the Darby Association of the same county. The high herd consisted of 17 Holsteins owned by Ray Van Schoyck of Hilliards, with a production of 1,357.9 lb. milk and 35.7 lb. butterfat per cow.

FINSTER HERD AGAIN LEADS

The good herd of Roy N. Finster of Eldora, Ia., headed the Hardin County Association with an average of 1,164 lb. milk and 49.6 lb. butterfat. This herd consists of purebred and grade Holsteins. Holstein herds were third and fourth while the fifth herd consisted of mixed grade Holsteins and Shorthorns.

A ten-year-old grade named Topsy owned by W. F. McCord was high cow with 1,438 lb. milk and 54.6 lb. fat. Mr. Finster's grade was second with 54 lb. fat, and a purebred Holstein owned by C. A. Mark was third with 52.7 lb. fat.

IN LITTLE RHODDY

During October seventeen cows in the Newport County, Rhode Island Testing Association, produced more than 1,200 lb. milk and thirty-four produced more than 42 lb. butterfat. The leader, a Holstein owned by J. L. Simmons, Jr. produced 1,605 lb. milk, 64.20 lb. fat.

KANSAS DAIRYING IS IMPROVING

Six of the seven Kansas Cow Testing Associations which have finished two years or more of work showed an increase in butterfat production last year over the year before. One showed a decrease for the third year as compared for the second year, although the second year was 22.6 lb. fat per cow better than the first year.

In Lyon County the production last year was 64.9 lb. per cow more than for the year before. Montgomery County showed a gain of 62.7 lbs. per cow over the preceding year. Clay County had an increase of 48.4 lbs. for the second over the first year. The Oswego Association increased 32.4 lbs., the Washington County Association 26 lbs. and Dickinson County, which has just finished nine years of work, showed an increase of 14.7 lbs. over last year.

The decrease of 15.2 lb. per cow is noted for the Bourbon County Association. This is due to a number of causes. Practically all members of this Association sell milk to a Fort Scott condensary and the average price paid last year was 26.1% less than the year before, so many of the dairymen stopped feeding grain which cut down production. The average feed cost last year was only $34.12 while the year before it was $51.76, the per cent of reduction being greater than the percentage of reduction in feed prices.

The average production of the 1,426 cows in Association work in the state was 6,625 lb. milk and 265.7 lb. butterfat, showing an increase of 296 lb. milk and 33 lb. butterfat per cow over the year before when 970 cows were tested. The increase for the seven associations which have done two or more years of work was 22.7 lb.

THREE MISSOURI LEADERS

Sixteen herds containing 252 cows were tested in the Oswego Testing Association in the month of September by Armon Newby, tester. This association operates in Cherokee and Labette Counties, Mo.

The leading herd consisted of black and whites and averaged 27.9 lb. butterfat. They were owned by Stephens & Paradee, who owned the three highest producing individuals. The leader, Betty, produced 1,134 lb. milk, 45.6 lb. fat for the month, the second highest produced 1,101 lb. milk, 37.4 lb. fat, while the third highest produced 744 lb. milk, 37.2 lb. fat.

Pasture is getting dry and most members of the association are feeding grain. A few are feeding silage. Some of the dairymen are feeding kafir and soybeans grown together for silage.

NUDINE IN FIRST POSITION

During October, 460 cows were tested in the Louis County, Wash., Association. They averaged 695 lb. milk and 26.7 lb. butterfat. The high cow was Nudine Colantha of Donnybrook, owned by J. C. Chamberlain of Cress, with 1,928 lb. milk and 117.6 lb. butterfat. Seventy-one other animals produced better than 40 lb. fat.

WISCONSIN OCTOBER TESTING

Ten of the 296 cows tested in the Cedarburg-Grafton Testing Association produced 40 lb. fat. Four of these ten were purebred Holsteins, three were grade Holsteins, one a grade Jersey and two were purebred Ayrshires. The leader, a purebred black and white, owned by Geo. Kohlwey, produced 1,302 lb. milk, 54.6 lb. fat for the month of August. High herd average was carried off by the ten purebred Holsteins owned by Otto Kohlwey, with the average production of 1,106.7 lb. milk, 33.4 lb. butterfat. The tester is Gust. Wild.

Thirty-one cows owned by members of the Kenosha County Association tested more than 40 lb. fat during October. The high cow for the month is owned by B. J. Gillmore. She was a purebred Holstein with a production of 2,058 lb. milk, 67 lb. fat. The tester is Lloyd Klusmeyer.

Twenty-five herds containing 293 cows were tested in the Horicon Association. Nineteen cows produced 40 lb. butterfat or more.

A purebred Holstein, owned by A. Hammonn is the leader with a credited production of 85.3 lb. fat from 1,984 lb. milk. A grade Holstein, also owned by Mr. Hammonn, stands second with 67.6 lb. fat from 1,779 lb. milk.

The high herd was owned by Otto Werner. This herd of grade Holsteins produced an average of 945 lb. milk, 33.5 lb. fat, while the herd of grades and purebreds owned by Mr. Hammonn was second with an average of 797 lb. milk, 31.2 lb. fat. Harvey Gustin was the tester.

Floralla, a purebred Holstein, led the Arena Association. She produced 1,600 lb. milk containing 65.6 lb. butterfat and is owned by Charles Cairns.

Eleven purebred and grade Holsteins compose the high herd for the month. They produced an average of 835 lb. milk, 32 lb. butterfat and are owned by Walter Schumann.

Spot, Lady and Topsy, are three grade Holsteins owned by Fred Harrop. They carried off the honors of the Arena Testing Association for the year by producing 12,721 lb. milk, 497.9 lb. fat; 13,958 lb. milk, 474.5 lb. fat; and 11,645 lb. milk, 459.1 lb. fat respectively.

Lady, a grade Holstein owned by John Wandergen, led the Oostburg-Cedar Grove Association. She produced 75.2 lb. butterfat from 1,833 lb. milk. Second high cow was Nigger, also a grade Holstein and owned by John Brethower, with 65.6 lb. fat from 1,426 lb. milk for the month. Hy Wieberdink's purebred Holstein Lenon was third with 59 lb. fat from 1,438 lb. milk.

Four of the 360 cows tested in the Mineral Point Association produced more than 60 lb. fat; twenty-four produced more than 50 lb. and fifty produced more than 40 lb. The high cow for butterfat production was a grade Holstein owned by John T. McNeil with 70 lb. fat from 1,522 lb. milk. High cow for milk production was also a grade Holstein which was owned by Ley Bros. She produced 64.2 lb. fat from 1,606 lb. milk. This was third high fat production, the second high being a grade Holstein owned by James Harris with 64.7 lb. fat from 1,541 lb. milk to her credit. Jos. McGinnity had the high herd average, his twenty-three cows averaging 969 lb. milk, 38.9 lb. butterfat. They were all grade Holsteins as were the members of the second high herd which was owned by Ley Bros. Earl L. Thompson is the tester.

The six high cows of the Monroe Association were all Holsteins. The leader, owned by Otto Zimmerli, produced 1,469 lb. milk, 60.2 lb. fat; Henry Haberman owned the second high cow with 1,434 lb. milk, 54.5 lb. fat. There were 466 cows tested.

Registered Holsteins formed the herd of Iver Ellingsen which had the high herd average for the month, their production being 928 lb. milk, 33.87 lb. fat. Frank Roderick owned the registered and grade Holsteins that captured second place for the month, they producing 830.-68 lb. milk, 29.28 lb. butterfat.

All the sires in this association are purebred and all members are pledged not to use substitutes for dairy products. Henry M. Auby is the tester.

Gypsy, a grade Holstein owned by Wm. Werner, was high cow in the Richfield Association. She produced 1,581 lb. milk and 82.2 lb. fat for the month. The high cow for the month of October was Bessy, also a grade and owned by Ed. Gensman, with the production of 1,082 lb. milk, 54.1 lb. fat. John Kroehler had the high herd for both months, his ten purebred Holsteins averaging 1,081 lb. milk, 33.2 lb. fat for the month of September and 911 lb. milk, 33.3 lb. fat for the month of October.

Four cows in the association were sold as boarders. The tester is A. R. House.

There were 392 cows tested in the La Grange Association and 40 of these produced more than 40 lb. butterfat while 11 produced more than 50 lb.

The high cow for the month was a grade Holstein, owned by Floyd Ewing, with a production of 1,841 lb. milk, 66.2 lb. fat. She was closely followed by a registered Holstein, owned by Ed. Calkins, with 1,646 lb. milk, 65.8 lb. butterfat. Mr. Ewing also owned the high herd, his grade Holsteins averaging 1,012 lb. milk, 35.3 lb. butterfat.

A grade Holstein owned by J. O. Cummings took high honors in the Neenah Association with 1,079 lb. milk, 63.6 lb. butterfat. A registered Holstein in the herd of D. K. Allen was second with 1,612 lb. milk, 61.3 lb. fat. Chris Nelson had three animals on the honor roll.

Walter Runde had the high cow in the Hazel Green Association. She is a grade Holstein and is credited with 1,879 lb. milk, 65.7 lb. fat. A. A. Zenz is the tester.

Ten of the 368 cows in the Wisconsin Rapids Association produced more than 1,000 lb. milk or 40 lb. butterfat for the month. Belle, a grade Holstein, owned by Hoogesteeger & Van Strien, was the leader with a production of 1,426 lb. milk, 65.5 lb. butterfat.

A grade Holstein owned by Harry Rasmussen produced 970 lb. milk, 49.5 lb. butterfat during October in the Tomah Association.

S. C. Jensen & Son had a purebred Holstein that led the Clinton Association with 1,366 lb. milk, 60.1 lb. fat in twenty-seven days. There were eight milkers in the Jensen herd and three produced more than 40 lb. fat during the month. Second position was held by a purebred Holstein, owned by C. A. Larsen, with 1,566 lb. milk, 56.4 lb. fat.

The Shirley-Denmark Association October report is led by a five-year-old grade Holstein owned by A. Davis of De Pere, she making 1,386 lb. milk, 63.6 lb. fat. The grade and purebred Holstein dairy owned by Henry Beneche of Denmark led for herds with an average of 1,138 lb. milk, 42.6 lb. fat for ten cows.

The Hillsboro Association was led by a herd of Holstein cattle owned by Albert Kahler with an average of 709 lb. milk, 29.2 lb. fat. The individual leader was a grade Holstein owned by Albert Fick with 1,326 lb. milk, 55.7 lb. fat.

Bonnie View Farms, Inc.

Java Village, N. Y.

"A modern breeding establishment for re-acting Holstein-Friesian Cattle."

High-class producing re-actors bred on a share basis.

Walcowis Farms led the Delavan-Geneva Association with a production of 1,218 lb. milk, 58.5 lb. butterfat by Lady Ormsby. Her stablemate, Ollie Beets, was second with 1,423 lb. milk, 57 lb. fat. The high herd record went to the eight head of grade Holsteins owned by John Underwood of Delavan with an average of 910.4 lb. milk, 31.9 lb. fat.

Tyranena, a purebred Holstein owned by J. A. Schmidt & Sons, again led the Central Rusk County Association this month with the production of 1,440 lb. milk, 60.5 lb. fat. The Schmidt herd was second with an average of 776 lb. milk, 27.4 lb. fat for seventeen cows.

Rockwell & Katterhenry had the high herd in the Beloit Association, their seventeen grade Holsteins averaging 970 lb. milk, 35.1 lb. fat. Their cow, Kit, has held the first place in the association for five months and fourth place twice. She came back to second position during October. Her total production to November 1st was 19,065 lb. milk, 664.4 lb. fat in 9½ months. If she can produce 140 lb. butterfat in the next 2½ months she will gain the championship.

High herd average in the Columbia County Association was made by the Holstein herd of George C. Townsend of Poynette, which produced an average of 1,253 lb. milk, 43.5 lb. butterfat. Mr. Townsend also owned the two highest producing cows, first being a grade Holstein with 70.2 lb. butterfat from 1,432 lb. milk to her credit and second another grade Holstein with 66.8 lb. fat from 1,711 lb. milk. There were 290 cows tested during October under the supervision of R. B. Flagler.

ROBERTSON HERD FIRST

Twenty-seven herds containing 342 cows were tested in the York Valley Testing Association during October. The high herd, consisting of fifteen registered Holsteins, was owned by H. E. Robertson, York, Pa. This herd averaged 1,248 lb. milk, 42.2 lb. butterfat for the month. Five of the ten highest producers were in this herd. The leader, Clothilde, produced 2,235 lb. milk, 62.6 lb. fat; her stablemate, Silvertip, was second with 1,931 lb. milk, 59.9 lb. fat.

Six individuals produced more than 50 lb. fat and twenty-nine more than 1,200 lb. milk; twenty-five produced more than 40 lb. fat while forty-nine produced more than 1,000 lb. milk.

GOOD KANSAS HOLSTEINS

Beach, a grade Holstein owned by W. C. Beard of Enfield, Kansas, led the Cowley County Association for the month of October with 1,568.6 lb. milk and 61.17 lb. butterfat. A stable mate was second with 1,512.8 lb. milk and 60.57 lb. fat. Purebred Holsteins occupied the next three positions. The Beard herd was high with an average of 847.7 lb. milk and 34.2 lb. butterfat.

HOLSTEIN LADY PROMINENT

The ladies are certainly right in the lead nowadays. The voters of the Second District of Chester County, Pa., elected Miss Martha G. Thomas as their representative in the Pennsylvania Legislature. The chairman of her campaign committee was Mrs. E. Page Allinson, the mistress of Town's End Farm, West Chester. Our readers will remember that the Allinsons recently entertained the Chester County breeders' at their field day, and that Mrs. Allinson presided that evening at the annual banquet.

The Allinsons have four children yet Mrs. Allinson finds time to take interest in community and political affairs. She is a Republican committeewoman of Chester County, is probably the first woman campaign manager of Pennsylvania, was the Chester County chairman of the endowment fund of Bryn Mawr, her alma mater and is a leader in the movement for progress. She is a daughter of Samuel R. Shipley, former president of the Provident Life and Trust Company of Philadelphia.

WIN IN TENNESSEE

At the Chattanooga Interstate Fair, there was a great display of dairy cattle. Johanna Zehringdale Inka, owned by Oscar Zehring of Germantown, Ohio, and shown in the Ohio State herd, was grand champion Holstein female while the junior championship went to Merrygold Beauty Pride, owned by Elmer Frazier of Middletown, Indiana. The Bonny Oaks Industrial School of Chattanooga and Harry Heiskell of Sweetwater, Tenn., also exhibited Holsteins of which there were some fifty shown.

HOLSTEINS HELPED

Olin Ruste of Blue Mounds, Wisconsin, at the Wisconsin Dairymen's Association held at Madison, October 26th, told how he increased his herd average from 7,150 lb. milk and 245 lb. butterfat in 1918 to 12,350 lb. milk, 431 lb. fat in 1921. Purebred Holsteins helped him do it.

May 2—Clintonville, Spring Consignment Sale.
June 4—Mentor, Ohio, Pinery Farms, Annual Sale.

DRAWS GOOD ATTENDANCE

A large crowd attended the Clinton County Holstein sale held at Clintonville, Wisconsin, but buyers were not plentiful, although the stock was of good quality. The top price was $310 paid by Chester P. Thorson for a offering from the herd of W. P. Kissinger & Son of Waupaca.

TENNESSEE BUYS FROM KENTUCKY

The second annual sale of the Kentucky Holstein Breeders' was held at Tattersall's barn, Lexington, November 15th. The average was $106 for 46 head, the total being $4,990. The top price was $345 for a two-year-old heifer consigned by J. H. Lindsay of Winchester. She was purchased by B. E. Elam of Crossville, Tenn., and will be used as a foundation animal. The top price for a bull was $200 for a four-year-old sire.

STANISLAUS BREEDERS' SALE

Some thirty head were sold in the Stanislaus Breeders' Fall Consignment Sale held at Modesto, Cal., early in November. The top price was $635 paid by M. J. and B. A. Edwards of Escalon, for Princess Cornucopia Prilly. She was consigned by Manuel Azavedo of Patterson and is a daughter of King Segis Alcartra Prilly. The sale was under the management of the California Breeders' Sale and Pedigree Company with C. L. Hughes as Sales Manager.

IOWA COUNTY, WISCONSIN

The sale held at the Mineral Point Fair Grounds late in October, is considered a success by those participating. During the two days eighty-nine purebreds including several calves, averaged $127. The top price for a grade was $135. A pair of two-year-old heifers, consigned by Dale Gordon of Mineral Point, brought $300 each, being purchased by Mayme Duffey of Highland, Wis. The pair weighed 2,410 lb. A majority of the animals stayed in Iowa County, although buyers were present from many parts of Southwestern Wisconsin.

CASS BULL SALE

Thirty head of purebred Holsteins were sold at the Cass Farm, Sumner, Iowa, November 9th, and averaged $132. Nineteen head were bulls and averaged exactly $100. The top price was $165 for a yearling purchased by F. H. Platt of Randalia. He was a son of Fayne Bessie Homestead from a young cow with a seven-day butter record of 22 lb. and a milk record of 90 lb. in a day. The top price for a female was $340 for a daughter of King Aaggie Hengerveld, bred to the famous show bull, Tritomia Pietertje Ormsby. She was consigned by Paul P. Stewart of Maynard and was purchased by P. C. Aeschliman of Wadena, Iowa.

DOING A BIG BUSINESS

Sales Manager A. J. Miller of the Holstein Association of Polk County, Wis., was a busy man during October and was instrumental in selling ninety head for a total of $5,905.

The principal sales were: Twenty-five heifers and cows and one bull purchased by Philip Schneider of Hinton, Iowa, for $1,782; The Logan County Holstein Breeders' Association of Burnsted, N. D., purchased twenty-nine heifers and three bulls for $1,423; L. C. Simons of the Twin City National Bank of St. Paul, purchased seven grade cows and heifers for $440 and two purebred cows for $295. Anton Runtjes of Bird Island, Minn., purchased seventeen grade Holsteins and seven grade Guernseys for $1,895.

The directors of the Holstein Association met at the home of A. J. Miller, November 1st and elected the following officers: President, Ernest Nelson, St. Croix Falls, Wis.; Ross De Golier, Anery, Wis., secretary; and A. J. Miller, Milltown, Wis., sales manager.

HARTSOOK DRAFT SALE

The Hartsook Sale on November 10th was well attended. Forty-seven animals were sold for $14,780 or an average of $315. A large number of the offerings were young heifers and the buyers were new men in Holstein business. Carl McCullers of Santa Maria took a two-year-old for $520. Mr. McCullers purchased eight head. Mr. A. M. Dunn purchased 16 heifers including Nancy Calamo Kornkyke 2d, for $475. Two cows brought $550 each. The sale took place on the Fred Hartsook farm at Lankershim, Cal.

LOW PRICES IN NEW HAMPSHIRE

About 350 attended the dispersal sale of the Fellows herd at the Holbrook farm at Amherst, N. H., and were entertained by seeing Ex-governor Chas. M. Floyd, himself a Holstein breeder, act as auctioneer for a portion of the time.

There was a very poor demand and prices ranged low. The governor is quoted as explaining it by saying that his milk was netting him 3c a quart at the farm while it was retailing at Boston at 16c a quart, consequently many dairymen were going out of the business. The sale was occasioned by the death of Bert J. Fellows, the former owner.

LIVONIA DAIRY IMPROVEMENT SALE

The first annual sale of the Livonia Dairy Improvement Association was held at the Fair Grounds at Hemlock, New York, November 17, 1922, under the management of Louis P. Zumstein. Col. Glenn Mead did the selling and Donald Graves read the pedigrees.

This sale was held in the interests of better dairying, hoping that many "Scrub sires" would be replaced with purebreds from dams with good C. T. A. records. Nine bull calves, 2 heifer calves, 2 yearling heifers and 9 cows were sold, the cows averaging $195. The top price of the sale was reached on a cow consigned by J. M. Huff and purchased by Fred Culberston, of Dansville, N. Y., for $260.

The buyers were largely local men who have been convinced of the value of purebreds by watching the improvement in their neighbor's herds under the supervision of the association tester. The consignors, while receiving no large prices, were well satisfied and will repeat next year with a still larger and better offering.

WISCONSIN BULL SALES BRING NEW BUYERS

Thirteen bulls and a heifer were sold on November 3d at the farm of Chas. Hughes and Son of Neenah. The average price was $71.50 the high price was $145 for a bull consigned by Chas. Hughes & Son and purchased by F. I. Cox & Sons of Omro.

Ten bulls and two heifers were sold at the Louis Sorenson Farm at Winchester, on November 8th. The average price for the bulls was $107.30, the highest price was $245 for a bull from the Sorenson herd, a grandson of Sir Pietertje Ormsby Mercedes 37th. Sorenson consigned four bulls which averaged $178.75.

The third of this series was held at th C. E. King Farm, Ormo, November 10th. Nine bulls and three heifer calves were sold, the average price for the bulls being $65. A majority of the bulls were purchased by men who up to that time had not owned purebred bulls. The highest price was $82.50 for a bull purchased by F. Nitzke of Omro, from Chas. Hughes & Son of Neenah.

The fourth and last of the Holstein bull sales was held November 15th at the farm of John Miller of Utica. Ten bulls and two heifers were sold. The average price of the bulls being slightly over $66. The highest price was $145 paid for a bull consigned by Burt Brewer of Nepeuskun and purchased by G. B. McLaren of Pickett.

STEVENSON COMMENTS ON HIS SALE

Mr. George E. Stevenson's report of his sale was received too late for insertion in the November 22d issue of the BREEDER AND DAIRYMAN and is as follows:

"Seventy-five animals sold brought $14,940, an average of $199.46. Twenty-one sound cows, past two years of age, now milking, brought an average of $421 plus; five aged cows, or cows with defective udders, averaged $156; twelve two-year-old heifers averaged $154 plus; thirteen yearlings averaged $100 plus, fifteen heifer calves averaged $66; nine bulls and bull calves averaged $139; one two-year-old heifer, a daughter of Keystone Beauty Plum Johanna, brought $1,000; five sold for $600 or over; one bull calf sold for $310; one three-month's-old bull calf, brought $200.

The day was cold, windy and rainy. There was a good attendance. The home county of Lackawanna was not a heavy purchaser and the cattle were widely distributed among the counties of the state, three shipments went out of the state. Had the young stuff been in as good a condition as the milking cows, the average would have been higher. The young stuff were shown just as they came from pasture, with no special fitting, were long-haired, and not as well-grown as they should have been. Considering all these facts, the prices were fairly satisfactory. Seventy-five animals were sold, fifteen more than advertised, these fifteen were mostly young bulls and heifer calves."

(Continued on page 810)

GREEN FEEDS CONTROL MINERAL METABOLISM

"If you wish to possess good healthy stock, receive milk in quantity and quality, and raise to a surprising extent your amount of butterfat, feed lime foods when cattle are on green stuff. Something, not yet chemically determined, in the substance of green food or well-cured hay, aids remarkably in the assimilation of the lime so necessary in the breeding of A-1 stock." Professor E. B. Hart thus briefly set forth the results of recent work in dairy cattle feeding at the Cattle Feeding Day held October 26th at the stock pavilion at the University of Wisconsin, Madison.

There are some new facts regarding mineral feeding that were brought out. The work reported on emphasized the necessity for feeding ample minerals at all times, especially along with green feeds. The lectures were well illustrated with live material in the form of calves that had received inadequate quantities of mineral matter.

While the work was primarily for the benefit of Wisconsin Dairymen it emphasized some facts that any man who is in the dairy business can profit by. Calcium and phosphorus and common salt were the minerals on which most emphasis was placed.—*P. V. Ewing.*

DOINGS AT BURR FARM

They are making some nice records on the Burr Farm, Los Angeles. The two-year-old, Netherland Korndyke Beauty produced 665.55 lb. butter from 11,582 lb. milk in 365 days while S. V. K. P. Susie Anne of Sunnyside made 847.1 lb. butter from 17,515.1 lb. milk as a junior three-year-old. Both are daughters of Sir Veeman Korndyke Pontiac.

There are ten cows in this herd on semi-official test. Three of them promise at least 900 lb. in a year. Sales are good, a son of Sir Veeman Korndyke Pontiac being sold to J. G. Miller of Gardena while six cows were recently shipped to Guaymas, Mexico.

GOOD FOR APPLEBY

The high cow for October in the Greene County, Mo., Association No. 1 was a Holstein owned by Homer Appleby with 1,060 lb. milk. Mr. Appleby had the second highest producing herd.

Ever notice that the people who have the most friends are usually the people who don't need any?

WASHINGTON DAIRY NOTES

Washington Dairy circles were active during October. County Agent Robert Cowan of Grays Harbor County reports the placing of six purebred females, three of which were registered Holsteins.

Dairymen in King County erected three silos during the month at an average cost of $109.64. County Agent A. B. Nystrom says the total tonnage of the three would be 141 tons.

All the boy and girl members of the Pierce County Dairy Clubs will keep daily milk records beginning November 1st.

A booth was arranged at the Everett Stock Exposition where ice cold milk, cheese sandwiches and ice cream were sold.

The Skamokawa Calf Club held a meeting to demonstrate how to fit dairy stock and judge cattle. County Agent Fred S. Martin reports that 61 people attended and a great deal of interest was shown.

The First Annual purebred dairy calf club exhibit was held at the East Stanwood Commercial Club of Snohomish County and Mr. Girard's farm. Nine members exhibited ten animals. An interesting fact about the calves was that in every instance the purebred animals owned by the club members were the only purebred animals on the farms where they were kept. Fifty dollars in prizes were given by the commercial clubs of Stanwood and East Stanwood.

COW BUYS HER BUTTER

"Mr. E. W. Harman's bull is of good type and is out of the cow, Hartog Pontiac Colantha Maid, who *purchased* 37.16 lb. butter in seven days from 630.7 lb. milk." From the Austin, Minn., *News*.

"You gotta give Jones credit for judgment, anyhow." "Yes? What's he done now?" "He married a deaf and dumb woman who is an expert housekeeper and whose mother died when she was a baby."

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 809)

THE DATE OF THE LAKE SALE

There is some confusion in the minds of those interested in the Lake Dispersal Sale regarding the date of that event. Some of the advertising gives the date as December 8th, others the 9th. The trouble arose very simply. The earlier date was first selected but it became necessary to change and some of the advertising copy was not corrected. The right date is *Saturday, December 9th* and the place is the Ridge Farm, Montrose, Pa. Montrose is on the Delaware, Lackawanna and Western Railroad. South Montrose, on the Lehigh Valley Railroad, is only a mile and a half from the farm and morning trains will be met there while busses will leave the Hotel Donovan at Montrose, at all hours sale morning.

This is a good opportunity to obtain producing Holsteins from a real high-class herd, one built on a foundation of combined individuality and production. The animals are tuberculin tested and sold subject to a 60-day retest privilege and the herd is now under State supervision.

On the Monday following, at Lynn, only ten miles from South Montrose, R. Bruce Williams will sell fifty-five registered Holsteins and this herd is also tested, having just passed a clean test. They too are sold subject to a sixty-day retest privilege, and the herd has been under Federal supervision for more than a year.

These two sales will give any one in need of good Holsteins the opportunity to select them from more than a hundred head of tested cattle and the places are so close together that one shipment can be made of animals purchased in the two sales. It is not often that such an opportunity is offered and purchasers are given their pick of two healthy, big-milking, business, Holstein dairies.

TRUMBULL COUNTY BREEDERS' SALE

The sale of the Trumbull County Holstein Breeders' held November 14th at Cortland, Ohio, resulted in an average of $129.74, the total being $6,277.50 for the 48 head consigned. The buyers were all Ohio men with the exception of C. A. Bean and P. H. Doyle of Greenville, Pa., who took a number of animals. There was a large proportion of young calves, which of course, lowered the average price.

The top price, $300 was reached for two animals, Pearl Fameuse Fayne, a daughter of King Model Fayne, recently made an official record of 22.11 lb. butter and 530 lb. milk in a week as a four-year-old. She was consigned by C. B. Knight of Orwell, Ohio, and was purchased by R. H. Morrison of Orangeville. Caseholm Princess Frindaella was a three-year-old sired by King Segis Pontiac Frindaella from a 21-lb. three-year-old daughter of King Pontiac Premier. She was purchased by Ray Alders of Mineral Ridge from the consignment of A. V. Case of Lockwood. The auctioneer was Walter Andrews with Wood as pedigree man.

Animals bringing $150 or more with names and addresses of their purchasers are:

Consigned by C. B. Knight, Orwell.

Pearl Fameuse Fayne, 4 yrs., R. H. Morrison, Orangeville	$300
Pauline Roe De Kol Hartog, 3 yrs., P. W. Miller; Cortland	210
Pride Pontiac Charm 2d, 3 yrs., R. T. Biggin, Cortland	185

Consigned by Alex. C. Brown, N. Bloomfield.

Jolie Hesper Hartog, 3 yrs., R. H. Morrison, Orangeville	160
Lindale Daisy Walker, 6 yrs., T. J. Clemmons, Youngstown	150

Consigned by S. B. Noxon, Kinsman.

Noxonis Pontiac Sarcastic Girl (Twin), 7 yrs., I. W. Switzer, Farmdale	150

Consigned by A. V. Case, Lockwood.

Bluebelle De Kol Wayne, 8 yrs., R. H. Morrison, Orangeville	225
Rose Nicola Pontiac, 6 yrs., I. C. Switzer, Farmdale	155

Consigned by E. H. Partridge, Farmdale.

Gustavus Helen Tula, 2 yrs., P. H. Doyle, Greenville, Pa.	155

WAUKESHA STAGES ANOTHER GOOD SALE

The fine average of $325.92 was reached for the sixty-five animals sold in the Wuakesha County Holstein-Friesian Breeders Sale, held in the pavilion at Waukesha, Wisconsin, on November 14th. The total was $21,185. Only two of the animals brought less than $100 and there was a good demand for bulls of good breeding and individuality. Practically all the animals went out of Waukesha County. Besides Wisconsin breeders, there were buyers present from Illinois, Indiana, Michigan, Maryland and Minnesota.

The high average was attained despite the fact that only one of the animals reached four figures, C. W. Newman of Culver, Ind., paying $1,000 for Nockdair Canary The Model, consigned by Baird Bros., of Waukesha. The Oakman Farms of Dundee, Ill., purchased several good ones including Nockdair Beets Pontiac Fayne for $710 and Ormsby Johanna Bess for the same amount. The first one came from the herd of Baird Bros. and the second from the herd of Aitken Bros., also of Waukesha. The well-known show cow Doetje Nellie Segis consigned by Klussendorf Bros. went to the Oatman Farms for $715. Fay L. Cusick of Waukesha bought several good ones, paying $850 for Iris Woodcrest Korndyke Kate De Kol, a thirty-lb. cow, consigned by the George J. Schuster Est. Homer E. Bailey of River Falls, Wis., purchased Topsy's Ormsby King, consigned by Aitken Bros. for $770. Jacob Rosenbaum of Mt. Vernon, Ind., took Pabst Creator Maplecrest Ormsby for $625.

In studying over the list, readers will note the large number of animals that brought between $300 and $400, another indication of the quality of the animals. There was no sensational animal to bring up the average, the cattle were good and consequently, as buyers were present, the sale was a credit to the greatest dairy county of the great dairy state of Wisconsin.

Animals bringing $200 or more with names and addresses of their purchasers are:

Consigned by Homer R. Dopp, Oconomowoc, Wis.

1	Meadowmere Johanna Ormsby, F. L. Gibson, St. Joseph, Ill.	$225
2	Meadowmere Daisy Johanna Ormsby, Oatman Farms, Dundee, Ill.	380

65	Colantha Pontiac Jewell, Springfield Hospital	340

TROY-CANTON BREEDERS' SALE

The Second Annual Sale of the Troy-Canton Holstein Breeding and Sales Association was held in the new pavilion at Troy, Pa., on October 26th. The top price, $300, was reached for three different animals; Cornucopia Pauline Blossom 2d, a granddaughter of Tidy Abbekerk Prince Wayne, with a private record of 13,805 lb. milk in nine months, consigned by Frank Ward of Troy and purchased by H. C. Gates of Canton; Keystone Beets Korndyke Lyons, a daughter of Segis Hengerveld Beets Lyons, consigned by C. A. Pratt, LeRaysville, and purchased by Harrington & Co., Dushore; Terrace Lottie Rag Apple, with a record of practically 10,000 lb. milk in a year as a two-year-old, a granddaughter of Rag Apple Korndyke, consigned by W. S. Sweet, Troy and purchased by Otto Dill, Johnsonburg.

The top price for a male was $225 which R. B. Arnold, Milan, paid for an eleven-month's-old bull sired by BradCo Holingen Korndyke from Crestmont Champion Bessie, a 25-lb. junior four-year-old daughter of King Pontiac Alcartra Wayne. He was consigned by H. C. Gates, Canton, and represents the Crestmont cross which is rapidly growing in favor in Northern Pennsylvania.

(Continued on page 812)

SIX GENERATIONS OF WORKERS

Six generations of Fernalds have worked the Fernald Farm at West Poland in Androscoggin County, Maine and it is not yet cleared of stones. The present owner is United States Senator Bert M. Fernald, who formerly was governor of the state and who for nearly twenty years has been a breeder of purebred Holsteins. The Fernald estate has been in the family for 130 years.

When the present owner desires exercise and a change from his duties at Washington his favorite recreation is building stone walls and he finds plenty of material to work with.

The Fernald herd of registered cattle consists of about seventy-five head. It has reached one hundred but there is such a demand for stock produced at this establishment that it is now down to seventy-five which allows of a nice little sale of surplus stock every year. The Senator recently shipped a carload of fifteen Holsteins heifers and a bull to the State of Rhode Island.

Senator Fernald is a canner and much of the feed his dairy consumes is corn cobs and husks from a near-by canning factory. This waste is hauled from the factory into the barn, is cut and carried by blower into the silo. Cream and part of the milk is sold to an ice cream factory not far from the farm. Senator Fernald is the senior member of the packing firm of Fernald, Keene and True, which at present owns seven large canning factories located in Western Maine. At the present time he does very little in the business way, his son James H. attending to the details.

The original Fernald came to Poland in 1790 and built his home on the present site. Each successor has changed the house considerably so that it only faintly resembles the original residence. The collection of tableware would delight lovers of old china as nearly every piece is an heirloom.

From six to ten men are employed on the farm the year around and usually they are men who have grown up in the neighborhood. The veteran is Hanson Orr, an old bachelor who has been in the employ of the Senator for thirty-five years. Senator Fernald himself is a big man, weighing at the present time 190 lb. —weight which he retains by hard work as he has weighed 240 lb.

The new servant has presented her references and the lady of the house read them over, with a doubtful eye. "I'm not quite satisfied with these, Bridget," she said.

"Nayther am I, mum," returned Bridget angrily, "but they're the best the ould fool would give me."

If you hold your sale without first consulting us WE BOTH LOSE.

E. M. HASTINGS CO., Pulaski, N. Y.

HOLSTEINS FOR BUTTER PRODUCERS

Elvin Brothers of Bad Axe, Mich., have a herd of 40 registered Holsteins of which 25 are cows, ten are heifers and five are bulls, three of the last named being calves. One of these, aged seven months, won the grand championship prize at the Bad Axe Fair this year.

The Elvin Brothers, M. R. and Fred, have gone in strongly for butter making and have an up-to-date private creamery with a splendid reputation for its products.

The Elvin barn is 50x86 feet with a wing 36x60 feet. It has room for 60 head of cattle and is provided with a ventilating system and individual drinking cups. The farm consists of 200 acres of level land. This year 25 acres of Grimm alfalfa was grown.

There are two herdsires, Black and White Aaggie No. 237922 is four years old and weighs 2,300 lb. He is a son of Pontiac Aaggie Korndyke. The younger bull is Ormsby Korndyke Huron, No. 286570. He is a son of Ormsby Korndyke Lad.

TEXAS DAIRYWOMAN HAS WINNERS

Mrs. B. I. Stout of Denton, Texas, has a real good herd of Holsteins and showed them at the Texas State Fair recently held at Dallas. Five of her animals won prizes competing with herds from Iowa, Nebraska, and Louisiana. Her herdsire, Duke Watson Fayne won fourth prize in the aged bull class. A junior yearling was third and three other members of the herd carried off ribbons.

NICE SHOWING

Ruhamah Clothilde Regis 2d, owned by Louis Sorenson of Neenah, Wis., recently completed a seven-day official test making 514.6 lb. milk, 31.29 lb. butter.

No man would like to be as mean as some people think he is.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 811)

Two animals in this sale were purchased for presentation to the Dairy at Penn State College. One of these was a daughter of BradCo Holingen Korndyke from a daughter of King Walker Champion. She was purchased by the Troy-Canton Bull Association. The other was Amleto Segis Alcartra, a granddaughter of King Pontiac Alcartra Wayne from Olive Amleto De Kol Yarland Miste 2d, a granddaughter of Changeling Butter Boy, over six hundred lb. butter, 14,196.2 lb. milk in ten months. She was purchased by the Northeastern Feed Dealers' Association from the consignment of R. H. Fleming of Alba, and they paid $245 for her.

Fifty-four animals in the sale brought $9,285, an average of $171.94. Fifty of these animals came from herds under state and Federal supervision, in fact, nearly all the animals were from full accredited herds.

Animals bringing $150 or more with names and addresses of their purchasers are:

	Consigned by Frank Ward, Troy, Pa.	
1	Cornucopia Pauline Blossom 2d, 6 yrs., H. C. Gates, Canton, Pa.	$300
	Consigned by Jas. O. Cowl, Troy, Pa.	
2	Anna Korndyke Tromp, 6 yrs., Mark Abbey, Columbia Cross Roads, Pa.	185
3	Rosamond Korndyke Pet, 2 yrs., Frank Ward, Troy, Pa.	290
	Consigned by C. A. Pratt, LeRaysville, Pa.

THE ALLEGANY-STEUBEN HOLSTEIN SALE

By E. M. Hastings

With an attendance of more than forty buyers representing four different states—Maryland, New Jersey, Pennsylvania and New York—and an average of almost $146 for 112 of the animals sold (comprising all but a few of the younger calves) the Allegany-Steuben Holstein Consignment Sale which was held at Hornell, N. Y., November 14th and 15th, seemed to be regarded by the consignors as a very satisfactory sale. Nevertheless, the uniformly high character of the entries would have warranted a considerably higher average, and the sale afforded many real bargains, especially in heifers and cows not immediately close to calving. The demand appeared to be only for milkers ready to pay immediate returns at the pail. In respect to individual quality of offerings this was the best sale yet held in the Allegany-Steuben district. As in the sale of a year ago, the quite exceptional bovine health record of Allegany and Steuben Counties was undoubtedly an important factor in attracting the attendance of outside buyers. Few localities can show an equal number of fully accredited herds and herds that have never known a reacting animal. The work of tuberculosis eradication is being diligently pushed and with continued effort along the line of the present marketing methods of the two-county organization, the time is sure to come when Allegany-Steuben breeders' will be able to realize better prices for their cattle than the less particular breeders of other localities. In this sale was exemplified the profit of growing animals to proper size—a lesson that breeders generally will do well to learn. Nothing can take the place of right feeding and care during the first two years. It is during this period only that the growth and development can be attained which the animal must have to qualify for maximum production and also to command the favorable consideration of the careful buyer.

Glenn R. Mead and Harry Scott served as auctioneers in their usually efficient manner, to the satisfaction of all concerned, with the writer in charge of the sale.

Three animals brought over $300, the top price being $450 which was paid by Glenn L. Warner of Cuba, New York, for Elnora King Pontiac Von Hengerveld, a nine-year-old consigned by C. S. & J. L. Zeliff of Hornell. As a senior four-year-old she made 34.89 lb. butter, 673.1 lb. milk in seven days. Her week-old bull calf went for $300 to C. W. Chittenden of Hornell. Ten animals brought between $200 and $300. The nine bulls, only one of which was a year-old averaged $114.45; 14 heifers, yearlings and under, averaged $110; 80 females, over a year old averaged $148.43.

THE LAKE AND WILLIAMS SALES

Northern Pennsylvania is being favored with a number of high-class Holstein sales. The dispersal of the Lake herds, takes place at Montrose, on Saturday, December 9th. The Williams Farm Dispersal sale is Monday, December 11th, at Lynn, just twelve miles from Montrose. The Lake herd has passed a clean federal test and the cattle are offered subject to a sixty-day retest. The Williams herd has been under federal supervision for more than a year and a 60- to 90-day retest privilege will be given. In the sale will be a number of fresh cows, granddaughters of Pontiac Korndyke from the herd of J. B. Quick of Meshoppen. This herd is also under federal supervision and the retest privilege goes with each animal sold.

R. Bruce Williams is known as an expert cattleman, a good care-taker. He has rented the farm and will have no place for his herd. Some time ago, he dispersed the high-grade herd he then had but could not stay out of the Hostein business and gradually gathered another herd on a foundation of extra quality cattle. The Williams herd is a dairy herd and at the present time, a number of the animals are milking 40 to 60 lb. a day on two milkings for as Mr. Williams says, "My cows are all heavy producers because a man must have good milk cattle at present milk prices to make a living."

There are no less than twenty heifers and thirty or more fresh cows ready to go right on and earn a profit for the man who buys them. They are bred to King Pontiac Alcartra Pietje Rival, a grandson of the well-known century sire, King Segis Pontiac Alcartra whose dam and sire's dam were both former World's champions.

Buyers from many of the Pennsylvania counties as well as from other states in search of cattle will find northern Pennsylvania a fruitful field in which to secure producing Holsteins.

Mr. Williams is desirous that people coming from a distance shall not be deprived of home comforts and is planning to serve dinner and has even advertised that buyers will be lodged free. It is very evident that he would not make these offers unless he believed that his cattle were good enough to bring prices that will justify the expense. Lynn is in Susquehanna County, Pa., and is on the Lehigh Valley Railroad, twelve miles from Montrose and ten miles from Tunkhannock.

SHEBOYGAN BREEDERS' SALE

The Sheboygan County Holstein Breeders' Sale was held November 16th at the Fair Grounds, Plymouth, Wis. The total for the ninety-nine head sold was $8,040, an average of $164.08 for everything. There were fifteen calves in the sale—deducting the prices received for these the average would be $199.24.

The heaviest buyer was an out-of-state man, E. C. Rogers of Putnam, Conn., who paid $3,280 for sixteen head; H. E. Bailey of River Falls, Wis. took ten head for $1,540.

The cattle were good dairy animals. There were no very high records although Elmside Parthenea Lill, the highest priced animal in the sale had a year record of 861.26 lb. butter and 22,600 lb. milk. H. E. Bailey paid $400 for her. She was consigned by Pinehurst Farms Co., of Sheboygan Falls. Mr. Rogers took Careme Segis Korndyke, a three-year-old granddaughter of Bairdland Segis Sir Prize for $350. She was consigned by R. C. Stolper, Random Lake, Wis.

C. F. Wehrwein was secretary of the sale; Everson was in the box and the auctioneers were Mack, Laux and De Munck.

Animals bringing $150 or more with names and addresses of their purchasers are:

	Consigned by P. J. Liebenstein, Adell, Wis.	
1	Lucy Johanna Mechthilde, 12 yrs., Louis Habeck, Random Lake, Wis.	$185

(Continued on page 814)

VIRGINIA CATTLE FOR SOUTH AFRICA

A large mining company working in Johannesburg, South Africa, has sent a request to the Virginia Holstein-Friesian Breeders' Club asking for prices and pedigrees on five highly bred Holstein females together with a good young bull.

This shipment of Virginia Holstein cattle are to form the foundation of a herd of American Holstein-Friesian cattle, which will be advertised and developed as a means of extending this breed in South Africa and Rhodesia.

At the present time the South African herds are descended from Holland and British Friesian stock. This exportation of Virginia Holstein-Friesian cattle is one of the first shipments of American bred Holstein-Friesians ever sent to South Africa. We believe that these cattle will successfully compete with the British Friesian stock as American stock has been known to make good in nearly every part of the world.

Virginia breeders are glad to have this opportunity to help extend the territory of American bred cattle.

A committee of breeders from the Virginia Holstein-Friesian Club with the assistance of F. A. Buchanan of the V. P. I. Dairy Extension Office will arrange for the selection and shipping of these cattle to South Africa.

FROM MASSACHUSETTS TO OREGON

Henry McCall of Prineville, Oregon, recently purchased from the Dutchland Farms the well-bred young bull, Dutchland Creamelle Sir Aaggie, a son of Dutchland Creamelle Korndyke Lad. In the veins of this young bull run some of the largest producing blood of the Holstein breed.

Get busy. It's a mighty good thing to be in too much of a hurry to stop and tell your troubles.

THE K. P. O. P. SALE

Hargrove & Arnold started something when they organized the first consignment sale ever restricted to offspring of any one sire and planned the first K. P. O. P. Sale, limited to descendants of their great bull King Pietertje Ormsby Piebe. The event took place November 22d at Des Moines, Iowa. There were offerings from nine accredited herds and five herds that are under Federal Supervision. The animals were sold subject to retest within a period of sixty to ninety days and every animal was guaranteed a breeder.

The offspring of King Pietertje Ormsby Piebe have won so many honors in great show rings and have been exhibited at the leading fairs of the country until the name of this great bull is a synonym for type and individuality. As was to be expected the animals were very uniform in type; in fact, breeders and newspaper men present declare that this was the most uniform lot of animals ever exhibited at a Holstein Sale.

Two-thirds of the animals consigned were yearlings or younger and only three animals in this sale had ever freshened. The average of $304.33 for the forty-five animals consigned is certainly very satisfactory. The total was $13,705. Haeger and Mack did the selling.

The top price was $1,000 paid for Martha Ormsby Piebe, a daughter of K. P. O. P. from Kirby Martha Girl, 830.85 lb. butter in a year as a junior two-year-old. Her dam was a 32-lb. four-year-old with 978.59 lb. butter in a year. She was consigned by Hargrove & Arnold and was purchased by F. H. Johnson of Sioux Falls, S. D., whose bidding contributed materially to the success of the sale. Mr. Johnson paid $780 for Lady Mutual Ormsby Piebe, a daughter of the great 34-lb. cow, Lady Mutual Friend 2d. He also gave $700 for Triune Ormsby Rose, a yearling daughter of Triune Ormsby Piebe from a daughter of K. P. O. P. E. G. Wylam & Son, Plainfield, Iowa, gave $750 for King Pietertje Ormsby Piebe Tidy 3d, a fine young show bull whose dam, Byrd Aaggie, a short time ago closed a record of 1,076.94 lb. butter in a year as an eleven-year-old cow. This bull was consigned by LeGrand Gleim of Arlington, Iowa.

Animals bringing $200 or more with names and addresses of their purchasers are:

Consigned by Fred W. Dann, Woodward, Iowa.

1	Princess Ormsby Fobes, 1 yr., State Hospital, Woodward, Iowa	$240

44	Opal Hengerveld Piebe, 7 mo., State Hospital, Independence	300

Consigned by Clarinda State Hospital, Clarinda, Iowa.

45	Clarinda Celia Fayne Ormsby, 1 yr., State Hospital, Oakdale, Iowa	240

COWS AND NOSE PRINTS

Experiments are still being conducted upon identifying animals by the means of nose prints. Several hundred cows have been "nose printed," at the University of Minnesota. The Holstein herd at the Soldiers' Home, Washington, D. C., has been "nose printed" by Fred Sandberg, who is connected with the Detective Department in the Capitol city. Mr. Sandberg used a tube of finger-print ink, a plate of glass, some paper and a piece of cloth. He first spread the ink over the glass, then dried the cow's wet muzzle with a cloth and the inked glass quickly rubbed over the muzzle than a sheet of paper was quickly pressed against the inked nose. The operation requires patience and speed as the animal is quite apt to lick off the ink unless the print is taken promptly. The experiments indicate that the new method is destined to be of value in identifying animals of the solid colored breeds. No two animals' markings have been found to agree in every particular.

GOOD STOCK AT READING HOME

The Reading County Home has, for some time past, been gradually picking up good Holsteins, taking some from the herd of Abner Deysher. The Home had an exhibit at the recent Berks County Fair, held at Reading, Penna., and one of their animals was the grand champion cow, she winning her honors over a long list of competitors. The County Home herd bull headed the two-year-old class and a two-year-old heifer took a first prize. First prize for best six mule team and for best pair of mules also went to the Home.

"Do you believe men are descended from animals way back?"

"Not so sure about that, but lots of us seem to have a dog's life here, all right."

SEGIS HENGERVELD FAYNE JOHANNA

Mr. J. M. Hunter the capable superintendent of the Gobel Farms, Annandale, N. J., gives us a few more particulars regarding the great year record of Segis Hengerveld Fayne Johanna who a short time ago closed a year record of 20,216.1 lb. milk and 1,129.38 lb. butter in a year. She is one of the four daughters of Segis Fayne Johanna that have each made 1,000 lb. or more butter in a year. We are quoting from Mr. Hunter's letter.

"During the time Segis Hengerveld Fayne Johanna was on record she was twice tested for tuberculosis, was shipped from Buffalo to Annandale and had four different herdsmen caring for her. She is now safely in calf to our herdsire King Gerben Colantha Prilly 347682.

We have two of her granddaughters through The Mighty Monarch and out of the cow Segis Fayne Rag Apple, a half sister to the Hengerveld cow. These heifers are now safe in calf to this same bull. The offspring from this cross will have their three nearest dams with an average of better than 1,086 lb. butter.

The cow herself is a wonderful individual as you will see by her picture."

J. M. HUNTER.

MILK-PRODUCTION COSTS IN DELAWARE

The latest addition to exact information on the cost of milk production collected by the United States Department of Agriculture is contained in Department Bulletin 1101, Unit Requirements for Producing Market Milk in Delaware, by J. B. Bain and Ralph P. Hotis. This is the seventh of a series of milk-cost studies that began in 1915 and that includes, in addition to the area in Delaware, market-milk sections in North Carolina, Indiana, Vermont, Washington, Louisiana, and Nebraska. The Delaware project was begun in 1919 and extended over two years. The milk was sold in Philadelphia and Wilmington and the farms were subject to the sanitary-inspection methods of those cities.

The information collected has been so arranged that the various costs can be studied in detail month by month, and winter costs can be compared with summer costs. During the winter months the requirements for produciong 100 lb. of milk having an average butterfat test of 3.6 per cent were: Concentrates, 53.7 lb.; hauling and grinding concentrated, $0.01; dry roughage, 114.2 lb.; silage and other succulent roughage, 91 lb.; bedding, 17.9 lb.; pasture $0.06; human labor, 2.6 hours; horse labor, 0.5 hours; total other costs except depreciation on cows, $0.79; depreciation on cows, $0.24.

The average production per cow per year was 5,439 lb. of milk, and the requirements for keeping a cow one year were: Concentrates, 1,885 lb.; hauling and grinding concentrates, $0.34; dry roughage, 3,289 lb.; silage and other succulent roughage, 2,760 lb.; bedding, 578 lb.; pasture, $14.68; human labor, 140.1 hours; horse labor, 23.8 hours; total other costs, except depreciation on cows, $42.43; depreciation on cows, $12.59. There was a credit per year of 0.91 of one calf for each cow. The credit for manure per cow amounted to 5,376 lb. It was estimated that a ton of this manure contained 10.3 lb. nitrogen, 3.8 lb. phosphoric acid, and 8.4 lb. of potash.

The figures show that the income and volume of milk sold, follow each other closely, but the income and gross feed cost varied considerably. Copies of the bulletin may be obtained by writing to the Department of Agriculture, Washington, D. C.

Sons and Daughters
OF
Plum Spring Farm Copia

inherit producing blood of the highest order. His dam made 32.73 lb. butter, 685.5 lb. milk in seven-day official test and the seven-day records of his four nearest dams (each above 30 lb.) average 35.31 lb. butter and 628.75 lb. milk.

Good Cattle at Reasonable Prices

A. W. DOWNTON
Starrucca, Penna.

INTERESTING THE YOUNGSTERS

The many stories now being carried by the country weeklies throught the country telling of calf club shows and exhibits by boys and girls at local and county fairs show that the younger generation is becoming interested in livestock through competition and emulation. If this interest is kept up future fairs will have to build showing pavilions and, instead of advertising the capacity of their grandstands to view horseracing, will tell how many their cattle pavilion will seat and of the many competitions staged among the livestock owners.

SHE TOLD IT ALL

It was the first day of school and the teacher was taking the names of the children, and the name and business of the father of each one. Little Lucy gave her name and that of her father but was silent when it came to his business. Urged by the teacher, she blushingly said: "He is the Aunt Jane that writes the Woman's page and the Beauty column of the Daily News."

Few of us think we are getting what we deserve. Some of us ought to be glad of it.

HUMPHREY ON THE ARGENTINE

G. C. Humphrey, head of the animal husbandry department of the Wisconsin State College of Agriculture returned a short time ago, from Argentina where he judged stock at the Argentine National Livestock Exposition. Until recently beef cattle were given practically all the attention until, due to post-war conditions, the price became very low. Professor Humphrey reports that Argentina conditions are much the same as are found in the southern part of the United States.

The prevailing type of cattle is grade Shorthorns. Despite this fact, Argentina exports dairy products equivalent to 150,000,000 lb. milk, due to the comparatively small population, there being about nine millions of people on an area of 1,135,119 square miles or approximately 37.5% of the area of the United States.

At the recent exposition held at Buenos Ayres there were exhibited herds of Holsteins, Normandy, Flemish, Freburg, Jerseys, and Brown Swiss cattle.

DAIRY PRODUCTS CAMPAIGN

Organization work for the Dairy Products Educational Campaign is well under way at Sheboygan, Wis., and the movement is backed by the various farm and civic organizations of the country. There will be seven milk specialists from the Wisconsin College of Agriculture who will speak during Dairy Products Week in Sheboygan which will be held October 29th to November 4th.

Essays are to be written by school children in competition for various prizes. Dairy programs are to be given in all schools, dairy food information will be broadcasted to the public and many other forms to bring home to the people the value of milk as a food will be adopted. It is planned to materially increase the consumption of dairy products in Sheboygan County.

DAIRYING DOUBLES BANK DEPOSITS

The Farmers' and Merchants' State Bank of Yankton is one of the South Dakota Banks that believes that its farmer-patrons should have more dairy cows and that the time is past when farmers of this territory can profitably sell their grain.

The cashier of this institution is Col. Fred B. Ray and the officers are either farmers or men with intimate knowledge of farm problems. The Farmers' and Merchants' State Bank has adopted a policy of importing from the best dairy districts high-grade milk cows and is selling them to farmers on 18 months' time, as near cost as is practicable. They are not interested in merely loaning money to one farmer to buy his neighbor's cow. Their idea is to get more dairy cows into Yankton County than they now have. In practically every instance, the cows have been sold in groups of from five to seven head, the idea being that this will form a nucleus around which to build a herd or if a man is already milking several cows, it will give him a sufficient number to make the dairy a principal source of revenue.

They realize that in most cases where a man is only milking a few cows, they are neglected to a certain extent and the income derived from them, is not sufficient to be noticeable. They are endeavoring to get as many of these groups in one community as possible, with the idea in mind, that the near future will see the dairy industry predominating in such communities.

Obtaining a satisfactory market for the farmers' produce is a factor vital to the farmers, in the opinion of Mr. Ray. With a satisfactory market, land values will be stabilized. He figures it out about like this: In Yankton County, alfalfa grows readily and will produce about four tons per acre. Extensive experiments have demonstrated that with butterfat at 30 cents per lb., a reasonably good dairy cow will convert alfalfa hay into dairy products making the hay worth $12 per ton. With butterfat worth 40 cents per lb., the alfalfa hay will be worth more than $15 per ton. With land that will produce an almost certain income of from $48 to $60 per acre when alfalfa is grown upon it and fed to dairy cows, land that is now difficult to sell at $150 per acre will be readily bought at double this amount, once these facts are demonstrated beyond question.

Several carloads of cows have been imported and distributed and the bankers plan to continue, as the demand warrants it. That such a policy is not only beneficial to the farmers but that it is appreciated by them is shown by the almost phenomenal growth of this bank during the past two years. On December 29, 1920, deposits were $381,489.93, one year later, they were $628,878.84, at this time, about 10 months later, they are approximately $800,000. Promotion of the dairy industry is not only good for the community but is good sound business from the banking standpoint.

J. M. BRANDEN, *County Agent.*

VITAMINES AS HAIR TONIC

I hear that milk and garden greens have snappy things called vitamines that give us health and strength and pep and put the ginger in our step. But what is this I also hear from folks who ought to know, that vitamines will help to make our hair and whiskers grow? I find my Jove-like dome of thought of shade not quite bereft; I'll use this happy hunch and keep what herbage I have left. The razor makes a daily trip along my chin and jowls and lip, so by my wife it is not feared that I will ever raise a beard or whiskers a la Bolshevik; but Oh, I want my hair to stick. Upon my brainpan flies would crawl if I should sport no hair at all, and those that lit upon my head would have to wear a non-skid tread. They'd slip and slither on my scalp like mountain climbers on an Alp. To ward them off my hair I'll keep though I chew lettuce in my sleep. To nourish bristles on my brow I'll buy myself a mooley cow. If milk and vegetables clinch the thatch upon our beans, so help me Pete, but I will eat a lot of spinach greens.—*Robert Adams in The Cornell Countryman.*

IOWA LOCAL LEADER

One of the leading dairymen of Cincinnati, Iowa, is named E. J. Beard and he is a breeder of purebred Holsteins who is a shining light in his own community. He farms 116 acres of valuable land, 96 acres of which is in the city limits. At present he has 31 female Holsteins and his tuberculin tested herd is headed by Sir Ormsby Skylark Copia, a son of Sir Ormsby Skylark and therefore brother to Duchess Ormsby Skylark the former world champion for year butter production.

Mr. Beard, who has been breeding purebred Holsteins for ten years, is manager of the Cincinnati Shipping Association and a leader in the farm bureau movement. He has a fine herd of purebred Hampshire hogs and a large flock of White Leghorns.

LUNCH IN THE COW BARN

Prof. F. F. Showers of the Carleton Farm, Chowchilla, California, entertained some 300 members, guests and friends of the Madera County Farm Bureau at a luncheon in the Carleton cow barn. The farm belongs to the Carleton College of Minnesota and consists of around 800 acres. Guests included many of the leaders of the community as well as Prof. Moffit, teacher of Agriculture at the Madera high school, who was present with 22 boys of his animal husbandry class.

NO?

"Pop, I got in trouble at school to-day and it's all your fault."

"How's that, my son?"

"Well, you remember when I asked you how much a million dollars was?"

"Yes, I remember."

"Well, teacher asked me to-day, and 'helluva lot' isn't the right answer."

FROM A BAKERY TO LIVESTOCK BREEDING

Fifteen years ago, the Wielands were Chicago bakers; to-day they own a prosperous farm located six miles west of Beloit, Wisconsin, and own a good herd numbering around 40 head. They started with grade Holsteins but gradually introduced purebreds until now they have one of the best herds in Rock County. Henry Wielands, who has charge of the stock does not attempt to make maximum short time records, believing it is the total production throughout the year that counts. The Wielands herd is tuberculin tested.

Besides purebred Holsteins the Wielands farm has sixty head of registered Duroc-Jersey hogs headed by Valley Giant, a boar weighing around 675 lb. He has twice won the grand championship of Rock County and was second in the junior yearling class at the last Wisconsin State Fair.

GETTING ACQUAINTED

To acquaint patrons of the Pevely Dairy Company of Effingham, Illinois, with the workings of a big distributing plant, Superintendent A. Wisnasky took a delegation to St. Louis where they went over the big plant of the company and then inspected the fine Holstein farm on the bank of the Merrimac River. Other trips of this kind will be made until all the patrons have had an opportunity to look over the farm and city establishments.

Justice of the Peace—"Will you love, honor and obey?"

Lady—"Yes."

Justice of the Peace—"He's yours. Five Dollars. And if you need my services again, I make a special discount to old customers."

The people who are looking for trouble need no signposts.

165 HEAD of Purebred Improved Chester Whites, priced low, and shipped on approval. Remember this is one of the best big type herds in the East.

C. E. CASSEL, HERSHEY, PA.

The young man was telling his sweetheart how he had been attracted to her.

"You were a lovely flower and I was a bee," he explained to her. "I was a mouse and you were a piece of cheese."

And then he wondered why she rose and left the room.

UNIVERSAL EDUCATION

Speaking at the celebration of the fiftieth anniversary of the Virginia Polytechnic Institute, the noted educator, Dr. Edwin A. Alderman, said:

"There is but one great question in this world—How to make men and women better and fitter for life in a democracy, and there is but one answer: Education. Education is the supreme essential of democracy, while democracy is the supreme opportunity of education. If such, then, be the nature of modern democracy, it is very clear that the one thing it cannot do without is the school, and the one thing the school, high or low, cannot do without is a clear notion of how it can train all men not only to perform the duties of free citizenship, but can give all men an opportunity to obtain a fair share of the fulness of life. What the wisest parent desires for his child, that the whole community now plans to give all of the children. This is the most revolutionary and creative idea to which the modern world has given birth."

HAD IT DOWN PAT

Mose: "Des wimmen folks hasn't a bit of sense!"

Pete: "Well, my wife knows three things absolutely perfectly."

Mose: "An what am dat?"

Pete: "Well, she knows, 'Hab you got any money,' 'Gimme' and 'hab you got any mo?'"

BREED CHAMPION HAS GOOD DAUGHTER

The good cow, Adirondac Wietske Dairy Maid, the only cow of the breed which has produced over 1,000 lb. butterfat two different years is evidently transmitting her great producing qualities to her daughters one of which Abbekerk Adirondac Dairy Maid recently completed a 365-day record of 847.87 lb. butter from 21,163.8 lb. milk. This is a great heifer and is very persistent as her twelfth month on test was her best, while she carried calf 206 days of the year. She was two-years, nine-month's-old when she started her test and like her dam, is owned by the Bridgeford Holstein Company of Patterson, Cal. It will be remembered that Abner S. Deysher of the Berks Farm, Reading, Pa., purchased a younger sister of this heifer at the Brentwood Sale.

ANTICIPATED

Pat had been hurt. It wasn't much more than a scratch, but his employer, with visions of being obliged to keep him for the rest of his life, sent him to a hospital for examination. The house surgeon looked him over and then pronounced:

"As subcutaneous abrasion is not observable, I do not think there is any real reason to apprehend tegumental cicatrization of the wound."

"Ah," said Pat in relief, "ye took the very words out of me mouth."

of Two Bull Calves--the Large, Strong Kind

Sired by KING SYLVIA JOHANNA PONTIAC (brother to Carnation King Sylvia) whose dam, Otego Valley Christmas Belle, made 40.56 lb. butter in a week averaging 93 lb. milk a day. She is dam of three daughters, one a 25.95 lb. three-year-old, one a 14.47 lb. yearling while the third made better than 31 lb. butter in seven days two consecutive years, each time producing 100 lb. milk in a day and has a 1,000 lb. year butter record.

THE DAM of No. 1 made above 20 lb. of butter in 7 days in heifer form.

This fellow's two nearest dams average better than 30 lb. butter in seven day official work.

THE DAM of No. 2 is a first calf heifer, daughter of our PIETJE PRIDE HOMESTEAD with over TWENTY THOUSAND POUNDS MILK and EIGHT HUNDRED POUNDS BUTTER in a year in the Merryall barns.

Ask anything and everything you want to know about these calves. Come and see them, their dams and their sires. REMEMBER, we guarantee satisfaction.

Berks Farm *Herd Under Federal Supervision* Reading, Pa.

ASK FOR POTASH

The present conditions in the business of the farmer and in the fertilizer industry call for serious thought. Both are going through a readjustment period, with its hardships and doubts.

The farmer may well ask whether he is using the most profitable fertilizer. The fertilizer salesman may well inquire whether he is selling the kind that will do the farmer the most good, and lead to larger sales in the future.

During the war America could not get Potash, and the use of acid phosphate increased. Central Europe could not get phosphates, and the use of Potash Salts increased. Today plenty of Potash can be had at less than pre-war prices. Now is the right time to restore the balance by using more Potash in the fertilizer formulas than the average amount used before, 5 to 10 per cent.

Crops take from the soil very much more Potash than phosphoric acid. On any soil where Potash has been profitable it is not unreasonable now to use at least as much Potash as phosphoric acid. Ask the fertilizer agent for prices on this kind of goods, and rebuild your soil while Potash is cheap.

Recently it has been shown that a lack of available magnesia causes serious injury to important crops on some soils. German Kainit and Manure Salts furnish this soluble magnesia without extra cost.

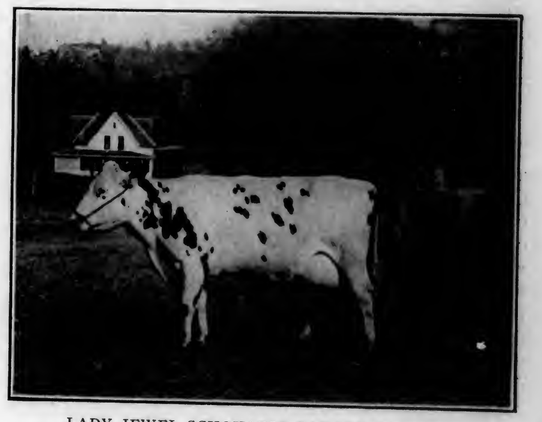
VOL. I HARRISBURG, PA.. DECEMBER 22, 1922 No. 24

NINE OF A KIND

The Story of One Test on Nine Half-Sisters in a Wisconsin Herd

IF you were a dairyman and were dependent for a living upon the milk and butterfat produced by your cattle, and had, in sixteen years, built up a herd of fifty head of purebred Holsteins every animal of which was born in your own barn with the exception of one of the two animals upon which you founded your herd, you would have reason to be proud of your accomplishment especially if your herd was of such calibre that it was leading your local cow testing association for average milk and butterfat production. Then, if you decided to test a bunch of your cows that freshened about the same time and had one of them break a state record for milk production, particularly so if you lived in the greatest dairy state of the Union you would have reason to be doubly proud. Then, if you had nine cows all daughters of one bull freshen at the same time, every cow of your own breeding for two or three generations and had the nine make the remarkable average of over 600 lb. milk and nearly 26 lb. butter in seven-day official work, wouldn't you feel that you had a herd of cows as good as could be found in any establishment in the country no matter how much had been spent on the development of the animals? Our story is about a small breeding establishment whose owners have done all this.



LADY JEWEL DE KOL COLANTHA, No. 360979
830.5 lb. milk, 32.56 lb. butter in seven days, 3,435.3 lb. milk, 126.45 lb. butter in thirty days. 127.4 lb. milk in a day; 870.3 lb. milk in a week.

Some time in 1906, more than sixteen years ago, J. W. Lawton & Sons, of Viola, Wis., purchased two heifer cows from John B. Irwin, the well-known Holstein breeder of Minneapolis, Minn. These two calves were Lady Jewel Canary, No. 89617 and Inka Easle De Kol, No. 88544, Lady being a daughter of Canary Mercedes Paul and Beauty Jewel Virgo while Inka was by Bermidji Chief from Wartena Inka De Kol. One of the original animals is still on the Maple Park Stock Farm which is the name of the Lawton establishment, and every female in the herd of approximately fifty head has been bred and raised on the farm and is a descendant of the original couple.

The Lawtons have been using purebred bulls for nearly thirty years so it is easy to see that they are progressive dairymen. Their first sire, after they started their purebred herd was Netherland De Kol Magnet No. 37533, a son of Sir Netherland De Kol De Freule. The Magnet bull has only one A. R. O. daughter, Lady Jewel Canary 2d, who was tested as a nine-year-old and made an official record of 17.62 lb. butter, averaging 73.9 lb. milk in a day. We shall have occasion to speak of her later.

The second herdsire was Skylark Ormsby Johanna Rue No. 84773, a son of Sir Skylark Johanna Ormsby who was sired by a son of Sir Ormsby Hengerveld De Kol. Skylark Ormsby Johanna Rue has a half a dozen tested daughters, all of which are descendants of the two heifers purchased by the Lawtons from Mr. Irwin.

LADY JEWEL SCHOHARIE CANARY, No. 456045
685.7 lb. milk, 27.96 lb. butter in seven days; 2,822.8 lb. milk, 112.47 lb. butter in thirty days. 101.1 lb. milk in a day as a senior four-year-old.

The Lawtons were good judges of dairy cattle. Heading a grade herd in Vernon County, Wisconsin, they found, as the saying goes, "in the brush" a handsome bull, Schoharie Sir Colantha De Kol No. 101300. The Lawtons admired his individuality and learning

that he was for sale, looked up his pedigree and found he was sired by King Pontiac Pleione, a son of King of the Pontiacs and the famous producer and show cow Pontiac Pleione, a daughter of Hengerveld De Kol with records of 645.1 lb. milk, 26.10 lb. butter in seven days, 24,820.2 lb. milk, 925.56 lb. butter in 346 days. Although "Schoharie" as they call him, was from a cow that was not tested, she was of New York State lines of breeding noted for production, being a grand-

SKYLARK ORMSBY JEWEL 2d, No. 360981
610 lb. milk, 24.81 lb. butter in seven days.

daughter of the good old-time sire Bright Alban De Kol. The daughters of King of the Pontiacs had made and were making remarkable records in short-time and long-time tests; the daughters of King Pontiac Pleione were making good, so Schoharie Sir Colantha De Kol, who was a grandson of King of the Pontiacs and a great-grandson of Hengerveld De Kol became the head of the Lawton herd. The performances of his daughters in a test commencing October 1st of this year is responsible for this story.

The Lawtons made their first test on three cows in October, 1919. In July, 1920, they tested six animals. The third test began on October 1, 1922, with nine animals all of which were daughters of Schoharie Sir Colantha De Kol. None of the animals were given any particular preliminary fitting and some of them were quite thin in flesh but their owners say that everyone who watched them agreed that not a single one lost in weight during the time they were on test, and that the four-year-old which made nearly 28 lb. butter in seven days was so poor that "she couldn't have lost much" although she gave 101 lb. milk in a day the forty-fifth day after she freshened. The records of these nine sisters are as follows:

Name	*Seven days*		*Thirty days*	
	Milk	*Butter*	*Milk*	*Butter*
Lady Jewel De Kol Colantha	830.5	32.56	3,435.3	126.45
Lady Colantha Canary	644.1	29.75	2,591.7	114.35
Lady Jewel Schoharie Canary	685.7	27.96	2,822.8	112.47
Inka Easle De Kol 4th	535.1	26.31	2,188.9	105.16
Canary Ormsby Johanna Rue 2d	594.5	23.71	.....	.....
Skylark Ormsby Jewel 2d	610.0	24.81	.....	.....
Jewel Canary De Kol	575.9	23.67	.....	.....
Lady Schoharie Jewel Canary	526.6	23.34	.....	.....
Colantha Johanna Ormsby Rue	493.4	21.18	.....	.....

This is certainly a remarkable showing to make on nine half sisters in the same test—not a record below 21 lb. butter and every one above 80 lb. milk in a day. Five exceeded 90 lb. and two made over 100 lb., the nine head averaging 610.6 lb. milk, 25.92 lb. butter. Six of these cows are between five and six years old; Canary Ormsby Johanna Rue 2d is just over six years of age while Lady Jewel Schoharie Canary, who produced 101.1 lb. milk in a day forty-five days after calving, and Lady Schoharie Jewel Canary are senior four-year-olds. Lady Jewel De Kol Colantha, the 32-lb. cow and Lady Schoharie Jewel Canary are full sisters born just one year and one day apart.

Lady Jewel De Col Colantha is a cow of excellent type and exceptional capacity. Mr. A. R. Lawton had never cared for a cow milking as heavy as she did and she was not crowded to her limit. She was the kind that a practical test feeder would like to handle as she was always hungry and licked her box "as clean as though it were washed." The test started with this cow being kept in a steel stanchion until she cracked a rib on a partition, then she was kept in a box stall. She went out for exercise every day the weather was at all pleasant. Lady has only been dry about two months since she dropped her first calf. She was on pasture and received grain twice daily for nearly two weeks after freshening. She had no roots or beet pulp, her only succulent feed in the barn was silage which for the first two weeks was of poor quality but after that was good. Besides her grain she received one lb. of Molasses daily with alfalfa hay for roughage but did not eat much of the hay until she had been ten days out of pasture. Lady had a tremendous appetite for grain and silage and took forty-four lb. grain and sixty lb. silage in 24 hours during the period she was making her maximum production. Her best day was 127.4 lb. milk and her best day's fat production was 4.032 lb. or 5.04 lb. butter. Her best seven-day's milk was 870.3 lb. which is believed to be the state record for Wisconsin. At the start of her test she was milking from 89 to 92 lb. a day and at the close of her thirty days test

EDENVALE ROY PIETERTJE, No. 245651
Herdsire at Maple Park Stock Farm, Viola, Wis. J. W. Lawton & Sons, Proprietors.

she was producing over 120 lb. milk daily. If she had been run at least ten days more, she would have increased her 30-day milk record to around 3,600 lb. The Lawton herd is enrolled in the local cow testing association and Lady made over 100 lb. fat and 3,516 lb. milk in the calendar month, which of course does not coincide with the 30 days she was in strict official test.

The Lawtons had twelve cows in milk at this time. One freshened last April, one recently freshened and is

only credited with thirteen day's production while another had only twenty-four day's production on the books. The twelve animals averaged 67.8 lb. butterfat and 2,020 lb. milk which is claimed to be a world record for a herd of this size in cow testing association work. Mr. A. R. Lawton does not have the best of health and so was handicapped while taking care of the test cows; this is the reason that the official work was dropped as soon as possible but the present plans are to fit the state champion better next year and let her do her best as her owner believes she has the capacity to equal and possibly surpass the remarkable production of the present champion May Echo Sylvia.

Eight of the nine half-sisters just tested are descendants of Lady Jewel Canary, the exception being Inka Easle De Kol 4th, who is a daughter of one of the original two foundation animals. Lady Jewel Canary has no daughters in the list but has five granddaughters and three great-granddaughters. The 32-lb. cow and her full sister are daughters of Lady Jewel Canary 2d, who in turn is the only tested daughter of Lady Jewel Canary, who must have been real good foundation stock to build a herd upon, otherwise her eight descendants just tested would not trace to her through four different daughters.

The Lawtons are milking thirteen cows at present, have six more to freshen soon while eight two-year-olds are due to calve in the spring, so that their milking dairy will number twenty-seven head. They have eight young heifer calves, nine heifers around a year old, and three bull calves—a healthy young herd. The cows average around 1,400 lb. in weight, the Lawtons think that this is the ideal size if the type is correct, cows of this size being able to handle themselves best for economic feeding and grazing on the hillsides. Cows weighing a ton or more do not climb around the side hills enough to gather the food they require in summer nor do they handle themselves as well in the stanchions as do smaller animals.

There are four more daughters of "Schoharie" in the Maple Park herd. The owners believe that they are just as good as their sisters recently tested and expect that two of them will make especially large records at maturity. As might be expected from a herd so closely related the type is very uniform. Regarding their individuality the following quotation from one of Ray Lawton's letters speaks volumes: "Our herd has been pronounced by some of the best Holstein judges in Wisconsin as being the straightest, most uniform in type with the best set of udders of any herd of its size in the state. We haven't a sloper in our barn, all have nice shaped udders, with well-placed teats, and are easy milkers."

All the daughters of the Schoharie bull have not been retained. At least one of them is owned by a brother of "A. R." and she, in cow testing work in a Minnesota herd produced nearly 600 lb. fat in a year as a four-year-old, milked twice a day and given ordinary farm feeding and care by a renter.

The present herdsire at Maple Park Stock Farm is Edenvale Roy Pietertje, a son of Sir Pietertje Ormsby Mercedes 41st from a daughter of Katie Mullen Pietertje, who as a ten-year-old made over 27 lb. butter in seven days from 539.3 lb. milk and has a year record made as an eight-year-old of practically 20,000 lb. milk and 739.75 lb. butter. Edenvale Roy Pietertje is a show bull as might be expected from his lines of breeding and his daughters in the herd now yearlings and calves have remarkable udder development for their age.

The story of the Maple Park Herd development is one that can be duplicated by many other herds when the owners start with good stock, use good bulls and develop the herd with the twin ideals of profitable production and correct type and individuality. There are many herds not yet tested that would, if given an opportunity, make nearly as good a showing as do the daughters of Schoharie Sir Colantha De Kol. It is not necessary to confine the choice of a herdsire to sons of high-record cows if the lines of breeding shown in the pedigree are already noted for production; if the dam is a producer of the true Holstein type and the animal himself possesses individuality of a high order, a breeder can feel sure that the offspring will inherit these desirable characteristics. There are many bulls which have been vealed because their dam had no record, when had they headed herds and displaced grade or scrub bulls their lives would have conferred a benefit on the dairy industry and added to the nation's wealth.

Livestock in South America

NORTH American breeders and exporters of pure-bred livestock will find much of interest to them in The Livestock Industry in South America, recently issued by the United States Department of Agriculture as Department circular 228. The information contained in the circular was obtained first-hand by L. B. Burk and E. Z. Russell, representatives of the department who spent several months during 1920 investigating livestock conditions in Argentina, Uruguay, Brazil, and Chile. A separate report is made on conditions in each of these four countries, attention being given to beef cattle, hogs, sheep, horses, and dairying.

Argentina is one of the leading grain, cattle and sheep countries of the world and the growing of high-class livestock has been developed more in this republic than in any other South American country. The mild climate, long-growing season, with the abundance of corn and alfalfa furnish good conditions for stock production but dairying has been held back because of the sparse population and because a large proportion of the cows milked are of the beef type. The industry is growing and is proving a profitable business and as the population increases there will undoubtedly come a larger demand for dairy products. In the sections near the cities the dairy industry already shows considerable development and butter and cheese has been exported. The preferred breed is the Holstein-Friesian. The stock industry is hindered by the existence of foot and mouth disease, of which there is

usually a yearly epidemic. Otherwise there are few diseases and pests which trouble cattle in the central and southern sections.

The republic of Uruguay is not much larger than the State of Missouri. The climate is mild with no snow in winter and without excessive heat in summer. It has excellent grazing lands but is handicapped as the soil is closely underlaid with rock and often there is a lack of rainfall. A few Holstein-Friesians have been imported from the United States and from Holland but there has not been much development in the dairy business. It is the custom to milk only once a day. The calves are separated from their mothers in the evening. In the morning a part of the milk is taken from the cow after which the calf is returned to its mother and allowed to remain the rest of the day. Foot and mouth disease is the great menace of Uruguayan livestock industry.

The general system of selling breeding animals in this country is by public auction held at sale barns which are located in the cities or at the big fairs and exhibitions. Most of these sales are held in August and September and are attended by ranch men and farmers from long distances. The auctioneer instead of crying the bid he wants calls the bid he has. He sells on a commission basis and the commission is paid by the purchaser. Uruguay livestock breeders are alert and eager to improve their herds.

Brazil is about the size of the United States but there are very few herds of purebred livestock. Transportation facilities are poor in most of the country and on most of the railroads there are only two or three trains a week. Natural grasses are abundant and furnish good cattle grazing. Grains are grown only in a limited way as much of the country is not yet cleared of stumps. Holstein cattle appear to give the most satisfaction of any dairy breed. The cattle industry has to contend with foot and mouth disease, warbles and the cattle tick. The Brazilian Department of Agriculture has found a method of immunizing cattle under two years of age against Texas fever. Dairying is largely confined to two states; butter and cheese are manufactured there in large quantities. There are few up-to-date barns, the cows seldom receive any especial care and few records are kept of production. Cows are handled much the same as they are in Argentina, milked only once a day. The tick and Texas fever handicaps the cattle business and Zebu stock is found in many herds for its resistance to this trouble.

The livestock business in Chile is not as extensive but there is a demand for the Holstein breed in the southern half of the country and several good herds are found around Santiago with silos and up-to-date equipment of all kinds. Shorthorn blood predominates in many herds.

The unfavorable rate of exchange has discriminated against importations from the United States but in due time this condition will be remedied. The Brazilians are very favorably disposed toward trading with the United States and as the possibilities for dairy development are so great in that country, it is expected that Brazil may in due time become one of our best customers for purebred livestock.

Mineral Madness

By George Leslie

NECESSITY is popularly admitted to be the "mother of invention" and we do not recall just who it was that first recognized the relationship; but we feel entitled to the Christopher Columbus medal for discovering that a fad is the father of fakes—and large families of them at that. The late A. A. Cortelyou, much respected as a man and a Holstein breeder, certainly started something when he expressed his thoughts on what he termed "vitality" in the milk of his favorite breed. His idea was sound. He believed there was some quality in Holstein milk that made it better than the milk of other breeds for babies and invalids, which quality, called by him for want of a more definitely descriptive term "vitality," we have come to understand as easier digestibility on account of the small fat globules.

There can be no doubt that the vitality campaign was productive of a great boom in Holstein milk, perfectly legitimate and based on solid facts. Also, there was what our British cousins call a "regular dust-up" with the other breeds, who promptly set to work to offset such claims to superiority by whatever means commended themselves.

Now, whether the fairly new "vitamine" craze is a sort of offshoot of the search for the elusive "vitality" in milk we are not sure; but they bear a sort of family resemblance to each other. The best milk for babies and sick people is the milk which had the first claim on vitality; and the best foods, so we are told, via the three-color page advertisements, are those which have in them these vitally necessary vitamines. If you are afraid your regular meals are shy on vitamines, you can get them, so we hear, wrapped up in a shiny tinfoil package with a label which matches in color your mental condition. Once a cake of yeast meant a batch of mother's good bread, fresh from the kitchen stove; but now it appears to mean all the difference between a joyful life and a wreath of flowers on the knob of the front door.

In the cattle breeders' world we have a parallel in the mineral craze. Our individual opinion is that this got its initial impetus through investigation into the causes for abortion, and we think we know who first had the bright idea that a shortage of ash or mineral matter in the cow's feed might be a contributing cause. At any rate the need for sufficient mineral matter in the dairy ration has been admitted, and, like the vitality fad and the vitamine fad, the mineral matter fad has fathered a number of schemes to separate from his money the farmer who breeds dairy cattle. What is offered in return may be, and in some instances is, mineral in its composition; but it sometimes is both unnecessarily expensive and expensively needless. This is plainly to be seen when we consider that, aside from salt, the two things that we must be sure to have enough of in our cattle feed are simply lime and phosphorus, and in steam bone meal, hardwood ashes, ground limestone and rock phosphate we get these very much cheaper than in expensively advertised commercial mixtures of minerals.

Undoubtedly the exhaustion of some of our soils and the feeding of our cows for the last ounce of milk and fat they can be induced to make in the race for "world's records" are responsible for the recognized need for mineral matter in addition to that which would naturally be supplied in the daily grains and roughages. There is danger, however, of our being "advertised" into thinking the danger is greater than the facts warrant.

To illustrate what we mean; certain grains are what we may call standard feeds, and certain roughages are in general use on the dairy breeding farms over the country.

In those grains and roughages nature provides mineral matter which our dairy cattle utilize in their body growth and the production of milk and butterfat, and enough to supply a sufficiency under any but unusual or abnormal conditions. If, then, we employ in our daily rations those roughages and grains which experiment and daily use have proved to be satisfactory there is no pressing need for buying expensive mixtures of minerals as supplementary feed.

For example, we have, on the authority of Henry & Morrison, in feeds and feeding the following mineral content in the most used hays:

Cowpea hay	11.9%
Soybean hay	8.6
Alfalfa hay (according to cutting)	8.6 to 10
Oat and pea	7.3
Clovers (according to cutting)	6 to 8.3
Oat and vetch	6.7
Mixed, with clover	6.4
Mixed	5.6
Timothy	4.9

In the staple grains, the mineral content is, according to the same authorities:

Cottonseed meal	6.6%
Wheat bran	6.3
Cocoanut meal	5.7
Oil meal	5.4
Soybean meal	5.4
Buckwheat middlings	4.8
Oats	3.5
Barley	2.7
Gluten	2.1
Corn and cob meal	1.5
Cornmeal	1.3

Molasses has 6.4% and dry beet pulp 3.5% of ash or mineral matter.

It would appear that the corn products, barley and timothy hay are lowest in mineral matter of the feeding stuffs selected. However no dairyman who pays attention to modern methods of feeding will depend on timothy for his sole roughage or even as the major portion of it. Corn meal, corn and cob meal and gluten are grains that do not, in good feeding practice, especially in the Eastern States, form a very large part of the daily ration; so their lack of mineral matter is made up for in the other grains and what legume may be used for roughage.

The dairy breeder who fertilizes his fields well, gives his cattle salt and uses in his own or a commercial mixture of feeds only standard grains without hulls or straws and provides a fair proportion of legume roughage, needs no high-priced, loudly trumpeted mixture of minerals at all. He can keep a supply of mixed steam bone meal, ground rock phosphate ("Floats"), finely sifted hardwood ashes and air-slaked lime where both dry and milking cows can have free access to it, being sure that if their systems require it they will not pass it by; while if they pay no attention to it he may rely on it that they are getting all the minerals they need in their feed and do not need any extra supply.

Increase Milk Production 75% in Four Years

THE work of Olin Ruste, a Wisconsin dairyman living at Blue Mounds, Iowa County, is quoted in agricultural journals all over the country; in fact, one writer hailing from central New York has even managed to incorporate some of his experiences in farm papers as New York State *News*.

Mr. Ruste spoke at the Wisconsin Dairymen's Association meeting at Madison, October 26th, and told how he increased his herd average from 7,150 lb. milk, 245 lb. fat per cow in 1918 to 12,350 lb. milk, 431 lb. butter in 1921 and increased his butterfat production over 75% in four years. The profits of last year were $99.36 per cow, Mr. Ruste states that the average cost of roughage fed was $51.95, and of grain was $38.16 making a total feed cost of $90.11. Milk averaged $1.54 for the year so that the value of production per cow was $189.47.

Ten years ago, Mr. Ruste purchased a purebred Holstein bull calf from his father for $50. This was a splendid investment as his daughters were wonderful producers. In due time the herd was entered in the Barneveld Cow Testing Association and is now nearly through its fifth year as an association member. The first year showed the average production to be 7,150 lb. milk, 245 lb. butterfat for sixteen purebred and grade Holsteins. The next year this was increased to 8,418 lb. milk, 293 lb. butterfat. Then by careful weeding out of the poorer producers and the use of better feeding methods the 1920 average of 10,935 lb. milk, 368 lb. butterfat was achieved from twelve purebred Holsteins.

In 1921, the average from eleven cows ranging from four to eleven-years-old was 12,350 lb. milk, 431 lb. butterfat. Six of the cows in the herd are daughters of one sire and their average is 13,108 lb. milk, 453 lb. fat.

The majority of the Ruste cows are dry about the first of January and freshen in March and February. They are all fed even when not producing as their owner believes such feeding puts them in condition for good production after freshening.

The fitting ration consists of a mixture of 100 lb. oats, 100 lb. bran, 75 lb. barley and 35 lb. oil meal. The animals get from six to eleven lb. a day depending upon condition. The roughage fed consists of 35 lb. silage and all the clover and alfalfa hay they would consume. They are fed twice a day.

About a week before they freshen the grain ration is cut in half and after calving the cows are fed a milk ration which last spring consisted of 400 lb. oats, 300 lb. corn, 100 lb. barley, 100 lb. Wisconsin balanced ration, 100 lb. International, 100 lb. bran, 100 lb. oil meal and 50 lb. cottonseed meal. From eleven to fourteen lb. of this ration is fed per cow depending upon her production.

Mr. Ruste told that his cows in milk averaged close to 600 lb. milk a day during the months of March, April and May. When the animals went into pasture the grain ration was cut down until it was taken away. About the time the pastures begin to fail he starts feeding grain again gradually increasing the amount. During the summer and fall the ration fed was similar to the fitting ration. Seven to ten lb. a day were fed to each animal when the pasture was poorest.

What Mr. Ruste has accomplished others can do if they follow the same methods. The poorer animals can gradually be weeded out, good sires used, calves raised from the most profitable producers and in a few short years the profits as well as the production can be materially increased. Notice that Mr. Ruste raised his own animals and did not try to buy them for, except in dispersion sales, no true breeder would dispose of his best females unless he received considerable more than they were really worth.

Successful Dairy Co-Operation

AWAY back in December, 1916, the Skagit County Washington Dairymen's Association organized to manufacture and handle dairy products on a non-profit coöperative plan. Memberships were limited to those actually engaged in the dairy business and the corporate powers were vested in a board of five trustees each of whom must be a stockholder in good standing. The Association leased the Federal Condensary at Mt. Vernon for two years under an option for which they paid $20,000. The earnings of the plant during this period met all expectations as the supply of milk was large enough and steady enough for profitable operation of the condensary. The Association has a plant of its own at Burlington, which is equipped to handle 150,000 lb. of raw milk a day. The Skagit County Dairymen's Association held a meeting at Burlington, November 18th and there were at least 2,500 in attendance. The Mount Vernon Condensary was purchased October 1st and this was the first payday since its purchase.

The manager of the plant, J. M. Humphries was master of ceremonies and W. J. Knutzer of Mt. Vernon made the address of welcome. The well-known Washington breeder Pete Omdahl who is a member of the board of directors told of the rapid dairy development in the state and warned breeders not to sell too many of their best cows to residents of other states. He said that they should develop their own industry first. J. A. Scollard, president of the United Dairy Association estimated there were at least 15,000 dairy cows in Skagit County and said that the farmers would be better off if there were double this number as the question of marketing the product had been solved.

In order to purchase the Mt. Vernon plant which required a quarter of a million dollars the association borrowed $120,000 at 7% for five years and raised $70,000 by the sale of bonds of which $10,000 went to business men of Mt. Vernon and $60,000 was purchased by farmers and by business men of other cities.

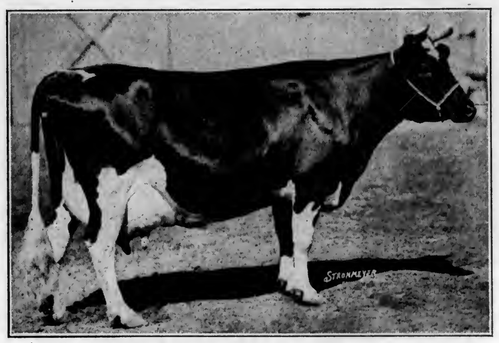
The two plants make one of the largest coöperative manufacturing units in the United States. They have a capacity of 353,000 lb. milk per day and a combined valuation of more than $600,000. During the operation of the Federal plant the organization earned for its members more than $75,000 after paying all expenses besides a profit to the Federal Company. The central agency distributing the output is known as the Consolidated Dairy Products Company and handles only coöperative dairy products.

Progress in Dairying

AMERICAN dairying has made rapid progress in many ways during the past few years. This country stands first for certified milk production in both quality and quantity. We stand high in our methods of handling city milk and in some processes of milk product manufacture. We easily stand first in ice cream production both in quality and quantity but there are other countries that have made even more progress than we have in some lines. In South Africa they are successfully centralizing sweet cream for buttermaking; Holland is officially branding dairy products and doing this in a way that is apparently giving satisfaction to producer, distributor and consumer; the New Zealanders have developed a coöperative organization for supplying their largest city with milk, which we understand is successful; Denmark ranks first in cow testing association work. We do not rank at the head in average production of our cows nor in the general quality of the butter or cheese we produce while the status of our coöperative buying and selling organizations is away below those attained in some of the other great dairy countries.

When the World's Dairy Congress meets in this country next October, we will know more about the work and accomplishments of dairy leaders in other lands. We can learn as well as teach. The interchange of knowledge by the leading experts of different countries will result in benefits to all the world for no one man or set of men know it all. It is possible and even probable that dairying in America may be materially influenced by the meeting which is being looked forward to by producers, distributors and manufacturers in this country as well as teachers and scientists.

See the farmer break his neck
Raising turnips by the peck.



See the middleman so gay
Raise the prices day by day.

See the poor consumer try
For to raise the price to buy.

Bridgeport City Cow Makes State Record

GOLDBRON DE KOL PIETJE No. 375973, one of the good cows at the Bridgeport City Farm has just completed a 365-day semi-official test making 27,685 lb. milk, 806.5 lb. fat or 1,008.12 lb. butter. Her butter record is one of the largest ever made in the State of Connecticut and her milk record is, we believe, a state record over all breeds and all ages. She was five years, six months and five-days-old at the time of starting her present lactation period.

This is not the first state record made by Goldbron De Kol Pietje as she is the present Connecticut state champion in the junior four-year-old class for both milk and butter production in the 305-day division. Goldbron freshened as a junior four-year-old on November 10, 1920, and she completed her 305-day test September 15, 1921, producing 17,195.2 lb. milk, 667.9 lb. butter, carrying calf 198 days of the time she was on test. She freshened again December 4, 1921, two months and nineteen days after completing her 305-day record. She was again put on test and made her

GOLDBRON DE KOL PIETJE

27,685 lb. milk, 1,008.12 lb. butter in 365 days. This is the Connecticut state milk record for year work. She also holds the milk and butter state championship in the junior four-year-old class, 305 days division, with a record of 17,195.2 lb. milk, 667.9 lb. butter. Owned by Department of Public Charities, Bridgeport, Connecticut.

present year record, a remarkable showing under the circumstances. During the year she was given an official test in which she made 23.87 lb. butter in seven days, tested twenty-nine days from freshening. She milked 690 lb. in the week an average of practically 99 lb. a day. The average production of Goldbron for her two latest lactation periods is 22,040 lb. milk.

Goldbron De Kol Pietje was born May 29, 1916. Her dam is Hillside Bell De Kol 2d No. 133326 and her sire, Goldbron Pietje No. 124684, is a son of Woodcrest Jamaica Pietje, the youngest son of the great imported cow Pietje 22d. During her test the state champion was cared for by Maurice Cahill, herdsman at the Bridgeport City Farms, who has been very successful in handling the Bridgeport cows on long-time work. It is well known that the Bridgeport City Farms are owned by the Department of Public Charities of Bridgeport, Conn., and that the superintendent is Angus P. Thorne, who is President of the Connecticut Holstein-Friesian Association. The citizens and the taxpayers of Bridgeport have every reason to be proud of the municipal farm and of the splendid animals thereon.

Eradicating the Cattle Tick

GOOD progress in the work of eradicating the cattle fever tick is shown by the 1922 report of the Bureau of Animal Industry. During the year 29,563 square miles, in Georgia, Louisiana, North Carolina, and Texas were released from Federal quarantine making a total of 523,837 square miles that have been freed of cattle ticks since the work began in 1906.

The work of the last fiscal year showed 48,089,005 dippings of cattle for the eradication of ticks. Only seven deaths occurred in every 1,000,000 cattle dipped and handled, besides which only five in every 1,000,000 were injured.

As the territory infested by the cattle tick is gradually diminished under the combined efforts of the Federal, State and County authorities to starve and poison this destructive insect out of existence the difficulties in the way of further rapid reduction of the area increase. In territory already released from quarantine there remain here and there a few infested premises or centers of tick infestation which must be held under control until the last tick can be destroyed.

When local officials, because of lack of funds or indifference to completing tick eradiction, fail to maintain quarantine over the few remaining tick-infested herds and to complete the eradication of ticks in the released areas, it is necessary from time to time to requarantine some counties and parts of counties in order to protect tick-free areas in adjacent Counties and States from reinfestation.

The United States Department of Agriculture has found it necessary to issue an order, effective December 10, 1922, requarantining a total area of 8,725 square miles in Arkansas, Louisiana, Oklahoma and Texas. This action became necessary because of the lack of sufficient State or Federal funds to continue extensive police duty over the movement of cattle from these areas. This order also covers the release of ten counties in Georgia, comprising 4,347 square miles.

Counties requarantined in the past have, in nearly every case, found the ways and means to finish the work; for the results obtained by tick-free counties in increased production of beef and dairy products amply justify the expenditure necessary for complete destruction of the tick.

British Champion Completes Record

OUR British cousins are quite elated over the performance of their champion milker, Brookside Colantha. The November 8th issue of THE HOLSTEIN BREEDER AND DAIRYMAN carried an article telling what this cow was doing and what she was expected to do. At that time she had produced 27,270 lb. milk in 299 days which, although she had over two months to go to the end of the year, was the British champion milk record. At that time the British Friesian breeders were looking forward to Brookside Colantha becoming their first 30,000 lb. cow, or as they term it, "3,000 Galloner," as the Imperial gallon weighs 10 lb. avoirdupois. The cow exceeded expectations and finished her year with 31,551¼ lb. giving 411 lb. milk the last week of her test. The amount of butter she produced had not been reported when we received

our information. British breeders of Friesian cattle stress the milk flow rather than the butterfat production of their animals. Brookside Colantha was born March, 1915. She is sired by Hedges Recorder and her dam was Melford Number Eight, a cow whose type and markings closely resemble those of Colantha 4th's Johanna, the former World's champion cow. This induced the breeders of Brookside Colantha to give her the name they did.

This is not the first time Brookside Colantha has appeared on the record books as, starting Dec. 7, 1919, she produced 16,440 lb. milk in 364 days. She again freshened and produced 23,690 lb. milk in 365 days despite the fact that she was exhibited at a number of fairs and shows during her lactation period. She freshened for the fifth time on November 18th, 1921. She was milked for nearly a month three times a day and then, as she was close to the hundred-lb. mark, her owners decided to have her milked four times a day. During January, 1922, she averaged 112 lb. a day and the first 120 days of her year she averaged 100 lb. a day, her best day being 119½ lb., which, at that time was the highest

BROOKSIDE COLANTHA
British Friesian Champion with 31,551¼ lb. milk in 365 days and 96,861 lb. milk in 1,752 days.

one-day milk production ever recorded for a British cow.

Brookside Colantha is a member of the Hache Herd at Findon, near Worthing. Worthing is a seashore pleasure resort on the Southeast coast of England, about 60 miles from London, very much patronized by the denizens of the metropolis. The record is strictly verified as the remarkable showing this cow was making has caused English agricultural writers and the British Friesian Cattle Society to keep close watch on her test and performances. Before her year was half completed it was seen that, barring accidents, she was going to exceed anything previously known in that country.

At the mid-day milking October 26th, she reached 30,000 lb. and she went on adding to her total until at the expiration of the year, she has not only exceeded 31,000 lb. but reached 31,551¼ lb.

This is the fifth long-time record made by Brookside Colantha. She has averaged 55.3 lb. milk a day during the entire time of which record has been kept and the figures are as follows:

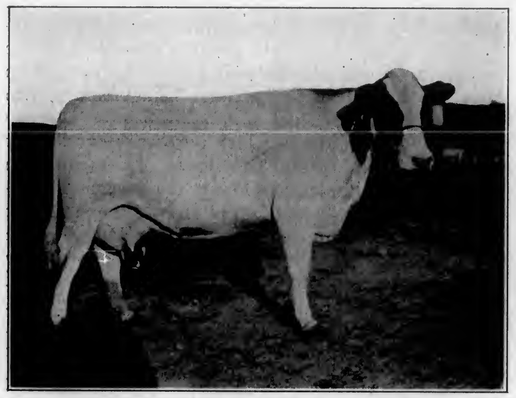
1st calf, 10,690 lb. milk in 297 days.
2d calf, 14,490 lb. milk in 361 days.
3d calf, 16,440 lb. milk in 364 days.
4th calf, 23,690 lb. milk in 365 days.
5th calf, 31,551 lb. milk in 365 days.
Total, 96,861 lb. milk in 1,752 days.

British papers featured the cow and her record. *The Daily Mail,* one of the Northcliffe group of papers, gave her a great write-up and *Punch* in the issue of November 22d, put the final stamp of approval by the following which our cousins across the water term the "Zenith of Fame."

"COLANTHA"

Queen of the lowing herd,
  Of thee I sing;
For thee the sounding word,
  The thrilling string.
Colantha! We shall see thee set
In countless dairy shops, a golden statuette.
To thee all mythic kine
  To-day must bow,
As Lakshmi the divine,
  The cosmic cow,
Hathor of Egypt, and the shade
Of her that Argus watched, Io the hapless maid.
The glittering galaxy,
  The Milky Way,
Shall take its name from thee
  This wondrous day;
And in alliterative sport
Astronomers shall call its light Colantha Court.
What are the myths to us
  But bygone dreams,
When more miraculous
  Thy glory seems?
For in the circle of a year
Thou gavest to the world three thousand gallons clear!
In vain that daring man,
  Henry J. Ford,
Of cars American
  The wealthy lord,
Would seek thy well-earned fame to bilk,
Framing some base machine to make synthetic milk.
Thy chronicler am I,
  And in my rhymes
Daily thou shalt supply
  (Four mortal times)
The flood to overfroth the pail,
Exhaustless as the ink that prints *"The Daily Mail."*

Pennsylvania Wants Dairy Show



A NUMBER of the leading Pennsylvania breeders of Holsteins and other dairy breeds are trying to get the next National Dairy Show staged in Philadelphia, October, 1923. The hotel accommodations are not excelled anywhere in the country and as the National Dairy Show and the World's Dairy Congress will be held in an eastern city, Philadelphia has many points in its favor as a meeting place. Foreign representatives will attend the Congress and foreign exhibitions are expected. The position of Philadelphia as a port is a strong argument in the favor of holding these two great dairy events at this point. John A. Bell, Jr., the president of the Pennsylvania Federation of Holstein-Friesian Clubs, is very active in the movement.

"Little, But Oh! My!" describes a Classified Advertisement.

Mankato Colantha Ormsby Bess

THE new Minnesota State junior two-year-old champion, Mankato Colantha Ormsby Bess No. 540351, produced 23,286.9 lb. milk in a year. She is the property of E. A. Barthelemy, proprietor of the St. Cloud Holstein Farm, St. Cloud, Minnesota, and was bred by Marlow & Randall of the well-known breeding establishment, Mankato Holstein Farm.

She was sold in the third Blue Earth County consignment sale held at Mankato in March, 1921, at the age of 22 months. Her sire is King Colantha Ormsby Bess, a line-bred Ormsby having two crosses of Sir Pietertje Ormsby Mercedes, and whose sire, King Korndyke Colantha Ormsby, is a son of Miss Korndyke Maid Ormsby, a 1,255-lb. year record daughter of Pietertje Maid Ormsby. He also traces to that great old foundation cow, Spring Brook Bess Burke. His

MANKATO COLANTHA ORMSBY BESS
23,286.9 lb. milk in a year as a junior two-year-old. Minnesota state record and second highest record in the World. Owned by E. A. Barthelemy, St. Cloud, Minn., and bred by the Mankato Holstein Farm.

first nine dams average over 1,000 lb. butter in year work.

Mankato Colantha Ormsby Bess is his first daughter to complete a year's record. She calved on November 13, 1921, at the age of two years, three months and twenty-three days. On seven days test she made 505 lb. milk, 17.62 lb. butter. She started on semi-official test on November 15th, and in the month of December milked 2,214.8 lb. In her ninth month during July, the hottest month in this year, nine months after freshening, she made 2,190.6 lb. milk. She finished the year with 23,286.9 lb. milk, the Minnesota State milk record for a junior two-year-old and 817.45 lb. butter, displacing the former champion Johanna Deen Segis Pontiac, with 22,937.2 lb. milk. She finished this state record in the very best of health and condition as shown by her photograph which was taken one month prior to the close of her record.

Credit is due George Hale, who came to the St. Cloud Holstein Farm as herdsman and took over the herd on April 1st. Mankato Colantha Ormsby Bess milked over 20,000 lb. milk in 305 days and she was bred to meet the requirements in this division and is due to freshen January 5th. This record is exceeded only by one other heifer in the world, a California yearling in the Hartsook herd with 22,604.3 lb. milk.

Minnesota Cow Smashes Records

MINNESOTA Holstein Breeders are feeling greatly elated over the splendid milk and butter records being made in year-test in that great dairy state. Following right on the announcement of Mamsell Johanna's breaking of the World's milk record in the junior four-year-old class by producing 31,515.9 lb., came the story of Mankato Colantha Ormsby Bess whose performance of 23,286.9 lb. milk in a year as a junior two-year-old is only surpassed by one other heifer in that class. Now comes the report of the breaking of the world's senior four-year-old milk and fat records in the yearly division by Grahamholm Colantha Pauline Segis, a member of the famous Graham herd. This cow made 34,291.8 lb. milk and 1,426.75 lb. butter. For the championship she displaced for both milk and butter that other great Minnesota four-year-old, Princess Aaggie Polkadot De Kol with 31,600.7 lb. milk and 1,315.29 lb. butter.

The new champion has set the bars quite a bit higher exceeding Dr. Fischer's heifer by 111 lb. butter and 2,690 lb. milk. Early in the lactation period, Grahamholm Colantha Pauline Segis produced 840.7 lb. milk in seven days, which at the time was the American champion record for seven days' milk production in the senior four-year-old class. Like many other great producers, Pauline possesses individuality of a high order. Shown at the 1921 National Dairy Show, she won second prize in the four-year-old class. In announcing the new record Mr. Gardner says:

"I am pleased to be able to report that the Holstein-Friesian cow Grahamholm Colantha Pauline Segis No. 405465 has broken the record for fat production in the senior four-year-old class of the semi-official yearly division, by producing in 365 consecutive days, 34,291.8 lb. milk containing 1,141.40 lb. fat. She freshened at the age of 4 years, 10 months, 22 days. Her sire is Dutchland Creamelle Colantha Lad No. 165049; her dam is Pauline Segis of Grahamholm No. 167469. She was bred and is now owned by Christopher Graham, Rochester, Minn. Her best seven-day's official production, made in the early part of the lactation period is 840.7 lb. milk containing 27.856 lb. fat; while she is credited with 3,457.2 lb. milk containing 115.115 lb. fat in thirty days. Also during a test begun 327 days from freshening she is credited with 494.7 lb. milk containing 17.229 lb. fat. In addition to two not less than 7-day strictly official test periods she had 17 other test periods, of which six were retests. Sixteen different supervisors were employed in the conduct of the test. Freshening at the age of 2 years, 1 month, 26 days she is credited with 443.9 lb. milk containing 17.898 lb. fat in 7 days, and with 18,445.8 lb. milk containing 678.94 lb. fat in 365 days. In the senior four-year-old class of the yearly division she displaces Princess Aaggie Polkadot De Kol No. 372024, whose record for 365 days is 31,600.7 lb. milk containing 1,052.49 lb. fat. Her 365 day production of 1,141.40 lb. fat, equivalent to 1,426.75 lb. butter on the 80 per cent basis, gives her 4th place among cows producing above 1,000 lb. fat, she being the 58th cow to gain the high honor of producing 1,000 lb. fat in 365 days.

MALCOLM H. GARDNER, *Supt. of A. R.*

The Holstein Breeder and Dairyman
Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years $1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

December 22, 1922

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Success

WITH this issue, THE HOLSTEIN BREEDER AND DAIRYMAN will conclude its first year's work, finishing Volume No. 1. From the very outset, we have recorded a steady and persistent growth, each mail bringing additional subscriptions, inquiries and copy for publication, all of which tell us that THE BREEDER AND DAIRYMAN is being welcomed, read and appreciated. We realize that the greater portion of our success is due to the unfailing support given us by the breeders and we wish at this time to acknowledge our appreciation and to thank our Friends, Readers and Patrons for their assistance in making this, Our First Year, a Grand Success.

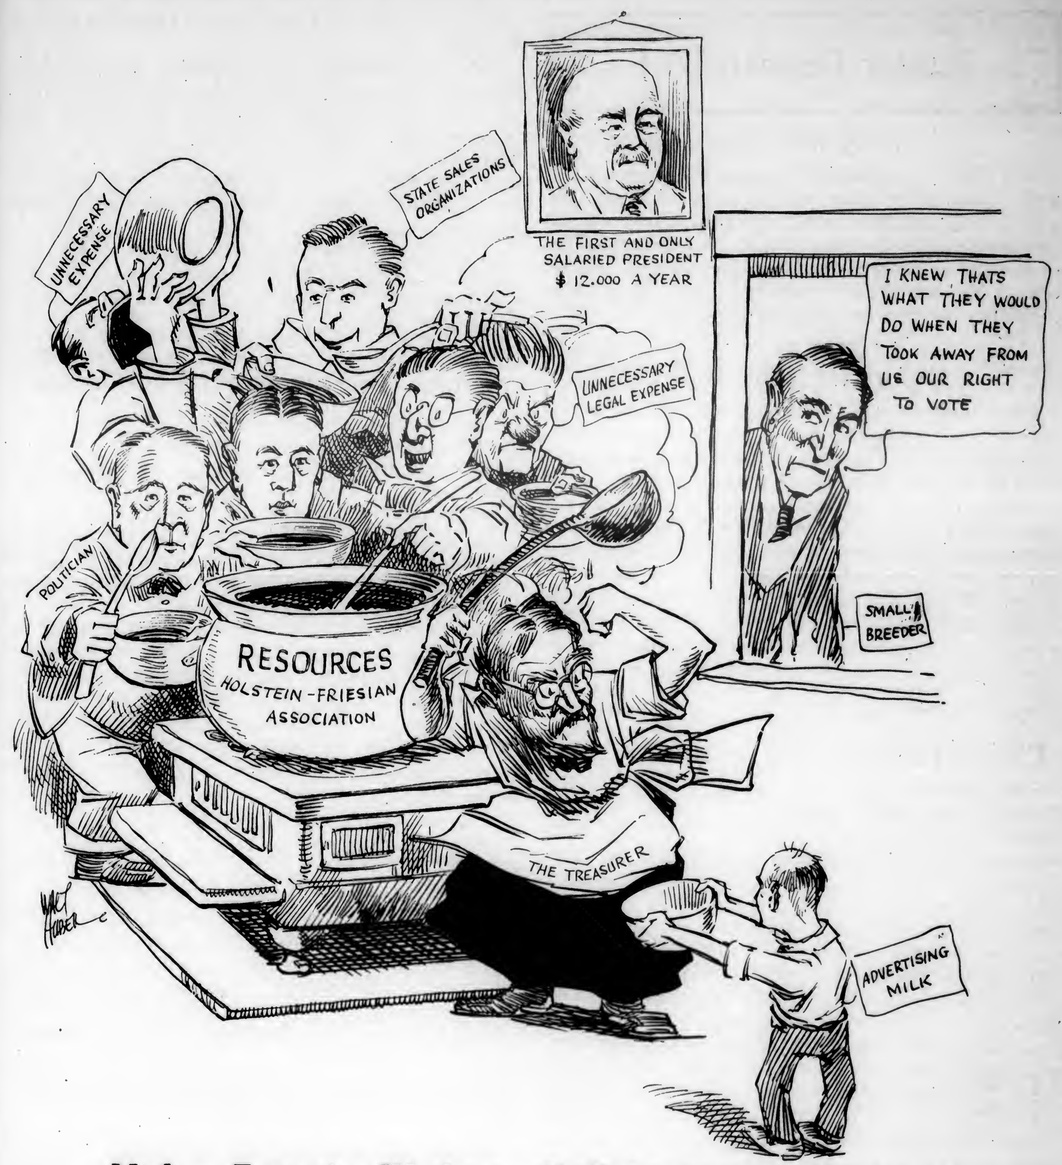
Our Sentiments, Too

THE importance of udder cannot be over estimated. At shows, but more especially at sales during the past summer, plain cows with good udders have often been preferred to stylish animals with beautiful bodies but defective udders. Time was when the buyer of British Friesians studied either pedigree, color or flesh, seldom looking below the animal to judge the udder. Then, if a cow or heifer was by an imported bull, a good price was certain; if such cow or heifer was also well-bodied and nicely colored a big price was inevitable. The udder of the animal or of her dam was almost entirely overlooked. Those days are gone, and for the sake of the breed they must never return. High prices are only good when based on commerical utility and when the buyer has value for money. High prices dictated by fashion are harmful.

When phenomenal prices were paid for stock bulls, the udder of the dam was seldom, if ever, remembered. This state of affairs must not be allowed to recur and every progressive breeder must aim to improve the udders throughout his herd. Care and selection can and must obtain the desired results. At each sale the demand for shapely vessels (udders) is increasingly noticeable, and as this requirement is purely commercial, it must be paid the attention it merits.—*British Friesian Journal.*

Purebreds Earn More Than Scrubs

THAT purebred livestock has an earning power greater than scrub stock, is a conclusion with which no purebred owner will disagree after giving the matter careful consideration. This conclusion is based on utility value alone, apart from breeding or sales value. The United States Department of Agriculture sent a list of questions relating to the value of purebred livestock to 500 farmers and stockmen living in different parts of the country and owning about 25,000 head of breeding stock and nearly 30,000 fowls. These men are all participating in the Better Sires, Better Stock campaign. Their answers indicate that the average superiority of purebreds for all classes of farm animals is around 40%, the range being from 1/3 to ½ greater than scrub stock.



The principal points in which purebreds excel other stock are superiority and uniformity in conformation and type, greater sale value, early maturity and economy in the conversion of feed into milk and other products. For example the letter of a Pennsylvania farmer—a breeder and dairyman—says in part, "My cows have more than doubled in milk production. Scrub and grade cows used to give me about 4,000 lb. milk a year while my purebreds average over 8,000 lb.

The stressing of the speculative, rather than the earning value of purebred Holsteins has, in the past, been responsible for much inflation of prices. Disappointment, even disaster, has been reaped by the innocent purchaser who did not know "the rules of the game," and who found, after he had taken home the stock he purchased, that his high purchase price was like costly overhead, and wiped out the profits of his dairy operations. The selling prices of purebreds should depend upon their profit earning capacity, and then, sold on that basis, they will bring a substantial advance over the prices of scrubs and grades, give satisfaction to the purchaser while the raising will prove a profitable business for the selling breeder.

Dairymen's League in the Movies

THE Dairymen's League is breaking into the movies and a motion picture has been made which shows the story of milk from the time it leaves the farm to the time it reaches the consumer in the city and also shows some of the more important departments of the general office of the association in Utica.

Only a comparatively small proportion of the members of the League ever see the general offices at Utica or have the opportunity to look over any of the larger League plants. The pictures will enable them to obtain a good, definite understanding of the size and importance of the business in which they are engaged and will serve to answer many questions which arise in the minds of the League Dairymen, their neighbors and friends.

Modern Extension Workers. Shall the Gang be Increased?

A Strengthening Sentiment

THE sentiment against the $1.50 Transfer Fee is crystallizing among the breeders of Holstein cattle and members of the Holstein-Friesian Association. This feeling no doubt will be exerted in the selection of delegates to the 1923 annual convention and will mark the beginning of a movement to check extravagance and place the Holstein-Friesian Association management back on the conservative and economical basis that characterized its management previous to the Philadelphia meeting in 1919. Six directors, a 50c Transfer Fee, abolishing of unnecessary offices, is what the breeders will demand. The Holstein industry must be taken out of the hands of the speculators and promoters and placed upon a firm, sound business basis if it is to continue and prosper.

Strikes are not of recent origin. Tablets found in the ruins of Thebes show that 3,000 years ago a large number of workmen notified their employers they would discontinue work unless a new wage scale was arranged and back pay given them at the new rate.

Junior Department

A Novel Plan

The County Demonstration agent stationed at Caldwell, Texas, is trying to organize a Holstein calf club with twenty members which will consist of boys and girls under eighteen years of age. A membership fee of $50 will be charged for which each member will receive a Holstein heifer. A prize of $50 will be given to the boy or girl who raises the best cow.

Sport with the Bull

The youngsters at the McKinley Industrial Home and boys at Los Angeles have a good time with the herdsire, Sir McKinley Pontiac who they have taught to carry them on his back although he weighs a ton.

During the year the 130 boys at the school did the work on the farm and produced stock, dairy and garden products that were worth around $11,000. The boys do the work under the direction of Supt. W. F. Jones. During Thanksgiving week the Los Angeles Kiwanis club engineered a drive to raise $100,000 with which to erect buildings to house 500 orphan boys at Van Nuys on a farm of 215 acres which is already paid for.

Pacific International Junior Judges

The Boys and Girls Club Judging Team of Klickitat County, Washington, carried off first honors at the Pacific International Livestock Exposition. The team consists of three boys, Kenneth Henshaw, Harvey Norris and James Coffield. The team from Linn County which was second, is made up of the three Cornett brothers, Bernard, Dennis and Carl. The team from Malheur was third, Union fourth then follow Jackson, Marion, Yakima Wash. Clatsop and Lane.

Kenneth Henshaw of Klickitat County and Thomas Nordstrom of Clatsop County of Oregon, tied for first place in the individual judging awards with 770 points out of a possible 900. Third and fourth prizes were divided between James Coffield and Clifford Cornett of Linn while fifth prize went to a younger brother of the latter, Dennis Cornett.

Student Judging at the International

Teams from nineteen states competed in the junior stock judging contest at the International Livestock Exposition. Virginia won first with Iowa second, Georgia third, Minnesota fourth, and Ohio fifth. The members of the Virginia team were: Howard Swank, Alfred Huffard, Lyle M. Armentrout with Herman Scott alternate. They were coached by County Agent Chas. W. Wantler.

This is the first team Virginia ever sent to the International. The high score was 1,041 and the lowest 801 so the teams were comparatively close together and all made a good showing. The high man was Wm. Armstrong of the California team followed by Everett Denby of Iowa, with Glenn Page of Oklahoma in third position.

The Intercollegiate Stock Judging contest was won for the eighth time by a team from Iowa State College. A team from Purdue University was second with Kansas third. There were twenty contestants. The Iowa team was composed of H. B. Boyle, E. E. Dubbert, J. H. Hilton, J. C. Holbert and S. S. Wheeler and the coach was Prof. P. S. Shearer. The winning score was 3,970.

J. C. Holbert, Iowa, made the best individual score with F. A. Fouts and L. W. Grandy of Nebraska second and third. The teams had to pass on horses, cattle, sheep and swine.

Rupel Laid the Right Foundation

The champion student judge of Holsteins at the National Dairy Show this year was I. W. Rupel a senior in the college of agriculture at the University of Illinois, and he was awarded the $400 scholarship given by the Holstein-Friesian Association.

Mr. Rupel was born on a farm in Northern Indiana. As a boy he was a proficient livestock judge and for his skill shown in club work he won three separate trips to farmers' week at Purdue University.

Later he took a short course at the University of Illinois and did cow testing association work in several Illinois Counties. He has defrayed most of his expenses while taking his four-year course in the college by his earnings in test work with the University dairy and in near-by breeders' herds so has had the opportunity to come in contact with the best Holstein herds of his adopted state.

Railroad Gives Prizes to Club Members

The Baltimore & Ohio Railroad gave two prizes of $100 each to the Maryland boy and girl who made the best record in Agricultural club work during 1922. The winners of these prizes are Catherine Baker of Edgemont, Washington County, and Norwood C. Thornton, of Elkton, Cecil County, according to an announcement by E. G. Jenkins, State boys' club agent for the University of Maryland Extension Service, and O. K. Quivey, general agricultural agent for the Baltimore & Ohio.

These prizes were offered to club members in all the counties of the state through which the Baltimore & Ohio Railroad runs. Under the rules of the contest, the prize money may be applied to an educational trip or to the payment of expenses at the University of Maryland. Miss Baker who is already a student at the University of Maryland, will use her prize to continue her University course while young Thornton took a trip to the Chicago International Livestock Exposition.

Miss Baker is 19 years of age and has been engaged in club work for six years. For two years she was president of a girl's club at Smithsburg, Washington County, which club introduced a hot lunch at the school for the benefit of grammar and high school students. Miss Baker had charge of this during her first year.

Miss Baker has conducted a home-garden demonstration and made it pay, specializing in fresh vegetables and in this way started the fund for her education. She was captain of the Washington County team which won the State bread-making contest at the Timonium Fair this fall and has given public demonstrations of bread-making at fairs and before womens' clubs. She made her own clothes, has done the home canning since being a club member and is now earning her way through the University of Maryland.

Norman Thornton is 16 years old and has been in club work two years. He has won prizes with a purebred Poland China sow at the Timonium Fair in 1921. This year he won first and grand champion prize with his boar at Timonium and again won a prize with the sow. He attended the club work at the University of Maryland last summer and took part in a county camp on Bush River, winning a prize for his efforts.

He was a member of the team which represented Cecil County in the dairy cattle judging contest at the Timonium Fair this year and took an active part in the farm products judging contest for club boys at the Calvert community show. Norwood has worked on the State road to make money for the trips which he has taken.

A Permanent Heifer Club

The George Schweser Dry Goods Company, David City, Nebraska, is promoting a purebred Holstein calf club for Butler County boys and girls. Each member of the club will have a heifer about a year old which he will take home and care for and is to show at designated community and county fairs. The heifer is to be bred to a purebred Holstein bull and as soon as it drops a heifer calf said calf is to be turned back to Mr. Schweser who will turn it over to another boy or girl who will take and raise it under the same conditions. The money received from the milk produced belongs to the club member and the animal will become his property when the heifer calf is given in exchange. The club member is to have his animal insured as soon as it is taken to his home. Mr. Schweser plans this to be a permanent calf club that will demonstrate the advisability of purebred Holstein cattle in Butler County.

Monthy Comparison of Association Business

Business in the office of the Holstein-Friesian Association of America during the month of November presents an interesting study. The total earnings were approximately the same as in the previous month, being just $415 less, the difference being negligible on the amount transacted. Registrations show a falling off of practically 1,300 but the falling off at this season during the past two years was even greater. Membership applications show a gain of twelve.

The number of transfer certificates issued show a gain of 1,164 over October but a loss of 702 over the number written November, 1921. The revenue from transfer certificates makes a big jump over the corresponding month of last year, the exact amount being $8,627 due of course to the fact that it now costs an owner three times as much to transfer an animal as it did a year ago.

Study the tables carefully. Despite the inspired propaganda being circulated by the friends of the transfer fee increase, the HOLSTEIN BREEDER AND DAIRYMAN has yet to see any benefits the Holstein-Friesian breed and its owners have derived from the tripling of the fee for transferring cattle. But we are willing to let anyone point it out to us and offer space in the pages of this journal for the purpose. And this offer holds good even to the parties responsible for the following statement "Reports from the secretary's office show renewed activity in Holstein registrations and transfers, far beyond the usual seasonal increase." Please, Oh, please, for the sake of the great Holstein breeding industry, show us where?

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Dec. 18-21—State College, Pa., Farmers' Week.
Jan. 16—Syracuse, N. Y., New York State Holstein Breeders' Association.
Jan. 16-19, 1923—Trenton, N. J., New Jersey Farm Products Show.
Jan. 22-27—Harrisburg, Pa., Penna. Farm Products Show.
Jan. 24—Harrisburg, Pa., Penna. Breeders' Banquet.
Jan. 25—Harrisburg, Pa., Annual Meeting Penna. Federation of Holstein-Friesian Clubs.

BOYS FORMING CLUB

A Holstein calf club has been organized by ten boys of St. Joseph County assisted by E. C. Bird of South Bend, Indiana, who is the county agent. They will elect officers and draw up a constitution at the meeting in the near future.

FORM CLUB IN OKLAHOMA

The Carter County Holstein-Friesian Association has been organized by breeders living around Ardmore, Okla., for the purpose of advancing interest in dairying and Holstein cattle. The officers are C. D. Bostwick, president; E. Berry, vice-president and B. W. Trice, secretary-treasurer.

PARK RAPIDS ORGANIZES

Twenty owners of purebred Holsteins met at the Community Club rooms, Park Rapids, Minn., November 22d, and formed a county organization. The officers elected were E. E. Bonham, president; James Robinson of Osage first vice-president; Levi Stevens of Ponsford second vice-president; Harry Freytag secretary and Ben Glantz treasurer. Mr. Glantz was elected chairman of a soliciting committee which will conduct a membership campaign.

FAVOR COUNTY AGENT

The Amherst Holstein club which has a membership of 25 has unanimously gone on record in favor of the county agent system in Portage County, Wisconsin. There has been some talk of abolishing the position. Professor O. W. Neale director of the rural department of the State Normal school was named spokesman to appear before the board of county supervisors on this question.

The president of the club is Stanley Kubisiak and Henry Swenson is secretary and treasurer. The club is supporting the area test plan for the eradication of tuberculosis.

PRIZES FOR NEW YORK CONSIGNMENTS

Prizes will be awarded to County Clubs sending the best consignment to the annual sale of the New York Holstein-Friesian Association which will be held January 17th-18th, at the New York State Fair Grounds at Syracuse. The animals will be judged on Tuesday, January 16th, the day before the sale opens. Awards will be made on the basis of individuality and sale condition and a County must have at least five animals to be eligible for a prize. The best consignment will win a cash prize of $50, the second $25 while prizes of $15 and $10 respectively will be awarded the consignments placed third and fourth.

DAIRY ORGANIZATIONS RE-ELECT VAN NORMAN

At a meeting in Chicago, December 8th, Professor H. E. Van Norman was elected president of the National Dairy Association for the eleventh successive time. This is the organization that conducts the National Dairy Exposition. Mr. Van Norman was also reëlected a director of the National Dairy Council and as our readers are aware, he is president of the World's Dairy Congress Association. The first two organizations have their headquarters at 910 South Michigan Ave., Chicago, while the headquarters of the World's Dairy Congress Association is in the Star Building at Washington, D. C. Before taking up the congress work, Mr. Van Norman was Dean and Professor of Dairy Management at the farm school at Davis, Cal., belonging to the University of California. At the suggestion of the Department of Agriculture, the University gave Dean Van Norman a leave of absence in July, 1921, in order to give him freedom to arrange for the International meeting of the Dairy Congress which will be held in this country, October, 1923.

FORM HOLSTEIN FEDERATION

A number of Holstein breeders met at Medford, Wis., early in December and organized a County Federation which will take the place of the local Holstein Association. August Ramm, Medford, was elected chairman, E. D. Ettreim, Gilman, vice-chairman, and J. M. Zenner, Medford, secretary and treasurer. The Stetsonville and Medford Clubs are selecting a committee which will conduct the annual spring sale of Holsteins. A committee was appointed to make arrangements for a big summer Holstein picnic. The new County Federation plans to organize a Holstein Calf Club for the youngsters on the farms of the county.

TAX SELLERS FOR BUYER'S EXPENSES

The Winnebago County Holstein Breeders Association held a meeting at Omro, early in December and a resolution was passed that a tax of 3% on grade anmials and 3½% on purebreds shall be levied for defraying the expenses occurred by buyers from a distance. Hithertofore, buyers from other states have paid their own expenses, the transportation charges and the expenses and transportation of a guide while purchasing cattle in Winnebago County. It is believed that the new rule will result in the securing of better prices while any balance remaining in the fund from such commissions will be available for advertising and for other association purposes.

ALBANY BREEDERS' ORGANIZE

Holstein breeders' living in the vicinity of Albany, Minn., met at the Martin Falkner Farm, November 26th, and organized the Albany Holstein Club. The following officers were elected: Alex Baggenstoss, president; Henry Kutzer, vice-president; Martin Falkner, secretary.

The purpose of the club is to promote the raising of purebred stock in the community and to coöperate with other organizations and the farmers in their efforts to better the welfare of the community. Meetings will be arranged at which good speakers and good programs will be provided. At a meeting which will be held in the immediate future, the Club has decided to hold a debate, "Why does a farmer pay $145 for a binder, when he can buy a cradle for $6.25; and why should a farmer pay $100 for a purebred sire when he can buy a scrub for $10."

REORGANIZATION AT NORTHFIELD

The Holstein Association of Rice County, Minn., will be reorganized on a community coöperative basis. At a recent meeting of the Northfield Holstein Club this plan was approved and a committee appointed to meet with similar committees from other communities to draft a constitution and by-laws for the association and make the working plans for the organization. The meeting will be held in the office of County Agent McPheeters.

In explaining the plan Mr. P. O. Holland, president of the Rice County Association emphasized the fact that this would not interfere with the work of the local clubs but would have a tendency to help develop the Holstein business in its territory. The working body of the new organization would consist of a Board of Directors elected by the local clubs. The funds derived from membership fees would be divided between them in proportion to the club membership and the greater portion of the membership fee would be returned to the local club for extension work and expenses.

NEBRASKA CLUB FORMED

Holstein owners of Buffalo County, Nebraska, have formed an Association to promote Holsteins interests and have elected the following officers: W. H. Swartzley of Riverdale, president; J. S. Clark of Ravenna, secretary; W. K. Fisher of Riverdale, vice-president; T. E. Bowlin of Elmcreek and Luther Burt of Gibbon complete the directorate.

WHERE THE MONEY GOES

The Lake Superior Holstein Breeders Association held their annual meeting at the Court House, Ashland, Wisconsin, December 7th. The report of the secretary showed a balance on hand of $47.80. They voted to appropriate $35 for the Wisconsin State Holstein Breeders Association, this to include payment of the 1923 assessment for membership dues. Under this plan every member of the local association becomes a member of the state organization.

A committee was appointed to arrange for a winter meeting and also to secure, if possible, a large bill-board advertising Holstein products, this to be erected at or near Ashland.

The following officers were elected for the following year. Henry Roffers, president; D. W. Emerson, secretary; Edward Carlson, treasurer; Directors, Matt Bruch, Butternut, Otto, Olson, Ashland, Frank Anderson, Ashland, W. M. Roffers, Ashland.

SPIRITED DISCUSSION AT DALTON

The Otter Tail County Holstein Breeders Association held their ninth meeting at Dalton, Minnesota, December 6th. About fifty were in attendance. After dinner the program was held in the town hall. Mr. G. W. Harnwell secretary of the Otter Tail County Fair, gave a full summary of the Holstein exhibits at that event, and urged the breeders to show more of their cattle and not let owners from other districts carry away so many of the prizes. Mr. Axel Anderson, the newly-elected county commissioner from the Pelican Rapids district urged the breeders to strive to increase the average production of their herd. Robert Geiger field secretary of the Minnesota Holstein Association spoke on County and State coöperation. There was a spirited discussion regarding supporting the State Association.

President N. H. Gray gave a resume of the Associations work for the past nine years. A nominating committee gave their report and the following officers were elected for the ensuing year. Mr. C. A. Anderson, Pelican Rapids, president; Warren Johnson, Dalton, 1st vice-president; Elmer Erickson, Battle Lake, 2d vice-president; A. R. Knutson, Pelican Rapids, director; J. V. Bopp, secretary-treasurer.

ROCK COUNTY BREEDERS CHANGE DUES

The Rock County Holstein Breeders Association met at the Y. M. C. A. hall Janesville, Wis., December 5th, and enjoyed a banquet. Nearly 100 members were present. The principal address was given by Earl Cooper, calf club specialist of the National Association.

The meeting passed a resolution to coöperate with the Rock County Farm Bureau in an effort to eradicate Bovine Tuberculosis from the county. The members also went on record in favor of more cow testing associations and to coöperate with the farm bureau in an effort to place a purebred sire on every farm.

Junior club work was indorsed with the accepted policy of only putting the best calves obtainable in the hands of the juniors. County Association dues were advanced to $2.00 per year with a provision that all members paying county dues become members of the State Association without additional payment, a part of the county dues being sent to support the state organization. The officers elected were as follows:

J. A. Craig, president; E. L. Benedict, vice-president; Archie Reed, Jr., treasurer and John W. Jones, secretary. The directors elected were as follows: for the three years, J. A. Craig, E. L. Benedict, John W. Jones, Archie Reed, Jr.; for one year, Arthur Tollefson, Orfordville; Henry Wieland, Jr., Orrie Steele, E. P. Coon, and for two years, John L. Fisher, Frank W. Milbrandt, Evansville; Harold Ward and W. H. Latta.

MARYLAND AGRICULTURAL SOCIETY

The annual meeting of the Maryland Agricultural Society and affiliated organizations will be held at Frederick, January 10th, 11th and 12th. A number of prominent speakers have been secured for the general program, including Governor Ritchie, J. R. Howard, president of the American Farm Bureau Federation, and Secretary of Agriculture Henry C. Wallace. There will be numerous other speakers and very complete programs have been arranged for all the meetings of the affiliated organizations.

Entertainment features will consist of a special buckwheat cake supper on Wednesday evening, January 10th, an apple banquet on Thursday evening, January 11th, and other entertainment features provided by the Frederick Chamber of Commerce.

ELECTION OF OFFICERS POSTPONED

The annual meeting of the Brown County Holstein Breeders Association was held at De Pere, Wis., December 4th and was called to order by President James Dillon. L. L. Oldham spoke at length on the work of the State Association. He said that this year, Wisconsin transferred more Holsteins than did New York. He suggested that the local Association charge a membership fee of $2.00 which would pay the local Association dues and also enroll the payee in the State Association. This was the first time in the history of the State Association that memberships could be secured for so low a fee. The plan was adopted and it was decided put on a membership campaign in Brown County and to include every owner of a purebred Holstein sire.

The annual election of officers was postponed until the next meeting January 3, 1923. The holding of the annual sale was discussed and the time was set for some time next spring.

FOREIGN INTEREST IN DAIRY MEETING

The International Dairy Federation was formed at a meeting in Brussels, 1903. The federation has an office for its permanent Bureau of National Committees at Brussels while national committees carry on the work of the organization in the great dairying countries of the world.

There has been six meetings of the International Congress, first at Brussels and then at Paris, The Hague, Budapest and Stockholm at two year intervals. The last one was held at Berne, 1914, but the World War interrupted the activities of the Federation. Shortly after the armistice was signed, suggestions from foreign countries indicated the opinion that the dairy industry of the world would be served by an international meeting held in America. The United States Government through the Department of Agriculture took the initiative in laying the proposal before the American Dairy interests. This resulted in the formation of the World's Dairy Congress Association as a committee of management to conduct the meeting next October which will be the seventh International Congress and the first to be held in the United States.

President J. Maenhaut and Secretary-General A. Collard-Bovy of the International Dairy Federation strongly indorse holding the next meeting in this country, will locate Belgian speakers and will ask other countries to coöperate. The Canadian Agricultural Department has appointed a committee of eleven men, the leading dairy officials in nine provinces to coöperate. The Italian committee is making a vigorous campaign to interest Italian dairymen. The Italians are noted for cheese manufacture, were the first to make ice cream, a business which has been largely controlled by Italians in other countries until recent years. Austria, despite her financial troubles has appointed four scientists and dairy organization heads to prepare papers for presentation and a special representative of the Ministry of Agriculture and Forestry to report the proceedings.

ANNUAL MEETING OF DAIRYMEN'S LEAGUE

The 14th Annual Stockholder's Meeting of the Dairymen's League, Inc., was held December 12th, at 15 Exchange Place, Jersey City, N. J. The meeting was harmonious and all resolutions and motions were adopted unanimously.

The meeting, by unanimous vote heartily approved the present plan of operation of the Dairymen's League Coöperative Association, Inc.

The meeting passed a resolution calling upon President Harding to make the Voigt Bill, which is designed to prohibit the movement in interstate commerce of so-called filled milk, a part of his legislative, agricultural program so that it may be made an administration measure.

John D. Miller presided at the meeting, as President George W. Slocum was in the west on a business trip in the interest of the League.

A new board of 24 directors was elected to be identical with the 24 directors of the Coöperative Association and the president was authorized to appoint a committee to investigate the advisability of bringing about the dissolution of the old organization in view of the fact that it has ceased to function as a sales agent for its members.

A total of 3,296.4 proxies, constituting more than 3 per cent of the total membership as required by law, were passed upon by a proxy committee for the purpose of the meeting.

BRATTLEBORO BUSINESS

There were twenty-five applications for membership received at the office of the Secretary during the week ending December 2d.

During the same period 2,012 certificates of registry were issued, 1,483 female and 529 male; 1,642 certificates of transfer were written, 1,096 female and 546 male.

During the week ending December 9th thirty-one applications for membership were received.

In the same time 2,217 certificates of registry were issued, 1,666 female and 551 male; 1,941 certificates of transfer were written, 1,422 female and 519 male.

The list of herd prefixes reserved during the two-week's period are:

Algernon, Mrs. Sidney A. Sherman, Lincoln, R. I.
Briarland, George C. Everest, New Haven, Vt.
Cedar Point, A. C. Bowlden, Irving, Tex.
Daleside, E. N. Golding, Cleveland, O.
Duehill, S. H. Miller, Frederic, Wis.
Edlolah, C. H. & Carl Straight, Kent, O.
Ekema, Ekema Bros., Alamo, Mich.
Frances Creek, Fred Skarvan, Maintowoc, Wis.
Grand River, John Black, West Farmington, O.
Griffwood, J. Edwin Griffith, Mt. Washington, Md.
Kanawha, Hotel Kanawha Co., Charleston, West Va.
Kirklees, G. H. Saville, Cushing, Wis.
Margival, Charles H. Paine, Concord, Mass.
Palomine, R. H. Barnhart, St. Charles, Mich.
Park Ave., Albert Grandman, Lomira, Wis.
Pinea, O. J. Feldkamp, Saline, Mich.
Rosverne, Roscoe R. Rouse, Eau Claire, Mich.
Readson, Harry W. Read & Son, Vineland, N. J.
Shadicrie, C. T. Kibler, Rose Hill, Ill.
Shiawa, V. W. Leeman, Shaftsburg, Mich.
Sioux Falls, F. W. Schafer, Sioux Falls Savings Bank, Sioux Falls, S. D.
Wasco, Reid D. White, Auburn, N. Y.

DON'T OVERLOOK THIS

The Pennsylvania Federation of Holstein-Friesian Clubs plan a great program at their annual meeting which will be held at Harrisburg, January 24th and 25th. The annual banquet which will be held in the Masonic Temple will be an affair worth attending. The toastmaster is Dr. John M. Thomas, President of the Pennsylvania State College, a noted educator and a general favorite with Pennsylvania breeders of livestock. The Hon. Frank O. Lowden, President of the Holstein-Friesian Association of America has planned to attend this meeting for a year and only a severe attack of the "flu" prevented him from being present a year ago. At that time the officers of the state organization and Mr. Lowden agreed that at the next meeting he should be present; the Hon. Gifford Pinchot, who will be Governor of Pennsylvania at the time the meeting is held has signified his intention to speak; the Hon. Fred Rasmussen, Secretary of Agriculture of the State of Pennsylvania will favor the breeders with a short speech and Geo. E. Stevenson, former vice-president of the National Association, is another speaker on the program. Dr. T. E. Munce, Chief Veterinarian of Pennsylvania, will address the meeting of breeders on the 25th while the banquet will be held on the 24th.

The Pennsylvania Farm Products Show which will be held all the week is an exhibition of state agricultural produce that is well worth attending. Despite the fact that the show is free valuable prizes will be given for the best exhibits. There will be more livestock exhibited there than there has been before at a Harrisburg show while the National Association and the State Federation will have a booth for the distribution of Holstein literature and for information regarding the breed. All breeders in Pennsylvania and adjoining states are cordially invited. President Bell, Secretary Jones, and Treasurer Brinton are planning a number of features that will be of interest to all who attend. This is an occasion that you must not miss, so plan to attend the show and meeting and banquet; stay just as long as you can. Your time will be spent to good advantage.

Maid—"I couldn't come yesterday, Miss Jackson. I was suffering that badly with pain in my chest."

Mistress—"What was it Melissa? Dyspepsia?"

Maid—"Yes'm it was. But the doctor, he calls it an attack of acute indiscretion."

Smith—"Do you believe that matches are made in heaven?"

Jones—"Sure, What do they want with matches in the other place?"

Luther Burbank recently crossed a field of daisies with a carnation in his buttonhole.

MAMSELL HOLDS WORLD'S RECORD

Superintendent Gardner officially announces that Mamsell Johanna, a junior four-year-old, owned by C. L. Spaulding, Warren, Minn., has produced 31,515.9 lb. milk, 1,317.53 lb. butter in 365 days. This is the world's record for milk production in the junior four-year-old class displacing Kiatta Pontiac Pride, with 31,491.6 lb. milk.

Mamsell was bred by her present owner. Her dam is a daughter of Sir Jarie Lulu De Kol and Mabel Homestead Johanna while her sire, King Watson Segis Pontiac, is a son of King Segis Pontiac Count from Star Watson 3d, an untested daughter of Star Watson, who recently died in the Iowana herd when nearly nineteen years of age. Volume 33 of the Blue Book gives Star Watson seven daughters with short-time and five daughters with year records. We do not know why Star Watson 3d was untested. The preliminary official announcement which was dated December 8, 1922, is as follows:

"I am pleased to announce that the Holstein-Friesian cow Mamsell Johanna No. 39012 has just closed a long-time test, and is credited with 31,515.9 lb. milk containing 1,054.03 lb. fat in 365 days, thus showing an average of 3.34 per cent in the milk. She freshened at the age of 4 years, 3 months. Her sire is King Watson Segis Pontiac No. 134193; her dam is Johanna Rockasene Jarie No. 281374. She was bred and is now owned by C. L. Spaulding, Warren, Minn. Her best seven-days' official production, made during the early part of the lactation period is 685.3 lb. milk containing 24.634 lb. fat. Her only previous test was a short-time test at the age of 1 year, 11 months, 19 days, when she produced 333.4 lb. milk containing 10.526 lb. fat. She has fourteen official test periods during the year, of which two were retests and one a 4-day test. Eleven different supervisors were employed in the conduct of the test. Her 365-day production of 1,054.03 lb. fat, equivalent to 1,317.53 lb. butter on the 80 per cent basis, gives her 22d place among the cows producing above 1,000 lb. fat, she being the 57th cow to gain the high honor of producing more than 1,000 lb. fat in 365 days."

MALCOLM H. GARDNER, *Supt. of A. R*

CHRISTMAS AND THE HERD

It's when the snow is flying and there's Christmas in the air,
And "Peace on Earth" is ringing from the towers everywhere
That my thoughts turn, more than ever to the cattle—to the herd,
To the service they have rendered and the promise of the word.
Yes, the service! Loyal, willing—and the records, day by day,
And the gift they give, unending, in their own, unselfish way.

At Yuletide, we pass presents, in the spirit of the time
And we praise the love o'giving in our speech and in our rhyme,
But the herd keeps on a-giving, from the summer to the snows,
From the month of frigid weather to the month of bird and rose.
There's no season to their giving—it's a present every day,
And it's Christmas when it's Christmas and it's Christmas when it's May.

That's why, when candles glitter on the green boughs of th' tree,
And there's lots of happy laughter—that the feeling comes to me—
I want to sing their praises—give them a Christmas thought,
Thank them for all th' blessings their years of toil have brought.
It's gratitude, old-fashioned, and homely, but sincere,
The herd has made it Christmas for all us fellers here.

Pass out the presents, mother, light up the Christmas tree,
I smell the turkey cooking, with an extra slice for me.
But I've been out to see them—snug in their beds o'hay,
I've talked to them, and patted each fine, fair head to-day.
They know I'm more than grateful for what they've given, too,
And said their "Merry Christmas" with a quaint Kriss Kringle "Moo."

—*W. Livingston Larned.*

WHITE BEAUTY CONCORDIA REPEATS

I am pleased to announce that the Holstein-Friesian cow White Beauty Concordia No. 392642 has just closed a long-time test, and is credited with 28,495.7 lb. milk containing 1,046.36 lb. fat in 365 days, thus showing an average of 3.67 per cent in the milk. She freshened at the age of 6 years, 7 months, 19 days. Her sire is Triumph Concordia De Kol No. 82861; her dam is White Beauty Netherland Belle No. 205134. She was bred by T. P. Hamer & Son, Waterloo, Iowa, and is now owned by Orrville L. Hamer, Waterloo, Iowa, Her best seven-days' official production during the test is 592.8 lb. milk containing 24.580 lb. fat, with the test begun ten days from freshening. At the age of 3 years, 9 months, 8 days she is credited with 368.2 lb. milk containing 10.447 lb. fat. In a previous long-time test begun at the age of 4 years, 11 months, she is credited with 21,199.8 lb. milk containing 810.67 lb. fat in 365 days. During the test just completed, in addition to an eight-day strictly official period, she had 12 other test periods, of which one was a retest. Eight different supervisors were employed in the conduct of the test. Her 365-day production of 1,046.36 lb. fat equivalent to 1,307.95 lb. butter on the 80 per cent basis, gives her 28th place among cows producing more than 1,000 lb. fat in 365 days.

MALCOLM H. GARDNER, *Supt. of A. R.*

Answers to Correspondents

CERTIFIED MILK PRODUCERS' TROUBLES

The Holstein Breeder and Dairyman,
Harrisburg, Pa.
Gentlemen:

I am writing you in regard to bacteria in milk. Can you tell me some way of keeping down bacteria other than Sanitation around the barn, milk-room, etc. I use every precaution to keep it down, in the way of clipping and washing the cows bags, straining the milk, etc., but my bacteria count runs too high. Any information you can give me concerning this matter will be very much appreciated.

South Carolina Dairyman.

ANSWER

The chief factors that usually enter into high Bacteria count are Dirty Strainer Cloths, Improper Sterilization and allowing the milk to stand around too long after it is drawn from the cow before it is properly cooled.

If you are having trouble with a high Bacteria count, make a thorough investigation of your milk pails, cans and bottling machinery and see that it is thoroughly cleaned and that there is no milk allowed to accumulate in the crevices, as that is a constant source of Bacteria.

To guard against not having the strainer cloths properly washed or sterilized, it is a good practice to buy cheese cloth by the bolt, have it cut in blocks 9 or 12 inches square and use one or two thicknesses over the strainer at each milking, with a small layer of cotton between and after they are once used, discard them. It is possible to wash and sterilize the strainer cloths and use them a second time, but the work must be done thoroughly. A safe way to sterilize such strainers is to place them in the oven of the cook stove and bake them.

As to the sterilization of the utensils, (Containers, Bottles and Cans) all such equipment should be thoroughly washed and rinsed and placed in a sterilizer and the temperature maintained at 212 for thirty minutes or more.

There are three great points that should be impressed in the fight to keep down Bacteria. First, proper sterilization of the containers and utensils and strainer cloths; second, cooling the milk as soon after it is drawn from the cow as is possible and holding it at a temperature around 40 degrees. On Certified Farms it is customary to have the bottling operations going on while the cows are being milked. Storing milk or hauling it any great distance often results in increased Bacteria. The method used in handling milk on Certified Farms to keep down Bacteria count, is to place the milk, immediately after it is bottled, in specially-constructed shipping cases made of wood

that hold 12 one-quart bottles. The cases are shoveled full of cracked ice and stacked up in a corner of the shipping room and re-iced before they leave the farm. These same cases are placed on the delivery wagons in New York City and the milk is not removed from the cases until it is delivered to the consumer, which insures a low temperature. There is a variation from this practice in some instances where the milk, immediately after bottling is placed in ice-water or a Cold Storage plant, but the shipment to the city is always made in these wooden cases that are thoroughly iced.

BREEDER AND DAIRYMAN.

AN EXPLANATORY BOUQUET

The Holstein Breeder and Dairyman,
Harrisburg, Pa.
Gentlemen:

We take this opportunity of thanking you for your article in your issue of December 8th in which you so fully and ably set out the work that we are attempting to do in the way of promoting the dairy industry in South Dakota. We have had considerable publicity on our work, but we can say frankly that your article tops the list.

We are just starting a Boys' and Girls' Calf Club and will have something for you in the way of a story later on. We had with us to-day as visitors, Professor Coleman of the High School of Lennox, South Dakota, and about twenty of his pupils and had our Mr. D. M. Parrick spread the gospel of dairying to these boys, and we hope they took home with them a message that will bear fruit.

This is not a commercial proposition with us, but we were really forced into this enterprise because of the losses that the entire country were sustaining in the raising of grain to sell. Dairying enables the farmer to keep all the grain he raises on his farm, and thus keeps the land built up and capable of higher production. We are extensive farmers, and it was falling on us as hard as on anyone else. We were hauling off the soil on our farms in the wagon boxes to the elevators and taking ruinous prices for grain. We are in the heart of a splendid agricultural country, and the price of oats during the last two years has not averaged over twenty cents per bushel and corn thirty cents per bushel. We figure that it costs us forty cents per bushel to raise a bushel of oats and eighty cents per bushel to raise a bushel of corn.

Yours very truly,
F. H. JOHNSON, *President, Sioux Falls Savings Bank.*
Sioux Falls, S. D., December 13, 1922.

Will power is an admirable thing—until it happens to stack up against won't power.

Quite often you will find that the milk of human kindness has very little cream in it.

New United States Butter Champion

JUST as the *Breeder and Dairyman* is on the press the news comes over the wire that May Walker Ollie Homestead No. 300043, owned by the Minnesota Holstein Company at Austin, Minn., has broken the United States record for year production by producing 1,217.27 lb. butterfat in 365 days, equivalent to 1,521.59 lb. butter, thus surpassing the record of 1,506.36 lb. butter made several years ago by Duchess Skylark Ormsby. The World's Championship is held by the Canadian cow, Belle Pontiac, 1,587.50 lb. butter.

The new champion is a daughter of Piebe Laura Ollie Homestead King and May Walker of Arden. She was born April 21, 1915, and freshened for this lactation period at six years, seven months, twenty-five days old, making an official seven-day record of 714.6 lb. milk, 34.89 lb. butter. She had a previous year record of 22,535.8 lb. milk, 1,096.60 lb. butter made as a senior four-year-old.

League Price Breaks Record

THE Dairymen's League Coöperative Association, Inc., has announced the base pool price for November milk of $2.53 per hundred lb. which is the highest price ever established by the pooling association. October 1921, the gross pool price in the base zone was $2.52. However, in October, 1921, the fluid price of milk paid by dealers in the base zone was $3.37 which is 47c more than the price paid by dealers in November of this year.

The pool has been marketing a very large percentage of its milk in fluid form. The plants of the association are arranged so as to ship milk to New York if necessary and this proceeding has enabled the metropolis to maintain its milk supply and uniform quality despite its increased demand.

What the Government Is Doing

THE magnitude of the United States Government experiments with cattle breeding are not fully understood. The government, through the dairy division of the Department of Agriculture, owns about 450 purebred cattle, Holsteins, Jerseys and Guernseys, which are in herds in Maryland, Louisiana, Oklahoma, South Dakota and Montana. Coöperative experiments are being conducted in Washington and Idaho and arrangements are being made for similar experiments in Oregon and West Virginia. The private breeder cannot afford to conduct experiments over a long period of time to determine breed theories. This is work for the state and federal authorities.

Cow Testing Association Reports

NEARLY A PERFECT SCORE

The monthly report for the Franklin County, Pa., Testing Association as compiled by R. H. Heisey shows that twenty-one herds were tested. There were sixteen cows that each made over 40 lb. fat; two were over 50 lb. and nine cows each made more than 1,200 lb. milk in the month.

Eleven of the twelve highest producers were black and white cows, the leader being the grade Holstein, Floss, owned by W. S. Young with 1,194 lb. milk, 57.8 lb. butterfat. A registered Guernsey was second with 51.3 lb. fat from 1,005 lb. milk; in third position was a registered Holstein owned by D. E. Kesselring with 1,050 lb. milk, 48.3 lb. fat. A registered Holstein owned by W. S. Young was fourth with 48.2 lb. fat from 1,605 lb. milk she being the leader for milk production.

The grade Holstein herd of W. E. Gossert had six cows on the honor roll as did the W. S. Young herd while the grade Holstein herd of E. S. Grimm had seven representatives that achieved this honor.

DOUBLEHEADER IN OHIO

Reports submitted to the Franklin County, Ohio, Farm Bureau shows that 310 cows representing twenty-two herds were tested in the Madison Township Testing Association during October, and 239 cows representing twenty herds were tested in the Darby Association. The high cow in the Madison Township Association was a grade Holstein owned by the Franklin County Home, she producing 1,311 lb. milk, 70.8 lb. butterfat. The high herd consisted of nine animals owned by W. V. Turnbull, Gahanna with an average of 8,065 lb. milk, 39 lb. butterfat. This is a mixed herd being composed of Jerseys and Holsteins.

A Holstein cow owned by J. E. Baldwin of Hilliards led the Darby Association with 2,176 lb. milk and 72.6 lb. fat. The high herd consisted of seventeen Holsteins, owned by Ray Van Schoyck of Hilliards and they averaged 1,357.9 lb. milk, 35.7 lb. butterfat.

SCRANTON, PA.

Herd under the Accredited Plan

IN WAYNE COUNTY, PA.

The Torrey-Berlin Cow Testing Association operating in Wayne County, Pa., have recently completed a year's work. The champion was a purebred Holstein, Burke, owned by T. H. Olver, she producing 12,020 lb. milk, 377.8 lb. butterfat. Mr. Olver had three cows in the list of the best ten milk producers and so did Wm. C. Garrett. The leading butterfat cow was Rosette, owned by W. H. Colwill with 429.9 lb. fat from 9,862 lb. milk. The Olver herd led for milk production by averaging 9.573 lb. milk, with 306.6 lb. fat. The D. W. Scudder herd was second, the Garrett herd third and W. H. Marshall, fourth.

The leading herd for fat production was owned by Wm. C. Garrett and averaged 329.6 lb. while the Scudder, Colwill, Olver, and Marshall herds followed in the order named. The average production for the association was 6,631 lb. milk, 249 lb. butterfat.

LEADS IN NEVADA

There were 218 cows in nine herds tested in the Washoe, Nevada, Cow Testing Association during October, and the average production was 831.5 lb. milk and twenty lb. butterfat. A grade Holstein owned by Claude Lima made the high record of the month, 1,224 lb. milk, 83.2 lb. butterfat. She has been a consistent producer all summer. Brook & Peckham had thirty-one of the thirty-nine cows on the honor roll. Mr. Lima had two honor cows besides the leader.

FAIR WARNING

Notice: My husband, Samuel Brouson having left my home and protection without any just cause since the 13th of May, 1920, and his whereabouts are unknown to me, I therefore notify the public that it's my intention to get married—(sig.) Mrs. Ethel Brouson—Personal ad in the Panama *Star* and *Herald.*

THE IRISH MAIL

An American visiting Ireland asked a waiter at a tavern, "How many mails do you have here a day?"

The waiter replied, "Three; dinner, breakfast and supper.

Since skirts are longer figures are lying again.

OMISSION

The leading article of our December 8th issue told something of the operations of the Sioux Falls Savings Bank and its efforts to benefit residents in its territory by promoting dairying and Holsteins. In speaking of De Kol Korndyke Ormsby 2d, the model cow of the Sioux Falls Holstein Farms which are owned by the Bank, we omitted to say that she with two of her progeny were exhibited at the recent National Dairy Show, where they won fourth prize for Advanced Registry cow and offspring. The cow herself won a prize in the class for cows with year records begun when under full age. De Kol Korndyke Ormsby 2d's record is 1,014 lb. butter, 23,370 lb. milk and she was a junior four-year-old when starting the test.

The president of the Sioux Falls Savings Bank is F. H. Johnson who purchased a number of the tops at the K. P. O. P. sale at Des Moines, Iowa, November 22d, paying $1,000 for Martha Ormsby Piebe and $780 for Lady Mutual Ormsby Piebe, two-year-old daughters of King Pietertje Ormsby Piebe; as well as $700 for the yearling heifer, Triune Ormsby Rose a daughter of Triune Ormsby Piebe from a daughter of King P. O. P.

THE NEW TEACHER

"How do you like your new teacher, Bobbie." "She's all right, Mother." "Has she asked you any questions yet that you couldn't answer?" "Yes, Ma, she asked how old you were."

Habit is a thing that influences us to follow the crowd without making any inquiry as to its destination.

A Merry Christmas

and a

Happy New Year

to my many friends and customers

I thank you for your patronage during 1922 and hope to serve you even better when you are in need of good Holsteins, purebred or grade, during the coming year.

D. B. YORK
TROY, PENNA.

DAUGHTER OF KING TWEEDE SPRING FARM GOES TO BERKS FARM

B. F. Jones and son of South Montrose, Pa., recently sold to Abner S. Deysher a good daughter of King Tweede Spring Farm. The name of this heifer is Lady Tweede Pontiac Lass and she is a daughter of Lady De Kol Burke Segis, who as a two-year-old made 15.74 lb. butter and 335.3 lb. milk in seven days. As a full aged cow and with only three-quarter udder, she produced in 269 days no less than 401.3 lb. butter, 8,949.7 lb. milk and she did this despite the fact that she carried her calf 241 days of the time she was on test. She is a daughter of King Segis Hengerveld De Kol Burke and her dam is a granddaughter of the famous old time sire, De Kol Burke.

Lady Tweede Pontiac Lass was in calf by Woodmont Echo Sylvia Champion whose dam, Butter Boy Empress milked 100 lb. in a day, made 30.27 lb. butter in seven days and was first-prize aged cow and grand champion at the 1921 New York State Fair.

The combination shown in the pedigree of Lady Tweede Pontiac Lass and in the pedigree of her unborn calf shows a blending of blood lines noted for remarkable production while many of the animals who appear in the pedigree have won high honors in the show ring. Woodmont Echo Sylvia Champion himself was the first-prize three-year-old bull at the last New York State Fair, while he is transmitting to his offspring the individuality and producing capacity of his noted dam.

In buying this daughter of his senior herdsire Mr. Deysher has again evidenced his belief in King Tweede Spring Farm. The daughters of this bull show great capacity. Those in the Deysher herd are as yet young but show evidence that when they become of milking age, they will be a credit to the family they represent and the herd they are in.

It it to be regretted that Lady Tweede Pontiac Lass was not fitted for a test as there was no expectation of giving her a record until Mr. Deysher purchased her. She is due right away. Her new owner has evidently bought her with the intention of showing visitors to Berks Farm a milking daughter of his senior herdsire.

"Greatest Feed Known to Correct Mineral Deficiencies"

U-COP-CO SPECIAL STEAM BONE MINERAL MEAL — FOR — CATTLE

U-Cop-Co Special Steam Bone Mineral Meal: A specially prepared product for the dairy cow, high in Calcium and Phosphorous content. HOW TO SELL BULLS

The purebred dairy bull campaign in Sonoma-Marin Counties, was a complete success resulting in the sale of 115 purebred dairy bulls, which were placed at the head of native or grade dairy herds. The selling campaign ended October 15th the buyers showing their preference for breeds in the following order: Holsteins, Jerseys, Guernseys, and Ayrshires. There were a few orders for Brown Swiss and Milking Shorthorns.

About forty of the bulls were purchased inside the two counties. The requirements were that the dam should have a production record of at least 400 lb. butterfat in a year, or its equivalent. A number of real good bulls were brought in from outside these two counties; some came from the Holstein herd of the McCloud River Lumber Co.; some from the Gibson Co.; twelve came from the Morris & Sons herd two from the Bridgford Company and two from the Cornwell herd. There were also others shipped in from Agee Bros. Los Angeles, County Farm, and the Burr Farm, well-known Holstein breeding establishments.

The head of the campaign was the state dairy specialist, Noel Negley assisted by County Agents M. B. Boissevain and H. E. Weinland with the assistance of local breeders and business men.

HALF A CENTURY OF DAIRYING

The management of the California Dairy Products Show which was held at Fresno late in November conceived the idea that it would be a great advertising feature to have the dairymen who had been continuously in the dairy business for the longest periol of time and have them attend the show. The J. W. Ford Company, manufacturers of a washing powder which is used around many dairies, generously donated a cash prize of $50 for this purpose.

The winners were Mr. and Mrs. N. D. Page of San Benito County. Mr. Page is nearly 81 years of age and his wife is eight years younger. The pair started dairying in Marin County away back in 1864 or fifty-eight years ago. For twenty-five years they have conducted a dairy farm in San Benito County. Mr. and Mrs. Page are both in excellent health and said that they have no intention of retiring. They were banqueted by the California Creamery Operators' Association at Fresno and received many congratulations and were shown many honors at the show. Here Mr. Page entertained his entertainers by telling stories of his early dairy experiences.

REPARTEE

The lady remarketh: "Hobo, did you notice that pile of wood in the yard?"

"Yes'm. I seen it."

"You should mind your grammar. You mean you saw it."

"No'm. You saw me see it, but you ain't seen me saw it."

RATIONS FOR EARLY WINTER FEEDING

The New York State College of Agriculture in its November *News Letter* recommends for early winter feeding the following mixture to be fed to dairy cows getting corn silage and mixed hay, containing at least one-half clover for roughage.

600 lb. wheat bran.
400 lb. hominy feed.
600 lb. gluten feed.
200 lb. cottonseed meal 43%.
200 lb. linseed oil meal.

The wholesale price of this is $41.29 and the letter is dated November 25th. The approximate analysis is 21% protein, 9% fiber and 5% fat. Ground oats are eliminated because of their comparatively high cost, but if the farmer has plenty of home-grown oats, he can improve the ration slightly by using 200 lb. of oats in place of an equal amount of wheat bran. Ground buckwheat could be substituted for part of the bran.

The hominy feed might be replaced by corn meal, corn feed meal or ground barley with equally good results. In place of part or all of the gluten feed, buckwheat middlings could be used. This is a good dairy feed and can often be purchased to advantage at this time of year.

Roughages vary widely in their protein content. Alfalfa hay is richest in protein while clover hay is good, mixed hay is fair and timothy hay poor in this respect. These facts must always be considered in making up a grain mixture.

Therefore using corn silage as the basis of the ration in order to properly balance it, sixty per cent of high protein feeds must be put into the grain mixture where only straight timothy hay is available. For mixed hay only fifty per cent high protein feeds are required and for clover hay forty per cent. With alfalfa hay the high protein feeds can be reduced to thirty per cent and yet give a balance ration.

The grain mixture should also contain thirty to forty per cent of bulky feeds such as wheat bran, wheat mixed feed or ground oats to lighten it up. Then to complete it hominy feed or feeds similar to it should be used.

Special attention should be given to the young stock now they are in the barn and a fairly liberal amount of grain should be fed to keep them growing properly.

Liberal feeding of the dry cow is important now in order to put her in better shape for the coming lactation period and to bring greater returns by way of the milk pail. A mixture of 800 lb. wheat bran, 800 lb. hominy feed and 400 lb. oil meal is suggested for young stock and dry cows. The wholesale price per ton is given as $37.02 and the approximate analysis is 16% protein, 9% fiber and 5.5% fat.

You never know what you can do until you try and many a fellow makes a fool of himself without half trying.

HER CALVES ARE GOOD

Aaltje Pontiac Tritomia, a daughter of King of the Pontiacs owned by Hanson Brothers is said to drop the biggest calves of any cow in Barron County, Wisconsin. Three years ago she had a bull calf which weighed 110 lb. at birth, which has developed into a grand animal and is the herdsire of Ed. Massie of Chetek. Last year she dropped a heifer calf which weighed as much as her son did at birth. This year she had another bull calf which weighed 146 lb. when it was eight-days-old.

Aaltje produced 420.3 lb. butterfat in nine months according to the records of the Chetek Cow Testing Association. She was started on official test November 20th, with prospects of making a fine record.

The Hanson herd is headed by Meisegier Andy Beets who was exhibited in 1921 winning first-prize at the Barron County Fair, second at the Tri-State Fair and fourth at the North Wisconsin Fair.

MUDDOX LIKES THE BOYS

H. C. Muddox of the Meadow View Stock Farm, Sacramento, Cal., is traveling through the center west and will take back a number of purebred Clydesdales. On the Meadow View Stock Farm they have Holsteins and Shorthorn cattle. Clydesdale horses and Berkshire hogs. This herd was exhibited at the California State Fair and won a number of prizes. The boys taking agricultural courses at the Sacramento high schools are allowed to go to the farm and judge the stock and a number of judging contests have been held there. Mr. Muddox is accompanied by his son, Forrest C. Muddox.

One of the best examples of the "modern religion" is demonstrated by the tearing down of a large stone church at 14th and A Sts., Washington, D. C., to build a five-story automobile building.

BLAIR COUNTY HOLSTEIN ASSOCIATION

S. F. ZOOK, Sec'y
Curryville - - - - - - Penna.

THE COMFORT HERD OF HOLSTEINS

In California there is a small town named Guernsey and, strange to say, in it lives a dairyman who owns a real good herd of registered Holsteins. This man's name is A. B. Comfort. Away back in 1915, Mr. Comfort attracted considerable attention by purchasing at a public sale the bull, Juliana De Kol King Segis paying $1,800 for him. At that time this was one of the highest prices a California bull had ever brought at a public sale. This young bull was a son of King Segis Pontiac Emperor, one of the greatest show bulls ever known in California. The dam was Juliana De Kol, who made a world's record as a senior two-year-old and was the junior champion at the St. Louis World's Fair.

The daughters of Juliana De Kol Segis have made good. One, Aaggie Segis Juliana, produced 965.58 lb. butter, 24,257.7 lb. milk in a year; she produced 674.4 lb. milk in a week, an average of 96 lb. a day; Juliana Pietertje Segis as a senior two-year-old produced 883.4 lb. butter from 23,073.8 lb. milk; Wisconsin Ormsby De Kol Segis made 24.73 lb. butter, 590.9 lb. milk in seven days as a senior three-year-old; the junior four-year-old, La Polka Pietertje Tubie 2d made 25.26 lb. butter in a week averaging 80 lb. milk a day; Dora Snowflake Juliana made 25.47 lb. butter in seven days averaging 83 lb. milk a day.

In the Comfort herd there are a number of daughters of Tirzah La Polka Pietertje Lad, formerly head of the Welch herd and these too, have made splendid records. La Polka Katrina Mercedes made 999.62 lb. butter, 26,320.1 lb. milk in a year; Tirzah La Polka Holland made 847.66 lb. butter, 22,611.2 lb. milk and others in test are making as good a showing.

The present head of the herd is King Riverside Mead, whose sire was King Mead of Riverside and whose dam was Pet Salambo of Riverside, a cow that made over 1,000 lb. butter in a year. The junior sire is King Aralia Mead, another son of King Mead of Riverside from Margaret Aralia De Kol who has a record of 1,161.48 lb. butter in a year.

MERRYGOLD HERD DOINGS

A young cow in the herd of Elmer Frazier of Middletown, Indiana, on November 21st dropped twin heifer calves which are reported as weighing 80 lb. each. In ten months to a day this heifer has had three calves.

There is quite a demand for young bulls from the Merrygold herd which made a good showing this year at the fairs. A nice calf recently went to Mr. Strong of Hydro, Oklahoma, and another to Burton Williams & Son near Anderson, Ind.

Take your medicine. The fellow who yells loudest for the peacemaker is the one who is getting licked.

In Chicago, six bandits robbed the Sandack Jewelry Co. of $40,000 but did not get any coal.

KIDDED A HUSTLER

E. C. Rogers of Worcester, Mass., took a trip into Wisconsin just before Thanksgiving in search of some good Holsteins but for a time did not find just what he wanted. At Plymouth he met Dr. A. F. Schrage and the two got into a spirited argument over the quality of local Holsteins. The Doctor grew rather nettled and said he could find two carloads that would suit in less than six hours. The first place they went was Roland L. Goelzer's where Mr. Rogers bought fifteen cows and heifers, three yearlings and a calf for $3,500, paying spot cash for them as soon as tested. The prize animal was a three-year-old daughter of Clover Mead King Spofford that had made a good seven-day official record as a yearling and was expected to make another good record when she freshened about Christmas. All Goelzer has left is one three-year-old and three bull calves.

MAKING A NICE SHOWING

Animals owned by Ward Gano of Moscow, Idaho, are making nice records. Queen Bess Wayne Korndyke made 642.5 lb. milk, 31.92 lb. butter in seven days. In thirty days she produced 2,457.8 lb. milk, 122.38 lb. butter which is the second highest record for the state. She is the first cow to make a thirty-lb. seven-day butter record in 1921.

Mr. Gano and the University of Idaho jointly own Queen Bess Segis Posch who made 1,761.3 lb. milk, 79.6 lb. butter in thirty days as a senior two-year-old which is the state record.

A man was recently blackmailed with a very threatening letter reading, "Place $5,000 under the stone at the entrance to your gate by 9 o'clock to-night or we will kidnap your wife."

Nine o'clock that night the kidnappers found a note as follows: "I haven't a cent but I am in favor of the movement." —*Strathmorean.*

WAUKESHA BREEDERS SELL BULLS TO EASTERN FARMS

Two important bull sales to eastern parties have just been reported by the Waukesha County Holstein Breeders' Association. Hartog Gerben Colantha, the senior herdsire of Williams Brothers, Templeton, goes to Avalon Farms, Westfield, Mass., and Far Oaks Sir Homestead Darkness was sold by L. J. Messerschmidt of Hartland to the Connecticut State Reformatory.

Hartog Gerben Colantha is a son of Dutchland Governor Sir Colantha one of the best transmitting sons of Colantha Johanna Lad. The dam of Hartog Gerben Colantha is a daughter of Ollie Johanna Sir Fayne, a half brother to Iowana Sir Ollie and Oak De Kol Ollie Homestead. These three sons of Ollie Watson Prima Donna have made imperishable records for themselves on the Holstein scrolls. The second dam is sired by a three-fourths brother of Sir Ormsby Skylark, the sire of Duchess Ormsby Skylark, former World Champion for year butter production.

Williams Brothers have about thirty of his daughters left in their herd. Two of them won first and second as senior heifer calves at the Waukesha Dairy Show, while Hartog Gerben himself was first prize two-year-old at the Dairy Show and second at the Wisconsin State Fair.

Far Oaks Sir Homestead Darkness is one of the best sons of Piebe Laura Ollie Homestead King, probably the greatest breeding son of Oak De Kol Ollie Homestead and Wisconsin Bess Piebe Laura. Here we have much of the same blood as the Williams Brothers bull, a combination of the blood of these two grand old matrons, Ollie Watson Prima Donna and Wisconsin Bess.

The dam of Far Oaks Sir Homestead Darkness is Spring Brook Darkness an A. R. O. daughter of Admiral Walker Pietertje. Her sire is Paul Beets Walker. Both of these sires have long lists of good record daughters.

These two bulls not only have distinguished pedigrees but they are of excellent conformation and type. In fact, the representatives of the two institutions selecting them laid much stress on the type equirements of any bull which would be given a place in their herds.

These two sales, which were made privately, and the sale of fifteen richly-bred bulls at good prices in the consignment sale on November 14th are an indication not only that Holstein breeders are again taking constructive forward steps, but that Waukesha County is becoming recognized as a center for bulls of sufficient quality to head the best herds in the country.

There are now about 60 Holstein bulls at the head of herds in Waukesha County whose dams have records of 30 lb. or more butter in seven days or 1,000 lb. or more butter in a year. Waukesha County, furthermore has half of the 1,000 lb. cows in Wisconsin and one-third of the 30 lb. cows.

Backus Bros. Pedigree Company

Box 45E Mexico, New York

THE IDAHO CHAMPION

Idaho Violet Posch Ormsby the great cow owned by the University of Idaho is making another big record. In the 232 days to November 1st, she produced 18,755 lb. milk, 845 lb. butter. It is a pity that this record is not official as the cow already has two-year records above 1,000 lb. butter. Her first record is 21,-399 lb. milk, 1,001.21 lb. butter as a six-year-old. Last year she made 21,-379.3 lb. milk, 1,007 lb. butter. When she freshened Violet produced 730.7 lb. milk in seven days; 2,868.3 lb. milk in thirty days. She has given 105.6 lb. milk in a day and her best seven-days butter record is 32.22. Although this record was made 73 days after freshening, it is the state record in the seven-day division, the dethroned champion being Belle Segis 2d with 31.39 lb. butter made some seven years ago.

Violet's thirty-day record of 122.34 lb. butter is second in the year and stands next to that of Daisy Pioneer Clyde with 123.43 lb.

MURPHY IS ACTIVE

Lawrence F. Murphy of the Badger Stock Farms, Hartford, Wis., reports activities in his herd. One of his two-year-olds, Colantha Changeling Fobes No. 649815 made 22.15 lb. butter, and over 400 lb. milk in seven days. She was just off pasture and was given no grain before freshening so Mr. Murphy is very much pleased with her showing.

Lawrence recently sold a six-months-old bull weighing just 500 lb. to John Fieldback of Waukesha County and he got exactly one dollar a lb. for this animal. This young bull carries 75% the same blood lines as the former World's champion two-year-old, Pietertje Ormsby Mercedes Frisby, being sired by Pietertje Ormsby Mercedes Della from a 30-lb. daughter of Colantha Changeling Lad.

The worst man we know about got married because he heard a wife was cheaper than a janitor.

INVENTORY AND INCOME TAX REPORTS

The time of the year is rapidly approaching when the farmer will have to make out his Income Tax Report, which he will have to do whether or not he has received income to require tax payments. At the best, the making out a Farm Income Tax statement is a complicated task. One of the greatest aids is a complete farm inventory which tells the amount of feed, tools and stock on hand. If such inventory is taken it is a very easy matter to tell the loss or gain in the year. One of the best helps we know of is issued by the New York State College of Agriculture at Cornell University and is compiled by C. E. Ladd. This consists of a 20-page book with pages 10 inches long and the width of the BREEDER AND DAIRYMAN. The book contains tables for various purposes, one of which will help the farmer to tell the amount of silage he has on hand. This table is the best thing of its kind we have seen. The pages for stock, feeds and crops, equipment and miscellaneous supplies, are very complete, while the pages showing how to make out a bank credit statement is full of information and will repay study. This book is free to residents of New York State and we believe can be obtained for a very low charge as long as the edition lasts, by residents of other states. As the book says, "An Annual Inventory Will:

1. Show your net worth above all debts.
2. Show whether or not you are getting ahead financially, and how much.
3. Make a good basis for preparing a credit statement.
4. Help put your farm on a business basis.
5. Provide a valuable list of all property for use in case of fire, in settling estates, or for other purposes."

MAKING LIVESTOCK MEN SWEAR

"What railroad men don't know about livestock shipments would fill a herd-book" says P. G. Peterson of Sharon, Wis. Mr. Peterson shipped four pure-bred Holsteins and some calves from Sharon to Aledo, Ill. He went along with the shipment taking feed and water for the journey. At Galva, when the records showed the stock had been on the road twenty-four hours the car was sent on to Galesburg so that the animals could be fed and watered despite the protests of Peterson. The trainmen declared that they had to obey the orders of the train dispatcher.

A NICE SHOWING

The Graham herd is still making good records. Novena Cara Mia, a five-year-old daughter of King Pontiac Netherland Segis 3d made 33.15 lb. butter from 574.4 lb. milk in seven days. It Pietertje Aaltje, starting her test as a junior three-year-old produced 833 lb. butter from 18,631.2 lb. milk in 365 days. Earl Graham of Compton, Cal., is very proud of the performances of these animals.

DOWNTON'S NEW HERD BULL

The new herdsire of A. W. Downton is Origin Sir Napol Cornucopia a son of Napol Sir Keystone Plum and Cornucopia Plum Johanna 2d. This young bull has a wonderful combination of producing blood in his pedigree. His sire is a son of Keystone Plum Johanna and a grandson of Keystone Beauty Plum Johanna. The former has a seven-day butter record of 29.35 lb. butter and a year record of 1,052.96 lb. butter and 22,190.7 lb. milk. Beauty has a seven-day butter record of 32.88 lb. and a year record of 1,294.71 lb. butter made in strictly official test as a senior four-year-old, a record which has never been equalled by any other heifer of her age. These two cows are full sisters, daughters of Cornucopia Plum Johanna who from three-fourths of an udder made 25.76 lb. butter in seven days and 1,056.78 lb. in a year.

The dam of the young bull, Cornucopia Plum Johanna 2d, a short time ago closed a ten-months test in which she made the record of 731.6 lb. butter and 13,968.1 lb. milk as a senior four-year-old, Pennsylvania State butter record. She was sired by Napol Prince another son of Keystone Plum Johanna while her dam was Cornucopia Plum Johanna already mentioned, a cow that has five daughters with long-time records. One of these daughters was tested as a five-year old, two were tested as four-year-olds, one as a three-year-old and the other a two-year-old. The records of the five daughters and their dam have the remarkable average of 18,723.1 lb. milk and 918.35 lb. butter. During her long-time test, which was made as a nine-year-old, Cornucopia Plum Johanna averaged 4.24% fat; Keystone Plum Johanna averaged 3.8%; Keystone Beauty Plum Johanna averaged 4.02% and Cornucopia Plum Johanna 2d, averaged 4.18%. It can be seen from the foregoing that Origin Sir Napol Cornucopia is a grandson and a great-grandson of Cornucopia Plum Johanna, while this same great foundation cow appears twice in the pedigree as the great-great-granddam.

It is well-known that the individuality of this wonderful producing family is on a par with their production. The udders are large and square, the teats are well-placed and the desirable characteristic of being able to produce milk averaging around 4% during the entire year appears firmly fixed. The further desirable characteristic of hornlessness, is, of course accepted as this is the great trait which first brought this family before the public. Mr. Downton is to be congratulated upon the acquisition of such a splendidly bred young herdsire.

Anticipation is more than half the pleasure. By the time we get the things we most want, the novelty has worn off.

They say talk is cheap; but that is only when you get it from a minister; talk from a lawyer costs something.

Every man has his troubles and most of them wear skirts.

DANDY CALVES AT MERRYALL FARMS

Mr. C. W. Newman of Merryall Farms is feeling mighty good over the individuality of his young calves sired by his herd bull, King Sylvia Johanna Pontiac. The youngsters show correct Holstein type and lots of constitution, are big, rugged fellows, just the kind a dairyman desires.

The Merryall herd is built upon the foundation of individuality and production, although this is the first year that any cows have been run on long-time test, a number of good records have been made. Preparation was made by keeping strict account of the production for years past, so that it was only a step to make semi-official records. The herdsire, King Sylvia Johanna Pontiac is by the same sire as Carnation King Sylvia the $106,000-bull whose daughters re making good in the Carnation herd. The dam of King Sylvia Johanna Pontiac is Otego Valley Christmas Belle, a cow that made a seven-day official butter record of 40.56 lb. and averaged 93 lb. milk a day during her test. She is transmitting her producing capacity to her offspring, for she already has three daughters in the Advanced Registry one of which practically made the requirements for a full aged cow although only a yearling at the time she freshened; a second made 25.95 lb. butter in seven days as a three-year-old, while the third has two different years exceeded 31 lb. butter in seven days and each year produced 100 lb. milk in a day while she has recently closed a thousand-lb. year butter record.

Merryall herd is under State and Federal supervision and Mr. Newman invites visitors and guarantees satisfaction. Animals from this herd have made good wherever they went and one of the attractions in the herd at Pennsylvania State College is a cow that came from this herd and has made good over a number of years. Any time you are near Wyalusing, just stop in at the post-office and you will find Mr. Newman for he is postmaster of that enterprising little town. You will find him a good fellow and will enjoy your visit with him whether or not you decide to purchase any of his animals.

MISSOURI HOLSTEINS PAY BIG

Four cows at the Whitaker Farm, Walnut Grove, Mo., each produced over 80 lb. milk a day in a recent test. They were on pasture and each received twelve lb. of mixed grain daily. Milk is retailing at 15c per quart in the near-by City of Springfield, so that each cow produced $6 worth of milk daily while the feed cost was 23c. Needless to say that the dairying profit per cow of $5.77 is attracting considerable attention among owners of dairies around Springfield and a number are seriously thinking of securing purebred Holsteins.

"Know thyself" is a good motto, and most people would know more about themselves if they consulted their neighbors.

WISCONSIN PIONEER

Thirty-nine years ago or to be exact November, 1883, Peter Hamen of Ripon, Wisconsin brought the first purebred Holstein cow into the Fond du Lac County. Speaking at a Holstein meeting, November 18th, Mr. Hammen told about the founding of the first Wisconsin Holstein breeders association. The first state organization was formed at Berlin, 1885, and A. D. DeLand, of Sheboygan, was elected president. The organization grew and until 1893 when the first great slump came in Holstein cattle prices and the Holstein Breeders Association reached the low ebb. Mr. Hammen made a plea for enthusiasm to help the breeders and their work. He still has a copy of the original constitution of the first organization and the names of the charter members.

PAY CASH

The Progressive Farmer is authority for the statement that there is a wide spread between cash prices and the prices charged for goods purchased on time payments. An investigation of such prices covering ten Southern states showed a difference of 23⅓% between cash prices paid for goods and goods bought on credit and paid for four months afterwards. A spread of 70% in a year is what the retailers charged for carrying the accounts and allowing for bad debts. Moral: Shop around and pay cash.

PABST BULL HEADS POOR FARM HERD

The Holstein herd owned by Fond du Lac County is now headed by Pabst Creator Arbitrator No. 367173, whose dam is making a nice record in long-time test. This bull has recently been purchased by the board of asylum trustees and Superintendent Louis Kenyon from the Pabst Stock Farm. The county poor farm houses a purebred Holstein herd of 150 animals.

Origin Sir Napol Cornucopia

my new herd sire, is a son of

Cornucopia Plum Johanna 2d

731.6 lb. butter in 10 months, the Pennsylvania State Champion in the senior four-year-old division; a daughter of the great

Cornucopia Plum Johanna

1056.78 lb. butter in a year. She and her five daughters average 18,723.1 lb. milk, 918.35 lb. butter in long time work, and practically 4 per cent fat. Four of the daughters tested as heifers.

A. W. DOWNTON

Starrucca, Penna.

HEAVY STUFF

A negro came to the window at the freight office and asked, "What's the rate on freight?"

There being many rates and many kinds of freight, the clerk facetiously replied, "The rates on freight are constantly increasing, due to the exorbitant profits on commodities and other saccharine substances, superinduced by the upward trend of extravagant profiteering indulged in by pitiless pecuniary fellows whose motto is, 'Be sure you are in the clear and then get all you can.' What is the particular commodity on which you wish to secure a rate? Tell me quickly in order that I may consult my tariffs, supplements, etc., now on file and effective at once promulgated by the I. C. C. and ratified by the gigantic monoply which I represent."

The negro, abashed at this high-flown language, recovered his equilibrium enough to reply, "Well boss, I did want to ship a cow, but if what you promulgate is authentic, guess I'd better perambulate home and tell the old 'oman dat, owing to the ponderosity of de times we had better procrastinate till a more convenient season."—*The Railway Clerk.*

HOLSTEINS ON THE 101 RANCH

The largest stock ranch in the United States is said to be the 101 Ranch which consists of some two thousand acres located near Ponca City, Oklahoma. This establishment is owned by three brothers, Joe, George and Zack Miller and, fittingly, has a good herd of purebred Holsteins. There is a herd of Dutch Belts as well as of Herefords, Angus and Shorthorns.

At the Kansas City National sale the 101 Ranch purchased, in connection with W. England, the 40-lb. four-year-old Highland Burke Joh for $2,550, the second highest price of the sale.

Remember that the most universally useful tool, the hair pin, was not invented until the sixteenth century.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

Jan. 10-11, 1923—Liverpool, N. Y., Wandaga & Brookside Herd Dispersals.
Jan. 17-18, 1923—Syracuse, N. Y., Third New York Sale.
Jan. 25—Wichita, Kan., Holstein-Friesian Association, W. H. Mott, Mgr.
March 1—Ponca City, Okla., Wm. H. England Dispersal.
March 5—Richland, Pa., M. H. Bennetch, 60-day retest with few consignments.
March 6—Kiron, Iowa, B. A. Samuelson & Son.
March 24—Watsontown, Pa., H. R. Remley's Sale.
May 2—Clintonville, Spring Consignment Sale.
June 4—Mentor, Ohio, Pinery Farms, Annual Sale.
June 14—Thorp, Wis., W. H. Krause Annual Bred Heifer Sale.

SALE AT PACIFIC INTERNATIONAL

Prices ruled low for quality at the Pacific International Sale, November 10th, which was the tenth of the series. The animals were in good condition, several of them had won prizes at the show a few days before. The average was $194.13, the total $12,530 for sixty-three head.

The leading buyer was the Oregon State Hospital which took fourteen head for an average of $277.85, which included Jewel Cornucopia Wayne Boon with her day-old heifer calf by her side for an even $500, the top price of the sale. The Hospital also took Hazelwood Gerben Heilo Queen for $410. The top price for a male was $300 for the ten-months-old Don Carlos Matador.

The sale was managed by George Gue who was auctioneer assisted by Colonel Fayne of Centralia, Wash., and Col. Highes of Forest Grove, Oregon.

Animals bringing $250 or more with names and addresses of their purchasers are:

Consigned by A. H. Buck and Ed. Hoem, Snohomish, Wash.
Glenwood Pearl Ormsby De Kol, 5 yrs., Oregon State Hospital, Salem, Ore. $350
Consigned by A. Ammeter, Chimacum, Wash.
Violet Veeman Pontiac 3d, 3 yrs., Oregon State Hospital 275
Consigned by Thos. Yarr, Chimacum, Wash.
Jewel Cornucopia Wayne Boon, 4 yrs., Oregon State Hospital 500
Consigned by David Nesbit, Chehalis, Wash.
Olympic Greenbank Queen, 1 yr., Thomas Owens, Kirkland, Wash. 305
Consigned by William McKeown, Gresham, Ore.
Lady Douglas Fayne Johanna, 4 yrs., Oregon State Hospital 325
Hazelwood Heilo Ormsby De Kol, 3 yrs., Oregon State Hospital 380
Hazelwood Heilo Aaggie Korndyke, 3 yrs., John Luscher, Fairview, Ore. 270
Hazelwood Gerben Heilo Queen, 3 yrs., Oregon State Hospital 410
Princess May Korndyke of Steeno, 7 yrs., L. W. Hoffmeister, Boring, Ore. 255
Don Carlos Matador, 11 mo., Joseph G. Beattie, North Portland 300
Consigned by F. R. Beals, Tillamook, Ore.
Six-year-old Female, Oregon State Hospital 335

REGISTRATION VALUES IN IDAHO

The W. G. Messersmith Dispersal was held on the farm near Boise, Idaho, October 26th. Buyers were present from three states and from many sections of Idaho. Nearly all the cattle remained in the Boise Valley which shows what the neighbors thought of the Messersmith herd. There were 27 head including calves. Six of the cows and seven of the calves were registered. The calves averaged $152.50, the purebreds averaged $339.16. The top price was $450 for Blue Valley Hartog De Kol Fayne a fresh two-year-old purchased by Chris Lillegard of Ustick. G. M. Byrkirt of Meridian purchased a number of good ones including the four-year-old Rocomawa Columbia Johanna for $450 and Racomawa Odelia De Kol a six-year-old for $350. The sale was an object lesson of the value of registration. Many of the so-called "Grades" were really unregistered purebreds and had higher cow testing association records than did the purebreds. The 11 grade cows brought $1,622.50 an average of $147.50 while their calves ranged from $25 to $50. The top price for an unregistered cow was $225 for a six-year-old with a record of 13,573 lb. milk and 521 lb. fat. She had the highest record of any animal in the herd. The auctioneer was Amos J. Miller of Caldwell, while the sale was managed by R. H. Musser. Matt Rescindes tester for the Boise Valley Cow Testing Association reported the records of each cows production. Approximately 600 were present and the prices were the highest reached in the Boise Valley during the past two years. Mr. Messersmith who has been 18 years a dairyman, is retiring from business.

ONLY ONE IN COUNTY

F. J. Kukkuck of Preston, Iowa, has the only purebred herd of dairy cattle in Jackson County. This was started in 1911 and now consists of forty head. The Kukkuck farm consists of 213 acres of which 200 can be cultivated. There are two silos with the capacity of 300 tons and a couple of good fields of alfalfa.

The herd is headed by Edenvale Skylark Pietertje whose nine nearest dams have records averaging 1,020.92 lb. butter, 21,279 lb. milk. Mr. Kukkuck is president of the Preston Cow Testing Association in which his cows are making good records.

Alabama man who paid $150 for half interest in a queen bee claims he did not get stung.

After man came woman—she has been after him ever since.

CHARLES LE ROY BRATZLER

There are many members of the Holstein Fraternity who will regret the tragic death of Chas. LeRoy Bratzler which occurred November 20th at Riverside, California. Mr. Bratzler had recently taken a shipment of cattle from the central west to the Glenwood Stock Ranch, at Riverside, of which he had recently become manager. This establishment is owned by the Stalder family. Mr. Bratzler was thirty-three years old on Sunday, November 19th. On that morning, two of the men on the farm had trouble starting a gasoline engine. They called on Mr. Bratzler and while priming the engine it back-fired and set him and the can of gasoline on fire. The explosion partially stunned the other men. Help was summoned and Mr. Bratzler was taken to the hospital where he lived until Monday morning, but never regained consciousness.

Mr. Bratzler was born near Algonquin, Ill., and lived there nearly all his life. For fourteen years he was R. E. Haeger's secretary and attended to many details of the management when that busy auctioneer was away. In addition, "Buster" as his friends called him, owned a little farm near Algonquin on which he kept a small but select herd of purebred Holsteins. He managed this as well as keeping up the office work in the great Haeger herd. Mr. Bratzler became a member of the Holstein-Friesian Association of America in 1914 but owned purebred Holsteins for some time before. He was a pastmaster of the public sale business and could do good work in any capacity connected therewith. He was an all-around cattle man, a first-class judge and a real live wire, was universally liked and has a wide circle of friends in many states that will mourn his untimely decease.

DR. F. H. WOLL

By the death of Dr. F. H. Woll, which occurred at his home at Berkeley, Cal., November 29th, the dairy industry has lost one of its leading writers, scientists and educators. Dr. Woll was only 57 years old. He was a native of Norway and graduated in 1883 from the University of Norway, specializing in agricultural chemistry. Later, he came to the United States and in 1887 became a member of the faculty of the University of Wisconsin where he remained for 26 years. He went to the University of California in 1913 and has divided his time between his duties as professor of animal nutrition at Berkeley and experimental and teaching work at the Branch Agricultural College at Davis.

"Professor" Woll, as most dairymen call him, was one of the leading American specialists on nutrition of dairy animals and dairy chemistry. He is the author of the so-called "American Standard" ration for dairy cows which, for a number of years was the leading scientific authority on feeding in this country. He was a great worker and in addition to his college work, wrote extensively for the dairy and agricultural press and is the author of a number of books found in any high-class agricultural library. With Professor E. H. Farrington, he wrote, "Testing milk and its products" a dairy literature classic. He was author of "Productive Feeding of Farm Animals," "The Book of Silage" and the "Farmers Hand Book." Dr. Woll's life was comparatively short but was full of achievement. His works stand as a monument to a useful life.

VIRGINIA HERD ACCREDITED

The good Virginia Holstein herd owned by Cheney Brothers and Jones at Roanoke Plantation, Randolph, Va., has been added to the Accredited Herd List and the certificate has been received by the owners.

About a year ago these gentlemen purchased Ormsby Korndyke Hockster Lad from Beaver Dam Farms. This splendidly bred bull is a son of the great Ormsby Korndyke Lad and his dam, Shady Maple King Pontiac Hockster, has a seven-day official record of 34.15 lb. butter from 636.3 lb. milk and a 30-day record of 131.5 lb. butter and 2,631 lb. milk. This record was made in June with second calf and during the test she produced 106 lb. milk in a day. She has a daughter that made over 30 lb. in seven days as a senior four-year-old and this daughter in ten month's test as a three-year-old produced nearly 16,000 lb. milk and 715.88 lb. butter. A full sister to the Virginia bull, O. K. L. Hockster, calving at thirty month's of age, made 20.76 lb. butter in seven days averaging well over 60 lb. milk a day. She is on her year test and making a fine showing. In this connection we may add a brief extract from a letter written by Mr. Carl Schmid in January to THE BREEDER AND DAIRYMAN in which he says, "We have three generations of the Hockster family in our herd. They are without exception, the best of individuals, have good udders, and are great producers. They are exceptionally good testers with a large flow of milk, which is a valuable asset not only to the breeder who makes records but just as much so to the man that sells his milk. All taken into consideration, I believe this young bull one of the real good sons of his sire."

Ormsby Korndyke Hockster Lad is certainly starting out to break records. At two and one-half years of age he weighed 1,650 lb. His first calves in the Cheney Brothers and Jones herd are twin heifers, born December 4th and Mr. J. R. Jones informs us that they are both beauties and O. K. in every way. They have 25 cows in calf to this bull and all of them are due before April. Before then the bull was in service at Beaver Dam Farms. He promises to be one of the best sons of his famous sire, Ormsby Korndyke Lad.

Enthusiasm is essential to success, but not the kind that you carry in a bottle in your hip-pocket.

A plucky man is seldom plucked.

BLACKBERRY HERD ACCREDITED

The noted Norfolk herd of purebred Holsteins has been added to the fully accredited list having passed its final clean test by State and Federal Veterinarians.

This great establishment is located at Norfolk, Connecticut. The animals in the herd carry a large percentage of King Segis blood. It contains daughters of King Segis Pontiac Alcartra, King Segis Pontiac Count and Matador Segis Walker and these are being bred to a grandson of the famous May Echo Sylvia, the only cow that ever produced one thousand lb. milk in seven days. The present herd bull is sired by her son, Carnation King Sylvia. The progeny resulting from this cross are giving great promise of both type and production.

RAISING THEIR OWN HELP

W. B. Starr, owner of Highland Springs Farm, located near Cisco, Texas, is building up a good herd of purebred Holsteins. Mr. and Mrs. Starr came from Nebraska to Texas soon after they were married and purchased a half section of land January, 1904. At that time only one acre of the tract was cultivated. They have reclaimed the place from the brush and now have 195 acres under cultivation. Then too, they have raised their own help for to-day they have ten children, nine of which are boys, the oldest just eighteen years old and the youngest just a year and a half.

OWNS A GOOD ONE

H. Ziegenhagen, of Bertha, Minn., has 36 head of Holstein cattle, grades and purebreds. His son, Fred, has a registered calf and is enrolled in the local calf club. The Ziegenhagen herd is enrolled in the cow testing association and one of the grade Holsteins therein produced 127.88 lb. fat in 2½ months.

CHAMPIONS CLOSELY RELATED

The junior champion female at the California National Livestock Show was the young heifer Abbekerk Adirondac Maid Prilly of the Bridgford Herd. Her sire is King Segis Alcartra Prilly whose daughters have been making splendid records. Her dam, Abbekerk Adirondac Dairy Maid on November 1st finished a 365-day record of 849 lb. butter and 21,250 lb. milk. She was a senior two-year-old in her first lactation period while she carried calf 209 days of the time she was on test. She in turn is a daughter of Adirondac Wietske Dairy Maid with 34,401.9 lb. milk and 1,420.19 lb. butter in 365 days. This cow had a previous year record of 1,295.11 lb. butter and 31,899.8 lb. milk and her total for the two years is 66,301.7 lb. milk and 2,175.3 lb. butter. She has a seven-day official record of 41.02 lb. butter and 831.7 lb. milk and four different years has made over 30 lb. butter in a week and three different years over 36 lb. In the Berks Herd, Reading, Pa., there is a three-fourths sister to the show calf, Dairy Maid Prilly, that Mr. Deysher purchased at the 1922 Brentwood Sale. Dairy Maid Prilly is sired by King Segis Alcartra Prilly and is from Adirondac Wietske Dairy Maid. Mr. Deysher paid $4,300 for her, the highest price for a female at that event. She is developing into a fine heifer and possesses the individuality of her three-fourths sister, the California National Junior Champion.

A BULL DISCOVERY

A Pennsylvania herd that is bound to be heard from is owned by Omwake and Speck of Greencastle. There are about 35 animals in this herd of which more than half are daughters of Sir Colantha Pietertje Korndyke. There is a story connected with this bull.

Sir Colantha Pietertje Korndyke was owned by a dairyman who had a few purebreds and a number of grades. Consequently, although the bull has splendid breeding and was siring good stock he has as yet only a few tested daughters. He is a show bull, about seven-eighths white, sires producers and has a combination of breeding that stands high in public favor. His sire is Pontiac Korndyke who is sire of some of the best transmitting bulls of the breed and a number of great record daughters. The dam of this bull is Colantha Pietertje Korndyke who as a four-year-old made 30.8 lb. butter and 529.9 lb. milk in a week. Her dam is Colantha Pietertje a 23.52-lb. cow and her sire is Pontiac Korndyke so that Sir Colantha Pietertje Korndyke carries 75% of the blood of his famous sire and has the combination of breeding found in a number of great producers including Pontiac Lady Korndyke the first 38-lb. cow whose seven- and thirty-day butter records were world's records at time of making.

The Omwake & Speck herd is one of producers as well as good individuals and some idea of its type and character can be gained from the cover illustration of this issue. The present owners plan to test the daughters of their herdsire and believe that, in due time, he will rank with the many good sons of that great old bull, Pontiac Korndyke.

King Pontiac Alcartra Wayne

and his great producing daughters extend to the readers of this paper the

Season's Greetings

and advise you to start 1923 RIGHT by placing a son or grandson of this great sire at the head of your own herd.

HARRY C. GATES

CANTON, PENNA.

Buy Your Bull From an Accredited Herd

EXAMPLE FOLLOWS PRECEPT

Hugh Barton, has been depot agent at Norfolk, Arkansas, for the Missouri Pacific Railroad for a number of years. The experience he has gained has shown him the needs of the community. For several years some 15 to 20 cans of cream have been shipped from Norfolk to city creameries and this was produced from scrub cows. Mr. Barton decided that twice this amount could be produced from the same number of purebred stock and he recently purchased ten head of purebred Holstein heifers and a registered bull. He expects to sell his surplus bulls to head herds of native cows around Norfolk and believes that a few years hence high-class dairy herds can be built up in that community just as soon as the people see the difference between the production of the native cows they have now and the purebreds introduced. Mr. Barton has been very persistent in his efforts to encourage farmers around Norfolk to raise better stock and has decided that example is better than precept.

VEGETABLE FANCYWORK

We question whether the greenest of green young brides could be so absolutely verdant, but here's the story as it comes to us:

"I have some particularly fine asparagus to-day," said the marketman to Mrs. Youngbride, and he displayed a bunch for her admiration. "Picked not three hours ago," he added.

Mrs. Youngbride looked at it with unaffected amazement.

"Does it grow like that?" she asked. "I always supposed the cook braided the ends of it."

At a ball, many a miss makes a hit.

TEXAS COLLEGE ACQUIRES STOCKMAN

George P. Grout, part owner and manager of the Jean du Luth Farms which is situated near Duluth, Minn., will head the Dairy Husbandry Department of the A. & M. College of Texas. The Jean Du Luth Farms has at least four great herds of cattle;—the Red Polled herd holds the majority of champion records of the breed; at least two of the Guernseys have made world's records while the Holsteins and Jersey exhibits from this herd have won high honors at state fairs and other high-class exhibitions.

Mr. Grout was born and reared on a grain farm, but early realized the importance of the dairy industry. He is a graduate of the School of Agriculture at the University of Minnesota and part of the time he was studying was also acting as instructor in dairying. After a short period of commercial life as traveler for a dairy manufacturing concern he entered the North Dakota Agricultural College, both as a student and instructor and graduated in 1908 with the degree of B. S. in Agriculture.

After graduating, he was appointed dairy assistant at the University of Minnesota where he did graduate work and received his Master's degree in 1909. He became assistant professor of dairy husbandry at the University and was in direct charge of the college herd until he joined the Jean Du Luth Farms.

Mr. Grout is prominent in a number of dairy associations and holds several offices. He is a gifted speaker and writer and is a valuable addition to the Texas College.

TWO GOOD RECORDS

Herbert Lepein and Phil Lenker of Hartford, Wis., have been making some nice long-time records. Lady Nettie Pontiac at five years and twenty-four days old, made 1,061.71 lb. butter and 23,829 lb. milk and is the first cow in Washington County to make a thousand lb. butter a year. Korndyke Netherland Star De Kol calving at two years, two months and five days old made 942 lb. butter and 20,733 lb. milk. She is the highest year-record two-year-old in Washington County. She headed the list of junior two-year-olds in the past Holstein testing year, winning the Association's first prize of $25 with a milk production of 574.9 lb. A stable mate, Korndyke Johanna De Kol Rue was second with 545.7 lb.

STANISLAUS LEADS THE STATE

During 1921 the total production of butterfat in California was 105,446,108 lb. of which Stanislaus County produced 9,476,221 lb. followed by Los Angeles County with 7,091,047 lb. Five other counties each produced more than five millions lb. The total value of Californian milk and milk products for the year was $97,125,398 according to the report of the State Department of Agriculture compiled by J. J. Frey.

EFFECT OF SILAGE ON MILK

The flavor and odor of milk may be controlled to a great extent through the feeding of the herd and the care of the product. These problems are discussed in United States Department of Agriculture Bulletin 1,097, The Effect of Silage on the Flavor and Odor of Milk, by James A. Gamble and Ernest Kelly.

The flavor and odor of silage, according to the results of the investigation, are largely imparted to milk through the body of the cow, and silage that has been fed one hour before milking is so quickly absorbed that its taint is discernable in the milk. It should be fed immediately after milking if the dairyman wishes to avoid imparting an odor to the milk. Legume silage must be fed in smaller amounts, as it effects the milk more than corn silage.

Odors imparted by silage may be greatly diminished by prompt and careful aeration of the warm milk. Some milk is improved in flavor by the feeding of silage. The results show that silage odors in the barn air have little effect on the flavor and odor of the milk, but the department advises that good ventilation should not be lost sight of.

Cream from silage-tainted milk retains the flavor and odors more tenaciously than the milk itself. Condensed milk made from it has a less perceptible silage flavor than the milk from which it was made.

Copies of the bulletin may be had from the Department of Agriculture, Washington, D. C.

BUILDING A GOOD HERD

Eight years ago P. J. Bremmer, of Muscoda, Wis., started with four purebred cows. He now has sixteen head of cows and heifers in milk, every one of which has satisfied its owner that it is good enough to stay on the place.

The Bremmer Farm overlooks the Wisconsin River. It is planned to eventually make the receipts for the sale of stock the main source of income, but until that time, the chief returns will be from dairying. The owner says that at the present time he has no difficulty in disposing of young animals at a good advance over grade prices, while it costs him no more to raise purebreds than it does grades.

The present herdsire is a grandson of King Segis Pontiac, and is from a twenty-five-pound three-year-old of the Homestead strain.

THE AGRICULTURAL FAIR

The agricultural fair is one of the oldest of our institutions, dating back to the fourteenth and fifteenth centuries, and competitive showing of all products of the field and farm has had its effect in the development of most that we prize to-day. The Percheron horse of France is largely the product of the fair, and the highly developed cattle of the English Isles, as well as the beef cattle of Scotland, are the results of development through competitive exhibits.

In this country agricultural fairs can be given much credit for both crop and livestock development. As a means of demonstrational education they are recognized as of paramount educational value. In the past, however, the fair has spread its full show of evil effects. In early times, the fair was a place of unbridled license, and according to early writings personal protection was almost a matter of personal prowess. Law and order was largely suspended and anything went. In fact, the record of one of the early colonial fairs in this country shows that King George granted a charter which contained the provision that any person "going to, being at or returning from" said fair was exempt from arrest.—*Los Angeles Cultivator.*

GOOD MISSOURI DAIRY FARM

One of the good Missouri dairy farms is that of the J. A. Hudson Estate at McBaine. This farm consists of 680 acres in addition to 640 acres which are rented. At the present time, 236 head of purebred and grade Holsteins are milked twice a day and in addition there are about fifty cows that are dry and one hundred head of calves and yearlings. The whole establishment is under the care of Manager Clyde Shepard. As far as possible all feed used on the farm is grown there. There are 200 acres of corn, 130 acres in alfalfa, 160 acres in wheat, 60 acres in sweet clover, 30 acres in rye and 690 acres in pasture. The establishment employs twenty-five men and uses three tractors and twenty-seven mules. The land is Missouri River bottom land and is very fertile. The barns are equipped with labor-saving devices having a lighting plant and running water as well as an ice plant. The greater part of the milk produced is shipped to St. Louis.

CONDENSED MILKMAID

The parents of Joan, aged seven, were invited to a fancy dress ball and were discussing costumes. Joan was greatly interested and finally asked "Mama, can I go as a milkmaid?" "No dear," replied mother, "You are too small." "But, Mama," Joan pleaded, "can't I go as a condensed milkmaid?"

TRY AGAIN

Instructor of sawmill (to Mose whose finger was amputated by a buzz saw): "How did you come to get your fingers cut off?"

Mose: "Ah doan know sah. I just done touched the darn contraption like dis and —Good gosh there goes another finger off."

A HOLSTEIN FARM NEED

Storekeeper.—Individual alarm clocks? Never heard of them. What are they like?

Shopper.—I never saw one myself but I thought maybe I could get one tuned so it would wake the tester and hired man without disturbing everyone else in the house.

HAVE TWO PUREBRED HERDS

The Borden Home Farm at Wallkill, New York, consists of 1,800 acres of fertile, tillable land. It has seventy-one buildings and the entire farm is inclosed with a woven wire fence. There are miles of driveways and several small lakes. The buildings and private drives are lighted by electricity and much of the machinery is driven by electric motors. The power plant from which the electricity is derived is located in the village at the big dam on the Wallkill River.

Upwards of 800 quarts of certified milk are sent to New York daily but the production of milk is not an exclusive feature. There is a large herd of purebred Chester White pigs and a hennery of White Plymouth Rocks. There are twenty-five modern tenant houses for the married men and a boarding house for the single men. A number of the employees have worked at this establishment some twenty or thirty years.

The farm was started by John G. Borden in 1881, the present owners are Marion Borden Halliday and George E. Halliday. There are two herds of purebred cattle; about ninety Holsteins and sixty Jerseys; the milk from these two herds are mixed.

In the summer the cows are pastured; no bedding is used in the barn, moistened sand being spread on the concrete floors to keep the cows from slipping. In winter, the bedding is either cut straw or corn stalks; the straw and stalks are cut and blown to the hayloft with a silo filler and are lowered to the cow barn in bags to prevent dust.

The milk is taken every morning from the dairies and then to the dairy house where it is mixed to make four per cent milk. It is bottled by machinery, capped, sealed and labeled. Packed into boxes, the bottles are covered with crushed ice and shipped to New York City.

Don't wait until you are broke before you begin to make your way.

W. M. SETHMAN, DELAWARE CO., HOBART, N. Y.

ANOTHER KIND OF BULL

There is a brakeman on the Monon Railroad named John Bull and his run is from French Lick to Lafayette. It is customary for the brakeman to drop off the train at Orleans to close the switch. On November 15th, Mr. Bull got off as usual but a yardman gave the engineman a signal that he would close the switch so that the train did not stop. When the train reached Mitchell, Indiana, the brakeman was missing and a message was sent to Orleans reading: "Bull left at Orleans. Send him over on speeder, holding train 12 at Mitchell."

While the train awaited, the people around the depot began to get interested and the operator showed one of them the message and imagination did the rest. Jenkins Brothers are Holstein breeders at Orleans and the wise bird took it for granted that this was an animal which was shipped to them. The news spread like wildfire and when brakeman Bull alighted there was a crowd of nearly 100 collected on the platform to welcome him.

WASHINGTON'S BIRTHPLACE

The birthplace of George Washington was Wakefield Farm, Westmoreland County, Virginia, where the illustrious George saw the light in 1732. The father of our country was a good farmer and a lover of good stock, and the present occupants of the farm, Latane Bros., are descendants of the Washington family. They are also good farmers and recently were enrolled in the "Better Sires—Better Stock" movement. The stock on the historic estate include cattle, horses, swine, sheep, and poultry. All sires are now purebred; the females are purebred, crossbred and grade, and are to be gradually improved.

HOT ICE

Bert Acosta, the air champion, said at a banquet in Omaha:

"It is so cold in an airplane when you reach great altitudes that if you try to describe the weather up there you feel like the farm hand who said:

"'Yep, mighty cold day. But, 'tain't nothin' to what I seen to hum wunst in the Vermont mountings. Why, one day in pig-killin' time it was so darn cold that we had a kettle of b'ilin' water settin' on the stove, and when we took it out in the yard, it friz so darn quick that the ice was hot.'"

DAM RAISED HER RECORD

The Experiment Farm at Scottsbluff, Nebraska, has a young bull, Varsity La Vertex Derby Gerben, who was a year old October 11th. He is a son of Varsity Derby Gerben, who has just completed a junior four-year-old record of 25,011 lb. milk, 1,045.5 lb. butter in the University herd at Lincoln. The bull is sired by a son of La Verna Lincoln, the state champion whose dam, La May, was a former state champion.

Optimist—a light-hearted man with a heavy liver.

FROM ILLINOIS TO MEXICO

Twenty-four head of black and white cows have recently been taken from New Dougles, Illinois, to the Andrews Hacienda, Guanajauto, Mexico. These cattle were in transit fifteen days and the transportation charges were nearly $1,000.00. They were shipped to Laredo, Texas, by freight; thence by express to the ranch, where alfalfa is cut and fed green 365 days in the year.

This ranch had been raided by bandits during the Villa régime and every animal was taken. The owner was held for ransom, his wife being compelled to send the bandit leader $600 in gold, together with three ponies and saddles.

ACTIVITY IN MISSOURI

The Whitaker Farm of Walnut Grove, Missouri, sold three young Holstein bulls for the reported price of $1,600 for the three. One of these went to the Sac River Valley Holstein Company, another to the Wilson Farms, and the other to the Stockton Holstein Association.

Interest in Holsteins in southern Missouri is growing rapidly.

The Whitaker Farm show herd which was on the fair circuits of Missouri and Kansas this fall, have won more blue and purple ribbons this season than any other Missouri herd.

A DAIRY ENTHUSIAST

Tom O. Mason, of Cumberland, Wis., president of the Haugen State Bank, says that the dairy cows have more than doubled the bank deposits of Barron County, Wis., in the past ten years. Mr. Mason is interested in a number of banks in northern Wisconsin counties and is influential in a movement to "Put a dairy herd on every farm in the Northwest. Last year he was one of a delegation of 200 that attended the National Dairy Show and he is planning to attend again this year.

SOME ANIMAL

What would you think of a calf with eleven legs and feet? The *New Era*, of Formosa, Kansas, is guilty of such a story, and reports the birth of a Holstein with one head, neck and a fully developed body while joined to that body is another without head or shoulders. The monstrosity has eleven legs and feet, nine of which are of normal size. Nature must have started a centipede or else one of those milk machines we were told of in Kellygrams.

HOLSTEINS FOR CREAM

Because the Kensett, Iowa, coöperative creamery was not receiving enough cream to pay running expenses and a profit, several patrons plan to bring in a number of purebred and grade Holsteins and so increase the supply. The movement is being engineered by President Glassel, A. W. Rudnick of the Iowa Dairy Extension Department and County Agent, B. W. Lodwick.

We Don't Keep Holsteins

They keep us so our 125 head are bred for every-day and all the year 'round production.
Oh! Boy!
How they do milk!
They are good individuals too, that straight-backed, big-barrelled kind, carrying large, square udders, with a teat on each corner.
You won't have to hide any stock you get from

Ellis Ellsworth
Meshoppen, Pa.
R. No. 4.

The herd is run on the Accredited Plan.

WYOMING COUNTY HOLSTEINS

are good ones.

Their health is O. K.

Their quality high class

while their producing ability is unsurpassed,

the only thing about them not away up is the price.

WYOMING COUNTY HOLSTEIN BREEDERS' ASSOCIATION

Clarence H. Titus, President — Dan Bartron, Sec. and Treas.

Lackawanna County Holsteins

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders—pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal jurisdiction.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

Lackawanna County Breeders' Association

Harry B. Miller, President — Robert Winship, Secretary
